Notes, cautions, and warnings

NOTE: A NOTE indicates important information that helps you make better use of your product.

CAUTION: A CAUTION indicates either potential damage to hardware or loss of data and tells you how to avoid the problem.

WARNING: A WARNING indicates a potential for property damage, personal injury, or death.

Before working inside your computer

NOTE: The images in this document may differ from your computer depending on the configuration you ordered.

Topics:
- Before you begin
- Safety instructions
- Recommended tools
- Screw list

Before you begin

1. Save and close all open files and exit all open applications.
2. Shut down your computer. Click Start > Power > Shut down.
   NOTE: If you are using a different operating system, see the documentation of your operating system for shut-down instructions.
3. Disconnect your computer and all attached devices from their electrical outlets.
4. Disconnect all attached network devices and peripherals, such as keyboard, mouse, and monitor from your computer.
5. Remove any media card and optical disc from your computer, if applicable.
6. After the computer is unplugged, press and hold the power button for 5 seconds to ground the system board.

Safety instructions

Use the following safety guidelines to protect your computer from potential damage and ensure your personal safety.

WARNING: Before working inside your computer, read the safety information that shipped with your computer. For more safety best practices, see the Regulatory Compliance home page at www.dell.com/regulatory_compliance.

WARNING: Disconnect all power sources before opening the computer cover or panels. After you finish working inside the computer, replace all covers, panels, and screws before connecting to the electrical outlet.

CAUTION: To avoid damaging the computer, ensure that the work surface is flat and clean.

CAUTION: To avoid damaging the components and cards, handle them by their edges, and avoid touching pins and contacts.

CAUTION: You should only perform troubleshooting and repairs as authorized or directed by the Dell technical assistance team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. See the safety instructions that shipped with the product or at www.dell.com/regulatory_compliance.

CAUTION: Before touching anything inside your computer, ground yourself by touching an unpainted metal surface, such as the metal at the back of the computer. While you work, periodically touch an unpainted metal surface to dissipate static electricity, which could harm internal components.

CAUTION: When you disconnect a cable, pull on its connector or on its pull tab, not on the cable itself. Some cables have connectors with locking tabs or thumb-screws that you must disengage before disconnecting the cable. When disconnecting cables, keep them evenly aligned to avoid bending any connector pins. When connecting cables, ensure that the ports and connectors are correctly oriented and aligned.

CAUTION: Press and eject any installed card from the media-card reader.
Recommended tools

The procedures in this document may require the following tools:

- Phillips screwdriver #1
- Phillips screwdriver #2
- Plastic scribe

Screw list

The following table provides the list of screws that are used for securing different components to the computer.

After working inside your computer

⚠️ **CAUTION:** Leaving stray or loose screws inside your computer may severely damage your computer.

1. Replace all screws and ensure that no stray screws remain inside your computer.
2. Connect any external devices, peripherals, or cables you removed before working on your computer.
3. Replace any media cards, discs, or any other parts that you removed before working on your computer.
4. Connect your computer and all attached devices to their electrical outlets.
5. Turn on your computer.
WARNING: Before working inside your computer, read the safety information that shipped with your computer and follow the steps in Before working inside your computer. After working inside your computer, follow the instructions in After working inside your computer. For more safety best practices, see the Regulatory Compliance home page at www.dell.com/regulatory_compliance.

Removing the right-side cover

**WARNING:** Before working inside your computer, read the safety information that shipped with your computer and follow the steps in Before working inside your computer. After working inside your computer, follow the instructions in After working inside your computer. For more safety best practices, see the Regulatory Compliance home page at www.dell.com/regulatory_compliance.

**Procedure**

1. Place the computer in an upright position.
2. Remove the screw (#6-32xL7-12) that secures the right-side cover release latch to the chassis.
3. Pull the right-side cover release latch.
4. Lift the right-side cover and then slide it towards the top of the computer.
5. Remove the right-side cover from the chassis.

![Diagram of removing the right-side cover](image)

**Figure 1. Removing the right-side cover**

1. right-side cover release latch
2. chassis
3. right-side cover
Replacing the right-side cover

**WARNING:** Before working inside your computer, read the safety information that shipped with your computer and follow the steps in Before working inside your computer. After working inside your computer, follow the instructions in After working inside your computer. For more safety best practices, see the Regulatory Compliance home page at www.dell.com/regulatory_compliance.

**Procedure**

1. Align the tabs on the right-side cover with the slots on the chassis in the bottom and snap the side-cover to lock it in place.

![Figure 2. Right-side cover replacement](image)

1. slots
2. tabs
3. chassis
4. right-side cover

**NOTE:** For computers shipped with 850 W power-supply unit, ensure that the two rubbers are adhered at the location that is marked inside the right-side cover.

2. Replace the screw (#6-32xL7-12) that secures the right-side cover release latch to the chassis.
Removing the front bezel

⚠️ **WARNING:** Before working inside your computer, read the safety information that shipped with your computer and follow the steps in **Before working inside your computer**. After working inside your computer, follow the instructions in **After working inside your computer**. For more safety best practices, see the Regulatory Compliance home page at [www.dell.com/regulatory_compliance](http://www.dell.com/regulatory_compliance).

**Topics:**
- Prerequisites
- Procedure

### Prerequisites

1. Remove the right-side cover.
2. Remove the optical drive.

### Procedure

1. Release the front-bezel tabs sequentially from the top, one at a time by moving them away from the slots on the front chassis.

![Removing the front bezel](image)

**Figure 3. Removing the front bezel**

1. front bezel

Replacing the front bezel

⚠️ **WARNING:** Before working inside your computer, read the safety information that shipped with your computer and follow the steps in Before working inside your computer. After working inside your computer, follow the instructions in After working inside your computer. For more safety best practices, see the Regulatory Compliance home page at www.dell.com/regulatory_compliance.

Topics:
- Procedure
- Post-requisites

### Procedure

1. Align the tabs on the front bezel with the slots on the chassis.
2. Rotate the front bezel towards the chassis until the front bezel tabs snap into place.

### Post-requisites

1. Replace the optical drive.
2. Replace the right-side cover.
Removing the optical drive

**WARNING:** Before working inside your computer, read the safety information that shipped with your computer and follow the steps in *Before working inside your computer*. After working inside your computer, follow the instructions in *After working inside your computer*. For more safety best practices, see the Regulatory Compliance home page at [www.dell.com/regulatory_compliance](http://www.dell.com/regulatory_compliance).

**Topics:**
- Prerequisites
- Procedure

### Prerequisites
1. Remove the right-side cover.
2. Follow the procedure from step 1 to step 2 in “Removing the power-supply unit”.

### Procedure
1. Disconnect the power and data cables from the optical drive.
2. Pull the release tab on the optical-drive cage towards the bottom of the computer.
3. Push to slide out the optical drive through the front of the computer.
Push and slide the optical drive through the front of the computer.

Replacing the optical drive

⚠️ WARNING: Before working inside your computer, read the safety information that shipped with your computer and follow the steps in Before working inside your computer. After working inside your computer, follow the instructions in After working inside your computer. For more safety best practices, see the Regulatory Compliance home page at www.dell.com/regulatory_compliance.

Topics:
  • Procedure
  • Post-requisites

Procedure

1. Align the screw hole on the optical-drive bracket with the screw hole on the optical drive.
2. Replace the screw that secures the optical-drive bracket to the optical drive.
3. Align the tabs on the optical-drive bezel with slots on the optical drive and snap it in place.
4. Slide the optical drive into the optical-drive cage through the front of the computer till it snaps into place.
5. Connect the power and data cables to the optical drive.

Post-requisites

1. Follow the procedure from step 9 to step 10 in “Replacing the power-supply unit”.
2. Replace the right-side cover.

Post-requisites

1. Follow the procedure from step 9 to step 10 in “Replacing the power-supply unit”.
2. Replace the right-side cover.
Removing the top cover

⚠️ WARNING: Before working inside your computer, read the safety information that shipped with your computer and follow the steps in Before working inside your computer. After working inside your computer, follow the instructions in After working inside your computer. For more safety best practices, see the Regulatory Compliance home page at www.dell.com/regulatory_compliance.

Topics:

- Prerequisites
- Procedure

Prerequisites

1. Remove the right-side cover.
2. Remove the front bezel.
3. Remove the optical drive.

Procedure

1. Place the computer in an upright position.
2. Pry the cover from the back corner and lift the top cover away from the chassis.

Figure 10. Removing the top cover

1. top cover
2. chassis
Replacing the top cover

⚠️ WARNING: Before working inside your computer, read the safety information that shipped with your computer and follow the steps in Before working inside your computer. After working inside your computer, follow the instructions in After working inside your computer. For more safety best practices, see the Regulatory Compliance home page at www.dell.com/regulatory_compliance.

Topics:
- Procedure
- Post-requisites

Procedure

Align the tabs on the top cover with the slots on the top panel and press the top cover until it snaps into place.

Post-requisites

1. Replace the optical drive.
2. Replace the front bezel.
3. Replace the right-side cover.
Removing the bottom cover

⚠️ **WARNING:** Before working inside your computer, read the safety information that shipped with your computer and follow the steps in Before working inside your computer. After working inside your computer, follow the instructions in After working inside your computer. For more safety best practices, see the Regulatory Compliance home page at www.dell.com/regulatory_compliance.

**Topics:**
- Prerequisites
- Procedure

**Prerequisites**

1. Remove the right-side cover.
2. Remove the front bezel.
3. Remove the optical drive.

**Procedure**

1. Lay the computer on the left side.
2. Release the bottom-cover tabs sequentially, one at a time by moving them away from the chassis.
3. Place the computer with the bottom facing up.
4. Pry and lift the bottom cover away from the chassis.

1  bottom cover

2  chassis
Replacing the bottom cover

⚠️ **WARNING:** Before working inside your computer, read the safety information that shipped with your computer and follow the steps in *Before working inside your computer*. After working inside your computer, follow the instructions in *After working inside your computer*. For more safety best practices, see the Regulatory Compliance home page at [www.dell.com/regulatory_compliance](http://www.dell.com/regulatory_compliance).

**Topics:**
- Procedure
- Post-requisites

**Procedure**

Align the tabs on the bottom cover with the slots on the bottom panel and press the bottom cover until it snaps in place.

**Post-requisites**

1. Replace the optical drive.
2. Replace the front bezel.
3. Replace the right-side cover.
Removing the primary hard-drive

⚠️ WARNING: Before working inside your computer, read the safety information that shipped with your computer and follow the steps in Before working inside your computer. After working inside your computer, follow the instructions in After working inside your computer. For more safety best practices, see the Regulatory Compliance home page at www.dell.com/regulatory_compliance.

⚠️ CAUTION: Hard drives are fragile. Exercise care when handling the hard drive.

⚠️ CAUTION: To avoid data loss, do not remove the hard drive while the computer is in sleep or on state.

Topics:

- Prerequisites
- Procedure

Prerequisites

Remove the right-side cover.

Procedure

1. Disconnect the data and power cables from the hard-drive.
2. Press the release tabs on the hard-drive carrier and slide the hard-drive carrier out of the hard-drive cage.
Figure 13. Removing the hard-drive assembly

1 data cable  
3 hard-drive cage  
5 hard-drive carrier  
2 power cable  
4 release tabs

3 Pry the hard-drive carrier to release the tabs on the carrier from the slots on the hard drive.
4 Lift the hard drive off the hard-drive carrier.

**NOTE:** Note the orientation of the hard drive to replace it correctly.

Figure 14. Removing the hard drive from the bracket

1 hard drive  
2 hard-drive carrier
Replacing the primary hard-drive

⚠️ **WARNING:** Before working inside your computer, read the safety information that shipped with your computer and follow the steps in Before working inside your computer. After working inside your computer, follow the instructions in After working inside your computer. For more safety best practices, see the Regulatory Compliance home page at www.dell.com/regulatory_compliance.

⚠️ **CAUTION:** Hard drives are fragile. Exercise care when handling the hard drive.

Topics:
- Procedure
- Post-requisites

**Procedure**

1. Place the hard drive into the hard-drive carrier and align the tabs on the bracket with the slots on the hard drive.
2. Snap the hard-drive carrier into the hard drive.
3. Slide the hard-drive carrier into the hard-drive cage until it snaps into place.
4. Connect the data and power cables to the hard-drive.

**Post-requisites**

Replace the right-side cover.
Removing the secondary hard-drive

⚠️ **WARNING:** Before working inside your computer, read the safety information that shipped with your computer and follow the steps in *Before working inside your computer*. After working inside your computer, follow the instructions in *After working inside your computer*. For more safety best practices, see the Regulatory Compliance home page at www.dell.com/regulatory_compliance.

⚠️ **CAUTION:** Hard drives are fragile. Exercise care when handling the hard drive.

⚠️ **CAUTION:** To avoid data loss, do not remove the hard drive while the computer is in sleep or on state.

Topics:
- Prerequisites
- Procedure

**Prerequisites**

Remove the right-side cover.

**Procedure**

1. Disconnect the data and power cables from the hard drive.
2. Remove the screws that secure the hard-drive cage to chassis.
3. Lift the hard drive cage off the chassis.

1. #6-32 X 1/4" screws (2)
2. hard drive
3. hard-drive cage
4. power cable
5. data cable
4. Remove the screws that secure the hard drive to the hard-drive cage.
5. Lift the hard drive out of the hard drive cage.

**NOTE:** Note the orientation of the hard drive so that you can replace it correctly.
Replacing the secondary hard-drive

⚠️ **WARNING:** Before working inside your computer, read the safety information that shipped with your computer and follow the steps in *Before working inside your computer*. After working inside your computer, follow the instructions in *After working inside your computer*. For more safety best practices, see the Regulatory Compliance home page at [www.dell.com/regulatory_compliance](http://www.dell.com/regulatory_compliance).

⚠️ **CAUTION:** Hard drives are fragile. Exercise care when handling the hard drive.

Topics:
- Post-requisites
- Procedure

### Post-requisites

Replace the right-side cover.

### Procedure

1. Place the hard drive into the hard-drive cage.
2. Replace the screws that secure the hard drive to the hard-drive cage.
3. Place the hard-drive cage into the hard-drive cage slot in the chassis.
4. Replace the screws that secure the hard-drive cage to the chassis.
5. Connect the data and power cables to the hard drive.
Removing the solid-state drive

⚠️ WARNING: Before working inside your computer, read the safety information that shipped with your computer and follow the steps in Before working inside your computer. After working inside your computer, follow the instructions in After working inside your computer. For more safety best practices, see the Regulatory Compliance home page at www.dell.com/regulatory_compliance.

⚠️ CAUTION: Solid-state drives are fragile. Exercise care when handling the solid-state drive.

⚠️ CAUTION: To avoid data loss, do not remove the solid-state drive while the computer is in sleep or on state.

Topics:

- Prerequisites
- Procedure

**Prerequisites**

1. Remove the right-side cover.
2. Remove the full-length graphics card (if installed).

**Procedure**

1. Remove the screw that secures the solid-state drive to the system board.
2. Slide and lift the solid-state drive off the system board.

For more information, see “System-board components”.
Figure 15. Removing the solid-state drive

1 solid-state drive
2 solid-state drive slot
3 system board
4 M2x2.5 screw
Replacing the solid-state drive

⚠️ WARNING: Before working inside your computer, read the safety information that shipped with your computer and follow the steps in Before working inside your computer. After working inside your computer, follow the instructions in After working inside your computer. For more safety best practices, see the Regulatory Compliance home page at www.dell.com/regulatory_compliance.

⚠️ CAUTION: Solid-state drives are fragile. Exercise care when handling the solid-state drive.

Topics:
- Procedure
- Post-requisites

Procedure

1. Align the notch on the solid-state drive with the tab on the solid-state drive slot.
2. Insert the solid-state drive at a 45-degree angle into the solid-drive drive slot.
   For more information, see “System-board components”.
3. Replace the screw that secures the solid-state drive to the system board.
Figure 16. Replacing the solid-state drive

1. tab
2. notch
3. solid-state drive slot
4. solid-state drive
5. system board
6. M2 X 2.5 screw

Post-requisites

1. Replace the full-length graphics card (if installed).
2. Replace the right-side cover.
Removing the power-supply unit

⚠️ **WARNING:** Before working inside your computer, read the safety information that shipped with your computer and follow the steps in *Before working inside your computer*. After working inside your computer, follow the instructions in *After working inside your computer*. For more safety best practices, see the Regulatory Compliance home page at www.dell.com/regulatory_compliance.

⚠️ **WARNING:** Lift the power-supply unit carefully as it is designed with a tight hinge without a physical lock. It always stays in the upright position while lifted up.

Topics:
- Prerequisites
- Procedure

**Prerequisites**

Remove the right-side cover.

**Procedure**

💻 **NOTE:** Note the routing of all cables as you remove them so that you can reroute them correctly after you replace the power supply.

1. Slide the power-supply unit cage release latches towards the unlock position.
2. Rotate the power-supply unit cage away from the chassis.
Figure 17. Rotating the power-supply unit

1 power-supply unit cage release latches (2)  2 power-supply unit
3 chassis  4 power-supply unit cage

3 Disconnect the CPU-power cable and system board power cable from the system board and the optical-drive power cable from the optical drive. For more information, see “System-board components”.
4 Disconnect the graphics-card power cables if applicable.
5 Remove the system-board power cable from the routing guide on the chassis.
Figure 18. Disconnecting cables

1. optical drive power cable
2. routing guide
3. CPU power cable
4. system board
5. system board power cable

6. Rotate the power-supply unit cage towards the chassis.
7. Disconnect the hard-disk power cable.

**NOTE:** There could be up to three hard-disk power cables depending on the quantity of hard-disk drive installed.

8. Remove the screws that secure the power-supply bracket to the chassis.
9. Remove the screws that secure the power-supply unit to the chassis.
10. Lift the power-supply bracket off the chassis.
11. Lift the power-supply unit off the chassis.
Figure 19. Removing the power supply unit

1  #6-32x1/4" screws (4)  
2  power-supply unit  
3  power-supply bracket  
4  #6-32x1/4" screws (2)  
5  hard-drive cable
Replacing the power-supply unit

⚠️ **WARNING:** Before working inside your computer, read the safety information that shipped with your computer and follow the steps in Before working inside your computer. After working inside your computer, follow the instructions in After working inside your computer. For more safety best practices, see the Regulatory Compliance home page at www.dell.com/regulatory_compliance.

⚠️ **WARNING:** Lift the power-supply unit carefully as it is designed with a tight hinge without a physical lock. It always stays in the upright position while lifted up.

Topics:
- Procedure
- Post-requisites

**Procedure**

1. Place the power supply on the power-supply unit cage.
2. Replace the screws that secure the power-supply unit to the power-supply unit cage.
3. Align the screw holes on the power-supply bracket with the screw holes on the power-supply unit cage.
4. Replace the screws that secure the power supply bracket to the power-supply unit cage.
5. Connect the hard-drive power cable.
6. Rotate the power-supply unit away from the chassis.
7. Connect the CPU-power cable, system-board power cable to the system board and the optical-drive power cable to the optical drive.
   For more information, see “System-board components”.
8. Route the system-board power cable through the routing guide on the chassis.
9. Connect the graphics-card power cables if applicable.
10. Rotate the power-supply unit towards the chassis until the unit snaps into place.
11. Slide the power-supply unit cage release latches to their locking positions to lock the release latches.

**Post-requisites**

Replace the right-side cover.
Removing the coin-cell battery

**WARNING:** Before working inside your computer, read the safety information that shipped with your computer and follow the steps in Before working inside your computer. After working inside your computer, follow the instructions in After working inside your computer. For more safety best practices, see the Regulatory Compliance home page at www.dell.com/regulatory_compliance.

**CAUTION:** Removing the coin-cell battery resets the BIOS setup program’s settings to default. It is recommended that you note the BIOS setup program’s settings before removing the coin-cell battery.

Topics:

- Prerequisites
- Procedure

**Prerequisites**

1. Remove the right-side cover.
2. Follow the procedure from step 1 to step 2 in “Removing the power-supply unit”.

**Procedure**

1. Using a plastic scribe, press the battery-release lever away from the coin-cell battery until the coin-cell battery pops up.
2. Lift the coin-cell battery out of its socket.
Figure 20. Removing the coin cell battery

1 plastic scribe
2 coin-cell battery
3 coin-cell battery socket
4 battery-release lever
Replacing the coin-cell battery

⚠️ WARNING: Before working inside your computer, read the safety information that shipped with your computer and follow the steps in Before working inside your computer. After working inside your computer, follow the instructions in After working inside your computer. For more safety best practices, see the Regulatory Compliance home page at www.dell.com/regulatory_compliance.

Topics:
- Procedure
- Post-requisites

Procedure

Insert the coin-cell battery into the battery socket with the positive side facing up, and snap the battery into place.

Post-requisites

1. Follow the procedure from step 9 to step 10 in “Replacing the power-supply unit.”
2. Replace the right-side cover.
Removing the graphics card

**WARNING:** Before working inside your computer, read the safety information that shipped with your computer and follow the steps in Before working inside your computer. After working inside your computer, follow the instructions in After working inside your computer. For more safety best practices, see the Regulatory Compliance home page at www.dell.com/regulatory_compliance.

Topics:
- Prerequisites
- Procedure

**Prerequisites**

**NOTE:** Your computer will be shipped with either graphics card or full-length graphics card.

1. Remove the right-side cover.
2. Follow the procedure from step 1 to step 2 in “Removing the power-supply unit”.

**Procedure**

1. Locate the graphics card on the system board and make note of the graphics-card slot (PCI-Express x16).
   
   For more information, see “System-board components”.

2. Push the securing tab on the PCIe slot away from the graphics card, grasp the card by its top corner, and ease it out of the slot.
Figure 21. Removing the graphics card

1. securing tab
2. system board
3. graphics card slot
4. graphics card
Replacing the graphics card

⚠️ WARNING: Before working inside your computer, read the safety information that shipped with your computer and follow the steps in Before working inside your computer. After working inside your computer, follow the instructions in After working inside your computer. For more safety best practices, see the Regulatory Compliance home page at www.dell.com/regulatory_compliance.

Topics:
- Procedure
- Post-requisites

Procedure

1. Locate the PCI-Express x16 card slot on the system board.
   For more information, see “System-board components”.
2. Align the notch on the graphics card with the tab on the slot and snap the graphics card in place.

Post-requisites

1. Follow the procedure from step 9 to step 10 in “Replacing the power-supply unit”.
2. Replace the right-side cover.
Removing the full-length graphics cards

WARNING: Before working inside your computer, read the safety information that shipped with your computer and follow the steps in Before working inside your computer. After working inside your computer, follow the instructions in After working inside your computer. For more safety best practices, see the Regulatory Compliance home page at www.dell.com/regulated_compliance.

Topics:
- Prerequisites
- Procedure

Prerequisites

NOTE: Your computer will be shipped with either graphics card or full-length graphics card.

1. Remove the right-side cover.
2. Follow the procedure from step 1 to step 2 in “Removing the power-supply unit”.

Procedure

1. Lift to release the full-length graphics-card bracket from the chassis.
Figure 22. Removing the full-length graphics-card bracket

1  full-length graphics-card bracket
2  chassis

2  Press the releasing clip on the power-cable connectors and disconnect the power cables from the full-length graphics card.
3  Push the securing tab on the PCIe slot away from the full-length graphics card, grasp the card by its top corner, and ease it out of the slot.
Figure 23. Removing the power cable

1. power cables
2. releasing clips (2)
3. full-length graphics card
4. securing tab
Replacing the full-length graphics cards

⚠️ **WARNING:** Before working inside your computer, read the safety information that shipped with your computer and follow the steps in *Before working inside your computer*. After working inside your computer, follow the instructions in *After working inside your computer*. For more safety best practices, see the Regulatory Compliance home page at [www.dell.com/regulatory_compliance](http://www.dell.com/regulatory_compliance).

Topics:
- Procedure
- Post-requisites

**Procedure**

1. Align the full-length graphics card with the slot on the system board.
2. Place the card into the slot and press down firmly until the full-length graphics card snaps into place.
3. Connect the power cables to the full-length graphics card.
4. Slide the tab on the full-length graphics-card bracket into the slot on the chassis and snap it into place.

**Post-requisites**

1. Follow the procedure from step 9 to step 10 in “Replacing the power-supply unit”.
2. Replace the right-side cover.
Removing the memory modules

⚠️ WARNING: Before working inside your computer, read the safety information that shipped with your computer and follow the steps in Before working inside your computer. After working inside your computer, follow the instructions in After working inside your computer. For more safety best practices, see the Regulatory Compliance home page at www.dell.com/regulatory_compliance.

Topics:
- Prerequisites
- Procedure

Prerequisites

1. Remove the right-side cover.
2. Follow the procedure from step 1 to step 2 in “Removing the power-supply unit”.

Procedure

1. Locate the memory-module slot on the system board.
   For more information, see “System-board components”.
2. Push the securing clips away from the memory module.
3. Grasp the memory module near the securing clip, and then gently ease the memory module out of the memory-module slot.

⚠️ CAUTION: If the memory module is difficult to remove, gently ease the memory module back and forth to remove it from the slot.

-note: Repeat step 2 to step 3 to remove any other memory modules installed in your computer.
Figure 24. Removing the memory module

1 memory-module slot
2 memory module
3 securing clips (2)
4 system board

Removing the memory modules
Replacing the memory modules

⚠️ **WARNING**: Before working inside your computer, read the safety information that shipped with your computer and follow the steps in *Before working inside your computer*. After working inside your computer, follow the instructions in *After working inside your computer*. For more safety best practices, see the Regulatory Compliance home page at [www.dell.com/regulatory_compliance](http://www.dell.com/regulatory_compliance).

Topics:

- Procedure
- Post-requisites

### Procedure

1. Align the notch on the memory module with the tab on the memory-module slot.
2. Insert the memory module into the memory-module slot, and press the memory module straight until it snaps into position and the securing clips lock in place.

   🔄 **NOTE**: If you do not hear the click, remove the memory module and reinstall it.
Figure 25. Replacing the memory module

1 tab 2 notch
3 memory-module slot 4 memory module
5 system board

NOTE: Use slots DIMM1 and DIMM3 if you need to use two memory modules. For more information, see System-board components.

The following table lists the available memory configuration matrix:

Post-requisites

1. Follow the procedure from step 9 to step 10 in “Replacing the power-supply unit”.
2. Replace the right-side cover.
Removing the power-button module

⚠️ WARNING: Before working inside your computer, read the safety information that shipped with your computer and follow the steps in Before working inside your computer. After working inside your computer, follow the instructions in After working inside your computer. For more safety best practices, see the Regulatory Compliance home page at www.dell.com/regulatory_compliance.

Topics:
- Prerequisites
- Procedure

Prerequisites

1. Remove the right-side cover.
2. Remove the optical drive.
3. Remove the front bezel.
4. Remove the top cover.
5. Follow the procedure from step 1 to step 2 in “Removing the power-supply unit”.

Procedure

**NOTE:** Note the routing of the cable as you remove it so that you can reroute it correctly after you replace the power-button module.

1. Disconnect the power-button module cable from the system board. For more information, see “System-board components”.
2. Note the power-button module cable routing and remove the cable from the routing guides next to the system board on the chassis.
3. Remove the screw that secures the power-button module and lift the power-button module from the chassis.
4. Remove the cable from the slot on top of the chassis.

6. power-button module cable
Replacing the power-button module

WARNING: Before working inside your computer, read the safety information that shipped with your computer and follow the steps in Before working inside your computer. After working inside your computer, follow the instructions in After working inside your computer. For more safety best practices, see the Regulatory Compliance home page at www.dell.com/regulatory_compliance.

Topics:
- Procedure
- Post-requisites

Procedure

1. Route the cable through the slot on the top of the chassis.
2. Align the screw hole on the power-button module with the screw hole on the chassis.
3. Replace the screw that secures the power-button module to the top chassis.
4. Route the power-button module cable through the routing guides on the chassis.
5. Connect the power-button module cable to the system board.
   For more information, see “System-board components”.

Post-requisites

1. Follow the procedure from step 9 to step 10 in “Replacing the power-supply unit”.
2. Replace the top cover.
3. Replace the front bezel.
4. Replace the optical drive.
5. Replace the right-side cover.
Removing the top I/O-panel

⚠️ WARNING: Before working inside your computer, read the safety information that shipped with your computer and follow the steps in Before working inside your computer. After working inside your computer, follow the instructions in After working inside your computer. For more safety best practices, see the Regulatory Compliance home page at www.dell.com/regulatory_compliance.

Topics:
- Prerequisites
- Procedure

Prerequisites

1. Remove the right-side cover.
2. Remove the front bezel.
3. Remove the top cover.
4. Follow the procedure from step 1 to step 2 in “Removing the power-supply unit”.

Procedure

1. Disconnect the top I/O-panel cables from the system board.
   For more information, see “System-board components”.
2. Note the I/O-panel cables routing and remove them from the routing guides next to the system board on the chassis.
3. Remove the cables through the slot at the top of the chassis.
Figure 27. Disconnecting the cables

3  chassis
Replacing the top I/O-panel

⚠️ WARNING: Before working inside your computer, read the safety information that shipped with your computer and follow the steps in Before working inside your computer. After working inside your computer, follow the instructions in After working inside your computer. For more safety best practices, see the Regulatory Compliance home page at www.dell.com/regulatory_compliance.

Topics:

• Procedure
• Post-requisites

Procedure

1. Align the screw holes on the top I/O-panel with the screw holes on the chassis.
2. Replace the screws that secure the top I/O-panel to the top chassis.
3. Route the I/O-panel cables through the routing guides on the chassis.
4. Connect the top I/O-panel cables to the system board.
   For more information, see "System-board components".

Post-requisites

1. Replace the top cover.
2. Replace the front bezel.
3. Follow the procedure from step 9 to step 10 in "Replacing the power-supply unit".
4. Replace the right-side cover.
Removing blower and heat-sink assembly

⚠️ **WARNING:** Before working inside your computer, read the safety information that shipped with your computer and follow the steps in Before working inside your computer. After working inside your computer, follow the instructions in After working inside your computer. For more safety best practices, see the Regulatory Compliance home page at www.dell.com/regulatory_compliance.

⚠️ **WARNING:** The heat sink may become hot during normal operation. Allow sufficient time for the heat sink to cool before you touch it.

⚠️ **CAUTION:** For maximum cooling of the processor, do not touch the heat transfer areas on the heat sink. The oils in your skin can reduce the heat transfer capability of the thermal grease.

Topics:

- Prerequisites
- Procedure

**Prerequisites**

1. Remove the right-side cover.
2. Follow the procedure from step 1 to step 2 in “Removing the power-supply unit”.

**Procedure**

1. Remove the screws that secure the blower to the heat-sink assembly.
2. Lift the blower off the heat-sink assembly and place it to the side.
Figure 29. Removing the blower

1. #6-32x1/4" screws (3)
2. Blower

3. In a non-adjacent sequence as indicated in the figure below, loosen the captive screws that secure the heat-sink assembly to the system board.

4. Lift the heat-sink assembly off the system board.
Figure 30. Removing the captive screws

1 heat-sink assembly
2 captive screws (4)
3 system board

5 Disconnect the blower cable from the system board.
For more information, see “System-board components”.
Figure 31. Removing the blower cable

1  system board
2  blower cable
3  blower
Replacing blower and heat-sink assembly

⚠️ WARNING: Before working inside your computer, read the safety information that shipped with your computer and follow the steps in Before working inside your computer. After working inside your computer, follow the instructions in After working inside your computer. For more safety best practices, see the Regulatory Compliance home page at www.dell.com/regulatory_compliance.

Topics:
- Procedure
- Post-requisites

Procedure

⚠️ CAUTION: If either the processor or the heat-sink assembly is replaced, use the thermal grease provided in the kit to make sure that thermal conductivity is achieved.

⚠️ NOTE: The original thermal grease can be reused if the original processor and heat-sink assembly are reinstalled together.

1. Connect the blower cable to the system board.
   For more information, see “System-board components”.
2. Place the heat-sink assembly over the processor.
3. Align the captive screws on the heat-sink assembly with the screw holes on the system board.
4. In a non-adjacent sequence, tighten the captive screws that secure the heat-sink assembly to the system board.
5. Place the blower over the heat-sink assembly.
6. Align the screw holes on the blower to the screw holes on the heat-sink assembly.
7. Replace the screws that secure the blower to the heat-sink assembly.

Post-requisites

1. Follow the procedure from step 9 to step 10 in “Replacing the power-supply unit”.
2. Replace the right-side cover.
Removing the VR heat sink

⚠️ WARNING: Before working inside your computer, read the safety information that shipped with your computer and follow the steps in Before working inside your computer. After working inside your computer, follow the instructions in After working inside your computer. For more safety best practices, see the Regulatory Compliance home page at www.dell.com/regulatory_compliance.

⚠️ WARNING: The heat sink may become hot during normal operation. Allow sufficient time for the heat sink to cool before you touch it.

⚠️ CAUTION: For maximum cooling of the processor, do not touch the heat transfer areas on the heat sink. The oils in your skin can reduce the heat transfer capability of the thermal grease.

Topics:

- Prerequisites
- Procedure

**Prerequisites**

1. Remove the right-side cover.
2. Follow the procedure from step 1 to step 2 in “Removing the power-supply unit”.
3. Remove the blower and heat-sink assembly.

**Procedure**

1. Loosen the captive screws that secure the VR heat sink to the system board.
2. Lift the VR heat sink from the system board.
Figure 32. Removing the VR heat sink
Replacing the VR heat sink

⚠️ WARNING: Before working inside your computer, read the safety information that shipped with your computer and follow the steps in Before working inside your computer. After working inside your computer, follow the instructions in After working inside your computer. For more safety best practices, see the Regulatory Compliance home page at www.dell.com/regulatory_compliance.

Topics:

- Procedure
- Post-requisites

Procedure

1. Align and place the VR heat sink on the system board.
2. Tighten the captive screws that secure the VR heat sink to the system board.

Post-requisites

1. Replace the blower and heat-sink assembly.
2. Follow the procedure from step 9 to step 10 in “Replacing the power-supply unit”.
3. Replace the right-side cover.
Removing the processor fan and heat-sink assembly

⚠️ WARNING: Before working inside your computer, read the safety information that shipped with your computer and follow the steps in Before working inside your computer. After working inside your computer, follow the instructions in After working inside your computer. For more safety best practices, see the Regulatory Compliance home page at www.dell.com/regulatory_compliance.

⚠️ WARNING: The heat sink may become hot during normal operation. Allow sufficient time for the heat sink to cool before you touch it.

⚠️ CAUTION: For maximum cooling of the processor, do not touch the heat transfer areas on the heat sink. The oils in your skin can reduce the heat transfer capability of the thermal grease.

Replacing the chassis fan

⚠️ WARNING: Before working inside your computer, read the safety information that shipped with your computer and follow the steps in Before working inside your computer. After working inside your computer, follow the instructions in After working inside your computer. For more safety best practices, see the Regulatory Compliance home page at www.dell.com/regulatory_compliance.

Topics:
- Procedure
- Post-requisites

Procedure

1. Align the holes on the chassis fan with the rubber grommets on the chassis-fan bracket.
   
   **NOTE:** Align the orientation of the chassis-fan bracket as indicated on the bracket to ensure that the chassis fan is secured to the computer.

2. Insert the ends of the rubber grommets through the holes at each corner of the fan.
3. Align the grommets in the fan with the holes at each corner of the chassis fan bracket and pull through until they snap into place.
4. Route the chassis-fan cable through the routing guide on the bracket.
5. Align the tabs on the chassis-fan bracket with the slots on the chassis and slide the fan into position.
6. Align the screw hole on the chassis-fan bracket with the screw hole on the chassis.
7. Replace the screw that secures the chassis-fan bracket to the chassis.
8. Route the chassis-fan cable through the routing guide on the bracket.
9. Connect the chassis-fan cable to the system board.

For more information, see “System-board components”.

Post-requisites

1. Replace the VR heat sink. (if installed)
2. Replace the blower and heat-sink assembly. (if installed)
3. Follow the procedure from step 9 to step 10 in “Replacing the power-supply unit”.
4. Replace the right-side cover.
Removing the processor

⚠️ WARNING: Before working inside your computer, read the safety information that shipped with your computer and follow the steps in Before working inside your computer. After working inside your computer, follow the instructions in After working inside your computer. For more safety best practices, see the Regulatory Compliance home page at www.dell.com/regulatory_compliance.

Topics:

Prerequisites

1. Remove the right-side cover.
2. Follow the procedure from step 1 to step 2 in “Removing the power-supply unit”.
3. Remove the processor fan and heat-sink assembly.
4. Remove the blower and heat-sink assembly. (If installed)

Procedure

1. Press the processor release-lever down and then pull it outwards to release it from the securing tab.
2. Extend the processor release-lever completely to open the processor cover.
3. Gently lift the processor and remove it from the processor socket.
Figure 36. Removing processor

5 processor
Replacing the processor

⚠️ WARNING: Before working inside your computer, read the safety information that shipped with your computer and follow the steps in Before working inside your computer. After working inside your computer, follow the instructions in After working inside your computer. For more safety best practices, see the Regulatory Compliance home page at www.dell.com/ regulatory_compliance.

⚠️ CAUTION: If either the processor or the heat sink is replaced, use the thermal grease provided in the kit to ensure that thermal conductivity is achieved.

⚠️ NOTE: A new processor ships with a thermal pad in the package. In some cases, the processor may ship with the thermal pad attached to it.

Topics:
- Procedure
- Post-requisites

Procedure

1. Ensure that the release lever on the processor socket is fully extended in the open position.

⚠️ CAUTION: The pin-1 corner of the processor has a triangle that aligns with the triangle on the pin-1 corner on the processor socket. When the processor is properly seated, all four corners are aligned at the same height. If one or more corners of the processor are higher than the others, the processor is not seated properly.

2. Align the pin-1 corner on the processor with the pin-1 corner on the processor socket, and then place the processor in the processor socket.

3. When the processor is fully seated in the socket, close the processor cover.

4. Pivot the release-lever down and place it under the tab on the processor cover.
Figure 37. Replacing processor

1  processor socket
3  securing tab
5  release lever

2  processor
4  processor cover

Post-requisites

1  Replace the blower and heat-sink assembly. (if installed)
2  Replace the processor fan and heat-sink assembly.
3  Follow the procedure from step 9 to step 10 in “Replacing the power-supply unit”.
4  Replace the right-side cover.
Removing the wireless card

⚠️ WARNING: Before working inside your computer, read the safety information that shipped with your computer and follow the steps in Before working inside your computer. After working inside your computer, follow the instructions in After working inside your computer. For more safety best practices, see the Regulatory Compliance home page at www.dell.com/regulatory_compliance.

Topics:
- Prerequisites
- Procedure

Prerequisites

1. Remove the right-side cover.
2. Follow the procedure from step 1 to step 2 in “Removing the power-supply unit”.

Procedure

1. Locate the wireless-card slot on the system board.
   For more information, see “System-board components”.
2. Remove the screw that secures the wireless-card bracket to the wireless card and the system board.
3. Remove the wireless-card bracket and disconnect the antenna cables from the wireless card.
4. Slide and lift the wireless card off the system board.

- Procedure
- Post-requisites

Procedure

CAUTION: To avoid damaging the wireless card, do not place any cables under it.

1. Align the notch on the wireless card with the tab on the wireless-card slot.
2. Slide the wireless card at an angle into the wireless-card slot.
3. Connect the antenna cables to the wireless card.
   The following table provides the antenna-cable color scheme for the wireless card supported by your computer.

<table>
<thead>
<tr>

- Post-requisites

Procedure

1. Adhere the antenna to the chassis.
2. Route the antenna cables through the slot on the top of the chassis.
3. Route the antenna cables through the routing guides on the chassis.
4. Secure the antenna cables to the chassis using the securing clip.

Post-requisites

1. Follow the procedure from step 3 to step 5 in “Replacing the wireless card”.
2. Replace the top cover.
3. Follow the procedure from step 9 to step 10 in “Replacing the power-supply unit”.
4. Replace the right-side cover.
Removing the system board

⚠️ **WARNING:** Before working inside your computer, read the safety information that shipped with your computer and follow the steps in *Before working inside your computer*. After working inside your computer, follow the instructions in *After working inside your computer*. For more safety best practices, see the Regulatory Compliance home page at [www.dell.com/regulatory_compliance](http://www.dell.com/regulatory_compliance).

**NOTE:** Your computer’s Service Tag is stored in the system board. You must enter the Service Tag in the BIOS setup program after you replace the system board.

**NOTE:** Replacing the system board removes any changes you have made to the BIOS using the BIOS setup program. You must make the appropriate changes again after you replace the system board.

**NOTE:** Before disconnecting the cables from the system board, note the location of the connectors so that you can reconnect the cables correctly after you replace the system board.

Topics:
- Prerequisites
- Procedure

### Prerequisites

1. Remove the right-side cover.
2. Follow the procedure from step 1 to step 2 in “Removing the power-supply unit”.
3. Remove the memory modules.
4. Remove the graphics card.
5. Remove the solid-state drive.
6. Remove the wireless card.
7. Remove the processor fan and heat sink assembly.
8. Remove the processor.

### Procedure

1. Disconnect all the cables connected to the system board.
   For more information, see “System-board components”.
2. Make note of the cable routing and remove the cables from the routing guides.
3. Remove the screws that secure the system board to the chassis.
4. Lift the system board at an angle and remove it from the computer.
Figure 42. Removing the system board

Replacing the system board

⚠️ **WARNING:** Before working inside your computer, read the safety information that shipped with your computer and follow the steps in Before working inside your computer. After working inside your computer, follow the instructions in After working inside your computer. For more safety best practices, see the Regulatory Compliance home page at [www.dell.com/regulatory_compliance](http://www.dell.com/regulatory_compliance).

⚠️ **NOTE:** Your computer’s Service Tag is stored in the system board. You must enter the Service Tag in the BIOS setup program after you replace the system board.

⚠️ **NOTE:** Replacing the system board removes any changes you have made to the BIOS using the BIOS setup program. You must make the appropriate changes again after you replace the system board.

Topics:
- Procedure
- Post-requisites

**Procedure**

1. Slide the I/O ports on the system board into the slots on the chassis and align the screw holes on the system board with the screw holes on the chassis.
2. Replace the screws that secure the system board to the chassis.
3. Route and connect the cables that you disconnected from the system board.
   For more information, see “System-board components.”

**Post-requisites**

1. Replace the processor.
2. Replace the processor fan and heat sink assembly.
3. Replace the wireless card.
4. Replace the solid-state drive.
5. Replace the graphics card.
6. Replace the memory modules.
7. Follow the procedure from step 9 to step 10 in “Replacing the power-supply unit.”
8. Replace the right-side cover.
Downloading drivers

Downloading the audio driver

1. Turn on your computer.
2. Go to www.dell.com/support.
3. Click or tap Product support, enter the Service Tag of your computer, and then click or tap Submit.
   
   **NOTE:** If you do not have the Service Tag, use the auto-detect feature or manually browse for your computer model.
4. Click or tap Drivers & downloads > Find it myself.
5. Scroll down the page and expand Audio.
6. Click or tap Download to download the audio driver for your computer.
7. After the download is complete, navigate to the folder where you saved the audio driver file.
8. Double-click or double-tap the audio driver file icon and follow the instructions on the screen to install the driver.

Downloading the graphics driver

1. Turn on your computer.
2. Go to www.dell.com/support.
3. Click or tap Product support, enter the Service Tag of your computer, and then click or tap Submit.
   
   **NOTE:** If you do not have the Service Tag, use the auto-detect feature or manually browse for your computer model.
4. Click or tap Drivers & downloads > Find it myself.
5. Scroll down the page and expand Video.
6. Click or tap Download to download the graphics driver for your computer.
7. After the download is complete, navigate to the folder where you saved the graphics driver file.
8. Double-click or double-tap the graphics driver file icon and follow the instructions on the screen.

Downloading the USB 3.0 driver

1. Turn on your computer.
2. Go to www.dell.com/support.
3. Click or tap Product support, enter the Service Tag of your computer, and then click or tap Submit.
   
   **NOTE:** If you do not have the Service Tag, use the auto-detect feature or manually browse for your computer model.
4. Click or tap Drivers & downloads > Find it myself.
5. Scroll down the page and expand Chipset.
6. Click or tap Download to download the USB 3.0 driver for your computer.
7. After the download is complete, navigate to the folder where you saved the USB 3.0 driver file.
8. Double-click or double-tap the driver file icon and follow the instructions on screen.

Downloading the Wi-Fi driver

1. Turn on your computer.
2. Go to www.dell.com/support.
Click or tap **Product support** enter the Service Tag of your computer, and then click or tap **Submit**.

**NOTE:** If you do not have the Service Tag, use the auto-detect feature or manually browse for your computer model.

1. Click or tap **Drivers & downloads** > **Find it myself**.
2. Scroll down the page and expand **Network**.
3. Click or tap **Download** to download the Wi-Fi driver for your computer.
4. After the download is complete, navigate to the folder where you saved the Wi-Fi driver file.
5. Double-click or double-tap the driver file icon and follow the on-screen instructions to install the driver.

### Downloading the media-card reader driver

1. Turn on your computer.
2. Go to [www.dell.com/support](http://www.dell.com/support).
3. Click **Product support**, enter the Service Tag of your computer, and then click **Submit**.

**NOTE:** If you do not have the Service Tag, use the auto-detect feature or manually browse for your computer model.

4. Click **Drivers & downloads** > **Find it myself**.
5. Scroll down the page, and expand **Chipset**.
6. Click **Download** to download the media-card reader driver for your computer.
7. After the download is complete, navigate to the folder where you saved the card reader driver file.
8. Double-click the card reader driver file icon, and follow the instructions on the screen.

### Downloading the chipset driver

1. Turn on your computer.
2. Go to [www.dell.com/support](http://www.dell.com/support).
3. Click or tap **Product support**, enter the Service Tag of your computer, and then click or tap **Submit**.

**NOTE:** If you do not have the Service Tag, use the auto-detect feature or manually browse for your computer model.

4. Click or tap **Drivers & downloads** > **Find it myself**.
5. Scroll down the page and expand **Chipset**.
6. Click or tap **Download** to download the chipset driver for your computer.
7. After the download is complete, navigate to the folder where you saved the chipset driver file.
8. Double-click or double-tap the chipset driver file icon and follow the instructions on the screen.

### Downloading the network driver

1. Turn on your computer.
2. Go to [www.dell.com/support](http://www.dell.com/support).
3. Click **Product support** enter the Service Tag of your computer and click **Submit**.

**NOTE:** If you do not have the Service Tag, use the auto-detect feature or manually browse for your computer model.

4. Click **Drivers & downloads** > **Find it myself**.
5. Scroll down the page and expand **Network**.
6. Click **Download** to download the network driver for your computer.
7. Save the file, and after the download is complete, navigate to the folder where you saved the network driver file.
8. Double-click the network driver file icon and follow the instructions on screen.
NOTE: Depending on the computer and its installed devices, the items listed in this section may or may not be displayed.

Topics:
- Boot Sequence
- Navigation keys
- BIOS overview
- Entering BIOS setup program
- System Setup Options
- System and setup password

Boot Sequence

Boot Sequence allows you to bypass the System Setup–defined boot device order and boot directly to a specific device (for example: optical drive or hard drive). During the Power-on Self Test (POST), when the Dell logo appears, you can:

- Access System Setup by pressing F2 key
- Bring up the one-time boot menu by pressing F12 key

The one-time boot menu displays the devices that you can boot from including the diagnostic option. The boot menu options are:

- Removable Drive (if available)
- STXXXX Drive
  
  NOTE: XXX denotes the SATA drive number.
- Optical Drive (if available)
- SATA Hard Drive (if available)
- Diagnostics
  
  NOTE: Choosing Diagnostics, will display the ePSA diagnostics screen.

The boot sequence screen also displays the option to access the System Setup screen.

Navigation keys

NOTE: For most of the System Setup options, changes that you make are recorded but do not take effect until you restart the system.

<table>

<td>Moves to the next focus area.</td>
</tr>
</tbody>
</table>
Keys

Esc

Moves to the previous page until you view the main screen. Pressing Esc in the main screen displays a message that prompts you to save any unsaved changes and restarts the system.

**BIOS overview**

The BIOS manages data flow between the computer's operating system and attached devices such as hard disk, video adapter, keyboard, mouse, and printer.

**Entering BIOS setup program**

1. Turn on (or restart) your computer.
2. During POST, when the DELL logo is displayed, watch for the F2 prompt to appear, and then press F2 immediately.

   **NOTE:** The F2 prompt indicates that the keyboard is initialized. This prompt can appear very quickly, so you must watch for it, and then press F2. If you press F2 before the F2 prompt, this keystroke is lost. If you wait too long and the operating system logo appears, continue to wait until you see the desktop. Then, turn off your computer and try again.

**System Setup Options**

**NOTE:** Depending on your computer and its installed devices, the items listed in this section may or may not appear.

## Advanced

### Auto Power On Mode
Allows you to set the computer to turn on automatically every day or on a preselected date. This option can be configured only if the Auto Power On mode is set to Enabled Everyday or Selected Day.

### Auto Power On Date
Allows you to set the date on which the computer must turn on automatically. This option can be configured only if the Auto Power On mode is set to Enabled 1 to 31.

### Auto Power On Time
Allows you to set the time at which the computer must turn on automatically. This option can be configured only if the Auto Power On mode is set to Enabled hh:mm:ss.

## SupportAssist System Resolution

### Auto OS Recovery Threshold
Control the automatic boot flow for SupportAssist System Resolution Console and for the Dell OS Recovery tool.

### SupportAssist OS Recovery
Enable or disable the boot flow for the SupportAssist OS Recovery tool when certain system errors.

## Performance Options

### Overclocking Feature
- **Core Over Clocking Level**
  Allows you enable or disable the processor to adjust the flex ratio and voltage in a turbo mode environment.
- **Core Ratio Limit Override**
  Allows you to set the core ratio limit.
- **Single Core**
  Allows you to select single core or multiple cores.
- **Core Voltage Mode**
  Allows you to select between adaptive and override voltage modes.
- **Core Voltage Offset**
  Allows you to set the override value of core voltage.
- **Long Duration PWR Limit**
  Allows you to set the turbo mode power limit.
- **Short Duration PWR Limit Options**
  Allows you to set the turbo mode power limit.

</tr>
</tbody>
</table>

You can create a system password and a setup password to secure your computer.

⚠️ CAUTION: The password features provide a basic level of security for the data on your computer.

⚠️ CAUTION: Anyone can access the data stored on your computer if it is not locked and left unattended.

ℹ️ NOTE: System and setup password feature is disabled.
Assigning a system setup password

You can assign a new System or Admin Password only when the status is in Not Set.

To enter the system setup, press F2 immediately after a power-on or re-boot.

1. In the System BIOS or System Setup screen, select Security and press Enter.
   The Security screen is displayed.
2. Select System/Admin Password and create a password in the Enter the new password field.
   Use the following guidelines to assign the system password:
   • A password can have up to 32 characters.
   • The password can contain the numbers 0 through 9.
   • Only lower case letters are valid, upper case letters are not allowed.
   • Only the following special characters are allowed: space, (\), (+), (-), (/), (;), ([), (]), (`).
3. Type the system password that you entered earlier in the Confirm new password field and click OK.
4. Press Esc and a message prompts you to save the changes.
5. Press Y to save the changes.
   The computer reboots.

Deleting or changing an existing system setup password

Ensure that the Password Status is Unlocked (in the System Setup) before attempting to delete or change the existing System and/or Setup password. You cannot delete or change an existing System or Setup password, if the Password Status is Locked.

To enter the System Setup, press F2 immediately after a power-on or reboot.

1. In the System BIOS or System Setup screen, select System Security and press Enter.
   The System Security screen is displayed.
2. In the System Security screen, verify that Password Status is Unlocked.
3. Select System Password, alter or delete the existing system password and press Enter or Tab.
4. Select Setup Password, alter or delete the existing setup password and press Enter or Tab.
   📌 NOTE: If you change the System and/or Setup password, re-enter the new password when prompted. If you delete the System and/or Setup password, confirm the deletion when prompted.
5. Press Esc and a message prompts you to save the changes.
6. Press Y to save the changes and exit from System Setup.
   The computer reboots.

Clearing CMOS settings

⚠️ WARNING: Before working inside your computer, read the safety information that shipped with your computer and follow the steps in Before working inside your computer. After working inside your computer, follow the instructions in After working inside your computer. For more safety best practices, see the Regulatory Compliance home page at www.dell.com/regulatory_compliance.

Prerequisites

1. Remove the right side-cover.
2. Follow the procedure from step 1 to step 3 in “Removing the power-supply unit.”
Procedure

1. Locate the CMOS reset jumper (CMCLR) on the system board.

   ![NOTE: For more information on the location of the CMOS jumper, see “System-board components”.

2. Remove the power cord.

3. Remove the jumper plug from the password jumper-pins (PSWD) and connect it to the CMOS jumper-pins.

4. Wait for 5 seconds and then replace the jumper plug to the password jumper-pins (PSWD).

---

**Figure 43. Clearing the CMOS**

1. jumper plug
2. CMOS jumper-pins
3. password jumper-pins (PSWD)

---

Post-requisites

1. Replace the right side-cover.

2. Follow the procedure from step 9 to step 10 in “Replacing the power-supply unit”.
Clearing forgotten passwords

⚠️ **WARNING:** Before working inside your computer, read the safety information that shipped with your computer and follow the steps in *Before working inside your computer*. After working inside your computer, follow the instructions in *After working inside your computer*. For more safety best practices, see the Regulatory Compliance home page at [www.dell.com/regulatory_compliance](http://www.dell.com/regulatory_compliance).

Prerequisites

1. Remove the right side-cover.
2. Follow the procedure from step 1 to step 3 in “Removing the power-supply unit”.

Procedure

1. Locate the password reset jumper (PSWD) on the system board.
   
   🔄 **NOTE:** *For more information on the location of the password reset jumper, see “System-board components”.*
2. Remove the jumper plug from the password jumper-pins.

   ![Figure 44. Removing the jumper plug](image)

   1. jumper plug
3. Power on without the jumper plug to clear the password.
4 Wait until the desktop is loaded and then shut down the system and replace the jumper plug in its original location.

**Figure 45. Clearing the password**

1 jumper plug

**Post-requisites**

1 Replace the right side-cover.
2 Follow the procedure from step 9 to step 10 in “Replacing the power-supply unit”.
Enhanced Pre-Boot System Assessment (ePSA) diagnostics

The ePSA diagnostics (also known as system diagnostics) performs a complete check of your hardware. The ePSA is embedded with the BIOS and is launched by the BIOS internally. The embedded system diagnostics provides a set of options for particular devices or device groups allowing you to:

- Run tests automatically or in an interactive mode
- Repeat tests
- Display or save test results
- Run thorough tests to introduce additional test options to provide extra information about the failed device(s)
- View status messages that inform you if tests are completed successfully
- View error messages that inform you of problems encountered during testing

**NOTE:** Some tests for specific devices require user interaction. Always ensure that you are present at the computer terminal when the diagnostic tests are performed.

Running the ePSA Diagnostics

Invoke diagnostics boot by either of the methods that are suggested below:

1. Power on the computer.
2. As the computer boots, press the F12 key when the Dell logo is displayed.
3. In the boot menu screen, use Up/Down arrow key to select the Diagnostics option and then press Enter.

   **NOTE:** The Enhanced Pre-boot System Assessment window displays, listing all devices detected in the computer. The diagnostics starts running the tests on all the detected devices.

4. Press the arrow in the lower-right corner to go to the page listing.
   The detected items are listed and tested.
5. To run a diagnostic test on a specific device, press Esc and click Yes to stop the diagnostic test.
6. Select the device from the left pane and click Run Tests.
7. If there are any issues, error codes are displayed.
   Note the error code and contact Dell.

Diagnostics

The computer POST (Power On Self Test) ensures that it meets the basic computer requirements and the hardware is working appropriately before the boot process begins. If the computer passes the POST, the computer continues to start in a normal mode. However, if the computer fails the POST, the computer emits a series of LED codes during the start-up. The system LED is integrated on the Power button.

The following table shows different light patterns and what they indicate.
### Table 10. Diagnostics

<table>
<thead>
<tr>
<th>Number of LED flashes</th>
<th>Problem description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>System board: BIOS and ROM failure</td>
</tr>
<tr>
<td>2</td>
<td>No memory or RAM detected</td>
</tr>
<tr>
<td>3</td>
<td>System board or chipset error</td>
</tr>
<tr>
<td>4</td>
<td>Memory or RAM failure</td>
</tr>
<tr>
<td>5</td>
<td>CMOS battery failure</td>
</tr>
<tr>
<td>6</td>
<td>Video card or chip failure</td>
</tr>
<tr>
<td>7</td>
<td>CPU failure</td>
</tr>
<tr>
<td>3,6</td>
<td>Recovery image not found</td>
</tr>
<tr>
<td>3,7</td>
<td>Recovery image found but invalid</td>
</tr>
</tbody>
</table>

### Flashing BIOS (USB key)

1. Follow the procedure from step 1 to step 7 in "Flashing the BIOS" to download the latest BIOS setup program file.
2. Create a bootable USB drive. For more information see the knowledge base article SLN143196 at www.dell.com/support.
3. Copy the BIOS setup program file to the bootable USB drive.
4. Connect the bootable USB drive to the computer that needs the BIOS update.
5. Restart the computer and press `F12` when the Dell logo is displayed on the screen.
6. Boot to the USB drive from the One Time Boot Menu.
7. Type the BIOS setup program filename and press `Enter`.
8. The BIOS Update Utility appears. Follow the instructions on the screen to complete the BIOS update.

### Flashing the BIOS

You may need to flash (update) the BIOS when an update is available or when you replace the system board.

Follow these steps to flash the BIOS:

1. Turn on your computer.
2. Go to www.dell.com/support.
3. Click **Product support**, enter the Service Tag of your computer, and then click **Submit**.
   
   **NOTE**: If you do not have the Service Tag, use the auto-detect feature or manually browse for your computer model.
4. Click **Drivers & downloads > Find it myself**.
5. Select the operating system installed on your computer.
6. Scroll down the page and expand **BIOS**.
7. Click **Download** to download the latest version of the BIOS for your computer.
8. After the download is complete, navigate to the folder where you saved the BIOS update file.
9. Double-click the BIOS update file icon and follow the instructions on the screen.

### Backup media and recovery options

Dell proposes multiple options for recovering Windows operating system on your Dell PC. For more information, see **Dell Windows Backup Media and Recovery Options**.
Power-supply unit Built-in Self Test (BIST)

XPS 8930 supports a new power-supply unit Built-in Self Test (BIST). BIST can now be performed by connecting the power cord to the power-supply unit.

1. Turn off your computer.
2. Disconnect the power cord from the power-supply unit, and wait for 15 seconds.
3. After 15 seconds, connect the power cord to the power-supply unit.
   - If the LED is on for 3 seconds and turns off, it indicates that the power-supply unit is functional. Continue with troubleshooting steps for other devices.
   - If the LED does not turn on, it indicates a hardware failure.

Steps to confirm that power-supply unit is defective

1. Disconnect the power cord from the power-supply unit.
   - CAUTION: Ensure that you take adequate safety precautions before accessing the components on your computer. See the removing and replacing instructions in the service manual for procedure to access the power-supply unit and its cables.
2. Disconnect the power-supply unit cables from the system board.
3. Connect the power cord to the power-supply unit.
   - If the LED is on for 3 seconds and turns off, it indicates that the power-supply unit is functional. Continue with troubleshooting steps for other devices.
   - If the LED does not turn on, it indicates a power-supply unit failure. Replace the power-supply unit only.

Wi-Fi power cycle

If your computer is unable to access the Internet due to Wi-Fi connectivity issues a Wi-Fi power cycle procedure may be performed. The following procedure provides the instructions on how to conduct a Wi-Fi power cycle:

- NOTE: Some ISPs (Internet Service Providers) provide a modem/router combo device.

1. Turn off your computer.
2. Turn off the modem.
3 Turn off the wireless router.
4 Wait for 30 seconds.
5 Turn on the wireless router.
6 Turn on the modem.
7 Turn on your computer.
Getting help and contacting Dell

Self-help resources

You can get information and help on Dell products and services using these self-help resources:

<table>

Dell knowledge base articles for a variety of computer concerns.

Learn and know the following information about your product:

- Product specifications
- Operating system
- Setting up and using your product
- Data backup
- Troubleshooting and diagnostics
- Factory and system restore
- BIOS information

To locate the Me and My Dell relevant to your product, identify your product through one of the following:

- Select Detect Product.
- Locate your product through the drop-down menu under View Products.
- Enter the Service Tag number or Product ID in the search bar.

Contacting Dell

To contact Dell for sales, technical support, or customer service issues, see www.dell.com/contactdell.

NOTE: Availability varies by country and product, and some services may not be available in your country.

NOTE: If you do not have an active internet connection, you can find contact information on your purchase invoice, packing slip, bill, or Dell product catalog.
