Notes, cautions, and warnings

**NOTE:** A NOTE indicates important information that helps you make better use of your product.

**CAUTION:** A CAUTION indicates either potential damage to hardware or loss of data and tells you how to avoid the problem.

**WARNING:** A WARNING indicates a potential for property damage, personal injury, or death.
Introduction

The Data Security Console provides access to applications that ensure security for all users of the computer, to view and manage encryption status of the computer's drives and partitions, and to easily enroll their PBA password and recovery questions.

The following features are available:
- Enroll credentials for use with PBA
- Take advantage of multi-factor credentials, including passwords and smart cards
- Recover access to your computer if you forget your password without help desk calls or administrator assistance
- Easily change your Windows password
- Set personal preferences
- View encryption status
- View Firewall and Web Protection status (if installed).

Data Security Console

To open the Data Security Console, from the Desktop, double-click the Dell Data Security Console icon.

You can access these applications:
- Encryption Status allows you to view the encryption status of the computer's drives and partitions.
- The Firewall and Web Protection status page displays the overall and individual protection status of the computers Fire and Web Protection.
- The Sign-In Access tool allows you to set up and manage PBA password, configure PBA self-recovery questions, and view the status of your credential enrollment.

This guide describes how to use each of these applications.

Be sure to periodically check dell.com/support for updated documentation.

Contact Dell ProSupport

Call 877-459-7304, extension 4310039 for 24x7 phone support for your Dell product.

Additionally, online support for Dell products is available at dell.com/support. Online support includes drivers, manuals, technical advisories, FAQs, and emerging issues.

Be sure to help us quickly connect you to the right technical expert by having your Service Tag or Express Service Code available when you call.

For phone numbers outside of the United States, see Dell ProSupport International Phone Numbers.
To access an application, click the appropriate tile.

Title bar

To return to the home page from within an application, click the back arrow in the left corner of the title bar, next to the name of the active application.

To navigate directly to another application, click the down arrow next to the active application name, and select an application.

To minimize, maximize, or close the Data Security Console, click the appropriate icon in the right corner of the title bar.

To restore the Data Security Console after minimizing, double-click its notification area icon.
To open Help, click the ? on the title bar.

Data Security Console Details

To view details about the Data Security Console, policies, running services, and logs, click the gear icon on the left side of the title bar. This information might be necessary for an administrator to provide technical support.

Select an item from the menu.

<table>
<thead>
<tr>
<th>Menu Item</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>About</td>
<td>Contains version information.</td>
</tr>
</tbody>
</table>
| Show Info | Contains the following:  
  • product version and date information  
  • whether Dell Encryption and/or PBA advanced authentication is managed by the enterprise or by a local administrator  
  • version numbers of the operating system, BIOS, motherboard, and Trusted Platform Module (TPM). |
| MS Info   | Runs the Microsoft Windows System Information utility to display detailed information about the hardware, components, and software environment. |
| Copy Info | Copies all of the system information to the clipboard, to paste into an email for your administrator or Dell ProSupport. |
| Feedback  | Displays a form where you can provide feedback to Dell about this product. (On non-domain computers, this option is always available. On domain computers, this option is determined by policy.) |
| Policies  | Displays a hierarchy of policies that apply to this computer. |
| Services  | Displays details about the services that are running. |
| Support   | Connects to the Dell ProSupport website. |
| Log       | Displays a detailed list of logged events, for troubleshooting. |
The Encryption page displays the encryption status of the computer. If a disk, drive, or partition is not encrypted, its status reads Unprotected. A drive or partition that is encrypted shows the status Protected.

To update encryption status, right-click the appropriate disk, drive, or partition, and select Refresh.
Sign-in Access lets you enroll, modify, and check enrollment status, based on policy set by the administrator.

After initial enrollment, you can click the Sign-in Access tile to add or modify credentials.

**NOTE:** The Sign-in Access tile will display only if the PBA is active.

### Enroll Credentials for the First Time

To enroll credentials for the first time:

2. On the Password page, to change your Windows password, enter the current password then enter and confirm a new password and click Change.
3. On the Recovery Question page, select and provide answers to three Recovery Questions then click Enroll.

For more detailed information about enrolling a credential, or to change a credential, see Add, Modify, or View Enrollments.

### Add, Modify, or View Enrollments

To add, modify, or view enrollments, click the Sign-in Access tile.

Tabs in the left pane list available Enrollments. This varies based on your platform or type of hardware.

The Sign-in Access page displays supported credentials, their policy setting (Required or N/A), and their enrollment status. From this page, users can manage their enrollments, based on policy set by the administrator:

- To enroll a credential for the first time, on the line with the credential, click Enroll.
- To delete an existing enrolled credential, click Delete.
- If policy does not allow you to either enroll or modify your own credentials, the Enroll and Delete links on the Status page are inactive.
- To change an existing enrollment, click the appropriate tab in the left pane.

If policy does not allow enrollment or modification of a credential, a message displays on the credential's enrollment page, "Credentials modification is not allowed by policy."
Password

To change your Windows password:

1. Click the **Password** tab.
2. Enter the current Windows password.
3. Enter the new password and enter it again to confirm it, and click **Change**.

   Password changes are effective immediately.

4. At the Successful Enrollment dialog, click **OK**.

   **NOTE:**

   You should only change your Windows password in the Data Security Console rather than in Windows. If the Windows password is changed outside of the Data Security Console, a password mismatch will occur, requiring a recovery operation.
Recovery Questions

The Recovery Questions page allows you to create, delete, or change your recovery questions and answers. Recovery Questions provide a question and answer-based method for you to access your Windows accounts if, for example, the password is expired or forgotten.

NOTE:
Recovery questions are used to recover access to a computer only. The questions and answers cannot be used to log on.

If you have no previous PBA recovery questions enrolled:
1. Click the Recovery Questions tab.
2. Select from a list of pre-defined questions and then enter and confirm the answers.
3. Click Enroll.

NOTE:
Click Reset to clear the selections on this page and start over.

Recovery Questions Already Enrolled

If PBA recovery questions have already been enrolled, you can either delete or re-enroll them.
1. Click the Recovery Questions tab.
2. Click the appropriate button:
   - To remove the PBA recovery questions completely, click Delete.
   - To re-define PBA recovery questions and answers, click Re-enroll.
Glossary

Credential - A credential is something that proves a person's identity, such as their Windows password.

Preboot Authentication (PBA) - Preboot Authentication serves as an extension of the BIOS or boot firmware and guarantees a secure, tamper-proof environment external to the operating system as a trusted authentication layer. The PBA prevents anything being read from the hard disk, such as the operating system, until the user has confirmed they have the correct credentials.

Protected – For a self-encrypting drive (SED), a computer is protected once the SED has been activated and the Pre-boot-authentication (PBA) is deployed.

Self-encrypting Drives (SEDs) - A hard drive that has a built-in encryption mechanism that encrypts all data stored on the media and decrypts all data leaving the media, automatically. This type of encryption is completely transparent to the user.

Single Sign-On (SSO) - SSO simplifies the logon process when multi-factor authentication is enabled at both preboot and Windows logon. If enabled, authentication is required at preboot only, and users are automatically logged on to Windows. If not enabled, authentication may be required multiple times.

Trusted Platform Module (TPM) - TPM is a security chip with three major functions: secure storage, measurement, and attestation. The Encryption client uses TPM for its secure storage function. The TPM can also provide encrypted containers for the software vault.
