Dell PowerEdge R720 and R720xd
Owner's Manual
# Notes, Cautions, and Warnings

- **NOTE**: A NOTE indicates important information that helps you make better use of your computer.

- **CAUTION**: A CAUTION indicates either potential damage to hardware or loss of data and tells you how to avoid the problem.

- **WARNING**: A WARNING indicates a potential for property damage, personal injury, or death.

**LCD Panel Features**

- **NOTE:** The LCD panel is present only on PowerEdge R720.

The system's LCD panel provides system information and status and error messages to indicate when the system is operating correctly or when the system needs attention. See System Error Messages for information about specific error codes.

- The LCD backlight lights blue during normal operating conditions and lights amber to indicate an error condition.
- The LCD backlight is off when the system is in standby mode and can be turned on by pressing either the Select, Left, or Right button on the LCD panel.
- The LCD backlight remains off if LCD messaging is turned off through the iDRAC utility, the LCD panel, or other tools.

![Figure 5. LCD Panel Features](image)
### Home Screen

The Home screen displays user-configurable information about the system. This screen is displayed during normal system operation when there are no status messages or errors. When the system is in standby mode, the LCD backlight turns off after five minutes of inactivity if there are no error messages. Press one of the three navigation buttons (Select, Left, or Right) to view the Home screen.

To navigate to the Home screen from another menu, continue to select the up arrow ↑ until the Home icon ↑ is displayed, and then select the Home icon.

From the Home screen, press the Select button to enter the main menu.

### Setup Menu

**NOTE:** When you select an option in the Setup menu, you must confirm the option before proceeding to the next action.

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>iDRAC</td>
<td>Select DHCP or Static IP to configure the network mode. If Static IP is selected, the available fields are IP, Subnet (Sub), and Gateway (Gtw). Select Setup DNS to enable DNS and to view domain addresses. Two separate DNS entries are available.</td>
</tr>
<tr>
<td>Set error</td>
<td>Select SEL to display LCD error messages in a format that matches the IPMI description in the SEL. This is useful when trying to match an LCD message with an SEL entry. Select Simple to display LCD error messages in a simplified user-friendly description. See System Error Messages for a list of messages in this format.</td>
</tr>
<tr>
<td>Set home</td>
<td>Select the default information to be displayed on the LCD Home screen. See View Menu to see the options and option items that can be set as the default on the Home screen.</td>
</tr>
</tbody>
</table>

### View Menu

**NOTE:** When you select an option in the View menu, you must confirm the option before proceeding to the next action.
**Option** | **Description**
---|---
**iDRAC IP** | Displays the IPv4 or IPv6 addresses for the iDRAC7. Addresses include DNS (Primary and Secondary), Gateway, IP, and Subnet (IPv6 does not have Subnet).
**MAC** | Displays the MAC addresses for iDRAC, iSCSI, or Network devices.
**Name** | Displays the name of the Host, Model, or User String for the system.
**Number** | Displays the Asset tag or the Service tag for the system.
**Power** | Displays the power output of the system in BTU/hr or Watts. The display format can be configured in the Set home submenu of the Setup menu.
**Temperature** | Displays the temperature of the system in Celsius or Fahrenheit. The display format can be configured in the Set home submenu of the Setup menu.

### Diagnostic Indicators

**NOTE:** The diagnostic indicators are present only on PowerEdge R720xd.

The diagnostic indicators on the system front panel display error status during system startup.

**NOTE:** No diagnostic indicators are lit when the system is switched off. To start the system, plug it into a working power source and press the power button.

The following section describes system conditions and possible corrective actions associated with these indicators:

#### Health indicator

<table>
<thead>
<tr>
<th>Condition</th>
<th>Corrective Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>If the system is on, and in good health, the indicator lights solid blue.</td>
<td>None required.</td>
</tr>
<tr>
<td>The indicator blinks amber if the system is on or in standby, and any error exists (for example, a failed fan or hard drive)</td>
<td>See the System Event Log or system messages for the specific issue. Invalid memory configurations can cause the system to halt at startup without any video output. See <a href="#">Getting Help</a>.</td>
</tr>
</tbody>
</table>

#### Hard-drive indicator

<table>
<thead>
<tr>
<th>Condition</th>
<th>Corrective Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>The indicator blinks amber if a hard drive experiences an error.</td>
<td>See the System Event Log to determine the hard drive that has an error. Run the appropriate Online Diagnostics test. Restart system and run embedded diagnostics (ePSA). If the hard drives are configured in a RAID array, restart the system and enter the host adapter configuration utility program.</td>
</tr>
<tr>
<td>Electrical indicator</td>
<td>Corrective Action</td>
</tr>
<tr>
<td>----------------------</td>
<td>-------------------</td>
</tr>
<tr>
<td>Condition</td>
<td></td>
</tr>
<tr>
<td>The indicator blinks amber if the system experiences an electrical error (for example, voltage out of range, or a failed power supply or voltage regulator).</td>
<td>See the System Event Log or system messages for the specific issue. If it is due to a problem with the power supply, check the LED on the power supply. Re-seat the power supply by removing and reinstalling it. If the problem persists, see Getting Help.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Temperature indicator</th>
<th>Corrective Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>Condition</td>
<td></td>
</tr>
</tbody>
</table>
| The indicator blinks amber if the system experiences a thermal error (for example, a temperature out of range or fan failure). | Ensure that none of the following conditions exist:  
• A cooling fan is removed or has failed.  
• System cover, cooling shroud, EMI filler panel, memory-module blank, or back-filler bracket is removed.  
• Ambient temperature is too high.  
• External airflow is obstructed.  
See Getting Help. |

<table>
<thead>
<tr>
<th>Memory indicator</th>
<th>Corrective Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>Condition</td>
<td></td>
</tr>
<tr>
<td>The indicator blinks amber if a memory error occurs.</td>
<td>See the system event log or system messages for the location of the failed memory. Reinstall the memory device. If the problem persists, see Getting Help.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>PCIe indicator</th>
<th>Corrective Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>Condition</td>
<td></td>
</tr>
<tr>
<td>The indicator blinks amber if a PCIe card experiences an error.</td>
<td>Restart the system. Update any required drivers for the PCIe card. Re-install the card. If the problem persists, see Getting Help.</td>
</tr>
</tbody>
</table>
**Hard-Drive Indicator Patterns**

![Diagram of hard-drive indicators](image)

1. **hard-drive activity indicator (green)**
2. **hard-drive status indicator (green and amber)**

**NOTE:** If the hard drive is in Advanced Host Controller Interface (AHCI) mode, the status indicator (on the right side) does not function and remains off.

<table>
<thead>
<tr>
<th>Drive-Status Indicator Pattern (RAID Only)</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>Blinks green two times per second</td>
<td>Identifying drive or preparing for removal</td>
</tr>
<tr>
<td>Off</td>
<td>Drive ready for insertion or removal</td>
</tr>
</tbody>
</table>

**NOTE:** The drive status indicator remains off until all hard drives are initialized after the system is turned on. Drives are not ready for insertion or removal during this time.

- Blinks green, amber, and off: Predicted drive failure
- Blinks amber four times per second: Drive failed
- Blinks green slowly: Drive rebuilding
- Steady green: Drive online
- Blinks green three seconds, amber three seconds, and off six seconds: Rebuild aborted
Back-Panel Features And Indicators

Figure 7. Back-Panel Features and Indicators—PowerEdge R720

1. System identification button

The identification buttons on the front and back panels can be used to locate a particular system within a rack.

- **PowerEdge R720**: When one of these buttons is pressed, the LCD panel on the front and the system status indicator on the back flashes until one of the buttons is pressed again.
- **PowerEdge R720xd**: When one of these buttons is pressed, the system status indicator on the back flashes until one of the buttons is pressed again.

Press to toggle the system ID on and off.

If the system stops responding during POST, press and hold the system ID button for more than five seconds to enter BIOS progress mode.

To reset iDRAC (if not disabled in F2 iDRAC setup) press and hold the button for more than 15 seconds.

2. System identification connector

Connects the optional system status indicator assembly through the optional cable management arm.

3. iDRAC7 Enterprise port

Dedicated management port.

**NOTE**: The port is available for use only if the iDRAC7 Enterprise license is installed on your system.
<table>

</tr>
<tr>
<td>Link indicator is amber</td>
<td>The NIC is connected to a valid network at less than its maximum port speed.</td>
</tr>
<tr>
<td>Activity indicator is blinking green</td>
<td>Network data is being sent or received.</td>
</tr>
</tbody>
</table>

### Power Indicator Codes

Each AC power supply has an illuminated translucent handle and each DC power supply (when available) has an LED that serves as an indicator to show whether power is present or whether a power fault has occurred.

![Figure 10. AC Power Supply Status Indicator](image)

1. AC power supply status indicator/handle

![Figure 11. DC Power Supply Status Indicator](image)

1. DC power supply status indicator
### Power Indicator

<table>
<thead>
<tr>
<th>Pattern</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>Not lit</td>
<td>Power is not connected.</td>
</tr>
<tr>
<td>Green</td>
<td>The handle/LED indicator lights green indicating that a valid power source is connected to the power supply and that the power supply is operational.</td>
</tr>
<tr>
<td>Flashing amber</td>
<td>Indicates a problem with the power supply. CAUTION: When correcting a power supply mismatch, replace only the power supply with the flashing indicator. Swapping the opposite power supply to make a matched pair can result in an error condition and unexpected system shutdown. To change from a High Output configuration to a Low Output configuration or vice versa, you must power down the system.</td>
</tr>
<tr>
<td>Flashing green</td>
<td>When hot-adding a power supply, this indicates that the power supply is mismatched with the other power supply (in terms of efficiency, feature set, health status, and supported voltage). Replace the power supply that has the flashing indicator with a power supply that matches the capacity of the other installed power supply.</td>
</tr>
</tbody>
</table>

### Other Information You May Need

⚠️ **WARNING:** See the safety and regulatory information that shipped with your system. Warranty information may be included within this document or as a separate document.

- The Getting Started Guide provides an overview of setting up your system, and technical specifications. This document is available online at [dell.com/support/manuals](https://dell.com/support/manuals).
- The rack documentation included with your rack solution describes how to install your system into a rack, if required.
- Any media that ships with your system that provides documentation and tools for configuring and managing your system, including those pertaining to the operating system, system management software, system updates, and system components that you purchased with your system.
- For the full name of an abbreviation or acronym used in this document, see the Glossary at [dell.com/support/manuals](https://dell.com/support/manuals).

⚠️ **NOTE:** Always check for updates on [dell.com/support/manuals](https://dell.com/support/manuals) and read the updates first because they often supersede information in other documents.
Using The System Setup and Boot Manager

System Setup enables you to manage your system hardware and specify BIOS-level options.

The following keystrokes provide access to system features during startup:

<table>
<thead>
<tr>
<th>Keystroke</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;F2&gt;</td>
<td>Opens the System Setup page.</td>
</tr>
<tr>
<td>&lt;F10&gt;</td>
<td>Enters System Services and starts Lifecycle Controller, which supports systems management features such as operating system deployment, hardware diagnostics, firmware updates, and platform configuration, using a graphical user interface. The feature set available in Lifecycle Controller is determined by the iDRAC license purchased. For more information, see Related Documentation topic.</td>
</tr>
<tr>
<td>&lt;F11&gt;</td>
<td>Enters the BIOS Boot Manager or the Unified Extensible Firmware Interface (UEFI) Boot Manager, depending on the system’s boot configuration.</td>
</tr>
<tr>
<td>&lt;F12&gt;</td>
<td>Starts Preboot Execution Environment (PXE) boot.</td>
</tr>
</tbody>
</table>

From the System Setup, you can:

- Change the NVRAM settings after you add or remove hardware
- View the system hardware configuration
- Enable or disable integrated devices
- Set performance and power management thresholds
- Manage system security

You can access the System Setup using the:

- Standard graphical browser, which is enabled by default
- Text browser, which is enabled using Console Redirection

To enable Console Redirection, in System Setup, select System BIOS → Serial Communication screen → Serial Communication, select On with Console Redirection.

⚠️ NOTE: By default, help text for the selected field is displayed in the graphical browser. To view the help text in the text browser, press <F1>.

Choosing The System Boot Mode

System Setup enables you to specify the boot mode for installing your operating system:

- BIOS boot mode (the default) is the standard BIOS-level boot interface.
- UEFI boot mode is an enhanced 64-bit boot interface based on Unified Extensible Firmware Interface (UEFI) specifications that overlays the system BIOS.
You must select the boot mode in the **Boot Mode** field of the **Boot Settings** screen of System Setup. Once you specify the boot mode, the system boots in the specified boot mode and you then proceed to install your operating system from that mode. Thereafter, you must boot the system in the same boot mode (BIOS or UEFI) to access the installed operating system. Trying to boot the operating system from the other boot mode will cause the system to halt at startup.

**NOTE:** Operating systems must be UEFI-compatible to be installed from the UEFI boot mode. DOS and 32-bit operating systems do not support UEFI and can only be installed from the BIOS boot mode.

**NOTE:** For the latest information on supported operating systems, go to [dell.com/ossupport](http://dell.com/ossupport).

### Entering System Setup

1. Turn on or restart your system.
2. Press `<F2>` immediately after you see the following message:
   
   `<F2> = System Setup`
   
   If your operating system begins to load before you press `<F2>`, allow the system to finish booting, and then restart your system and try again.

### Responding To Error Messages

If an error message is displayed while the system is booting, make a note of the message. For more information, see **System Error Messages**.

**NOTE:** After installing a memory upgrade, it is normal for your system to display a message the first time you start your system.

### Using The System Setup Navigation Keys

<table>
<thead>
<tr>
<th>Keys</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>Up arrow</td>
<td>Moves to the previous field.</td>
</tr>
<tr>
<td>Down arrow</td>
<td>Moves to the next field.</td>
</tr>
<tr>
<td><code>&lt;Enter&gt;</code></td>
<td>Allows you to type in a value in the selected field (if applicable) or follow the link in the field.</td>
</tr>
<tr>
<td>Spacebar</td>
<td>Expands or collapses a drop-down menu, if applicable.</td>
</tr>
<tr>
<td><code>&lt;Tab&gt;</code></td>
<td>Moves to the next focus area.</td>
</tr>
<tr>
<td><code>&lt;Esc&gt;</code></td>
<td>Moves to the previous page till you view the main screen. Pressing <code>&lt;Esc&gt;</code> in the main screen displays a message that prompts you to save any unsaved changes and restarts the system.</td>
</tr>
<tr>
<td><code>&lt;F1&gt;</code></td>
<td>Displays the System Setup help file.</td>
</tr>
</tbody>
</table>

**NOTE:** For most of the options, any changes that you make are recorded but do not take effect until you restart the system.

### System Setup Options
System Setup Main Screen

**NOTE:** Press <Alt><F> to reset the BIOS or UEFI settings to their default settings.

<table>
<thead>
<tr>
<th>Menu Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>System BIOS</td>
<td>This option is used to view and configure BIOS settings.</td>
</tr>
<tr>
<td>iDRAC Settings</td>
<td>This option is used to view and configure iDRAC settings.</td>
</tr>
<tr>
<td>Device Settings</td>
<td>This option is used to view and configure device settings.</td>
</tr>
</tbody>
</table>

System BIOS Screen

**NOTE:** The options for System Setup change based on the system configuration.

**NOTE:** System Setup defaults are listed under their respective options in the following sections, where applicable.

<table>
<thead>
<tr>
<th>Menu Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>System Information</td>
<td>Displays information about the system such as the system model name, BIOS version, Service Tag, and so on.</td>
</tr>
<tr>
<td>Memory Settings</td>
<td>Displays information and options related to installed memory.</td>
</tr>
<tr>
<td>Processor Settings</td>
<td>Displays information and options related to the processor such as speed, cache size, and so on.</td>
</tr>
<tr>
<td>SATA Settings</td>
<td>Displays options to enable or disable the integrated SATA controller and ports.</td>
</tr>
<tr>
<td>Boot Settings</td>
<td>Displays options to specify the boot mode (BIOS or UEFI). Enables you to modify UEFI and BIOS boot settings.</td>
</tr>
<tr>
<td>Integrated Devices</td>
<td>Displays options to enable or disable integrated device controllers and ports, and to specify related features and options.</td>
</tr>
<tr>
<td>Serial Communication</td>
<td>Displays options to enable or disable the serial ports and specify related features and options.</td>
</tr>
<tr>
<td>System Profile Settings</td>
<td>Displays options to change the processor power management settings, memory frequency, and so on.</td>
</tr>
<tr>
<td>System Security</td>
<td>Displays options to configure the system security settings like, system password, setup password, TPM security, and so on. It also enables or disables support for local BIOS update, the power and NMI buttons on the system.</td>
</tr>
<tr>
<td>Miscellaneous Settings</td>
<td>Displays options to change the system date, time, and so on.</td>
</tr>
</tbody>
</table>

System Information Screen

<table>
<thead>
<tr>

</tr>
<tr>
<td></td>
<td><strong>NOTE:</strong> The QPI speed option displays only when both the processors are installed.</td>
</tr>
<tr>
<td>Alternate RTID (Requestor Transaction ID) Setting</td>
<td>Allows you to allocate more RTIDs to the remote socket increasing cache performance between the sockets or work in normal mode for NUMA. By default, the Alternate RTID (Requestor Transaction ID) Setting is set to <strong>Disabled</strong>.</td>
</tr>
<tr>
<td>Virtualization Technology</td>
<td>Allows you to enable or disable the additional hardware capabilities provided for virtualization. By default, the Virtualization Technology option is set to <strong>Enabled</strong>.</td>
</tr>
<tr>
<td>Adjacent Cache Line Prefetch</td>
<td>Allows you to optimize the system for applications that require high utilization of sequential memory access. By default, the Adjacent Cache Line Prefetch option is set to <strong>Enabled</strong>. You can disable this option for applications that require high utilization of random memory access.</td>
</tr>
<tr>
<td>Hardware Prefetcher</td>
<td>Allows you to enable or disable hardware prefetcher. By default, the Hardware Prefetcher option is set to <strong>Enabled</strong>.</td>
</tr>
<tr>
<td>DCU Streamer Prefetcher</td>
<td>Allows you to enable or disable Data Cache Unit streamer prefetcher. By default, the DCU Streamer Prefetcher option is set to <strong>Enabled</strong>.</td>
</tr>
<tr>
<td>DCU IP Prefetcher</td>
<td>Allows you to enable or disable Data Cache Unit IP prefetcher. By default, the DCU IP Prefetcher option is set to <strong>Enabled</strong>.</td>
</tr>
<tr>
<td>Execute Disable</td>
<td>Allows you enable or disable execute disable memory protection technology. By default, the Execute Disable option is set to <strong>Enabled</strong>.</td>
</tr>
<tr>
<td>Logical Processor Idling</td>
<td>Allows you to enable or disable the OS capability to put logical processors in the idling state in order to reduce power consumption. By default, the option is set to <strong>Disabled</strong>.</td>
</tr>
<tr>
<td>Dell Controlled Turbo</td>
<td>Helps in controlling Turbo engagement. By default, the option is set to <strong>Disabled</strong>. This feature is also referred to as Dell Processor Acceleration Technology (DPAT).</td>
</tr>
<tr>
<td></td>
<td><strong>NOTE:</strong> This option is available only on systems installed with an E5-2690 or E5-2600 V2 Xeon series processor and support Turbo. Enable Turbo Boost under <strong>System Profile Settings</strong> and set the <strong>System Profile</strong> to <strong>Performance</strong> mode when utilizing this feature. Enabling Dell Controlled Turbo will force fans to run at maximum R.P.M.</td>
</tr>
<tr>
<td></td>
<td><strong>NOTE:</strong> DPAT works when DPAT is enabled in BIOS setup and either one of the following settings is available:</td>
</tr>
<tr>
<td></td>
<td>• <strong>System Profile</strong> is set to <strong>Maximum Performance</strong>. This automatically enables Turbo mode.</td>
</tr>
<tr>
<td></td>
<td>• <strong>System Profile</strong> is set to <strong>Custom</strong> and <strong>CPU Power Management</strong> is set to <strong>Maximum Performance</strong> and <strong>Turbo</strong> is enabled.</td>
</tr>
<tr>
<td></td>
<td><strong>NOTE:</strong> When DPAT is disabled, fan offset speed does not change and remains high. Set <strong>Fan offset</strong> to normal on the <strong>iDRAC Thermal Settings</strong> page.</td>
</tr>
<tr>
<td>Number of Cores per Processor</td>
<td>Allows you to control the number of enabled cores in each processor. By default, the Number of Cores per Processor option is set to <strong>All</strong>.</td>

<td>Allows you to enable or disable the OS watchdog timer. When this field is enabled, the operating system initializes the timer and the OS watchdog timer helps in recovering the operating system. By default, the OS Watchdog Timer option is set to Disabled.</td>
</tr>
<tr>
<td>Embedded Video Controller</td>
<td>Allows you to enable or disable the Embedded Video Controller. By default, the embedded video controller is Enabled.</td>
</tr>
<tr>
<td>SR-IOV Global Enable</td>
<td>Allows you to enable or disable the BIOS configuration of Single Root I/O Virtualization (SR-IOV) devices. By default, the SR-IOV Global Enable option is set to Disabled.</td>
</tr>
<tr>
<td>Slot Disablement</td>
<td>Allows you to enable or disable available PCIe slots on your system. The Slot Disablement feature controls the configuration of PCIe cards installed in the specified slot.</td>
</tr>
<tr>
<td>CAUTION: Slot disablement must be used only when the installed peripheral card is preventing booting into the Operating System or causing delays in system startup. If the slot is disabled, both the Option ROM and UEFI driver are disabled.</td>
<td></td>
</tr>
<tr>
<td>Memory Mapped I/O above 4 GB</td>
<td>Allows you to enable support for PCIe devices that require large amounts of memory. By default, the option is set to Enabled.</td>
</tr>
</tbody>
</table>

### Serial Communications Screen

<table>
<thead>
<tr>
<th>Menu Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Serial Communication</td>
<td>Allows you to select serial communication devices (Serial Device 1 and Serial Device 2) in the BIOS. BIOS console redirection can also be enabled and the port address can be specified. By default, Serial Communication option is set to On without Console Redirection.</td>
</tr>
<tr>
<td>Serial Port Address</td>
<td>Allows you to set the port address for serial devices. By default, the Serial Port Address option is set to Serial Device 1=COM2, Serial Device 2=COM1.</td>
</tr>
<tr>
<td>NOTE: Only Serial Device 2 can be used for Serial Over LAN (SOL). To use console redirection by SOL, configure the same port address for console redirection and the serial device.</td>
<td></td>
</tr>
<tr>
<td>External Serial Connector</td>
<td>Allows you to associate the external serial connector to serial device 1, serial device 2, or remote access device. By default, the External Serial Connector option is set to Serial Device 1.</td>
</tr>
<tr>
<td>NOTE: Only Serial Device 2 can be used for SOL. To use console redirection by SOL, configure the same port address for console redirection and the serial device.</td>
<td></td>
</tr>
<tr>
<td>Failsafe Baud Rate</td>
<td>Displays the failsafe baud rate for console redirection. The BIOS attempts to determine the baud rate automatically. This failsafe baud rate is used only if the attempt fails and the value must not be changed. By default, the Failsafe Baud Rate option is set to 11520.</td>
</tr>
<tr>
<td>Remote Terminal Type</td>
<td>Allows you to set the remote console terminal type. By default, the Remote Terminal Type option is set to VT 100/VT 220.</td>
</tr>
</tbody>
</table>
### Menu Item | Description
--- | ---
Redirection After Boot | Allows you to enable or disable to the BIOS console redirection when the operating system is loaded. By default, the Redirection After Boot option is set to Enabled.

### System Profile Settings Screen

| Menu Item | Description |
--- | --- |
System Profile | Allows you to set the system profile. If you set the System Profile option to a mode other than Custom, the BIOS automatically sets the rest of the options. You can only change the rest of the options if the mode is set to Custom. By default, the System Profile option is set to Performance Per Watt Optimized (DAPC). DAPC is Dell Active Power Controller.
  
  **NOTE:** The following parameters are available only when the System Profile is set to Custom.

CPU Power Management | Allows you to set the CPU power management. By default, the CPU Power Management option is set to System DBPM (DAPC). DBPM is Demand-Based Power Management.

Memory Frequency | Allows you to set the memory frequency. By default, the Memory Frequency option is set to Maximum Performance.

Turbo Boost | Allows you to enable or disable the processor to operate in turbo boost mode. By default, the Turbo Boost option is set to Enabled.

C1E | Allows you to enable or disable the processor to switch to a minimum performance state when it is idle. By default, the C1E option is set to Enabled.

C States | Allows you to enable or disable the processor to operate in all available power states. By default, the C States option is set to Enabled.

Monitor/Mwait | Allows you to enable Monitor/Mwait instructions in the processor. By default, the Monitor/Mwait option is set to Enabled for all system profiles, except Custom.

  **NOTE:** This option can be disabled only if the C States option in Custom mode is disabled.

  **NOTE:** When C States is enabled in Custom mode, changing the Monitor/Mwait setting does not impact system power/performance.

Memory Patrol Scrub | Allows you to set the memory patrol scrub frequency. By default, the Memory Patrol Scrub option is set to Standard.

Memory Refresh Rate | Allows you to set the memory refresh rate. By default, the Memory Refresh Rate option is set to 1x.

Memory Operating Voltage | Allows you to set the DIMM voltage selection. When set to Auto, the system automatically sets the system voltage to the optimal setting based on the DIMM capacity and the number of DIMMs installed. By default, the Memory Operating Voltage option is set to Auto.

Collaborative CPU Performance Control | When set to Enabled, the CPU power management is controlled by the OS DBPM and the System DBPM (DAPC). By default, the option is set to Disabled.
System Security Screen

<table>
<thead>
<tr>
<th>Menu Item</th>

<tr>
<td>Keyboard NumLock</td>
<td>Allows you to set whether the system boots with the NumLock enabled or disabled. By default the Keyboard NumLock is set to On.</td>
</tr>
<tr>
<td>NOTE:</td>
<td>This option does not apply to 84-key keyboards.</td>
</tr>
<tr>
<td>Report Keyboard Errors</td>
<td>Allows you to set whether keyboard-related error messages are reported during system boot. By default, the Report Keyboard Errors option is set to Report.</td>
</tr>
<tr>
<td>F1/F2 Prompt on Error</td>
<td>Allows you to enable or disable the F1/F2 prompt on error. By default, F1/F2 Prompt on Error is set to Enabled.</td>
</tr>
<tr>
<td>In-System Characterization</td>
<td>This option enables or disables In-System Characterization. By default, In-System Characterization is set to Enabled.</td>
</tr>
</tbody>
</table>

## System And Setup Password Features

You can create a system password and a setup password to secure your system. To enable creation of the system and setup password, the password jumper must be set to enabled. For more information on the password jumper settings, see System Board Jumper Settings.

### System password
This is the password that you must enter before you can boot your system.

### Setup password
This is the password that you must enter to access and make changes to the BIOS or UEFI settings of your system.

⚠️ **CAUTION:** The password features provide a basic level of security for the data on your system.

⚠️ **CAUTION:** Anyone can access the data stored on your system if the system is running and unattended.

⚠️ **NOTE:** Your system is shipped with the system and setup password feature disabled.

## Assigning A System And/Or Setup Password

⚠️ **NOTE:** The password jumper enables or disables the System Password and Setup Password features. For more information on the password jumper settings, see System Board Jumper Settings.

You can assign a new System Password and/or Setup Password or change an existing System Password and/or Setup Password only when the password jumper setting is enabled and Password Status is Unlocked. If the Password Status is Locked, you cannot change the System Password and/or Setup Password.

If the password jumper setting is disabled, the existing System Password and Setup Password is deleted and you need not provide the system password to boot the system.
To assign a system and/or setup password:

1. To enter System Setup, press <F2> immediately after a power-on or reboot.
2. In the System Setup Main Menu, select System BIOS and press <Enter>. The System BIOS screen is displayed.
4. In the System Security screen, verify that Password Status is Unlocked.
5. Select System Password, enter your system password, and press <Enter> or <Tab>. Use the following guidelines to assign the system password:

   • A password can have up to 32 characters.
   • The password can contain the numbers 0 through 9.
   • Only lower case letters are valid, upper case letters are not allowed.
   • Only the following special characters are allowed: space, ("), (+), (.), (-), (/), (;), ([), (]), (`).

   A message prompts you to re-enter the system password.
6. Re-enter the system password that you entered earlier and click OK.
7. Select Setup Password, enter your system password and press <Enter> or <Tab>. A message prompts you to re-enter the setup password.
8. Re-enter the setup password that you entered earlier and click OK.
9. Press <Esc> to return to the System BIOS screen. Press <Esc> again, and a message prompts you to save the changes.

   ✔️ NOTE: Password protection does not take effect until the system reboots.

Deleting Or Changing An Existing System And/Or Setup Password

Ensure that the Password jumper is set to enabled and the Password Status is Unlocked before attempting to delete or change the existing System and/or Setup password. You cannot delete or change an existing System or Setup password if the Password Status is Locked.

To delete or change the existing System and/or Setup password:

1. To enter System Setup, press <F2> immediately after a power-on or restart.
2. In the System Setup Main Menu, select System BIOS and press <Enter>. The System BIOS screen is displayed.
4. In the System Security screen, verify that Password Status is Unlocked.
5. Select System Password, alter or delete the existing system password and press <Enter> or <Tab>.
6. Select Setup Password, alter or delete the existing setup password and press <Enter> or <Tab>.

   ✔️ NOTE: If you change the System and/or Setup password a message prompts you to re-enter the new password. If you delete the System and/or Setup password, a message prompts you to confirm the deletion.
7. Press <Esc> to return to the System BIOS screen. Press <Esc> again, and a message prompts you to save the changes.

   ✔️ NOTE: You can disable password security while logging on to the system. To disable the password security, turn on or reboot your system, type your password and press <Ctrl><Enter>.
Using Your System Password To Secure Your System

NOTE: If you have assigned a setup password, the system accepts your setup password as an alternate system password.

1. Turn on or reboot your system.
2. Type your password and press <Enter>.

When Password Status is Locked, type the password and press <Enter> when prompted at reboot.

If an incorrect system password is entered, the system displays a message and prompts you to re-enter your password. You have three attempts to enter the correct password. After the third unsuccessful attempt, the system displays an error message that the system has halted and must be powered down.

Even after you shut down and restart the system, the error message is displayed until the correct password is entered.

NOTE: You can use the Password Status option in conjunction with the System Password and Setup Password options to protect your system from unauthorized changes.

Operating With A Setup Password Enabled

If Setup Password is Enabled, enter the correct setup password before modifying most of the System Setup options.

If you do not enter the correct password in three attempts, the system displays the message

Invalid Password! Number of unsuccessful password attempts: <x> System Halted! Must power down.

Even after you shut down and restart the system, the error message is displayed until the correct password is entered. The following options are exceptions:

• If System Password is not Enabled and is not locked through the Password Status option, you can assign a system password.
• You cannot disable or change an existing system password.

NOTE: You can use the Password Status option in conjunction with the Setup Password option to protect the system password from unauthorized changes.

Entering The UEFI Boot Manager

NOTE: Operating systems must be 64-bit UEFI-compatible (for example, Microsoft Windows Server 2008 x64 version) to be installed from the UEFI boot mode. DOS and 32-bit operating systems can only be installed from the BIOS boot mode.

The Boot Manager enables you to:

• Add, delete, and arrange boot options.
• Access System Setup and BIOS-level boot options without restarting.

To enter the Boot Manager:

1. Turn on or restart your system.
2. Press <F11> after you see the following message:
   
   <F11> = UEFI Boot Manager

   If your operating system begins to load before you press <F11>, allow the system to finish booting, and then restart your system and try again.
Using The Boot Manager Navigation Keys

<table>
<thead>
<tr>
<th>Key</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Up arrow</td>
<td>Moves to the previous field.</td>
</tr>
<tr>
<td>Down arrow</td>
<td>Moves to the next field.</td>
</tr>
<tr>
<td>&lt;Enter&gt;</td>
<td>Allows you to type in a value in the selected field (if applicable) or follow the link in the field.</td>
</tr>
<tr>
<td>Spacebar</td>
<td>Expands or collapses a drop-down list, if applicable.</td>
</tr>
<tr>
<td>&lt;Tab&gt;</td>
<td>Moves to the next focus area.</td>
</tr>
</tbody>
</table>

**NOTE:** For the standard graphics browser only.

| <Esc>          | Moves to the previous page till you view the main screen. Pressing <Esc> in the main screen exits the Boot Manager and proceeds with system boot. |
| <F1>           | Displays the System Setup help file.                                         |

**NOTE:** For most of the options, any changes that you make are recorded but do not take effect until you restart the system.

Boot Manager Screen

## Embedded System Management

The Dell Lifecycle Controller provides advanced embedded systems management throughout the server's lifecycle. The Lifecycle Controller can be started during the boot sequence and can function independently of the operating system.

**NOTE:** Certain platform configurations may not support the full set of features provided by the Lifecycle Controller.

For more information about setting up the Lifecycle Controller, configuring hardware and firmware, and deploying the operating system, see the Lifecycle Controller documentation at [dell.com/support/manuals](http://dell.com/support/manuals).

## iDRAC Settings Utility

The iDRAC Settings utility is an interface to set up and configure the iDRAC parameters using UEFI. You can enable or disable various iDRAC parameters using the iDRAC Settings Utility.

**NOTE:** Accessing some of the features on the iDRAC Settings Utility requires the iDRAC7 Enterprise License upgrade.

For more information on using iDRAC, see the *iDRAC7 User's Guide* at [dell.com/emsmanuals](http://dell.com/emsmanuals).

### Entering The iDRAC Settings Utility

1. Turn on or restart the managed system.
3. In the System Setup Main Menu page, click **iDRAC Settings**.
   
   The iDRAC Settings screen is displayed.

### Changing The Thermal Settings

The iDRAC Settings utility enables you to select and customize the thermal control settings for your system.

1. Enter the iDRAC Settings utility.
2. Under **iDRAC Settings** → **Thermal** → **User Option**, select between the following options:
   
   - Default
   - Maximum Exhaust Temperature
   - Fan Speed Offset

   **NOTE:** When the **User Option** is set to the default **Auto** setting, the user option cannot be modified.

3. Set the **Maximum Air Exhaust Temperature** or the **Fan Speed Offset** fields.
4. Click **Back** → **Finish** → **Yes**.
Installing System Components

Recommended Tools

You may need the following items to perform the procedures in this section:

- Key to the system keylock
- #2 Phillips screwdriver
- T10 and T15 Torx screwdrivers
- Wrist grounding strap connected to ground

Following tools are required for assembling cables for a DC power supply unit (PSU), when available:

- AMP 90871-1 hand-crimping tool or equivalent
- Wire-stripper pliers capable of removing insulation from size 10 AWG solid or stranded, insulated copper wire

**NOTE:** Use alpha wire part number 3080 or equivalent (65/30 stranding).

Front Bezel (Optional)

Removing The Front Bezel

1. Unlock the keylock at the left end of the bezel.
2. Lift the release latch next to the keylock.
3. Rotate the left end of the bezel away from the front panel.
4. Unhook the right end of the bezel and pull the bezel away from the system.
Figure 12. Removing and Installing the Front Bezel

1. release latch
2. keylock
3. front bezel
4. locking hook

Installing The Front Bezel

1. Hook the right end of the bezel onto the chassis.
2. Fit the free end of the bezel onto the system.
3. Secure the bezel with the keylock.

Opening And Closing The System

⚠️ WARNING: Whenever you need to lift the system, get others to assist you. To avoid injury, do not attempt to lift the system by yourself.

⚠️ WARNING: Opening or removing the system cover when the system is on may expose you to a risk of electric shock.

⚠️ CAUTION: Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.

⚠️ CAUTION: Do not operate the system without the cover for a duration exceeding five minutes.

Opening The System

⚠️ NOTE: It is recommended that you always use a static mat and static strap while working on components in the interior of the system.

1. Turn off the system and attached peripherals, and disconnect the system from the electrical outlet.
2. Rotate the latch release lock counter clockwise to the unlocked position.
3. Lift the latch on top of the system and slide the cover back.
4. Grasp the cover on both sides, and carefully lift the cover away from the system.
Closing The System

1. Lift the latch on the cover.
2. Place the cover onto the chassis and offset the cover slightly back so that it clears the chassis hooks and lays flush on the chassis.
3. Push down the latch to move the cover into the closed position.
4. Rotate the latch release lock in a clockwise direction to secure the cover.
5. Reconnect the system to its electrical outlet and turn the system on, including any attached peripherals.

Inside The System

⚠️ CAUTION: Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.

NOTE: Components that are hot-swappable are marked orange and touch points on the components are marked blue.

Cooling Shroud

Removing The Cooling Shroud

⚠️ CAUTION: Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.

⚠️ CAUTION: Never operate your system with the cooling shroud removed. The system may get overheated quickly, resulting in shutdown of the system and loss of data.

1. Turn off the system, including any attached peripherals, and disconnect the system from the electrical outlet and peripherals.
2. Open the system.
3. If installed, remove the full-length PCIe card.
4. Hold the touch points and lift the shroud away from the system.

![Figure 16. Removing and Installing the Cooling Shroud](image)

| 1. cooling shroud | 2. supports for a full-length PCIe card |

### Installing The Cooling Shroud

⚠️ **CAUTION:** Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.

**NOTE:** For proper seating of the cooling shroud in the chassis, ensure that the cables inside the system are routed along the chassis wall and secured using the cable securing bracket.

1. Align the tabs on the cooling shroud with the securing slots on the chassis.
2. Lower the cooling shroud into the chassis until it is firmly seated.
3. If applicable, replace the full-length PCIe card.
4. Close the system.
5. Reconnect the system to its electrical outlet and turn the system on, including any attached peripherals.

### System memory

Your system supports DDR3 unbuffered ECC DIMMs (ECC UDIMMs), registered DIMMs (RDIMMs), and load reduced DIMMs (LRDIMMs). It supports DDR3 and DDR3L voltage specifications.

**NOTE:** MT/s indicates DIMM speed in MegaTransfers per second.

Memory bus operating frequency can be 1866 MT/s, 1600 MT/s, 1333 MT/s, 1066 MT/s, or 800 MT/s depending on:

- **DIMM type** (UDIMM, RDIMM, or LRDIMM)
  - **NOTE:** PowerEdge R720xd with 3.5 inch hard-drive configuration does not support LRDIMMs due to thermal limitations.
- **DIMM configuration** (number of ranks)
- **maximum frequency of the DIMMs**
- number of DIMMs populated per channel
- DIMM operating voltage
- system profile selected (for example, Performance Optimized, Custom, or Dense Configuration Optimized)
- maximum supported DIMM frequency of the processors

The system contains 24 memory sockets split into two sets of 12 sockets, one set per processor. Each 12-socket set is organized into four channels. In each channel, the release levers of the first socket are marked white, the second socket black, and the third socket green.

**NOTE:** DIMMs in sockets A1 to A12 are assigned to processor 1 and DIMMs in sockets B1 to B12 are assigned to processor 2.

![Image of memory socket locations](image)

**Figure 17. Memory socket locations**

Memory channels are organized as follows:
**Processor 1**
- channel 0: slots A1, A5, and A9
- channel 1: slots A2, A6, and A10
- channel 2: slots A3, A7, and A11
- channel 3: slots A4, A8, and A12

**Processor 2**
- channel 0: slots B1, B5, and B9
- channel 1: slots B2, B6, and B10
- channel 2: slots B3, B7, and B11
- channel 3: slots B4, B8, and B12

The following table shows the memory populations and operating frequencies for the supported configurations.

**General Memory Module Installation Guidelines**

This system supports Flexible Memory Configuration, enabling the system to be configured and run in any valid chipset architectural configuration. The following are the recommended guidelines for best performance:

- UDIMMs, RDIMMs, and LRDIMMs must not be mixed.
- x4 and x8 DRAM based DIMMs can be mixed. For more information, see Mode-Specific Guidelines.
- A maximum of two UDIMMs can be populated in a channel.
• Up to two quad-rank RDIMMs and up to three dual- or single-rank RDIMMs can be populated per channel. When a quad-rank RDIMM is populated in the first slot with white release levers, the third DIMM slot in the channel with green release levers cannot be populated.
• Up to three LRDIMMs can be populated regardless of rank count.
• Populate DIMM sockets only if a processor is installed. For single-processor systems, sockets A1 to A12 are available. For dual-processor systems, sockets A1 to A12 and sockets B1 to B12 are available.
• Populate all sockets with white release tabs first, then black, and then green.
• Do not populate the third DIMM socket in a channel with green release tabs, if a quad-rank RDIMM is populated in the first socket with white release tabs.
• Populate the sockets by highest rank count in the following order — first in sockets with white release levers, then black, and then green. For example, if you want to mix quad-rank and dual-rank DIMMs, populate quad-rank DIMMs in the sockets with white release tabs and dual-rank DIMMs in the sockets with black release tabs.
• In a dual-processor configuration, the memory configuration for each processor should be identical. For example, if you populate socket A1 for processor 1, then populate socket B1 for processor 2, and so on.
• Memory modules of different sizes can be mixed provided that other memory population rules are followed (for example, 2 GB and 4 GB memory modules can be mixed).
• Populate four DIMMs per processor (one DIMM per channel) at a time to maximize performance.
• If memory modules with different speeds are installed, they will operate at the speed of the slowest installed memory module(s) or slower depending on system DIMM configuration.

Mode-Specific Guidelines

Four memory channels are allocated to each processor. The allowable configurations depend on the memory mode selected.

**NOTE:** x4 and x8 DRAM based DIMMs can be mixed, providing support for RAS features. However, all guidelines for specific RAS features must be followed. x4 DRAM based DIMMs retain Single Device Data Correction (SDDC) in memory optimized (independent channel) mode. x8 DRAM based DIMMs require Advanced ECC mode to gain SDDC.

The following sections provide additional slot population guidelines for each mode.

**Advanced ECC (Lockstep)**
Advanced ECC mode extends SDDC from x4 DRAM based DIMMs to both x4 and x8 DRAMs. This protects against single DRAM chip failures during normal operation.

Memory installation guidelines:

• Memory modules must be identical in size, speed, and technology.
• DIMMs installed in memory sockets with white release tabs must be identical and similar rule applies for sockets with black and green release tabs. This ensures that identical DIMMs are installed in matched pairs - for example, A1 with A2, A3 with A4, A5 with A6, and so on.

**NOTE:** Advanced ECC with Mirroring is not supported.

**Memory Optimized (Independent Channel) Mode**
This mode supports SDDC only for memory modules that use x4 device width and does not impose any specific slot population requirements.

**Memory Sparing**

**NOTE:** To use memory sparing, this feature must be enabled in the System Setup.

In this mode, one rank per channel is reserved as a spare. If persistent correctable errors are detected on a rank, the data from this rank is copied to the spare rank and the failed rank is disabled.
With memory sparing enabled, the system memory available to the operating system is reduced by one rank per channel. For example, in a dual-processor configuration with sixteen 4 GB dual-rank DIMMs, the available system memory is: \( \frac{3}{4} \text{ (ranks/channel)} \times 16 \text{ (DIMMs)} \times 4 \text{ GB} = 48 \text{ GB} \), and not \( 16 \text{ (DIMMs)} \times 4 \text{ GB} = 64 \text{ GB} \).

*NOTE:* Memory sparing does not offer protection against a multi-bit uncorrectable error.

*NOTE:* Both Advanced ECC/Lockstep and Optimizer modes support Memory Sparing.

### Memory Mirroring

Memory Mirroring offers the strongest DIMM reliability mode compared to all other modes, providing improved uncorrectable multi-bit failure protection. In a mirrored configuration, the total available system memory is one half of the total installed physical memory. Half of the installed memory is used to mirror the active DIMMs. In the event of an uncorrectable error, the system will switch over to the mirrored copy. This ensures SDDC and multi-bit protection.

Memory installation guidelines:

- Memory modules must be identical in size, speed, and technology.
- DIMMs installed in memory sockets with white release levers must be identical and similar rule applies for sockets with black and green release tabs. This ensures that identical DIMMs are installed in matched pairs - for example, A1 with A2, A3 with A4, A5 with A6, and so on.

### Sample memory configurations

The following tables show sample memory configurations for one and two processor configurations that follow the appropriate memory guidelines stated in this section.

*NOTE:* 16 GB quad-rank RDIMMs are not supported.

*NOTE:* 1R, 2R and 4R in the following tables indicate single-, dual-, and quad-rank DIMMs respectively.

**Removing Memory Modules**

⚠️ WARNING: The memory modules are hot to the touch for some time after the system has been powered down. Allow time for the memory modules to cool before handling them. Handle the memory modules by the card edges and avoid touching the components or metallic contacts on the memory module.
CAUTION: Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.

CAUTION: To ensure proper system cooling, memory-module blanks must be installed in any memory socket that is not occupied. Remove memory-module blanks only if you intend to install memory modules in those sockets.

1. Turn off the system, including any attached peripherals, and disconnect the system from the electrical outlet and peripherals.
2. Open the system.
3. Remove the cooling shroud.
4. Locate the appropriate memory-module socket(s).
5. To release the memory-module blank from the socket, simultaneously press the ejectors on both ends of the memory module socket.

CAUTION: Handle each memory module only by the card edges, making sure not to touch the middle of the memory module or metallic contacts. To avoid damaging the memory module, handle only one memory module at a time.

6. If a memory module or a memory-module blank is installed in the socket, remove it.

NOTE: Retain removed memory-module blank(s) for future use.
Installing Memory Modules

⚠️ **WARNING:** The memory modules are hot to the touch for some time after the system has been powered down. Allow time for the memory modules to cool before handling them. Handle the memory modules by the card edges and avoid touching the components or metallic contacts on the memory module.

⚠️ **CAUTION:** Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.

⚠️ **CAUTION:** To ensure proper system cooling, memory-module blanks must be installed in any memory socket that is not occupied. Remove memory-module blanks only if you intend to install memory modules in those sockets.

1. Turn off the system, including any attached peripherals, and disconnect the system from the electrical outlet.
2. Open the system.
3. If applicable, remove the cooling shroud.
4. Locate the memory-module sockets.

⚠️ **CAUTION:** Handle each memory module only by the card edges, making sure not to touch the middle of the memory module or metallic contacts. To avoid damaging the memory module, handle only one memory module at a time.

5. If a memory module or a memory-module blank is installed in the socket, remove it.

⚠️ **NOTE:** Retain removed memory-module blank(s) for future use.

6. Align the memory-module’s edge connector with the alignment key of the memory-module socket, and insert the memory module in the socket.

⚠️ **NOTE:** The memory-module socket has an alignment key that allows you to install the memory module in the socket in only one orientation.

⚠️ **CAUTION:** To prevent damage to the memory-module socket during installation, apply pressure at both ends of the memory module evenly. Do not apply pressure to the center of the memory module.
7. Press down on the memory module with your thumbs until the memory module snaps into place.

![Diagram of memory module installation](image)

**Figure 20. Installing The Memory Module**

1. memory module
2. memory-module ejectors
3. memory-module socket alignment key
4. memory-module alignment key

**NOTE:** When the memory module is properly seated in the socket, the levers on the memory-module socket align with the levers on the other identical sockets that have memory modules installed.

8. Repeat step 4 through step 7 of this procedure to install the remaining memory modules.

9. Replace the cooling shroud.

10. Close the system.

11. Reconnect the system to its electrical outlet and turn on the system, including any attached peripherals.

12. Press <F2> to enter the System Setup, and check the memory settings. The system should have already changed the value to reflect the newly installed memory.

13. If the value is incorrect, one or more of the memory modules may not be installed properly. Repeat step 4 through step 7 of this procedure, checking to ensure that the memory modules are firmly seated in their sockets.

14. Run the appropriate diagnostic test. For more information, see Using System Diagnostics.

**Hard Drives**

All hard drives connect to the system board through the hard-drive backplane. Hard drives are supplied in hot-swappable hard-drive carriers that fit in the hard-drive slots.

**CAUTION:** Before attempting to remove or install a hard drive while the system is running, see the documentation for the storage controller card to ensure that the host adapter is configured correctly to support hot-swap hard drive removal and insertion.

**CAUTION:** Do not turn off or reboot your system while the hard drive is being formatted. Doing so can cause a hard drive failure.

**NOTE:** Use only hard drives that have been tested and approved for use with the hard-drive backplane.

When you format a hard drive, allow enough time for the formatting to be completed. Be aware that high-capacity hard drives can take a number of hours to format.
Removing A 2.5 Inch Hard-Drive Blank

⚠️ CAUTION: To maintain proper system cooling, all empty hard-drive slots must have hard-drive blanks installed.

1. If installed, remove the front bezel.
2. Press the release button and slide the hard-drive blank out until it is free of the hard-drive slot.

![Figure 21. Removing and Installing a 2.5 Inch Hard-Drive Blank](image)

1. hard-drive blank 2. release button

Installing A 2.5 Inch Hard-Drive Blank

1. If installed, remove the front bezel.
2. Insert the hard-drive blank into the hard-drive slot until the release button clicks into place.
3. If applicable, install the front bezel.

Removing A 2.5 Inch Hard-Drive Blank (Back)

⚠️ NOTE: This procedure applies only to PowerEdge R720xd.
CAUTION: To maintain proper system cooling, all empty hard-drive slots must have drive blanks installed.

Pull the hard-drive blank out until it is free of the hard-drive slot.

![Figure 22. Removing and Installing a 2.5 Inch Hard-Drive Blank (Back)](image)

1. hard-drive blank (back)

Installing A 2.5 Inch Hard-Drive Blank (Back)

NOTE: This procedure applies only to PowerEdge R720xd.

Insert the hard-drive blank into the hard-drive slot until it clicks into place.

Removing A 3.5 Inch Hard-Drive Blank

CAUTION: To maintain proper system cooling, all empty hard-drive slots must have drive blanks installed.

1. If installed, remove the front bezel.
2. Grasp the front of the hard-drive blank, press the release button and slide the blank out until it is free of the hard-drive slot.

![Figure 23. Removing and Installing a 3.5 Inch Hard-Drive Blank](image)

1. hard-drive blank 2. release button
Installing A 3.5 Inch Hard-Drive Blank

1. If installed, remove the front bezel.
2. Insert the hard-drive blank into the hard-drive slot until the release button clicks into place.
3. If applicable, install the front bezel.

Removing A Hot-Swap Hard Drive

⚠️ CAUTION: To prevent data loss, ensure that your operating system supports hot-swap drive installation. See the documentation supplied with your operating system.

1. From the management software, prepare the hard drive for removal. Wait until the indicators on the hard-drive carrier signal that the hard drive can be removed safely. For more information, see the documentation for the storage controller.
   If the hard drive is online, the green activity/fault indicator flashes as the drive is turned off. When the hard-drive indicators are off, the hard drive is ready for removal.
2. Press the release button to open the hard-drive carrier release handle.
3. Slide the hard-drive carrier out until it is free of the hard-drive slot.
   ⚠️ CAUTION: To maintain proper system cooling, all empty hard-drive slots must have hard-drive blanks installed.
4. Insert a hard-drive blank in the empty hard-drive slot.

Installing A Hot-Swap Hard Drive

⚠️ CAUTION: Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.
CAUTION: Use only hard drives that have been tested and approved for use with the hard-drive backplane.

CAUTION: Combining SAS and SATA hard drives in the same RAID volume is not supported.

CAUTION: When installing a hard drive, ensure that the adjacent drives are fully installed. Inserting a hard-drive carrier and attempting to lock its handle next to a partially installed carrier can damage the partially installed carrier’s shield spring and make it unusable.

CAUTION: To prevent data loss, ensure that your operating system supports hot-swap drive installation. See the documentation supplied with your operating system.

CAUTION: When a replacement hot-swappable hard drive is installed and the system is powered on, the hard drive automatically begins to rebuild. Make absolutely sure that the replacement hard drive is blank or contains data that you wish to have over-written. Any data on the replacement hard drive is immediately lost after the hard drive is installed.

1. If a hard-drive blank is installed in the hard-drive slot, remove it.
2. Install a hard drive in the hard-drive carrier.
3. Press the release button on the front of the hard-drive carrier and open the hard-drive carrier handle.
4. Insert the hard-drive carrier into the hard-drive slot until the carrier connects with the backplane.
5. Close the hard-drive carrier handle to lock the hard drive in place.

Removing A Hard Drive From A Hard-Drive Carrier

1. Remove the screws from the slide rails on the hard-drive carrier.
2. Lift the hard drive out of the hard-drive carrier.

Figure 25. Removing and Installing a Hard Drive Into a Hard-Drive Carrier

1. hard-drive carrier
2. hard drive
3. Screws (4)

Installing A Hard Drive Into A Hard-Drive Carrier

⚠️ CAUTION: Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.

1. Insert the hard drive into the hard-drive carrier with the connector end of the hard drive toward the back.
2. Align the screw holes on the hard drive with the set of screw holes on the hard-drive carrier.
   When aligned correctly, the back of the hard drive is flush with the back of the hard-drive carrier.
3. Attach the screws to secure the hard drive to the hard-drive carrier.

Optical Drive (Optional)

Removing The Optical Drive

⚠️ NOTE: This procedure applies only to PowerEdge R720.

⚠️ CAUTION: Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.

1. If installed, remove the front bezel.
2. Turn off the system, including any attached peripherals, and disconnect the system from the electrical outlet and peripherals.
3. Open the system.
4. Remove the cooling-fan assembly.
5. Disconnect the power/data cable from the back of the optical drive.
   Note the routing of the power/data cable on the side of the system as you remove them from the system board and the optical drive. You must route these cables properly when you replace them to prevent them from being pinched or crimped.
6. To release the optical drive, press and push the release tab toward the front of the system.
7. Slide the optical drive out of the system until it is free of the optical-drive slot.
8. If you are not adding a new optical drive, install the optical-drive blank.
9. Install the cooling-fan assembly.
10. Close the system.
11. Reconnect the system to its electrical outlet and turn the system on, including any attached peripherals.
12. If applicable, install the front bezel.
Installing The Optical Drive

NOTE: This procedure applies only to PowerEdge R720.

CAUTION: Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.

1. If installed, remove the front bezel.
2. Turn off the system, including any attached peripherals, and disconnect the system from its electrical outlet.
3. Open the system.
4. To remove the optical drive blank, press the blue release tab at the back of the blank and push the blank out of the system.
5. Align the optical drive with the optical drive slot on the front of chassis.
6. Slide the optical drive into the slot until the latch snaps into place.
7. Connect the power/data cable to the back of the drive.
8. Route the power/data cable along the inside left wall of the chassis.
9. Connect the power/data cable to the connectors on the system board.
10. Install the cooling-fan assembly.
11. Close the system.
12. If applicable, install the front bezel.
13. Reconnect the system to its electrical outlet and turn the system on, including any attached peripherals.
Cooling Fans

Your system supports hot-swappable cooling fans.

NOTE: In the event of a problem with a particular fan, the fan number is referenced by the system’s management software, allowing you to easily identify and replace the proper fan by noting the fan numbers on the cooling fan assembly.

Removing A Cooling Fan

WARNING: Opening or removing the system cover when the system is on may expose you to a risk of electric shock. Exercise utmost care while removing or installing cooling fans.

CAUTION: Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.

CAUTION: The cooling fans are hot-swappable. To maintain proper cooling while the system is on, replace only one fan at a time.

CAUTION: Do not operate the system with the cover removed for a duration exceeding five minutes.

NOTE: The procedure for removing each fan is identical.

1. Open the system.
2. Press the fan release tab and lift the cooling fan out of the cooling-fan assembly.

![Figure 27. Removing and Installing a Cooling Fan](image)

1. cooling-fan assembly
2. fan release tab
3. cooling fans (6)
4. cooling-fan connectors (6)
Installing A Cooling Fan

⚠️ CAUTION: The PowerEdge R720 and R720xd cooling fans are not compatible with each other and must not be interchanged.

⚠️ CAUTION: Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.

1. Open the system.
2. Align the plug at the base of the cooling fan with the connector on the system board.
3. Slide the cooling fan into the securing slots until the tabs lock into place.
4. Close the system.

Removing The Cooling-Fan Assembly

⚠️ CAUTION: Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.

1. Turn off the system, including any attached peripherals, and disconnect the system from the electrical outlet and peripherals.
2. Open the system.
3. Unlock the cooling-fan assembly from the chassis by rotating the blue release lever upward.
4. Lift the cooling-fan assembly out of the chassis.
Installing The Cooling-Fan Assembly

⚠️ CAUTION: Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.

⚠️ CAUTION: Ensure that the cables are correctly installed and retained by the cable retention bracket before installing the cooling-fan assembly. Incorrectly installed cables may get damaged.

1. Align the cooling-fan assembly slots with the guide pins on the chassis.
2. Slide the cooling-fan assembly into the chassis.
3. Lock the cooling-fan assembly into the chassis by rotating the blue release levers downward until firmly seated.
4. Close the system.
5. Reconnect the system to its electrical outlet and turn the system on, including any attached peripherals.

Internal USB Memory Key (Optional)

An optional USB memory key installed inside your system can be used as a boot device, security key, or mass storage device. The USB connector must be enabled by the Internal USB Port option in the Integrated Devices screen of the System Setup.
To boot from the USB memory key, configure the USB memory key with a boot image and then specify the USB memory key in the boot sequence in the System Setup.

**NOTE:** To locate the internal USB connector (J_USB_INT) on the system board, see System Board Connectors.

### Replacing The Internal USB Key

**CAUTION:** Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.

1. Turn off the system, including any attached peripherals, and disconnect the system from the electrical outlet and peripherals.
2. Open the system.
3. Locate the USB connector / USB key on the system board.
   To locate the USB connector (J_USB_INT), see System Board Connectors.
4. If installed, remove the USB key.
5. Insert the USB key into the USB connector.
6. Close the system.
7. Reconnect the system to its electrical outlet and turn the system on, including any attached peripherals.
8. Enter the System Setup and verify that the USB key is detected by the system.

![Figure 29. Replacing the Internal USB Key](image)

| 1. USB memory key connector | 2. USB memory key |

### PCIe Card Holder

### Removing The PCIe Card Holder

**CAUTION:** Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.
CAUTION: Do not use your system without the PCIe card holder installed. The PCIe card holder is necessary to ensure proper system cooling.

1. Turn off the system, including any attached peripherals, and disconnect the system from the electrical outlet and peripherals.
2. Open the system.
3. If installed, remove the full-length PCIe card.
4. Press the release tab and the touch-point to release the PCIe card holder from the chassis.
5. Lift the PCIe card holder out of the chassis.

NOTE: To ensure proper system cooling, you must replace the PCIe card holder.

Installing The PCIe Card Holder

CAUTION: Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.

CAUTION: Do not use your system without the PCIe card holder installed. The PCIe card holder is necessary to ensure proper system cooling.

1. Turn off the system, including any attached peripherals, and disconnect the system from its electrical outlet.
2. Open the system.
3. Align the PCIe card holder with the projection on the chassis and push it down until firmly seated.
4. If applicable, replace the full-length PCIe card.
5. Close the system.
6. Reconnect the system to its electrical outlet and turn the system on, including any attached peripherals.

**Opening And Closing The PCIe Card Holder Latch**

⚠️ CAUTION: Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.

1. Turn off the system, including any attached peripherals, and disconnect the system from the electrical outlet and peripherals.
2. Open the system.
3. To open the PCIe card holder latch, press the tab.
4. To close the PCIe card holder latch, rotate the latch clockwise until it locks.

⚠️ NOTE: Before installing a full-length PCIe card, the PCIe card holder latch must be closed. When the full-length PCIe card is installed, open the PCIe card holder latch. Before removing the full-length PCIe card, you must close the PCIe card holder latch.

![Figure 31. Opening and Closing the PCIe Card Holder Latch](image)

1. PCIe card holder
2. tab
3. PCIe card holder latch

5. Close the system.
6. Reconnect the system to its electrical outlet and turn the system on, including any attached peripherals.

**Top Cover Lock Latch**

**Installing The Top Cover Lock Latch**

⚠️ CAUTION: Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.

1. Turn off the system, including any attached peripherals, and disconnect the system from its electrical outlet.
2. Open the system.
3. Remove the cover.
4. If applicable, remove the PCIe card holder.
5. Orient the top cover lock latch in a direction such that the screw hole on the top cover lock latch is aligned with the screw hole on the latch.
6. Slide the top cover lock latch until the screw holes are completely aligned.
7. Attach the top cover lock latch to the latch using the Torx screw.

![Figure 32. Installing the Top Cover Lock Latch](image)

8. If applicable, install the PCIe card holder.
9. Close the system.
10. Reconnect the system to its electrical outlet and turn the system on, including any attached peripherals.

Cable Retention Bracket

Removing The Cable Retention Bracket

⚠️ CAUTION: Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.

1. Turn off the system, including any attached peripherals, and disconnect the system from the electrical outlet and peripherals.
2. Open the system.
3. Remove the cooling shroud.
4. Remove all cables routed through the cable retention bracket.
5. Press the tab and slide the cable retention bracket toward the front of the chassis to release it from the chassis.
6. Lift the cable retention bracket out of the chassis.
Installing The Cable Retention Bracket

⚠️ **CAUTION:** Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.

1. Turn off the system, including any attached peripherals, and disconnect the system from its electrical outlet.
2. Open the system.
3. Using alignment pins as guide, slide the cable retention bracket along the chassis wall until the tab snaps into place.
4. Place all cables to be routed in the cable retention bracket.
5. Install the cooling shroud.
6. Close the system.
7. Reconnect the system to its electrical outlet and turn the system on, including any attached peripherals.

Expansion Cards And Expansion-Card Risers

⚠️ **NOTE:** A missing or an unsupported expansion-card riser logs an SEL event. It does not prevent your system from powering on and no BIOS POST message or F1/F2 pause is displayed.

Expansion Card Installation Guidelines

Depending on your system configuration:

- PowerEdge R720 supports seven expansion cards
- PowerEdge R720xd supports six expansion cards

The following PCI Express Generation 3 expansion cards are supported:
Table 3. Supported Expansion Cards

### Removing An Expansion Card From The Expansion-Card Riser 2 Or 3

**CAUTION:** Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.

1. Turn off the system, including any attached peripherals, and disconnect the system from the electrical outlet and peripherals.
2. Open the system.
3. Disconnect any cables connected to the expansion card.
4. Lift the expansion-card latch out of the slot.
5. Grasp the expansion card by its edges, and remove it from the expansion-card connector.
6. If you are removing the card permanently, install a metal filler bracket over the empty expansion slot opening and close the expansion-card latch.

**NOTE:** You must install a filler bracket over an empty expansion slot to maintain Federal Communications Commission (FCC) certification of the system. The brackets also keep dust and dirt out of the system and aid in proper cooling and airflow inside the system.

7. Close the system.
8. Reconnect the system to its electrical outlet and turn the system on, including any attached peripherals.
Figure 34. Removing and Installing the Expansion Card

5. power connector (for GPU cards)

Installing An Expansion Card Into The Expansion-Card Riser 2 Or 3

⚠️ CAUTION: Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.

1. Unpack the expansion card and prepare it for installation.
   For instructions, see the documentation accompanying the card.
2. Turn off the system, including any attached peripherals, and disconnect the system from the electrical outlet and peripherals.
3. Open the system.
4. Lift the expansion-card latch and remove the filler bracket.
5. Holding the card by its edges, position the card so that the connector on the expansion card aligns with the expansion-card connector on the riser.
6. Insert the card-edge connector firmly into the expansion-card connector until the card is fully seated.
7. Replace the expansion-card latch.
8. To install a full-length card, use the supports provided on the cooling shroud.
9. If applicable, connect cables to the expansion card.
   
   **NOTE:** When installing a GPU card on riser 2 or riser 3 (default), connect the GPU card power cable to the power connector on the riser.
10. Close the system.
11. Reconnect the system to its electrical outlet and turn the system on, including any attached peripherals.
12. Install any device drivers required for the card as described in the documentation for the card.

### Removing An Expansion Card From The Expansion-Card Riser 1

**CAUTION:** Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.

**NOTE:** The expansion-card riser 1 can be used only when both the processors are installed.

1. Turn off the system, including any attached peripherals, and disconnect the system from the electrical outlet and peripherals.
2. Open the system.
3. Disconnect any cables connected to the expansion card.
4. Remove the expansion-card riser.
5. Press tab A and rotate the latch clockwise.
6. Press tab B and rotate the latch down.
7. Remove the expansion card from the expansion-card riser.
8. If you are removing the card permanently, install a metal filler bracket over the empty expansion slot opening and close the expansion-card latch.

   **NOTE:** You must install a filler bracket over an empty expansion slot to maintain Federal Communications Commission (FCC) certification of the system. The brackets also keep dust and dirt out of the system and aid in proper cooling and airflow inside the system.
9. Reinstall the expansion-card riser.
10. Close the system.
11. Reconnect the system to its electrical outlet and turn the system on, including any attached peripherals.
Installing An Expansion Card Into The Expansion-Card Riser 1

⚠️ CAUTION: Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.

NOTE: The expansion-card riser 1 can be used only when both the processors are installed.

1. Unpack the expansion card and prepare it for installation.
   For instructions, see the documentation accompanying the card.
2. Turn off the system, including any attached peripherals, and disconnect the system from the electrical outlet and peripherals.
3. Open the system.
4. Remove the expansion-card riser.
5. Press tab A and rotate the latch clockwise.
6. Press tab B and rotate the latch down.
7. Holding the card by its edges, position the card so that the card-edge connector aligns with the expansion-card connector.
8. Insert the card-edge connector firmly into the expansion-card connector until the card is fully seated.
9. Close the expansion-card latches.
10. If applicable, connect any cables to the expansion card.
11. Install the expansion-card riser.
12. Close the system.
13. Reconnect the system to its electrical outlet and turn the system on, including any attached peripherals.
14. Install any device drivers required for the card as described in the documentation for the card.

Removing Expansion-Card Risers

⚠️ CAUTION: Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.

ℹ️ NOTE: The expansion-card riser 1 can be used only when both the processors are installed.

1. Turn off the system, including any attached peripherals, and disconnect the system from the electrical outlet and peripherals.
2. Open the system.
3. Holding the touch points, lift the expansion-card riser from the riser connector on the system board.

![Figure 36. Removing and Installing the Expansion Card Riser 1](image.jpg)

Installing Expansion-Card Risers

CAUTION: Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.

1. If applicable, reinstall the expansion card(s) into the expansion card riser.
2. Align the expansion-card riser with the connector and the riser guide pin on the system board.
3. Lower the expansion-card riser into place until the expansion-card riser is fully seated in the connector.
4. Close the system.
5. Reconnect the system to its electrical outlet and turn the system on, including any attached peripherals.
6. Install any device drivers required for the card as described in the documentation for the card.

GPU Card Installation Guidelines

NOTE: Internal GPU cards are supported on the PowerEdge R720 and not on the PowerEdge R720xd.

NOTE: Due to the high power consumption of GPUs, the ambient system inlet temperature is restricted to 30 °C to ensure adequate system cooling when one or more GPU cards are installed in PowerEdge R720. Note that this is less than the standard environmental specification of 35 °C.

• The PowerEdge R720 must be installed with two processors.
• The processor must be of 115 W or less.
• The processor must use a GPU kit low-profile heat sink.
• Ensure the GPU enablement kit is available.
  GPU enablement kit includes:
  – Low-profile heat sinks
  – System board support brackets
– Power cables for the GPU cards
– Filler brackets with closeout EMI shield for unoccupied PCI-e slots

• All GPU cards must be of the same type and model.
• Ensure that your system uses the redundant 1100 W power supplies.
• You can install up to two double-wide GPU cards.

**NOTE:** Two double-wide GPU cards configuration requires optional riser 3.
• You can install up to four single-wide GPU cards.

**Installing A GPU Card**

⚠️ **CAUTION:** Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.

1. Turn off the system, including any attached peripherals, and disconnect the system from the electrical outlet and peripherals.
2. Open the system.
3. Unpack the GPU cards and the GPU enablement kit.
4. Attach the system board support bracket for the GPU card to the system chassis using the screw provided in the kit.

![Diagram of GPU card installation](image)

a. screw
b. system board support bracket
5. Remove the cooling shroud.
6. Remove the heat sinks.
7. Install the heat sinks from the kit and reinstall the cooling shroud.
8. Connect the GPU power cable/s to the riser card.
9. Unlatch the GPU card lock on the shroud by pushing in the black tab while pulling up the blue card latch.
10. With the blue card latch pulled up, remove the filler brackets for the single- or double-wide GPU cards.
11. Replace the remaining filler brackets with those from the GPU kit.
12. Locate the GPU power connectors on the cable and plug them to the 6-pin and 8-pin connectors on the GPU card.
13. With the GPU card at an angle to the slot on the riser card, insert the connector on the edge of the card into the corresponding connector on the riser slot until the card is fully seated.

   **NOTE:** Ensure the GPU card is installed correctly into the GPU card lock.

14. Press down on the GPU card lock to secure the card in position.
15. Ensure the GPU card is seated into the baffle and press down on the blue dot to close the baffle.
16. Close the system.

### Removing A GPU Card

⚠️ **CAUTION:** Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.

1. Turn off the system, including any attached peripherals, and disconnect the system from the electrical outlet and peripherals.
2. Open the system.
3. Lift the GPU-card latch.
4. Open the baffle.
5. Grasp the GPU card by its edges and slide out the GPU card at an angle to release it from the connector on the riser card.
6. Disconnect the cables from the GPU card.
7. If you are removing the card permanently, install a metal filler bracket over the empty slot opening and close the GPU-card latch.

   **NOTE:** You must install a filler bracket over an empty expansion slot to maintain Federal Communications Commission (FCC) certification of the system. The brackets also keep dust and dirt out of the system and aid in proper cooling and airflow inside the system.

8. Close the system.
9. Reconnect the system to its electrical outlet and turn the system on, including any attached peripherals.
Figure 42. Removing and Installing the GPU Card

5. GPU card

SD vFlash Card

A vFlash SD card is a Secure Digital (SD) card that plugs into the vFlash SD card slot in the system. It provides persistent on-demand local storage and a custom deployment environment that allows automation of server configuration, scripts, and imaging. It emulates USB device(s). For more information, see the iDRAC7 User’s Guide at dell.com/support/manuals.

Replacing An SD vFlash Card

1. Locate the vFlash media slot on the system.
2. To remove the SD vFlash card, push inward on the card to release it, and pull the card from the card slot.
Figure 43. Removing and Installing the SD vFlash Card

1. SD vFlash card
2. SD vFlash card slot

3. To install the SD vFlash card, with the label side facing up, insert the contact-pin end of the SD card into the card slot on the module.

   NOTE: The slot is keyed to ensure correct insertion of the card.

4. Press inward on the card to lock it into the slot.

Removing The vFlash Media Unit

NOTE: This procedure applies only to PowerEdge R720xd.

CAUTION: Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.

1. Turn off the system, including any attached peripherals, and disconnect the system from the electrical outlet and peripherals.
2. Open the system.
3. Remove the screw securing the vFlash media unit to the chassis.
4. Remove the cable from the vFlash media unit and the backplane.
5. Slide the vFlash media unit toward front of chassis and lift it out of the system.
6. Close the system.
7. Reconnect the system to its electrical outlet and turn the system on, including any attached peripherals.
Installing The vFlash Media Unit

NOTE: This procedure applies only to PowerEdge R720xd.

CAUTION: Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.

1. Turn off the system, including any attached peripherals, and disconnect the system from its electrical outlet.
2. Open the system.
3. Slide in and align the vFlash media unit toward the back of chassis.
4. Connect the cable to the vFlash media unit.
5. Replace the screw securing the vFlash media unit to the chassis.
6. Close the system.
7. Reconnect the system to its electrical outlet and turn the system on, including any attached peripherals.
Internal Dual SD Module

NOTE: When the Redundancy option is set to Mirror Mode in the Integrated Devices screen of the System Setup, the information is replicated from one SD card to another.

Removing The Internal Dual SD Module

CAUTION: Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.

1. Turn off the system, including any attached peripherals, and disconnect the system from the electrical outlet and peripherals.
2. Open the system.
3. Remove the expansion-card riser 3 and any card(s) installed in the riser.
4. Locate the internal dual SD module installed on the J_IDSDM connector on the system board.
5. If applicable, remove the SD card(s).
6. Holding the tab, pull the dual SD module to remove it from the system board.
7. Replace the expansion-card riser 3 and if applicable, replace the card(s) in the riser.
8. Close the system.
9. Reconnect the system to its electrical outlet and turn the system on, including any attached peripherals.
Installing The Internal Dual SD Module

⚠️ CAUTION: Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.

1. Turn off the system, including any attached peripherals, and disconnect the system from the electrical outlet and peripherals.
2. Open the system.
3. Remove the expansion-card riser cage 3 and any card(s) installed in the riser.
4. Locate the J_IDSDM connector on the system board.
5. Align the connectors on the system board and the dual SD module.
6. Holding the tab, push the dual SD module until it is firmly seated on the system board.
7. Replace the expansion-card riser 1 and if applicable, replace the card(s) in the riser.
8. Close the system.
9. Reconnect the system to its electrical outlet and turn the system on, including any attached peripherals.
Internal SD Card

Removing An Internal SD Card

⚠️ CAUTION: Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.

1. Turn off the system, including any attached peripherals, and disconnect the system from the electrical outlet and peripherals.
2. Open the system.
3. Remove the expansion-card riser 3 and any card(s) installed in the riser.
4. Locate the SD card slot on the internal dual SD module and press inward on the card to release it from the slot and remove the card.
5. Replace the expansion-card riser 3 and if applicable, replace the card(s) in the riser.
6. Close the system.
7. Reconnect the system to its electrical outlet and turn the system on, including any attached peripherals.

Installing An Internal SD Card

⚠️ CAUTION: Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.

NOTE: To use an SD card with your system, ensure that the internal SD card port is enabled in the System Setup.

1. Turn off the system, including any attached peripherals, and disconnect the system from the electrical outlet and peripherals.
2. Open the system.
3. Remove the expansion-card riser 3 and any card(s) installed in the riser.
4. Locate the SD card connector on the internal dual SD module. With the label side facing up, insert the contact-pin end of the card into the slot.

   NOTE: The slot is keyed to ensure correct insertion of the card.

5. Press the card into the card slot to lock it into place.
6. Replace the expansion-card riser 3 and if applicable, replace the card(s) in the riser.
7. Close the system.
8. Reconnect the system to its electrical outlet and turn the system on, including any attached peripherals.

Integrated Storage Controller Card

Your system includes a dedicated expansion-card slot on the system board for an integrated controller card that provides the integrated storage subsystem for your system’s internal hard drives. The controller supports SAS and SATA hard drives and also enables you to set up the hard drives in RAID configurations as supported by the version of the storage controller included with your system.
Removing The Integrated Storage Controller Card

⚠️ CAUTION: Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.

1. Turn off the system, including any attached peripherals, and disconnect the system from the electrical outlet and peripherals.
2. Open the system.
3. Remove the cooling shroud.
4. Remove the expansion-card riser 1.
5. Push down the two release levers at the edge of the card to disengage the card from the connector.
6. Angle the card so that the other end of the card disengages from the storage-controller card holder on the system board.
7. Replace the expansion-card riser 1.
8. Replace the cooling shroud.
9. Close the system.
10. Reconnect the system to its electrical outlet and turn the system on, including any attached peripherals.

Figure 46. Removing and Installing the Integrated Storage Controller Card

1. storage connector on the system board
2. storage controller card
3. storage-controller card holder
4. release levers (2)
Installing The Integrated Storage Controller Card

⚠️ CAUTION: Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.

1. Turn off the system, including any attached peripherals, and disconnect the system from the electrical outlet.
2. Open the system.
3. Remove the cooling shroud.
4. Remove the expansion-card riser 1.
5. Align one end of the card with the card holder on the system board.
6. Lower the other end of the card into the storage-controller card holder on the system board.
7. Press the card down until it is fully seated.
   - When the card is fully seated, the release levers snap over the edge of the card.
8. Replace the expansion-card riser 1.
9. Replace the cooling shroud.
10. Close the system.
11. Reconnect the system to its electrical outlet and turn the system on, including any attached peripherals.

Network Daughter Card

Removing The Network Daughter Card

⚠️ CAUTION: Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.

1. Turn off the system, including any attached peripherals, and disconnect the system from the electrical outlet and peripherals.
2. Open the system.
3. If installed, remove expansion card(s) from the expansion-card riser 2.
4. Using a #2 Phillips screwdriver, loosen the two captive screws that secure the network daughter card to the system board.
5. Hold the network daughter card by the edges on either side of the touch point and lift to remove it from the connector on the system board.
6. Slide the network daughter card away from the back of the system until the NIC connectors are clear of the slot in the back panel.
7. Lift the network daughter card out of the chassis.
Installing The Network Daughter Card

CAUTION: Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.

1. Angle the card so that the RJ-45 connectors fit through the slot in the back panel.
2. Align the captive screws at back-end of the card with the captive screw sockets on the system board.
3. Press the touch point on the card until the card connector is firmly seated on the system board connector.
4. Using a #2 Phillips screwdriver, tighten the two captive screws to secure the network daughter card to the system board.
5. If applicable, install the expansion card(s) in the expansion-card riser 2.
6. Close the system.
7. Reconnect the system to its electrical outlet and turn the system on, including any attached peripherals.

Processors

Use the following procedure when:

- Installing an additional processor
- Replacing a processor

NOTE: To ensure proper system cooling, you must install a processor blank and a heat-sink blank in any empty processor socket.
Removing A Processor

⚠️ CAUTION: Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.

1. Before upgrading your system, download the latest system BIOS version from support.dell.com and follow the instructions included in the compressed download file to install the update on your system.

   ✔️ NOTE: You can update the system BIOS using the Lifecycle Controller.

2. Turn off the system, including any attached peripherals, and disconnect the system from the electrical outlet. When disconnected from the power source, press and hold the power button for three seconds to fully drain the system of stored power prior to removing the cover.

3. Open the system.

4. Remove the cooling shroud.

   ⚠️ WARNING: The heat sink and processor are hot to the touch for some time after the system has been powered down. Allow the heat sink and processor to cool before handling them.

   ⚠️ CAUTION: Never remove the heat sink from a processor unless you intend to remove the processor. The heat sink is necessary to maintain proper thermal conditions.

5. Using a #2 Phillips screwdriver, loosen one of the heat-sink retention sockets. Wait 30 seconds for the heat sink to loosen from the processor.

6. Loosen the second heat-sink retention socket.

7. Lift the heat sink away from the processor and set the heat sink aside.
Figure 48. Removing and Installing the Processor Heat Sink

1. heat sink
2. retention sockets (2)
3. retention screws (2)
4. processor

⚠️ CAUTION: The processor is held in its socket under strong pressure. Be aware that the release lever can spring up suddenly if not firmly grasped.

8. Position your thumb firmly over the processor socket-release lever near the unlock icon and release the lever from the locked position by pushing down and out from under the tab.

9. Similarly, position your thumb firmly over the processor socket-release lever near the lock icon and release the lever from the locked position by pushing down and out from under the tab. Rotate the lever 90 degrees upward.
Figure 49. Processor Shield Opening and Closing Lever Sequence

1. close-lock symbol
2. processor socket-release lever
3. processor
4. processor socket-release lever
5. open-lock symbol

10. Rotate the processor shield upward and out of the way.

⚠️ CAUTION: The socket pins are fragile and can be permanently damaged. Be careful not to bend the pins in the socket when removing the processor out of the socket.

11. Lift the processor out of the socket and leave the release lever up so that the socket is ready for the new processor.

✏️ NOTE: If you are permanently removing a processor, you must install a processor/DIMM blank in the vacant socket to ensure proper system cooling. The processor/DIMM blank covers the vacant sockets for the DIMMs and the processor.
Installing A Processor

⚠️ CAUTION: Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.

NOTE: If you are installing a single processor, it must be installed in socket CPU1.

1. Before upgrading your system, download the latest system BIOS version from support.dell.com and follow the instructions included in the compressed download file to install the update on your system.

   NOTE: You can update the system BIOS using the Lifecycle Controller.

2. Turn off the system, including any attached peripherals, and disconnect the system from the electrical outlet. When disconnected from the power source, press and hold the power button for three seconds to fully drain the system of stored power prior to removing the cover.

3. Open the system.

4. Remove the cooling shroud.
WARNING: The heat sink and processor are hot to the touch for some time after the system has been powered down. Allow the heat sink and processor to cool before handling them.

CAUTION: Never remove the heat sink from a processor unless you intend to remove the processor. The heat sink is necessary to maintain proper thermal conditions.

5. Remove the heat sink/heat-sink blank and processor/processor blank, as applicable.

NOTE: The procedure to remove the heat-sink blank or processor blank is similar to removing a heat-sink or processor.

6. Unpack the new processor.

7. Align the processor with the socket keys on the ZIF socket.

CAUTION: Positioning the processor incorrectly can permanently damage the system board or the processor.

Be careful not to bend the pins in the socket.

CAUTION: Do not use force to seat the processor. When the processor is positioned correctly, it engages easily into the socket.

8. With the release levers on the processor socket in the open position, align pin 1 of the processor, using pin 1 position guide on the socket, as reference and set the processor lightly in the socket.

9. Close the processor shield.

10. Rotate the socket-release lever near the lock icon until it is locked in position.

11. Similarly, rotate the socket-release lever near the unlock icon until it is locked in position.

12. Using a clean lint-free cloth, remove the thermal grease from the heat sink.

CAUTION: Applying too much thermal grease can result in excess grease coming in contact with and contaminating the processor socket.

13. Open the grease applicator included with your processor kit and apply all of the thermal grease in the applicator to the center of the topside of the new processor.

14. Place the heat sink on the processor.

15. Using a #2 Phillips screwdriver, tighten the heat-sink retention sockets.

16. Install the cooling shroud.

17. Close the system.

18. Reconnect your system and peripherals to their electrical outlets, and turn on the system.

19. Press <F2> to enter the System Setup and check that the processor information matches the new system configuration.

20. Run the system diagnostics to verify that the new processor operates correctly.

Power Supplies

Your system supports either:

- Two 495 W, 750 W, or 1100 W AC power supply modules or
- Two 750 W or 1100 W DC power supply modules

NOTE: Titanium power supply is nominally rated for 200 VAC to 240 VAC input only.

When two identical power supplies are installed, the power supply configuration is redundant (1 + 1). In redundant mode, power is supplied to the system equally from both power supplies to maximize efficiency.

When only one power supply is installed, the power supply configuration is non-redundant (1 + 0). Power is supplied to the system only by the single power supply.
NOTE: If two power supplies are used, they must be of the same type and have the same maximum output power.

Hot Spare Feature

Your system supports the Hot Spare feature that significantly reduces the power overhead associated with power supply redundancy.

When the Hot Spare feature is enabled, a redundant power supply is switched to a sleep state. The active power supply supports 100% of the load, thus operating at higher efficiency. The redundant power supply in the sleep state monitors output voltage of the active power supply. If the output voltage of the active power supply drops, the redundant power supply in the sleep state returns to an active output state.

The active power supply can also activate a sleeping power supply if having both power supplies active is more efficient than having the redundant power supply in a sleep state. The power supply defaults are to wake both power supplies if the load on the active power supply is greater than 50% and to sleep the redundant power supply if the load falls below 20%.

You can configure the Hot Spare feature using the iDRAC settings. For more information on iDRAC settings, see the iDRAC7 User’s Guide at dell.com/support/manuals.

Removing An AC Power Supply

⚠️ CAUTION: Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.

⚠️ CAUTION: The system requires one power supply for normal operation. On power-redundant systems, remove and replace only one power supply at a time in a system that is powered on.

⚠️ NOTE: You may have to unlatch and lift the optional cable management arm if it interferes with power supply removal. For information about the cable management arm, see the system’s rack documentation.

1. Disconnect the power cable from the power source and the power supply you intend to remove and remove the cables from the strap.
2. Press the release latch and slide the power supply out of the chassis.
Installing An AC Power Supply

⚠️ CAUTION: Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.

1. Verify that both the power supplies are the same type and have the same maximum output power.

   📌 NOTE: The maximum output power (shown in Watts) is listed on the power supply label.

2. If applicable, remove the power supply blank.

3. Slide the new power supply into the chassis until the power supply is fully seated and the release latch snaps into place.

   📌 NOTE: If you unlatched the cable management arm, re-latch it. For information about the cable management arm, see the system’s rack documentation.

4. Connect the power cable to the power supply and plug the cable into a power outlet.

   ⚠️ CAUTION: When connecting the power cable, secure the cable with the strap.

   📌 NOTE: When installing, hot-swapping, or hot-adding a new power supply, allow several seconds for the system to recognize the power supply and determine its status. The power-supply status indicator turns green to signify that the power supply is functioning properly.
Wiring Instructions For A DC Power Supply

Your system supports up to two –(48–60) V DC power supplies (when available).

⚠️ WARNING: For equipment using –(48–60) V DC power supplies, a qualified electrician must perform all connections to DC power and to safety grounds. Do not attempt connecting to DC power or installing grounds yourself. All electrical wiring must comply with applicable local or national codes and practices. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow all safety instructions that came with the product.

⚠️ CAUTION: Wire the unit with copper only, unless otherwise specified, use only 10 American Wire Gauge (AWG) wire rated minimum 90 ºC for source and return. Protect the –(48–60) V DC (1 wire) with a branch circuit overcurrent protection rated 50 A for DC with a high interrupt current rating.

⚠️ CAUTION: Connect the equipment to a –(48–60) V DC supply source that is electrically isolated from the AC source (reliably grounded –(48–60) V DC SELV source). Ensure that the –(48–60) V DC source is efficiently secured to earth (ground).

NOTE: A readily accessible disconnect device that is suitably approved and rated shall be incorporated in the field wiring.

Input Requirements

- Supply voltage: –(48–60) V DC
- Current consumption: 32 A (maximum)

Kit Contents

- Dell part number 6RYJ9 terminal block or equivalent (1)
- #6-32 nut equipped with lock washer (1)

Required Tools

Wire-stripper pliers capable of removing insulation from size 10 AWG solid or stranded, insulated copper wire

NOTE: Use alpha wire part number 3080 or equivalent (65/30 stranding)

Required Wires

- One UL 10 AWG, 2 m maximum (stranded) black wire [–(48–60) V DC]
- One UL 10 AWG, 2 m maximum (stranded) red wire (V DC return)
- One UL 10 AWG, 2 m maximum green/yellow, green with a yellow stripe, stranded wire (safety ground)

Assembling And Connecting The Safety Ground Wire

⚠️ WARNING: For equipment using –(48–60) V DC power supplies, a qualified electrician must perform all connections to DC power and to safety grounds. Do not attempt connecting to DC power or installing grounds yourself. All electrical wiring must comply with applicable local or national codes and practices. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow all safety instructions that came with the product.

1. Strip the insulation from the end of the green/yellow wire, exposing approximately 4.5 mm (0.175 inch) of copper wire.
2. Using a hand-cramping tool (Tyco Electronics, 58433-3 or equivalent), crimp the ring-tongue terminal (Jeerson Terminals Inc., RS-4SA or equivalent) to the green/yellow wire (safety ground wire).
3. Connect the safety ground wire to the grounding post on the back of the system using a #6-32 nut equipped with a locking washer.

![Diagram of connecting safety ground wire](image)

**Figure 52. Assembling and Connecting the Safety Ground Wire**

1. safety ground wire  
2. grounding post  
3. locking washer  
4. spring washer  
5. #6-32 nut

**Assembling The DC Input Power Wires**

⚠️ **WARNING:** For equipment using –(48–60) V DC power supplies, a qualified electrician must perform all connections to DC power and to safety grounds. Do not attempt connecting to DC power or installing grounds yourself. All electrical wiring must comply with applicable local or national codes and practices. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow all safety instructions that came with the product.

1. Strip the insulation from the ends of the DC power wires, exposing approximately 13 mm (0.5 inch) of copper wire.

   ⚠️ **WARNING:** Reversing polarity when connecting DC power wires can permanently damage the power supply or the system.

2. Insert the copper ends into the mating connectors and tighten the captive screws at the top of the mating connector using a #2 Phillips screwdriver.

   ⚠️ **WARNING:** To protect the power supply from electrostatic discharge, the captive screws must be covered with the rubber cap before inserting the mating connector into the power supply.

3. Rotate the rubber cap clockwise to fix it over the captive screws.

4. Insert the mating connector into the power supply.

Removing A DC Power Supply

WARNING: For equipment using –(48–60) V DC power supplies, a qualified electrician must perform all connections to DC power and to safety grounds. Do not attempt connecting to DC power or installing grounds yourself. All electrical wiring must comply with applicable local or national codes and practices. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow all safety instructions that came with the product.

CAUTION: The system requires one power supply for normal operation. On power-redundant systems, remove and replace only one power supply at a time in a system that is powered on.

NOTE: You may have to unlatch and lift the optional cable management arm if it interferes with power supply removal. For information about the cable management arm, see the system’s rack documentation.

1. Disconnect the power wires from the power source and the connector from the power supply you intend to remove.
2. Disconnect the safety ground wire.
3. Press the release latch and slide the power supply out of the chassis.
Installing A DC Power Supply

⚠️ **WARNING:** For equipment using –(48–60) V DC power supplies, a qualified electrician must perform all connections to DC power and to safety grounds. Do not attempt connecting to DC power or installing grounds yourself. All electrical wiring must comply with applicable local or national codes and practices. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow all safety instructions that came with the product.

1. Verify that both the power supplies are the same type and have the same maximum output power.
   
   🔄 **NOTE:** The maximum output power (shown in Watts) is listed on the power supply label.

2. If applicable, remove the power supply blank.

3. Slide the new power supply into the chassis until the power supply is fully seated and the release latch snaps into place.
   
   🔄 **NOTE:** If you unlatched the cable management arm, re-latch it. For information about the cable management arm, see the system’s rack documentation.

4. Connect the safety ground wire.

5. Install the DC power connector in the power supply.

   ⚠️ **CAUTION:** When connecting the power wires, secure the wires with the strap to the power supply handle.

6. Connect the wires to a DC power source.

   🔄 **NOTE:** When installing, hot-swapping, or hot-adding a new power supply, allow several seconds for the system to recognize the power supply and determine its status. The power-supply status indicator turns green to signify that the power supply is functioning properly.
Removing The Power Supply Blank

⚠️ CAUTION: To ensure proper system cooling, the power supply blank must be installed in the second power supply bay in a non-redundant configuration. Remove the power supply blank only if you are installing a second power supply.

If you are installing a second power supply, remove the power supply blank in the bay by pulling outward on the blank.

![Figure 55. Removing and Installing the Power Supply Blank](image)

1. power supply blank

Installing The Power Supply Blank

⚠️ NOTE: Install the power supply blank only in the second power supply bay.

To install the power supply blank, align the blank with the power supply bay and insert it into the chassis until it clicks into place.

System Battery

Replacing The System Battery

⚠️ WARNING: There is a danger of a new battery exploding if it is incorrectly installed. Replace the battery only with the same or equivalent type recommended by the manufacturer. See your safety information for additional information.
CAUTION: Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.

1. Turn off the system, including any attached peripherals, and disconnect the system from the electrical outlet and peripherals.
2. Open the system.
3. Remove the cooling shroud.
4. Locate the battery socket.

CAUTION: To avoid damage to the battery connector, you must firmly support the connector while installing or removing a battery.

5. To remove the battery, support the battery connector by pressing down firmly on the positive side of the connector.

![Diagram of battery replacement](image)

Figure 56. Replacing the System Battery

1. positive side of battery connector  
2. system battery  
3. negative side of battery connector

6. Lift the battery out of the securing tabs at the negative side of the connector.
7. To install a new system battery, support the battery connector by pressing down firmly on the positive side of the connector.
8. Hold the battery with the "+" facing up and slide it under the securing tabs at the positive side of the connector.
9. Press the battery straight down into the connector until it snaps into place.
10. Install the cooling shroud.
11. Close the system.
12. Reconnect the system to the electrical outlet and turn the system on, including any attached peripherals.
13. Enter the System Setup to confirm that the battery is operating properly.
14. Enter the correct time and date in the System Setup Time and Date fields.
15. Exit the System Setup.

Hard-Drive Backplane

Depending on your system configuration:
PowerEdge R720 supports 2.5 inch (x16) SAS/SATA backplane or
dual 2.5 inch (x8) SAS/SATA backplanes or
2.5 inch (x8) SAS/SATA backplane and 2.5 inch (x4) Dell PowerEdge Express Flash (PCIe SSD)
backplane or
3.5 inch (x8) SAS/SATA backplane or
no backplane

PowerEdge R720xd supports 2.5 inch (x24) SAS/SATA backplane and optional 2.5 inch (x2) SAS/SSD backplane (back) or
3.5 inch (x12) SAS/SATA backplane and optional 2.5 inch (x2) SAS/SSD backplane (back)

Removing The Hard-Drive Backplane

⚠️ CAUTION: Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.

1. If installed, remove the front bezel
2. Turn off the system, including any attached peripherals, and disconnect the system from the electrical outlet.
3. Open the system.
   ⚠️ CAUTION: To prevent damage to the drives and backplane, you must remove the hard drives from the system before removing the backplane.
   ⚠️ CAUTION: You must note the number of each hard drive and temporarily label them before removal so that you can replace them in the same locations.
4. Remove the cooling shroud.
5. Remove the cooling-fan assembly.
6. Remove all hard drives.
7. Disconnect the SAS/SATA/SSD data, signal, and power cable(s) from the backplane.
8. Press the release tabs and slide the backplane upward.

Installing The Hard-Drive Backplane

⚠️ CAUTION: Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.

1. Use the hooks at the base of the chassis as guides to align the hard-drive backplane.
2. Slide down the hard-drive backplane until the release tabs snap into place.
3. Connect the SAS/SATA/SSD data, signal, and power cable(s) to the backplane.
4. Replace the cooling-fan assembly.
5. Replace the cooling shroud.
6. Install the hard drives in their original locations.
7. Close the system.
8. Reconnect the system to its electrical outlet and turn the system on, including any attached peripherals.
9. If applicable, install the front bezel.

Removing The Optional Hard-Drive Backplane (Back)

 NOTE: This procedure applies only to PowerEdge R720xd.

 CAUTION: Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.

1. Turn off the system, including any attached peripherals, and disconnect the system from the electrical outlet.
2. Open the system.
   CAUTION: To prevent damage to the drives and backplane, you must remove the hard drives from the system before removing the backplane.
   CAUTION: You must note the number of each hard drive and temporarily label them before removal so that you can replace them in the same locations.
3. Remove both hard drives.
4. Disconnect all the cables from the backplane.
5. Lift the release pin and slide the backplane away from the chassis.
6. Lift the backplane to remove it from the chassis.

7. x12 or x24 hard-drive backplane

Installing The Optional Hard-Drive Backplane (Back)

**NOTE:** This procedure applies only to PowerEdge R720xd.

**CAUTION:** Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.

1. Turn off the system, including any attached peripherals, and disconnect the system from the electrical outlet.
2. Open the system.
3. Align the notches on the backplane with the notches on the chassis.
4. Lift the release pin and slide the backplane on the chassis until firmly seated.
5. Release the release pin to lock the backplane to the chassis.
6. Reconnect all the cables to the backplane.
7. Install both the hard drives in their original location.
8. Close the system.
9. Reconnect the system to its electrical outlet and turn the system on, including any attached peripherals.

Control Panel Board

Removing The Control Panel (PowerEdge R720)

⚠️ CAUTION: Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.

1. If installed, remove the front bezel.
2. Turn off the system, including any attached peripherals, and disconnect the system from the electrical outlet and peripherals.
3. Open the system.
4. Using a #2 Phillips screwdriver, remove the screw(s) securing the control panel to the chassis.

⚠️ CAUTION: Do not use excessive force when removing the control panel as it can damage the connectors.
5. From inside the system, push the front panel out of the chassis.
6. Remove all the cables connecting the control panel to the chassis.

![Figure 72. Removing and Installing the Control Panel—3.5 inch Hard Drives—PowerEdge R720]

7. Locate and press the tabs on the information tag.
8. Push the information tag out of the slot to remove it from the control panel.

**NOTE:** Retain the information tag for replacement in the new control panel.

Figure 74. Removing and Installing the Information Tag

1. information tag  
2. tabs (2)  
3. slot

### Installing The Control Panel (PowerEdge R720)

⚠️ **CAUTION:** Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.

1. Replace the blank information tag in the new control panel with the information tag retained from the old control panel.
NOTE: Information tag lists system information such as Service Tag, NIC, MAC address, and so on.

2. To install the information tag, push the information tag into the control-panel slot.
3. Connect all the applicable cables to the control panel.
4. Insert the control panel into the slot in the chassis and secure the module with the screw.
5. Close the system.
6. Reconnect the system and peripherals to their power sources, and turn them on.
7. If applicable, install the front bezel.

Removing The Control Panel (PowerEdge R720xd)

⚠️ CAUTION: Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.

1. If installed, remove the front bezel.
2. Turn off the system, including any attached peripherals, and disconnect the system from the electrical outlet and peripherals.
3. Open the system.
   ⚠️ CAUTION: Do not use excessive force when removing the control panel cable as it can damage the connectors.
4. Disconnect the control panel cable from the backplane by pulling on the pull tab.
5. Remove the three Torx screws that secure the I/O panel to the chassis.
6. Fold the pull tab close to the connector.
7. Pull out the control panel cable as you guide the connector and the pull tab through the channel on the chassis.
Installing The Control Panel (PowerEdge R720xd)

⚠️ CAUTION: Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.

1. If installed, remove the front bezel.
2. Turn off the system, including any attached peripherals, and disconnect the system from the electrical outlet and peripherals.
3. Open the system.
4. Fold the label around the cable.
5. Fold the pull tab close to the connector and guide the connector and pull tab into the channel.
6. Push the cable until the cable passes completely through the channel.
7. Tighten the three Torx screws to secure the control panel to the chassis.

⚠️ NOTE: You must route the cable properly to prevent it from being pinched or crimped.
8. Connect the cable connector on the backplane by pushing on the center of the connector.
9. Close the system.
10. Reconnect the system to its electrical outlet and turn the system on, including any attached peripherals.
11. If applicable, install the front bezel.
Removing The I/O Panel (PowerEdge R720xd)

⚠️ CAUTION: Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.

1. If installed, remove the front bezel.
2. Turn off the system, including any attached peripherals, and disconnect the system from the electrical outlet and peripherals.
3. Open the system.

⚠️ CAUTION: To prevent damage to the I/O cable, you must release the locking tab before removing or installing the I/O cable from the connector on the hard-drive backplane.

4. Rotate the locking tab on the I/O cable connector clockwise 90 degrees to release the lock.
5. Disconnect the I/O cable from the backplane.
6. Remove the three Torx screws securing the I/O panel to the chassis.
7. Pull out the I/O panel cable through the channel on the chassis.

Figure 76. Removing and Installing the I/O Panel — PowerEdge R720xd

1. I/O panel cable
2. hard-drive backplane
3. Torx screws (3)
4. I/O panel
5. chassis
Installing The I/O Panel (PowerEdge R720xd)

⚠️ CAUTION: Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.

1. If installed, remove the front bezel.
2. Turn off the system, including any attached peripherals, and disconnect the system from the electrical outlet and peripherals.
3. Open the system.
4. Fold the label around the cable.
5. Push the cable until the cable passes completely through the channel.

⚠️ CAUTION: To prevent damage to the I/O cable, you must release the locking tab before removing or installing the I/O cable from the connector on the hard-drive backplane.

6. If locked, rotate the locking tab on the I/O cable connector clockwise 90 degrees to release the lock.
7. Connect the I/O panel cable to the connector on the hard-drive backplane.
8. Rotate the locking tab on the I/O cable connector counter clockwise 90 degrees to secure the lock.
9. Tighten the three Torx screws to secure the control panel to the chassis.

⚠️ NOTE: You must route the cable properly to prevent it from being pinched or crimped.

10. Close the system.
11. Reconnect the system to its electrical outlet and turn the system on, including any attached peripherals.
12. If applicable, install the front bezel.

System Board

Removing The System Board

⚠️ CAUTION: Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.

⚠️ CAUTION: If you are using the Trusted Program Module (TPM) with an encryption key, you may be prompted to create a recovery key during program or System Setup. Be sure to create and safely store this recovery key. If you replace this system board, you must supply the recovery key when you restart your system or program before you can access the encrypted data on your hard drives.

1. Turn off the system, including any attached peripherals, and disconnect the system from the electrical outlet.
2. If installed, remove the front bezel.
3. Open the system.
4. Remove the following:
   a. cooling shroud
   b. cooling-fan assembly
   c. power supply(s)
   d. all expansion-card risers
   e. integrated storage controller card
f. internal dual SD module
g. internal USB key (if installed)
h. PCIe card holder
i. cable retention bracket
j. if present, support bracket

**NOTE:** The support bracket is present on certain system configurations for protection during shipping and can be discarded after removal.

⚠️ **CAUTION:** To avoid damaging the mini SAS cable and connector, follow the correct procedure when removing the mini SAS cable from the system board.

5. Disconnect the mini SAS cable from the system board:
   a. Push the mini SAS cable connector to slide it further into the connector (J_SASX8) on the system board.
   b. Press down and hold the metal tab on the mini SAS cable connector.
   c. Pull the mini SAS cable out of the connector on the system board.

![Diagram of mini SAS cable connector and metal tab]

   a. mini SAS cable connector           b. metal tab
   c. connector on the system board

6. Disconnect all cables from the system board.

⚠️ **CAUTION:** Take care not to damage the system identification button while removing the system board from the chassis.

⚠️ **CAUTION:** Do not lift the system board assembly by grasping a memory module, processor, or other components.

7. Grasp the system-board holder, lift the blue release pin and slide the system board toward the front of the system.
Figure 77. Removing and Installing the System Board

1. system board
2. system-board holder
3. release pin
4. support bracket (present on certain systems only)

⚠️ WARNING: The heat sink and processor are hot to the touch for some time after the system has been powered down. Allow the heat sink and processor to cool before handling them.

8. Remove heat sink(s)/heat-sink blank(s) and processors(s)/processor blank(s).
9. Remove memory modules and memory module blanks.
10. Remove network daughter card.

Installing The System Board

⚠️ CAUTION: Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.

1. Unpack the new system board assembly.
2. Transfer the following components to the new system board:
   a. heat sink(s)/heat-sink blank(s) and processors(s)/processor blank(s)
   b. memory modules and memory module blanks
   c. network daughter card

⚠️ CAUTION: Do not lift the system board assembly by grasping a memory module, processor, or other components.

⚠️ CAUTION: Take care not to damage the system identification button while placing the system board into the chassis.

3. Hold the touch points and lower the system board into the chassis.
4. Push the system board toward the back of the chassis until the board clicks into place.

5. Replace the following:
   a. cable retention bracket
   b. PCIe card holder
   c. integrated storage controller card
   d. internal USB key (if installed)
   e. internal dual SD module
   f. all expansion-card risers
   g. cooling-fan assembly
   h. cooling shroud
   i. power supply(s)

6. Reconnect all cables to the system board.
   
   **NOTE:** Ensure that the cables inside the system are routed along the chassis wall and secured using the cable securing bracket.

7. Close the system.

8. Reconnect the system to its electrical outlet and turn the system on, including any attached peripherals.

9. Import your new or existing iDRAC Enterprise license. For more information, see *iDRAC7 User’s Guide*, at dell.com/support/manuals.
Troubleshooting Your System

Safety First—For You And Your System

⚠️ CAUTION: Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.

Troubleshooting System Startup Failure

If you boot the system to the BIOS boot mode after installing an operating system from the UEFI Boot Manager, the system hangs. The reverse is also true. You must boot to the same boot mode in which you installed the operating system.

For all other startup issues, note the system messages that appear on the screen.

Troubleshooting External Connections

Ensure that all external cables are securely attached to the external connectors on your system before troubleshooting any external devices.

Troubleshooting The Video Subsystem

1. Check the system and power connections to the monitor.
2. Check the video interface cabling from the system to the monitor.
3. Run the appropriate diagnostic test.

If the tests run successfully, the problem is not related to video hardware.
If the tests fail, see Getting Help.

Troubleshooting A USB Device

Use the following steps to troubleshoot a USB keyboard/mouse. For other USB devices, go to step 7.

1. Disconnect the keyboard and mouse cables from the system briefly and reconnect them.
2. Connect the keyboard/mouse to the USB port(s) on the opposite side of the system.
3. If the problem is resolved, restart the system, enter the System Setup, and check if the non-functioning USB ports are enabled.
4. Replace the keyboard/mouse with another working keyboard/mouse.
5. If the problem is resolved, replace the faulty keyboard/mouse.
6. If the problem is not resolved, proceed to the next step to begin troubleshooting the other USB devices attached to the system.
7. Power down all attached USB devices and disconnect them from the system.

8. Reboot the system and, if your keyboard is functioning, enter the System Setup. Verify that all USB ports are enabled on the Integrated Devices screen, in the System Setup options.

   If your keyboard is not functioning, you can also use remote access. If the system is not accessible, reset the NVRAM_CLR jumper inside your system and restore the BIOS to the default settings.

9. Reconnect and power on each USB device one at a time.

10. If a device causes the same problem, power down the device, replace the USB cable with a known good cable, and power up the device.

If all troubleshooting fails, see Getting Help.

### Troubleshooting A Serial I/O Device

1. Turn off the system and any peripheral devices connected to the serial port.

2. Swap the serial interface cable with a working cable, and turn on the system and the serial device.

   If the problem is resolved, replace the interface cable with a known good cable.

3. Turn off the system and the serial device, and swap the device with a comparable device.

4. Turn on the system and the serial device.

If the problem persists, see Getting Help.

### Troubleshooting A NIC

1. Run the appropriate diagnostic test. See Using System Diagnostics for available diagnostic tests.

2. Reboot the system and check for any system messages pertaining to the NIC controller.

3. Check the appropriate indicator on the NIC connector:

   - If the link indicator does not light, check all cable connections.
   - If the activity indicator does not light, the network driver files might be damaged or missing.

     Remove and reinstall the drivers if applicable. See the NIC's documentation.

   - If applicable, change the autonegotiation setting.
   - Use another connector on the switch or hub.

4. Ensure that the appropriate drivers are installed and the protocols are bound. See the NIC's documentation.

5. Enter the System Setup and confirm that the NIC ports are enabled on the Integrated Devices screen.

6. Ensure that the NICs, hubs, and switches on the network are all set to the same data transmission speed and duplex. See the documentation for each network device.

7. Ensure that all network cables are of the proper type and do not exceed the maximum length.

If all troubleshooting fails, see Getting Help.

### Troubleshooting A Wet System

⚠️ **CAUTION:** Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.

1. Turn off the system and attached peripherals, and disconnect the system from the electrical outlet.

2. Open the system.
3. Disassemble components from the system:
   - Hard drives
   - Hard-drive backplane
   - USB memory key
   - Cooling shroud
   - Expansion-card risers (if present)
   - Expansion cards
   - Power supply(s)
   - Cooling-fan assembly (if present)
   - Cooling fans
   - Processor(s) and heat sink(s)
   - Memory modules

4. Let the system dry thoroughly for at least 24 hours.
5. Reinstall the components you removed in step 3.
6. Close the system.
7. Turn on the system and attached peripherals.
   If the system does not start properly, see Getting Help.
8. If the system starts properly, shut down the system and reinstall all of the expansion cards that you removed.
9. Run the appropriate diagnostic test. For more information, see Using System Diagnostics.

If the tests fail, see Getting Help.

**Troubleshooting A Damaged System**

⚠️ **CAUTION:** Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.

1. Turn off the system and attached peripherals, and disconnect the system from the electrical outlet.
2. Open the system.
3. Ensure that the following components are properly installed:
   - Cooling shroud
   - Expansion-card risers (if present)
   - Expansion cards
   - Power supply(s)
   - Cooling-fan assembly (if present)
   - Cooling fans
   - Processor(s) and heat sink(s)
   - Memory modules
   - Hard-drive carriers
   - Hard-drive backplane
4. Ensure that all cables are properly connected.
5. Close the system.
6. Run the appropriate diagnostic test. For more information, see System Diagnostics.
If the tests fail, see Getting Help.

Troubleshooting The System Battery

⚠️ CAUTION: Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.

⚠️ NOTE: If the system is turned off for long periods of time (for weeks or months), the NVRAM may lose its system configuration information. This situation is caused by a defective battery.

1. Re-enter the time and date in the System Setup.
2. Turn off the system and disconnect it from the electrical outlet for at least one hour.
3. Reconnect the system to the electrical outlet and turn on the system.
4. Enter the System Setup.
   If the date and time are not correct in the System Setup, check the SEL for system battery messages.

If the problem persists, see Getting Help.

⚠️ NOTE: Some software may cause the system time to speed up or slow down. If the system seems to operate normally except for the time kept in the System Setup, the problem may be caused by software rather than by a defective battery.

Troubleshooting Power Supplies

⚠️ CAUTION: Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.

Reseat the power supply by removing and reinstalling it.

⚠️ NOTE: After installing a power supply, allow several seconds for the system to recognize the power supply and to determine if it is working properly.

If the problem persists, see Getting Help.

Troubleshooting Cooling Problems

⚠️ CAUTION: Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.

Ensure that none of the following conditions exist:

- System cover, cooling shroud, EMI filler panel, memory-module blank, or back-filler bracket is removed.
- Ambient temperature is too high.
- External airflow is obstructed.
- A cooling fan is removed or has failed.
- The expansion card installation guidelines have not been followed.
Troubleshooting Cooling Fans

⚠️ CAUTION: Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.

1. Open the system.
2. Reseat the fan or the fan’s power cable.
3. If the fan functions properly, close the system.

If the problem persists, see Getting Help.

Troubleshooting System Memory

⚠️ CAUTION: Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.

1. If the system is operational, run the appropriate diagnostic test. See Using System Diagnostics for available diagnostic tests.
   If diagnostics indicates a fault, follow the corrective actions provided by the diagnostic program.
2. If the system is not operational, turn off the system and attached peripherals, and unplug the system from the power source. Wait at least 10 seconds and then reconnect the system to power.
3. Turn on the system and attached peripherals and note the messages on the screen.
   If an error message is displayed indicating a fault with a specific memory module, go to step 12.
4. Enter the System Setup and check the system memory setting. Make any changes to the memory settings, if needed.
   If the memory settings match the installed memory but a problem is still indicated, go to step 12.
5. Turn off the system and attached peripherals, and disconnect the system from the electrical outlet.
6. Open the system.
7. Check the memory channels and ensure that they are populated correctly.
8. Reseat the memory modules in their sockets.
9. Close the system.
10. Enter the System Setup and check the system memory setting.
   If the problem is not resolved, proceed with the next step.
11. Open the system.
12. If a diagnostic test or error message indicates a specific memory module as faulty, swap or replace the module with a known good memory module.
13. To troubleshoot an unspecified faulty memory module, replace the memory module in the first DIMM socket with a module of the same type and capacity.
   If an error message is displayed on the screen, this may indicate a problem with the installed DIMM type(s), incorrect DIMM installation, or defective DIMM(s). Follow the on-screen instructions to resolve the problem. For more information, see General Memory Module Installation Guidelines.
14. Close the system.
15. As the system boots, observe any error message that is displayed and the diagnostic indicators on the front of the system.
16. If the memory problem is still indicated, repeat step 12 through step 15 for each memory module installed.

If the problem persists after all memory modules have been checked, see Getting Help.

Troubleshooting An Internal USB Key

⚠️ CAUTION: Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.

1. Enter the System Setup and ensure that the USB key port is enabled on the Integrated Devices screen.
2. Turn off the system and attached peripherals, and disconnect the system from the electrical outlet.
3. Open the system.
4. Locate the USB key and reseat it.
5. Close the system.
6. Turn on the system and attached peripherals and check if the USB key is functioning.
7. If the problem is not resolved, repeat step 2 and step 3.
8. Insert a different USB key that you know works properly.
9. Close the system.

If the problem is not resolved, see Getting Help.

Troubleshooting An SD Card

⚠️ CAUTION: Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.

NOTE: Certain SD cards have a physical write-protect switch on the card. If the write-protect switch is turned on then the SD card is not writeable.

1. Enter the System Setup and ensure that the Internal SD Card Port is enabled.
2. Turn off the system, including any attached peripherals, and disconnect the system from the electrical outlet.
3. Open the system.
4. CAUTION: If the Internal SD Card Redundancy option is set to Mirror Mode in the Integrated Devices screen of the System Setup, you must follow the instructions in step 4 through step 7 to avoid loss of data.
5. Note: When an SD card failure occurs, the internal dual SD module controller notifies the system. On the next reboot, the system displays a message indicating the failure.
6. If the Internal SD Card Redundancy option is set to Disabled, replace the failed SD card with a new SD card.
7. If SD card 1 has failed, remove the card from SD card slot 1. If SD card 2 has failed, install a new SD card in SD card slot 2 and proceed to step 7.
8. Remove the card present in SD card slot 2 and insert it into SD card slot 1.
9. Insert the new SD card into SD card slot 2.
10. Close the system.
11. reconnect the system to its electrical outlet and turn the system on, including any attached peripherals.
12. Enter the System Setup and ensure that the Internal SD Card Port and Internal SD Card Redundancy mode is enabled.
11. Check if the SD card is functioning properly.
   If the problem persists, see Getting Help.

Troubleshooting An Optical Drive

⚠️ CAUTION: Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.

1. Try using a different CD or DVD.
2. Enter the System Setup and ensure that the integrated SATA controller and the drive’s SATA port are enabled.
3. Run the appropriate diagnostic test.
4. Turn off the system and attached peripherals, and disconnect the system from the electrical outlet.
5. Open the system.
6. Remove the front bezel.
7. Ensure that the interface cable is securely connected to the optical drive and to the controller.
8. Ensure that a power cable is properly connected to the drive.
9. Close the system.

If the problem is not resolved, see Getting Help.

Troubleshooting A Tape Backup Unit

⚠️ CAUTION: Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.

1. Try using a different tape cartridge.
2. Ensure that the device drivers for the tape backup unit are installed and are configured correctly. See your tape drive documentation for more information about device drivers.
3. Reinstall the tape-backup software as instructed in the tape-backup software documentation.
4. Ensure that the tape drive’s interface cable is fully connected to the external port on the controller card.
5. Check that the controller card is properly installed:
   a. Turn off the system and attached peripherals, and disconnect the system from the electrical outlet.
   b. Open the system.
   c. Reseat the controller card in the expansion card slot.
   d. Close the system.
   e. Turn on the system and attached peripherals.
6. Run the appropriate diagnostic test. For more information, see Using System Diagnostics.

If you cannot resolve the problem, see Getting Help.

Troubleshooting A Hard Drive

⚠️ CAUTION: Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.
CAUTION: This troubleshooting procedure can erase data stored on the hard drive. Before you proceed, back up all files on the hard drive.

1. Run the appropriate diagnostic test. For more information, see Using System Diagnostics. Depending on the results of the diagnostics test, proceed as needed through the following steps.

2. If your system has a RAID controller and your hard drives are configured in a RAID array, perform the following steps:
   a. Reboot the system and press <F10> during system startup to run the Lifecycle Controller, and then run the Hardware Configuration wizard to check the RAID configuration.
      See the Lifecycle Controller documentation or online help for information on RAID configuration.
   b. Ensure that the hard drive(s) are configured correctly for the RAID array.
   c. Take the hard drive offline and reseat the drive.
   d. Exit the configuration utility and allow the system to boot to the operating system.

3. Ensure that the required device drivers for your controller card are installed and are configured correctly. See the operating system documentation for more information.

4. Reboot the system and enter the System Setup.

5. Verify that the controller is enabled and the drives are displayed in the System Setup.

If the problem persists, try troubleshooting the expansion cards or see Getting Help.

Troubleshooting A Storage Controller

CAUTION: Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.

NOTE: When troubleshooting a SAS or PERC controller, see the documentation for your operating system and the controller.

1. Run the appropriate diagnostic test. For more information, see Using System Diagnostics.

2. Turn off the system and attached peripherals, and disconnect the system from the electrical outlet.

3. Open the system.

4. Verify that the installed expansion cards are compliant with the expansion card installation guidelines.

5. Ensure that each expansion card is firmly seated in its connector.

6. Close the system

7. Reconnect the system to the electrical outlet, and turn on the system and attached peripherals.

8. If the problem is not resolved, turn off the system and attached peripherals, and disconnect the system from the electrical outlet.

9. Open the system.

10. Remove all expansion cards installed in the system.

11. Close the system.

12. Reconnect the system to the electrical outlet, and turn on the system and attached peripherals.

13. Run the appropriate diagnostic test. For more information, see Using System Diagnostics. If the tests fail, see Getting Help.

14. For each expansion card you removed in step 10, perform the following steps:
   a. Turn off the system and attached peripherals, and disconnect the system from the electrical outlet.
   b. Open the system.
c. Reinstall one of the expansion cards.
d. Close the system.
e. Run the appropriate diagnostic test. For more information, see Using System Diagnostics.

If the tests fail, see Getting Help.

Troubleshooting Expansion Cards

⚠️ CAUTION: Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.

NOTE: When troubleshooting an expansion card, see the documentation for your operating system and the expansion card.

1. Run the appropriate diagnostic test. For more information, see Using System Diagnostics.
2. Turn off the system and attached peripherals, and disconnect the system from the electrical outlet.
3. Open the system.
4. Ensure that each expansion card is firmly seated in its connector.
5. Close the system.
6. If the problem is not resolved, turn off the system and attached peripherals, and disconnect the system from the electrical outlet.
7. Open the system.
8. Remove all expansion cards installed in the system.
9. Close the system.
10. Run the appropriate diagnostic test. For more information, see Using System Diagnostics. If the tests fail, see Getting Help.
11. For each expansion card you removed in step 8, perform the following steps:
   a. Turn off the system and attached peripherals, and disconnect the system from the electrical outlet.
   b. Open the system.
   c. Reinstall one of the expansion cards.
   d. Close the system.
   e. Run the appropriate diagnostic test. For more information, see Using System Diagnostics.

If the problem persists, see Getting Help.

Troubleshooting Processors

⚠️ CAUTION: Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.

1. Run the appropriate diagnostics test. See Using System Diagnostics for available diagnostic tests.
2. Turn off the system and attached peripherals, and disconnect the system from the electrical outlet.
3. Open the system.
4. Ensure that the processor and heat sink are properly installed.
5. Close the system.
6. Run the appropriate diagnostic test. For more information, see Using System Diagnostics.
If the problem persists, see Getting Help.
Using System Diagnostics

If you experience a problem with your system, run the system diagnostics before contacting Dell for technical assistance. The purpose of running system diagnostics is to test your system hardware without requiring additional equipment or risking data loss. If you are unable to fix the problem yourself, service and support personnel can use the diagnostics results to help you solve the problem.

Dell Online Diagnostics

Dell Online Diagnostics, a stand-alone suite of diagnostic programs or test modules, allows you to run diagnostic tests on the systems in a production environment, and helps you ensure maximum uptime of your systems. Online Diagnostics allows you to run diagnostic tests on chassis and storage components such as hard drives, physical memory, and network interface cards (NICs). You can use the graphical user interface (GUI) or the command line interface (CLI) to run diagnostic tests on the hardware that Online Diagnostics discovers on your system. For information about using diagnostics, see the Dell Online PowerEdge Diagnostics User’s Guide under Software → Serviceability Tools, at dell.com/support/manuals.

Dell Embedded System Diagnostics

NOTE: Also known as Enhanced Pre-boot System Assessment (ePSA) diagnostics.

The embedded system diagnostics provides a set of options for particular device groups or devices allowing you to:

- Run tests automatically or in an interactive mode
- Repeat tests
- Display or save test results
- Run thorough tests to introduce additional test options to provide extra information about the failed device(s)
- View status messages that inform you if tests are completed successfully
- View error messages that inform you of problems encountered during testing

When To Use The Embedded System Diagnostics

If a major component or device in the system does not operate properly, running the embedded system diagnostics may indicate component failure.

Running The Embedded System Diagnostics

The embedded system diagnostics program is run from the Dell Lifecycle Controller.

CAUTION: Use the embedded system diagnostics to test only your system. Using this program with other systems may cause invalid results or error messages.

1. As the system boots, press <F11>.
2. Use the up and down arrow keys to select System Utilities → Launch Dell Diagnostics.
The ePSA Pre-boot System Assessment window is displayed, listing all devices detected in the system. The diagnostics starts executing the tests on all the detected devices.

Disabling A Forgotten Password

The system's software security features include a system password and a setup password. The password jumper enables these password features or disables them and clears any password(s) currently in use.

⚠️ CAUTION: Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.

1. Turn off the system, including any attached peripherals, and disconnect the system from the electrical outlet.
2. Open the system.
3. Move the jumper on the system-board jumper from pins 4 and 6 to pins 2 and 4.
4. Close the system.

The existing passwords are not disabled (erased) until the system boots with the jumper on pins 2 and 4. However, before you assign a new system and/or setup password, you must move the jumper back to pins 4 and 6.

⚠️ NOTE: If you assign a new system and/or setup password with the jumper on pins 2 and 4, the system disables the new password(s) the next time it boots.

5. Reconnect the system to its electrical outlet and turn the system on, including any attached peripherals.
6. Turn off the system, including any attached peripherals, and disconnect the system from the electrical outlet.
7. Open the system.
8. Move the jumper on the system-board jumper from pins 2 and 4 to pins 4 and 6.
9. Close the system.
10. Reconnect the system to its electrical outlet and turn the system on, including any attached peripherals.
11. Assign a new system and/or setup password.
## Technical Specifications

**NOTE:** The following specifications apply to both PowerEdge R720 and PowerEdge R720xd unless specified otherwise.

### Processor

| Processor type | One or two Intel Xeon processor E5-2600 or E5-2600v2 product family |

### Expansion Bus

### Drives

**Hard drives** *(PowerEdge R720)*

- **Four–hard-drive systems**: Up to four 3.5 inch, internal, hot-swappable SATA hard drives in hard-drive slots 0 through 3 (hard-drive slots 4 through 7 do not support any hard drives and are installed with a hard-drive blank).

  - **NOTE**: Four–hard-drive systems support software RAID. For more information on software RAID, see the Dell PowerEdge RAID Controller (PERC) documentation at support.dell.com/manuals.

- **Eight–hard-drive systems**: Up to eight 3.5 inch or 2.5 inch, internal, hot-swappable SAS, SATA, or Nearline SAS hard drives in hard-drive slots 0 through 7.

- **Sixteen or eight plus eight–hard-drive systems**: Up to sixteen 2.5 inch, internal, hot-swappable SAS, SATA, SATA SSD, or Nearline SAS hard drives in hard-drive slots 0 through 15 or 0 through 7 and 0 through 7.

- **Twelve–hard-drive systems**: Up to eight 2.5 inch, internal, hot-swappable SAS, SATA, SATA SSD, or Nearline SAS hard drives in hard-drive slots 0 through 7 (hard-drive bay 1) and up to four 2.5 inch Dell PowerEdge Express Flash devices (PCIe SSDs) in hard-drive slots 0 through 3 (hard-drive bay 2).

**Hard drives** *(PowerEdge R720xd)*

- **Twelve plus two–hard-drive systems**: Up to twelve 3.5 inch, internal, hot-swappable SAS, SATA, SATA SSD, or Nearline SAS drives, and two optional 2.5 inch back-accessible SAS, Nearline SAS, or SSD hard drives in hard-drive slots 0 through 11 and 12 through 13.

- **Twenty-four plus two–hard-drive systems**: Up to twenty-four 2.5 inch, internal, hot-swappable SAS, SATA, SATA SSD, or Nearline SAS drives in hard-drive slots
### Drives

NOTE: When operating in the expanded temperature range, system performance may be impacted.

NOTE: When operating in the expanded temperature range, ambient temperature warnings may be reported on the LCD and in the System Event Log.

≤ 10% of annual operating hours

5 °C to 40 °C at 5% to 85% RH with 26 °C dew point.

NOTE: Outside the standard operating temperature (10 °C to 35 °C), the system can operate down to 5 °C or up to 40 °C for a maximum of 10% of its annual operating hours.

For temperatures between 35 °C and 40 °C, de-rate maximum allowable dry bulb temperature by 1 °C per 175 m above 950 m (1 °F per 319 ft).

≤ 1% of annual operating hours

–5 °C to 45 °C at 5% to 90% RH with 26 °C dew point.

NOTE: Outside the standard operating temperature (10 °C to 35 °C), the system can operate down to –5 °C or up to 45 °C for a maximum of 1% of its annual operating hours.

For temperatures between 40 °C and 45 °C, de-rate maximum allowable dry bulb temperature by 1 °C per 125 m above 950 m (1 °F per 228 ft).

Expanded Operating Temperature Restrictions

• Do not perform a cold startup below 5 °C.
• The operating temperature specified is for a maximum altitude of 3050 m (10,000 ft).
• 130 W (4 core) processor is not supported.
• Redundant power supplies are required.
• Non Dell qualified peripheral cards and/or peripheral cards greater than 25 W are not supported.

NOTE: For PowerEdge R720, maximum 130 W processor is supported in either 8 hard drive or 16 hard drive chassis.

NOTE: The following additional restrictions apply to PowerEdge R720xd.

• Maximum 95 W processor supported on 3.5 inch hard drive chassis.
• Maximum 115 W processor supported on 2.5 inch hard drive chassis.
• Only SSDs are allowed in the hard drive slots at the back of the 3.5 inch hard drive chassis.
Environmental

NOTE: For additional information about environmental measurements for specific system configurations, see dell.com/environmental_datasheets.

### Temperature

<table>
<thead>
<tr>
<th>Maximum Temperature Gradient (Operating and Storage)</th>
<th>20 °C/h (36 °F/h)</th>

</tr>
</tbody>
</table>

Particulate Contamination

- **NOTE:** This section defines the limits to help avoid IT equipment damage and/or failure from particulates and gaseous contamination. If it is determined that levels of particulates or gaseous pollution are beyond the limits specified below and are the reason for the damage and/or failures to your equipment, it may be necessary for you to re-mediate the environmental conditions that are causing the damage and/or failures. Re-mediation of environmental conditions will be the responsibility of the customer.

**Air Filtration**

- **NOTE:** Applies to data center environments only. Air filtration requirements do not apply to IT equipment designed to be used outside a data center, in environments such as an office or factory floor.

Air must be free of conductive dust, zinc whiskers, or other conductive particles.

- **NOTE:** Applies to data center environments.

Air must be free of corrosive dust. Residual dust present in the air must have a deliquescent point less than 60% relative humidity.

**Gaseous Contamination**

- **NOTE:** Maximum corrosive contaminant levels measured at ≤50% relative humidity.

**Copper Coupon Corrosion Rate**

<300 Å/month per Class G1 as defined by ANSI/ISA71.04-1985.

**Silver Coupon Corrosion Rate**

<200 Å/month as defined by AHSRAE TC9.9.
System Messages

LCD Messages

NOTE: Applicable only if your system has an LCD display.

The LCD messages consist of brief text messages that refer to events recorded in the System Event Log (SEL). For information on the SEL and configuring system management settings, see the systems management software documentation.

NOTE: If your system fails to boot, press the System ID button for at least 5 seconds until an error code is displayed on the LCD. Record the code, then see System Error Messages.

Viewing LCD Messages

If a system error occurs, the LCD screen will turn amber. Press the Select button to view the list of errors or status messages. Use the Left and Right buttons to highlight an error number, and press the Select button to view the error.

Removing LCD Messages

For faults associated with sensors, such as temperature, voltage, fans, and so on, the LCD message is automatically removed when that sensor returns to a normal state. For other faults, you must take action to remove the message from the display:

• Clear the SEL — You can perform this task remotely, but you will lose the event history for the system.
• Power cycle — Turn off the system and disconnect it from the electrical outlet; wait approximately 10 seconds, reconnect the power cable, and restart the system.

System Error Messages

System messages appear on the monitor to notify you of a possible problem with the system. These messages refer to events recorded in the System Event Log (SEL). For information on the SEL and configuring system management settings, see the systems management software documentation.

Some messages are also displayed in an abbreviated form on the system’s LCD, if the system includes that feature.

NOTE: The LCD error messages listed here are displayed in the simple format. See Setup Menu to select the format in which the messages are displayed.

NOTE: If you receive a system message not listed here, check the documentation of the application that was running when the message was displayed or the operating system’s documentation for an explanation of the message and recommended action.

NOTE: In some messages, a particular system component is identified by name (“<name>”), component number (“<number>”), or location (“bay”).

**TMP0119**

- **Message**: The system inlet temperature is less than the lower critical threshold.
- **LCD Message**: System inlet temperature is outside of range.
- **Details**: Ambient air temperature is too cool.
- **Action**: Check the system operating environment.

**TMP0120**

- **Message**: The system inlet temperature is greater than the upper warning threshold.
- **LCD Message**: System inlet temperature is outside of range.
- **Details**: Ambient air temperature is too warm or one or more fans may have failed.
- **Action**: Check the system operating environment and review event log for fan failures.

**TMP0121**

- **Message**: The system inlet temperature is greater than the upper critical threshold.
- **LCD Message**: System inlet <name> temperature is outside of range. Check Fans.
- **Details**: Ambient air temperature is too warm or one or more fans may have failed.
- **Action**: Check the system operating environment and review event log for fan failures.

**VLT0204**

- **Message**: The system board <name> voltage is outside of the allowable range.
- **LCD Message**: System board voltage is outside of range.
- **Details**: System hardware detected an over voltage or under voltage condition. If multiple voltage exceptions occur consecutively the system may power down in fail-safe mode.

**Warning Messages**

A warning message alerts you to a possible problem and prompts you to respond before the system continues a task. For example, before you format a hard drive, a message warns you that you may lose all data on the hard drive. Warning messages usually interrupt the task and require you to respond by typing y (yes) or n (no).

**NOTE:** Warning messages are generated by either the application or the operating system. For more information, see the documentation that accompanied the operating system or application.

**Diagnostic Messages**

The system diagnostic utilities may issue messages if you run diagnostic tests on your system. See the “Using System Diagnostics” chapter for more information about system diagnostics.

**Alert Messages**

Systems management software generates alert messages for your system. Alert messages include information, status, warning, and failure messages for drive, temperature, fan, and power conditions. For more information, see the systems management software documentation.
Getting Help

Contacting Dell

NOTE: If you do not have an active Internet connection, you can find contact information on your purchase invoice, packing slip, bill, or Dell product catalog.

Dell provides several online and telephone-based support and service options. Availability varies by country and product, and some services may not be available in your area. To contact Dell for sales, technical support, or customer service issues:

1. Visit dell.com/support
2. Select your support category.
3. Verify your country or region in the Choose a Country/Region drop-down menu at the top of page.
4. Select the appropriate service or support link based on your need.
