Notes, cautions, and warnings

**NOTE:** A NOTE indicates important information that helps you make better use of your product.

**CAUTION:** A CAUTION indicates either potential damage to hardware or loss of data and tells you how to avoid the problem.

**WARNING:** A WARNING indicates a potential for property damage, personal injury, or death.

Introduction

SupportAssist automates support from Dell by proactively and predictively identifying hardware and software issues on your PC. SupportAssist addresses PC performance and stabilization issues, prevents security threats, monitors and detects hardware failures, and automates the engagement process with Dell Technical support. Depending on your Dell service plan, SupportAssist also automates support request creation for issues that are detected during a scan. For information on the SupportAssist capabilities for different service plans, see SupportAssist capabilities and Dell service plans on page 6.

NOTE: In this document, the term PC refers to Dell laptops, desktops, gateways, and embedded PCs.

SupportAssist enables you to optimize your PC by removing unwanted files, optimizing network settings, tuning-up PC performance, and removing virus and malware. It also identifies driver updates available for your PC.

SupportAssist collects and sends the required PC information securely to Dell Technical Support. The collected information enables Dell to provide you an enhanced, efficient, and accelerated support experience.

This document provides information about using SupportAssist on PCs running Windows 7, 8, or 10 operating systems. For information about using SupportAssist on PCs running Windows 10 in S mode, see the SupportAssist for Home PCs User’s Guide for Windows 10 in S Mode available at https://www.dell.com/serviceabilitytools.

Topics:
- Key features
- New features in this release
- Supported PCs
- SupportAssist capabilities and Dell service plans
- Additional resources

Key features
- Predictive and proactive issue detection and notification.
- Manually or automatically check for driver updates available for your PC.
- Manually or automatically scan your PC hardware to identify issues.
- Automatically create a support request for a hardware issue detected in your PC.
- Manually create a support request for an issue in your PC.
- Clean temporary files, optimize network connectivity, fine-tune PC performance, and remove viruses and malware.
- Manually send files to Dell technical support.

NOTE: SupportAssist capabilities available for a PC vary depending on the Dell service plan of the PC.

New features in this release

Ability to migrate files and settings from a Dell or non-Dell PC to a different Dell PC using the Dell Migrate service. For more information, go to www.Dell.com/Migrate.

NOTE: The Dell Migrate service is available only for Inspiron, XPS, and Alienware PCs in the United States region.

Supported PCs

SupportAssist is supported on the following Dell PCs:

- Laptops and desktops:
  - Inspiron
  - XPS
  - Alienware
NOTE: SupportAssist is not supported on virtual machines.

SupportAssist capabilities and Dell service plans

SupportAssist proactively and predictively detects and notifies you about hardware and software issues that may occur on your PC. Depending on your Dell service plan, SupportAssist automates and facilitates your engagement with Dell Technical Support.

The following table summarizes the SupportAssist capabilities for PCs with an active Basic, Premium Support, ProSupport, ProSupport Plus, and Premium Support Plus service plans:

</tbody>
</table>

1 Onsite assistance for replacing a self-replaceable part is available only in certain regions.
2 The virus and malware removal capability is not available in certain regions, for example, China.
3 Predictive analysis failure detection includes hard drives, solid state drives, batteries, thermals, and desktop fans.
4 Preferred contact time can be provided only by customers in U.S. or Canada.

Additional resources

Besides this guide, you can also see the following resources:
- For questions about SupportAssist, go to the Dell SupportAssist Community.
- For video tutorials about various SupportAssist features, see the SupportAssist for Home PCs on YouTube.
SupportAssist is preinstalled on your PC, you can open SupportAssist by browsing through your applications. If SupportAssist is not preinstalled, follow the instructions in this section to install SupportAssist, create a SupportAssist profile, and configure your SupportAssist settings.

Topics:
- Minimum PC requirements
- Install SupportAssist
- SupportAssist user interface
- Change language setting
- Create SupportAssist profile
- Update contact and shipping information
- Use different SupportAssist profile
- PC details
- Configure Internet settings
- Scheduled scans and optimizations
- Manually upgrade SupportAssist
- Notifications
- Uninstall SupportAssist

Minimum PC requirements

The following table lists the minimum PC requirements for installing and using SupportAssist:

| **Display resolution** | 1200 x 720 |

**NOTE:** If you do not have Microsoft .NET Framework 4.6.1, SupportAssist installs the latest Microsoft .NET Framework on your PC.

**Install SupportAssist**

**Prerequisites**
- The PC must meet the minimum PC requirements for installing and using SupportAssist. See Minimum PC requirements on page 8.
- You must have administrator rights on the PC.

**About this task**
By default, SupportAssist is installed on all PCs shipped from the Dell factory. If SupportAssist is not installed on your PC, you can manually download and install SupportAssist.

**Steps**
1. Go to www.dell.com/supportassistforpcs
2. Click **Download Now**.
   The SupportAssistInstaller.exe file is downloaded.
   The SupportAssist installer package is downloaded, and SupportAssist is automatically installed and a shortcut icon is created on the desktop.
   **NOTE:** On PCs with operating system build number 16299 or later, the shortcut icon is not created.
4. In the **SupportAssist installer** window, click **Launch**.
   The **SupportAssist** window is displayed.

**SupportAssist user interface**

Click **Start Now** to run all the scans and optimizations from the home page.
NOTE: If there is a pending notification or SupportAssist requires you to perform an action, only the tiles view is displayed when you open SupportAssist.

![Home page](image)

Figure 1. Home page

After the scans and optimizations are complete, the following details are displayed on the home page:

- Amount of hard drive space reclaimed
- Number of driver updates installed
- Number of viruses or malware removed

NOTE: The home page displays the details of the scans and optimizations that were performed during the last 90 days.

![Summary view](image)

Figure 2. Home page—Summary view

To go to the tiles view, click .

Depending on your service plan, the following tiles are displayed on the home page. For information on the SupportAssist capabilities for different service plans, see SupportAssist capabilities and Dell service plans on page 6.

- Get Drivers & Downloads
- Scan Hardware
- Clean Files
- Tune Performance
- Optimize Network
- Remove Viruses & Malware

NOTE: If you do not have administrator rights on the PC, only the Scan Hardware tile is enabled.

![SupportAssist interface](image)

**Figure 3. Home page—Tiles view**

**NOTE:** Figures 1, 2, and 3 are for illustrative purpose only. Individual features such as header color, buttons, and so on, are different on Alienware PCs.

**NOTE:** If a critical hardware issue is detected on your PC, all the PC optimization tiles are disabled until you create a support request.

### Change language setting

**About this task**
SupportAssist is available in 25 languages. By default, SupportAssist is set to the same language as that of the operating system. You can change the language according to your preference.

**Steps**
1. On the top-right corner of the SupportAssist user interface, click the settings icon and click **Select language**. The list of languages is displayed.
2. Select your preferred language.
3. Click **Yes** to restart SupportAssist in the selected language.

SupportAssist restarts in the selected language and 🔄 is displayed next to the selected language.

### Create SupportAssist profile

**Prerequisites**
You must have administrator rights on the PC.

**About this task**
You can create a SupportAssist profile by using your Dell My Account or your social media account. Creating a SupportAssist profile enables you to receive the automated support capabilities available based on your PC service plan.
Steps

1. On the top-right corner of the SupportAssist user interface, click **Profile** and click **Complete Profile**.
   - If you have not accepted the SupportAssist terms and conditions, a message is displayed indicating that you have not accepted the SupportAssist terms and conditions. Click the **Read SupportAssist terms & conditions** link, accept the terms and conditions, click **Save**, and then try again.
   - If SupportAssist is unable to connect to the Internet, an appropriate message is displayed. You can click the troubleshooting links displayed below the error message to fix the issue and try again.

2. On the Dell My Account **Sign In** page, perform one of the following:
   - If you already have a Dell My Account, enter your Dell My Account credentials, and then click **Sign In**.
   - If you do not have a Dell My Account, create an account to sign in. For instructions on creating an account, see **Create a new Dell My Account**.
   - Sign in with your social media account. For instructions on using your social media account, see **Sign in with social media account**.

3. On the **Contact and Shipping Address** page, enter your contact information and shipping details.

4. Select your preferred contact method and preferred contact time.
   - **NOTE**: The preferred contact time is applicable only for PCs with an active Premium Support or Premium Support Plus service plans in United States or Canada.

5. If you want to add a secondary contact, select the **Add secondary contact** and enter the details.

6. If you do not want SupportAssist to automatically create a support request, clear **Automatically create Support Requests**.
   - **NOTE**: The automatic support request creation capability is available and enabled only for PCs with an active ProSupport, ProSupport Plus, Premium Support, or Premium Support Plus service plan.

7. Click **Done**.
   - If the shipping details are incorrect, a message is displayed to update the details. Click **Update and Finish** to update the details.
   - If the shipping details are correct, the first name and last name are displayed on the top-right corner of the SupportAssist user interface.

---

**Create a new Dell My Account**

**Prerequisites**
You must have administrator rights on the PC.

**Steps**

1. In the **Create an Account** section of the Dell My Account **Sign in** page, enter the first name, last name, email address, and password in the appropriate fields.
   - **NOTE**: The password must contain eight through 20 characters, and must include 1 uppercase letter, 1 lowercase letter, and 1 number.

2. Re-enter the password.

3. Click **Create Account**.
   A new Dell My Account is created and you are signed in to SupportAssist.

---

**Sign in with social media account**

**Prerequisites**
- You must have administrator rights on the PC.
- You must have a valid account with any of the following social media platforms:
  - Google Plus
  - Facebook

**Steps**

1. On the Dell My Account **Sign In** page, click the appropriate social media icon.
2. On the corresponding social media login page, enter the user name or email address and password in the appropriate fields.
3. Click Sign in.
   A new Dell My Account is created with the credentials that you entered for signing in to your social media account.

Update contact and shipping information

Prerequisites
You must have administrator rights on the PC.

About this task
After you create a SupportAssist profile, update the contact and shipping information.

Steps
1. On the top-right corner of the SupportAssist user interface, click the **user name** and click Profile Details.
   The Contact and Shipping Address page is displayed.
2. Update the required details and click **Done**.
   - If the shipping details are incorrect, a message is displayed to update the details. Click **Update and Finish** to update the details.
   - If the shipping details are correct, the Home page is displayed.

Use different SupportAssist profile

Prerequisites
You must have administrator rights on the PC.

About this task
Deactivate your current profile and sign in to SupportAssist using a different profile. When you sign in using a different profile, you cannot access the contact and shipping address details of the previous profile.

Steps
1. On the top-right corner of the SupportAssist user interface, click the **username** and click Use a different profile.
2. Click **Continue**.
   **NOTE:** When you click Continue, SupportAssist deactivates the current profile and removes access to the saved contact information and shipping details.

   The Home page is displayed and the link to create a profile is displayed on the top-right corner of the SupportAssist user interface. For instructions to create a profile, see Create SupportAssist profile.

PC details

When you hover over the PC model or Service Tag displayed in the SupportAssist window, the PC image and its details are displayed. The following table describes the PC details displayed:

**Table 3. PC details**

<table>
<thead>
<tr>

</tbody>
</table>

Configure Internet settings

**Prerequisites**
You must have administrator rights on the PC.

**About this task**
Choose the method through which SupportAssist can connect to the Internet. Your PC must be connected to an active Internet connection to experience the automated support capabilities of SupportAssist.

**Steps**
1. On the top-right corner of the SupportAssist user interface, click the settings icon, click Settings, and then click Internet.
2. If you want SupportAssist to directly connect to the Internet, select Connect directly.
3. If you want SupportAssist to connect to the Internet using a proxy network, perform the following:
   a. Select Connect using proxy.
      The proxy settings fields are displayed.
   b. Enter the address, port number, username, and password details.
      (NOTE: You can enter a maximum of five digits for the port number.)
4. Click Save.
   The Home page is displayed.

Scheduled scans and optimizations

By default, SupportAssist scans the PC once every month for hardware issues and once every week to detect driver updates and the required PC optimizations. If required, you can configure the frequency in which SupportAssist performs the scan.

**(NOTE): SupportAssist scans the PC only when it is connected to an electrical outlet and not in use during the start of the scan. But, if a notification for a hardware issue is already displayed, the scan is not performed.**

SupportAssist prompts you before the hardware scan is performed. Click Run Later to defer the scan for 24 hours. If you defer the scan for the third time, SupportAssist automatically performs the scan at the next scheduled time.

If an urgent driver update, hardware issue, or a virus or malware is detected during the scan, a notification is displayed. The type of notification depends on the operating system that is installed on the PC. See Notifications on taskbar or Windows Action Center on page 16. If your PC has an active ProSupport Plus or Premium Support Plus service plan, SupportAssist automatically optimizes your PC after the scan.

Schedule automatic scans and optimizations

**Prerequisites**
You must have administrator rights on the PC.
About this task
Select the time, frequency, and day when you want SupportAssist to scan your PC for driver updates, hardware issues, and the required optimizations.

Steps
1. On the top-right corner of the SupportAssist user interface, click the settings icon, click **Settings**, and then click **Schedule scans and Optimizations**.
2. Enable automatic PC scans and optimizations.
3. Select the time, frequency, and day when you want to run the scan.
   The date of the next scheduled scan is displayed.
4. Click **Save**.
   The Home page is displayed.

Manually upgrade SupportAssist
Upgrading SupportAssist enables you to receive the latest features and ensures that your PC is running at its best.

Prerequisites
- You must have administrator rights on the PC.
- You must be signed in to SupportAssist.

About this task
If a newer version is available, SupportAssist automatically upgrades to the new version. You can also manually check and upgrade SupportAssist.

Steps
1. Open SupportAssist.
2. On the top-right corner of the SupportAssist window, click the settings icon, and then click **About SupportAssist**.
   SupportAssist automatically checks if a newer version of SupportAssist is available.
   - If no update is available, ✓ and a message indicating that the latest version of SupportAssist is installed are displayed.
   - If a newer version of SupportAssist is available, ⬇️ and the **Update Now** link are displayed.
3. Click **Update Now**.

Results
The latest version of SupportAssist is downloaded and installed on the PC.

Notifications
By default, SupportAssist displays notifications about hardware and software issues, driver updates, open support requests, service plan, and so on.

Notifications on SupportAssist window
The following table provides a summary of the notifications that are displayed when you open SupportAssist:

**Table 4. Notifications on the SupportAssist window**

<table>
<thead>
<tr>
<th>When the notification is displayed</th>

</tr>
</tbody>
</table>

**Notifications on taskbar or Windows Action Center**

Depending on the type of operating system installed on your PC, SupportAssist displays a notification on the taskbar or in the Windows Action Center:

- On Microsoft Windows 7, 8, or 8.1, the notification is displayed on the taskbar.
- On Microsoft Windows 10, the notification is displayed in the Windows Action Center.

The following table provides a summary of the different types of notifications that are displayed on the taskbar or in the Windows Action Center.

Table 5. Taskbar or Windows Action Center notifications

<table>
<thead>
<tr>

<td>Service plan of the PC is about to expire, or has expired.</td>
<td>Click the notification to open SupportAssist. A link to renew the service plan is displayed on the SupportAssist user interface.</td>
</tr>
</tbody>
</table>

Banners on SupportAssist home page

When the service plan of your PC is nearing expiry or has expired:

- A notification is displayed on the SupportAssist window.
- Depending on the operating system installed on your PC, a notification is displayed on the taskbar or in Windows Action Center.
- A banner is displayed on the SupportAssist home page.

You can renew or upgrade your service plan by using the links that are provided in the notification or banner. For information about the notifications that are displayed on the SupportAssist window, see Notifications on SupportAssist window. For information about notifications that are displayed on the taskbar or Windows Action Center, see Notifications on taskbar or Windows Action Center.

The following table describes the banners that are displayed on the home page:

NOTE: The online renewal capability is available only for PCs in the United States.

Disable SupportAssist notifications

Prerequisites

You must have administrator rights on the PC.

About this task

You can disable SupportAssist from displaying notifications on your PC. However, SupportAssist displays notifications about hardware issues and urgent driver updates that are detected during a scan even if you disable the notifications.

Steps

1. On the top-right corner of the SupportAssist window, click the settings icon, click Settings, and then click Notifications.
2. Clear the I want to receive notifications about hardware and software issues, driver updates, Support Requests, and other alerts for my PC check box and click Save.
   The home page is displayed.
Uninstall SupportAssist

Prerequisites
- The SupportAssist window must not be open on the PC.
- There should be no pending SupportAssist notifications in the Windows Action Center or on the taskbar.

Steps
1. Click Start, go to Control panel > Programs, and then click Programs and Features.
   The Uninstall or change a program page is displayed.
2. Right-click Dell SupportAssist, and click Uninstall.
3. When you are prompted to confirm the uninstallation, click Yes.

Results
SupportAssist is uninstalled.
Dell Migrate overview

Dell Migrate is a service that enables you to securely migrate your personal files and settings to your Dell PC from any other PC running Windows operating system.

**NOTE:** The Dell Migrate service is available only for Inspiron, XPS, and Alienware PCs in the United States region.

In this document, the term **source PC** refers to the PC from which you want to migrate your files and settings. The term **target PC** refers to the PC to which you want to migrate your files and settings.

Dell Migrate enables you to migrate your personal files such as documents, photos, music, videos, and so on.

The following table lists the type of settings that can also be migrated from your source PC using Dell Migrate:

<table>
<thead>
<tr>

Topics:
Migrate data from source to target PCs

Prerequisites
Ensure the following:
• The operating system that is installed on the source PC is Windows 8 or later.
• The operating system that is installed on the target PC is Windows 10.
• The source and target PCs are connected to an electrical outlet.
• You are logged in to source and target PCs as an administrator.
• The source and target PCs are connected to the same local network.
• Sufficient disk space is available on the target PC.
• No applications are running on the source and target PCs.
• The language in SupportAssist is set to English. For instructions to change your language setting, see Change language setting on page 11.

Steps
1. On the source PC, perform the following:
   b. Download and run Dell data assistant.exe.
      Dell Data Assistant checks for a target PC that is connected to the same local network. If a target PC is detected, a verification code is displayed on the source PC.
2. On the target PC, perform the following:
   a. Open SupportAssist and click 𝘽.
      b. Perform one of the following:
         • On the bottom-left corner of the SupportAssist home page, click Go now.
         • Go to Troubleshooting > Copy my files and settings from another PC, and then click Go now.
   c. On the Dell Migrate home page, click Get started.
   d. Click Connect.
      • Dell Migrate checks for a source PC that is connected to the same local network.
      • The Troubleshooting, History, and the Get Support tabs are disabled.
   e. Enter the verification code that is displayed on the source PC.
      If the code is verified successfully:
         • The accounts used to log in to the source and target PCs are verified. If you used different accounts, a message is displayed to confirm if you want to continue the migration. Click Continue to perform the migration.
         NOTE: During migration, only the files and settings of the current user profile in the source PC are migrated to the current user profile in the target PC.
         • The source and target PCs are paired.
         • Dell Migrate scans the source PC for your files and settings that can be migrated.
3. By default, all your files and settings that can be migrated from the source PC are selected. If you want to select your files and settings that must be migrated, select Let me choose what to move. For more information on the files and type of settings that can be migrated, see Change language setting on page 11.
   The files and settings that are detected on the source PC are displayed.
4. Optionally, if you want to manually select the drive to which your files and settings must be migrated to, perform the following:
   a. On the left pane, click Change.
   b. Select the required drive, and click Apply.
5. Click Migrate now.
   After the migration is completed, a summary is displayed with the following information:
   • Size of the files migrated
   • Time taken to migrate the files and settings
   • Number of files and settings that were migrated
   • Number of files or settings that were not migrated
   • Number of files that were backed up or replaced
6. Perform one of the following:
   • If all your files and settings were migrated successfully, click **OK**.
   • If some of your files or settings were not migrated, click **Show skipped files** to view the details or click **Retry** to migrate your files or settings again.

7. Optionally, click **** to view the migration summary or click **** to provide your feedback to Dell.

   **NOTE:** For any assistance on migrating your files and settings using Dell Migrate, contact Dell technical support. The support options available for your PC are displayed on the Get Support page. See **Getting support on page 38.**

8. Click **Home**.
   The SupportAssist home page is displayed.
Scanning PC hardware

Running a hardware scan enables you to detect hardware issues on your PC. By default, SupportAssist scans your PC hardware once in a month to detect hardware issues. You can also manually perform the following to identify a hardware issue:

- Scan a specific hardware component
- Run a quick hardware scan
- Run a stress test

**NOTE:** If SupportAssist is minimized and an issue is detected during a scan, a notification is displayed on the Scan Hardware tile. The notification is retained on the tile for up to seven days. If you do not create a support request for the issue within seven days, the notification is automatically removed.

For certain hardware issues, the issue title is displayed above the tiles and a notification is displayed on the Scan Hardware tile. The notification that is displayed on the tile depends on the severity of the issue. For information on the type of notifications that are displayed on the tile, see Scan Hardware tile notifications on page 23.

Topics:
- Scan specific hardware component
- Run quick hardware scan
- Run stress test
- Scan Hardware tile notifications

Scan specific hardware component

**About this task**

Scan a specific hardware component that is installed in your PC. The steps to run a scan depend on the hardware component that you select.

The following steps are applicable for scanning the hard drive.

**Steps**

1. Open SupportAssist and click the **Troubleshooting** tab.
2. Click **I want to troubleshoot my PC** and then click **I want to check a specific piece of hardware**.
   - The list of hardware components that are available in your PC is displayed.
   
   **NOTE:** To update the list of hardware components displayed, click **Refresh hardware list**.
3. In the **Storage Devices** section, click **Hard Drive**.
4. Select the test type, and click **Run Test**.

**Results**

- If no issue is detected, **Passed** status and ✔️ are displayed.
- If an issue is detected and it does not require creating a support request, **Failed** status and ⚠️ are displayed.
- If an issue is detected and requires creating a support request, the issue details page is displayed. For instructions to create a support request, see Create support request for issue detected by a scan.

Run quick hardware scan

**About this task**

Run a quick scan on your PC to detect issues in hardware components, for example, hard drive, processor, memory module, and so on.

Scanning PC hardware
**NOTE:** You must have administrator rights on the PC to create a support request for issues that are detected during the scan. For instructions to know your user account type, see the operating system documentation at Microsoft.com/support.

**Steps**

1. Open SupportAssist and click做到了.
2. On the **Scan Hardware** tile, click **Run**.

**Results**

After the scan is complete, the following may be observed:

- If no issue is detected, an appropriate notification is displayed on the tile.
- If an issue is detected and it requires creating a support request, the optimization tiles are disabled and the issue details page is displayed. For instructions to create a support request, see Create support request for issue detected by a scan on page 29.
- If an issue is detected and it does not require creating a support request, the issue title is displayed above the tiles, a notification is displayed on the **Scan Hardware** tile, and the optimization tiles are disabled. If you want to enable the tiles, click **Skip**.

**Run stress test**

**About this task**

The stress test helps you detect issues in components such as the PC board, optical drives, camera, components scanned during a quick scan, and so on.

⚠️ **CAUTION:** During a stress test, you may see flashes on your screen and may not be able to use your PC.

**Steps**

1. Open SupportAssist and click the **Troubleshooting** tab.
2. Click **I want to troubleshoot my PC** and then click **I want to scan my entire PC**.
3. Click **Start**.
   
   A message is displayed prompting you to save your files and to close all applications.
4. After you save your files and close all the applications, click **OK** to run the test.

During the test, the name of the task that is running is displayed above the tiles and the scan progress is displayed on the **Scan Hardware** tile.

**Results**

- If no issue is detected, an appropriate notification is displayed on the tile.
- If an issue is detected and requires creating a support request, the optimization tiles are disabled and the issue details page is displayed. For instructions to create a support request, see Create support request for issue detected by a scan on page 29.
- If an issue is detected and does not require creating a support request, the issue title is displayed above the tiles, a notification is displayed on the **Scan Hardware** tile, and the optimization tiles are disabled. If you want to enable the optimization tiles, click **Skip**.

**Scan Hardware tile notifications**

The following table describes the different status notifications that are displayed on the **Scan Hardware** tile when an issue is detected during a quick hardware scan or a stress test on the PC:

<table>
<thead>
<tr>
<th>Status icon</th>
<th>PC icon</th>
<th>Status</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>

Optimization tiles are disabled. Click Skip to enable the tiles.
Optimizing your PC

SupportAssist helps you optimize your PC by running a series of diagnostics to identify modifications to files and settings of your PC. SupportAssist optimizations helps you improves your PC speed, storage space availability, and PC stability by performing the following on your PC:

- Cleaning temporary files
- Tuning PC performance
- Optimizing network
- Removing viruses, malware, and potentially unwanted programs (PUPs)

Figure 4. PC Optimization-In Progress

Topics:

- Clean files
- Tune PC performance
- Optimize network
- Remove viruses and malware
- Run all PC scans and optimizations

Clean files

About this task

Remove redundant files, temporary folders, and other unnecessary clutter from your PC.

Steps

1. Open SupportAssist and click .
2. On the Clean Files tile, click Run.

During the optimization, the name of task that is running is displayed above the tiles and the progress of scan is displayed on the tile.
CAUTION: If you cancel the optimization while it is in progress, the changes that were performed are not reversed.

Results
The amount of hard drive space that is saved is displayed on the Clean Files tile, the Home page, and the History page.

Tune PC performance

About this task
Adjust the power settings, registry, and memory allocation to maximize the processing speed of your PC.

Steps
1. Open SupportAssist and click .
2. On the Tune Performance tile, click Run.
   During the optimization, the name of task that is running is displayed above the tiles and the progress of scan is displayed on the tile.
   CAUTION: If you cancel the optimization while it is in progress, the changes that were performed are not reversed.

Results
After the optimization is complete, an appropriate notification is displayed on the tile.

Optimize network

About this task
Update PC settings to ensure Internet connectivity and keep your network efficient and reliable.

Steps
1. Open SupportAssist and click .
2. On the Optimize Network tile, click Run.
   During the optimization, the name of task that is running is displayed above the tiles and the progress of scan is displayed on the tile.
   CAUTION: If you cancel the optimization while it is in progress, the changes that were performed are not reversed.

Results
After the optimization is complete, an appropriate notification is displayed on the tile.

Remove viruses and malware

About this task
Isolate and remove files that are infected by viruses and malware to keep your PC secure. You can also detect and remove potentially unwanted programs (PUPs) installed on your PC.

NOTE: The virus and malware removal capability is available only for PCs with an active ProSupport Plus or Premium Support Plus service plan.

NOTE: The virus and malware removal capability is not available in certain regions, for example, China.

Steps
1. Open SupportAssist and click .
2. On the **Remove Viruses & Malware** tile, click **Run**.

   During the optimization, the name of task that is running is displayed above the tiles and the progress of scan is displayed on the tile.

   **CAUTION:** If you cancel the optimization while it is in progress, the changes that were performed are not reversed.

**Results**

- The number of viruses and malware removed are displayed on the **Remove Viruses & Malware** tile, **Home** page, and the **History** page.
- If PUPs are detected on the PC, the number of PUPs detected is displayed on the **Remove Viruses & Malware** tile. For instructions to remove PUPs, see **Remove potentially unwanted programs** on page 27.

### Remove potentially unwanted programs

**Prerequisites**

You must have administrator rights on the PC.

**About this task**

Potentially unwanted programs (PUPs) are programs that are installed silently on the PC while installing an application. PUPs reduce the PC performance or display unwanted advertisements.

SupportAssist detects PUPs present on the PC during a manually-initiated or automated virus and malware scan. If PUPs are detected, the **Remove Viruses & Malware** tile icon is displayed in red color and the number of PUPs that were detected are displayed on the tile. You can review and remove the PUPs that were detected on the PC.

**NOTE:** If PUPs are detected during an automated scan, a notification is displayed. For information on the types of notification that are displayed by SupportAssist, see **Notifications** on page 15.

**Steps**

1. Open SupportAssist.
2. On the **Remove Viruses & Malware** tile, click **View**.
   
   The PUPs details page is displayed.

   **NOTE:** By default, the PUPs are selected. You can review the PUPs list and clear the PUPs that you do not want to remove from the PC.
3. Click the **Click here for more details** link to view more information about the PUP.
4. Click **Remove** and then click **Confirm**.
   
   The selected PUPs are removed from the PC.
5. Click **OK**.

**Results**

The number of PUPs removed is displayed on the home page.

### Run all PC scans and optimizations

**About this task**

Initiate a complete PC scan to identify hardware issues, required optimizations, and identify updates to drivers or Dell applications that are installed on your PC.

**Steps**

1. Perform one of the following:
   - Open SupportAssist and click **Start Now**.
   - Open SupportAssist, click ☐, and then click **Run all**.
     
     During the optimization, the name of task that is running is displayed above the tiles and the progress of scan is displayed on the tile.
CAUTION: If you cancel the optimization while it is in progress, the changes that were performed are not reversed.

After the scan is complete, the following are observed:

- If no issue is detected and there are no updates, an appropriate message is displayed on each tile. The amount of hard drive space that is saved, and the number of viruses or malware that is removed is displayed on the home page.
- If driver or application updates are detected during the scan, the update type and the number of available updates are notified on the Get Drivers & Downloads tile. For instructions to install these updates, see Install driver updates on page 33.
- If a hardware issue is detected and it requires creating a support request, the issue details page is displayed. For instructions to create a support request, see Create support request for issue detected by a scan on page 29.
- If an issue is detected and it does not require creating a support request, the issue title is displayed above the tiles and a notification is displayed on the Scan Hardware tile after all the scans are complete.

![NOTE: The type of notification depends on the severity of the hardware issue. For information on the types of notification that are displayed by SupportAssist, see Notifications on page 15. Click Skip to hide the issue notification.]

- If potentially unwanted programs (PUPs) are detected, a notification is displayed on the Remove Viruses & Malware tile. For instructions to remove PUPs, see Remove potentially unwanted programs on page 27.

![NOTE: View details of the scans and optimizations that are performed on your PC on the History page.]

2. After the scan is complete and if you are still facing the issue, click Still Need Help to manually create a support request.

![NOTE: The manual support request creation capability is applicable only for PCs with an active Premium Support, ProSupport, Premium Support Plus, or ProSupport Plus service plan.]

The support request page is displayed. For instructions to manually create a support request, see Manually create a support request on page 30.
SupportAssist helps you proactively and periodically monitor your PC for hardware or software issues. If an issue is detected on your PC, SupportAssist enables you to create a support request with Dell technical support. Depending on the service plan of your PC, SupportAssist may also automatically create a support request for the issue.

**NOTE:** The automatic support request creation capability is not available for PCs with an expired warranty.

Topics:
- Create support request for issue detected by a scan
- Manually create a support request
- View support request details
- Issue details page
- Issue summary page
- Dispatchable parts

### Create support request for issue detected by a scan

**Prerequisites**
On PCs with operating system build number 16299 or later, you must have administrative rights on the PC. For steps to see the build number of the operating system installed on your PC, see Frequently asked questions on page 41.

**About this task**
If a support request must be created for an issue that is detected during a manually initiated or an automated scan, the following are observed:
- The PC optimization tiles are disabled.
- The links to troubleshoot hardware issues are disabled on the **Troubleshooting** page.
- If the SupportAssist window is minimized during the scan, a notification is displayed on the **Scan Hardware** tile. For information on the type of notifications that are displayed on the tile, see Scan Hardware tile notifications on page 23.
- If the SupportAssist window is open, the issue details page is displayed.

**Steps**
1. Open SupportAssist.
2. Click **Fix Now**.
   - **NOTE:** If you do not have administrative rights on the PC and a SupportAssist profile is not created, an appropriate message is displayed. You must sign in to PC as an administrator, create a profile, and then try again.
   - **NOTE:** If ▶️ is displayed on the tile, click Skip and create the support request later. If you click Skip, the PC optimization tiles and the links in the Troubleshooting page are enabled.

The issue details page is displayed.
   - **NOTE:** For XPS, Inspiron, and Alienware PCs in certain regions with an expired service plan, a link to purchase the hardware component is displayed.
3. Click **Next**.
   - If you have not accepted the SupportAssist terms and conditions, a message is displayed indicating that you have not accepted the SupportAssist terms and conditions. Click the Read SupportAssist terms & conditions link, accept the terms and conditions, click **Save**, and then try again.
• If SupportAssist is unable to connect to the Internet, an appropriate message is displayed. Click the troubleshooting links displayed below the error message to fix the issue and try again.
• If you have not created a SupportAssist profile, the Dell My Account Sign In page is displayed. To continue, create a SupportAssist profile and click Finish.
• If you have already created a SupportAssist profile, the contact information and shipping address are displayed. If you want to update the contact information and shipping address, click Edit, make the necessary updates, and then click Finish.

![NOTE: If you do not have administrator rights on the PC, you cannot edit the contact information and shipping address.]

4. On the issue summary page, click Done.

![NOTE: You can view the details and track the status of the support request from the History page.]

The tiles view of the home page is displayed, and the Support Request Open status is displayed on the Scan Hardware tile.

### Manually create a support request

**About this task**

Depending on the service plan of your PC, you can manually create a support request for issues that are not detected by SupportAssist. For information on the SupportAssist capabilities for different service plans, see SupportAssist capabilities and Dell service plans on page 6.

**Steps**

1. Open SupportAssist and click the Get Support tab.
2. Click Open a Support Request.
   - If the SupportAssist scans and optimizations are not performed in the last 24 hours, all the scans are automatically initiated. If an issue is detected on your PC, the scan is stopped and the issue details page is displayed. For instructions to create a support request, see Create support request for issue detected by a scan.
   - If the SupportAssist scans and optimizations are performed in the last 24 hours, the support request page is displayed.
   - If a notification for a hardware issue is already displayed on the home page, the issue details page is displayed. For instructions to create a support request, see Create support request for issue detected by a scan.
   - If you do not have administrative rights on the PC and a SupportAssist profile is not created, an appropriate message is displayed. You must sign in to PC as an administrator, create a profile, and then try again.
3. If the support request page is displayed:
   a. From the Select a category list, select an appropriate issue category.
   b. Enter the description of the issue.
   c. Click Next.
      - If you have not accepted the SupportAssist terms and conditions, a message is displayed indicating that you have not accepted the SupportAssist terms and conditions. Click the Read SupportAssist terms & conditions link, accept the terms and conditions, click Save, and then try again.
      - If you have not created a SupportAssist profile, the Dell My Account Sign In page is displayed. To continue, create a SupportAssist profile and click Finish.
      - If you have already created a SupportAssist profile, the contact information and shipping address are displayed. If you want to update the contact information and shipping address, click Edit, make the necessary updates, and then click Finish.

![NOTE: If you do not have administrator rights on the PC, you cannot edit the contact information and shipping address.]

4. On the issue summary page, click Done.

![NOTE: You can view the details and track the status of the support request from the History page.]

The tiles view of the home page is displayed, and the Support Request Open status is displayed on the Scan Hardware tile.
View support request details

About this task

After a support request is created, a notification is displayed with the details of the support request every time you open SupportAssist. If you do not want SupportAssist to display the notification again, click Never Remind Me on the notification.

You can view the support request details from the home page till it is closed by Dell. You can also view the support request details on the History page.

Steps

1. Open SupportAssist.
2. Click View Details.
   The issue summary page is displayed.

Issue details page

The following table describes the information that is displayed on the issue details page:

Table 9. Issue details page

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

Dispatchable parts

When SupportAssist detects an issue on your PC, a replacement part may be automatically dispatched to you depending on the Dell service plan of your PC.

The following are the parts that may be dispatched automatically:

- Hard drive
- Memory module
- Optical drive
- Keyboard
- Mouse
- Battery
- Video card
Drivers and downloads overview

By default, SupportAssist scans your PC every week to detect updates available for drivers and Dell applications that are installed on your PC. If required, you can configure the frequency in which SupportAssist performs the scan. See Scheduled scans and optimizations on page 14. Updating the drivers helps improve PC performance and patch security risks.

NOTE: In this document, the term driver refers to BIOS, drivers, firmware, and Dell applications installed on your PC.

Figure 5. Get Drivers & Downloads tile notification

Topics:
- Severity categorization of updates
- Install driver updates
- Uninstall driver updates
- Get Drivers and Downloads tile notifications

Severity categorization of updates

SupportAssist categorizes the updates based on their severity as follows:
- Urgent — Updates that can prevent potential security threats to your PC.
- Recommended — Updates that can improve the performance of your PC.
- Optional — Updates that you can choose to install, if necessary.

NOTE: If an urgent or recommended update is available, a notification is displayed. For information on the types of notification that are displayed by SupportAssist, see Notifications on page 15.

Install driver updates

Prerequisites
You must have administrator rights on the PC.
About this task

SupportAssist scans your PC and proactively suggests updates available for your PC drivers and Dell applications that are installed on your PC. Before installing a driver update, SupportAssist automatically creates a restore point. You can use the restore point to uninstall the driver update and return the PC to its previous state. At a given time period, SupportAssist can retain only three restore points. If a new restore point must be created, the oldest restore point is automatically removed.

1. **NOTE:** If you install a newer version of BIOS available for your PC, you cannot uninstall the update.

2. **NOTE:** In a Windows operating system, by default, the restore point creation setting is disabled. To enable SupportAssist to create a restore point, you must enable the restore point creation settings in Windows.

Steps

1. Open SupportAssist and click ![Image]

2. On the **Get Drivers & Downloads** tile, click **Run**.
   - If updates are available for your PC, the update type and the number of available updates are notified on the **Get Drivers & Downloads** tile.
   - If SupportAssist cannot detect updates available for your PC, an appropriate message is displayed.
   
   **NOTE:** The notification on the tile depends on the severity of the update. For information about the type of notifications that are displayed on the tile, see Get Drivers and Downloads tile notifications on page 35.

3. Click **Update Now**.

4. Select the updates that you want to install and click **Install**.

   **NOTE:** Certain driver updates must be installed along with one or more other drivers to function correctly. You must select all those dependent drivers and then click Install.

   - For updates that are automatically installed, ✔ and **Done** status are displayed in the **Status** column.
   - If the update must be manually installed, an **Install** link is displayed in the **Status** column after the download is complete. The update can be installed by clicking the **Install** link.

   **NOTE:** You may have to restart your PC to complete the installation of certain drivers.

5. Click **Finish**.

6. If an update requires restart, click **Restart Now** to restart the PC immediately.

   You are prompted to save your files and close all applications before you restart.

7. Click **Restart**.

   The PC restarts automatically to complete the installation.

Uninstall driver updates

Prerequisites

You must have administrator rights on the PC.

About this task

If you encounter problems with your PC after updating a driver, you may uninstall the update and return the PC to its previous state.

Steps

1. Open SupportAssist and click the **History** tab.

2. On the **History** page, click the required **Restore System** link.

   A message is displayed stating that the PC will be restored to the state when the restore point was created.

3. Click **Restore**.

   The PC restarts automatically to uninstall the update.
Get Drivers and Downloads tile notifications

The following table describes the different status notifications that are displayed on the Get Drivers & Downloads tile:

Troubleshooting overview

The Troubleshooting page enables you to troubleshoot issues in network connectivity and PC performance. It also enables you to scan a specific hardware component or the entire PC for hardware issues. It also provides links to video tutorials to troubleshoot issues in operating system, PC hardware, software, and Internet connectivity.

The troubleshooting links enabled for you depends on your user account type. For instructions to know your user account type, see the operating system documentation at Microsoft.com/Support.

**NOTE:** If a hardware issue is detected or a support request is created for a hardware issue, the links to troubleshoot hardware issues are disabled.

The Troubleshooting page also enables you to set up your PC by configuring the following:

- Microsoft Office account
- Automatic Windows updates
- Email account
- Printer
- Browser home page
- Desktop wallpaper
- Automatic application updates, Live Tile, and Video Autoplay settings in Microsoft Store

**NOTE:** These options are available only for PCs running Windows 10 operating system.

![SupportAssist](image)

Figure 6. Troubleshooting Page
The **History** page displays information about the SupportAssist activities and events that are performed in the last 90 days in a chronological order. The activities that are listed include software optimizations, troubleshooting tasks, driver updates, hardware scans, and so on.

By default, information about events and activities that are performed during the current week are displayed. You can view the details for a specific day or an entire month. You can also view the history of a particular type of event by selecting the required event type in the **Select History View** list.

The following are also displayed on the **History** page:

- Number of driver updates installed
- Amount of hard drive space saved
- Number of viruses or malware deleted

![System Activity History](image)

**Figure 7. History page**
The **Get Support** page lists the help and support options available for your PC. The help and support options that you can access vary based on the service plan of your PC and your region. For information about the help and support options for various service plans, see **SupportAssist capabilities and Dell service plans** on page 6.

**NOTE:** If Internet connectivity is not available, you can only view the Dell technical support contact numbers for your region.

![SupportAssist](image)

### Your contact options

- **Call us:** Depending on your region, contact Dell technical support using the displayed contact numbers.
- **Connect with Social Media:** Contact Dell technical support through social media platforms such as WeChat, WhatsApp, Facebook Messenger, or Line depending on your region.
- **Open a Support Request:** Manually create a support request for a hardware or software issue. For instructions to create a support request, see **Manually create a support request** on page 30.
- **Start Dell RemoteAssist Session:** Allow a technical support agent to access your PC remotely to troubleshoot an issue. For instructions to start a session, see **Start Dell RemoteAssist session** on page 40.
- **Send files to Tech Support:** Send files to Dell technical support describing the issue on your PC or send files that a technical support agent requests for. **NOTE:** The maximum size of the file that you can send is 4 MB.

- Start Dell RemoteAssist session

Send files to Dell technical support

About this task
Send files describing the issue on your PC or any specific file that is requested by the support agent. The format of the files that you can send are as follows:

- .zip
- .rar
- .txt
- .jpg
- .jpeg
- .png
- .gif
- .docx
- .doc
- .odt
- .pdf
- .xls
- .xlsx

![NOTE: The maximum size of the file that you can send is 4 MB.](image)

![NOTE: You can send only three files in a day. If you have multiple files, you can compress the files to the .zip format and send the .zip file.](image)
Steps
1. Open SupportAssist and click the Get Support tab.
2. In the right pane, click Upload Files.
3. In the Upload files dialog box, click Browse, select the required file, and then click Upload.

Results
After the file is sent, ✓ and the File uploaded successfully message are displayed.

Send log files to Dell technical support

About this task
Send the PC activity log files to Dell technical support if requested by the Dell technical support agent.

Steps
1. Open SupportAssist and click the Get Support tab.
2. In the right pane, click Upload log file.

Results
After the file is sent, ✓ and the File uploaded successfully message are displayed.

Start Dell RemoteAssist session

Prerequisites
• You must have administrator rights on the PC.
• A Dell RemoteAssist session must be initiated for your PC by the Dell technical support agent.

About this task
For certain issues, the technical support agent must remotely access your PC to troubleshoot the issue. In such circumstances, you can enable the technical support agent to remotely access your PC using Dell RemoteAssist.

Steps
1. Open SupportAssist and click the Get Support tab.
2. In the right pane, in the Start Dell RemoteAssist session section, click Start Session.
   The Dell RemoteAssist Terms & Conditions page is displayed.
   
   ![NOTE: If you try to start a session before the technical support agent enables it, an error message is displayed.](image)
   
3. Select I agree to the terms and conditions and click Finish.
1. **How can I see the build number of the operating system that is installed on my PC?**

   Perform the following:
   
   a. Click **Start** to open the programs menu.
   
   b. Search and open the **Run** application.
   
   c. Enter `winver` and click **OK**.

   The operating system build number is displayed, for example, OS Build 15063.1266.

2. **How can I check if SupportAssist is installed on my PC?**

   To verify if SupportAssist is installed, perform the following:
   
   a. Click **Start** to open the programs menu.
   
   b. Go to **Control Panel > Programs > Programs and Features**.
   
   c. In the list of programs, verify if **Dell SupportAssist** is present.

3. **How can I disable SupportAssist notifications?**

   For instructions on disabling SupportAssist notifications, see Disable SupportAssist notifications.

4. **Can I schedule a hardware scan?**

   Yes, you can schedule a hardware scan. For instructions on scheduling a hardware scan, see Schedule scans and optimizations.

5. **How can I edit my contact and shipping information?**

   For instructions on updating your contact and shipping information, see Update contact and shipping information.

6. **I accidentally canceled a notification about a failure. How and where do I get the notification again to view details about the failure?**

   If you cancel a notification, it will be displayed again after six hours or if you restart the PC.

7. **Can I change the contact information and shipping details while creating a support request?**

   Yes, you can change the contact information and shipping details while creating a support request.

8. **Why should I enter my shipping details for an issue with a nondispatchable part?**

   After analysis, if a hardware failure is identified as the root cause of the issue, the shipping address is used to ship a replacement part to you. If you had entered your shipping address while registering SupportAssist, your shipping address is automatically retrieved before you submit an issue.

9. **What are the languages that the SupportAssist user interface supports?**

   The SupportAssist user interface supports 25 languages. The supported languages are Arabic, Chinese (Simplified), Chinese (Traditional), Czech, Danish, Dutch, English, Finnish, French, French Canadian, German, Greek, Hebrew, Hungarian, Italian, Japanese, Korean, Norwegian, Polish, Portuguese (Brazilian), Portuguese (Iberian), Russian, Spanish, Swedish, and Turkish. For instructions to change your language setting, see Change language setting.

10. **I have installed SupportAssist on my PC, but I am unable to open it. What could be the reason?**

    SupportAssist requires 5700 port to open the SupportAssist interface. If any other application uses the 5700 port, SupportAssist does not open in your PC. Ensure that no other application is using port 5700 and then retry opening SupportAssist.

11. **How can I check if any other application uses the 5700 port?**

    Perform the following steps:
    
    a. Click **Start** to open the programs menu.
    
    b. Search and open the **Services** application.
    
    c. In the right pane, click **Dell SupportAssist**.
12. It is taking much time to open SupportAssist. What should I do?
If it is taking a long time to open SupportAssist, you must restart the SupportAssist service. Perform the following steps:
   a. Click Start to open the programs menu.
   b. Search and open the Services application.
   c. In the right pane, click Dell SupportAssist.
   d. In the left pane, click Stop and then click Restart.

13. I am facing a hardware issue on my PC. Why is it undetected by SupportAssist?
If no hardware issue is detected, ensure that the SupportAssist services are running on the PC. To verify if the SupportAssist services are running:
   a. Click Start to open the programs menu.
   b. Search and open the Services application.
   c. Verify if Running status is displayed for the following services on your PC:
      - Dell Data Vault Collector
      - Dell Data Vault Processor
      - Dell Data Vault Service API
      - Dell SupportAssist
      - Dell Hardware Support

14. Where can I check details of the optimizations that were performed on my PC during a scheduled or manually initiated optimization?
SupportAssist retains the details of all the events and activities that were performed in the last 90 days. You can view the details for a month, week, or a specific day on the History page.

15. Why does SupportAssist take more time to perform the optimizations than the duration specified on the tiles?
The time that is displayed on the PC optimization tiles is only an estimate that is based on your PC configuration. The actual time required to perform the optimizations may differ from the estimate.

16. When I click Start DellConnect Session and accept the terms and conditions, the support agent is unable to access my PC remotely. What should I do?
Request the support agent to disconnect the current session and initiate a new DellConnect session.

17. When I click Start Session, why is a message stating that there is no active Dell RemoteAssist session displayed?
You can start a Dell RemoteAssist session only after it is initiated by a Dell technical support agent. To avoid this error, click Start Session after the session is initiated.

18. When I hover over the Service Tag or PC model number, Unknown Warranty is displayed. Why?
Unknown Warranty is displayed because of the following reasons:
   - SupportAssist is not connected to the Internet. Go to the Troubleshooting page for steps to troubleshoot your Internet connection.
   - If your PC connects to the Internet through a proxy server, ensure that you have configured the proxy settings in SupportAssist. See Configure Internet settings.

19. During optimization, SupportAssist stopped working. What should I do?
Close and reopen SupportAssist and then try to run the optimization again. If the issue persists, perform the following:
   a. Click Start to open the programs menu.
   b. Search and open the Services application.
   c. In the right pane, click Dell SupportAssist.
   d. In the left pane, click Stop and then click Restart.
20. I am not receiving notifications for driver updates. What should I do?

If your service plan has expired, SupportAssist does not display notifications for driver updates available for your PC. You must renew your service plan to receive notifications about driver updates. See Banners on SupportAssist home page.

21. Can I update the BIOS on a BitLocker enabled PC?

It is recommended to disable the BitLocker encryption on the PC before updating the BIOS.

22. When I perform a hardware scan, the scan result is displayed as Misconfigured on the History page. But, there is no notification that is displayed on the Scan Hardware tile. Why?

If SupportAssist could not scan a component during the hardware scan, the Misconfigured status is displayed. Hence, no notification is displayed on the Scan Hardware tile. SupportAssist scans the component again during the next manually initiated or automated scan.

23. Where can I view the summary of the files and settings that were migrated using Dell Migrate?

To view the files and settings that were migrated in the last session, go to the Dell Migrate home page and click View Summary. You can also view the summary of all the files and settings that were migrated during the last 90 days on the History page.
