Dell Networking Command Line Reference Guide for the MXL 10/40GbE Switch I/O Module
Dell Networking Operating System 9.2(0.0) and 9.2(0.2)
Notes, Cautions, and Warnings

NOTE: A NOTE indicates important information that helps you make better use of your computer.

CAUTION: A CAUTION indicates either potential damage to hardware or loss of data and tells you how to avoid the problem.

WARNING: A WARNING indicates a potential for property damage, personal injury, or death.

About this Guide

This book provides information about the Dell Networking operating software (Dell) command line interface (CLI).
This book also includes information about the protocols and features found in the Dell OS and on the Dell Networking systems supported by the Dell OS.

References

For more information about your system, refer to the following documents:

- Dell OS Configuration Guides
- Installation and Maintenance Guides for the MXL 10/40GbE Switch System
- Release Notes for the MXL 10/40GbE Switch System and Dell OS version 8.3.16.4

Objectives

This book is intended as a reference guide for the Dell OS CLI commands, with detailed syntax statements, along with usage information and sample output.
This guide contains an Appendix with a list of the request for comment (RFCs) and management information base files (MIBs) supported.

NOTE: For more information about when to use the CLI commands, refer to the Dell Networking OS Configuration Guide for your system.
Audience

This book is intended for system administrators who are responsible for configuring or maintaining networks. This guide assumes that you are knowledgeable in Layer 2 and Layer 3 networking technologies.

Conventions

This book uses the following conventions to describe command syntax.

<table>
<thead>
<tr>
<th>Keyword</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Keyword</strong></td>
<td>Keywords are in Courier font and must be entered in the CLI as listed.</td>
</tr>
<tr>
<td><strong>parameter</strong></td>
<td>Parameters are in italics and require a number or word to be entered in the CLI.</td>
</tr>
<tr>
<td>{X}</td>
<td>Keywords and parameters within braces must be entered in the CLI.</td>
</tr>
<tr>
<td>[X]</td>
<td>Keywords and parameters within brackets are optional.</td>
</tr>
<tr>
<td>x</td>
<td>y</td>
</tr>
<tr>
<td>x</td>
<td></td>
</tr>
</tbody>
</table>

Information Icons

This book uses the following information symbols:

- **NOTE**: The Note icon signals important operational information.
- **CAUTION**: The Caution icon signals information about situations that could result in equipment damage or loss of data.
- **WARNING**: The Warning icon signals information about hardware handling that could result in injury.
CLI Basics

This chapter describes the command line interface (CLI) structure and command modes. The Dell operating software commands are in a text-based interface that allows you to use the launch commands, change command modes, and configure interfaces and protocols.

Accessing the Command Line

When the system boots successfully, you are positioned on the command line in EXEC mode and not prompted to log in. You can access the commands through a serial console port or a Telnet session. When you Telnet into the switch, you are prompted to enter a login name and password.

Example
telnet 172.31.1.53
Trying 172.31.1.53...
Connected to 172.31.1.53.
Escape character is '^]'.
Login: username
Password: Dell>

After you log in to the switch, the prompt provides you with the current command-level information. For example:

Prompt
Dell> EXEC
Dell# EXEC Privilege
Dell(conf)# CONFIGURATION

NOTE: For a list of all the command mode prompts, refer to the Command Modes section.

Multiple Configuration Users

When a user enters CONFIGURATION mode and another user is already in CONFIGURATION mode, the Dell operating software generates an alert warning message similar to the following:

Dell#conf

% Warning: The following users are currently configuring the system:

User "" on line console0
User "admin" on line vty0 ( 123.12.1.123 )
User "admin" on line vty1 ( 123.12.1.123 )
User "Irene" on line vty3 ( 123.12.1.321 )
Dell#conf
When another user enters CONFIGURATION mode, the Dell OS sends a message similar to the following:

% Warning: User "admin" on line vty2 "172.16.1.210" is in configuration

In this case, the user is "admin" on vty2.

Navigating the CLI

The Dell operating system displays a command line interface (CLI) prompt comprised of the host name and CLI mode.

- Host name is the initial part of the prompt and is "Dell" by default. You can change the host name with the `hostname` command.
- CLI mode is the second part of the prompt and reflects the current CLI mode. For a list of the Dell Networking OS command modes, refer to the command mode list in the Accessing the Command Line section.

The CLI prompt changes as you move up and down the levels of the command structure. Starting with CONFIGURATION mode, the command prompt adds modifiers to further identify the mode. For more information about command modes, refer to the Command Modes section.

<table>
<thead>
<tr>
<th>Prompt</th>
<th>CLI Command Mode</th>

</tr>
</tbody>
</table>

Obtaining Help

As soon as you are in a command mode there are several ways to access help.

**To obtain a list of keywords at any command mode:**

Type a ? at the prompt or after a keyword. There must always be a space before the ?.
To obtain a list of keywords with a brief functional description:

Type help at the prompt.

To obtain a list of available options:

Type a keyword and then type a space and a ?.

To obtain a list of partial keywords using a partial keyword:

Type a partial keyword and then type a ?.

Example

The following is an example of typing ip ? at the prompt:

Dell(conf)#ip ?
igmp     Internet Group Management Protocol
route    Establish static routes
telnet   Specify telnet options

When entering commands, you can take advantage of the following timesaving features:

- The commands are not case-sensitive.
- You can enter partial (truncated) command keywords. For example, you can enter int gig int interface for the interface gigabitethernet interface command.
- To complete keywords in commands, use the TAB key.
- To display the last enabled command, use the up Arrow key.
- Use either the Backspace key or Delete key to erase the previous character.
- To navigate left or right in the Dell Networking OS command line, use the left and right Arrow keys.

The shortcut key combinations at the Dell Networking OS command line are as follows:

<table>
<thead>
<tr>
<th>Key Combination</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>CNTL-A</td>
<td>Moves the cursor to the beginning of the command line.</td>
</tr>
<tr>
<td>CNTL-B</td>
<td>Moves the cursor back one character.</td>
</tr>
<tr>
<td>CNTL-D</td>
<td>Deletes the character at the cursor.</td>
</tr>
<tr>
<td>CNTL-E</td>
<td>Moves the cursor to the end of the line.</td>
</tr>
<tr>
<td>CNTL-F</td>
<td>Moves the cursor forward one character.</td>
</tr>
<tr>
<td>CNTL-I</td>
<td>Completes a keyword.</td>
</tr>
<tr>
<td>CNTL-K</td>
<td>Deletes all the characters from the cursor to the end of the command line.</td>
</tr>
<tr>
<td>CNTL-L</td>
<td>Re-enters the previous command.</td>
</tr>
<tr>
<td>CNTL-N</td>
<td>Returns to the more recent commands in the history buffer after recalling commands with Ctrl-P or the up Arrow key.</td>
</tr>
<tr>
<td>CNTL-P</td>
<td>Recalls commands, beginning with the last command.</td>
</tr>
</tbody>
</table>
Key Combination | Action
--- | ---
CNTL-R | Re-enters the previous command.
CNTL-U | Deletes the line.
CNTL-W | Deletes the previous word.
CNTL-X | Deletes the line.
CNTL-Z | Ends continuous scrolling of the command outputs.
Esc B | Moves the cursor back one word.
Esc F | Moves the cursor forward one word.
Esc D | Deletes all the characters from the cursor to the end of the word.

Using the Keyword no Command

To disable, delete or return to default values, use the no form of the commands.

For most commands, if you type the keyword no in front of the command, you disable that command or delete it from the running configuration. In this guide, the no form of the command is described in the Syntax portion of the command description. For example:

Syntax

```
no {boot | default | enable | ftp-server | hardware | hostname
| ip | line | logging | monitor | service | io-aggregator
broadcast storm-control | snmp-server | username}
```

Defaults
None

Command Modes
CONFIGURATION

Command History
Version 8.3.17.0 Supported on the M I/O Aggregator.

Filtering show Commands

To find specific information, display certain information only or begin the command output at the first instance of a regular expression or phrase, you can filter the display output of a show command.

When you execute a show command, and then enter a pipe ( | ), one of the following parameters, and a regular expression, the resulting output either excludes or includes those parameters.

- **NOTE:** The Dell operating software accepts a space before or after the pipe, no space before or after the pipe, or any combination. For example: Dell#command | grep gigabit | except regular-expression | find regular-expression.

- **except** displays only the text that does not match the pattern (or regular expression)
The grep command option has an ignore-case sub-option that makes the search case-insensitive. For example, the commands:

**Displaying All Output**

To display the output all at once (not one screen at a time), use the `no-more` option after the pipe. This operation is similar to the `terminal length screen-length` command except that the `no-more` option affects the output of just the specified command. For example:

```bash
Dell#show running-config|no-more.
```

**Filtering the Command Output Multiple Times**

You can filter a single command output multiple times. To filter a command output multiple times, place the `save` option as the last filter. For example:

```bash
Dell# command | grep regular-expression | except regular-expression | grep other-regular-expression | find regular-expression | no-more | save.
```

**Command Modes**

To navigate and launch various CLI modes, use specific commands. Navigation to these modes is described in the following sections.

**EXEC Mode**

When you initially log in to the switch, by default, you are logged in to EXEC mode. This mode allows you to view settings and enter EXEC Privilege mode, which is used to configure the device.

When you are in EXEC mode, the > prompt is displayed following the host name prompt, which is “Dell” by default. You can change the host name prompt using the `hostname` command.

**EXEC Privilege Mode**

The `enable` command accesses EXEC Privilege mode. If an administrator has configured an “Enable” password, you are prompted to enter it.

EXEC Privilege mode allows you to access all the commands accessible in EXEC mode, plus other commands, such as to clear address resolution protocol (ARP) entries and IP addresses. In addition, you can access CONFIGURATION mode to configure interfaces, routes and protocols on the switch. While you are logged in to EXEC Privilege mode, the # prompt displays.
CONFIGURATION Mode

In EXEC Privilege mode, use the `configure` command to enter CONFIGURATION mode and configure routing protocols and access interfaces.

To enter CONFIGURATION mode:

1. Verify that you are logged in to EXEC Privilege mode.
2. Enter the `configure` command. The prompt changes to include (conf).

From this mode, you can enter INTERFACE mode by using the `interface` command.

INTERFACE Mode

Use INTERFACE mode to configure interfaces or IP services on those interfaces. An interface can be physical (for example, a Gigabit Ethernet port) or virtual (for example, the Null interface).

To enter INTERFACE mode:

1. Verify that you are logged in to CONFIGURATION mode.
2. Enter the `interface` command and then enter an interface type and interface number that is available on the switch.

The prompt changes to include the designated interface and slot/port number. For example:

```
Prompt                  Interface Type
Dell(conf-if)#          INTERFACE mode
Dell(conf-if-te-0/0)#   Ten-Gigabit Ethernet interface then slot/port information
Dell(conf-if-fo-0/0)#   Forty-Gigabit Ethernet interface then slot/port information
Dell(conf-if-lo-0)#     Loopback interface number
Dell(conf-if-nu-0)#     Null Interface then zero
Dell(conf-if-po-0)#     Port-channel interface number
Dell(conf-if-vl-0)#     VLAN Interface then VLAN number (range 1–4094)
Dell(conf-if-ma-0/0)#   Management Ethernet interface then slot/port information
Dell(conf-if-range)#    Designated interface range (used for bulk configuration).
```

IP ACCESS LIST Mode

To enter IP ACCESS LIST mode and configure either standard or extended access control lists (ACLs), use the `ip access-list standard` or `ip access-list extended` command.
To enter IP ACCESS LIST mode:

1. Verify that you are logged in to CONFIGURATION mode.
2. Use the `ip access-list standard` or `ip access-list extended` command. Include a name for the ACL. The prompt changes to include (conf-std-nacl) or (conf-ext-nacl).

You can return to CONFIGURATION mode by using the `exit` command.

**LINE Mode**

To configure the console or virtual terminal parameters, use LINE mode.

To enter LINE mode:

1. Verify that you are logged in to CONFIGURATION mode.
2. Enter the `line` command. Include the keywords `console` or `vty` and their line number available on the switch. The prompt changes to include (config-line-console) or (config-line-vty).

You can exit this mode by using the `exit` command.

**MAC ACCESS LIST Mode**

To enter MAC ACCESS LIST mode and configure either standard or extended access control lists (ACLs), use the `mac access-list standard` or `mac access-list extended` command.

To enter MAC ACCESS LIST mode:

1. Verify that you are logged in to CONFIGURATION mode.
2. Use the `mac access-list standard` or `mac access-list extended` command. Include a name for the ACL. The prompt changes to include (conf-std-macl) or (conf-ext-macl).

You can return to CONFIGURATION mode by using the `exit` command.

**MULTIPLE SPANNING TREE Mode**

To enable and configure the multiple spanning tree protocol (MSTP), use MULTIPLE SPANNING TREE mode, as described in Multiple Spanning Tree Protocol (MSTP).

To enter MULTIPLE SPANNING TREE mode:

1. Verify that you are logged in to CONFIGURATION mode.
2. Enter the `protocol spanning-tree mstp` command.

You can return to CONFIGURATION mode by using the `exit` command.

**Per-VLAN SPANNING TREE (PVST+) Plus Mode**

To enable and configure the Per-VLAN Spanning Tree (PVST+) protocol, use PVST+ mode. For more information, refer to Per-VLAN Spanning Tree Plus (PVST+).

**NOTE:** The protocol name is PVST+, but the plus sign is dropped at the CLI prompt.

To enter PVST+ mode:

1. Verify that you are logged in to CONFIGURATION mode.
2. Enter the `protocol spanning-tree pvst` command. The prompt changes to include (conf-pvst).

You can return to CONFIGURATION mode by using the `exit` command.

**PREFIX-LIST Mode**

To configure a prefix list, use PREFIX-LIST mode.

To enter PREFIX-LIST mode:

1. Verify that you are logged in to CONFIGURATION mode.
2. Enter the `ip prefix-list` command. Include a name for the prefix list. The prompt changes to include (conf-nprefixl).

You can return to CONFIGURATION mode by using the `exit` command.

**PROTOCOL GVRP Mode**

To enable and configure GARP VLAN Registration Protocol (GVRP), use PROTOCOL GVRP mode. For more information, refer to [GARP VLAN Registration (GVRP)](https://www.example.com/gvrp).

To enter PROTOCOL GVRP mode:

1. Verify that you are logged in to CONFIGURATION mode.
2. Enter the `protocol gvrp` command. The prompt changes to include (config-gvrp).

You can return to CONFIGURATION mode by using the `exit` command.

**RAPID SPANNING TREE (RSTP) Mode**

To enable and configure RSTP, use RSTP mode. For more information, refer to [Rapid Spanning Tree Protocol (RSTP)](https://www.example.com/rstp).

To enter RSTP mode:

1. Verify that you are logged in to CONFIGURATION mode.
2. Enter the `protocol spanning-tree rstp` command. The prompt changes to include (conf-rstp).

You can return to CONFIGURATION mode by using the `exit` command.

**ROUTE-MAP Mode**

To configure a route map, use ROUTE-MAP mode.

To enter ROUTE-MAP mode:

1. Verify that you are logged in to CONFIGURATION mode.
2. Use the `route-map map-name [permit | deny] [sequence-number]` command. The prompt changes to include (config-route-map).

You can return to CONFIGURATION mode by using the `exit` command.

**ROUTER OSPF Mode**

To configure OSPF, use ROUTER OSPF mode. For more information, refer to [Open Shortest Path First (OSPF)](https://www.example.com/ospf).
To enter ROUTER OSPF mode:

1. Verify that you are logged in to CONFIGURATION mode.
2. Enter the `router ospf (process-id)` command. The prompt changes to include `(conf-router ospf-id)`.

You can switch to INTERFACE mode by using the `interface` command or you can switch to ROUTER RIP mode by using the `router rip` command.

**ROUTER RIP Mode**

To enable and configure Router Information Protocol (RIP), use ROUTER RIP mode. For more information, refer to [Routing Information Protocol (RIP)](#).

To enter ROUTER RIP mode:

1. Verify that you are logged in to CONFIGURATION mode.
2. Enter the `router rip` command. The prompt changes to include `(conf-router_rip)`.

You can return to CONFIGURATION mode by using the `exit` command.

**SPANNING TREE Mode**

To enable and configure the Spanning Tree protocol, use SPANNING TREE mode. For more information, refer to [Spanning Tree Protocol (STP)](#).

To SPANNING TREE mode:

1. Verify that you are logged in to CONFIGURATION mode.
2. Enter the `protocol spanning-tree stp-id` command. The prompt changes to include `(conf-stp)`.

You can return to CONFIGURATION mode by using the `exit` command.
File Management

This chapter contains command line interface (CLI) commands needed to manage the configuration files as well as other file management commands. The commands in this chapter are supported by the Dell Networking operating software (Dell).

**cd**

Change to a different working directory.

**Syntax**

```
cd directory
```

**Parameters**

- `directory` (OPTIONAL) Enter the following:
  - `flash:` (internal Flash) or any sub-directory
  - `usbflash:` (external Flash) or any sub-directory

**Command Modes**

EXEC Privilege

**Command History**

- **Version 8.3.16.0**
  Introduced on the MXL 10/40GbE Switch IO Module.

**copy**

Copy one file to another location. The Dell OS supports IPv4 addressing for FTP, TFTP, and SCP (in the `hostip` field).

**Syntax**

```
copy source-file-url destination-file-url
```

**Parameters**

- `file-url` Enter the following location keywords and information:
  - **To copy a file from the internal FLASH**
    - Enter the keyword `flash://` then the filename.
  - **To copy a file from the external FLASH**
    - Enter the keyword `usbflash://` then the filename.

- **To copy a file from the remote host**
  - `ftp://user:password@hostip/path/to/remote/file`
  - `tftp://hostip/path/to/remote/file`
  - `scp://username:password@hostip/path/to/remote/file`
  - `sftp://username:password@hostip/path/to/remote/file`

- **To copy a file from the FTP server**
  - `ftp://user:password@hostip/path/to/remote/file`
  - `sftp://user:password@hostip/path/to/remote/file`

- **To copy a file from the TFTP server**
  - `tftp://hostip/path/to/remote/file`

- **To copy a file from the SSH server**
  - `scp://username:password@hostip/path/to/remote/file`
  - `sftp://username:password@hostip/path/to/remote/file`

- **To copy a file from the SCP server**
  - `scp://hostip/path/to/remote/file`
  - `sftp://hostip/path/to/remote/file`
To copy the running configuration

Enter the keywords `running-config`.

To copy the startup configuration

Enter the keywords `startup-config`.

To copy a file on the external FLASH

Enter the keyword `slot0://` then the filename.

**EXEC Privilege**

**Command Modes**

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

The Dell OS supports a maximum of 100 files at the root directory level, on both the internal and external Flash.

The `usbflash` commands are supported. For a list of approved USB vendors, refer to the `Dell OS Release Notes`.

When copying a file to a remote location (for example, using Secure Copy [SCP]), enter only the keywords and Dell OS prompts you need for the rest of the information. For example, when using SCP, you can enter `copy running-config scp:` where `running-config` is the source and the target is specified in the ensuing prompts. The Dell OS prompts you to enter any required information, as needed for the named destination—remote destination, destination filename, user ID, password, and so forth.

When you use the `copy running-config startup-config` command to copy the running configuration (the startup configuration file amended by any configuration changes made since the system was started) to the startup configuration file, the Dell OS creates a backup file on the internal flash of the startup configuration.

The Dell OS supports copying the running-configuration to a TFTP server or to an FTP server. For example:

- `copy running-config tftp:`
- `copy running-config ftp:`

**Example**

```
Dell#copy running-config scp:
Address or name of remote host []: 10.10.10.1
Port number of the server [22]: 99
Destination file name [startup-config]: old_running
User name to login remote host: sburgess
Password to login remote host: 
Password to login remote host? dilling
```

In this `copy scp: flash:` example, specifying `SCP` in the first position indicates that the target is to be specified in the ensuing prompts. Entering `flash:` in the
second position indicates that the target is the internal Flash. The source is on a secure server running SSH, so you are prompted for the user datagram protocol (UDP) port of the SSH server on the remote host.

Example

Dell#copy scp: flash:
Address or name of remote host []: 10.11.199.134
Port number of the server [22]: 99
Source file name []: test.cfg
User name to login remote host: admin
Password to login remote host:
Destination file name [test.cfg]: test1.cfg

Related Commands

cd – changes the working directory.

copy running-config startup-config

Copy running configuration to the startup configuration.

Syntax

copy running-config startup-config {duplicate}

Command Modes
EXEC Privilege

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

This command is useful for quickly making a changed configuration on one chassis available on external flash in order to move it to another chassis.

delete

Delete a file from the flash. After deletion, files cannot be restored.

Syntax

delete flash: ([flash://]filepath) usbflash ([usbflash://]filepath)

Parameters

flash-url Enter the following location and keywords:

• For a file or directory on the internal Flash, enter flash:// then the filename or directory name.
• For a file or directory on an external USB drive, enter usbflash:// then the filename or directory name.

no-confirm (OPTIONAL) Enter the keywords no-confirm to specify that the Dell OS does not require user input for each file prior to deletion.
### Command Modes
EXEC Privilege

### Command History
**Version 8.3.16.1** Introduced on the MXL 10/40GbE Switch IO Module.

flash: 2143281152 bytes total (1389801472 bytes free)

Dell\#  

### Related Commands
- **cd** — Changes the working directory.

---

### format flash

Erase all existing files and reformat the filesystem in the internal flash memory. After the filesystem is formatted, files cannot be restored.

**Syntax**

```
format {flash: | usbflash:}
```

**Defaults**

- flash memory

**Command Modes**

EXEC Privilege

**Command History**

**Version 8.3.16.1** Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

You must include the colon (:) when entering this command.

⚠️ **CAUTION:** This command deletes all files, including the startup configuration file. So, after executing this command, consider saving the running config as the startup config (use the write memory command or copy run start command).

**Related Commands**

- **copy** — copies the current configuration to either the startup-configuration file or the terminal.

- **show file** — displays the contents of a text file in the local filesystem.
**logging coredump**

Enable coredump.

**Syntax**

logging coredump stack-unit all

**Command Modes**

CONFIGURATION

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

The kernel coredump can be large and may take five to 30 minutes to upload. The Dell OS does not overwrite application coredumps so you should delete them as necessary to conserve space on the flash; if the flash is out of memory, the coredump is aborted.

If the FTP server is not reachable, the application coredump is aborted. The Dell OS completes the coredump process and waits until the upload is complete before rebooting the system.

**Related Commands**

- **logging coredump server** — designates a server to upload kernel coredumps.

**logging coredump server**

Designate a server to upload core dumps.

**Syntax**

logging coredump server {ipv4-address} username name password [type] password

**Parameters**

- `ipv4-address` Enter the server IPv4 address (A.B.C.D).
- `name` Enter a username to access the target server.
- `type` Enter the password type:
  - Enter 0 to enter an unencrypted password.
  - Enter 7 to enter a password that has already been encrypted using a Type 7 hashing algorithm.
- `password` Enter a password to access the target server.

**Defaults**

Crash kernel files are uploaded to flash by default.
**Command Modes**  
CONFIGURATION

**Command History**  
Version 8.4.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**  
Because flash space may be limited, using this command ensures your entire crash kernel files are uploaded successfully and completely. Only a single coredump server can be configured. Configuration of a new coredump server over-writes any previously configured server.

**NOTE:** You must disable `logging coredump` before you designate a new server destination for your core dumps.

**Related Commands**  
`logging coredump` – disables the kernel coredump

---

**pwd**

Display the current working directory.

**Syntax**  
pwd

**Command Modes**  
EXEC Privilege

**Command History**  
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Example**  
Dell#pwd
flash:
Dell#

**Related Commands**  
`cd` – changes the directory.

---

**rename**

Rename a file in the local file system.

**Syntax**  
rename url url

**Parameters**  
`url`  
Enter the following keywords and a filename:

- For a file on the internal Flash, enter `flash://` then the filename.
- For a file on an external USB drive, enter `usbflash://` then the filename.
show boot system

Displays information about boot images currently configured on the system.

Syntax  
show boot system stack-unit {0-5 | all}

Parameters  
0-5  
Enter this information to display the boot image information of only the entered stack-unit.

all  
Enter the keyword all to display the boot image information of all the stack-units in the stack.

Defaults  
none

Command Modes  
• EXEC
• EXEC Privilege

Command History  
Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.

Example  
Dell#show boot system stack-unit all
Current system image information in the system:
==================================================================

Stack-unit 1 is not present.
Stack-unit 2 is not present.
Stack-unit 3 is not present.
Stack-unit 4 is not present.
Stack-unit 5 DOWNLOAD BOOT 9-1-0-675    9-1-0-684

show file

Display contents of a text file in the local filesystem.

Syntax  
show file url

Parameters  
url  
Enter one of the following:

• For a file on the internal Flash, enter flash:// then the filename.
For a file on the external Flash, enter `usbflash://` then the filename.

**Command Modes**

EXEC Privilege

**Command History**

**Version 8.3.16.1** Introduced on the MXL 10/40GbE Switch IO Module.

**Example**

Dell#

Command Fields

Field Description
size(b) Lists the size (in bytes) of the storage location. If the location
is remote, no size is listed.
Free(b) Lists the available size (in bytes) of the storage location. If
the location is remote, no size is listed.
Feature Displays the formatted DOS version of the device.
Type Displays the type of storage. If the location is remote, the
word network is listed.
Flags Displays the access available to the storage location. The
following letters indicate the level of access:
  • r = read access
  • w = write access
Prefixes Displays the name of the storage location.

Related Commands
format flash — Erases all the existing files and reformats the filesystem in the
internal flash memory.
show file — Displays the contents of a text file in the local filesystem.
show startup-config — Displays the current SFM status.

show os-version

Display the release and software image version information of the image file specified.

Syntax
show os-version [file-url]

Parameters
file-url (OPTIONAL) Enter the following location keywords and
information:
- For a file on the internal Flash, enter `flash://` then the filename.
- For a file on an FTP server, enter `ftp://user:password@hostip/filepath`.
- For a file on a TFTP server, enter `tftp://hostip/filepath`.
- For a file on the external Flash, enter `usbflash://filepath` then the filename.

**Defaults**
none

**Command Modes**
EXEC Privilege

**Command History**

**Version 8.3.16.1** Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

```

**show running-config**

Display the current configuration and display changes from the default values.

**Syntax**

```
show running-config [entity] [configured] [status]
```
Parameters

entity

(OPTIONAL) To display that entity’s current (non-default) configuration, enter one of the following keywords:

NOTE: If you did not configure anything that entity, nothing displays and the prompt returns.

- aaa for the current AAA configuration
- acl for the current ACL configuration
- arp for the current static ARP configuration
- boot for the current boot configuration
- class-map for the current class-map configuration
- fefd for the current FEFD configuration
- ftp for the current FTP configuration
- fvrp for the current FVRP configuration
- host for the current host configuration
- hardware-monitor for hardware-monitor action-on-error settings
- igmp for the current IGMP configuration
- interface for the current interface configuration
- line for the current line configuration
- load-balance for the current port-channel load-balance configuration
- logging for the current logging configuration
- mac for the current MAC ACL configuration
- mac-address-table for the current MAC configuration
- management-route for the current Management port forwarding configuration
- mroute for the current Mroutes configuration
- ntp for the current NTP configuration
- ospf for the current OSPF configuration
- pim for the current PIM configuration
- policy-map-input for the current input policy map configuration
- policy-map-output for the current output policy map configuration
prefix-list for the current prefix-list configuration

privilege for the current privilege configuration

radius for the current RADIUS configuration

resolve for the current DNS configuration

rip for the current RIP configuration

route-map for the current route map configuration

snmp for the current SNMP configuration

spanning-tree for the current spanning tree configuration

static for the current static route configuration

status for the file status information

tacacs+ for the current TACACS+ configuration

tftp for the current TFTP configuration

users for the current users configuration

wred-profile for the current wred-profile configuration

configured (OPTIONAL) Enter the keyword configuration to display line card interfaces with non-default configurations only.

status (OPTIONAL) Enter the keyword status to display the checksum for the running configuration and the start-up configuration.

Command Modes

- EXEC Privilege

**upgrade boot**

Upgrade the bootflash image or bootselector image.

**Syntax**

```
upgrade boot {all | bootflash-image | bootselector-image} stack-unit {0-5 | all} {booted | flash: | ftp: | tftp: | usbflash:} (A: | B:}
```

**Parameters**

- **all**: Enter the keyword `all` to change both the bootflash and bootselector images.
- **bootflash-image**: Enter the keywords `bootflash-image` to change the bootflash image.
- **bootselector-image**: Enter the keywords `bootselector-image` to change the bootselector image.
- **0-5**: Enter the keyword `0-5` to upgrade all stack-units.
- **all**: Enter the keyword `all` to upgrade all the member stack-units.
- **booted**: Enter the keyword `booted` to upgrade from the current image in the MXL 10/40GbE Switch.
- **ftp:** After entering the keyword `ftp:`, you can either follow it with the location of the source file in this form: `//userid:password@hostip/filepath` or press Enter to launch a prompt sequence.
- **tftp:** After entering the keyword `tftp:`, you can either follow it with the location of the source file in this form: `//hostlocation/filepath` or press Enter to launch a prompt sequence.
flash: After entering the keyword flash:, you can either follow it with the location of the source file in this form: //filepath or press Enter to launch a prompt sequence.

usbflash: After entering the keyword usbflash:, you can either follow it with the location of the source file in this form: //filepath or press Enter to launch a prompt sequence.

A: Enter this keyword to upgrade the bootflash partition A.

B: Enter this keyword to upgrade the bootflash partition B.

Default: none

Command Modes EXEC Privilege

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

You must reload the Dell OS after executing this command.

Example

Dell#upgrade boot ?
  all Upgrade both boot flash image and selector image
  bootflash-image Upgrade boot flash image
  bootselector-image Upgrade boot selector image

Dell#

upgrade system

Upgrade the bootflash image or system image.

Syntax

upgrade system {flash: | ftp: | scp: | tftp: | usbflash: | stack-unit {0-5 | all} {A: | B:}}

Parameters

0–5 Enter the keyword 0–5 to upgrade only the mentioned stack-unit.

all Enter the keyword all to upgrade all the member units of the stack.

ftp After entering the keyword ftp you can either follow it with the location of the source file in this form: //userid:password@hostip/filepath, or press Enter to launch a prompt sequence.

scp After entering the keyword scp you can either follow it with the location of the source file in this form: //userid:password@hostip/filepath, or press Enter to launch a prompt sequence.
tftp
After entering the keyword `tftp` you can either follow it with the location of the source file in this form: `//filepath`, or press Enter to launch a prompt sequence.

flash
After entering the keyword `flash` you can either follow it with the location of the source file in this form: `//filepath`, or press Enter to launch a prompt sequence.

usbflash
After entering the keyword `usbflash` you can either follow it with the location of the source file in this form: `//filepath`, or press Enter to launch a prompt sequence.

A:
Enter this keyword to upgrade the bootflash partition A.

B:
Enter this keyword to upgrade the bootflash partition B.

Defaults
none

Command Modes
EXEC Privilege

Command History
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
Reset the card using the `power-cycle` option after restoring the FPGA command.

Example
Dell#upgrade system ?
flash: Copy from flash file system (flash://filepath)
ftp: Copy from remote file system, IPv4 or IPv6,
(ftp://userid:password@hostip/filepath)
scp: Copy from remote file system, IPv4 or IPv6,
(scp://userid:password@hostip/filepath)
stack-unit Sync image to the stack-unit
tftp: Copy from remote file system, IPv4 or IPv6,
(tftp://hostip/filepath)
usbflash: Copy from usbflash file system (usbflash://filepath)
Dell#
Control and Monitoring

This chapter describes control and monitoring for the MXL 10/40GbE Switch IO Module.

asset-tag
Assign and store a unique asset-tag to the stack member.

Syntax

asset-tag stack-unit unit-id Asset-tag ID
To remove the asset tag, use no stack-unit unit-id Asset-tag ID command.

Parameters

stack-unit unit-id
Enter the keywords stack-unit then the unit-id to assign a tag to the specific member. The range is from 0 to 5.

Asset-tag ID
Enter a unique asset-tag ID to assign to the stack member. This option accepts a maximum of 10 characters, including all special characters except double quotes. To include a space in the asset-tag, enter a space within double quotes.

Defaults
No asset-tag is assigned.

Command Modes
EXEC Privilege

Command History
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Related Commands
show system — Displays the current status of all stack members or a specific member.

asf-mode
Enable alternate store and forward (ASF) mode and forward packets as soon as a threshold is reached.

Syntax

asf-mode stack-unit {unit-id | all} queue size
To return to standard Store and Forward mode, use the no asf-mode stack unit command.
Parameters

- **unit-id**: Enter the stack member unit identifier of the stack member to reset. The range is from 0 to 5 or **all**.
- **queue size**: Enter the queue size of the stack member. The range is from 0 to 5.

Defaults
Not configured

Command Modes
CONFIGURATION

Command History

**Version 8.3.16.1**
Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
You must save the configuration and reload the system to implement ASF. When you enter the command, the system sends a message stating that the new mode is enabled when the system reloads.

banner exec

Configure a message that is displayed when your enter EXEC mode.

**Syntax**

`banner exec c line c`

**Parameters**

- **c**: Enter the keywords `banner exec`, then enter a character delineator, represented here by the letter `c`. Press ENTER.
- **line**: Enter a text string for your banner message ending the message with your delineator. In the following example, the delineator is a percent character (`%`); the banner message is “testing, testing”.

Defaults
No banner is displayed.

Command Modes
CONFIGURATION

Command History

**Version 8.3.16.1**
Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
Optionally, use the `banner exec` command to create a text string that displays when you accesses EXEC mode. The `exec-banner` command toggles that display.

Example

```bash
Dell(conf)#banner exec ?
LINE c banner-text(max length 255) c, where 'c' is a delimiting character

Dell(conf)#banner exec %
Enter TEXT message. End with the character '%'.
This is the banner%
Dell(conf)#end
Dell#exit
```
banner login

Set a banner to display when logging on to the system.

Syntax

```
banner login {keyboard-interactive | no keyboard-interactive} [c line c]
```

Parameters

- **keyboard-interactive**: Enter the keyword `keyboard-interactive` to require a carriage return (CR) to get the message banner prompt.
- **c**: Enter a delineator character to specify the limits of the text banner. The delineator is a percent character (%).
- **line**: Enter a text string for your text banner message ending the message with your delineator. The delineator is a percent character (%). Range: maximum of 50 lines, up to 255 characters per line.

Defaults

No banner is configured and the CR is required when creating a banner.

Command Modes

CONFIGURATION

Command History

- **Version 8.3.16.1**: Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

A login banner message displays only in EXEC Privilege mode after entering the enable command then the password. These banners do not display to users in EXEC mode.

Example

```
Dell(conf)#banner login ?
keyboard-interactive Press enter key to get prompt
LINE c banner-text(max length 255) c, where
```
'c' is a delimiting character
Dell(conf)#no banner login ?
keyboard-interactive Prompt will be displayed by default <cr>
Dell(conf)#banner login keyboard-interactive
Enter TEXT message. End with the character '%'.
This is the banner%
Dell(conf)#end
Dell#exit

13d21h9m: %STKUNIT0-M:CP %SEC-5-LOGOUT: Exec session is terminated for user on line console
This is the banner
Dell Force10 con0 now available
Press RETURN to get started.
13d21h10m: STKUNIT0-M:CP %SEC-5-LOGIN_SUCCESS: Login successful for user on line console
This is the banner

Related Commands

banner motd — sets a Message of the Day banner.

exec-banner — enables the display of a text string when you enter EXEC mode.

banner motd

Set a message of the day (MOTD) banner.

Syntax

banner motd c line c

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>c</td>
<td>Enter a delineator character to specify the limits of the text banner. The delineator is a percent character (%).</td>
</tr>
<tr>
<td>line</td>
<td>Enter a text string for your message of the day banner message ending the message with your delineator. The delineator is a percent character (%).</td>
</tr>
</tbody>
</table>

Defaults

No banner is configured.

Command Modes

CONFIGURATION

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

A MOTD banner message displays only in EXEC Privilege mode after entering the enable command then the password. These banners do not display to users in EXEC (non-privilege) mode.
clear alarms

Clear alarms on the system.

Syntax

clear alarms

Command Modes

EXEC Privilege

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

This command clears alarms that are no longer active. If an alarm situation is still active, it is seen in the system output.

clear command history

Clear the command history log.

Syntax

clear command history

Command Modes

EXEC Privilege

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Related Commands

show command-history — displays a buffered log of all the commands all users enter along with a time stamp.

clear line

Reset a terminal line.

Syntax

clear line {line-number | console 0 | vty number}

Parameters

line-number Enter a number for one of the 12 terminal lines on the system. The range is from 0 to 11.

console 0 Enter the keywords console 0 to reset the console port.
**vty number**
Enter the keyword `vty` then a number to clear a terminal line. The range is from 0 to 9.

**Command Modes**
EXEC Privilege

**Command History**
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

---

**configure**
Enter CONFIGURATION mode from EXEC Privilege mode.

**Syntax**
```
configure [terminal]
```

**Parameters**
- `terminal` (OPTIONAL) Enter the keyword `terminal` to specify that you are configuring from the terminal.

**Command Modes**
EXEC Privilege

**Command History**
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Example**
```
Dell#configure
Dell (conf)#
```

---

**debug cpu-traffic-stats**
Enable the collection of computer processor unit (CPU) traffic statistics.

**Syntax**
```
debbug cpu-traffic-stats
```

**Defaults**
Disabled

**Command Modes**
EXEC Privilege

**Command History**
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**
This command enables (and disables) the collection of CPU traffic statistics from the time this command is executed (not from system boot). However, excessive traffic a CPU receives automatically triggers (turn on) the collection of CPU traffic statistics.
The following message is an indication that collection of CPU traffic is automatically turned on. To view the traffic statistics, use the `show cpu-traffic-stats` command.

If the CPU receives excessive traffic, traffic is rate controlled.

**NOTE:** You must enable this command before the `show cpu-traffic-stats` command displays traffic statistics. Dell Networking recommends disabling debugging (`no debug cpu-traffic-stats`) after troubleshooting is complete.

**Related Commands**

- `show cpu-traffic-stats` — displays the cpu traffic statistics.

---

**debug ftpserver**

View transactions during an FTP session when a user is logged into the FTP server.

**Syntax**

```
debug ftpserver
```

**Command Modes**

EXEC Privilege

**Command History**

Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.

---

**disable**

Return to EXEC mode.

**Syntax**

```
disable [level]
```

**Parameters**

- `level` (OPTIONAL) Enter a number for a privilege level of the Dell OS. The range is from 0 to 15. The default is 1.

**Defaults**

1

**Command Modes**

EXEC Privilege

**Command History**

Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.
do

Allows the execution of most EXEC-level commands from all CONFIGURATION levels without returning
to the EXEC level.

Syntax

```
do command
```

Parameters

- **command**
  
  Enter an EXEC-level command.

Defaults

```

none
```

Command Modes

- CONFIGURATION
- INTERFACE

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The following commands are not supported by the do command:

- enable
- disable
- exit
- config

Example

```
Dell(conf-if-te-5/0)#do clear counters
Clear counters on all interfaces [confirm]
Dell(conf-if-te-5/0)#
Dell(conf-if-te-5/0)#do clear logging
Clear logging buffer [confirm]
Dell(conf-if-te-5/0)#
Dell(conf-if-te-5/0)#do reload
System configuration has been modified. Save? [yes/no]: n
Proceed with reload [confirm yes/no]: n
Dell(conf-if-te-5/0)#
```

enable

Enter EXEC Privilege mode or any other privilege level configured. After entering this command, you may
need to enter a password.

Syntax

```
enable [level]
```

Parameters

- **level**
  
  (OPTIONAL) Enter a number for a privilege level of the Dell OS. The range is from 0 to 15. The default is **15**.

Defaults

```
15
```
## Command Modes

<table>
<thead>
<tr>
<th>Command Modes</th>
<th>EXEC</th>
</tr>
</thead>
</table>

## Command History

| Version 8.3.16.1 | Introduced on the MXL 10/40GbE Switch IO Module. |

## Usage Information

Users entering EXEC Privilege mode or any other configured privilege level can access configuration commands. To protect against unauthorized access, use the `enable password` command to configure a password for the `enable` command at a specific privilege level. If no privilege level is specified, the default is privilege level 15.

## Related Commands

- **enable password** — configures a password for the `enable` command and to access a privilege level.

## enable optic-info-update interval

Enable polling intervals of optical information updates for simple network management protocol (SNMP).

### Syntax

```
enable optical-info-update interval seconds
```

To disable optical power information updates, use the `no enable optical-info-update interval` command.

### Parameters

- **interval**
- **seconds**

Enter the keyword `interval` then the polling interval in seconds. The range is from 120 to 6000 seconds. The default is 300 seconds (5 minutes).

### Defaults

Disabled

### Command Modes

<table>
<thead>
<tr>
<th>Command Modes</th>
<th>CONFIGURATION</th>
</tr>
</thead>
</table>

### Command History

| Version 8.3.16.1 | Replaces the `enable xfp-power-updates` command. |

### Usage Information

To enable polling and to configure the polling frequency, use this command.

## end

Return to EXEC Privilege mode from other command modes (for example, CONFIGURATION or ROUTER OSPF modes).

### Syntax

```
end
```

### Command Modes

- **CONFIGURATION**
exec-banner

Enable the display of a text string when the user enters EXEC mode.

Syntax: exec-banner

Defaults: Enabled on all lines (if configured, the banner appears).

Command Modes: LINE

Command History: Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information: Optionally, use the banner exec command to create a text string that is displayed when you access EXEC mode. This command toggles that display.

Related Commands: banner exec — configures a banner to display when entering EXEC mode.

line — enables and configures console and virtual terminal lines to the system.

exec-timeout

Set a time interval that the system waits for input on a line before disconnecting the session.

Syntax: exec-timeout minutes [seconds]

To return to default settings, use the no exec-timeout command.
**Parameters**

**minutes**

Enter the number of minutes of inactivity on the system before disconnecting the current session. The range is from 0 to 35791. The default is **10 minutes** for the console line and **30 minutes** for the VTY line.

**seconds**

(Optional) Enter the number of seconds. The range is from 0 to 2147483. The default is **0 seconds**.

**Defaults**

10 minutes for console line; 30 minutes for VTY lines; 0 seconds

**Command Modes**

LINE

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

To remove the time interval, use the `exec-timeout 0 0` command.

**Example**

Dell con0 is now available
Press RETURN to get started.
Dell>

---

**exit**

Return to the lower command mode.

**Syntax**

`exit`

**Command Modes**

- EXEC Privilege
- CONFIGURATION
- LINE
- INTERFACE
- PROTOCOL GVRP
- SPANNING TREE
- MULTIPLE SPANNING TREE
- MAC ACCESS LIST
- ACCESS-LIST
- PREFIX-LIST
- ROUTER OSPF
- ROUTER RIP

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**

`end` — returns to EXEC Privilege mode.
ftp-server enable

Enable FTP server functions on the system.

Syntax

```
ftp-server enable
```

Defaults

Disabled

Command Modes

CONFIGURATION

Command History

Version 8.3.16.1
Introduced on the MXL 10/40GbE Switch IO Module.

Example

```

```

Related Commands

- `ftp-server todir` — sets the directory to be used for incoming FTP connections.
- `ftp-server username` — sets a username and password for incoming FTP connections.

ftp-server todir

Specify the top-level directory to be accessed when an incoming FTP connection request is made.

Syntax

```
ftp-server todir directory
```

Parameters

- `directory` Enter the directory path.

Defaults

The internal flash is the default directory.

Command Modes

CONFIGURATION
Command History

After you enable FTP server functions with the `ftp-server enable` command, Dell Networking recommends specifying a top-level directory path. Without a top-level directory path specified, the Dell Networking OS directs users to the flash directory when logging in to the FTP server.

Related Commands

- **ftp-server enable** — enables FTP server functions on the MXL 10/40GbE switch IO module.
- **ftp-server username** — sets a username and password for incoming FTP connections to the MXL 10/40GbE switch IO module.

### ftp-server username

Create a user name and associated password for incoming FTP server sessions.

**Syntax**

```
ftp-server username username password [encryption-type] password
```

**Parameters**

- **username** Enter a text string up to 40 characters long as the user name.
- **password** Enter the keyword `password` then a string up to 40 characters long as the password. Without specifying an encryption type, the password is unencrypted.
- **encryption-type** (OPTIONAL) After the keyword `password`, enter one of the following numbers:
  - 0 (zero) for an unencrypted (clear text) password
  - 7 (seven) for a hidden text password

**Defaults**

Not enabled.

**Command Modes**

CONFIGURATION

**Command History**

- **Version 8.3.16.1** Introduced on the MXL 10/40GbE Switch IO Module.

### hostname

Set the host name of the system.

**Syntax**

```
hostname name
```
Parameters

**name**
Enter a text string, up to 32 characters long.

Defaults

Dell

Command Modes

CONFIGURATION

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The hostname is used in the prompt.

---

**ip ftp password**

Specify a password for outgoing FTP connections.

**Syntax**

```
ip ftp password [encryption-type] password
```

**Parameters**

- **encryption-type** *(OPTIONAL)* Enter one of the following numbers:
  - 0 (zero) for an unencrypted (clear text) password
  - 7 (seven) for a hidden text password
- **password**
Enter a string up to 40 characters as the password.

Defaults

Not configured.

Command Modes

CONFIGURATION

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The password is listed in the configuration file; you can view the password by entering the `show running-config ftp` command in EXEC mode.

Use the `ip ftp password` command when you use the `ftp:` parameter in the `copy` command.

Related Commands

- `copy` — copy files.
- `ftp-server username` — sets the user name for the FTP sessions.
ip ftp source-interface

Specify an interface's IP address as the source IP address for FTP connections.

Syntax
ip ftp source-interface interface

Parameters
interface

Enter the following keywords and slot/port or number information:

- For Loopback interfaces, enter the keyword loopback then a number from zero (0) to 16383.
- For a Port Channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.
- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
- For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.

Defaults
The IP address on the system that is closest to the Telnet address is used in the outgoing packets.

Command Modes
CONFIGURATION

Command History
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Related Commands
ip ftp username — Assigns a user name for outgoing FTP connection requests.

ip ftp username

Assign a user name for outgoing FTP connection requests.

Syntax
ip ftp username username

Parameters
username

Enter a text string as the user name up to 40 characters long.

Defaults
No user name is configured.

Command Modes
CONFIGURATION

Command History
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.
Configure a password with the `ip ftp password` command.

### Related Commands

- `ip ftp password` — sets the password for FTP connections.

---

**ip telnet server enable**

Enable the Telnet server on the switch.

**Syntax**

```
ip telnet server enable
```

To disable the Telnet server, use the `no ip telnet server enable` command.

**Defaults**

Enabled

**Command Modes**

CONFIGURATION

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**

- `ip ssh server` — enables the secure shell (SSH) server on the system.

---

**ip telnet source-interface**

Set an interface's IP address as the source address in outgoing packets for Telnet sessions.

**Syntax**

```
ip telnet source-interface interface
```

**Parameters**

- `interface` Enter the following keywords and slot/port or number information:
  - For Loopback interfaces, enter the keyword `loopback` then a number from zero (0) to 16383.
  - For a Port Channel, enter the keywords `port-channel` then a number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
  - For VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

**Defaults**

The IP address on the system that is closest to the Telnet address is used in the outgoing packets.
### ip tftp source-interface

Assign an interface's IP address in outgoing packets for TFTP traffic.

**Syntax**

```
ip tftp source-interfaceinterface
```

**Parameters**

- **interface**: Enter the following keywords and slot/port or number information:
  - For Loopback interfaces, enter the keyword `loopback` then a number from zero (0) to 16383.
  - For a Port Channel, enter the keywords `port-channel` then a number. The range is 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
  - For VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

**Defaults**

The IP address on the system that is closest to the Telnet address is used in the outgoing packets.

**Command Modes**

- **CONFIGURATION**

**Command History**

- **Version 8.3.16.1**: Introduced on the MXL 10/40GbE Switch IO Module.

---

### line

Enable and configure console and virtual terminal lines to the system. This command accesses LINE mode, where you can set the access conditions for the designated line.

**Syntax**

```
line {console 0 | vty number [end-number]}
```

**Parameters**

- **console 0**: Enter the keyword `console 0` to configure the console port. The console option is <0-0>.
vty number

Enter the keyword vty then a number from 0 to 9 to
calculate a virtual terminal line for Telnet sessions. The
system supports 10 Telnet sessions.

end-number

(Optional) Enter a number from 1 to 9 as the last virtual
terminal line to configure. You can configure multiple lines at
one time.

Defaults
Not configured

Command Modes
CONFIGURATION

Command History
Version 8.3.17.0 Supported on the M I/O Aggregator.

Usage Information
You cannot delete a terminal connection.

Related Commands
show memory — view current memory usage on the M I/O Aggregator.

motd-banner

Enable a message of the day (MOTD) banner to appear when you log in to the system.

Syntax
motd-banner

Defaults
Enabled on all lines.

Command Modes
LINE

Command History
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

ping

Test connectivity between the system and another device by sending echo requests and waiting for
replies.

Syntax
ping [host | ip-address | ipv6-address] [count {number | continuous}] [datagram-size] [timeout] [source (ip src-ipv4-address) | interface] [tos] [df-bit (y|n)] [validate-reply(y|n)] [outgoing-interface] [pattern pattern] [sweep-min-size] [sweep-max-size] [sweep-interval] [ointerface (ip src-ipv4-address) | interface]
**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>host</td>
<td>(OPTIONAL) Enter the host name of the devices to which you are testing connectivity.</td>
</tr>
<tr>
<td>ip-address</td>
<td>(OPTIONAL) Enter the IPv4 address of the device to which you are testing connectivity. The address must be in the dotted decimal format.</td>
</tr>
<tr>
<td>count</td>
<td>Enter the number of echo packets to be sent. The default is 5.</td>
</tr>
<tr>
<td></td>
<td>• number: from 1 to 2147483647</td>
</tr>
<tr>
<td></td>
<td>• continuous: transmit echo request continuously</td>
</tr>
<tr>
<td>datagram size</td>
<td>Enter the ICMP datagram size. The range is from 36 to 15360 bytes. The default is 100.</td>
</tr>
<tr>
<td>timeout</td>
<td>Enter the interval to wait for an echo reply before timing out. The range is from 0 to 3600 seconds. The default is 2 seconds.</td>
</tr>
<tr>
<td>source</td>
<td>Enter the IPv4 or IPv6 source ip address or the source interface. For IPv6 addresses, you may enter global addresses only. Enter the IP address in A.B.C.D format.</td>
</tr>
<tr>
<td></td>
<td>• For a Port Channel interface, enter the keywords <strong>port-channel</strong> then a number. The range is from 1 to 128.</td>
</tr>
<tr>
<td></td>
<td>• For a 10-Gigabit Ethernet interface, enter the keyword <strong>TenGigabitEthernet</strong> then the slot/port information.</td>
</tr>
<tr>
<td></td>
<td>• For a 40-Gigabit Ethernet interface, enter the keyword <strong>fortyGigE</strong> then the slot/port information.</td>
</tr>
<tr>
<td></td>
<td>• For a VLAN interface, enter the keyword <strong>vlan</strong> then a number from 1 to 4094.</td>
</tr>
<tr>
<td>tos</td>
<td>(IPv4 only) Enter the type of service required. The range is from 0 to 255. The default is 0.</td>
</tr>
<tr>
<td>df-bit</td>
<td>(IPv4 only) Enter <strong>Y</strong> or <strong>N</strong> for the &quot;don't fragment&quot; bit in IPv4 header.</td>
</tr>
<tr>
<td></td>
<td>• <strong>N</strong>: Do not set the &quot;don't fragment&quot; bit.</td>
</tr>
<tr>
<td></td>
<td>• <strong>Y</strong>: Do set &quot;don't fragment&quot; bit</td>
</tr>
<tr>
<td></td>
<td>Default is <strong>No</strong>.</td>
</tr>
<tr>
<td>validate-reply</td>
<td>(IPv4 only) Enter <strong>Y</strong> or <strong>N</strong> for reply validation.</td>
</tr>
<tr>
<td></td>
<td>• <strong>N</strong>: Do not validate reply data.</td>
</tr>
<tr>
<td></td>
<td>• <strong>Y</strong>: Do validate reply data.</td>
</tr>
<tr>
<td></td>
<td>Default is <strong>No</strong>.</td>
</tr>
<tr>
<td>pattern pattern</td>
<td>(IPv4 only) Enter the IPv4 data pattern. Range: 0-FFFF. Default: <strong>0xABCD</strong>.</td>
</tr>
</tbody>
</table>
sweep-min-size  Enter the minimum size of datagram in sweep range. The range is from 52 to 15359 bytes.

sweep-max-size  Enter the maximum size of datagram in sweep range. The range is from 53 to 15359 bytes.

sweep-interval  Enter the incremental value for sweep size. The range is from 1 to 15308 seconds.

oointerface  (IPv4 only) Enter the outgoing interface for multicast packets. Enter the IP address in A.B.C.D format.

• For a Port Channel, enter the keywords port-channel then a number. The range is from 1 to 128.
• For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
• For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
• For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.

Defaults  See parameters above.

Command Modes  • EXEC
• EXEC Privilege

Command History  Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information  When you enter the ping command without specifying an IP address (Extended Ping), you are prompted for a target IP address, a repeat count, a datagram size (up to 1500 bytes), a timeout (in seconds), and for Extended Commands. For information on the ICMP message codes that return from a ping command, refer to Internet Control Message Protocol (ICMP) Message Types.

Example (IPv4)  Dell#ping 172.31.1.255
Type Ctrl-C to abort.

Sending 5, 100-byte ICMP Echos to 172.31.1.255, timeout is 2 seconds:
Reply to request 1 from 172.31.1.208 0 ms
Reply to request 1 from 172.31.1.216 0 ms
Reply to request 1 from 172.31.1.205 16 ms
::
Reply to request 5 from 172.31.1.209 0 ms
Reply to request 5 from 172.31.1.66 0 ms
Reply to request 5 from 172.31.1.87 0 ms
Dell#

Example (IPv6)  Dell#ping 100::1
Type Ctrl-C to abort.

Sending 5, 100-byte ICMP Echos to 100::1, timeout is 2 seconds:
!!!!!
reload

Reboot the Dell OS.

Syntax

reload

Command Modes

EXEC Privilege

Command History

Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

If there is a change in the configuration, the Dell OS prompts you to save the new configuration. Or you can save your running configuration with the copy running-config command.

Related Commands

redundancy disable-auto-reboot — Resets any designated stack member except the management unit.

send

Send messages to one or all terminal line users.

Syntax

send [*] | [line ] | [console] | [vty]

Parameters

* Enter the asterisk character * to send a message to all tty lines.

line Send a message to a specific line. The range is from 0 to 11.

console Enter the keyword console to send a message to the primary terminal line.

vty Enter the keyword vty to send a message to the virtual terminal.

Defaults none

Command Modes EXEC

Command History

Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.
Usage

Messages can contain an unlimited number of lines; however, each line is limited to 255 characters. To move to the next line, use <CR>. To send the message use CTR-Z; to abort a message, use CTR-C.

service timestamps

To debug and log messages, add time stamps. This command adds either the uptime or the current time and date.

Syntax

service timestamps [debug | log] [datetime [localtime] [msec] [show-timezone] | uptime]

Parameters

debug

(OPTIONAL) Enter the keyword debug to add timestamps to debug messages.

log

(OPTIONAL) Enter the keyword log to add timestamps to log messages with severity from 0 to 6.

datetime

(OPTIONAL) Enter the keyword datetime to have the current time and date added to the message.

localtime

(OPTIONAL) Enter the keyword localtime to include the localtime in the timestamp.

msec

(OPTIONAL) Enter the keyword msec to include milliseconds in the timestamp.

show-timezone

(OPTIONAL) Enter the keyword show-timezone to include the time zone information in the timestamp.

uptime

(OPTIONAL) Enter the keyword uptime to have the timestamp based on time elapsed since system reboot.

Defaults

Not configured.

Command Modes

CONFIGURATION

Command History

Version 8.3.16.1

Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

If you do not specify parameters and enter service timestamps, it appears as service timestamps debug uptime in the running-configuration.

To view the current options set for the service timestamps command, use the show running-config command.
**show alarms**

View alarms.

**Syntax**

```
show alarms
```

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

*Version 8.3.16.1*  Introduced on the MXL 10/40GbE Switch IO Module.

**Example**

```
Dell# show alarms
-- Minor Alarms --
Alarm Type                       Duration
---------------------------------------
No minor alarms
-- Major Alarms --
Alarm Type                       Duration
---------------------------------------
No major alarms

Dell#
```

**show command-history**

Display a buffered log of all commands all users enter along with a time stamp.

**Syntax**

```
show command-history
```

**Defaults**

none

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

*Version 8.3.16.1*  Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

One trace log message is generated for each command. No password information is saved to this file.

**Example**

```
Dell#show command-history
[4/20 10:27:23]: CMD-(CLI):[enable]by default from console
[4/20 10:27:23]: CMD-(CLI):[configure terminal]by default from console
  - Repeated 1 time.
[4/20 10:27:23]: CMD-(CLI):[snmp-server community public ro]by default from console
[4/20 10:27:23]: CMD-(CLI):[logging 172.16.1.162]by default from console
```
show command-tree

Display the entire CLI command tree, and optionally, display the utilization count for each command and its options.

Syntax

```
show command-tree [count | no]
```

Related Commands

clear command history — clears the command history log.
Parameters

**count**
Display the command tree with a usage counter for each command.

**no**
Display all of the commands that may be preceded by the keyword no, which is the keyword used to remove a command from the running-configuration.

Defaults

none

Command Modes

• EXEC

• EXEC Privilege

Command History

**Version 8.3.16.1**
Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

Reload the system to reset the command-tree counters.

Example

Dell#show command-tree count
!

### show cpu-traffic-stats

View the CPU traffic statistics.

| Syntax       | show cpu-traffic-stats [port number | all] |
|--------------|------------------------------------|
| Parameters   | port number (OPTIONAL) Enter the port number to display traffic statistics on that port only. The range is from 1 to 1568. |
|              | all (OPTIONAL) Enter the keyword all to display traffic statistics on all the interfaces receiving traffic, sorted based on the traffic. |

<table>
<thead>
<tr>
<th>Defaults</th>
<th>all</th>
</tr>
</thead>
<tbody>
<tr>
<td>Command Modes</td>
<td>EXEC</td>
</tr>
<tr>
<td>Command History</td>
<td>Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

Traffic statistics are sorted on a per-interface basis; the interface receiving the most traffic is displayed first. All CPU and port information is displayed unless a specific port or CPU is specified. Traffic information is displayed for router ports only; not for management interfaces. The traffic statistics are collected only after the `debug cpu-traffic-stats` command is executed; not from the system bootup.

**Example**

```bash
Dell#show cpu-traffic-stats
Processor : CP

Received 100% traffic on TenGigabitEthernet 8/2 Total packets:100
   LLC:0, SNAP:0, IP:100, ARP:0, other:0
   Unicast:100, Multicast:0, Broadcast:0
Dell#
```

**Related Commands**

- `debug cpu-traffic-stats` — enables CPU traffic statistics for debugging.
show debugging

View a list of all enabled debugging processes.

Syntax

```
show debugging
```

Command Modes

EXEC Privilege

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Example

```
Dell#show debug
Generic IP: (Access List: test)
   IP packet debugging is on for (Access List: test)
   TenGigabitEthernet 0/16
   ICMP packet debugging is on for
   TenGigabitEthernet 0/16
OSPF:1
   OSPF packet debugging is on
DHCP:
   DHCP debugging is on
Dell#
```

show environment

View system component status (for example, temperature or voltage).

Syntax

```
show environment [all | stack-unit unit-id]
```

Parameters

- `all` Enter the keyword all to view all components.
- `stack-unit unit-id` Enter the keyword stack-unit then the unit-id to display information on a specific stack member. The range is from 0 to 5.
- `thermal sensor` Enter the keywords thermal-sensor to view all components.

Command Modes

- EXEC
- EXEC Privilege

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The following example shows the output of the show environment fan command as it appears prior to the Dell Networking OS version 7.8.1.0.

Example (all)

```
Dell#show environment all
-- Unit Environment Status --
Unit Status Temp Voltage
------------------------------
```

97
### show inventory

Display the switch type, components (including media), and Dell OS version including hardware identification numbers and configured protocols.

**Syntax**

```
show inventory [media slot]
```

**Parameters**

- **media slot** *(OPTIONAL)* Enter the keyword `media` then the stack ID of the stack member you want to display pluggable media inventory.

**Defaults**

- `none`

**Command Modes**

- `EXEC`
Command History
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
If there are no fiber ports in the unit, just the header under show inventory media displays. If there are fiber ports but no optics inserted, the output displays "Media not present or accessible".

Example
Dell#show inventory
System Type      : MXL-10/40GbE
System Mode      : 1.0
Software Version : NAVASOTA-DEV-9-1-0-917
Unit Type          Serial Number   Part Number Revision
--------------------------------------------------------------
* 1  MXL-10/40GbE  TW282921F00048  ONVH81      2.0
* - Management Unit

Software Protocol Configured
--------------------------------------------------------------
SNMP
LLDP
Dell#

Example (media)
Dell#show inv media

0    54   QSFP  40GBASE-SR4    MK50012         No
0    55   QSFP  40GBASE-SR4    MK50012         No
0    56   QSFP  40GBASE-SR4    MK50012         No
Dell#

Related Commands
show interfaces — displays a specific interface configuration.

show interfaces transceiver — displays the physical status and operational status of an installed transceiver. The output also displays the transceiver’s serial number.
show memory

View current memory usage on the MXL switch.

Syntax
show memory [stack-unit 0–5]

Parameters
stack-unit 0–5 (OPTIONAL) Enter the keywords stack-unit then the stack unit ID of the stack member to display memory information on the designated stack member.

Command Modes
• EXEC
• EXEC Privilege

Command History
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
The output for show memory displays the memory usage of LP part (sysdlp) of the system. The sysdlp is an aggregate task that handles all the tasks running on the CPU.

Example
Dell#show memory stack-unit 0
Statistics On Unit 0 Processor
===========================
Total (b)  Used (b)  Free (b)  Lowest (b)  Largest (b)
268435456 4010354 264425102 264375410 264425102

show processes cpu

Display CPU usage information based on processes running.

Syntax
show processes cpu [management-unit 1-99 [details] | stack-unit 0–5 | summary | ipc | memory [stack-unit 0–5]]

Parameters
management-unit 1-99 [details] (OPTIONAL) Display processes running in the control processor. The 1-99 variable sets the number of tasks to display in order of the highest CPU usage in the past five (5) seconds. Add the keyword details to display all running processes (except sysdlp). Refer to Example (management-unit).

stack-unit 0–5 (OPTIONAL) Enter the keyword stack-unit then the stack member ID. The range is from 0 to 5.

As an option of the show processes cpu command, this option displays CPU usage for the designated stack member. Or, as an option of memory, this option limits the output of memory statistics to the designated stack member. Refer to Example (stack-unit).
summary (OPTIONAL) Enter the keyword summary to view a summary view of CPU usage for all members of the stack. Refer to Example (summary).

ipc (OPTIONAL) Enter the keyword ipc to display interprocess communication statistics.

memory (OPTIONAL) Enter the keyword memory to display memory statistics. Refer to Example (memory).

Command Modes
- EXEC
- EXEC Privilege

Command History
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Example (summary)
Dell#show processes cpu summary

Related Commands

- **show hardware layer2 acl** — displays Layer 2 ACL data for the selected stack member and stack member port-pipe.
- **show hardware layer3** — displays Layer 3 ACL or QoS data for the selected stack member and stack member port-pipe.
- **show hardware stack-unit** — displays the data plane or management plane input and output statistics of the designated component of the designated stack member.
- **show hardware system-flow** — displays Layer 3 ACL or QoS data for the selected stack member and stack member port-pipe.
- **show interfaces stack-unit** — displays information on all interfaces on a specific stack member.
- **show processes memory** — displays CPU usage information based on processes running.
show processes ipc flow-control

Display the single window protocol queue (SWPQ) statistics.

Syntax

```
show processes ipc flow-control [cp]
```

Parameters

- **cp** (OPTIONAL) Enter the keyword `cp` to view the control processor’s SWPQ statistics.

Defaults

none

Command Modes

- EXEC
- EXEC Privilege

Command History

- **Version 8.3.16.1**
  Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Source QID /Tx Process</td>
<td>Source Service Identifier</td>
</tr>
<tr>
<td>Destination QID/Rx Process</td>

<td>Number of messages acknowledged</td>
</tr>
<tr>
<td>Retr /Available Retra</td>
<td>Number of retries left</td>
</tr>
<tr>
<td>Total/ Max Retra</td>
<td>Number of retries allowed</td>
</tr>
</tbody>
</table>

Important Points:

- The SWP provides flow control-based reliable communication between the sending and receiving software tasks.
- A sending task enqueues messages into the SWP queue for a receiving task and waits for an acknowledgement.
- If no response is received within a defined period of time, the SWP timeout mechanism resubmits the message at the head of the FIFO queue.
- After retrying a defined number of times, the `SWP-2-NOMORETIMEOUT` timeout message is generated.
In the example, a retry (Retries) value of zero indicates that the SWP mechanism reached the maximum number of retransmissions without an acknowledgement.

Example

```
Dell#show processes ipc flow-control

Dell#
```

show processes memory

Display memory usage information based on the running processes.

**Syntax**

```
show processes memory {management-unit | stack unit {0-5 | all | summary}}
```

**Parameters**

- **management-unit**: Enter the keyword `management-unit` for CPU memory usage of the stack management unit.
- **stack unit 0-5**: Enter the keyword `stack unit` then a stack unit ID of the member unit for which to display memory usage on the forwarding processor.
- **all**: Enter the keyword `all` for detailed memory usage on all stack members.
- **summary**: Enter the keyword `summary` for a brief summary of memory availability and usage on all stack members.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

- **show processes memory output**
- **Description**

  **Field**
  - **Total**: Total system memory available
show processes memory output

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>

<td>Total dynamic memory allocated</td>
</tr>
<tr>
<td>Frees</td>
<td>Total dynamic memory freed</td>
</tr>
<tr>
<td>Max</td>
<td>Maximum dynamic memory allocated</td>
</tr>
<tr>
<td>Current</td>
<td>Current dynamic memory in use</td>
</tr>
</tbody>
</table>

The output for the `show process memory` command displays the memory usage statistics running on CP part (sysd) of the system. The sysd is an aggregate task that handles all the tasks running on the MXL 10/40GbE Switch IO Module’s CP.

The output of the `show memory` command and this command differ based on which the Dell OS processes are counted.

- In the `show memory` output, the memory size is equal to the size of the application processes.
- In the output of this command, the memory size is equal to the size of the application processes plus the size of the system processes.

**Example**

```
Dell#show processes memory stack-unit 0
Total: 2147483648, MaxUsed: 378433536, CurrentUsed: 378433536, CurrentFree: 1769050112

show software ifm

Display interface management (IFM) data.

**Syntax**

```
show software ifm {clients [summary] | ifagt number | ifcb interface | stack-unit unit-ID | trace-flags}
```

**Parameters**

- **clients**  
Enter the keyword clients to display IFM client information.

- **summary** (OPTIONAL)  
Enter the keyword summary to display brief information about IFM clients.

- **ifagt number**  
Enter the keyword ifagt then the number of an interface agent to display software pipe and IPC statistics.

- **ifcb interface**  
Enter the keyword ifcb then one of the following interface IDs then the slot/port information to display interface control block information for that interface:
  - For a Port Channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.
  - For a 10G Ethernet interface, enter the keyword TenGigabitEthernet.
  - For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE.
**stack-unit unit-ID**

Enter the keywords `stack-unit` then the stack member number to display IFM information for that unit. The range is from 0 to 5.

**trace-flags**

Enter the keyword `trace-flags` to display IFM information for internal trace flags.

**Defaults**

`none`

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

- **Version 8.3.16.1**
  Introduced on the MXL 10/40GbE Switch IO Module.

**Example**

```

Related Commands

asset-tag — Assigns and stores a unique asset-tag to the stack member.

show version — displays the Dell Networking version.

show processes memory — displays memory usage based on running processes.

show system stack-ports — Displays information about the stack ports on all switches in the stack.

show hardware stack-unit — displays the data plane and management plane input and output statistics of a particular stack member.

stack-unit priority — Configures the ability of the switch to become the management unit of a stack.

show tech-support

Display a collection of data from other show commands, necessary for Dell Networking technical support to perform troubleshooting on MXL switches.

Syntax

show tech-support [stack-unit unit-id | page]

Parameters

stack-unit (OPTIONAL) Enter the keyword stack-unit to view CPU memory usage for the stack member designated by unit-id. The range is 0 to 7.

page (OPTIONAL) Enter the keyword page to view 24 lines of text at a time. Press the SPACE BAR to view the next 24 lines. Press ENTER to view the next line of text.

When using the pipe command ( | ), enter one of these keywords to filter command output. For details about filtering commands, refer to CLI Basics.
save Enter the keyword save to save the command output. flash:
Save to local flash drive (flash://filename [max 20
chars]).

Command Modes
EXEC Privilege

Command History
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
Without the page or stack-unit option, the command output is continuous. Use
Ctrl-z to interrupt the command output.

The save option works with other filtering commands. This allows you to save
specific information of a show command. The save entry must always be the last
option. For example: Dell#show tech-support |grep regular-expression
|except regular-expression | find regular-expression | save
flash://result

This display output is an accumulation of the same information that is displayed
when you execute one of the following show commands:

• show cam
• show clock
• show environment
• show file
• show interfaces
• show inventory
• show ip protocols
• show ip route summary
• show processes cpu
• show processes memory
• show redundancy
• show running-conf
• show version

Example (partial)
Dell#show tech-support ?

Related Commands

  show version — displays the Dell Networking OS version.
  show system — displays the current switch status.
  show environment — displays the system component status.
  show processes memory — displays memory usage based on running processes.

telnet

Connect through Telnet to a server. The Telnet client and server in the Dell operating system support IPv4 connections. You can establish a Telnet session directly to the router or a connection can be initiated from the router.

Syntax
telnet {host | ip-address} [/source-interface]

Parameters

  host
  Enter the name of a server.

  ip-address
  Enter the IPv4 address in dotted decimal format of the server.

  source-interface
  (OPTIONAL) Enter the keywords /source-interface then the interface information to include the source interface.
  Enter the following keywords and slot/port or number information:

  • For a Loopback interface, enter the keyword loopback then a number from zero (0) to 16383.
  • For the Null interface, enter the keyword null then 0.
• For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
• For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
• For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
• For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

 Defaults
Command Modes
• EXEC
• EXEC Privilege
Command History
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**terminal xml**

Enable XML mode in Telnet and SSH client sessions.

**Syntax**
```
terminal xml
```
To exit XML mode, use the `terminal no xml` command.

 Defaults
Command Modes
• EXEC
• EXEC Privilege
Command History
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**
This command enables the XML input mode where you can either cut and paste XML requests or enter the XML requests line-by-line. For more information about using the XML feature, refer to the XML chapter in the *Dell Operating System Configuration Guide*.

**traceroute**

View a packet’s path to a specific device.

**Syntax**
```
traceroute {host | ip-address}
```
Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>host</td>
<td>Enter the name of device.</td>
</tr>
<tr>
<td>ip-address</td>
<td>Enter the IP address of the device in dotted decimal format.</td>
</tr>
</tbody>
</table>

Defaults

- Timeout = 5 seconds
- Probe count = 3
- 30 hops max
- 40 byte packet size
- UDP port = 33434

Command Modes

- EXEC
- EXEC Privilege

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

When you enter the traceroute command without specifying an IP address (Extended Traceroute), you are prompted for a target and source IP address, timeout (in seconds) (default is 5), a probe count (default is 3), minimum TTL (default is 1), maximum TTL (default is 30), and port number (default is 33434). To keep the default setting for those parameters, press the ENTER key.

Example (IPv4)

```
Dell# traceroute www.force10networks.com
Translating "www.force10networks.com"...domain server (10.11.0.1) [OK]
Type Ctrl-C to abort.
-----------------------------------------------
Tracing the route to www.force10networks.com (10.11.84.18), 30 hops max, 40 byte packets
-----------------------------------------------
TTL Hostname      Probe1     Probe2     Probe3
1   10.11.199.190 001.000 ms 001.000 ms 002.000 ms
2   gwegress-sjc-02.force10networks.com (10.11.30.126) 005.000 ms 001.000 ms 001.000 ms
3   fw-sjc-01.force10networks.com (10.11.127.254) 000.000 ms 000.000 ms 000.000 ms
4   www.force10networks.com (10.11.84.18) 000.000 ms 000.000 ms 000.000 ms
Dell#
```

Related Commands

- ping — tests the connectivity to a device.
undebug all

Disable all debug operations on the system.

Syntax
undebug all

Defaults
none

Command Modes
EXEC Privilege

Command History
Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.

virtual-ip

Configure a virtual IP address for the active management interface. You can configure virtual addresses both for IPv4 independently.

Syntax
virtual-ip {ipv4-address}

Parameters
ipv4-address  Enter the IP address of the active management interface in a dotted decimal format (A.B.C.D).

Defaults
none

Command Modes
CONFIGURATION

Command History
Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
Each time you issue this command, it replaces the previously configured address of the same family. The no virtual-ip command takes an address/prefix-length argument, so that the desired address only is removed. If you enter the no virtual-ip command without any specified address, the IPv4 virtual addresses are removed.

Example
Dell#virtual-ip 10.11.197.99/16

write

Copy the current configuration to either the startup-configuration file or the terminal.

Syntax
write {memory | terminal}

Parameters
memory  Enter the keyword memory to copy the current running configuration to the startup configuration file. This
command is similar to the `copy running-config startup-config` command.

**terminal**
Enter the keyword `terminal` to copy the current running configuration to the terminal. This command is similar to the `show running-config` command.

<table>
<thead>
<tr>
<th>Command Modes</th>
<th>EXEC Privilege</th>
</tr>
</thead>
<tbody>
<tr>
<td>Command History</td>
<td>Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**
The `write memory` command saves the running-configuration to the file labeled `startup-configuration`. When using a LOCAL CONFIG FILE other than the startup-config not named “startup-configuration,” the running-config is not saved to that file; use the `copy` command to save any running-configuration changes to that local file.
An authentication server must authenticate a client connected to an 802.1X switch port. Until the authentication, only extensible authentication protocol over LAN (EAPOL) traffic is allowed through the port to which a client is connected. After authentication is successful, normal traffic passes through the port.

The Dell Networking operating software supports remote authentication dial-in service (RADIUS) and active directory environments using 802.1X Port Authentication.

### Important Points to Remember

The system limits network access for certain users by using virtual local area network (VLAN) assignments. 802.1X with VLAN assignment has these characteristics when configured on the switch and the RADIUS server.

- If no VLAN is supplied by the RADIUS server or if you disable 802.1X authorization, the port configures in its access VLAN after successful authentication.
- If you enable 802.1X authorization but the VLAN information from the RADIUS server is not valid, the port returns to the Unauthorized state and remains in the configured access VLAN. This safeguard prevents ports from appearing unexpectedly in an inappropriate VLAN due to a configuration error. Configuration errors create an entry in Syslog.
- If you enable 802.1X authorization and all information from the RADIUS server is valid, the port is placed in the specified VLAN after authentication.
- If you enable port security on an 802.1X port with VLAN assignment, the port is placed in the RADIUS server assigned VLAN.
- If you disable 802.1X on the port, it returns to the configured access VLAN.
- When the port is in the Force Authorized, Force Unauthorized, or Shutdown state, it is placed in the configured access VLAN.
- If an 802.1X port is authenticated and put in the RADIUS server assigned VLAN, any change to the port access VLAN configuration does not take effect.
- The 802.1X with VLAN assignment feature is not supported on trunk ports, dynamic ports, or with dynamic-access port assignment through a VLAN membership.

### debug dot1x

Display 802.1X debugging information.

**Syntax**

```
debug dot1x [all | auth-pae_fsm | backend_fsm | eapol_pdu] [interface interface]
```
Parameters

- **all**: Enable all 802.1X debug messages.
- **auth-pae-fsm**: Enable authentication PAE FSM debug messages.
- **backend-fsm**: Enable backend FSM debug messages.
- **eapol-pdu**: Enable the EAPOL frame trace and related debug messages.
- **interface**: Restricts the debugging information to an interface.

Defaults: Disabled

Command Modes: EXEC Privilege

Command History

- **Version 9.2(0.0)**: Introduced on the MXL 10/40GbE Switch IO Module.

---

dot1x auth-fail-vlan

Configure an authentication failure VLAN for users and devices that fail 802.1X authentication.

**Syntax**

```
dot1x auth-fail-vlan vlan-id [max-attempts number]
```

To delete the authentication failure VLAN, use the **no dot1x auth-fail-vlan vlan-id [max-attempts number]** command.

**Parameters**

- **vlan-id**: Enter the VLAN Identifier. The range is from 1 to 4094.
- **max-attempts number** (OPTIONAL): Enter the keywords `max-attempts` followed by the number of attempts desired before authentication fails. The range is from 1 to 5. The default is **3**.

**Defaults**

- 3 attempts

**Command Modes**

CONFIGURATION (conf-if-interface-slot/port)

**Command History**

- **Version 9.2(0.0)**: Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

If the host responds to 802.1X with an incorrect login/password, the login fails. The switch attempts to authenticate again until the maximum attempts configured is reached. If the authentication fails after all allowed attempts, the interface moves to the authentication failed VLAN.

After the authentication VLAN is assigned, the port-state must be toggled to restart authentication. Authentication occurs at the next reauthentication interval (dot1x reauthentication).
Related Commands

- `dot1x port-control` — Enables port control on an interface.
- `dot1x guest-vlan` — Configures a guest VLAN for limited access users or for devices that are not 802.1X capable.
- `show dot1x interface` — Displays the 802.1X configuration of an interface.

**dot1x auth-server**

Configure the authentication server to RADIUS.

**Syntax**

```
dot1x auth-server radius
```

**Defaults**

`none`

**Command Modes**

`CONFIGURATION`

**Command History**

- Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**dot1x auth-type mab-only**

To authenticate a device with MAC authentication bypass (MAB), only use the host MAC address.

**Syntax**

```
dot1x auth-type mab-only
```

**Defaults**

`Disabled`

**Command Modes**

`INTERFACE`

**Command History**

- Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

The prerequisites for enabling MAB-only authentication on a port are:

- Enable 802.1X authentication globally on the switch and on the port (the `dot1x authentication` command).
- Enable MAC authentication bypass on the port (the `dot1x mac-auth-bypass` command).

In MAB-only authentication mode, a port authenticates using the host MAC address even though 802.1X authentication is enabled. If the MAB-only authentication fails, the host is placed in the guest VLAN (if configured).

To disable MAB-only authentication on a port, enter the `no dot1x auth-type mab-only` command.
Related Commands

**dot1x authentication (Configuration)**

Enable dot1x globally. Enable dot1x both globally and at the interface level.

**Syntax**

```
dot1x authentication
```

To disable dot1x on a globally, use the `no dot1x authentication` command.

**Defaults**

Disabled

**Command Modes**

CONFIGURATION

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**

- `dot1x authentication (Interface)` — Enables dot1x on an interface.

**dot1x authentication (Interface)**

Enable dot1x on an interface. Enable dot1x both globally and at the interface level.

**Syntax**

```
dot1x authentication
```

To disable dot1x on an interface, use the `no dot1x authentication` command.

**Defaults**

Disabled

**Command Modes**

INTERFACE

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**

- `dot1x authentication (Configuration)` — Enable dot1x globally.

**dot1x guest-vlan**

Configure a guest VLAN for limited access users or for devices that are not 802.1X capable.

**Syntax**

```
dot1x guest-vlan vlan-id
```

122
To disable the guest VLAN, use the `no dot1x guest-vlan vlan-id` command.

**Parameters**

- **vlan-id**
  
  Enter the VLAN Identifier. The range is from 1 to 4094.

**Defaults**

Not configured.

**Command Modes**

CONFIGURATION (conf-if-interface-slot/port)

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

802.1X authentication is enabled when an interface is connected to the switch. If the host fails to respond within a designated amount of time, the authenticator places the port in the guest VLAN.

If a device does not respond within 30 seconds, it is assumed that the device is not 802.1X capable. Therefore, a guest VLAN is allocated to the interface and authentication, for the device, occurs at the next reauthentication interval (`dot1x reauthentication`).

If the host fails authentication for the designated number of times, the authenticator places the port in authentication failed VLAN (`dot1x auth-fail-vlan`).

**NOTE:** You can create the Layer 3 portion of a guest VLAN and authentication fail VLANs regardless if the VLAN is assigned to an interface or not. After an interface is assigned a guest VLAN (which has an IP address), routing through the guest VLAN is the same as any other traffic. However, the interface may join/leave a VLAN dynamically.

**Related Commands**

- `dot1x auth-fail-vlan` — Configures an authentication failure VLAN.
- `dot1x reauthentication` — Enables periodic re-authentication of the client.
- `dot1x reauth-max` — Configure the maximum number of times to re-authenticate a port before it becomes unauthorized.

### dot1x host-mode

Enable single-host or multi-host authentication.

**Syntax**

`dot1x host-mode {single-host | multi-host | multi-auth}`

**Parameters**

- **single-host**
  
  Enable single-host authentication.

- **multi-host**
  
  Enable multi-host authentication.

- **multi-auth**
  
  Enable multi-suppllicant authentication.
Default single-host
Command Modes INTERFACE
Command History Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.
Usage Information
- Single-host mode authenticates only one host per authenticator port and drops all other traffic on the port.
- Multi-host mode authenticates the first host to respond to an Identity Request and then permits all other traffic on the port.
- Multi-supplicant mode authenticates every device attempting to connect to the network on the authenticator port.

dot1x mac-auth-bypass
Enable MAC authentication bypass. If 802.1X times out because the host did not respond to the Identity Request frame, the system attempts to authenticate the host based on its MAC address.

Syntax
dot1x mac-auth-bypass
To disable MAC authentication bypass on a port, use the no dot1x mac-auth-bypass command.

Defaults Disabled
Command Modes INTERFACE
Command History Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

dot1x max-eap-req
Configure the maximum number of times an extensive authentication protocol (EAP) request is transmitted before the session times out.

Syntax
dot1x max-eap-req number
To return to the default, use the no dot1x max-eap-req command.

Parameters
- number Enter the number of times an EAP request is transmitted before a session time-out. The range is from 1 to 10. The default is 2.
dot1x max-suppliants

Restrict the number of supplicants that can be authenticated and permitted to access the network through the port. This configuration is only takes effect in Multi-Auth mode.

Syntax

dot1x max-suppliants number

Parameters

- **number**: Enter the number of supplicants that can be authenticated on a single port in Multi-Auth mode. The range is from 1 to 128. The default is 128.

Defaults

128 hosts can be authenticated on a single authenticator port.

Command Modes

INTERFACE

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Related Commands

dot1x host-mode — Enables single-host or multi-host authentication.

dot1x port-control

Enable port control on an interface.

Syntax

dot1x port-control {force-authorized | auto | force-unauthorized}

Parameters

- **force-authorized**: Enter the keywords force-authorized to forcibly authorize a port.
- **auto**: Enter the keyword auto to authorize a port based on the 802.1X operation result.
- **force-unauthorized**: Enter the keywords force-unauthorized to forcibly deauthorize a port.

Defaults

none
dot1x quiet-period

Set the number of seconds that the authenticator remains quiet after a failed authentication with a client.

Syntax

```
dot1x quiet-period seconds
```

To disable quiet time, use the `no dot1x quiet-time` command.

Parameters

- **seconds**: Enter the number of seconds. The range is from 1 to 65535. The default is 60.

Defaults

- 60 seconds

Command Modes

- INTERFACE

Command History

- **Version 9.2(0.0)**: Introduced on the MXL 10/40GbE Switch IO Module.

---

**dot1x reauthentication**

Enable periodic reauthentication of the client.

Syntax

```
dot1x reauthentication [interval seconds]
```

To disable periodic reauthentication, use the `no dot1x reauthentication` command.

Parameters

- **interval seconds**: (Optional) Enter the keyword `interval` then the interval time, in seconds, after which reauthentication is initiated. The range is from 1 to 31536000 (one year). The default is 3600 (1 hour).

Defaults

- 3600 seconds (1 hour)

Command Modes

- INTERFACE

Command History

- **Version 9.2(0.0)**: Introduced on the MXL 10/40GbE Switch IO Module.
**Command History**

`Version 9.2(0.0)` Introduced on the MXL 10/40GbE Switch IO Module.

---

### dot1x reauth-max

Configure the maximum number of times a port can reauthenticate before the port becomes unauthorized.

**Syntax**

```
dot1x reauth-max number
```

To return to the default, use the `no dot1x reauth-max` command.

**Parameters**

- `number` Enter the permitted number of reauthentications. The range is from 1 to 10. The default is 2.

**Defaults**

2

**Command Modes**

INTERFACE

**Command History**

`Version 9.2(0.0)` Introduced on the MXL 10/40GbE Switch IO Module.

---

### dot1x server-timeout

Configure the amount of time after which exchanges with the server time-out.

**Syntax**

```
dot1x server-timeout seconds
```

To return to the default, use the `no dot1x server-timeout` command.

**Parameters**

- `seconds` Enter a time-out value in seconds. The range is from 1 to 300, where 300 is implementation dependant. The default is 30.

**Defaults**

30 seconds

**Command Modes**

INTERFACE

**Command History**

`Version 9.2(0.0)` Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

When you configure the `dot1x server-timeout` value, take into account the communication medium used to communicate with an authentication server and the number of RADIUS servers configured. Ideally, the `dot1x server-timeout` value should be greater than the round-trip time between the device and the server.
value (in seconds) is based on the configured RADIUS-server timeout and retransmit values and calculated according to the following formula:

\[
\text{dot1x server-timeout seconds} > (\text{radius-server retransmit seconds} + 1) \times \text{radius-server timeout seconds}.
\]

Where the default values are as follows: dot1x server-timeout (30 seconds), radius-server retransmit (3 seconds), and radius-server timeout (5 seconds).

For example:

Dell(conf)#radius-server host 10.11.197.105 timeout 6
Dell(conf)#radius-server host 10.11.197.105 retransmit 4
Dell(conf)#interface gigabitethernet 2/23
Dell(conf-if-gi-2/23)#dot1x server-timeout 40

**dot1x supplicant-timeout**

Configure the amount of time after which exchanges with the supplicant time-out.

**Syntax**

```
dot1x supplicant-timeout seconds
```

To return to the default, use the no dot1x supplicant-timeout command.

**Parameters**

- **seconds**
  
Enter a time-out value in seconds. The range is from 1 to 300, where 300 is implementation dependant. The default is 30.

**Defaults**

30 seconds

**Command Modes**

INTERFACE

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**dot1x tx-period**

Configure the intervals at which EAPOL PDUs the Authenticator PAE transmits.

**Syntax**

```
dot1x tx-period seconds
```

To return to the default, use the no dot1x tx-period command.

**Parameters**

- **seconds**
  
Enter the interval time, in seconds, that EAPOL PDUs are transmitted. The range is from 1 to 65535. The default is 30.
show dot1x cos-mapping interface

Display the CoS priority-mapping table the RADIUS server provides and applies to authenticated supplicants on an 802.1X-enabled system.

Syntax

```
show dot1x cos-mapping interface interface [mac-address mac-address]
```

Parameters

- **interface**
  - Enter one of the following keywords and slot/port or number information:
    - For a Gigabit Ethernet interface, enter the keyword `GigabitEthernet` then the slot/port information.
    - For a Fast Ethernet interface, enter the keyword `FastEthernet` then the slot/port information.
    - For a Ten-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.

- **mac-address**
  - (Optional) MAC address of an 802.1X-authenticated supplicant.

Defaults

`none`

Command Modes

- EXEC
- EXEC privilege

Command History

- **Version 9.2(0.0)**
  - Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

To display CoS mapping information only for the specified supplicant, enter a supplicant’s MAC address using the `mac-address` option.

You can display the CoS mapping information applied to traffic from authenticated supplicants on 802.1X-enabled ports that are in Single-Hot, Multi-Host, and Multi-Supplicant authentication modes.

Example

```
Dell#show dot1x cos-mapping interface gigabitethernet 2/21
802.1p CoS re-map table on Gi 2/21:
-----------------------------
Dot1p  Remapped Dot1p
```
show dot1x interface

Display the 802.1X configuration of an interface.

Syntax

show dot1x interface interface [mac-address mac-address]

Parameters

interface

Enter one of the following keywords and slot/port or number information:

- For a Gigabit Ethernet interface, enter the keyword GigabitEthernet then the slot/port information.
- For a Fast Ethernet interface, enter the keyword FastEthernet then the slot/port information.
- For a Ten-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.

mac-address

(Optional) MAC address of a supplicant.

Defaults

none

Command Modes

- EXEC
- EXEC privilege

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.
If you enable 802.1X multi-supplicant authentication on a port, additional 802.1X configuration details (Port Authentication status, Untagged VLAN ID, Authentication PAE state, and Backend state) are displayed for each supplicant, as shown in the following example.

**Example**

Dell#show dot1x int Gi 2/32

Access Control Lists (ACL)

Access control lists (ACLs) are supported by the Dell Networking operating system. The Dell OS supports the following types of ACL, IP prefix list, and route maps:

- Commands Common to all ACL Types
- Common IP ACL Commands
- Standard IP ACL Commands
- Extended IP ACL Commands
- Common MAC Access List Commands
- Standard MAC ACL Commands
- Extended MAC ACL Commands
- IP Prefix List Commands
- Route Map Commands

**NOTE:** For ACL commands that use the Trace function, refer to the Secure DHCP Commands section in the Security chapter.

### Commands Common to all ACL Types

The following commands are available within each ACL mode and do not have mode-specific options. Some commands in this chapter may use similar names, but require different options to support the different ACL types (for example, the deny command).

**description**

Configure a short text string describing the ACL.

**Syntax**

description text

**Parameters**

- **text**
  
Enter a text string up to 80 characters long.

**Defaults**

Not enabled.

**Command Modes**

- CONFIGURATION-IP ACCESS-LIST-STANDARD
- CONFIGURATION-IP ACCESS-LIST-EXTENDED
- CONFIGURATION-MAC ACCESS LIST-STANDARD
- CONFIGURATION-MAC ACCESS LIST-EXTENDED
remark

Enter a description for an ACL entry.

Syntax
remark [remark-number] [description]

Parameters
remark-number
Enter the remark number. The range is from 0 to 4294967290.

NOTE: You can use the same sequence number for the remark and an ACL rule.

description
Enter a description of up to 80 characters.

Defaults
Not configured.

Command Modes
• CONFIGURATION-IP ACCESS-LIST-STANDARD
• CONFIGURATION-IP ACCESS-LIST-EXTENDED
• CONFIGURATION-MAC ACCESS LIST-STANDARD
• CONFIGURATION-MAC ACCESS LIST-EXTENDED

Usage Information
The remark command is available in each ACL mode. You can configure up to 4294967290 remarks in a given ACL.

The following example shows the use of the remark command twice within CONFIGURATION-STANDARD-ACCESS-LIST mode. The same sequence number was used for the remark and for an associated ACL rule. The remark precedes the rule in the running-config because it is assumed that the remark is for the rule with the same sequence number, or the group of rules that follow the remark.

Example
Dell(conf-std-nacl)#remark 10 Deny rest of the traffic
Dell(conf-std-nacl)#remark 5 Permit traffic from XYZ Inc.
Dell(conf-std-nacl)#show conf
!
ip access-list standard test
remark 5 Permit traffic from XYZ Inc.
seq 5 permit 1.1.1.0/24
remark 10 Deny rest of the traffic
seq 10 Deny any
Dell(conf-std-nacl)#

Related Commands
resequence access-list — Re-assigns sequence numbers to entries of an existing access-list.
**resequence access-list**

Re-assign sequence numbers to entries of an existing access-list.

**Syntax**

```
resequence access-list {ipv4 | mac} {access-list-name StartingSeqNum Step-to-Increment}
```

**Parameters**

- **ipv4 | mac**
  - Enter the keyword `ipv4` or `mac` to identify the access list type to resequence.
- **access-list-name**
  - Enter the name of a configured IP access list.
- **StartingSeqNum**
  - Enter the starting sequence number to resequence. The range is from 0 to 4294967290.
- **Step-to-Increment**
  - Enter the step to increment the sequence number. The range is from 1 to 4294967290.

**Defaults**

none

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

When you have exhausted all the sequence numbers, this feature permits re-assigning a new sequence number to entries of an existing access-list.

**Related Commands**

- `resequence prefix-list ipv4` — resequences a prefix list.

---

**resequence prefix-list ipv4**

Re-assign sequence numbers to entries of an existing prefix list.

**Syntax**

```
resequence prefix-list ipv4 {prefix-list-name StartingSeqNum Step-to-Increment}
```

**Parameters**

- **prefix-list-name**
  - Enter the name of the configured prefix list, up to 140 characters long.
- **StartingSeqNum**
  - Enter the starting sequence number to resequence. The range is from 0 to 65535.
- **Step-to-Increment**
  - Enter the step to increment the sequence number. The range is from 1 to 65535.
Defaults

Command Modes

• EXEC
• EXEC Privilege

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

When you have exhausted all the sequence numbers, this feature permits reassigning a new sequence number to entries of an existing prefix list.

Related Commands

seq — Assigns a sequence number to a deny or permit filter in an IP access list while creating the filter.

show config

Display the current ACL configuration.

Syntax

show config

Command Modes

• CONFIGURATION-IP ACCESS-LIST-STANDARD
• CONFIGURATION-IP ACCESS-LIST-EXTENDED
• CONFIGURATION-MAC ACCESS LIST-STANDARD
• CONFIGURATION-MAC ACCESS LIST-EXTENDED

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Example

Dell(config-ext-nacl)#show conf
!
ip access-list extended patches
Dell(config-ext-nacl)#

Common IP ACL Commands

The following commands are available within both IP ACL modes (Standard and Extended) and do not have mode-specific options. When an ACL is created without a rule and then is applied to an interface, ACL behavior reflects an implicit permit.

The MXL 10/40GbE Switch IO Module platform supports both Ingress and Egress IP ACLs.

NOTE: Also refer to the Commands Common to all ACL Types section.
**access-class**

Apply a standard ACL to a terminal line.

**Syntax**

```
access-class access-list-name
```

**Parameters**

- **access-list-name**
  
  Enter the name of a configured Standard ACL, up to 140 characters.

**Defaults**

Not configured.

**Command Modes**

LINE

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

---

**clear counters ip access-group**

Erase all counters maintained for access lists.

**Syntax**

```
clear counters ip access-group [access-list-name]
```

**Parameters**

- **access-list-name**
  
  (OPTIONAL) Enter the name of a configured access-list, up to 140 characters.

**Command Modes**

EXEC Privilege

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

---

**ip access-group**

Assign an IP access list (IP ACL) to an interface.

**Syntax**

```
ip access-group access-list-name (in | out) [implicit-permit] [vlan vlan-id]
```

**Parameters**

- **access-list-name**
  
  Enter the name of a configured access list, up to 140 characters.

- **in**
  
  Enter the keyword **in** to apply the ACL to incoming traffic.

- **out**
  
  Enter the keyword **out** to apply the ACL to outgoing traffic.

- **implicit-permit**
  
  (OPTIONAL) Enter the keyword **implicit-permit** to change the default action of the ACL from implicit-deny to implicit-allow.
**implicit-permit** (that is, if the traffic does not match the filters in the ACL, the traffic is permitted instead of dropped).

```plaintext
vlan vlan-id
```

(Optional) Enter the keyword `vlan` then the ID numbers of the VLANs.

**Defaults**

Not enabled.

**Command Modes**

`INTERFACE`

**Command History**

Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

You can assign one ACL (standard or extended ACL) to an interface.

**NOTE:** This command is not supported on the MXL Switch Loopback interfaces.

When you apply an ACL that filters IGMP traffic, all IGMP traffic is redirected to the CPUs and soft-forwarded, if necessary, in the following scenarios:

- on a Layer 2 interface — if a Layer 3 ACL is applied to the interface
- on a Layer 3 port or on a Layer 2/Layer 3 port

**Related Commands**

- `ip access-list standard` — configures a standard ACL.
- `ip access-list extended` — configures an extended ACL.

### show ip access-lists

Display all of the IP ACLs configured in the system, whether or not they are applied to an interface, and the count of matches/mismatches against each ACL entry displayed.

**Syntax**

```
show ip access-lists [access-list-name] [interface interface] [in]
```

**Parameters**

- `access-list-name`
  - Enter the name of a configured MAC ACL, up to 140 characters.
- `interface`
  - Enter the keyword `interface` then the one of the following keywords and slot/port or number information:
    - For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
    - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
    - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
Identify whether ACL is applied on the ingress or egress side.

**Command Modes**

EXEC Privilege

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

### show ip accounting access-list

Display the IP access-lists created on the switch and the sequence of filters.

**Syntax**

```
show ip accounting {access-list access-list-name | cam_count} interface interface
```

**Parameters**

- `access-list-name`
  - Enter the name of the ACL to be displayed.
- `cam_count`
  - List the count of the CAM rules for this ACL.
- `interface`
  - Enter the keyword `interface` then the one of the following keywords and slot/port or number information:
    - For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
    - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
    - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

- `show ip accounting access-lists`
  - **Field**
    - "Extended IP..."
      - Displays the name of the IP ACL.
    - "seq 5..."
      - Displays the filter. If the keywords `count` or `byte` were configured in the filter, the number of packets or bytes the filter processes is displayed at the end of the line.
    - "order 4"
      - Displays the QoS order of priority for the ACL entry.
Example

Dell#show ip accounting access FILTER1 interface gig 1/6
Extended IP access list FILTER1
seq 5 deny ip any 191.1.0.0 /16 count (0x00 packets)
seq 10 deny ip any 191.2.0.0 /16 order 4
seq 15 deny ip any 191.3.0.0 /16
seq 20 deny ip any 191.4.0.0 /16
seq 25 deny ip any 191.5.0.0 /16

Standard IP ACL Commands

When you create an ACL without any rule and then apply it to an interface, the ACL behavior reflects an implicit permit.

The MXL 10/40GbE Switch IO Module platform supports both Ingress and Egress IP ACLs.

NOTE: Also refer to the Commands Common to all ACL Types and Common IP ACL Commands sections.

deny

To drop packets with a certain IP address, configure a filter.

Syntax
deny {source [mask] | any | host ip-address} [count [byte]]
[dscp value] [order] [fragments]

To remove this filter, you have two choices:

- Use the no seq sequence-number command if you know the filter’s sequence number.
- Use the no deny {source [mask] | any | host ip-address} command.

Parameters

source Enter the IP address in dotted decimal format of the network from which the packet was sent.

mask (OPTIONAL) Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous (discontiguous).

any Enter the keyword any to specify that all routes are subject to the filter.

host ip-address Enter the keyword host and then enter the IP address to specify a host IP address only.

count (OPTIONAL) Enter the keyword count to count packets processed by the filter.

byte (OPTIONAL) Enter the keyword byte to count bytes processed by the filter.
(OPTIONAL) Enter the keyword dscp to match to the IP DSCP values.

Order

(OPTIONAL) Enter the keyword order to specify the QoS order of priority for the ACL entry. The range is 0 to 254 (where 0 is the highest priority and 254 is the lowest; lower order numbers have a higher priority). The default, if you do not use the order keyword, the ACLs have the lowest order by default (255).

Fragments

Enter the keyword fragments to use ACLs to control packet fragments.

Default: Not configured.

Command Modes

CONFIGURATION-IP ACCESS-LIST-STANDARD

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The order option is relevant in the context of the Policy QoS feature only. For more information, refer to the Quality of Service chapter of the Dell Operating System Configuration Guide.

In the MXL switch, you can configure either count (packets) or count (bytes). However, for an ACL with multiple rules, you can configure some ACLs with count (packets) and others as count (bytes) at any given time.

Related Commands

ip access-list standard—configures a standard ACL.

permit —configures a permit filter.

**ip access-list standard**

Create a standard IP access list (IP ACL) to filter based on IP address.

Syntax

```
ip access-list standard access-list-name
```

Parameters

access-list-name

Enter a string up to 140 characters long as the ACL name.

Defaults

All IP access lists contain an implicit deny any, that is, if no match occurs, the packet is dropped.

Command Modes

CONFIGURATION
permit

To permit packets from a specific source IP address to leave the switch, configure a filter.

Syntax

```
permit {source [mask] | any | host ip-address}[count [byte]]
[dscp value] [order]
```

To remove this filter, you have two choices:

- Use the `no seq sequence-number` command if you know the filter's sequence number.
- Use the `no permit {source [mask] | any | host ip-address}` command.

Parameters

- **source**
  Enter the IP address in dotted decimal format of the network from which the packet was sent.
- **mask**
  (OPTIONAL) Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.
- **any**
  Enter the keyword any to specify that all routes are subject to the filter.
- **host ip-address**
  Enter the keyword host then the IP address to specify a host IP address or hostname.
- **count**
  (OPTIONAL) Enter the keyword count to count packets processed by the filter.
- **dscp**
  (OPTIONAL) Enter the keyword dscp to match to the IP DSCP values.
- **byte**
  (OPTIONAL) Enter the keyword byte to count bytes processed by the filter.
order

(OPTIONAL) Enter the keyword order to specify the QoS priority for the ACL entry. The range is from 0 to 254 (where 0 is the highest priority and 254 is the lowest; lower order numbers have a higher priority). The default, if you do not use the order keyword, the ACLs have the lowest order by default (255).

Defaults
Not configured.

Command Modes
CONFIGURATION-IP ACCESS-LIST-STANDARD

Command History
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
The order option is relevant in the context of the Policy QoS feature only. For more information, refer to the “Quality of Service” chapter of the Dell Operating System Configuration Guide.

In the MXL switch, you can configure either count (packets) or count (bytes). However, for an ACL with multiple rules, you can configure some ACLs with count (packets) and others as count (bytes) at any given time.

Related Commands
deny — Assigns a IP ACL filter to deny IP packets.

ip access-list standard — creates a standard ACL.

seq

Assign a sequence number to a deny or permit filter in an extended IP access list while creating the filter.

Syntax
seq sequence-number {deny | permit} {source [mask] | any | host ip-address} {count [byte] [dscp value] [order] [fragments]

Parameters

sequence-number Enter a number from 0 to 4294967290. The range is from 0 to 65534.

deny Enter the keyword deny to configure a filter to drop packets meeting this condition.

permit Enter the keyword permit to configure a filter to forward packets meeting this criteria.

source Enter an IP address in dotted decimal format of the network from which the packet was received.

mask (OPTIONAL) Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.
any Enter the keyword any to specify that all routes are subject to the filter.

count (OPTIONAL) Enter the keyword count to count packets the filter processes.

byte (OPTIONAL) Enter the keyword byte to count bytes the filter processes.

dscp (OPTIONAL) Enter the keyword dscp to match to the IP DCSCP values.

order (OPTIONAL) Enter the keyword order to specify the QoS order for the ACL entry. The range is from 0 to 254 (where 0 is the highest priority and 254 is the lowest; lower-order numbers have a higher priority). If you do not use the keyword order, the ACLs have the lowest order by default (255).

fragments Enter the keyword fragments to use ACLs to control packet fragments.

Defaults Not configured

Command Modes CONFIGURATION-IP ACCESS-LIST-STANDARD

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information The order option is relevant in the context of the Policy QoS feature only. The following applies:

• The seq sequence-number command is applicable only in an ACL group.
• The order option works across ACL groups that have been applied on an interface via the QoS policy framework.
• The order option takes precedence over seq sequence-number.
• If sequence-number is not configured, the rules with the same order value are ordered according to their configuration order.
• If sequence-number is configured, the sequence-number is used as a tie breaker for rules with the same order.

Related Commands
deny — configures a filter to drop packets.

permit — configures a filter to forward packets.

seq — Assigns a sequence number to a deny or permit filter in an IP access list while creating the filter.
Extended IP ACL Commands

When an ACL is created without any rule and then applied to an interface, ACL behavior reflects an implicit permit.

The following commands configure extended IP ACLs, which in addition to the IP address, also examine the packet's protocol type.

The MXL 10/40GbE Switch IO Module platform supports both Ingress and Egress IP ACLs.

NOTE: Also refer to the Commands Common to all ACL Types and Common IP ACL Commands sections.

deny

Configure a filter that drops IP packets meeting the filter criteria.

Syntax

```
deny {ip | ip-protocol-number} {source mask | any | host ip-address} {destination mask | any | host ip-address} [count [byte]] [dscp value] [order] [fragments]
```

To remove this filter, you have two choices:

- Use the `no seq sequence-number` command if you know the filter's sequence number.
- Use the `no deny {ip | ip-protocol-number} {source mask | any | host ip-address} {destination mask | any | host ip-address}` command.

Parameters

- **ip**: Enter the keyword `ip` to configure a generic IP access list. The keyword `ip` specifies that the access list denies all IP protocols.
- **ip-protocol-number**: Enter a number from 0 to 255 to deny based on the protocol identified in the IP protocol header.
- **source**: Enter the IP address of the network or host from which packets were sent.
- **mask**: Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or noncontiguous.
- **any**: Enter the keyword `any` to specify that all routes are subject to the filter.
- **host ip-address**: Enter the keyword `host` then the IP address to specify a host IP address.
- **destination**: Enter the IP address of the network or host to which the packets are sent.
**deny icmp**

To drop all or specific internet control message protocol (ICMP) messages, configure a filter.

**Syntax**

```
deny icmp {source mask | any | host ip-address} {destination mask | any | host ip-address} [dscp] [message-type] [count [byte]] [order] [fragments]
```

To remove this filter, you have two choices:
- Use the `no seq sequence-number` command if you know the filter’s sequence number.
- Use the `no deny icmp {source mask | any | host ip-address} {destination mask | any | host ip-address}` command.

**Parameters**

- **source** Enter the IP address of the network or host from which the packets were sent.
- **mask** Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.
- **any** Enter the keyword `any` to specify that all routes are subject to the filter.
- **host ip-address** Enter the keyword `host` then the IP address to specify a host IP address.
- **destination** Enter the IP address of the network or host to which the packets are sent.
- **dscp** Enter this keyword `dscp` to deny a packet based on the DSCP value. The range is from 0 to 63.
- **message-type** (OPTIONAL) Enter an ICMP message type, either with the type (and code, if necessary) numbers or with the name of the message type. The range is from 0 to 255 for ICMP type and from 0 to 255 for ICMP code.
- **count** (OPTIONAL) Enter the keyword `count` to count packets processed by the filter.
- **byte** (OPTIONAL) Enter the keyword `byte` to count bytes processed by the filter.
- **order** (OPTIONAL) Enter the keyword `order` to specify the QoS priority for the ACL entry. The range is from 0 to 254 (where 0 is the highest priority and 254 is the lowest; lower order numbers have a higher priority) If you did not use the keyword `order`, the ACLs have the lowest order by default (255).
- **fragments** Enter the keyword `fragments` to use ACLs to control packet fragments.

**Defaults** Not configured.

**Command Modes** CONFIGURATION-IP ACCESS-LIST-EXTENDED

**Command History**

- **Version 8.3.16.1** Introduced on the MXL 10/40GbE Switch IO Module.
The order option is relevant in the context of the Policy QoS feature only. For more information, refer to the Quality of Service chapter of the Dell Operating System Configuration Guide.

deny tcp

Configure a filter that drops transmission control protocol (TCP) packets meeting the filter criteria.

Syntax

deny tcp (source mask | any | host ip-address) [bit] [operator port [port]] (destination mask | any | host ip-address) [dscp] [bit] [operator port [port]] [count [byte] [order] [fragments]]

To remove this filter, you have two choices:

- Use the no seq sequence-number command if you know the filter's sequence number.
- Use the no deny tcp {source mask | any | host ip-address} {destination mask | any | host ip-address} command.

Parameters

source
Enter the IP address of the network or host from which the packets are sent.

mask
Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.

any
Enter the keyword any to specify that all routes are subject to the filter.

host ip-address
Enter the keyword host then the IP address to specify a host IP address.

dscp
Enter this keyword dscp to deny a packet based on the DSCP value. The range is from 0 to 63.

bit
Enter a flag or combination of bits:

- ack: acknowledgement field
- fin: finish (no more data from the user)
- psh: push function
- rst: reset the connection
- syn: synchronize sequence numbers
- urg: urgent field

operator
(Optional) Enter one of the following logical operand:

- eq = equal to
- neq = not equal to
- gt = greater than
- lt = less than
- range = inclusive range of ports (you must specify two ports for the port command)

port port
Enter the application layer port number. Enter two port numbers if using the range logical operand. The range is from 0 to 65535.
The following list includes some common TCP port numbers:

- 23 = Telnet
- 20 and 21 = FTP
- 25 = SMTP
- 169 = SNMP

destination

Enter the IP address of the network or host to which the packets are sent.

mask

Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.

count

(OPTIONAL) Enter the keyword count to count packets the filter processes.

byte

(OPTIONAL) Enter the keyword byte to count bytes the filter processes.

order

(OPTIONAL) Enter the keyword order to specify the QoS priority for the ACL entry. The range is from 0 to 254 (where 0 is the highest priority and 254 is the lowest; lower-order numbers have a higher priority) If you did not use the keyword order, the ACLs have the lowest order by default (255).

fragments

Enter the keyword fragments to use ACLs to control packet fragments.

Defaults

Not configured.

Command Modes

CONFIGURATION-IP ACCESS-LIST-EXTENDED

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The order option is relevant in the context of the Policy QoS feature only. For more information, refer to the Quality of Service chapter of the Dell Networking OS Configuration Guide.

In the MXL switch, you can configure either count (packets) or count (bytes). However, for an ACL with multiple rules, you can configure some ACLs with count (packets) and others as count (bytes) at any given time.

Most ACL rules require one entry in the CAM. However, rules with TCP and UDP port operators (for example, gt, lt, or range) may require more than one entry. The range of ports is configured in the CAM based on bit mask boundaries; the space required depends on exactly what ports are included in the range.
An ACL rule with a TCP port range of 4000–8000 uses eight entries in the CAM.

Related Commands

deny — assigns a filter to deny IP traffic.
deny udp — assigns a filter to deny UDP traffic.

deny udp

To drop user datagram protocol (UDP) packets meeting the filter criteria, configure a filter.

Syntax

deny udp {source mask | any | host ip-address} [operator port [port]] {destination mask | any | host ip-address} [dscp] [operator port [port]] [count [byte]] [order] [fragments]

To remove this filter, you have two choices:

- Use the no seq sequence-number command if you know the filter's sequence number.
- Use the no deny udp {source mask | any | host ip-address} {destination mask | any | host ip-address} command.

Parameters

source

Enter the IP address of the network or host from which the packets were sent.

mask

Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.

any

Enter the keyword any to specify that all routes are subject to the filter.
**host ip-address** Enter the keyword **host** then the IP address to specify a host IP address.

**dscp** Enter this keyword **dscp** to deny a packet based on the DSCP value. The range is from 0 to 63.

**operator** (OPTIONAL) Enter one of the following logical operand:

- **eq** = equal to
- **neq** = not equal to
- **gt** = greater than
- **lt** = less than
- **range** = inclusive range of ports (you must specify two ports for the **port** command)

**port port** Enter the application layer port number. Enter two port numbers if using the range logical operand. The range is from 0 to 65535.

**destination** Enter the IP address of the network or host to which the packets are sent.

**mask** Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.

**count** (OPTIONAL) Enter the keyword **count** to count packets processed by the filter.

**byte** (OPTIONAL) Enter the keyword **byte** to count bytes processed by the filter.

**order** (OPTIONAL) Enter the keyword **order** to specify the QoS priority for the ACL entry. The range is from 0 to 254 (where 0 is the highest priority and 254 is the lowest; lower-order numbers have a higher priority) If you did not use the keyword **order**, the ACLs have the lowest order by default (255).

**fragments** Enter the keyword **fragments** to use ACLs to control packet fragments.

**Defaults** Not configured.

**Command Modes** CONFIGURATION-IP ACCESS-LIST-EXTENDED

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information** The **order** option is relevant in the context of the Policy QoS feature only. For more information, refer to the Quality of Service chapter of the Dell Networking OS Configuration Guide.
In the MXL switch, you can configure either count (packets) or count (bytes). However, for an ACL with multiple rules, you can configure some ACLs with count (packets) and others as count (bytes) at any given time.

Most ACL rules require one entry in the CAM. However, rules with TCP and UDP port operators (for example, gt, lt or range) may require more than one entry. The range of ports is configured in the CAM based on bit mask boundaries; the space required depends on exactly what ports are included in the range.

Example

An ACL rule with a TCP port range of 4000–8000 uses eight entries in the CAM.

Related Commands

deny — assigns a filter to deny IP traffic.
deny tcp — assigns a filter to deny TCP traffic.

ip access-list extended

Name (or select) an extended IP access list (IP ACL) based on IP addresses or protocols.

Syntax

```
ip access-list extended access-list-name
```

To delete an access list, use the no ip access-list extended access-list-name command.

Parameters

- `access-list-name` Enter a string up to 140 characters long as the access list name.

Defaults

All access lists contain an implicit `deny any`; that is, if no match occurs, the packet is dropped.
permit

To pass IP packets meeting the filter criteria, configure a filter.

**Syntax**

```
permit {ip | ip-protocol-number} {source mask | any | host ip-address} {destination mask | any | host ip-address} [count [bytes]] [dscp value] [order] [fragments]
```

To remove this filter, you have two choices:

- Use the `no seq sequence-number` command if you know the filter’s sequence number.
- Use the `no deny {source mask | any | host ip-address} {destination mask | any | host ip-address}` command.

**Parameters**

- **ip**
  - Enter the keyword `ip` to configure a generic IP access list. The keyword `ip` specifies that the access list will permit all IP protocols.

- **ip-protocol-number**
  - Enter a number from 0 to 255 to permit based on the protocol identified in the IP protocol header. The range is from 0 to 128.

- **source**
  - Enter the IP address in dotted decimal format of the network from which the packet was sent.

- **mask**
  - (OPTIONAL) Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.

- **any**
  - Enter the keyword `any` to specify that all routes are subject to the filter.

- **host ip-address**
  - Enter the keyword `host` then the IP address to specify a host IP address or hostname.
**permit icmp**

Configure a filter to allow all or specific ICMP messages.

**Syntax**

```
permit icmp [source mask | any | host ip-address] [destination mask | any | host ip-address] [dscp] [message-type] [count [byte]] [order] [fragments]
```

**destination**

Enter the IP address of the network or host to which the packets are sent.

**count**

(OPTIONAL) Enter the keyword count to count packets processed by the filter.

**bytes**

(OPTIONAL) Enter the keyword bytes to count bytes processed by the filter.

**dscp**

(OPTIONAL) Enter the keyword dscp to match to the IP DCSCP values.

**order**

(OPTIONAL) Enter the keyword order to specify the QoS priority for the ACL entry. The range is from 0 to 254 (where 0 is the highest priority and 254 is the lowest; lower-order numbers have a higher priority). If you do not use the keyword order, the ACLs have the lowest order by default (255).

**fragments**

Enter the keyword fragments to use ACLs to control packet fragments.

**Defaults**

Not configured.

**Command Modes**

CONFIGURATION-IP ACCESS-LIST-EXTENDED

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

The order option is relevant in the context of the Policy QoS feature only. For more information, refer to the "Quality of Service" chapter of the Dell Operating System Configuration Guide.

In the MXL switch, you can configure either count (packets) or count (bytes). However, for an ACL with multiple rules, you can configure some ACLs with count (packets) and others as count (bytes) at any given time.

**Related Commands**

- ip access-list extended — creates an extended ACL.
- permit tcp — assigns a permit filter for TCP packets.
- permit udp — assigns a permit filter for UDP packets.
To remove this filter, you have two choices:

- Use the `no seq sequence-number` command if you know the filter's sequence number.
- Use the `no permit icmp {source mask | any | host ip-address} {destination mask | any | host ip-address}` command.

### Parameters

**source**
Enter the IP address of the network or host from which the packets were sent.

**mask**
Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or noncontiguous.

**any**
Enter the keyword `any` to match and drop specific Ethernet traffic on the interface.

**host ip-address**
Enter the keyword `host` and then enter the IP address to specify a host IP address.

**destination**
Enter the IP address of the network or host to which the packets are sent.

**dscp**
Enter the keyword `dscp` to deny a packet based on the DSCP value. The range is 0 to 63.

**message-type**
(Optional) Enter an ICMP message type, either with the type (and code, if necessary) numbers or with the name of the message type. The range is 0 to 255 for ICMP type and 0 to 255 for ICMP code.

**count**
(Optional) Enter the keyword `count` to count packets the filter processes.

**byte**
(Optional) Enter the keyword `byte` to count bytes the filter processes.

**order**
(Optional) Enter the keyword `order` to specify the QoS priority for the ACL entry. The range is 0 to 254 (where 0 is the highest priority and 254 is the lowest; lower-order numbers have a higher priority). If you do not use the keyword `order`, the ACLs have the lowest order by default (255).

**fragments**
Enter the keyword `fragments` to use ACLs to control packet fragments.

### Defaults
Not configured.

### Command Modes

**CONFIGURATION-IP ACCESS-LIST-STANDARD**

### Command History

Version 8.3.16.1
Introduced on the MXL 10/40GbE Switch IO Module.
Usage Information

The `order` option is relevant in the context of the Policy QoS feature only. For more information, refer to the Quality of Service chapter of the Dell Operating System Configuration Guide.

permit tcp

To pass TCP packets meeting the filter criteria, configure a filter.

Syntax

```
permit tcp {source mask | any | host ip-address} [bit] [operator port [port]] {destination mask | any | host ip-address} [bit] [dscp] [operator port [port]] [count [byte]] [order] [fragments]
```

To remove this filter, you have two choices:

- Use the `no seq sequence-number` command if you know the filter’s sequence number.
- Use the `no permit tcp {source mask | any | host ip-address} {destination mask | any | host ip-address}` command.

Parameters

- **source**
  - Enter the IP address of the network or host from which the packets were sent.

- **mask**
  - Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.

- **any**
  - Enter the keyword `any` to specify that all routes are subject to the filter.

- **host ip-address**
  - Enter the keyword `host` then the IP address to specify a host IP address.

- **bit**
  - Enter a flag or combination of bits:
    - `ack`: acknowledgement field
    - `fin`: finish (no more data from the user)
    - `psh`: push function
    - `rst`: reset the connection
    - `syn`: synchronize sequence numbers
    - `urg`: urgent field

- **dscp**
  - Enter the keyword `dscp` to deny a packet based on the DSCP value. The range is from 0 to 63.

- **operator**
  - (OPTIONAL) Enter one of the following logical operand:
    - `eq` = equal to
    - `neq` = not equal to
- `gt` = greater than
- `lt` = less than
- `range` = inclusive range of ports (you must specify two ports for the port parameter)

**port port**
Enter the application layer port number. Enter two port numbers if you are using the range logical operand. The range is from 0 to 65535. The following list includes some common TCP port numbers:
- `23` = Telnet
- `20` and `21` = FTP
- `25` = SMTP
- `169` = SNMP

**destination**
Enter the IP address of the network or host to which the packets are sent.

**mask**
Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.

**count**
(Optional) Enter the keyword `count` to count packets the filter processes.

**byte**
(Optional) Enter the keyword `byte` to count bytes the filter processes.

**order**
(Optional) Enter the keyword `order` to specify the QoS priority for the ACL entry. The range is from 0 to 254 (where 0 is the highest priority and 254 is the lowest; lower-order numbers have a higher priority). If you do not use the keyword `order`, the ACLs have the lowest order by default (255).

**fragments**
Enter the keyword `fragments` to use ACLs to control packet fragments.

**Defaults**
Not configured.

**Command Modes**
CONFIGURATION-IP ACCESS-LIST-EXTENDED

**Command History**
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**
The `order` option is relevant in the context of the Policy QoS feature only. For more information, refer to the “Quality of Service” chapter of the *Dell Networking OS Configuration Guide*.

The MXL 10/40GbE System IO Module cannot count both packets and bytes, so when you enter the count byte options, only bytes are incremented.
Most ACL rules require one entry in the CAM. However, rules with TCP and UDP port operators (for example, gt, lt, or range) may require more than one entry. The range of ports is configured in the CAM based on bit mask boundaries; the space required depends on exactly what ports are included in the range.

**Example**

An ACL rule with a TCP port range of 4000–8000 uses eight entries in the CAM.

**Related Commands**

- `ip access-list extended` — creates an extended ACL.
- `permit` — assigns a permit filter for IP packets.
- `permit udp` — assigns a permit filter for UDP packets.

**permit udp**

To pass UDP packets meeting the filter criteria, configure a filter.

**Syntax**

`permit udp {source mask | any | host ip-address} [operator port [port]] {destination mask | any | host ip-address} [dscp] [operator port [port]] [count [byte]] [order] [fragments]`

To remove this filter, you have two choices:

- Use the `no seq sequence-number` command if you know the filter's sequence number.
- Use the `no permit udp {source mask | any | host ip-address} {destination mask | any | host ip-address} command.`

**Parameters**

- `source` Enter the IP address of the network or host from which the packets were sent.
mask Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.

any Enter the keyword any to specify that all routes are subject to the filter.

host ip-address Enter the keyword host and then enter the IP address to specify a host IP address.

dscp Enter the keyword dscp to deny a packet based on the DSCP value. The range is from 0 to 63.

operator (OPTIONAL) Enter one of the following logical operand:

- `eq` = equal to
- `neq` = not equal to
- `gt` = greater than
- `lt` = less than
- `range` = inclusive range of ports (you must specify two ports for the `port` parameter)

port port Enter the application layer port number. Enter two port numbers if you are using the `range` logical operand. The range is 0 to 65535.

destination Enter the IP address of the network or host to which the packets are sent.

count (OPTIONAL) Enter the keyword count to count packets processed by the filter.

byte (OPTIONAL) Enter the keyword byte to count bytes processed by the filter.

order (OPTIONAL) Enter the keyword order to specify the QoS priority for the ACL entry. The range is from 0 to 254 (where 0 is the highest priority and 254 is the lowest; lower-order numbers have a higher priority). If you do not use the keyword order, the ACLs have the lowest order by default (255).

fragments Enter the keyword fragments to use ACLs to control packet fragments.

Defaults Not configured.

Command Modes CONFIGURATION-IP ACCESS-LIST-EXTENDED

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.
Usage Information

The order option is relevant in the context of the Policy QoS feature only. For more information, refer to the "Quality of Service" chapter of the Dell Operating System Configuration Guide.

In the MXL switch, you can configure either count (packets) or count (bytes). However, for an ACL with multiple rules, you can configure some ACLs with count (packets) and others as count (bytes) at any given time.

Most ACL rules require one entry in the CAM. However, rules with TCP and UDP port operators (for example, gt, lt, or range) may require more than one entry. The range of ports is configured in the CAM based on bit mask boundaries; the space required depends on exactly what ports are included in the range.

Example

An ACL rule with a TCP port range of 4000–8000 uses eight entries in the CAM.

</tbody>
</table>
- **169 = SNMP**

**destination**

Enter the IP address of the network or host to which the packets are sent.

**message-type**

(Optional) Enter an ICMP message type, either with the type (and code, if necessary) numbers or with the name of the message type. The range is from 0 to 255 for ICMP type and from 0 to 255 for ICMP code.

**count**

(Optional) Enter the keyword `count` to count packets the filter processes.

**byte**

(Optional) Enter the keyword `byte` to count bytes the filter processes.

**dscp**

(Optional) Enter the keyword `dscp` to match to the IP DCSCP values.

**order**

(Optional) Enter the keyword `order` to specify the QoS order for the ACL entry. The range is from 0 to 254 (where 0 is the highest priority and 254 is the lowest; lower-order numbers have a higher priority). If you do not use the keyword `order`, the ACLs have the lowest order by default (255).

**fragments**

Enter the keyword `fragments` to use ACLs to control packet fragments.

**Defaults**

Not configured

**Command Modes**

CONFIGURATION-IP ACCESS-LIST-EXTENDED

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

The `order` option is relevant in the context of the Policy QoS feature only. The following applies:

- The `seq sequence-number` command is applicable only in an ACL group.
- The `order` option works across ACL groups that have been applied on an interface via the QoS policy framework.
- The `order` option takes precedence over `seq sequence-number`.
- If `sequence-number` is not configured, the rules with the same order value are ordered according to their configuration order.
- If `sequence-number` is configured, the sequence-number is used as a tie breaker for rules with the same order.

If you configure the `sequence-number`, the `sequence-number` is used as a tie breaker for rules with the same order.
Related Commands

deny — configures a filter to drop packets.
permit — configures a filter to forward packets.

Common MAC Access List Commands

The following commands are available within both MAC ACL modes (Standard and Extended) and do not have mode-specific options. These commands allow you to clear, display, and assign MAC ACL configurations.

The MXL 10/40GbE Switch IO Module platform supports both Ingress and Egress MAC ACLs.

clear counters mac access-group

Clear counters for all or a specific MAC ACL.

Syntax

clear counters mac access-group [mac-list-name]

Parameters

mac-list-name (OPTIONAL) Enter the name of a configured MAC access list.

Command Modes

EXEC Privilege

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

mac access-group

Apply a MAC ACL to traffic entering or exiting an interface.

Syntax

mac access-group access-list-name {in [vlan vlan-range] | out}

Parameters

access-list-name Enter the name of a configured MAC access list, up to 140 characters.

vlan vlan-range (OPTIONAL) Enter the keyword vlan and then enter a range of VLANs. The range is from 1 to 4094 (you can use IDs 1 to 4094).

NOTE: This option is available only with the keyword in option.
Enter the keyword **in** to configure the ACL to filter incoming traffic.

Enter the keyword **out** to configure the ACL to filter outgoing traffic.

**Defaults**

none

**Command Modes**

INTERFACE

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

You can assign one ACL (standard or extended) to an interface.

**Related Commands**

- `mac access-list standard` — configures a standard MAC ACL.
- `mac access-list extended` — configures an extended MAC ACL.

### show mac access-lists

Display all of the Layer 2 ACLs configured in the system, whether or not they are applied to an interface, and the count of matches/mismatches against each ACL entry displayed.

**Syntax**

```
show mac access-lists [access-list-name] [interface interface] [in | out]
```

**Parameters**

- `access-list-name` Enter the name of a configured MAC ACL, up to 140 characters.
- `interface interface` Enter the keyword `interface` then the one of the following keywords and slot/port or number information:
  - For a Port Channel interface, enter the keywords `port-channel` and then enter a number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` and then enter the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` and then enter the slot/port information.
- `in | out` Identify whether ACL is applied on ingress or egress side.

**Command Modes**

EXEC Privilege
show mac accounting access-list

Display MAC access list configurations and counters (if configured).

Syntax

show mac accounting access-list access-list-name interface
interface in | out

Parameters

access-list-name
Enter the name of a configured MAC ACL, up to 140
characters.

interface
interface
Enter the keyword interface then the one of the following
keywords and slot/port or number information:

• For a Port Channel interface, enter the keywords port-
channel and then enter a number. The range is from 1
to 128.

• For a 10-Gigabit Ethernet interface, enter the keyword
TenGigabitEthernet and then enter the slot/port
information.

• For a 40-Gigabit Ethernet interface, enter the keyword
fortyGigE and then enter the slot/port information.

in | out
Identify whether ACL is applied on ingress or egress side.

Command Modes

• EXEC
• EXEC Privilege

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The ACL hit counters in this command increment the counters for each matching
rule, not just the first matching rule.

Example

Dell#show mac accounting access-list mac-ext interface po 1
Extended mac access-list mac-ext on GigabitEthernet 0/11
    seq 5 permit host 00:00:00:00:00:11 host 00:00:00:00:00:19
    count (393794576 packets)
    seq 10 deny host 00:00:00:00:00:00:00:21 host 00:00:00:00:00:00:00:29
    count (89076777 packets)
    seq 15 deny host 00:00:00:00:00:00:00:31 host 00:00:00:00:00:00:00:39
    count (0 packets)
    seq 20 deny host 00:00:00:00:00:00:00:41 host 00:00:00:00:00:00:00:49
    count (0 packets)
    seq 25 permit any any count (0 packets)
Extended mac access-list mac-ext on GigabitEthernet 0/12
    seq 5 permit host 00:00:00:00:00:11 host 00:00:00:00:00:19
    count (57589834 packets)
    seq 10 deny host 00:00:00:00:00:00:00:21 host 00:00:00:00:00:00:00:29
    count (393143077 packets)

Standard MAC ACL Commands

When you create an access control list without any rule and then apply it to an interface, the ACL behavior reflects implicit permit. These commands configure standard MAC ACLs.

The MXL 10/40GbE Switch IO Module platform supports both Ingress and Egress MAC ACLs.

NOTE: For more information, also refer to the Commands Common to all ACL Types and Common MAC Access List Commands sections.

deny

To drop packets with a the MAC address specified, configure a filter.

Syntax
deny {any | mac-source-address [mac-source-address-mask]} [count [byte]]

To remove this filter, you have two choices:

• Use the no seq sequence-number command if you know the filter's sequence number.
• Use the no deny {any | mac-source-address mac-source-address-mask} command.

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>any</td>
<td>Enter the keyword any to specify that all routes are subject to the filter.</td>
</tr>
<tr>
<td>mac-source-address-mask</td>
<td>(OPTIONAL) Specify which bits in the MAC address must match. If no mask is specified, a mask of 00:00:00:00:00:00 is applied (in other words, the filter allows only MAC addresses that match).</td>
</tr>
<tr>
<td>count</td>
<td>(OPTIONAL) Enter the keyword count to count packets processed by the filter.</td>
</tr>
<tr>
<td>byte</td>
<td>(OPTIONAL) Enter the keyword byte to count bytes processed by the filter.</td>
</tr>
</tbody>
</table>
Defaults
Not enabled.

Command Modes
CONFIGURATION-MAC ACCESS LIST-STANDARD

Command History
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Related Commands
permit — configures a MAC address filter to pass packets.
seq — configures a MAC address filter with a specified sequence number.

mac access-list standard
To configure a standard MAC ACL, name a new or existing MAC access control list (MAC ACL) and enter MAC ACCESS LIST mode.

Syntax
mac access-list standard mac-list-name

Parameters
mac-list-name Enter a text string as the name of the standard MAC access list (140 character maximum).

Defaults
Not configured.

Command Modes
CONFIGURATION

Command History
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
The Dell operating system supports one ingress and one egress MAC ACL per interface.

The number of entries allowed per ACL is hardware-dependent. For detailed specification about entries allowed per ACL, refer to your switch documentation.

The MXL Switch supports both ingress and egress ACLs.

Example
Dell(conf)#mac-access-list access-list standard TestMAC
Dell(config-std-macl)#?
deny Specify packets to reject
description List description
ext Exit from access-list configuration mode
no Negate a command or set its defaults
permit Specify packets to forward
remark Specify access-list entry remark
seq Specify sequence numbers
show Show Standard ACL configuration
permit
To forward packets from a specific source MAC address, configure a filter.

Syntax

```
permit {any | mac-source-address [mac-source-address-mask]} [count [byte]]
```

To remove this filter, you have two choices:

- Use the `no seq sequence-number` command if you know the filter's sequence number.
- Use the `no permit {any | mac-source-address mac-source-address-mask}` command.

Parameters

- **any**
  - Enter the keyword `any` to forward all packets received with a MAC address.
- **mac-source-address**
- **mac-source-address-mask** (OPTIONAL)
  - Specify which bits in the MAC address must match. If no mask is specified, a mask of 00:00:00:00:00:00 is applied (in other words, the filter allows only MAC addresses that match).
- **count** (OPTIONAL)
  - Enter the keyword `count` to count packets processed by the filter.
- **byte** (OPTIONAL)
  - Enter the keyword `byte` to count bytes processed by the filter.

Defaults

Not configured.

Command Modes

`CONFIGURATION-MAC ACCESS LIST-STANDARD`

Command History

```
Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.
```

Related Commands

- **deny** — configures a MAC ACL filter to drop packets.
- **seq** — configure a MAC ACL filter with a specified sequence number.

seq
To a deny or permit filter in a MAC access list while creating the filter, assign a sequence number.

Syntax

```
seq sequence-number {deny | permit} {any | mac-source-address [mac-source-address-mask]} [count [byte]]
```

170
Parameters

- **sequence-number**: Enter a number from 0 to 65535.
- **deny**: Enter the keyword deny to configure a filter to drop packets meeting this condition.
- **permit**: Enter the keyword permit to configure a filter to forward packets meeting this criteria.
- **any**: Enter the keyword any to filter all packets.
- **mac-source-address**: Enter a MAC address in nn:nn:nn:nn:nn:nn format.
- **mac-source-address-mask** *(OPTIONAL)*: Specify which bits in the MAC address must match. If no mask is specified, a mask of 00:00:00:00:00:00 is applied (in other words, the filter allows only MAC addresses that match).
- **count** *(OPTIONAL)*: Enter the keyword count to count packets the filter processes.
- **byte** *(OPTIONAL)*: Enter the keyword byte to count bytes the filter processes.

Defaults

- Not configured

Command Modes

- CONFIGURATION-MAC ACCESS LIST-STANDARD

Command History

- **Version 8.3.16.1**: Introduced on the MXL 10/40GbE Switch IO Module.

Related Commands

- **deny** — configures a filter to drop packets.
- **permit** — configures a filter to forward packets.

Extended MAC ACL Commands

When an access-list is created without any rule and then applied to an interface, ACL behavior reflects implicit permit. The following commands configure Extended MAC ACLs.

The MXL 10/40GbE Switch IO Module platform supports both Ingress and Egress MAC ACLs.
deny

To drop packets that match the filter criteria, configure a filter.

Syntax

deny {any | host mac-address | mac-source-address mac-source-address-mask} {any | host mac-address | mac-destination-address mac-destination-address-mask} [ethertype-operator] [count [byte]]

To remove this filter, you have two choices:

- Use the no seq sequence-number command if you know the filter's sequence number.
- Use the no deny {any | host mac-address | mac-source-address mac-source-address-mask} {any | host mac-address | mac-destination-address mac-destination-address-mask} command.

Parameters

- **any**: Enter the keyword any to drop all packets.
- **host mac-address**: Enter the keyword host and then enter a MAC address to drop packets with that host address.
- **mac-source-address**: Enter a MAC address in nn:nn:nn:nn:nn:nn format.
- **mac-source-address-mask**: Specify which bits in the MAC address must match.
  
  The MAC ACL supports an inverse mask; therefore, a mask of ff:ff:ff:ff:ff:ff allows entries that do not match and a mask of 00:00:00:00:00:00 only allows entries that match exactly.
- **mac-destination-address**: Enter the destination MAC address and mask in nn:nn:nn:nn:nn:nn format.
- **mac-destination-address-mask**: Specify which bits in the MAC address must match.
  
  The MAC ACL supports an inverse mask; therefore, a mask of ff:ff:ff:ff:ff:ff allows entries that do not match and a mask of 00:00:00:00:00:00 only allows entries that match exactly.
- **ethertype-operator**: (OPTIONAL) To filter based on protocol type, enter one of the following Ethertypes:
  
  - `ev2` - is the Ethernet II frame format
  - `llc` - is the IEEE 802.3 frame format
  - `snap` - is the IEEE 802.3 SNAP frame format
- **count**: (OPTIONAL) Enter the keyword count to count packets processed by the filter.
- **byte**: (OPTIONAL) Enter the keyword byte to count bytes processed by the filter.
Defaults
Not configured.

Command Modes
CONFIGURATION-MAC ACCESS LIST-EXTENDED

Command History

Related Commands
permit — configures a MAC address filter to pass packets.
seq — configures a MAC address filter with a specified sequence number.

mac access-list extended
Name a new or existing extended MAC access control list (extended MAC ACL).

Syntax
mac access-list extended access-list-name

Parameters
access-list-name
Enter a text string as the MAC access list name, up to 140 characters.

Defaults
none

Command Modes
CONFIGURATION

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
The number of entries allowed per ACL is hardware-dependent. For detailed specifications on entries allowed per ACL, refer to your line card documentation.

Example
Dell(conf)#mac-access-list access-list access-list TestMATExt
Dell(config-ext-macl)#remark 5 IPv4
Dell(config-ext-macl)#seq 10 permit any any ev2 eq 800 count bytes

Dell(config-ext-macl)#seq 20 permit any any ev2 eq 806 count bytes
Dell(config-ext-macl)#remark 25 IPv6
Dell(config-ext-macl)#seq 30 permit any any ev2 eq 86dd count bytes
Dell(config-ext-macl)#seq 40 permit any any count bytes
Dell(config-ext-macl)#exit
Dell(conf)#do show mac accounting access-list snickers
Extended mac access-list snickers on GigabitEthernet 0/47
seq 10 permit any any ev2 eq 800 count bytes (559851886 packets 191402152148 bytes)
seq 20 permit any any ev2 eq 806 count bytes (74481486 packets 5031686754 bytes)

173
seq 30 permit any any ev2 eq 86dd count bytes (7751519 packets 797843521 bytes)

Related Commands

- `mac access-list standard` — configures a standard MAC access list.
- `show mac accounting access-list` — displays MAC access list configurations and counters (if configured).

**permit**

To pass packets matching the criteria specified, configure a filter.

**Syntax**

```
permit {any | host mac-address | mac-source-address mac-source-address-mask} {any | host mac-address | mac-destination-address mac-destination-address-mask} [ethertype operator] [count [byte]]
```

To remove this filter, you have two choices:

- **Use the** `no seq` `sequence-number` **command** if you know the filter's sequence number.
- **Use the** `no permit {any | host mac-address | mac-source-address mac-source-address-mask} {any | mac-destination-address mac-destination-address-mask}` **command**.

**Parameters**

- **any**
  - Enter the keyword any to forward all packets.

- **host**
  - Enter the keyword host then a MAC address to forward packets with that host address.

- **mac-source-address**

- **mac-source-address-mask**
  - (OPTIONAL) Specify which bits in the MAC address must match.
  - The MAC ACL supports an inverse mask; therefore, a mask of ff:ff:ff:ff:ff:ff allows entries that do not match and a mask of 00:00:00:00:00:00 only allows entries that match exactly.

- **mac-destination-address**
  - Enter the destination MAC address and mask in nn:nn:nn:nn:nn:nn format.

- **mac-destination-address-mask**
  - Specify which bits in the MAC address must be matched.
  - The MAC ACL supports an inverse mask; therefore, a mask of ff:ff:ff:ff:ff:ff allows entries that do not match and a mask of 00:00:00:00:00:00 only allows entries that match exactly.
ethertype  
operator  

(OPTIONAL) To filter based on protocol type, enter one of the following Ethertypes:

- ev2 - is the Ethernet II frame format
- llc - is the IEEE 802.3 frame format
- snap - is the IEEE 802.3 SNAP frame format

count  

(OPTIONAL) Enter the keyword count to count packets the filter processes.

byte  

(OPTIONAL) Enter the keyword byte to count bytes the filter processes.

Defaults
Not configured.

Command Modes
CONFIGURATION-MAC ACCESS LIST-EXTENDED

deny — configures a MAC ACL filter to drop packets.
seq — configure a MAC ACL filter with a specified sequence number.

seq

Configure a filter with a specific sequence number.

Syntax
seq sequence-number {deny | permit} {any | host mac-address | mac-source-address mac-source-address-mask} {any | host mac-address | mac-destination-address mac-destination-address-mask} [ethertype operator] [count [byte]]

Parameters
sequence-number  Enter a number as the filter sequence number. The range is from zero (0) to 65535.
deny  Enter the keyword deny to drop any traffic matching this filter.
permit  Enter the keyword permit to forward any traffic matching this filter.
any  Enter the keyword any to filter all packets.
host mac-address  Enter the keyword host and then enter a MAC address to filter packets with that host address.
mac-source-address-mask
Specify which bits in the MAC address must be matched.

mac-destination-address
Enter the destination MAC address and mask in

mac-destination-address-mask
Specify which bits in the MAC address must be matched.
The MAC ACL supports an inverse mask; therefore, a mask of
ff:ff:ff:ff:ff:ff allows entries that do not match and a mask of
00:00:00:00:00:00 only allows entries that match exactly.

ethertype
(OPTIONAL) To filter based on protocol type, enter one of
the following Ethertypes:
• ev2 - is the Ethernet II frame format.
• llc - is the IEEE 802.3 frame format.
• snap - is the IEEE 802.3 SNAP frame format.

operator

count
(OPTIONAL) Enter the keyword count to count packets the
filter processes.

byte
(OPTIONAL) Enter the keyword byte to count bytes the filter
processes.

Defaults
Not configured.

Command Modes
CONFIGURATION-MAC ACCESS LIST-STANDARD

IP Prefix List Commands
When you create an access-list without any rule and then apply it to an interface, the ACL behavior
reflects implicit permit.
To configure or enable IP prefix lists, use these commands.
clear ip prefix-list

Reset the number of times traffic mets the conditions (‘hit’ counters) of the configured prefix lists.

Syntax  
clear ip prefix-list [prefix-name]

Parameters  
prefix-name  (OPTIONAL) Enter the name of the configured prefix list to clear only counters for that prefix list, up to 140 characters long.

Defaults  
Clears “hit” counters for all prefix lists unless a prefix list is specified.

Command Modes  
EXEC Privilege

Command History  
Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.

Related Commands  
ip prefix-list — configures a prefix list.

deny

To drop packets meeting the criteria specified, configure a filter.

Syntax  
deny ip-prefix [ge min-prefix-length] [le max-prefix-length]

Parameters  

ip-prefix  Specify an IP prefix in the network/length format. For example, 35.0.0.0/8 means match the first 8 bits of address 35.0.0.0.

ge min-prefix-length  (OPTIONAL) Enter the keyword ge and then enter the minimum prefix length, which is a number from zero (0) to 32.

le max-prefix-length  (OPTIONAL) Enter the keyword le and then enter the maximum prefix length, which is a number from zero (0) to 32.

Defaults  
Not configured.

Command Modes  
PREFIX-LIST

Command History  
Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information  
Sequence numbers for this filter are automatically assigned starting at sequence number 5.
If you do not use the `ge` or `le` options, only packets with an exact match to the prefix are filtered.

**Related Commands**
- `permit` — configures a filter to pass packets.
- `seq` — configures a drop or permit filter with a specified sequence number.

### ip prefix-list

Enter the PREFIX-LIST mode and configure a prefix list.

**Syntax**
```
ip prefix-list prefix-name
```

**Parameters**
- `prefix-name` Enter a string up to 16 characters long as the name of the prefix list, up to 140 characters long.

**Command Modes**
CONFIGURATION

**Command History**
- **Version 8.3.16.1** Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**
Prefix lists redistribute OSPF and RIP routes meeting specific criteria.

**Related Commands**
- `show ip route list` — displays IP routes in an IP prefix list.
- `show ip prefix-list summary` — displays a summary of the configured prefix lists.

### permit

Configure a filter that passes packets meeting the criteria specified.

**Syntax**
```
permit ip-prefix [ge min-prefix-length] [le max-prefix-length]
```

**Parameters**
- `ip-prefix` Specify an IP prefix in the network/length format. For example, 35.0.0.0/8 means match the first 8 bits of address 35.0.0.0.
- `ge min-prefix-length` (OPTIONAL) Enter the keyword `ge` and then enter the minimum prefix length, which is a number from zero (0) to 32.
- `le max-prefix-length` (OPTIONAL) Enter the keyword `le` and then enter the maximum prefix length, which is a number from zero (0) to 32.
**seq**

To a deny or permit filter in a prefix list while configuring the filter, assign a sequence number.

**Syntax**
```
seq sequence-number {deny | permit} {any} | [ip-prefix /nn {ge min-prefix-length} {le max-prefix-length}] | [bitmask number]
```

**Parameters**
- `sequence-number`: Enter a number. The range is from 1 to 4294967294.
- `deny`: Enter the keyword `deny` to configure a filter to drop packets meeting this condition.
- `permit`: Enter the keyword `permit` to configure a filter to forward packets meeting this condition.
- `any` (OPTIONAL): Enter the keyword `any` to match any packets.
- `ip-prefix /nn` (OPTIONAL): Specify an IP prefix in the network/length format. For example, 35.0.0.0/8 means match the first 8 bits of address 35.0.0.0.
- `ge min-prefix-length` (OPTIONAL): Enter the keyword `ge` and then enter the minimum prefix length, which is a number from zero (0) to 32.
- `le max-prefix-length` (OPTIONAL): Enter the keyword `le` and then enter the maximum prefix length, which is a number from zero (0) to 32.
- `bitmask number`: Enter the keyword `bitmask` then enter a bit mask number in dotted decimal format.

**Defaults**
Not configured.
### show config

Display the current PREFIX-LIST configurations.

**Syntax**

```
show config
```

**Command Modes**

PREFIX-LIST

**Command History**

- **Version 8.3.16.1**
  - Introduced on the MXL 10/40GbE Switch IO Module.

**Example**

```
Dell(conf-nprefixl)#show config
!
ip prefix-list snickers
Dell(conf-nprefixl)#
```

### show ip prefix-list detail

Display details of the configured prefix lists.

**Syntax**

```
show ip prefix-list detail [prefix-name]
```

**Parameters**

- `prefix-name` (OPTIONAL) Enter a text string as the name of the prefix list, up to 140 characters.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

- **Version 8.3.16.1**
  - Introduced on the MXL 10/40GbE Switch IO Module.
show ip prefix-list summary

Display a summary of the configured prefix lists.

**Syntax**

```
show ip prefix-list summary [prefix-name]
```

**Parameters**

- `prefix-name` (OPTIONAL) Enter a text string as the name of the prefix list, up to 140 characters.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

*Version 8.3.16.1* Introduced on the MXL 10/40GbE Switch IO Module.

**Example**

```
Dell#show ip prefix summary
Prefix-list with the last deletion/insertion: test
ip prefix-list test:
  count: 3, range entries: 1, sequences: 5 - 15
  ip prefix-list test1:
  count: 2, range entries: 2, sequences: 5 - 10
  ip prefix-list test2:
  count: 1, range entries: 1, sequences: 5 - 5
  ip prefix-list test3:
  count: 1, range entries: 1, sequences: 5 - 5
  ip prefix-list test4:
  count: 1, range entries: 1, sequences: 5 - 5
    ip prefix-list test5:
    count: 1, range entries: 1, sequences: 5 - 5
    ip prefix-list test6:
    count: 1, range entries: 1, sequences: 5 - 5
Dell#
```
Route Map Commands

When you create an access-list without any rule and then applied to an interface, the ACL behavior reflects implicit permit.

To configure route maps and their redistribution criteria, use the following commands.

continue

To a route-map entry with a higher sequence number, configure a route-map.

Syntax

```
continue [sequence-number]
```

Parameters

- **sequence-number** (OPTIONAL) Enter the route map sequence number. The range is from 1 to 65535. The default is: no sequence number

Defaults

Not configured

Command Modes

ROUTE-MAP

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The `continue` feature allows movement from one route-map entry to a specific route-map entry (the sequence number). If you do not specify the sequence number, the `continue` feature simply moves to the next sequence number (also known as an implied continue). If a match clause exists, the `continue` feature executes only after a successful match occurs. If there are no successful matches, the `continue` feature is ignored.

Match clause with Continue clause

The `continue` feature can exist without a match clause. A `continue` clause without a match clause executes and jumps to the specified route-map entry.

With a match clause and a `continue` clause, the match clause executes first and the `continue` clause next in a specified route map entry. The `continue` clause launches only after a successful match. The behavior is:

- A successful match with a `continue` clause, the route map executes the set clauses and then goes to the specified route map entry upon execution of the `continue` clause.
- If the next route map entry contains a `continue` clause, the route map executes the `continue` clause if a successful match occurs.
- If the next route map entry does not contain a `continue` clause, the route map evaluates normally. If a match does not occur, the route map does not continue and falls through to the next sequence number, if one exists.

Set Clause with Continue Clause
If the route-map entry contains sets with the continue clause, set actions are performed first then the continue clause jumps to the specified route map entry.

- If a set action occurs in the first route map entry and then the same set action occurs with a different value in a subsequent route map entry, the last set of actions overrides the previous set of actions with the same set command.
- If set community additive and set as-path prepend are configure, the communities and AS numbers are prepended.

Related Commands

- `set metric` — Specifies a COMMUNITY attribute
- `set automatic-tag` — Configures a filter to modify the AS path

**description**

Add a description to this route map.

**Syntax**

```
description description
```

**Parameters**

- `description` Enter a description to identify the route map (80 characters maximum).

**Defaults**

none

**Command Modes**

ROUTE-MAP

**Command History**

- **Version 8.3.16.1** Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**

- `route-map` — Enables a route map

**match interface**

To match routes whose next hop is on the interface specified, configure a filter.

**Syntax**

```
match interface interface
```

To remove a match, use the `no match interface interface` command.

**Parameters**

- `interface` Enter the following keywords and slot/port or number information:
  - For the Loopback interface, enter the keyword `loopback` then a number from zero (0) to 16383.
For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.

For a Ten Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.

For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.

**match ip address**

To match routes based on IP addresses specified in an access list, configure a filter.

**Syntax**

`match ip address prefix-list-name`

**Parameters**

- `prefix-list-name`: Enter the name of configured prefix list, up to 140 characters.

**Defaults**

Not configured.

**Command Modes**

ROUTE-MAP

**Command History**

- **Version 8.3.16.1**
  - Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**

- `match interface` — redistributes routes that match the next-hop interface.
- `match ip next-hop` — redistributes routes that match the next-hop IP address.
**match ip route-source** — redistributes routes that match routes advertised by other routers.

**match metric** — redistributes routes that match a specific metric.

**match route-type** — redistributes routes that match a route type.

**match tag** — redistributes routes that match a specific tag.

---

**match ip next-hop**

To match based on the next-hop IP addresses specified in an IP access list or IP prefix list, configure a filter.

**Syntax**

```
match ip next-hop {access-list | prefix-list prefix-list-name}
```

**Parameters**

- **access-list-name**: Enter the name of a configured IP access list, up to 140 characters.
- **prefix-list prefix-list-name**: Enter the keywords `prefix-list` and then enter the name of configured prefix list, up to 140 characters.

**Defaults**

Not configured.

**Command Modes**

ROUTE-MAP

**Command History**

- **Version 8.3.16.1**: Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**

- **match interface** — redistributes routes that match the next-hop interface.
- **match ip address** — redistributes routes that match an IP address.
- **match ip route-source** — redistributes routes that match routes advertised by other routers.
- **match metric** — redistributes routes that match a specific metric.
- **match route-type** — redistributes routes that match a route type.
- **match tag** — redistributes routes that match a specific tag.
match ip route-source

To match based on the routes advertised by routes specified in IP access lists or IP prefix lists, configure a filter.

Syntax

```
match ip route-source {access-list | prefix-list prefix-list-name}
```

Parameters

- `access-list-name` Enter the name of a configured IP access list, up to 140 characters.
- `prefix-list prefix-list-name` Enter the keywords `prefix-list` and then enter the name of configured prefix list, up to 140 characters.

Defaults

Not configured.

Command Modes

ROUTE-MAP

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Related Commands

- `match interface` — redistributes routes that match the next-hop interface.
- `match ip address` — redistributes routes that match an IP address.
- `match ip next-hop` — redistributes routes that match the next-hop IP address.
- `match metric` — redistributes routes that match a specific metric.
- `match route-type` — redistributes routes that match a route type.
- `match tag` — redistributes routes that match a specific tag.

match metric

To match on a specified value, configure a filter.

Syntax

```
match metric metric-value
```

Parameters

- `metric-value` Enter a value to match. The range is from zero (0) to 4294967295.

Defaults

Not configured.

Command Modes

ROUTE-MAP
To match routes based on how they are defined, configure a filter.

**Syntax**

```
match route-type {external [type-1 | type-2] | internal | local}
```

**Parameters**

- **external**
  - `[type-1 | type-2]`  
  - Enter the keyword `external` then either `type-1` or `type-2` to match only on OSPF Type 1 routes or OSPF Type 2 routes.

- **internal**
  - Enter the keyword `internal` to match only on routes generated within OSPF areas.

- **local**
  - Enter the keyword `local` to match only on routes generated within the switch.

**Defaults**

Not configured.

**Command Modes**

ROUTE-MAP

**Command History**

- **Version 8.3.16.1**  
  -Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**

- `match interface` — redistributes routes that match the next-hop interface.
- `match ip address` — redistributes routes that match an IP address.
- `match ip next-hop` — redistributes routes that match the next-hop IP address.
- `match ip route-source` — redistributes routes that match routes advertised by other routers.
- `match route-type` — redistributes routes that match a route type.
- `match tag` — redistributes routes that match a specific tag.
**match tag**

To redistribute only routes that match a specified tag value, configure a filter.

**Syntax**

```
match tag tag-value
```

**Parameters**

- `tag-value` Enter a value as the tag on which to match. The range is from zero (0) to 4294967295.

**Defaults**

Not configured.

**Command Modes**

ROUTE-MAP

**Command History**

- **Version 8.3.16.1** Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**

- `match interface` — redistributes routes that match the next-hop interface.
- `match ip address` — redistributes routes that match an IP address.
- `match ip next-hop` — redistributes routes that match the next-hop IP address.
- `match ip route-source` — redistributes routes that match routes advertised by other routers.
- `match metric` — redistributes routes that match a specific metric.
- `match route-type` — redistributes routes that match a route type.

---

**route-map**

Enable a route map statement and configure its action and sequence number. This command also places you in ROUTE-MAP mode.

**Syntax**

```
route-map map-name [permit | deny] [sequence-number]
```

**Parameters**

- `map-name` Enter a text string of up to 140 characters to name the route map for easy identification.
- `permit` (OPTIONAL) Enter the keyword `permit` to set the route map default as permit. If you do not specify a keyword, the default is `permit`. 
deny  (OPTIONAL) Enter the keyword deny to set the route map default as deny.

sequence-number  (OPTIONAL) Enter a number to identify the route map for editing and sequencing with other route maps. You are prompted for a sequence number if there are multiple instances of the route map. The range is from 1 to 65535.

Defaults
Not configured.
If you do not define a keyword (permit or deny) for the route map, the permit action is the default.

Command Modes
CONFIGURATION

Command History
Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module

Usage Information
Use caution when you delete route maps because if you do not specify a sequence number, all route maps with the same map-name are deleted when you use the no route-map map-name command.

Example
Dell(conf)#route-map dempsey
Dell(config-route-map)#

Related Commands
show config2 — displays the current configuration.

set automatic-tag
To automatically compute the tag value of the route, configure a filter.

Syntax
set automatic-tag
To return to the default, use the no set automatic-tag command.

Defaults
Not configured.

Command Modes
ROUTE-MAP

Command History
Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.

Related Commands
set metric — specify the metric value assigned to redistributed routes.
set metric-type — specify the metric type assigned to redistributed routes.
set tag — specify the tag assigned to redistributed routes.
**set metric**

To assign a new metric to redistributed routes, configure a filter.

**Syntax**

```
set metric [+ | -] metric-value
```

To delete a setting, use the `no set metric` command.

**Parameters**

- **+** (OPTIONAL) Enter + to add a metric-value to the redistributed routes.
- **-** (OPTIONAL) Enter – to subtract a metric-value from the redistributed routes.
- **metric-value** Enter a number as the new metric value. The range is from zero (0) to 4294967295.

**Defaults**

Not configured.

**Command Modes**

ROUTE-MAP

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**

- `set automatic-tag` — computes the tag value of the route.
- `set metric-type` — specifies the route type assigned to redistributed routes.
- `set tag` — specifies the tag assigned to redistributed routes.

---

**set metric-type**

To assign a new route type for routes redistributed to OSPF, configure a filter.

**Syntax**

```
set metric-type {internal | external | type-1 | type-2}
```

**Parameters**

- **internal** Enter the keyword `internal` to assign the Interior Gateway Protocol metric of the next hop as the route's BGP MULTI_EXIT_DES (MED) value.
- **external** Enter the keyword `external` to assign the IS-IS external metric.
- **type-1** Enter the keyword `type-1` to assign the OSPF Type 1 metric.
- **type-2** Enter the keyword `type-2` to assign the OSPF Type 2 metric.

**Defaults**

Not configured.
set tag

To specify a tag for redistributed routes, configure a filter.

Syntax

```
set tag tag-value
```

Parameters

- `tag-value` Enter a number as the tag. The range is from zero (0) to 4294967295.

Defaults

Not configured.

Command Modes

ROUTE-MAP

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Related Commands

- `set automatic-tag` — computes the tag value of the route.
- `set metric` — specifies the metric value assigned to redistributed routes.
- `set tag` — specifies the tag assigned to redistributed routes.

show config

Display the current route map configuration.

Syntax

```
show config
```

Command Modes

ROUTE-MAP

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.
Example

Dell(config-route-map)#show config
!
route-map hopper permit 10
Dell(config-route-map)#

**show route-map**

Display the current route map configurations.

**Syntax**

show route-map [map-name]

**Parameters**

- **map-name** (OPTIONAL) Enter the name of a configured route map, up to 140 characters.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

- **Version 8.3.16.1** Introduced on the MXL 10/40GbE Switch IO Module.

**Example**

Dell#show route-map
route-map firpo, permit, sequence 10
  Match clauses:
  Set clauses:
    tag 34
Dell#

**Related Commands**

- **route-map** — configures a route map.
Bidirectional Forwarding Detection (BFD)

Bidirectional forwarding detection (BFD) is a detection protocol that provides fast forwarding path failure detection.

The Dell Networking operating system (Dell) implementation is based on the standards specified in the IETF Draft draft-ietf-bfd-base-03 and supports BFD on all Layer 3 physical interfaces including virtual local area network (VLAN) interfaces and port-channels.

**bfd all-neighbors**

Enable BFD sessions with all neighbors discovered by Layer 3 protocols intermediate system to intermediate system (IS-IS), open shortest path first (OSPF), OSPFv3, or border gateway protocol (BGP) on router interfaces, and (optionally) reconfigure the default timer values.

**Syntax**

```
[vrrp] bfd all-neighbors [interval interval min_rx min_rx multiplier value role {active | passive}]
```

**Parameters**

- **vrrp**
  - Enter the keyword `vrrp` in INTERFACE mode to enable BFD for VRRP.

- **interval milliseconds**
  - (OPTIONAL) Enter the keyword `interval` to specify non-default BFD session parameters beginning with the transmission interval. The range is from 50 to 1000. The default is 100.

- **min_rx milliseconds**
  - Enter the keyword `min_rx` to specify the minimum rate at which the local system would like to receive control packets from the remote system. The range is from 50 to 100. The default is 100.

- **multiplier value**
  - Enter the keyword `multiplier` to specify the number of packets that must be missed in order to declare a session down. The range is from 3 to 50. The default is 3.

- **role [active | passive]**
  - Enter the role that the local system assumes:
    - **Active** — The active system initiates the BFD session. Both systems can be active for the same session.
    - **Passive** — The passive system does not initiate a session. It only responds to a request for session initialization from the active system.

  The default is **active**.
Defaults
Refer to Parameters.

Command Modes
- ROUTER OSPF
- ROUTER OSPFv3
- ROUTER BGP
- ROUTER ISIS
- INTERFACE (BFD for VRRP only)

Command History
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
All neighbors inherit the timer values configured with the bfd neighbor command except in the following cases:

- Timer values configured with the isis bfd all-neighbors commands in INTERFACE mode override timer values configured with the bfd neighbor command. Likewise, using the no bfd neighbor command does not disable BFD on an interface if you explicitly enable BFD using the isis bfd all-neighbors command.
- Neighbors that have been explicitly enabled or disabled for a BFD session with the bfd neighbor or neighbor bfd disable commands in ROUTER BGP mode do not inherit the global BFD enable/disable values configured with the bfd neighbor command or configured for the peer group to which a neighbor belongs. The neighbors inherit only the global timer values (configured with the bfd neighbor command).

Related Commands
- show bfd neighbors — displays BFD neighbor information on all interfaces or a specified interface.
- bfd neighbor — explicitly enables a BFD session with a BGP neighbor or a BGP peer group.
- neighbor bfd disable — explicitly disables a BFD session with a BGP neighbor or a BGP peer group.

bdf disable
Disable BFD on an interface.

Syntax
bdf disable

Re-enable BDF using the no bdf disable command.

Defaults
BFD is disabled by default.
Command Modes

INTERFACE VRRP

Command History

Version 9.2(0.0)  Introduced on the MXL 10/40GbE Switch IO Module.

bfd enable (Configuration)

Enable BFD on all interfaces.

Syntax

```
bfd enable
```

Disable BFD using the `no bfd enable` command.

Defaults

BFD is disabled by default.

Command Modes

CONFIGURATION

Command History

Version 9.2(0.0)  Introduced on the MXL 10/40GbE Switch IO Module.

bfd enable (Interface)

Enable BFD on an interface.

Syntax

```
bfd enable
```

Defaults

BFD is enabled on all interfaces when you enable BFD from CONFIGURATION mode.

Command Modes

INTERFACE

Command History

Version 9.2(0.0)  Introduced on the MXL 10/40GbE Switch IO Module.

bfd interval

Specify non-default BFD session parameters beginning with the transmission interval.

Syntax

```
bfd interval interval min_rx min_rx multiplier value role {active | passive}
```
### Parameters

- **interval milliseconds**
  - Enter the keywords `interval` to specify non-default BFD session parameters beginning with the transmission interval. The range is from 50 to 1000. The default is **100**.

- **min_rx milliseconds**
  - Enter the keywords `min_rx` to specify the minimum rate at which the local system would like to receive control packets from the remote system. The range is from 50 to 1000. The default is **100**.

- **multiplier value**
  - Enter the keywords `multiplier` to specify the number of packets that must be missed in order to declare a session down. The range is from 3 to 50. The default is **3**.

- **role [active | passive]**
  - Enter the role that the local system assumes:
    - **Active** — The active system initiates the BFD session. Both systems can be active for the same session.
    - **Passive** — The passive system does not initiate a session. It only responds to a request for session initialization from the active system.
  
  The default is **Active**.

### Defaults

Refer to Parameters.

### Command Modes

**INTERFACE**

### Command History

**Version 9.2(0.0)**

Introduced on the MXL 10/40GbE Switch IO Module.

### Example

Dell(conf-if-gi-0/3)#bfd interval 250 min_rx 300 multiplier 4 role passive
Dell(conf-if-gi-0/3)#

---

### bfd neighbor

Establish a BFD session with a neighbor.

**Syntax**

```plaintext
bfd neighbor ip-address
```

**Parameters**

- **ip-address**
  - Enter the IP address of the neighbor in dotted decimal format (A.B.C.D).

**Defaults**

none

**Command Modes**

**INTERFACE**
**bfd protocol-liveness**

Enable the BFD protocol liveness feature.

**Syntax**

```
bfd protocol-liveness
```

**Defaults**

Disabled

**Command Modes**

CONFIGURATION

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

Protocol Liveness is a feature that notifies the BFD Manager when a client protocol (for example, OSPF and ISIS) is disabled. When a client is disabled, all BFD sessions for that protocol are torn down. Neighbors on the remote system receive an Admin Down control packet and are placed in the Down state. Peer routers might take corrective action by choosing alternative paths for the routes that originally pointed to this router.

**ip route bfd**

Enable BFD for all neighbors configured through static routes.

**Syntax**

```
ip route bfd [interval interval min_rx min_rx multiplier value role {active | passive}]```  

To disable BFD for all neighbors configured through static routes, use the `no ip route bfd [interval interval min_rx min_rx multiplier value role {active | passive}]` command.

**Parameters**

- `interval milliseconds` (OPTIONAL) Enter the keywords `interval` to specify non-default BFD session parameters beginning with the transmission interval. The range is from 50 to 1000. The default is 100.

- `min_rx milliseconds` Enter the keywords `min_rx` to specify the minimum rate at which the local system receives control packets from the remote system. The range is from 50 to 1000. The default is 100.
**multiplier value**  
Enter the keywords **multiplier** to specify the number of packets that must be missed in order to declare a session down. The range is from 3 to 50. The default is **3**.

**role [active | passive]**  
Enter the role that the local system assumes:

- **Active** — The active system initiates the BFD session. Both systems can be active for the same session.
- **Passive** — The passive system does not initiate a session. It only responds to a request for session initialization from the active system.

The default is **Active**.

**Defaults**  
See Parameters

**Command Modes**  
CONFIGURATION

**Command History**  
Version 9.2  
(0.0)  
Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**  
- **show bfd neighbors** — displays the BFD neighbor information on all interfaces or a specified interface.
- **ipv6 ospf bfd all-neighbors** — Establish BFD sessions with all OSPFv3 neighbors on a single interface or use non-default BFD session parameters.

### `ipv6 ospf bfd all-neighbors`  
Establish BFD sessions with all OSPFv3 neighbors on a single interface or use non-default BFD session parameters.

**Syntax**  
`ipv6 ospf bfd all-neighbors [disable | [interval interval min_rx min_rx multiplier value role {active | passive}]]

To disable all BFD sessions on an OSPFv3 interface implicitly, use the `no ipv6 ospf bfd all-neighbors [disable | [interval interval min_rx min_rx multiplier value role {active | passive}]][command in interface mode].`

**Parameters**  
- **disable**  
  (OPTIONAL) Enter the keyword `disable` to disable BFD on this interface.

- **interval milliseconds**  
  (OPTIONAL) Enter the keyword `interval` to specify non-default BFD session parameters beginning with the transmission interval. The range is from 50 to 1000. The default is **100**.

- **min_rx milliseconds**  
  Enter the keywords `min_rx` to specify the minimum rate at which the local system receives control packets from the remote system. The range is from 50 to 100. The default is **100**.
multiplier value  
Enter the keyword multiplier to specify the number of packets that must be missed in order to declare a session down. The range is from 3 to 50. The default is 3.

role [active | passive]  
Enter the role that the local system assumes:

• Active — The active system initiates the BFD session. Both systems can be active for the same session.
• Passive — The passive system does not initiate a session. It only responds to a request for session initialization from the active system.

The default is Active.

Defaults  
See Parameters

Command Modes  
INTERFACE

Command History  
Version 9.2(0.0)  
Introduced on the MXL 10/40GbE Switch IO Module.

**isis bfd all-neighbors**

Enable BFD on all IS-IS neighbors discovered on an interface.

**Syntax**

```
isis bfd all-neighbors [disable | [interval interval min_rx min_rx multiplier value role {active | passive}]]
```

To remove all BFD sessions with IS-IS neighbors discovered on this interface, use the no isis bfd all-neighbors [disable | [interval interval min_rx min_rx multiplier value role {active | passive}]] command.

**Parameters**

- **disable**  
  (OPTIONAL) Enter the keyword disable to disable BFD on this interface.

- **interval**  
  (OPTIONAL) Enter the keywords interval to specify non-default BFD session parameters beginning with the transmission interval. The range is from 50 to 1000. The default is 100.

- **min_rx milliseconds**  
  Enter the keywords min_rx to specify the minimum rate at which the local system would like to receive control packets from the remote system. The range is from 50 to 1000. The default is 100.

- **multiplier value**  
  Enter the keywords multiplier to specify the number of packets that must be missed in order to declare a session down. The range is from 3 to 50. The default is 3.
role [active | passive]

Enter the role that the local system assumes:

- **Active** — The active system initiates the BFD session. Both systems can be active for the same session.
- **Passive** — The passive system does not initiate a session. It only responds to a request for session initialization from the active system.

The default is **Active**.

**Defaults**
See Parameters

**Command Modes**
INTERFACE

**Command History**
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**
This command provides the flexibility to fine-tune the timer values based on individual interface needs when ISIS BFD is configured in CONFIGURATION mode. Any timer values specified with this command overrides timers set using the `bfd all-neighbors` command. Using the `no` form of this command does not disable BFD if BFD is configured in CONFIGURATION mode.

To disable BFD on a specific interface while BFD is configured in CONFIGURATION mode, use the keyword `disable`.

**neighbor bfd**
Explicitly enable a BFD session with a BGP neighbor or a BGP peer group.

**Syntax**
```
neighbor {ip-address | peer-group-name} bfd
```

**Parameters**
- **ip-address**
  - Enter the IP address of the BGP neighbor that you want to explicitly enable for BFD sessions in dotted decimal format (A.B.C.D).
- **peer-group-name**
  - Enter the name of the peer group that you want to explicitly enable for BFD sessions.

**Defaults**
none

**Command Modes**
ROUTER BGP

**Command History**
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.
When you enable a BFD session with a specified BGP neighbor or peer group using the `bfd neighbor` command, the default BFD session parameters are used (interval: 100 milliseconds, min_rx: 100 milliseconds, multiplier: 3 packets, and role: active) if you have not specified parameters with the `bfd neighbor` command.

When you explicitly enable a BGP neighbor for a BFD session with the `bfd neighbor` command:

- The neighbor does not inherit the global BFD enable values configured with the `bfd neighbor` command or configured for the peer group to which the neighbor belongs.
- The neighbor only inherits the global timer values configured with the `bfd neighbor` command: interval, min_rx, and multiplier.

**Related Commands**

- `bfd neighbor` — enables BFD sessions with all neighbors the Layer 3 protocols discover.
- `neighbor bfd disable` — explicitly disables a BFD session with a BGP neighbor or a BGP peer group.
- `show bfd neighbors` — displays the BFD neighbor information on all interfaces or a specified interface.

---

**neighbor bfd disable**

Explicitly disable a BFD session with a BGP neighbor or a BGP peer group.

**Syntax**

```
neighbor {ip-address | peer-group-name} bfd disable
```

**Parameters**

- `ip-address` Enter the IP address of the BGP neighbor that you want to explicitly disable for BFD sessions in dotted decimal format (A.B.C.D).
- `peer-group-name` Enter the name of the peer group that you want to explicitly disable for BFD sessions.

**Defaults**

none

**Command Modes**

ROUTER BGP

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

When you explicitly disable a BGP neighbor for a BFD session with the `neighbor bfd disable` command:
The neighbor does not inherit the global BFD disable values configured with the `bfd all-neighbor` command or configured for the peer group to which the neighbor belongs.

The neighbor only inherits the global timer values configured with the `bfd all-neighbor` command: interval, min_rx, and multiplier.

When you remove the Disabled state of a BFD for a BGP session with a specified neighbor by entering the `no neighbor bfd disable` command, the BGP link with the neighbor returns to normal operation and uses the BFD session parameters globally configured with the `bfd all-neighbor` command or configured for the peer group to which the neighbor belongs.

**Related Commands**

- `bfd all-neighbors` — enables BFD sessions with all neighbors discovered by Layer 3 protocols.
- `bfd neighbor` — explicitly enables a BFD session with a BGP neighbor or a BGP peer group.
- `show bfd neighbors` — displays the BFD neighbor information on all interfaces or a specified interface.

**show bfd neighbors**

Display BFD neighbor information on all interfaces or a specified interface.

**Syntax**

```
show bfd neighbors [interface [detail]]
```

**Parameters**

- `interface` Enter one of the following keywords and slot/port or number information:
  - For a 10-Gigabit Ethernet interface, enter the keyword `tengigabitethernet` then the slot/port information.
  - For a port-channel interface, enter the keyword `port-channel` then a number. The range is from 1 to 128.
  - For VLAN interfaces, enter the keyword `vlan` then a number from 1 to 4094. For ExaScale VLAN interfaces, the range is 1 to 2730 (VLAN IDs can be from 0 to 4093).

- `detail` (OPTIONAL) Enter the keyword `detail` to view detailed information about BFD neighbors.

**Defaults**

```
none
```

**Command Modes**

- EXEC
- EXEC Privilege
Command History

Version 9.2(0.0)  Introduced on the MXL 10/40GbE Switch IO Module.

Related Commands

  bfd neighbor  — establishes a BFD session with a neighbor.
  bfd all-neighbors  — establishes BFD sessions with all neighbors discovered by the
                      IS-IS protocol or OSPF protocol out of all interfaces.
vrrp bfd neighbor

Establish a BFD for VRRP session with a neighbor.

Syntax

vrrp bfd neighbor ip-address

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>neighbor ip-address</td>
<td>Enter the IP address of the BFD neighbor.</td>
</tr>
</tbody>
</table>

Defaults

none

Command Modes

INTERFACE

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.
Border Gateway Protocol IPv4 (BGPv4)

For detailed information about configuring BGP, refer to the BGP chapter in the Dell Networking OS Configuration Guide.

This chapter contains the following sections:

- BGPv4 Commands
- MBGP Commands
- BGP Extended Communities (RFC 4360)

BGP IPv6 Commands are listed in the following sections:

- IPv6 BGP Commands
- IPv6 MBGP Commands

BGPv4 Commands

Border gateway protocol (BGP) is an external gateway protocol that transmits interdomain routing information within and between autonomous systems (AS).

BGP version 4 (BGPv4) supports classless interdomain routing (CIDR) and the aggregation of routes and AS paths. Basically, two routers (called neighbors or peers) exchange information including full routing tables and periodically send messages to update those routing tables.

**NOTE:** Dell Networking OS Version 7.7.1 supports 2-Byte (16-bit) and 4-Byte (32-bit) format for autonomous system numbers (ASNs), where the 2-Byte format is 1-65535 and the 4-Byte format is 1-4294967295.

**NOTE:** Dell Networking OS Version 8.3.1.0 supports dotted format as well as the traditional plain format for AS numbers. Display the dot format using the `show ip bgp` commands. To determine the comparable dot format for an ASN from a traditional format, use `ASN/65536`. For more information about using the 2-Byte or 4-Byte format, refer to the Dell Networking OS Configuration Guide.

**address-family**

Enable the IPv4 multicast or the IPv6 address family.

**Syntax**

```
address-family [ipv4 multicast| ipv6unicast]
```

**Parameters**

- `ipv4 multicast` Enter BGPv4 multicast mode.
ipv6 unicast                Enter BGPv6 mode.

Defaults                  Not configured.
Command Modes            ROUTER BGP
Command History          Version 9.2(0.0)  Introduced on the MXL 10/40GbE Switch IO Module.

aggregate-address

To minimize the number of entries in the routing table, summarize a range of prefixes.

Syntax  aggregate-address ip-address mask [advertise-map map-name] [as-set] [attribute-map map-name] [summary-only] [suppress-map map-name]

Parameters

- **ip-address**
  - Enter the IP address and mask of the route to be the aggregate address. Enter the IP address in dotted decimal format (A.B.C.D) and mask in /prefix format (/x).

- **mask**
  - Enter the IP address and mask of the route to be the aggregate address. Enter the IP address in dotted decimal format (A.B.C.D) and mask in /prefix format (/x).

- **advertise-map [map-name]**
  - (OPTIONAL) Enter the keywords advertise-map then the name of a configured route map to set filters for advertising an aggregate route.

- **as-set**
  - (OPTIONAL) Enter the keyword as-set to generate path attribute information and include it in the aggregate. AS_SET includes AS_PATH and community information from the routes included in the aggregated route.

- **attribute-map [map-name]**
  - (OPTIONAL) Enter the keywords attribute-map then the name of a configured route map to modify attributes of the aggregate, excluding AS_PATH and NEXT_HOP attributes.

- **summary-only**
  - (OPTIONAL) Enter the keyword summary-only to advertise only the aggregate address. Specific routes are not advertised.

- **suppress-map [map-name]**
  - (OPTIONAL) Enter the keywords suppress-map then the name of a configured route map to identify which more-specific routes in the aggregate are suppressed.

Defaults                  Not configured.
Command Modes            • ROUTER BGP ADDRESS FAMILY
                          • ROUTER BGP ADDRESS FAMILY IPv6
At least one of the routes included in the aggregate address must be in the BGP routing table for the configured aggregate to become active.

If routes within the aggregate are constantly changing, do not add the as-set parameter to the aggregate as the aggregate flaps to keep track of the changes in the AS_PATH.

In route maps used in the suppress-map parameter, routes meeting the deny clause are not suppress; in other words, they are allowed. The opposite is also true: routes meeting the permit clause are suppressed.

If the route is injected via the network command, that route still appears in the routing table if the summary-only parameter is configured in the aggregate-address command.

The summary-only parameter suppresses all advertisements. If you want to suppress advertisements to only specific neighbors, use the neighbor distribute-list command.

In the show ip bgp command, aggregates contain an 'a' in the first column and routes suppressed by the aggregate contain an 's' in the first column.

**bgp add-path**

Allow the advertisement of multiple paths for the same address prefix without the new paths replacing any previous ones.

**Syntax**  
bgp add-path [send | receive | both] path-count

**Parameters**
- **send**  
Enter the keyword send to indicate that the system sends multiple paths to peers.
- **receive**  
Enter the keyword receive to indicate that the system accepts multiple paths from peers.
- **both**  
Enter the keyword both to indicate that the system sends and accepts multiple paths from peers.
- **path-count**  
Enter the number paths supported. The range is from 2 to 64.

**Defaults**  
Disabled

**Command Modes**
- ROUTER BGP
- ROUTER BGP-address-family
bgp always-compare-med

Allows you to enable comparison of the MULTI_EXIT_DISC (MED) attributes in the paths from different external ASs.

**Syntax**

```
bgp always-compare-med
```

To disable comparison of MED, enter `no bgp always-compare-med`.

**Defaults**

Disabled (that is, the software only compares MEDs from neighbors within the same AS).

**Command Modes**

ROUTER BGP

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

Any update without a MED attribute is the least preferred route.

If you enable this command, use the `clear ip bgp *` command to recompute the best path.

bgp asnotation

Allows you to implement a method for AS number representation in the command line interface (CLI).

**Syntax**

```
bgp asnotation [asplain | asdot+ | asdot]
```

To disable a dot or dot+ representation and return to ASPLAIN, enter the `no bgp asnotation` command.

**Defaults**

asplain

**Command Modes**

ROUTER BGP

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.
### Usage Information

Before enabling this feature, enable the `enable bgp four-octet-as-support` command. If you disable the `four-octect-support` command after using dot or dot+ format, the AS numbers revert to asplain text.

When you apply an asnotation, it is reflected in the running-configuration. If you change the notation type, the running-config updates dynamically and the new notation shows.

### Example

```
Dell(conf)#router bgp 1
Dell(conf-router_bgp)#bgp asnotation asdot
Dell(conf-router_bgp)#ex
Dell(conf)#do show run | grep bgp
router bgp 1
  bgp four-octet-as-support
  bgp asnotation asdot

Dell(conf)#router bgp 1
Dell(conf-router_bgp)#bgp asnotation asdot+
Dell(conf-router_bgp)#ex
Dell(conf)#do show run | grep bgp
router bgp 1
  bgp four-octet-as-support
  bgp asnotation asdot+

Dell(conf)#router bgp 1
Dell(conf-router_bgp)#bgp asnotation asplain
Dell(conf-router_bgp)#ex
Dell(conf)#do show run | grep bgp
router bgp 1
  bgp four-octet-as-support

Dell(conf)#
```

### Related Commands

- `bgp four-octet-as-support` — enables 4-byte support for the BGP process.

### bgp bestpath as-path ignore

Ignore the AS PATH in BGP best path calculations.

#### Syntax

```
bgp bestpath as-path ignore
```

To return to the default, enter the `no bgp bestpath as-path ignore` command.

#### Defaults

Disabled (that is, the software considers the AS_PATH when choosing a route as best).

#### Command Modes

ROUTER BGP
**bgp bestpath as-path multipath-relax**

Include prefixes received from different AS paths during multipath calculation.

**Syntax**

```
bgp bestpath as-path multipath-relax
```

To return to the default BGP routing process, use the `no bgp bestpath as-path multipath-relax` command.

**Defaults**

Disabled

**Command Modes**

ROUTER BGP

**Command History**

Version 9.2(0.0)  Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

The `bestpath router bgp configuration mode` command changes the default bestpath selection algorithm. The `multipath-relax` option allows load-sharing across providers with different (but equal-length) autonomous system paths. Without this option, ECMP expects the AS paths to be identical for load-sharing.

**bgp bestpath med confed**

Enable MULTI_EXIT_DISC (MED) attribute comparison on paths learned from BGP confederations.

**Syntax**

```
bgp bestpath med confed
```

To disable MED comparison on BGP confederation paths, enter the `no bgp bestpath med confed` command.

**Defaults**

Disabled

**Command Modes**

ROUTER BGP

**Command History**

Version 9.2(0.0)  Introduced on the MXL 10/40GbE Switch IO Module.
Usage Information

The software compares the MEDs only if the path contains no external autonomous system numbers. If you enable this command, use the `clear ip bgp *` command to recompute the best path.

**bgp bestpath med missing-as-best**

During path selection, indicate preference to paths with missing MED (MULTI_EXIT_DISC) over paths with an advertised MED attribute.

**Syntax**

```
bgp bestpath med missing-as-best
```

To return to the default selection, use the `no bgp bestpath med missing-as-best` command.

**Defaults**

Disabled

**Command Modes**

ROUTER BGP

**Command History**

Version 9.2(0.0)  Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

The MED is a 4-byte unsigned integer value and the default behavior is to assume a missing MED as 4294967295. This command causes a missing MED to be treated as 0. During path selection, paths with a lower MED are preferred over paths with a higher MED.

**bgp bestpath router-id ignore**

Do not compare router-id information for external paths during best path selection.

**Syntax**

```
bgp bestpath router-id ignore
```

To return to the default selection, use the `no bgp bestpath router-id ignore` command.

**Defaults**

Disabled

**Command Modes**

ROUTER BGP

**Command History**

Version 9.2(0.0)  Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

Configuring this option retains the current best-path. When sessions are then reset, the oldest received path is chosen as the best-path.
bgp client-to-client reflection

Allows you to enable route reflection between clients in a cluster.

**Syntax**

```
bgp client-to-client reflection
```

To disable client-to-client reflection, use the `no bgp client-to-client reflection` command.

**Defaults**

Enabled when a route reflector is configured.

**Command Modes**

ROUTER BGP

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

Route reflection to clients is not necessary if all client routers are fully meshed.

**Related Commands**

- `bgp cluster-id` — assigns an ID to a BGP cluster with two or more route reflectors.
- `neighbor route-reflector-client` — configures a route reflector and clients.

---

bgp cluster-id

Assign a cluster ID to a BGP cluster with more than one route reflector.

**Syntax**

```
bgp cluster-id {ip-address | number}
```

To delete a cluster ID, use the `no bgp cluster-id {ip-address | number}` command.

**Parameters**

- `ip-address` Enter an IP address as the route reflector cluster ID.
- `number` Enter a route reflector cluster ID as a number from 1 to 4294967295.

**Defaults**

Not configured.

**Command Modes**

ROUTER BGP

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

When a BGP cluster contains only one route reflector, the cluster ID is the route reflector’s router ID. For redundancy, a BGP cluster may contain two or more route reflectors. Assign a cluster ID with the `bgp cluster-id` command. Without a cluster ID, the route reflector cannot recognize route updates from the other route reflectors within the cluster.
The default format for displaying the cluster-id is dotted decimal, but if you enter the cluster-id as an integer, it is displayed as an integer.

**Related Commands**

- `bgp client-to-client reflection` — enables route reflection between the route reflector and clients.
- `neighbor route-reflector-client` — configures a route reflector and clients.
- `show ip bgp cluster-list` — views paths with a cluster ID.

---

**bgp confederation identifier**

Configure an identifier for a BGP confederation.

**Syntax**

```
bgp confederation identifier as-number
```

To delete a BGP confederation identifier, use the `no bgp confederation identifier as-number` command.

**Parameters**

- `as-number` Enter the AS number. The range is from 0 to 65535 (2 byte), from 1 to 4294967295 (4 byte), or from 0.1 to 65535.65535 (dotted format).

**Defaults**

Not configured.

**Command Modes**

ROUTER BGP

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

To accept 4-byte formats before entering a 4-byte AS number, configure your system. All the routers in the Confederation must be 4 byte or 2 byte identified routers. You cannot mix them.

The autonomous systems configured in this command are visible to the EBGP neighbors. Each autonomous system is fully meshed and contains a few connections to other autonomous systems. The next hop, MED, and local preference information is preserved throughout the confederation.

The system accepts confederation EBGP peers without a LOCAL_PREF attribute. The software sends AS_CONFED_SET and accepts AS_CONFED_SET and AS_CONF_SEQ.

**Related Commands**

- `bgp four-octet-as-support` — enables 4-byte support for the BGP process.
bpg confederation peers

Specify the autonomous systems (ASs) that belong to the BGP confederation.

Syntax

```
bgp confederation peers as-number [...as-number]
```

To return to the default, use the `no bgp confederation peers` command.

Parameters

- **as-number**: Enter the AS number. The range is from 0 to 65535 (2 byte), from 1 to 4294967295 (4 byte), or from 0.1 to 65535.65535 (dotted format).

- **...as-number**: (OPTIONAL) Enter up to 16 confederation numbers. The range is from 0 to 65535 (2 byte), from 1 to 4294967295 (4 byte), or from 0.1 to 65535.65535 (dotted format).

Defaults

Not configured.

Command Modes

ROUTER BGP

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

- All the routers in the Confederation must be 4 byte or 2 byte identified routers. You cannot mix them.

- The autonomous systems configured in this command are visible to the EBGP neighbors. Each autonomous system is fully meshed and contains a few connections to other autonomous systems.

- After specifying autonomous systems numbers for the BGP confederation, recycle the peers to update their configuration.

Related Commands

- `bgp confederation identifier` — configures a confederation ID.

- `bgp four-octet-as-support` — enables 4-byte support for the BGP process.

bpg dampening

Enable BGP route dampening and configure the dampening parameters.

Syntax

```
bgp dampening [half-life reuse suppress max-suppress-time] [route-map map-name]
```

To disable route dampening, use the `no bgp dampening [half-life reuse suppress max-suppress-time] [route-map map-name]` command.
Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>half-life</strong></td>
<td>(OPTIONAL) Enter the number of minutes after which the Penalty is decreased. After the router assigns a Penalty of 1024 to a route, the Penalty is decreased by half after the half-life period expires. The range is from 1 to 45. The default is <strong>15 minutes</strong>.</td>
</tr>
<tr>
<td><strong>reuse</strong></td>
<td>(OPTIONAL) Enter a number as the reuse value, which is compared to the flapping route’s Penalty value. If the Penalty value is less than the reuse value, the flapping route is once again advertised (or no longer suppressed). The range is from 1 to 20000. The default is <strong>750</strong>.</td>
</tr>
<tr>
<td><strong>suppress</strong></td>
<td>(OPTIONAL) Enter a number as the suppress value, which is compared to the flapping route’s Penalty value. If the Penalty value is greater than the suppress value, the flapping route is no longer advertised (that is, it is suppressed). The range is from 1 to 20000. The default is <strong>2000</strong>.</td>
</tr>
<tr>
<td><strong>max-suppress-time</strong></td>
<td>(OPTIONAL) Enter the maximum number of minutes a route can be suppressed. The default is four times the half-life value. The range is from 1 to 255. The default is <strong>60 minutes</strong>.</td>
</tr>
<tr>
<td><strong>route-map</strong></td>
<td>(OPTIONAL) Enter the keyword <strong>route-map</strong> then the name of a configured route map. Only <strong>match</strong> commands in the configured route map are supported.</td>
</tr>
</tbody>
</table>

Defaults

Disabled.

Command Modes

- ROUTER BGP
- ROUTER BGP-address-family

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

If you enter the **bgp dampening** command, the default values for **half-life**, **reuse**, **suppress**, and **max-suppress-time** are applied. The parameters are position-dependent; therefore, if you configure one parameter, configure the parameters in the order they appear in the CLI.

Related Commands

- **show ip bgp dampened-paths** — views the BGP paths.
bgp default local-preference

Change the default local preference value for routes exchanged between internal BGP peers.

Syntax

```
bgp default local-preference value
```

To return to the default value, use the `no bgp default local-preference` command.

Parameters

`value` Enter a number to assign to routes as the degree of preference for those routes. When routes are compared, the higher the degree of preference or local preference value, the more the route is preferred. The range is from 0 to 4294967295. The default is 100.

Defaults

100

Command Modes

ROUTER BGP

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

All routers apply the `bgp default local-preference` command setting within the AS. To set the local preference for a specific route, use the `set local-preference` command in ROUTE-MAP mode.

Related Commands

- `set metric` — assigns a local preference value for a specific route.

bgp enforce-first-as

Disable (or enable) enforce-first-as check for updates received from EBGP peers.

Syntax

```
bgp enforce-first-as
```

To turn off the default, use the `no bgp enforce-first-as` command.

Defaults

Enabled

Command Modes

ROUTER BGP

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

This command is enabled by default, that is for all updates received from EBGP peers, BGP ensures that the first AS of the first AS segment is always the AS of the peer. If not, the update is dropped and a counter is increments. To view the “failed enforce-first-as check” counter, use the `show ip bgp neighbors` command.
If you disable the `enforce-first-as` command, it can be viewed using the `show ip protocols` command.

**Related Commands**

- `show ip bgp neighbors` — views the information the BGP neighbors exchange.
- `show ip protocols` — views information on routing protocols.

### bgp fast-external-failover

Enable the fast external failover feature, which immediately resets the BGP session if a link to a directly connected external peer fails.

**Syntax**

```plaintext
gbgp fast-external-failover
```

To disable fast external failover, use the `no bgp fast-external-failover` command.

**Defaults**

Enabled

**Command Modes**

ROUTER BGP

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

The `bgp fast-external-failover` command appears in the `show config` command output.

### bgp four-octet-as-support

Enable 4-byte support for the BGP process.

**Syntax**

```plaintext
gbgp four-octet-as-support
```

To disable fast external failover, use the `no bgp four-octet-as-support` command.

**Defaults**

Disabled (supports 2-byte format)

**Command Modes**

ROUTER BGP

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.
Routers supporting 4-byte ASNs advertise that function in the OPEN message. The behavior of a 4-byte router is slightly different depending on whether it is speaking to a 2-byte router or a 4-byte router.

When creating Confederations, all the routers in the Confederation must be 4 byte or 2 byte identified routers. You cannot mix them.

Where the 2-byte format is from 1 to 65535, the 4-byte format is from 1 to 4294967295. Both formats are accepted and the advertisements reflect the entered format.

For more information about using the 2 byte or 4-byte format, refer to the Dell Networking OS Configuration Guide.

```
bgp graceful-restart
```

To support graceful restart as a receiver only, enable graceful restart on a BGP neighbor, a BGP node, or designate a local router.

**Syntax**
```
bgp graceful-restart [restart-time seconds] [stale-path-time seconds] [role receiver-only]
```

To return to the default, use the `no bgp graceful-restart` command.

**Parameters**
- `restart-time seconds`
  - Enter the keyword `restart-time` then the maximum number of seconds to restart and bring-up all the peers. The range is from 1 to 3600 seconds. The default is 120 seconds.
- `stale-path-time seconds`
  - Enter the keyword `stale-path-time` then the maximum number of seconds to wait before restarting a peer’s stale paths. The default is 360 seconds.
- `role receiver-only`
  - Enter the keyword `role receiver-only` to designate the local router to support graceful restart as a receiver only.

**Defaults**
as above

**Command Modes**
- ROUTER BGP

**Command History**
```
Version 9.2(0.0)  Introduced on the MXL 10/40GbE Switch IO Module.
```

**Usage Information**
This feature is advertised to BGP neighbors through a capability advertisement. In Receiver Only mode, BGP saves the advertised routes of peers that support this capability when they restart.
BGP graceful restart is active only when the neighbor becomes established. Otherwise it is disabled. Graceful-restart applies to all neighbors with established adjacency.

**bgp non-deterministic-med**

Compare MEDs of paths from different autonomous systems.

**Syntax**

```text
bgp non-deterministic-med
```

To return to the default, use the `no bgp non-deterministic-med` command.

**Defaults**

Disabled (that is, paths/routes for the same destination but from different ASs do not have their MEDs compared).

**Command Modes**

ROUTER BGP

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

In Non-Deterministic mode, paths are compared in the order in which they arrive. This method can lead to the system choosing different best paths from a set of paths, depending on the order in which they are received from the neighbors because MED may or may not get compared between adjacent paths. In Deterministic mode (`no bgp non-deterministic-med`), the system compares MED between adjacent paths within an AS group because all paths in the AS group are from the same AS.

When you change the path selection from Deterministic to Non-Deterministic, the path selection for the existing paths remains Deterministic until you enter the `clear ip bgp` command to clear existing paths.

**bgp recursive-bgp-next-hop**

Enable next-hop resolution through other routes learned by BGP.

**Syntax**

```text
bgp recursive-bgp-next-hop
```

To disable next-hop resolution, use the `no bgp recursive-bgp-next-hop` command.

**Defaults**

Enabled

**Command Modes**

ROUTER BGP
bgp regex-eval-optz-disable

Disables the Regex Performance engine that optimizes complex regular expression with BGP.

Syntax

```
bgp regex-eval-optz-disable
```

To re-enable optimization engine, use the `no bgp regex-eval-optz-disable` command.

Defaults

Enabled

Command Modes

ROUTER BGP (conf-router_bgp)

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

BGP uses regular expressions (regex) to filter route information. In particular, the use of regular expressions to filter routes based on AS-PATHs and communities is common. In a large-scale configuration, filtering millions of routes based on regular expressions can be quite CPU intensive, as a regular expression evaluation involves generation and evaluation of complex finite state machines.

BGP policies, containing regular expressions to match as-path and communities, tend to use much CPU processing time, which in turn affects the BGP routing convergence. Additionally, the `show bgp` commands, which are filtered through regular expressions, use up CPU cycles particularly with large databases. The Regex Engine Performance Enhancement feature optimizes the CPU usage by caching and reusing regular expression evaluation results. This caching and reuse may be at the expense of RP1 processor memory.

Examples

```
Dell(conf-router_bgp)#no bgp regex-eval-optz-disable
Dell(conf-router_bgp)#do show ip protocols
Routing Protocol is "ospf 22222"
  Router ID is 2.2.2.2
```
Routing Protocol is "bgp 1"
Cluster Id is set to 10.10.10.0
Router Id is set to 10.10.10.0
Fast-external-fallover enabled
Regular expression evaluation optimization enabled
Capable of ROUTE_REFRESH
For Address Family IPv4 Unicast
  BGP table version is 0, main routing table version 0
  Distance: external 20 internal 200 local 200

Dell(conf-router_bgp)#

Related Commands

**bgp router-id**

Assign a user-given ID to a BGP router.

**Syntax**

bgp router-id ip-address

To delete a user-assigned IP address, use the no bgp router-id command.

**Parameters**

*ip-address* Enter an IP address in dotted decimal format to reset only that BGP neighbor.

**Defaults**

The router ID is the highest IP address of the Loopback interface or, if no Loopback interfaces are configured, the highest IP address of a physical interface on the router.

**Command Modes**

ROUTER BGP

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

Peering sessions are reset when you change the router ID of a BGP router.

**bgp soft-reconfig-backup**

To avoid the peer from resending messages, use this command only when route-refresh is not negotiated.

**Syntax**

bgp soft-reconfig-backup
To return to the default setting, use the `no bgp soft-reconfig-backup` command.

**Defaults**

Off

**Command Modes**

ROUTER BGP

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

When you enable soft-reconfiguration for a neighbor and you execute the `clear ip bgp soft*in` command, the update database stored in the router is replayed and updates are re-evaluated. With this command, the replay and update process is triggered only if route-refresh request is not negotiated with the peer. If the request is indeed negotiated (after executing the `clear ip bgp soft*in` command), BGP sends a route-refresh request to the neighbor and receives all of the peer’s updates.

**Related Commands**

- `clear ip bgp` — activates inbound policies without resetting the BGP TCP session.

**capture bgp-pdu neighbor**

Enable capture of an IPv4 BGP neighbor packet.

**Syntax**

```
capture bgp-pdu neighbor ipv4-address direction {both | rx | tx}
```  

To disable capture of the IPv4 BGP neighbor packet, use the `no capture bgp-pdu neighbor ipv4-address` command.

**Parameters**

- `ipv4-address` Enter the IPv4 address of the target BGP neighbor.
- `direction {both | rx | tx}` Enter the keyword `direction` and a direction — either `rx` for inbound, `tx` for outbound, or both.

**Defaults**

Not configured.

**Command Modes**

EXEC Privilege

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**

- `capture bgp-pdu max-buffer-size` — specifies a size for the capture buffer.
- `show capture bgp-pdu neighbor` — displays BGP packet capture information.
**capture bgp-pdu max-buffer-size**

Set the size of the BGP packet capture buffer. This buffer size pertains to both IPv4 and IPv6 addresses.

**Syntax**

```
capture bgp-pdu max-buffer-size 100-102400000
```

**Parameters**

```
100-102400000
0
```

- **Enter a size for the capture buffer.**

**Defaults**

40960000 bytes.

**Command Modes**

EXEC Privilege

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**

- `capture bgp-pdu neighbor` — enables capture of an IPv4 BGP neighbor packet.
- `show capture bgp-pdu neighbor` — displays BGP packet capture information for an IPv6 address.

---

**clear ip bgp**

Reset BGP sessions. The soft parameter (BGP Soft Reconfiguration) clears the policies without resetting the TCP connection.

**Syntax**

```
clear ip bgp * | as-number | ip-address [flap-statistics | soft [in | out]]
```

**Parameters**

- **Enter an asterisk ( * ) to reset all BGP sessions.**
- **as-number**
  - Enter the AS number to reset all neighbors belonging to that AS. The range is from 0 to 65535 (2 byte), from 1 to 4294967295 (4 byte), or from 0.1 to 65535.65535 (dotted format).
- **ip-address**
  - Enter an IP address in dotted decimal format to reset all prefixes from that neighbor.
- **flap-statistics**
  - (OPTIONAL) Enter the keyword flap-statistics to reset the flap statistics on all prefixes from that neighbor.
- **soft**
  - (OPTIONAL) Enter the keyword soft to configure and activate policies without resetting the BGP TCP session, that is, BGP Soft Reconfiguration.

**NOTE:** If you enter the `clear ip bgp ip-address soft` command, both inbound and outbound policies are reset.
in (OPTIONAL) Enter the keyword in to activate only inbound policies.

out (OPTIONAL) Enter the keyword out to activate only outbound policies.

Command Modes
EXEC Privilege

Command History
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Related Commands
bgp recursive-bgp-next-hop — disables next-hop resolution through other routes learned by the BGP.

bgp soft-reconfig-backup — turns on BGP Soft Reconfiguration.

clear ip bgp dampening
Clear information on route dampening and return the suppressed route to the Active state.

Syntax
clear ip bgp dampening [ip-address mask]

Parameters
ip-address mask (OPTIONAL) Enter an IP address in dotted decimal format and the prefix mask in slash format (/x) to clear dampening information only that BGP neighbor.

Command Modes
EXEC Privilege

Command History
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
After you enter this command, the software deletes the history routes and returns the suppressed routes to the Active state.

clear ip bgp flap-statistics
Clear BGP flap statistics, which includes number of flaps and the time of the last flap.

Syntax
clear ip bgp flap-statistics [ip-address mask | filter-list as-path-name | regexp regular-expression]

Parameters
ip-address mask (OPTIONAL) Enter an IP address in dotted decimal format and the prefix mask in slash format (/x) to reset only that prefix.
filter-list as-path-name

(OPTIONAL) Enter the keywords filter-list then the name of a configured AS-PATH list.

regexp regular-expression

(OPTIONAL) Enter the keyword regexp then regular expressions. Use one or a combination of the following:

- . = (period) any single character (including a white space).
- * = (asterisk) the sequences in a pattern (0 or more sequences).
- + = (plus) the sequences in a pattern (1 or more sequences).
- ? = (question mark) sequences in a pattern (either 0 or 1 sequences).
- [ ] = (brackets) a range of single-character patterns.
- ( ) = (parenthesis) groups a series of pattern elements to a single element.
- { } = (braces) minimum and the maximum match count.
- ^ = (caret) the beginning of the input string. If you use the caret at the beginning of a sequence or range, it matches on everything BUT the characters specified.
- $ = (dollar sign) the end of the output string.

NOTE: Enter an escape sequence (CTRL+v) prior to entering the ? regular expression.

Command Modes

- EXEC Privilege

Command History

- Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

If you enter the clear ip bgp flap-statistics command without any parameters, all statistics are cleared.

Related Commands

- show debugging — views the enabled debugging operations.
- show ip bgp flap-statistics — views the BGP flap statistics.
- undebug all — disables all debugging operations.

clear ip bgp peer-group

Reset a peer-group’s BGP sessions.

Syntax

clear ip bgp peer-group peer-group-name

225
**Parameters**

**peer-group-name**
Enter the peer group name to reset the BGP sessions within that peer group.

**Command Modes**

EXEC Privilege

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

### debug ip bgp

Display all information on BGP, including BGP events, keepalives, notifications, and updates.

**Syntax**

debug ip bgp [ip-address | peer-group peer-group-name] [in | out]

To disable all BGP debugging, use the no debug ip bgp command.

**Parameters**

**ip-address**
Enter the IP address of the neighbor in dotted decimal format.

**peer-group peer-group-name**
Enter the keywords peer-group then the name of the peer group to debug.

**in**
(Optional) Enter the keyword in to view only information on inbound BGP routes.

**out**
(Optional) Enter the keyword out to view only information on outbound BGP routes.

**Command Modes**

EXEC Privilege

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

To view information on both incoming and outgoing routes, do not include the in and out parameters in the debugging command. The in and out parameters cancel each other; for example, if you enter the debug ip bgp in command and then enter the debug ip bgp out command, you do not see information on the incoming routes.

Entering a no debug ip bgp command removes all configured debug commands for BGP.

**Related Commands**

- debug ip bgp events — views information about BGP events.
- debug ip bgp keepalives — views information about BGP keepalives.
debug ip bgp notifications — views information about BGP notifications.

debug ip bgp updates — views information about BGP updates.

show debugging — views enabled debugging operations.

debug ip bgp dampening

View information on routes being dampened.

**Syntax**

debug ip bgp dampening [in | out]

To disable debugging, use the no debug ip bgp dampening command.

**Parameters**

- **in**  
  (OPTIONAL) Enter the keyword in to view only inbound dampened routes.

- **out**  
  (OPTIONAL) Enter the keyword out to view only outbound dampened routes.

**Command Modes**

EXEC Privilege

**Command History**

Version 9.2(0.0)  
Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**

- show debugging — view enabled debugging operations.
- show ip bgp dampened-paths — view BGP dampened routes.

debug ip bgp events

Display information on local BGP state changes and other BGP events.

**Syntax**

debug ip bgp [ip-address | peer-group peer-group-name] events [in | out]

To disable debugging, use the no debug ip bgp [ip-address | peer-group peer-group-name] events command.

**Parameters**

- **ip-address**  
  (OPTIONAL) Enter the IP address of the neighbor in dotted decimal format.
debug ip bgp keepalives

Display information about BGP keepalive messages.

Syntax

ddebug ip bgp [ip-address | peer-group peer-group-name] keepalives [in | out]

To disable debugging, use the no debug ip bgp [ip-address | peer-group peer-group-name] keepalives [in | out] command.

Parameters

- ip-address (OPTIONAL) Enter the IP address of the neighbor in dotted decimal format.
- peer-group peer-group-name (OPTIONAL) Enter the keyword peer-group then the name of the peer group.
- in (OPTIONAL) Enter the keyword in to view only inbound keepalive messages.
- out (OPTIONAL) Enter the keyword out to view only outbound keepalive messages.

Command Modes

- EXEC Privilege

Command History

- Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

To remove all configured debug commands for BGP, enter the no debug ip bgp command.
Usage Information
To remove all configured debug commands for BGP, enter the `no debug ip bgp` command.

dbg ip bgp notifications
Allows you to view information about BGP notifications received from neighbors.

Syntax
```
debug ip bgp [ip-address | peer-group peer-group-name] notifications [in | out]
```
To disable debugging, use the `no debug ip bgp [ip-address | peer-group peer-group-name] notifications [in | out]` command.

Parameters
- `ip-address`  
  (OPTIONAL) Enter the IP address of the neighbor in dotted decimal format.
- `peer-group`  
  (OPTIONAL) Enter the keyword `peer-group` then the name of the peer group.
- `peer-group-name`  
  (OPTIONAL) Enter the name of the peer group.
- `in`  
  (OPTIONAL) Enter the keyword `in` to view BGP notifications received from neighbors.
- `out`  
  (OPTIONAL) Enter the keyword `out` to view BGP notifications sent to neighbors.

Command Modes
EXEC Privilege

Command History
- Version 9.2(0.0)  
  Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
To remove all configured debug commands for BGP, enter the `no debug ip bgp` command.

dbg ip bgp soft-reconfiguration
Enable soft-reconfiguration debug.

Syntax
```
debug ip bgp {ip-address | peer-group-name} soft-reconfiguration
```
To disable, use the `no debug ip bgp {ip-address | peer-group-name} soft-reconfiguration` command.
Parameters

- **ip-address** (OPTIONAL) Enter the IP address of the neighbor in dotted decimal format.
- **peer-group-name** (OPTIONAL) Enter the name of the peer group to disable or enable all routers within the peer group.

Defaults

Disabled

Command Modes

EXEC Privilege

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

This command turns on BGP soft-reconfiguration inbound debugging. If no neighbor is specified, debug turns on for all neighbors.

**debug ip bgp updates**

Allows you to view information about BGP updates.

**Syntax**

debg ip bgp updates [in | out | prefix-list prefix-list-name]

To disable debugging, use the no debug ip bgp [ip-address | peer-group peer-group-name] updates [in | out] command.

**Parameters**

- **in** (OPTIONAL) Enter the keyword in to view only BGP updates received from neighbors.
- **out** (OPTIONAL) Enter the keyword out to view only BGP updates sent to neighbors.
- **prefix-list prefix-list-name** (OPTIONAL) Enter the keyword prefix-list then the name of an established prefix list. If the prefix list is not configured, the default is permit (to allow all routes).
- **ip-address** (OPTIONAL) Enter the IP address of the neighbor in dotted decimal format.
- **peer-group-name** (OPTIONAL) Enter the name of the peer group to disable or enable all routers within the peer group.

Command Modes

EXEC Privilege

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.
default-metric

Allows you to change the metric of redistributed routes to locally originated routes. Use this command with the redistribute command.

Syntax

```
default-metric number
```

To return to the default setting, use the
```
no default-metric
```
command.

Parameters

- `number` Enter a number as the metric to be assigned to routes from other protocols. The range is from 1 to 4294967295.

Defaults

- 0

Command Modes

- ROUTER BGP

Command History

- **Version 9.2(0.0)** Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The `default-metric` command in BGP sets the value of the BGP MULTI_EXIT_DISC (MED) attribute for redistributed routes only.

Related Commands

- `bgp always-compare-med` — enables comparison of all BGP MED attributes.
- `redistribute` — redistributes routes from other routing protocols into BGP.

description

Enter a description of the BGP routing protocol

Syntax

```
description {description}
```

To remove the description, use the
```
no description {description}
```
command.

Parameters

- `description` Enter a description to identify the BGP protocol (80 characters maximum).

Defaults

- none
### max-paths

Configure the maximum number of parallel routes (multipath support) BGP supports.

**Syntax**

```
max-paths {ebgp | ibgp} number
```

To return to the default values, enter the `no max-paths` command.

**Parameters**

- `ebgp`
  - Enter the keyword `ebgp` to enable multipath support for External BGP routes.
- `ibgp`
  - Enter the keyword `ibgp` to enable multipath support for Internal BGP routes.
- `number`
  - Enter a number as the maximum number of parallel paths.
  - The range is from 2 to 64.

**Defaults**

`none`

**Command Modes**

`ROUTER BGP`

**Command History**

- **Version 9.2(0.0)**
  - Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

If you enable this command, use the `clear ip bgp *` command to recompute the best path.

### neighbor activate

This command allows the specified neighbor/peer group to be enabled for the current AFI/SAFI (Address Family Identifier/Subsequent Address Family Identifier).

**Syntax**

```
neighbor [ip-address | peer-group-name] activate
```

To disable, use the `no neighbor [ip-address | peer-group-name] activate` command.
Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>ip-address</code></td>
<td>(OPTIONAL) Enter the IP address of the neighbor in dotted decimal format.</td>
</tr>
<tr>
<td><code>peer-group-name</code></td>
<td>(OPTIONAL) Enter the name of the peer group.</td>
</tr>
<tr>
<td><code>activate</code></td>
<td>Enter the keyword <code>activate</code> to enable the neighbor/peer group in the new AFI/SAFI.</td>
</tr>
</tbody>
</table>

Defaults

- Disabled

Command Modes

- `CONFIGURATION-ROUTER-BGP-ADDRESS FAMILY`

Command History

- `Version 9.2(0.0)` Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

By default, when you create a neighbor/peer group configuration in the Router BGP context, this enables IPv4/Unicast AFI/SAFI. When you use `activate` in the new context, the neighbor/peer group enables for AFI/SAFI.

**neighbor add-path**

This command allows the specified neighbor/peer group to send/receive multiple path advertisements.

**Syntax**

```
neighbor [ip-address | peer-group-name] add-path [send | receive | both] count
```

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>ip-address</code></td>
<td>(OPTIONAL) Enter the IP address of the neighbor in dotted decimal format.</td>
</tr>
<tr>
<td><code>peer-group-name</code></td>
<td>(OPTIONAL) Enter the name of the peer group.</td>
</tr>
<tr>
<td><code>send</code></td>
<td>Enter the keyword <code>send</code> to indicate that the system sends multiple paths to peers.</td>
</tr>
<tr>
<td><code>receive</code></td>
<td>Enter the keyword <code>receive</code> to indicate that the system accepts multiple paths from peers.</td>
</tr>
<tr>
<td><code>both</code></td>
<td>Enter the keyword <code>both</code> to indicate that the system sends and accepts multiple paths from peers.</td>
</tr>
<tr>
<td><code>count</code></td>
<td>Enter the number paths supported. The range is from 2 to 64.</td>
</tr>
</tbody>
</table>

Defaults

- `none`

Command Modes

- `CONFIGURATION-ROUTER-BGP-ADDRESS FAMILY`
neighbor advertisement-interval

Set the advertisement interval between BGP neighbors or within a BGP peer group.

Syntax
neighbor {ip-address | peer-group-name} advertisement-interval seconds

To return to the default value, use the no neighbor {ip-address | peer-group-name} advertisement-interval command.

Parameters
- **ip-address**: (OPTIONAL) Enter the IP address of the neighbor in dotted decimal format.
- **peer-group-name**: Enter the name of the peer group to set the advertisement interval for all routers in the peer group.
- **seconds**: Enter a number as the time interval, in seconds, between BGP advertisements. The range is from 0 to 600 seconds. The default is 5 seconds for internal BGP peers and 30 seconds for external BGP peers.

Defaults
- seconds = 5 seconds (internal peers)
- seconds = 30 seconds (external peers)

Command Modes
ROUTER BGP

Command History
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

neighbor advertisement-start

To send BGP routing updates, set the minimum interval before starting.

Syntax
neighbor {ip-address} advertisement-start seconds

To return to the default value, use the no neighbor {ip-address} advertisement-start command.
### Parameters

- **ip-address** *(OPTIONAL)* Enter the IP address of the neighbor in dotted decimal format.
- **seconds** Enter a number as the time interval, in seconds, before BGP route updates are sent. The range is from 0 to 3600 seconds.

### Defaults

- **none**

### Command Modes

- **ROUTER BGP**

### Command History

- **Version 9.2(0.0)** Introduced on the MXL 10/40GbE Switch IO Module.

---

### neighbor allowas-in

Set the number of times an AS number can occur in the AS path.

**Syntax**

```
neighbor {ip-address | peer-group-name} allowas-in number
```

To return to the default value, use the `no neighbor {ip-address | peer-group-name} allowas-in` command.

**Parameters**

- **ip-address** *(OPTIONAL)* Enter the IP address of the neighbor in dotted decimal format.
- **peer-group-name** Enter the name of the peer group to set the advertisement interval for all routers in the peer group.
- **number** Enter a number of times to allow this neighbor ID to use the AS path. The range is from 1 to 10.

**Defaults**

- **Not configured.**

### Command Modes

- **ROUTER BGP**

### Command History

- **Version 9.2(0.0)** Introduced on the MXL 10/40GbE Switch IO Module.

### Related Commands

- `bgp four-octet-as-support` — enables 4-byte support for the BGP process.
neighbor default-originate

Inject the default route to a BGP peer or neighbor.

Syntax

neighbor (ip-address | peer-group-name) default-originate
[route-map map-name]

To remove a default route, use the no neighbor (ip-address | peer-group-name) default-originate command.

Parameters

ip-address (OPTIONAL) Enter the IP address of the neighbor in dotted decimal format.

peer-group-name Enter the name of the peer group to set the default route of all routers in that peer group.

route-map (OPTIONAL) Enter the keyword route-map then the name of a configured route map.

Defaults Not configured.

Command Modes ROUTER BGP

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information If you apply a route map to a BGP peer or neighbor with the neighbor default-originate command configured, the software does not apply the set filters in the route map to that BGP peer or neighbor.

neighbor description

Assign a character string describing the neighbor or group of neighbors (peer group).

Syntax

neighbor (ip-address | peer-group-name) description text

To delete a description, use the no neighbor (ip-address | peer-group-name) description command.

Parameters

ip-address Enter the IP address of the neighbor in dotted decimal format.

peer-group-name Enter the name of the peer group.

text Enter a continuous text string up to 80 characters.

Defaults Not configured.
neighbor distribute-list

Distribute BGP information via an established prefix list.

Syntax

neighbor {ip-address | peer-group-name} distribute-list prefix-list-name {in | out}

To delete a neighbor distribution list, use the no neighbor {ip-address | peer-group-name} distribute-list prefix-list-name {in | out} command.

Parameters

- ip-address: Enter the IP address of the neighbor in dotted decimal format.
- peer-group-name: Enter the name of the peer group to apply the distribute list filter to all routers in the peer group.
- prefix-list-name: Enter the name of an established prefix list.
  If the prefix list is not configured, the default is permit (to allow all routes).
- in: Enter the keyword in to distribute only inbound traffic.
- out: Enter the keyword out to distribute only outbound traffic.

Defaults

Not configured.

Command Modes

ROUTER BGP

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

Other BGP filtering commands include: neighbor filter-list, ip as-path access-list, and neighbor route-map.

Related Commands

neighbor route-map — assigns a route map to a neighbor or peer group.
neighbor ebgp-multihop

Attempt and accept BGP connections to external peers on networks that are not directly connected.

Syntax

```
neighbor {ip-address | peer-group-name} ebgp-multihop [ttl]
```

To disallow and disconnect connections, use the `no neighbor {ip-address | peer-group-name} ebgp-multihop` command.

Parameters

- `ip-address` Enter the IP address of the neighbor in dotted decimal format.
- `peer-group-name` Enter the name of the peer group.
- `ttl` (OPTIONAL) Enter the number of hops as the Time to Live (ttl) value. The range is from 1 to 255. The default is `255`.

Defaults

Disabled.

Command Modes

- ROUTER BGP

Command History

`Version 9.2(0.0)` Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

To prevent loops, the `neighbor ebgp-multihop` command does not install the default routes of the multihop peer. Networks not directly connected are not considered valid for best-path selection.

neighbor fall-over

Enable or disable fast fall-over for BGP neighbors.

Syntax

```
neighbor {ipv4-address | peer-group-name} fall-over
```

To disable, use the `no neighbor {ipv4-address | peer-group-name} fall-over` command.

Parameters

- `ipv4-address` Enter the IP address of the neighbor in dotted decimal format.
- `peer-group-name` Enter the name of the peer group.

Defaults

Disabled.

Command Modes

- ROUTER BGP
neighbor graceful-restart

Enable graceful restart on a BGP neighbor.

Syntax

neighbor {ip-address | peer-group-name} graceful-restart [restart-time seconds] [stale-path-time seconds] [role receiver-only]

Parameters

- **ip-address**: Enter the IP address of the neighbor in dotted decimal format.
- **peer-group-name**: Enter the name of the peer group to apply the filter to all routers in the peer group.
- **restart-time seconds**: Enter the keyword restart-time then the maximum number of seconds to restart and bring-up all the peers. The range is from 1 to 3600 seconds. The default is 120 seconds.
- **stale-path-time seconds**: Enter the keyword stale-path-time then the maximum number of seconds to wait before restarting a peer’s stale paths. The default is 360 seconds.
- **role receiver-only**: Enter the keyword role receiver-only to designate the local router to support graceful restart as a receiver only.

Defaults

as above

Command Modes

ROUTER BGP

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

This feature advertises to BGP neighbors through a capability advertisement. In Receiver Only mode, BGP saves the advertised routes of peers that support this capability when they restart.
neighbor local-as

To accept external routes from neighbors with a local AS number in the AS number path, configure Internal BGP (IBGP) routers.

Syntax

```
neighbor {ip-address | peer-group-name} local-as as-number [no-prepend]
```

To return to the default value, use the `no neighbor {ip-address | peer-group-name} local-as` command.

Parameters

- **ip-address**: Enter the IP address of the neighbor in dotted decimal format.
- **peer-group-name**: Enter the name of the peer group to set the advertisement interval for all routers in the peer group.
- **as-number**: Enter the AS number to reset all neighbors belonging to that AS. The range is from 0 to 65535 (2 byte), from 1 to 4294967295 (4 byte) or from 0.1 to 65535.65535 (dotted format).
- **no prepend**: Specifies that local AS values do not prepend to announcements from the neighbor.

Defaults

Not configured.

Command Modes

- ROUTER BGP

Command History

- Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Related Commands

- `bgp four-octet-as-support` — enables 4-byte support for the BGP process.

neighbor maximum-prefix

Control the number of network prefixes received.

Syntax

```
neighbor {ip-address | peer-group-name} maximum-prefix maximum [threshold] [warning-only]
```

To return to the default values, use the `no neighbor {ip-address | peer-group-name} maximum-prefix maximum` command.

Parameters

- **ip-address**: Enter the IP address of the neighbor in dotted decimal format.
- **peer-group-name**: Enter the name of the peer group.
maximum Enter a number as the maximum number of prefixes allowed for this BGP router. The range is from 1 to 4294967295.

threshold (OPTIONAL) Enter a number to be used as a percentage of the maximum value. When the number of prefixes reaches this percentage of the maximum value, the software sends a message. The range is from 1 to 100 percent. The default is 75.

warning-only (OPTIONAL) Enter the keyword warning-only to set the router to send a log message when the maximum value is reached. If this parameter is not set, the router stops peering when the maximum number of prefixes is reached.

Defaults threshold = 75

Command Modes ROUTER BGP

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

If you configure the neighbor maximum-prefix command and the neighbor receives more prefixes than the neighbor maximum-prefix command configuration allows, the neighbor goes down and the show ip bgp summary command displays (prfxd) in the State/PfxRcd column for that neighbor. The neighbor remains down until you enter the clear ip bgp command for the neighbor or the peer group to which the neighbor belongs or you enter the neighbor shutdown and neighbor no shutdown commands.

Related Commands

show ip bgp summary — displays the current BGP configuration.

neighbor password

Enable message digest 5 (MD5) authentication on the TCP connection between two neighbors.

Syntax

neighbor {ip-address | peer-group-name} password [encryption-type] password

To delete a password, use the no neighbor {ip-address | peer-group-name} password command.

Parameters

Command Modes

ip-address Enter the IP address of the router to be included in the peer group.

peer-group-name Enter the name of a configured peer group.

ehcryption-type (OPTIONAL) Enter 7 as the encryption type for the password entered. 7 means that the password is encrypted and hidden.
**password**

Enter a text string up to 80 characters long. The first character of the password must be a letter.

You cannot use spaces in the password.

**Defaults**

Not configured.

**Command Modes**

ROUTER BGP

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Configure the same password on both BGP peers or a connection does not occur. When you configure MD5 authentication between two BGP peers, each segment of the TCP connection between them is verified and the MD5 digest is checked on every segment sent on the TCP connection.

Configuring a password for a neighbor causes an existing session to be torn down and a new one established.

If you specify a BGP peer group by using the peer-group-name parameter, all the members of the peer group inherit the characteristic configured with this command.

If you configure a password on one neighbor, but you have not configured a password for the neighboring router, the following message appears on the console while the routers attempt to establish a BGP session between them:

```
%RPM0-P:RP1 %KERN-6-INT: No BGP MD5 from [peer's IP address]:179 to [local router's IP address]:65524
```

Also, if you configure different passwords on the two routers, the following message appears on the console:

```
%RPM0-P:RP1 %KERN-6-INT: BGP MD5 password mismatch from [peer's IP address]:11502 to [local router's IP address]:179
```

**neighbor peer-group (assigning peers)**

Allows you to assign one peer to an existing peer group.

**Syntax**

```
neighbor ip-address peer-group peer-group-name
```

To delete a peer from a peer group, use the no neighbor ip-address peer-group peer-group-name command.

**Parameters**

- **ip-address**
  
Enter the IP address of the router to be included in the peer group.
Enter the name of a configured peer group.

Defaults
Not configured.

Command Modes
ROUTER BGP

Command History
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
You can assign up to 256 peers to one peer group.

When you add a peer to a peer group, it inherits all the peer group’s configured parameters. A peer cannot become part of a peer group if any of the following commands are configured on the peer:

- neighbor advertisement-interval
- neighbor distribute-list
- neighbor route-map
- neighbor route-reflector-client
- neighbor shutdown

A neighbor may keep its configuration after it was added to a peer group if the neighbor’s configuration is more specific than the peer group’s, and the neighbor’s configuration does not affect outgoing updates.

A peer group must exist before you add a peer to it. If the peer group is disabled (shutdown) the peers within the group are also disabled (shutdown).

Related Commands
- clear ip bgp — resets BGP sessions.
- neighbor peer-group (creating group) — creates a peer group.
- show ip bgp peer-group — views BGP peers.
- show ip bgp neighbors — views BGP neighbors configurations.

neighbor peer-group (creating group)
Allows you to create a peer group and assign it a name.

Syntax
neighbor peer-group-name peer-group

To delete a peer group, use the no neighbor peer-group-name peer-group command.
**neighbor peer-group passive**

Enable passive peering on a BGP peer group, that is, the peer group does not send an OPEN message, but responds to one.

**Syntax**

```plaintext
neighbor peer-group-name peer-group passive [limit sessions]
```

To delete a passive peer-group, use the `no neighbor peer-group-name peer-group passive` command.

**Parameters**

- `peer-group-name` Enter a text string up to 16 characters long as the name of the peer group.
- `limit` (Optional) Enter the keyword `limit` to constrain the numbers of sessions for this peer-group. The range is from 2 to 256. The default is 256.

**Defaults**

- Not configured.

**Command Modes**

- ROUTER BGP

**Command History**

- **Version 9.2(0.0)** Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

After you configure a peer group as passive, assign it a subnet using the `neighbor soft-reconfiguration inbound` command.
For passive eBGP limits, the Remote AS must be different from the AS for this neighbor.

Related Commands

- `neighbor soft-reconfiguration inbound` — assigns a subnet to a dynamically configured BGP neighbor.
- `neighbor remote-as` — assigns an indirectly connected AS to a neighbor or peer group.

**neighbor remote-as**

Create and specify the remote peer to the BGP neighbor.

**Syntax**

```
neighbor {ip-address | peer-group-name} remote-as number
```

To delete a remote AS entry, use the `no neighbor {ip-address | peer-group-name} remote-as number` command.

**Parameters**

- `ip-address` — Enter the IP address of the neighbor to enter the remote AS in its routing table.
- `peer-group-name` — Enter the name of the peer group to enter the remote AS into routing tables of all routers within the peer group.
- `number` — Enter a number of the AS. The range is from 0 to 65535 (2 byte) or from 1 to 4294967295 (4 byte).

**Defaults**

Not configured.

**Command Modes**

ROUTER BGP

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

To accept 4-byte formats before entering a 4 byte AS Number, configure your system. If the `number` parameter is the same as the AS number used in the `router bgp` command, the remote AS entry in the neighbor is considered an internal BGP peer entry.

This command creates a peer and the newly created peer is disabled (Shutdown).

**Related Commands**

- `router bgp` — enters ROUTER BGP mode and configures routes in an AS.
- `bgp four-octet-as-support` — enables 4-byte support for the BGP process.
neighbor remove-private-as

Remove private AS numbers from the AS-PATH of outgoing updates.

Syntax

```plaintext
neighbor {ip-address | peer-group-name} remove-private-as
```

To return to the default, use the `no neighbor {ip-address | peer-group-name} remove-private-as` command.

Parameters

- `ip-address` Enter the IP address of the neighbor to remove the private AS numbers.
- `peer-group-name` Enter the name of the peer group to remove the private AS numbers.

Defaults

Disabled (that is, private AS number are not removed).

Command Modes

- ROUTER BGP

Command History

- **Version 9.2(0.0)** Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

- Applies to EBGP neighbors only.

- Configure your system to accept 4-byte formats before entering a 4 byte AS Number.

- If the AS-PATH contains both public and private AS number or contains AS numbers of an EBGP neighbor, the private AS numbers are not removed.

- If a confederation contains private AS numbers in its AS-PATH, the software removes the private AS numbers only if they follow the confederation numbers in the AS path.

- Private AS numbers are from 64512 to 65535 (2 byte).

neighbor route-map

Apply an established route map to either incoming or outbound routes of a BGP neighbor or peer group.

Syntax

```plaintext
neighbor {ip-address | peer-group-name} route-map map-name {in | out}
```

To remove the route map, use the `no neighbor {ip-address | peer-group-name} route-map map-name {in | out}` command.

Parameters

- `ip-address` Enter the IP address of the neighbor in dotted decimal format.
**neighbor route-reflector-client**

Configure the router as a route reflector and the specified neighbors as members of the cluster.

**Syntax**

```
neighbor {ip-address | peer-group-name} route-reflector-client
```

To remove one or more neighbors from a cluster, use the `no neighbor {ip-address | peer-group-name} route-reflector-client` command. If you delete all members of a cluster, you also delete the route-reflector configuration on the router.

**Parameters**

- **ip-address**
  - Enter the IP address of the neighbor in dotted decimal format.

- **peer-group-name**
  - Enter the name of the peer group.
  
  All routers in the peer group receive routes from a route reflector.

**Defaults**

```
Not configured.
```
A route reflector reflects routes to the neighbors assigned to the cluster. Neighbors in the cluster do not need not to be fully meshed. By default, when you use `no route reflector`, the internal BGP (IBGP) speakers in the network must be fully meshed.

The first time you enter this command, the router configures as a route reflector and the specified BGP neighbors configure as clients in the route-reflector cluster.

When you remove all clients of a route reflector using the `no neighbor route-reflector-client` command, the router no longer functions as a route reflector.

If the clients of a route reflector are fully meshed, you can configure the route reflector to not reflect routes to specified clients by using the `no bgp client-to-client reflection` command.

Related Commands

- `bgp client-to-client reflection` — enables route reflection between the route reflector and the clients.

### neighbor shutdown

Disable a BGP neighbor or peer group.

**Syntax**

```
neighbor {ip-address | peer-group-name} shutdown
```

To enable a disabled neighbor or peer group, use the `neighbor {ip-address | peer-group-name} no shutdown` command.

**Parameters**

- `ip-address` Enter the IP address of the neighbor in dotted decimal format.
- `peer-group-name` Enter the name of the peer group to disable or enable all routers within the peer group.

**Defaults**

Enabled (that is, BGP neighbors and peer groups are disabled.)

**Command Modes**

ROUTER BGP

**Command History**

Version 9.2(0.0) Introduced on the M XL 10/40GbE Switch IO Module.
Usage Information

Peers that are enabled within a peer group are disabled when their peer group is disabled.

The `neighbor shutdown` command terminates all BGP sessions on the BGP neighbor or BGP peer group. Use this command with caution as it terminates the specified BGP sessions. When a neighbor or peer group is shut down, use the `show ip bgp summary` command to confirm its status.

Related Commands

- `show ip bgp summary` — displays the current BGP configuration.
- `show ip bgp neighbors` — displays the current BGP neighbors.

neighbor soft-reconfiguration inbound

Enable soft-reconfiguration for BGP.

Syntax

```plaintext
neighbor {ip-address | peer-group-name} soft-reconfiguration inbound
```

To disable, use the `no neighbor {ip-address | peer-group-name} soft-reconfiguration inbound` command.

Parameters

- **ip-address**
  - Enter the IP address of the neighbor in dotted decimal format.

- **peer-group-name**
  - Enter the name of the peer group to disable or enable all routers within the peer group.

Defaults

Disabled

Command Modes

ROUTER BGP

Command History

Version 9.2(0.0)

Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

This command enables soft-reconfiguration for the BGP neighbor specified. BGP stores all the updates the neighbor receives but does not reset the peer-session.

⚠️ **CAUTION:** Inbound update storage is a memory-intensive operation. The entire BGP update database from the neighbor is stored in memory regardless of the inbound policy results applied on the neighbor.

📝 **NOTE:** This command is supported in BGP Router Configuration mode for IPv4 Unicast address only.

Related Commands

- `show ip bgp neighbors` — displays routes received by a neighbor.
neighbor timers

Set keepalive and hold time timers for a BGP neighbor or a peer group.

Syntax

```
neighbor {ip-address | peer-group-name} timers keepalive holdtime
```

To return to the default values, use the `no neighbor {ip-address | peer-group-name} timers` command.

Parameters

- **ip-address**: Enter the IP address of the peer router in dotted decimal format.
- **peer-group-name**: Enter the name of the peer group to set the timers for all routers within the peer group.
- **keepalive**: Enter a number for the time interval, in seconds, between keepalive messages sent to the neighbor routers. The range is from 1 to 65535. The default is 60 seconds.
- **holdtime**: Enter a number for the time interval, in seconds, between the last keepalive message and declaring the router dead. The range is from 3 to 65535. The default is 180 seconds.

Defaults

- **keepalive** = 60 seconds
- **holdtime** = 180 seconds

Command Modes

ROUTER BGP

Command History

- **Version 9.2(0.0)**: Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

Timer values configured with the `neighbor timers` command override the timer values configured with any other command.

When two neighbors, configured with different keepalive and holdtime values, negotiate for new values, the resulting values are as follows:

- the lower of the holdtime value is the new holdtime value, and
- whichever is the lower value: one-third of the new holdtime value, or the configured keepalive value, is the new keepalive value.

neighbor update-source

Enable the software to use Loopback interfaces for TCP connections for BGP sessions.

Syntax

```
neighbor {ip-address | peer-group-name} update-source interface
```
To use the closest interface, use the `no neighbor {ip-address | peer-group-name} update-source interface` command.

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>ip-address</code></td>
<td>Enter the IP address of the peer router in dotted decimal format.</td>
</tr>
<tr>
<td><code>peer-group-name</code></td>
<td>Enter the name of the peer group to disable all routers within the peer group.</td>
</tr>
<tr>
<td><code>interface</code></td>
<td>Enter the keyword <code>loopback</code> then a number of the Loopback interface. The range is from 0 to 16383.</td>
</tr>
</tbody>
</table>

**Defaults**

Not configured.

**Command Modes**

`ROUTER BGP`

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

Loopback interfaces are up constantly and the BGP session may need one interface constantly up to stabilize the session. The `neighbor update-source` command is not necessary for directly connected internal BGP sessions.

### neighbor weight

Assign a weight to the neighbor connection, which is used to determine the best path.

**Syntax**

```
neighbor {ip-address | peer-group-name} weight weight
```

To remove a weight value, use the `no neighbor {ip-address | peer-group-name} weight` command.

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>ip-address</code></td>
<td>Enter the IP address of the peer router in dotted decimal format.</td>
</tr>
<tr>
<td><code>peer-group-name</code></td>
<td>Enter the name of the peer group to disable all routers within the peer group.</td>
</tr>
<tr>
<td><code>weight</code></td>
<td>Enter a number as the weight. The range is from 0 to 65535. The default is 0.</td>
</tr>
</tbody>
</table>

**Defaults**

0

**Command Modes**

`ROUTER BGP`

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.
Usage Information

In the system best path selection process, the path with the highest weight value is preferred.

**NOTE:** In the system best-path selection process, the path with the highest weight value is preferred.

If you configure the `set weight` command in a route map applied to this neighbor, the weight set in that command overrides the weight set in the `neighbor weight` command.

**network**

Specify the networks for the BGP process and enter them in the BGP routing table.

**Syntax**

```
network ip-address mask [route-map map-name]
```

To remove a network, use the `no network ip-address mask [route-map map-name]` command.

**Parameters**

- `ip-address` Enter an IP address in dotted decimal format of the network.
- `mask` Enter the mask of the IP address in the slash prefix length format (for example, /24).
  - The mask appears in command outputs in dotted decimal format (A.B.C.D).
- `route-map map-name` (OPTIONAL) Enter the keyword `route-map` then the name of an established route map.
  - Only the following ROUTE-MAP mode commands are supported:
    - `match ip address`
    - `set metric`
    - `set tag`
  - If the route map is not configured, the default is `deny` (to drop all routes).

**Defaults**

- Not configured.

**Command Modes**

- ROUTER BGP

**Command History**

- *Version 9.2(0.0)*
  - Introduced on the MxL 10/40GbE Switch IO Module.
Usage Information
The system software resolves the network address the network command configures with the routes in the main routing table to ensure that the networks are reachable using non-BGP routes and non-default routes.

Related Commands
redistribute — redistributes routes into BGP.

network backdoor
Specify this IGP route as the preferred route.

Syntax
network ip-address mask backdoor
To remove a network, use the no network ip-address mask backdoor command.

Parameters
ip-address Enter an IP address in dotted decimal format of the network.
mask Enter the mask of the IP address in the slash prefix length format (for example, /24).
The mask appears in command outputs in dotted decimal format (A.B.C.D).

Defaults
Not configured.

Command Modes
ROUTER BGP

Command History
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
Although the system does not generate a route due to the backdoor config, there is an option for injecting/sourcing a local route in the presence of network backdoor config on a learned route.

redistribute
Redistribute routes into BGP.

Syntax
redistribute {connected | static} [route-map map-name]
To disable redistribution, use the no redistribution {connected | static} command.

Parameters
connected Enter the keyword connected to redistribute routes from physically connected interfaces.
static

Enter the keyword static to redistribute manually configured routes.

These routes are treated as incomplete routes.

route-map

(map-name)

(Optional) Enter the keyword route-map then the name of an established route map.

Only the following ROUTE-MAP mode commands are supported:

- match ip address
- set metric
- set tag

If the route map is not configured, the default is deny (to drop all routes).

Defaults

Not configured.

Command Modes

ROUTER BGP

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

With the Dell Networking OS version 8.3.1.0 and later, you can use the redistribute command to advertise the IGP cost as the MED on redistributed routes. When you set the route-map with metric-type internal and applied outbound to an EBGP peer/peer-group, the advertised routes corresponding to those peer/peer-groups have the IGP cost set as MED.

If you do not configure the default-metric command, in addition to the redistribute command, or there is no route map to set the metric, the metric for redistributed static and connected is "0".

To redistribute the default route (0.0.0.0/0), configure the neighbor default-origin command.

Related Commands

neighbor default-origin — injects the default route.

redistribute ospf

Redistribute OSPF routes into BGP.

Syntax

redistribute ospf process-id [[match external {1 | 2}] [match internal]] [route-map map-name]
To stop redistribution of OSPF routes, use the `no redistribute ospf process-id` command.

<table>
<thead>
<tr>
<th>Parameters</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>process-id</code></td>
<td>Enter the number of the OSPF process. The range is from 1 to 65535.</td>
</tr>
<tr>
<td><code>match external</code></td>
<td>(OPTIONAL) Enter the keywords <code>match external</code> to redistribute OSPF external routes. You can specify 1 or 2 to redistribute those routes only.</td>
</tr>
<tr>
<td><code>match internal</code></td>
<td>(OPTIONAL) Enter the keywords <code>match internal</code> to redistribute OSPF internal routes only.</td>
</tr>
<tr>
<td><code>route-map</code></td>
<td>(OPTIONAL) Enter the keywords <code>route-map</code> then the name of a configured route map.</td>
</tr>
<tr>
<td><code>map-name</code></td>
<td></td>
</tr>
</tbody>
</table>

**Defaults**

Not configured.

**Command Modes**

ROUTER BGP

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

With the Dell Networking OS version 8.3.1.0 and later, you can use the `redistribute` command to advertise the IGP cost as the MED on redistributed routes. When you set the route-map with metric-type internal and apply outbound to an EBGP peer/peer-group, the advertised routes corresponding to those peer/peer-groups have the IGP cost set as MED.

When you enter the `redistribute isis process-id` command without any other parameters, the system redistributes all OSPF internal routes, external type 1 routes, and external type 2 routes. RFC does not support this feature.

**router bgp**

To configure and enable BGP, enter ROUTER BGP mode.

**Syntax**

```
router bgp as-number
```

To disable BGP, use the `no router bgp as-number` command.

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>as-number</code></td>
<td>Enter the AS number. The range is from 1 to 65535 (2 byte), from 1 to 4294967295 (4 byte), or from 0.1 to 65535.65535 (dotted format).</td>
</tr>
</tbody>
</table>

**Defaults**

Not enabled.
show capture bgp-pdu neighbor

Display BGP packet capture information for an IPv4 address on the system.

Syntax

show capture bgp-pdu neighbor ipv4-address

Parameters

ipv4-address

Enter the IPv4 address (in dotted decimal format) of the BGP neighbor to display packet information for that address.

Command Modes

EXEC Privilege

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Example

Dell(conf-router_bgp)#show capture bgp-pdu neighbor 20.20.20.2

Incoming packet capture enabled for BGP neighbor 20.20.20.2
Available buffer size 40958758, 26 packet(s) captured using 680 bytes

PDU[1] : len 101, captured 00:34:51 ago

PDU[2] : len 19, captured 00:34:51 ago

PDU[3] : len 19, captured 00:34:51 ago

[. . .]

Outgoing packet capture enabled for BGP neighbor 20.20.20.2
Available buffer size 40958758, 27 packet(s) captured using 562 bytes

PDU[1] : len 41, captured 00:34:52 ago

PDU[2] : len 21, captured 00:34:52 ago

PDU[3] : len 21, captured 00:34:52 ago

[. . .]
show config

View the current ROUTER BGP configuration.

Syntax

```
show config
```

Command Modes

ROUTER BGP

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Example

```
Dell(conf-router_bgp)#show config
!
router bgp 45
neighbor suzanne peer-group
neighbor suzanne no shutdown
neighbor sara peer-group
neighbor sara shutdown
neighbor 13.14.15.20 peer-group suzanne
neighbor 13.14.15.20 shutdown
neighbor 123.34.55.123 peer-group suzanne
neighbor 123.34.55.123 shutdown
Dell(conf-router_bgp)#
```

Related Commands

- `capture bgp-pdu max-buffer-size` — specifies a size for the capture buffer.

show ip bgp

View the current BGP IPv4 routing table for the system.

Syntax

```
show ip bgp [ipv4 unicast] [network [network-mask] [longer-prefixes]]
```

Parameters

- `ipv4 unicast` (OPTIONAL) Enter the keywords ipv4 unicast to view information only related to ipv4 unicast routes.
(OPTIONAL) Enter the network address (in dotted decimal format) of the BGP network to view information only on that network.

(network-mask)

(Optional) Enter the network mask (in slash prefix format) of the BGP network address.

(longer-prefixes)

(Optional) Enter the keywords longer-prefixes to view all routes with a common prefix.

Command Modes

- EXEC
- EXEC Privilege

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

When you enable the bgp non-deterministic-med command, the show ip bgp command output for a BGP route does not list the INACTIVE reason.

The following describes the show ip bgp command shown in the following example.

Field | Description
--- | ---
Network | Displays the destination network prefix of each BGP route.
Next Hop | Displays the next hop address of the BGP router. If 0.0.0.0 is listed in this column, then local routes exist in the routing table.
Metric | Displays the BGP route’s metric, if assigned.
LocPrf | Displays the BGP LOCAL_PREF attribute for the route.
Weight | Displays the route’s weight.
Path | Lists all the ASs the route passed through to reach the destination network.

Example

```
Dell>show ip bgp
BGP table version is 847562, local router ID is 63.114.8.131
Status codes: s suppressed, d damped, h history, * valid, > best
Path source: I - internal, a - aggregate, c - confed-external,
r - redistributed, n - network
Origin codes: i - IGP, e - EGP, ? - incomplete

  Network     Next Hop     Metric  LocPrf  Weight Path
  *> 0.0.0.0/0  63.114.8.33         0 18508  i
  *  3.0.0.0/8  63.114.8.33         0 18508 209
  701 80 i
  *> 63.114.8.33                  0 18508 701 80
  i
  *> 3.3.0.0/16  0.0.0.0       22      32768 ?
     63.114.8.35                  0 18508 ?
  *> 4.0.0.0/8  63.114.8.33                  0 18508 701  i
  *> 4.2.49.12/30  63.114.8.33                  0 18508 209  i
  *  4.17.250.0/24  63.114.8.33                  0 18508 209
```
show ip bgp cluster-list

View BGP neighbors in a specific cluster.

**Syntax**

```
show ip bgp [ipv4 unicast] cluster-list [cluster-id]
```

**Parameters**

- `ipv4 unicast` (OPTIONAL) Enter the keywords `ipv4 unicast` to view information only related to ipv4 unicast routes.
- `cluster-id` (OPTIONAL) Enter the cluster id in dotted decimal format. The range is 1 — 4294967295.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40Gbe Switch IO Module.

**Usage Information**

The following describes the `show ip bgp cluster-list` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Network</td>
<td>Displays the destination network prefix of each BGP route.</td>
</tr>
<tr>
<td>Next Hop</td>
<td>Displays the next hop address of the BGP router. If 0.0.0.0 is listed in this column, then local routes exist in the routing table.</td>
</tr>

</tbody>
</table>

**show ip bgp community**

View information on all routes with Community attributes or view specific BGP community groups.

**Syntax**

show ip bgp [ipv4 unicast] community [community-number] [local-as] [no-export] [no-advertise]

**Parameters**

- **ipv4 unicast** (OPTIONAL) Enter the keywords ipv4 unicast to view information only related to ipv4 unicast routes.
- **community-number** Enter the community number in AA:NN format where AA is the AS number (2 bytes) and NN is a value specific to that autonomous system.
You can specify up to eight community numbers to view information on those community groups.

**local-AS**

Enter the keywords `local-AS` to view all routes with the COMMUNITY attribute of NO_EXPORT_SUBCONFED.

All routes with the NO_EXPORT_SUBCONFED (0xFFFFFF03) community attribute must not be advertised to external BGP peers.

**no-advertise**

Enter the keywords `no-advertise` to view all routes containing the well-known community attribute of NO_ADVERTISE.

All routes with the NO_ADVERTISE (0xFFFFFF02) community attribute must not be advertised to other BGP peers.

**no-export**

Enter the keywords `no-export` to view all routes containing the well-known community attribute of NO_EXPORT.

All routes with the NO_EXPORT (0xFFFFFF01) community attribute must not be advertised outside a BGP confederation boundary.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

To view the total number of COMMUNITY attributes found, use the `show ip bgp summary` command. The text line above the route table states the number of COMMUNITY attributes found.

The `show ip bgp community` command without any parameters lists BGP routes with at least one BGP community attribute and the output is the same as for the `show ip bgp` command output.

The following describes the `show ip bgp community` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Network</td>
<td>Displays the destination network prefix of each BGP route.</td>
</tr>
<tr>
<td>Next Hop</td>
<td>Displays the next hop address of the BGP router. If 0.0.0.0 is listed in this column, then local routes exist in the routing table.</td>
</tr>
<tr>
<td>Field</td>
<td>Description</td>
</tr>
<tr>
<td>--------</td>
<td>-------------</td>
</tr>
<tr>
<td>Metric</td>
<td>Displays the BGP route’s metric, if assigned.</td>
</tr>
<tr>
<td>LocPrf</td>
<td>Displays the BGP LOCAL_PREF attribute for the route.</td>
</tr>
<tr>
<td>Weight</td>
<td>Displays the route’s weight.</td>
</tr>
<tr>
<td>Path</td>
<td>Lists all the ASs the route passed through to reach the destination network.</td>
</tr>
</tbody>
</table>

**Example**

Dell>show ip bgp community
BGP table version is 3762622, local router ID is 63.114.8.48
Status codes: s suppressed, d damped, h history, * valid, > best
Path source: I - internal, a - aggregate, c - confed-external, r - redistributed, n - network
Origin codes: i - IGP, e - EGP, ? - incomplete

--More--
show ip bgp community-list

View routes that a specific community list affects.

Syntax

```
show ip bgp [ipv4 unicast] community-list community-list-name
  [exact-match]
```

Parameters

- **ipv4 unicast**: (OPTIONAL) Enter the keywords `ipv4 unicast` to view information only related to ipv4 unicast routes.
- **community-list-name**: Enter the name of a configured IP community list (maximum 140 characters).
- **exact-match**: Enter the keyword for an exact match of the communities.

Command Modes

- EXEC
- EXEC Privilege

Command History

- **Version 9.2(0.0)**: Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The `show ip bgp community-list` command without any parameters lists BGP routes matching the Community List and the output is the same as for the `show ip bgp` command output.

The following describes the `show ip bgp community-list pass` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Network</td>
<td>Displays the destination network prefix of each BGP route.</td>
</tr>
<tr>
<td>Next Hop</td>
<td>Displays the next hop address of the BGP router. If 0.0.0.0 is listed in this column, then local routes exist in the routing table.</td>
</tr>
<tr>
<td>Metric</td>
<td>Displays the BGP route’s metric, if assigned.</td>
</tr>
<tr>
<td>LocPrf</td>
<td>Displays the BGP LOCAL_PREF attribute for the route.</td>
</tr>
<tr>
<td>Weight</td>
<td>Displays the route’s weight.</td>
</tr>
<tr>
<td>Path</td>
<td>Lists all the ASs the route passed through to reach the destination network.</td>
</tr>
</tbody>
</table>

Example

```
Dell#show ip bgp community-list pass
BGP table version is 0, local router ID is 10.101.15.13
Status codes: s suppressed, d damped, h history, * valid, > best
Path source: I - internal, a - aggregate, c - confed-external, r - redistributed, n - network
Origin codes: i - IGP, e - EGP, ? - incomplete
```
show ip bgp dampened-paths

View BGP routes that are dampened (non-active).

Syntax

show ip bgp [ipv4 unicast] dampened-paths

Command Modes

• EXEC
• EXEC Privilege

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The following describes the show ip bgp damp command shown in the following example.

Field Description
Network Displays the network ID to which the route is dampened.
From Displays the IP address of the neighbor advertising the dampened route.
Reuse Displays the hour:minutes:seconds until the dampened route is available.
Path Lists all the ASs the dampened route passed through to reach the destination network.

Example

Dell>show ip bgp dampened-paths
BGP table version is 210708, local router ID is 63.114.8.2
Status codes: s suppressed, d damped, h history, * valid, > best
Path source: I - internal, a - aggregate, c - confed-external,
r - redistributed, n - network
Origin codes: i - IGP, e - EGP, ? - incomplete

Network From Reuse Path
Dell>

265
show ip bgp extcommunity-list

View information on all routes with Extended Community attributes.

Syntax

show ip bgp [ipv4 unicast] extcommunity-list [list name]

Parameters

ipv4 unicast (OPTIONAL) Enter the keywords ipv4 unicast to view information only related to ipv4 unicast routes.
list name Enter the extended community list name you wish to view. The range is 140 characters.

Command Modes

- EXEC
- EXEC Privilege

266
show ip bgp filter-list

View the routes that match the filter lists.

Syntax

```
show ip bgp [ipv4 unicast] filter-list as-path-name
```

Parameters

- `ipv4 unicast` (OPTIONAL) Enter the keywords `ipv4 unicast` to view information only related to ipv4 unicast routes.
- `as-path-name` Enter an AS-PATH access list name. The range is 140 characters.

Command Modes

- EXEC
- EXEC Privilege

Command History

- **Version 9.2(0.0)** Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The following describes the `show ip bgp filter-list hello` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Path source codes</td>
<td>Lists the path sources shown to the right of the last AS number in the Path column:</td>
</tr>
<tr>
<td></td>
<td>• <code>i</code> = internal route entry</td>
</tr>
<tr>
<td></td>
<td>• <code>a</code> = aggregate route entry</td>
</tr>
<tr>
<td></td>
<td>• <code>c</code> = external confederation route entry</td>
</tr>
<tr>
<td></td>
<td>• <code>n</code> = network route entry</td>
</tr>
<tr>
<td></td>
<td>• <code>r</code> = redistributed route entry</td>
</tr>
</tbody>
</table>
### show ip bgp flap-statistics

View flap statistics on BGP routes.

**Syntax**

```
show ip bgp [ipv4 unicast] flap-statistics [ip-address [mask]]
[filter-list as-path-name] [regexp regular-expression]
```

**Parameters**

- `ipv4 unicast` *(OPTIONAL)* Enter the keywords `ipv4 unicast` to view information only related to ipv4 unicast routes.

---

Example:

```bash
Dell#show ip bgp filter-list hello
BGP table version is 80227, local router ID is 120.1.1.1
Status codes: s suppressed, d damped, h history, * valid, > best
Path source: I - internal, a - aggregate, c - confed-external,
r - redistributed, n - network
Origin codes: i - IGP, e - EGP, ? - incomplete

</table>
```

Dell#
ip-address

(OPTIONAL) Enter the IP address (in dotted decimal format) of the BGP network to view information only on that network.

mask

(OPTIONAL) Enter the network mask (in slash prefix (/x) format) of the BGP network address.

filter-list as-path-name

(OPTIONAL) Enter the keyword filter-list then the name of a configured AS-PATH ACL. The range is 140 characters.

regexp regular-expression

Enter a regular expression then use one or a combination of the following characters to match. The range is 256 characters.

- . = (period) any single character (including a white space).
- * = (asterisk) the sequences in a pattern (zero or more sequences).
- + = (plus) the sequences in a pattern (one or more sequences).
- ? = (question mark) sequences in a pattern (either zero or one sequences).

NOTE: Enter an escape sequence (CTRL+v) prior to entering the ? regular expression.

- [ ] = (brackets) a range of single-character patterns.
- ( ) = (parenthesis) groups a series of pattern elements to a single element.
- { } = (braces) minimum and the maximum match count.
- ^ = (caret) the beginning of the input string. If you use the caret at the beginning of a sequence or range, it matches on everything BUT the characters specified.
- $ = (dollar sign) the end of the output string.

Command Modes

- EXEC
- EXEC Privilege

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The following describes the show ip bgp flap command shown in the following example.

Field | Description
--- | ---
Network | Displays the network ID to which the route is flapping.
From | Displays the IP address of the neighbor advertising the flapping route.
Field | Description
--- | ---
Flaps | Displays the number of times the route flapped.
Duration | Displays the hours:minutes:seconds since the route first flapped.
Reuse | Displays the hours:minutes:seconds until the flapped route is available.
Path | Lists all the ASs the flapping route passed through to reach the destination network.

**Example**

```
Dell>show ip bgp flap-statistics
BGP table version is 210851, local router ID is 63.114.8.2
Status codes: s suppressed, d damped, h history, * valid, > best
Path source: I - internal, a - aggregate, c - confed-external, r redistributed, n - network
Origin codes: i - IGP, e - EGP, ? - incomplete

<table>
<thead>
<tr>
<th>Network</th>
<th>From</th>
<th>Flaps</th>
<th>Duration</th>
<th>Reuse</th>
</tr>
</thead>
<tbody>
<tr>
<td>Path</td>
<td>Dell</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
```

**show ip bgp inconsistent-as**

View routes with inconsistent originating autonomous system (AS) numbers; that is, prefixes that are announced from the same neighbor AS but with a different AS-Path.

**Syntax**

```
show ip bgp [ipv4 unicast] inconsistent-as
```

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

The following describes the `show ip bgp inconsistent-as` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Network</td>
<td>Displays the destination network prefix of each BGP route.</td>
</tr>
<tr>
<td>Next Hop</td>
<td>Displays the next hop address of the BGP router. If 0.0.0.0 is listed in this column, then local routes exist in the routing table.</td>
</tr>
<tr>
<td>Metric</td>
<td>Displays the BGP route’s metric, if assigned.</td>
</tr>
</tbody>
</table>
Field | Description
---|---
LocPrf | Displays the BGP LOCAL_PREF attribute for the route.
Weight | Displays the route’s weight.
Path | Lists all the ASs the route passed through to reach the destination network.

Example

Dell>show ip bgp inconsistent-as
BGP table version is 280852, local router ID is 10.1.2.100
Status codes: s suppressed, d damped, h history, * valid, > best
Path source: I - internal, c - confed-external, r - redistributed, n - network
Origin codes: i - IGP, e - EGP, ? - incomplete

show ip bgp neighbors

Allows you to view the information BGP neighbors exchange.

Syntax

```
show ip bgp [ipv4 unicast] neighbors [ip-address [advertised-routes | dampened-routes | detail | flap-statistics | routes | {received-routes [network [network-mask]]} | {denied-routes [network [network-mask]]}]
```

Parameters

- `ipv4 unicast` (OPTIONAL) Enter the keywords `ipv4 unicast` to view information only related to ipv4 unicast routes.
- `ip-address` (OPTIONAL) Enter the IP address of the neighbor to view only BGP information exchanged with that neighbor.
advertised-routes  (OPTIONAL) Enter the keywords advertised-routes to view only the routes the neighbor sent.

dampened-routes  (OPTIONAL) Enter the keywords dampened-routes to view information on dampened routes from the BGP neighbor.

detail  (OPTIONAL) Enter the keyword detail to view neighbor-specific internal information for the IPv4 Unicast address family.

flap-statistics  (OPTIONAL) Enter the keywords flap-statistics to view flap statistics on the neighbor’s routes.

routes  (OPTIONAL) Enter the keyword routes to view only the neighbor’s feasible routes.

received-routes  (OPTIONAL) Enter the keywords received-routes then either the network address (in dotted decimal format) or the network mask (in slash prefix format) to view all information received from neighbors.

denied-routes  (OPTIONAL) Enter the keywords denied-routes then either the network address (in dotted decimal format) or the network mask (in slash prefix format) to view all information on routes denied via neighbor inbound filters.

Command Modes  • EXEC
  • EXEC Privilege

Command History  Version 9.2(0.0)  Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information  After a peer reset, the contents of the notification log messages is displayed in hex values for debugging.

The following describes the show ip bgp neighbors command shown in the following examples.

The Lines Beginning with:  Description

BGP neighbor  Displays the BGP neighbor address and its AS number. The last phrase in the line indicates whether the link between the BGP router and its neighbor is an external or internal one. If they are located in the same AS, the link is internal; otherwise the link is external.
<table>
<thead>
<tr>
<th>The Lines Beginning with:</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>BGP version</td>
<td>Displays the BGP version (always version 4) and the remote router ID.</td>
</tr>
<tr>
<td>BGP state</td>
<td>Displays the neighbor's BGP state and the amount of time in hours:minutes:seconds it has been in that state.</td>
</tr>
<tr>
<td>Last read</td>
<td>This line displays the following information:</td>
</tr>
<tr>
<td></td>
<td>• last read is the time (hours:minutes:seconds) the router read a message from its neighbor</td>
</tr>
<tr>
<td></td>
<td>• hold time is the number of seconds configured between messages from its neighbor</td>
</tr>
<tr>
<td></td>
<td>• keepalive interval is the number of seconds between keepalive messages to help ensure that the TCP session is still alive.</td>
</tr>
<tr>
<td>Received messages</td>
<td>This line displays the number of BGP messages received, the number of notifications (error messages), and the number of messages waiting in a queue for processing.</td>
</tr>
<tr>
<td>Sent messages</td>
<td>The line displays the number of BGP messages sent, the number of notifications (error messages), and the number of messages waiting in a queue for processing.</td>
</tr>
<tr>
<td>Received updates</td>
<td>This line displays the number of BGP updates received and sent.</td>
</tr>
<tr>
<td>Soft reconfiguration</td>
<td>This line indicates that soft reconfiguration inbound is configured.</td>
</tr>
<tr>
<td>Minimum time</td>
<td>Displays the minimum time, in seconds, between advertisements.</td>
</tr>
<tr>
<td>(list of inbound and outbound policies)</td>
<td>Displays the policy commands configured and the names of the Route map, AS-PATH ACL, or Prefix list configured for the policy.</td>
</tr>
<tr>
<td>For address family:</td>
<td>Displays the IPv4 Unicast as the address family.</td>
</tr>
<tr>
<td>BGP table version</td>
<td>Displays which version of the primary BGP routing table the router and the neighbor are using.</td>
</tr>
<tr>
<td>accepted prefixes</td>
<td>Displays the number of network prefixes the router accepts and the amount of memory used to process those prefixes.</td>
</tr>
<tr>
<td>Prefix advertised</td>
<td>Displays the number of network prefixes advertised, the number rejected, and the number withdrawn from the BGP routing table.</td>
</tr>
<tr>
<td>Connections established</td>
<td>Displays the number of TCP connections established and dropped between the two peers to exchange BGP information.</td>
</tr>
</tbody>
</table>
The Lines
Beginning with:

<table>
<thead>
<tr>
<th>Description</th>
<th>Last reset</th>
<th>Displays the amount of time since the peering session was last reset. Also states if the peer resets the peering session. If the peering session was never reset, the word never is displayed.</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Local host:</strong></td>
<td></td>
<td>Displays the peering address of the local router and the TCP port number.</td>
</tr>
<tr>
<td><strong>Foreign host:</strong></td>
<td></td>
<td>Displays the peering address of the neighbor and the TCP port number.</td>
</tr>
</tbody>
</table>

**Example**

Dell#show ip bgp neighbors
BGP neighbor is 10.10.10.1, remote AS 23456, external link
  BGP version 4, remote router ID 10.10.10.1
  BGP state ESTABLISHED, in this state for 00:00:35
  Capabilities received from neighbor for IPv4 Unicast :
    MULTIPROTO_EXT(1)
    ROUTE_REFRESH(2)
    4_OCTECT_AS(65)
    ADD_PATH (69)
    CISCO_ROUTE_REFRESH(128)

**Example**

Dell#show ip bgp neighbors
BGP neighbor is 100.10.10.2, remote AS 200, external link
  BGP version 4, remote router ID 192.168.2.101
  BGP state ESTABLISHED, in this state for 00:16:12
  Last read 00:00:12, last write 00:00:03
  Hold time is 180, keepalive interval is 60 seconds
  Received 1404 messages, 0 in queue
  3 opens, 1 notifications, 1394 updates
  6 keepalives, 0 route refresh requests
  Sent 48 messages, 0 in queue
  3 opens, 2 notifications, 0 updates
  43 keepalives, 0 route refresh requests
  Minimum time between advertisement runs is 30 seconds
  Minimum time before advertisements start is 0 seconds
  Capabilities received from neighbor for IPv4 Unicast :
    MULTIPROTO_EXT(1)
    ROUTE_REFRESH(2)
    CISCO_ROUTE_REFRESH(128)
  Capabilities advertised to neighbor for IPv4 Unicast :
    MULTIPROTO_EXT(1)
    ROUTE_REFRESH(2)
    ROUTE_REFRESH(2)
    GRACEFUL_RESTART(64)
    CISCO_ROUTE_REFRESH(128)
  Route map for incoming advertisements is test
  Maximum prefix set to 4 with threshold 75

For address family: IPv4 Unicast
BGP table version 34, neighbor version 34
5 accepted prefixes consume 20 bytes
Prefix advertised 0, denied 4, withdrawn 0
Prefixes accepted 1 (consume 4 bytes), withdrawn 0 by peer
Prefixes advertised 0, rejected 0, withdrawn 0 from peer
Connections established 2; dropped 1
Last reset 00:18:21, due to Maximum prefix limit reached

Dell>show ip bgp neighbors 192.14.1.5 advertised-routes
BGP table version is 74103, local router ID is 33.33.33.33
Status codes: s suppressed, S stale, d damped, h history, * valid, > best
Path source: I - internal, a - aggregate, c - confed-external, r - redistributed,
n - network
Origin codes: i - IGP, e - EGP, ? - incomplete

D 70.70.22/24     | 100.10.10.2   | 0      | 0      | 100    | 200  |

275
show ip bgp next-hop

View all next hops (using learned routes only) with current reachability and flap status. This command only displays one path, even if the next hop is reachable by multiple paths.

Syntax

```
show ip bgp next-hop
```

Command Modes

- EXEC
- EXEC Privilege

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The following describes the `show ip bgp next-hop` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Next-hop</td>
<td>Displays the next-hop IP address.</td>
</tr>
<tr>
<td>Via</td>
<td>Displays the IP address and interface used to reach the next hop.</td>
</tr>
<tr>
<td>RefCount</td>
<td>Displays the number of BGP routes using this next hop.</td>
</tr>
<tr>
<td>Cost</td>
<td>Displays the cost associated with using this next hop.</td>
</tr>
<tr>
<td>Flaps</td>
<td>Displays the number of times the next hop has flapped.</td>
</tr>
<tr>
<td>Time Elapsed</td>
<td>Displays the time elapsed since the next hop was learned. If the route is down, this field displays time elapsed since the route went down.</td>
</tr>
</tbody>
</table>

Example

```
Dell>show ip bgp next-hop
Next-hop   Via                  RefCount Cost Flaps Time Elapsed
63.114.8.33 63.114.8.33, Gi 12/22   240984   0     0 00:18:25
63.114.8.34 63.114.8.34, Gi 12/22   135152   0     0 00:18:13
63.114.8.35 63.114.8.35, Gi 12/22        1   0     0 00:18:07
63.114.8.60 63.114.8.60, Gi 12/22   135155   0     0 00:18:11
Dell>
```
show ip bgp paths

View all the BGP path attributes in the BGP database.

Syntax

show ip bgp paths [regexp regular-expression]

Parameters

regexp regular-expression

Enter a regular expression then use one or a combination of the following characters to match:

- . = (period) any single character (including a white space).
- * = (asterisk) the sequences in a pattern (zero or more sequences).
- + = (plus) the sequences in a pattern (one or more sequences).
- ? = (question mark) sequences in a pattern (either zero or one sequences).

NOTE: Enter an escape sequence (CTRL+v) prior to entering the ? regular expression.

- [ ] = (brackets) a range of single-character patterns.
- ( ) = (parenthesis) groups a series of pattern elements to a single element.
- { } = (braces) minimum and the maximum match count.
- ^ = (caret) the beginning of the input string. If you use the caret at the beginning of a sequence or range, it matches on everything BUT the characters specified.
- $ = (dollar sign) the end of the output string.

Command Modes

- EXEC
- EXEC Privilege

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The following describes the show ip bgp path command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Total</td>
<td>Displays the total number of BGP path attributes.</td>
</tr>
<tr>
<td>Address</td>
<td>Displays the internal address where the path attribute is stored.</td>
</tr>
<tr>
<td>Hash</td>
<td>Displays the hash bucket where the path attribute is stored.</td>
</tr>
<tr>
<td>Refcount</td>
<td>Displays the number of BGP routes using this path attribute.</td>
</tr>
<tr>
<td>Metric</td>
<td>Displays the MED attribute for this path attribute.</td>
</tr>
</tbody>
</table>
show ip bgp paths as-path

View all unique AS-PATHs in the BGP database.

Syntax

show ip bgp paths as-path

Command Modes

- EXEC
- EXEC Privilege

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The following describes the show ip bgp paths as-path command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Address</td>
<td>Displays the internal address where the path attribute is stored.</td>
</tr>
<tr>
<td>Hash</td>
<td>Displays the hash bucket where the path attribute is stored.</td>
</tr>
<tr>
<td>Refcount</td>
<td>Displays the number of BGP routes using these AS-Paths.</td>
</tr>
</tbody>
</table>
### show ip bgp paths

View all unique COMMUNITY numbers in the BGP database.

**Syntax**

```
show ip bgp paths community
```

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

- **Version 9.2(0.0)**
  - Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

The following describes the `show ip bgp paths community` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Address</td>
<td>Displays the internal address where the path attribute is stored.</td>
</tr>
<tr>
<td>Hash</td>
<td>Displays the hash bucket where the path attribute is stored.</td>
</tr>
<tr>
<td>Refcount</td>
<td>Displays the number of BGP routes using these communities.</td>
</tr>
<tr>
<td>Community</td>
<td>Displays the community attributes in this BGP path.</td>
</tr>
</tbody>
</table>

**Example**

show ip bgp peer-group

Allows you to view information on the BGP peers in a peer group.

Syntax

show ip bgp [ipv4 unicast] peer-group [peer-group-name [detail | summary]]

Parameters

- **ipv4 unicast** (OPTIONAL) Enter the keywords ipv4 unicast to view information only related to ipv4 unicast routes.
- **peer-group-name** (OPTIONAL) Enter the name of a peer group to view information about that peer group only.
- **detail** (OPTIONAL) Enter the keyword detail to view detailed status information of the peers in that peer group.
summary (OPTIONAL) Enter the keyword summary to view status information of the peers in that peer group. The output is the same as that found in the show ip bgp summary command.

Command Modes
• EXEC
• EXEC Privilege

Command History
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
The following describes the show ip bgp peer-group command shown in the following example.

Line beginning with: Description
Peer-group Displays the peer group's name.
Administratively Displays the peer group's status if the peer group is not
closed enabled. If you enable the peer group, this line is not
displayed.
BGP version Displays the BGP version supported.
Minimum time Displays the time interval between BGP advertisements.
For address family Displays IPv4 Unicast as the address family.
BGP neighbor Displays the name of the BGP neighbor.
Number of peers Displays the number of peers currently configured for this
peer group.
Peer-group members: Lists the IP addresses of the peers in the peer group. If the
address is outbound optimized, an * is displayed next to the
IP address.

Example ()

Dell#show ip bgp peer-group

Peer-group pg1
  BGP version 4
  Minimum time between advertisement runs is 30 seconds

  For address family: IPv4 Unicast
  BGP neighbor is pg1
  Number of peers in this group 4
  Update packing has 4 OCTECT_AS support enabled
  Add-path support enabled
  Peer-group members (* - outbound optimized):
    1.1.1.5
    1.1.1.6
    10.10.10.2*
    20.20.20.100
Example

Dell#show ip bgp peer-group

Peer-group RT-PEERS
Description: ***peering-with-RT***
BGP version 4
Minimum time between advertisement runs is 30 seconds

For address family: IPv4 Unicast
BGP neighbor is RT-PEERS
Number of peers in this group 20
Peer-group members (* - outbound optimized):
  12.1.1.2*
  12.1.1.3*
  12.1.1.4*
  12.1.1.5*
  12.1.1.6*
  12.2.1.2*
  12.2.1.3*
  12.2.1.4*
  12.2.1.5*
  12.2.1.6*
  12.3.1.2*
  12.3.1.3*
  12.3.1.4*
  12.3.1.5*
  12.3.1.6*
  12.4.1.2*
  12.4.1.3*
  12.4.1.4*
  12.4.1.5*
  12.4.1.6*

Related Commands

neighbor peer-group (assigning peers) — assigns a peer to a peer-group.

neighbor peer-group (creating group) — creates a peer group.

show ip bgp regexp

Display the subset of the BGP routing table matching the regular expressions specified.

Syntax

show ip bgp regexp regular-expression [character]

Parameters

regular-expression [character] Enter a regular expression then use one or a combination of the following characters to match:

• . = (period) any single character (including a white space).
• * = (asterisk) the sequences in a pattern (zero or more sequences).
• + = (plus) the sequences in a pattern (one or more sequences).
• ? = (question mark) sequences in a pattern (either zero or one sequences).
NOTE: Enter an escape sequence (CTRL+v) prior to entering the regular expression.

- [ ] = (brackets) a range of single-character patterns.
- ( ) = (parenthesis) groups a series of pattern elements to a single element.
- { } = (braces) minimum and the maximum match count.
- ^= (caret) the beginning of the input string. If you use the caret at the beginning of a sequence or range, it matches on everything BUT the characters specified.
- $ = (dollar sign) the end of the output string.

Command Modes

- EXEC
- EXEC Privilege

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The following describes the show ip bgp regexp command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Network</td>
<td>Displays the destination network prefix of each BGP route.</td>
</tr>
<tr>
<td>Next Hop</td>
<td>Displays the next hop address of the BGP router. If 0.0.0.0 is listed in this column, then non-BGP routes exist in the router’s routing table.</td>
</tr>
<tr>
<td>Metric</td>
<td>Displays the BGP router's metric, if assigned.</td>
</tr>
<tr>
<td>LocPrf</td>
<td>Displays the BGP LOCAL_PREF attribute for the route.</td>
</tr>
<tr>
<td>Weight</td>
<td>Displays the route’s weight</td>
</tr>
<tr>
<td>Path</td>
<td>Lists all the AS paths the route passed through to reach the destination network.</td>
</tr>
</tbody>
</table>

Example

Dell#show ip bgp regexp ^2914+
BGP table version is 3700481, local router ID is 63.114.8.35
Status codes: s suppressed, S stale, d damped, h history, * valid, > best
Path source: I - internal, a - aggregate, c - confed-external, r - redistributed, n - network
Origin codes: i - IGP, e - EGP, ? - incomplete

<table>
<thead>
<tr>

</tbody>
</table>
show ip bgp summary

Allows you to view the status of all BGP connections.

**Syntax**

```
show ip bgp [ipv4 unicast] summary
```

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

Version 9.2(0.0)  Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

The following describes the `show ip bgp summary` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>BGP router identifier</td>
<td>Displays the local router ID and the AS number.</td>
</tr>
<tr>
<td>BGP table version</td>
<td>Displays the BGP table version and the main routing table version.</td>
</tr>
<tr>
<td>network entries</td>
<td>Displays the number of network entries, route paths, and the amount of memory used to process those entries.</td>
</tr>
<tr>
<td>Field</td>
<td>Description</td>
</tr>
<tr>
<td>------------------</td>
<td>---------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>paths</td>
<td>Displays the number of paths and the amount of memory used.</td>
</tr>
<tr>
<td>denied paths</td>
<td>Displays the number of denied paths and the amount of memory used.</td>
</tr>
<tr>
<td>BGP path attribute entries</td>
<td>Displays the number of BGP path attributes and the amount of memory used to process them.</td>
</tr>
<tr>
<td>BGP AS-PATH entries</td>
<td>Displays the number of BGP AS-PATH attributes processed and the amount of memory used to process them.</td>
</tr>
<tr>
<td>BGP community entries</td>
<td>Displays the number of BGP COMMUNITY attributes processed and the amount of memory used to process them. The <code>show ip bgp community</code> command provides more details on the COMMUNITY attributes.</td>
</tr>
<tr>
<td>Dampening enabled</td>
<td>Displayed only when you enable dampening. Displays the number of paths designated as history, dampened, or penalized.</td>
</tr>
<tr>
<td>Neighbor</td>
<td>Displays the BGP neighbor address.</td>
</tr>
<tr>
<td>AS</td>
<td>Displays the AS number of the neighbor.</td>
</tr>
<tr>
<td>MsgRcvd</td>
<td>Displays the number of BGP messages that neighbor received.</td>
</tr>
<tr>
<td>MsgSent</td>
<td>Displays the number of BGP messages that neighbor sent.</td>
</tr>
<tr>
<td>TblVer</td>
<td>Displays the version of the BGP table that was sent to that neighbor.</td>
</tr>
<tr>
<td>InQ</td>
<td>Displays the number of messages from that neighbor waiting to be processed.</td>
</tr>
<tr>
<td>OutQ</td>
<td>Displays the number of messages waiting to be sent to that neighbor. If a number appears in parentheses, the number represents the number of messages waiting to be sent to the peer group.</td>
</tr>
<tr>
<td>Up/Down</td>
<td>Displays the amount of time that the neighbor is in the Established stage. If the neighbor has never moved into the Established stage, the word never is displayed.</td>
</tr>
</tbody>
</table>

The output format is:

<table>
<thead>
<tr>
<th>Time Established</th>
<th>Display Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt; 1 day</td>
<td>00:12:23 (hours:minutes:seconds)</td>
</tr>
<tr>
<td>&lt; 1 week</td>
<td>1d21h (DaysHours)</td>
</tr>
<tr>
<td>&gt; 1 week</td>
<td>11w2d (WeeksDays)</td>
</tr>
</tbody>
</table>
Field | Description
---|---
State/Pfxrcd | If the neighbor is in Established stage, the number of network prefixes received. If a maximum limit was configured with the neighbor maximum-prefix command, (prfxd) appears in this column. If the neighbor is not in Established stage, the current stage is displayed (Idle, Connect, Active, OpenSent, OpenConfirm). When the peer is transitioning between states and clearing the routes received, the phrase (Purging) may appear in this column. If the neighbor is disabled, the phrase (Admin shut) appears in this column.

Example (S4810)

```
Dell#show ip bgp summary
BGP router identifier 120.10.10.1, local AS number 100
BGP table version is 34, main routing table version 34
9 network entrie(s) using 1372 bytes of memory
5 paths using 380 bytes of memory
4 denied paths using 164 bytes of memory
BGP-RIB over all using 385 bytes of memory
2 BGP path attribute entrie(s) using 168 bytes of memory
1 BGP AS-PATH entrie(s) using 39 bytes of memory
1 BGP community entrie(s) using 43 bytes of memory
2 neighbor(s) using 7232 bytes of memory

Neighbor   AS  MsgRcvd MsgSent TblVer InQ OutQ Up/Down State/Pfx
100.10.10.2 200     46     41     34   0    0 00:14:33    5
120.10.10.2 300     40     47     34   0    0 00:37:10    0

Dell#
```
**timers bgp**

Adjust the BGP Keep Alive and Hold Time timers.

**Syntax**  
timers bgp keepalive holdtime  
To return to the default, use the no timers bgp command.

**Parameters**

- **keepalive**  
Enter a number for the time interval, in seconds, between keepalive messages sent to the neighbor routers. The range is from 1 to 65535. The default is 60 seconds.

- **holdtime**  
Enter a number for the time interval, in seconds, between the last keepalive message and declaring the router dead. The range is from 3 to 65535. The default is 180 seconds.

**Defaults**  
none

**Command Modes**  
EXEC Privilege

**Command History**  
Version 9.2(0.0)  
Introduced on the MXL 10/40GbE Switch IO Module.

---

**MBGP Commands**

Multiprotocol BGP (MBGP) is an enhanced BGP that enables multicast routing policy throughout the internet and connecting multicast topologies between BGP and autonomous systems (ASs). MBGP is implemented as per IETF RFC 1858.

**debug ip bgp dampening**

View information on routes being dampened.

**Syntax**  
default ip bgp ipv4 multicast dampening  
To disable debugging, use the no debug ip bgp ipv4 multicast dampening command.

**Parameters**

- **dampening**  
Enter the keyword dampening to clear route flap dampening information.

**Command Modes**  
EXEC Privilege
distance bgp

Define an administrative distance for routes.

Syntax
distance bgp external-distance internal-distance local-distance
To return to default values, use the no distance bgp command.

Parameters

- **external-distance**
  Enter a number to assign to routes learned from a neighbor external to the AS. The range is from 1 to 255. The default is 20.

- **internal-distance**
  Enter a number to assign to routes learned from a router within the AS. The range is from 1 to 255. The default is 200.

- **local-distance**
  Enter a number to assign to routes learned from networks listed in the network command. The range is from 1 to 255. The default is 200.

Defaults

- external-distance = 20
- internal-distance = 200
- local-distance = 200

Command Modes

ROUTER BGP (conf-router_bgp_af)

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

⚠️ CAUTION: Dell Networking recommends that you do not change the administrative distance of internal routes. Changing the administrative distances may cause routing table inconsistencies.

The higher the administrative distance assigned to a route means that your confidence in that route is low. Routes assigned an administrative distance of 255 are not installed in the routing table. Routes from confederations are treated as internal BGP routes.
show ip bgp dampened-paths

View BGP routes that are dampened (non-active).

**Syntax**

```
show ip bgp [ipv4 unicast] dampened-paths
```

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

```
Version 9.2(0.0)  Introduced on the MXL 10/40GbE Switch IO Module.
```

**Usage Information**

The following describes the `show ip bgp damp` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Network</td>
<td>Displays the network ID to which the route is dampened.</td>
</tr>
<tr>
<td>From</td>
<td>Displays the IP address of the neighbor advertising the dampened route.</td>
</tr>
<tr>
<td>Reuse</td>
<td>Displays the hour:minutes:seconds until the dampened route is available.</td>
</tr>
<tr>
<td>Path</td>
<td>Lists all the ASs the dampened route passed through to reach the destination network.</td>
</tr>
</tbody>
</table>

**Example**

```
Dell>show ip bgp dampened-paths
BGP table version is 210708, local router ID is 63.114.8.2
Status codes: s suppressed, d damped, h history, * valid, > best
Path source: I - internal, a - aggregate, c - confed-external, r - redistributed, n - network
Origin codes: i - IGP, e - EGP, ? - incomplete
           Network   From       Reuse       Path
Dell>
```

**BGP Extended Communities (RFC 4360)**

BGP Extended Communities, as defined in RFC 4360, is an optional transitive BGP attribute. BGP Extended Communities provides two major advantages over Standard Communities:

- The range is extended from 4-octet (AA:NN) to 8-octet (Type:Value) to provide enough number communities.
- Communities are structured using a new “Type” field (1 or 2-octets), allowing you to provide granular control/filter routing information based on the type of extended communities.
set extcommunity rt

To set Route Origin community attributes in Route Map, use this feature.

Syntax

set extcommunity rt {as4 ASN4:NN [non-trans] | ASN:NNNN [non-trans] | IPADDR:NN [non-trans]} [additive]

To delete the Route Origin community, use the no set extcommunity command.

Parameters

as4 ASN4:NN Enter the keyword as4 then the 4-octet AS specific extended community number in the format ASN4:NN (4-byte AS number:2-byte community value).

ASN:NNNN Enter the 2-octet AS specific extended community number in the format ASN:NNNN (2-byte AS number:4-byte community value).

IPADDR:NN Enter the IP address specific extended community in the format IPADDR:NN (4-byte IPv4 Unicast Address:2-byte community value).

additive (OPTIONAL) Enter the keyword additive to add to the existing extended community.

non-trans (OPTIONAL) Enter the keywords non-trans to indicate a non-transitive BGP extended community.

Defaults

none

Command Modes

ROUTE MAP (config-route-map)

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

If the set community rt and soo are in the same route-map entry, the behavior defines as:

- If the rt option comes before soo, with or without the additive option, soo overrides the communities rt sets.
- If the rt option comes after soo, without the additive option, rt overrides the communities soo sets.
- If the rt with the additive option comes after soo, rt adds the communities soo sets.

Related Commands

set extcommunity soo — sets the extended community site-of-origin in the route-map.
set extcommunity soo

To set extended community site-of-origin in Route Map, use this feature.

**Syntax**

```plaintext
set extcommunity soo {as4 ASN4:NN | ASN:NNNN | IPADDR:NN [non-trans]}
```

To delete the site-of-origin community, use the `no set extcommunity` command.

**Parameters**

- **as4 ASN4:NN**
  - Enter the keyword `as4` then the 4-octet AS specific extended community number in the format ASN4:NN (4-byte AS number:2-byte community value).
- **ASN:NNNN**
  - Enter the 2-octet AS specific extended community number in the format ASN:NNNN (2-byte AS number:4-byte community value).
- **IPADDR:NN**
  - Enter the IP address specific extended community in the format IPADDR:NN (4-byte IPv4 Unicast Address:2-byte community value).
- **non-trans**
  - (OPTIONAL) Enter the keywords `non-trans` to indicate a non-transitive BGP extended community.

**Defaults**

none

**Command Modes**

ROUTE MAP (config-route-map)

**Command History**

Version 9.2(0.0)  Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

If the set community `rt` and `soo` are in the same route-map entry, the behavior defines as:

- If the `rt` option comes before `soo`, with or without the `additive` option, `soo` overrides the communities `rt` sets.
- If the `rt` option comes after `soo`, without the `additive` option, `rt` overrides the communities `soo` sets.
- If the `rt` with the `additive` option comes after `soo`, `rt` adds the communities `soo` sets.

**Related Commands**

- `set extcommunity rt` — sets the extended community route origins using the route-map.
**show ip bgp paths extcommunity**

To display all BGP paths having extended community attributes, use this feature.

**Syntax**

```
show ip bgp paths extcommunity
```

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

Version 9.2(0.0)  Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

The following describes the `show ip bgp paths extcommunity` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Address</td>
<td>Displays the internal address where the path attribute is stored.</td>
</tr>
<tr>
<td>Hash</td>
<td>Displays the hash bucket where the path attribute is stored.</td>
</tr>
<tr>
<td>Refcount</td>
<td>Displays the number of BGP routes using these extended communities.</td>
</tr>
<tr>
<td>Community</td>
<td>Displays the extended community attributes in this BGP path.</td>
</tr>
</tbody>
</table>

**Example**

```
Dell#show ip bgp paths extcommunity
Total 1 Extended Communities

Address     Hash  Refcount Extended Community
0x41d57024  12272 1        RT:7:200 SoO:5:300 SoO:0.0.0.3:1285

Dell#
```  

**show ip bgp extcommunity-list**

View information on all routes with Extended Community attributes.

**Syntax**

```
show ip bgp [ipv4 unicast] extcommunity-list [list name]
```

**Parameters**

- `ipv4 unicast`  
  (OPTIONAL) Enter the keywords `ipv4 unicast` to view information only related to ipv4 unicast routes.

- `list name`  
  Enter the extended community list name you wish to view. The range is 140 characters.

**Command Modes**

- EXEC
IPv6 BGP Commands

IPv6 Border Gateway Protocol (IPv6 BGP) is supported on the MXL 10/40GbE Switch IO Module. Border gateway protocol (BGP) is an external gateway protocol that transmits interdomain routing information within and between autonomous systems (AS). BGP version 4 (BGPv4) supports classless interdomain routing and the aggregation of routes and AS paths. Basically, two routers (called neighbors or peers) exchange information including full routing tables and periodically send messages to update those routing tables.

bgp soft-reconfig-backup

To avoid the peer from resending messages, use this command only when route-refresh is not negotiated.

Syntax

bgp soft-reconfig-backup

To return to the default setting, use the no bgp soft-reconfig-backup command.

Defaults

Disabled

Command Modes

ROUTER BGP

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

When you enable soft-reconfiguration for a neighbor and you execute the clear ip bgp soft in command, the update database stored in the router is replayed and updates are re-evaluated. With this command, the replay and update process is triggered only if route-refresh request is not negotiated with the peer. If the request is indeed negotiated (after executing the clear ip bgp soft in command, the show ip bgp community command without any parameters lists BGP routes with at least one BGP community attribute and the output is the same as for the show ip bgp command output.
command), BGP sends a route-refresh request to the neighbor and receives all of
the peer’s updates.

Related Commands

**clear ip bgp** — activates inbound policies without resetting the BGP TCP session.

---

**clear ip bgp ipv6 unicast soft**

Clear and reapply policies for IPv6 unicast routes without resetting the TCP connection; that is, perform BGP soft reconfiguration.

**Syntax**

```
clear ip bgp {* | as-number | ipv4-neighbor-addr | ipv6-neighbor-addr | peer-group name} ipv6 unicast soft [in | out]
```

**Parameters**

- `*` - Clear and reapply an asterisk (*) for all BGP sessions.
- `as-number` - Clear and reapply policies for all neighbors belonging to the AS. The range is from 0 to 65535 (2 Byte), from 1 to 4294967295 (4 Byte), or from 0.1 to 0.65535.65535 (Dotted format).
- `ipv4-neighbor-addr` or `ipv6-neighbor-addr` - Clear and reapply policies for a neighbor.
- `peer-group name` - Clear and reapply policies for all BGP routers in the specified peer group.
- `ipv6 unicast soft` - Clear and reapply policies for all IPv6 unicast routes.
- `in` - Reapply only inbound policies.
  
  **NOTE:** If you enter `soft`, without an `in` or `out` option, both inbound and outbound policies are reset.
- `out` - Reapply only outbound policies.
  
  **NOTE:** If you enter `soft`, without an `in` or `out` option, both inbound and outbound policies are reset.

**Command Modes**

EXEC Privilege

**Command History**

- **Version 9.2(0.0)** - Introduced on the MXL 10/40GbE Switch IO Module.
**debug ip bgp ipv6 unicast soft-reconfiguration**

Enable soft-reconfiguration debugging for IPv6 unicast routes.

**Syntax**

```
debug ip bgp [ipv4-address | ipv6-address | peer-group-name] ipv6 unicast soft-reconfiguration
```

To disable debugging, use the `no debug ip bgp [ipv4-address | ipv6-address | peer-group-name] ipv6 unicast soft-reconfiguration` command.

**Parameters**

- `ipv4-address | ipv6-address`
Enter the IP address of the neighbor on which you want to enable soft-reconfiguration debugging.

- `peer-group-name`
Enter the name of the peer group on which you want to enable soft-reconfiguration debugging.

- `ipv6 unicast`
Debug soft reconfiguration for IPv6 unicast routes.

**Defaults**

Disabled.

**Command Modes**
EXEC Privilege

**Command History**

- **Version 9.2(0.0)**
  Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

This command turns on BGP soft-reconfiguration inbound debugging for IPv6 unicast routes. If no neighbor is specified, debug is turned on for all neighbors.

---

**ipv6 prefix-list**

Configure an IPv6 prefix list.

**Syntax**

```
ipv6 prefix-list prefix-list-name
```

**Parameters**

- `prefix-list-name`
Enter the name of the prefix list.

**Defaults**
none

**Command Modes**
CONFIGURATION

**Command History**

- **Version 9.2(0.0)**
  Introduced on the MXL 10/40GbE Switch IO Module.

**NOTE:** There is a 140-character limit for prefix list names.
show ipv6 prefix-list

Displays the specified IPv6 prefix list.

**Syntax**

```
show ipv6 prefix-list detail {prefix-list name} | summary
```

**Parameters**

- `detail`  
  Display a detailed description of the selected IPv6 prefix list.
- `prefix-list name`  
  Enter the name of the prefix list.
  
  **NOTE:** There is a 140-character limit for prefix list names.
- `summary`  
  Display a summary of RPF routes.

**Command Modes**

EXEC

**Command History**

*Version 9.2(0.0)*  
Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**

- `ipv6 prefix-list` — configures an IPv6 prefix-list.

---

IPv6 MBGP Commands

Multiprotocol BGP (MBGP) is an enhanced BGP that enables multicast routing policy throughout the Internet and connecting multicast topologies between BGP and autonomous systems (AS). MBGP is implemented as per IETF RFC 1858.

**show ipv6 mbgproutes**

Display the selected IPv6 MBGP route or a summary of all MBGP routes in the table.

**Syntax**

```
show ipv6 mbgproutes ipv6-address prefix-length | summary
```

**Parameters**

- `ipv6-address prefix-length`  
  (OPTIONAL) Enter the IPv6 address in the x:x:x::x format then the prefix length in the /x format. The range is from /0 to /128.

  **NOTE:** The :: notation specifies successive hexadecimal fields of zeros.

Content Addressable Memory (CAM)

Content addressable memory (CAM) commands are supported on the Dell Networking MXL 10/40GbE Switch IO Module.

⚠️ WARNING: If you are using these features for the first time, contact Dell Networking Technical Assistance Center (TAC) for guidance.

CAM Profile Commands

The CAM profiling feature allows you to partition the CAM to best suit your application. For example:

- Configure more Layer 2 forwarding information base (FIB) entries when the system is deployed as a switch.
- Configure more Layer 3 FIB entries when the system is deployed as a router.
- Configure more access control lists (ACLs).
- Optimize the virtual local area network (VLAN) ACL Group feature, which permits group VLANs for IP egress ACLs.

Important Points to Remember

- The Dell Networking operating system (OS) versions 7.8.1.0 and later support CAM allocations on the MXL 10/40GbE Switch IO Module.
- The CAM configuration is applied to the entire system when you use the CONFIGURATION mode commands. Save the running-configuration to affect the change.
- When budgeting your CAM allocations for ACLs and quality of service (QoS) configurations, remember that ACL and QoS rules might consume more than one CAM entry depending on complexity. For example, transmission control protocol (TCP) and user datagram protocol (UDP) rules with port range options might require more than one CAM entry.
- After you install a secondary RPM, copy the running-configuration to the startup-configuration so that the new RPM has the correct CAM profile.
- You MUST save your changes and reboot the system for CAM profiling or allocations to take effect.

cam-acl (Configuration)

Select the default CAM allocation settings or reconfigure a new CAM allocation for Layer 2, IPv4, and IPv6 ACLs, Layer 2 and Layer 3 (IPv4) QoS, Layer 2 Protocol Tunneling (L2PT), IP and MAC source address validation for DHCP, Ethernet Connectivity Fault Management (CFM) ACLs, and Policy-based Routing (PBR).

Syntax

```plaintext
cam-acl {default | l2acl number ipv4acl number ipv6acl number ipv4qos number l2qos number l2pt number ipmacacl number [vman-]
```

Use the default CAM profile settings and set the CAM as follows:

- L3 ACL (ipv4acl): 4
- L2 ACL (l2acl): 5
- IPv6 L3 ACL (ipv6acl): 0
- L3 QoS (ipv4qos): 1
- L2 QoS (l2qos): 1
- L2PT (L2PT): 0
- MAC ACL (IpMacAcl): 0
- VmanDualQos: 0
- EcfmAcl: 0
- FcoeAcl: 4
- iscsiOptAcl: 2

Allocate space to each CAM region.

Enter the CAM profile name then the amount of CAM space to be allotted. The total space allocated must equal 13. The range for ipv4acl is from 1 to 4. The ipv6acl range must be a factor of 2.

The total space allocated must equal 13.

The range for ipv4acl is 1 to 4.

The ipv6acl range must be a factor of 2.

The vman-qos-dual-fp number must be entered as a multiple of 4.

Save the new CAM settings to the startup-config (write-mem or copy run start) then reload the system for the new settings to take effect.
The total amount of space allowed is 16 FP Blocks. System flow requires three blocks; these blocks cannot be reallocated. The `ipv4acl` profile range is from 1 to 4.

When configuring space for IPv6 ACLs, the total number of Blocks must equal 13.

On the MXL 10/40GbE switch IO module, there can be only one odd number of Blocks in the CLI configuration; the other Blocks must be in factors of two. For example, a CLI configuration of 5+4+2+1+1 Blocks is not supported; a configuration of 6+4+2+1 Blocks is supported.

Ranges for the CAM profiles are from 1 to 10, except for the `ipv6acl` profile which is from 0 to 10. The `ipv6acl` allocation must be a factor of two (2, 4, 6, 8, 10).

cam-optimization

Optimize CAM utilization for QoS Entries by minimizing require policy-map CAM space.

**Syntax**

```plaintext
cam-optimization [qos]
```

**Parameters**

- **qos**
  
  Optimize CAM usage for QoS.

**Defaults**

Disabled.

**Command Modes**

CONFIGURATION

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

When you enable this command, if a Policy Map containing classification rules (ACL and/or dscp/ ip-precedence rules) is applied to more than one physical interface on the same port pipe, only a single copy of the policy is written (only one FP entry is used).

NOTE: An ACL itself may still require more that a single FP entry, regardless of the number of interfaces. For more information, refer to the IP Access Control Lists, Prefix Lists, and Route-map sections in the Dell Operating System Configuration Guide.

show cam-acl

Display the details of the CAM profiles on the chassis and all stack units.

**Syntax**

```plaintext
show cam-acl
```
Defaults
none

Command Modes
EXEC Privilege

Command History
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
The display reflects the settings implemented with the cam-acl command.

Example
(Default)
Dell#show cam-acl

VmanDualQos:       0
Ipv4pbr    :       0

-- Line card 4 --
Current Settings(in block sizes)
L2Acl      :       5
show cam-acl-egress

Display the details of the FP groups allocated for the egress ACL.

**Syntax**
```plaintext
show cam-acl-egress
```

**Defaults**
none

**Command Modes**
Configuration

**Command History**
- **Version 8.3.16.1** Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**
The display reflects the settings implemented with the `cam-acl-egress` command.

**Example**
```
Dell#show cam-acl-egress

-- Chassis Egress Cam ACL --
 Current Settings(in block sizes)
 L2Acl   :   1
 IPv4Acl :   1
 IPv6Acl :   2

-- Stack unit 0 --
 Current Settings(in block sizes)
 L2Acl   :   1
 IPv4Acl :   1
 IPv6Acl :   2

Dell#
```
Control Plane Policing (CoPP)

The CoPP commands are supported on the Dell Networking MXL 10/40GbE Switch IO Module.

control-plane-cpuqos

To manage control-plane traffic, enter control-plane mode and configure the switch.

Syntax:
control-plane-cpuqos

Defaults:
Not configured.

Command Modes:
CONFIGURATION

Command History:
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

service-policy rate-limit-cpu-queues

Apply a policy map for the system to rate limit control traffic on a per-queue basis.

Syntax:
service-policy rate-limit-cpu-queues policy-name

Parameters:
policy-name Enter the service-policy name, using a string up to 32 characters.

Defaults:
Not configured.

Command Modes:
CONTROL-PLANE-CPUQOS

Command History:
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information:
Create a policy-map by associating a queue number with the qos-policy.
Create QoS policies prior to enabling this command.
For CoPP, do not use the keywords cpu-qos when creating qos-policy-input.
service-policy rate-limit-protocols

Apply a policy for the system to rate limit control protocols on a per-protocol basis.

Syntax
service-policy rate-limit-protocols policy-name

Parameters
policy-name 
Enter the service-policy name, using a string up to 32 characters.

Defaults
Not configured.

Command Modes
CONTROL-PLANE-CPUQOS

Command History
Version 9.2(0.0) 
 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
This command applies the service-policy based on the type of protocol defined in the ACL rules.

Create ACL and QoS policies prior to enabling this command.

For CoPP, do not use the keywords cpu-qos when creating qos-policy-input.

Related Commands
ip access-list extended — creates an extended IP ACL.
mac access-list extended — creates an extended MAC ACL.
qos-policy-input — creates a QoS input policy map.
class-map — creates a QoS class map.
policy-map-input — creates an input policy map.

show cpu-queue rate cp

Display the rates for each queue.

Syntax
show cpu-queue rate cp

Defaults
Not configured.
**show ip protocol-queue-mapping**

Display the queue mapping for each configured protocol.

**Syntax**

```
show ip protocol-queue-mapping
```

**Defaults**

Not configured.

**Command Modes**

EXEC Privilege

**Command History**

Version 9.2(0.0)  Introduced on the MXL 10/40GbE Switch IO Module.

**Example**

```
Dell show ip protocol-queue-mapping
 Protocol Src-Port Dst-Port TcpFlag Queue EgPort Rate(kbps) ---- -------- -------- ------- ----- ---------- ---- -----------
TCP (BGP) any/179 179/any _ Q6 CP
UDP (DHCP) 67/68 67/67 _ Q6/Q5 CP _
UDP (DHCP-R) 67 67 _ Q6 CP _
TCP (FTP) any 21 _ Q6 CP _
ICMP any any _ Q6 CP _
IGMP any any _ Q7 CP _
TCP (MSDP) any/639 639/any _ Q6 CP _
UDP (NTP) any 123 _ Q6 CP _
OSPF any any _ Q7 CP _
PIM any any _ Q7 CP _
UDP (RIP) any 520 _ Q7 CP _
TCP (SSH) any 22 _ Q6 CP _
```

307
show ipv6 protocol-queue-mapping

Display the queue mapping for each configured IPv6 protocol.

Syntax
show ipv6 protocol-queue-mapping

Defaults
Not configured.

Command Modes
EXEC Privilege

Command History
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Example
Dell#show ipv6 protocol-queue-mapping
Protocol    Src-Port   Dst-Port  TcpFlag Queue EgPort
Rate(kbps)
--------    --------   --------  ------- ----- ------ --------
TCP (BGP)    any/179     179/any    _      Q6     CP     _
ICMP         any         any        _      Q6     CP     _
VRRP         any         any        _      Q7     CP     _

show mac protocol-queue-mapping

Display the queue mapping for the MAC protocols.

Syntax
show mac protocol-queue-mapping

Defaults
Not configured.

Command Modes
EXEC Privilege

Command History
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Example
Dell#show mac protocol-queue-mapping
Protocol Destination Mac        EtherType Queue EgPort
Rate(kbps)
----------------------------------- ----- ------ -----------
ARP        any                     0x0806   Q5/Q6  CP      _
FRRP       01:01:e8:00:00:10/11    any      Q7     CP      _
LACP       01:80:c2:00:00:02       0x8809   Q7     CP      _
LLDP       any                     0x88cc   Q7     CP      _
GVRP       01:80:c2:00:00:21       any      Q7     CP      _
STP        01:80:c2:00:00:00       any      Q7     CP      _
ISIS       01:80:c2:00:00:14/15    any      Q7     CP      _
Data Center Bridging (DCB)

Data center bridging (DCB) refers to a set of IEEE Ethernet enhancements that provide data centers with a single, robust, converged network to support multiple traffic types, including local area network (LAN), server, and storage traffic.

The Dell Networking operating software (Dell) commands for data center bridging features include 802.1Qbb priority-based flow control (PFC), 802.1Qaz enhanced transmission selection (ETS), and the data center bridging exchange (DCBX) protocol.

advertise dcbx-appln-tlv

On a DCBX port with a manual role, configure the application priority TLVs advertised on the interface to DCBX peers.

Syntax

advertise dcbx-appln-tlv {fcoe | iscsi}

To remove the application priority TLVs, use the no advertise dcbx-appln-tlv {fcoe | iscsi} command.

Parameters

{fcoe | iscsi} Enter the application priority TLVs, where:

- fcoe: enables the advertisement of FCoE in application priority TLVs.
- iscsi: enables the advertisement of iSCSI in application priority TLVs.

Defaults

Application priority TLVs are enabled to advertise FCoE and iSCSI.

Command Modes

PROTOCOL LLDP

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

To disable TLV transmission, use the no form of the command; for example, no advertise dcbx-appln-tlv iscsi.
advertise dcbx-tlv

On a DCBX port with a manual role, configure the PFC and ETS TLVs advertised to DCBX peers.

Syntax

```
advertise dcbx-tlv {ets-conf | ets-reco | pfc} [ets-conf | ets-reco | pfc] [ets-conf | ets-reco | pfc]
```

To remove the advertised ETS TLVs, use the `no advertise dcbx-tlv` command.

Parameters

- **(ets-conf | ets-reco | pfc)** Enter the PFC and ETS TLVs advertised, where:
  - **ets-conf**: enables the advertisement of ETS configuration TLVs.
  - **ets-reco**: enables the advertisement of ETS recommend TLVs.
  - **pfc**: enables the advertisement of PFC TLVs.

Defaults

All PFC and ETS TLVs are advertised.

Command Modes

```
PROTOCOL LLDP
```

Command History

```
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.
```

Usage Information

- You can configure the transmission of more than one TLV type at a time; for example: `advertise dcbx-tlv ets-conf ets-reco`.
- You can enable ETS recommend TLVs (`ets-reco`) only if you enable ETS configuration TLVs (`ets-conf`). To disable TLV transmission, use the `no form of` the command; for example, `no advertise dcbx-tlv pfc ets-reco`.

DCBX requires that you enable LLDP to advertise DCBX TLVs to peers.

Configure DCBX operation at the INTERFACE level on a switch or globally on the switch. To verify the DCBX configuration on a port, use the `show interface dcbx detail` command.

bandwidth-percentage

Configure the bandwidth percentage allocated to priority traffic in port queues.

Syntax

```
bandwidth-percentage percentage
```

To remove the configured bandwidth percentage, use the `no bandwidth-percentage` command.
Parameters

**percentage**
(Optional) Enter the bandwidth percentage. The percentage range is from 1 to 100% in units of 1%.

Defaults

none

Command Modes

QOS-POLICY-OUT-ETS

Command History

**Version 8.3.16.1**
Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

By default, equal bandwidth is assigned to each port queue and each dot1p priority in a priority group. To configure bandwidth amounts in associated dot1p queues, use the `bandwidth-percentage` command. When specified bandwidth is assigned to some port queues and not to others, the remaining bandwidth (100% minus assigned bandwidth amount) is equally distributed to unassigned nonstrict priority queues in the priority group. The sum of the allocated bandwidth to all queues in a priority group must be 100% of the bandwidth on the link.

ETS-assigned bandwidth allocation applies only to data queues, not to control queues.

The configuration of bandwidth allocation and strict-queue scheduling is not supported at the same time for a priority group. If you configure both, the configured bandwidth allocation is ignored for priority-group traffic when you apply the output policy on an interface.

By default, equal bandwidth is assigned to each priority group in the ETS output policy applied to an egress port if you did not configure bandwidth allocation. The sum of configured bandwidth allocation to dot1p priority traffic in all ETS priority groups must be 100%. Allocate at least 1% of the total bandwidth to each priority group and queue. If bandwidth is assigned to some priority groups but not to others, the remaining bandwidth (100% minus assigned bandwidth amount) is equally distributed to nonstrict-priority groups which have no configured scheduler.

Related Commands

- `qos-policy-output ets` — creates a QoS output policy.
- `scheduler` — schedules priority traffic in port queues.

### dcb-enable

Enable data center bridging.

**Syntax**

dcb enable

To disable DCB, use the `no dcb enable` command.
dcb-input

To apply pause or flow control for specified priorities using a configure delay time, create a DCB input policy.

Syntax

```
dcb-input policy-name
```

To delete the DCB input policy, use the `no dcb-input` command.

Parameters

- `policy-name`: Maximum: 32 alphanumeric characters.

Defaults

none

Command Modes

CONFIGURATION

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

As soon as you apply a DCB policy with PFC enabled on an interface, DCBx starts exchanging information with PFC-enabled peers. The IEEE802.1Qbb, CEE, and CIN versions of PFC TLV are supported. DCBx also validates PFC configurations received in TLVs from peer devices.

By applying a DCB input policy with PFC enabled, you enable PFC operation on ingress port traffic. To achieve complete lossless handling of traffic, also enable PFC on all DCB egress ports or configure the dot1p priority-queue assignment of PFC priorities to lossless queues (refer to `pfc no-drop queues`).

To remove a DCB input policy, including the PFC configuration it contains, enter the `no dcb-input policy-name` command in Interface Configuration mode.

Related Commands

- `dcb-policy input` — applies the input policy with the PFC configuration.
**dcb-output**

To associate an ETS configuration with priority traffic, create a DCB output policy.

**Syntax**

```
dcb-output policy-name
```

To remove the ETS output policy globally, use the `no dcb output policy-name` command.

**Parameters**

<table>
<thead>
<tr>
<th>parameter</th>
<th>description</th>
</tr>
</thead>
<tbody>
<tr>
<td>policy-name</td>
<td>Enter the DCB output policy name. The maximum is 32 alphanumeric characters.</td>
</tr>
</tbody>
</table>

**Defaults**

none

**Command Modes**

CONFIGURATION

**Command History**

Version 8.3.16.1 
Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

To associate a priority group with an ETS output policy with scheduling and bandwidth configuration, create a DCB output policy. You can apply a DCB output policy on multiple egress ports. When you apply an ETS output policy on an interface, ETS-configured scheduling and bandwidth allocation take precedence over any configured settings in QoS output policies.

The ETS configuration associated with 802.1 priority traffic in a DCB output policy is used in DCBX negotiation with ETS peers.

**Related Commands**

- `dcb-policy output` — applies the output policy.

---

**dcb-policy input**

Apply the input policy with the PFC configuration to an ingress interface.

**Syntax**

```
dcb-policy input policy-name
```

To delete the input policy, use the `no dcb-policy input` command.

**Parameters**

<table>
<thead>
<tr>
<th>parameter</th>
<th>description</th>
</tr>
</thead>
<tbody>
<tr>
<td>policy-name</td>
<td>Enter the input policy name with the PFC configuration to an ingress interface.</td>
</tr>
</tbody>
</table>

**Defaults**

none

**Command Modes**

INTERFACE
If you apply an input policy with PFC disabled (no pfc mode on):

- You can enable link-level flow control on the interface. To delete the input policy, first disable link-level flow control. PFC is then automatically enabled on the interface because an interface is by default PFC-enabled.
- PFC still allows you to configure lossless queues on a port to ensure no-drop handling of lossless traffic.

When you apply an input policy to an interface, an error message is displayed if:

- The PFC dot1p priorities result in more than two lossless port queues globally on the switch.
- You already enabled link-level flow control. PFC and link-level flow control cannot be enabled at the same time on an interface.

In a switch stack, configure all stacked ports with the same PFC configuration.

A DCB input policy for PFC applied to an interface may become invalid if you reconfigure the dot1p-queue mapping. This situation occurs when the new dot1p-queue assignment exceeds the maximum number (2) of lossless queues supported globally on the switch. In this case, all PFC configurations received from PFC-enabled peers are removed and resynchronized with the peer devices.

Traffic may be interrupted when you reconfigure PFC no-drop priorities in an input policy or reapply the policy to an interface.

**Related Commands**

- `dcb-input` — creates a DCB input policy.

```
dcb-policy input stack-unit stack-ports all
```

Apply the specified DCB input policy on all ports of the switch stack or a single stacked switch.

**Syntax**

```
dcb-policy input stack-unit {all | stack-unit-id} stack-ports all 
dcb-input-policy-name
```

To remove all DCB input policies applied to the stacked ports and rest the PFC to its default settings, use the `no dcb-policy input stack-unit all` command.

To remove only the DCB input policies applied to the specified switch, use the `no dcb-policy input stack-unit command`.

**Parameters**

- `stack-unit-id` Enter the stack unit identification.
- `dcb-input-policy-name` Enter the policy name for the DCB input policy.
Defaults none
Command Modes CONFIGURATION

Command History
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
The `dcb-policy input stack-unit all` command overwrites any previous `dcb-policy input stack-unit stack-unit-id` configurations. Similarly, a `dcb-policy input stack-unit stack-unit-id` command overwrites any previous `dcb-policy input stack-unit all` configuration.

Related Commands
- `dcb-policy output stack-unit stack-ports all` — applies the specified DCB output policy.

**dcb-policy output**

Apply the output policy with the ETS configuration to an egress interface.

Syntax
```
dcb-policy output policy-name
```
To delete the output policy, use the `no dcb-policy output` command.

Parameters
- **policy-name** Enter the output policy name.

Defaults none
Command Modes INTERFACE

Command History
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
When you apply an ETS output policy to an interface, ETS-configured scheduling and bandwidth allocation take precedence over any configured settings in QoS output policies.

To remove an ETS output policy from an interface, use the `no dcb-policy output policy-name` command. ETS is enabled by default with the default ETS configuration applied (all dot1p priorities in the same group with equal bandwidth allocation).

Related Commands
- `dcb-output` — creates a DCB output policy.
**dcb-policy output stack-unit stack-ports all**

Apply the specified DCB output policy on all ports of the switch stack or a single stacked switch.

**Syntax**

```
dcb-policy output stack-unit {all | stack-unit-id} stack-ports all dcb-output-policy-name
```

To remove all DCB output policies applied to the stacked ports, use the `no dcb-policy output stack-unit all` command.

To remove only the DCB output policies applied to the specified switch, use the `no dcb-policy output stack-unit` command.

**Parameters**

- `stack-unit-id` Enter the stack unit identification.
- `dcb-output-policy-name` Enter the policy name for the DCB output policy.

**Defaults**

none

**Command Modes**

CONFIGURATION

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

The `dcb-policy output stack-unit all` command overwrites any previous `dcb-policy output stack-unit stack-unit-id` configurations. Similarly, a `dcb-policy output stack-unit stack-unit-id` command overwrites any previous `dcb-policy output stack-unit all` configuration.

You can apply a DCB output policy with ETS configuration to all stacked ports in a switch stack or an individual stacked switch. You can apply different DCB output policies to different stack units.

**Related Commands**

- `dcb-policy input stack-unit stack-ports all` — applies the specified DCB input policy.

---

**dcb stack-unit all pfc-buffering pfc-port-count pfc-queues**

Configure the PFC buffer for all switches in the stack.

**Syntax**

```
dcb stack-unit all pfc-buffering pfc-port-count {1-56} pfc-queues {1-2}
```

To remove the configuration for the PFC buffer on all switches in the stack, use the `no dcb stack-unit all pfc-buffering pfc-port-count pfc-queues` command.
Parameters

- **pfc-port-count (1-56)**
  - Enter the pfc-port count. The range is 1 to 56.

- **pfc-queues (1-2)**
  - Enter the pfc-queue number. The range is 1 to 2.

Defaults

The PFC buffer is enabled on all ports on the stack unit.

Command Modes

CONFIGURATION

Command History

Version 8.3.16.1
- Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

If you configure PFC on a 40GbE port, count the 40GbE port as four PFC-enabled ports in the pfc-port number you enter in the command syntax.

To achieve lossless PFC operation, the PFC port count and queue number used for the reserved buffer size that is created must be greater than or equal to the buffer size required for PFC-enabled ports and lossless queues on the switch.

You must reload the stack or a specified stack unit (use the reload command in EXEC Privilege mode) for the PFC buffer configuration to take effect.

Related Commands

- `dcb stack-unit pfc-buffering pfc-port pfc-queues` – configures the PFC buffer for all port pipes in a specified stack unit.

**dcb stack-unit pfc-buffering pfc-port-count pfc-queues**

Configure the PFC buffer for all port pipes in a specified stack unit by specifying the port-pipe number, number of PFC-enabled ports, and number of configured lossless queues.

Syntax

```
dcb stack-unit stack-unit-id [port-set port-set-id] pfc-buffering pfc-ports {1-56} pfc-queues {1-2}
```

To remove the configuration for the PFC buffer on all port pipes in a specified stack unit, use the `no dcb stack-unit stack-unit-id [port-set port-set-id] pfc-buffering pfc-ports pfc-queues` command.

Parameters

- **stack-unit-id**
  - Enter the stack unit identification. The range is from 0 to 5.

- **port-set**
  - Enter the port-set identification. The only valid port-set ID (port-pipe number) on an MXL Switch is 0.

- **pfc-ports (1-56)**
  - Enter the pfc-ports. The range is from 1 to 56.

- **pfc-queues (1-2)**
  - Enter the pfc-queue number. The range is from 1 to 2.
**Command Modes**

**Command History**

**Version 8.3.16.1**  Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

If you configure PFC on a 40GbE port, count the 40GbE port as four PFC-enabled ports in the pfc-port number you enter in the command syntax.

To achieve lossless PFC operation, the PFC port count and queue number used for the reserved buffer size that is created must be greater than or equal to the buffer size required for PFC-enabled ports and lossless queues on the switch.

You must reload the stack or a specified stack unit (use the `reload` command in EXEC Privilege mode) for the PFC buffer configuration to take effect.

**Related Commands**

dcb stack-unit pfc-buffering pfc-port pfc-queues — configures the PFC buffer for all switches in the stack.

dcbx port-role

Configure the DCBX port role the interface uses to exchange DCB information.

**Syntax**

dcbx port-role {config-source | auto-downstream | auto-upstream | manual}

To remove DCBX port role, use the `no dcbx port-role {config-source | auto-downstream | auto-upstream | manual}` command.

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>config-source</td>
<td>Enter the DCBX port role, where:</td>
</tr>
<tr>
<td>auto-downstream</td>
<td>• config-source: configures the port to serve as the</td>
</tr>
<tr>
<td>auto-upstream</td>
<td>configuration source on the switch.</td>
</tr>
<tr>
<td>manual</td>
<td>• auto-upstream: configures the port to receive a peer</td>
</tr>
<tr>
<td></td>
<td>configuration. The configuration source is elected from</td>
</tr>
<tr>
<td></td>
<td>auto-upstream ports.</td>
</tr>
<tr>
<td></td>
<td>• auto-downstream: configures the port to accept the</td>
</tr>
<tr>
<td></td>
<td>internally propagated DCB configuration from a</td>
</tr>
<tr>
<td></td>

</tr>
<tr>
<td></td>
<td>• manual: configures the port to operate only on</td>
</tr>
<tr>
<td></td>
<td>administer-configured DCB parameters. The port does</td>
</tr>
<tr>
<td></td>
<td>not accept a DCB configuration received form a peer or</td>
</tr>
<tr>
<td></td>
<td>a local configuration source.</td>
</tr>
</tbody>
</table>

**Defaults**

Manual

**Command Modes**

INTERFACE PROTOCOL LLDP
**dcxb version**

Configure the DCBX version used on the interface.

**Syntax**

```plaintext
dcbx version {auto | cee | cin | ieee-v2.5}
```

To remove the DCBX version, use the `dcbx version {auto | cee | cin | ieee-v2.5}` command.

**Parameters**

- `auto`Enter the DCBX version type used on the interface, where:
  - `auto`: configures the port to operate using the DCBX version received from a peer.
  - `cee`: configures the port to use CDD (Intel 1.01).
  - `cin`: configures the port to use Cisco-Intel-Nuova (DCBX 1.0).
  - `ieee-v2`: configures the port to use IEEE 802.1az (Draft 2.5).

**Defaults**

Auto

**Command Modes**

INTERFACE PROTOCOL LLDP

**Command History**

**Version 8.3.16.1** Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

DCBX requires that you enable LLDP to advertise DCBX TLVs to peers.

Configure DCBX operation at the INTERFACE level on a switch or globally on the switch. To verify the DCBX configuration on a port, use the `show interface dcbx detail` command.
**debug dcbx**

Enable DCBX debugging.

**Syntax**

```
debug dcbx {all | auto-detect-timer | config-exchng | fail | mgmt | resource | sem | tlv}
```

To disable DCBX debugging, use the no debug dcbx command.

**Parameters**

Enter the type of debugging, where:

- **all**: enables all DCBX debugging operations.
- **auto-detect-timer**: enables traces for DCBX auto-detect timers.
- **config-exchng**: enables traces for DCBX configuration exchanges.
- **fail**: enables traces for DCBX failures.
- **mgmt**: enables traces for DCBX management frames.
- **resource**: enables traces for DCBX system resource frames.
- **sem**: enables traces for the DCBX state machine.
- **tlv**: enables traces for DCBX TLVs.

**Defaults**

none

**Command Modes**

EXEC Privilege

**Command History**

Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.

**description**

Enter a text description of the DCB policy (PFC input or ETS output).

**Syntax**

```
description text
```

To remove the text description, use the no description command.

**Parameters**

- **text**  
  Enter the description of the output policy. The maximum is 32 characters.

**Defaults**

none

**Command Modes**

- DCB INPUT POLICY
- DCB OUTPUT POLICY
ets mode on

Enable the ETS configuration so that scheduling and bandwidth allocation configured in an ETS output policy or received in a DCBX TLV from a peer can take effect on an interface.

Syntax

ets mode on

To remove the ETS configuration, use the no ets mode on command.

Defaults

ETS mode is on.

Command Modes DCB OUTPUT POLICY

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

If you disable ETS in an output policy applied to an interface using the no ets mode on command, any previously configured QoS settings at the interface or global level takes effect. If you configure QoS settings at the interface or global level and in an output policy map (the service-policy output command), the QoS configuration in the output policy takes precedence.

Related Commands

- dcb-output — creates a DCB output policy.
- dcb-policy output — applies the output policy.

fcoe priority-bits

Configure the FCoE priority advertised for the FCoE protocol in application priority TLVs.

Syntax

fcoe priority-bits priority-bitmap

To remove the configured FCoE priority, use the no fcoe priority-bits command.

Parameters

priority-bitmap Enter the priority-bitmap range. The range is from 1 to FF.
Defaults: 0x8
Command Modes: PROTOCOL LLDP

Command History:
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information:
This command is available at the global level only.

iscsi priority-bits

Configure the iSCSI priority advertised for the iSCSI protocol in application priority TLVs.

Syntax:
iscsi priority-bits priority-bitmap

To remove the configured iSCSI priority, use the no iscsi priority-bits command.

Parameters:
- **priority-bitmap**: Enter the priority-bitmap range. The range is from 1 to FF.

Defaults: 0x10

Command Modes: PROTOCOL LLDP

Command History:
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information:
This command is available at the global level only.

pfc link-delay

Configure the link delay used to pause specified priority traffic.

Syntax:
pfc link-delay value

To remove the link delay, use the no pfc link-delay command.

Parameters:
- **value**: The range is (in quanta) from 712 to 65535. One quantum is equal to a 512-bit transmission.

Defaults: 45556 quantum
pfc mode on

Enable the PFC configuration on the port so that the priorities are included in DCBX negotiation with peer PFC devices.

Syntax

```
pfc mode on
```

To disable the PFC configuration, use the `no pfc mode on` command.

Defaults

PFC mode is on.

Command Modes

DCB INPUT POLICY

Command History

Version 8.3.16.1 Introduced on the MxL 10/40GbE Switch IO Module.

Usage Information

By applying a DCB input policy with PFC enabled, you enable PFC operation on ingress port traffic. To achieve complete lossless handling of traffic, also enable PFC on all DCB egress ports or configure the dot1p priority-queue assignment of PFC priorities to lossless queues (refer to `pfc no-drop queues`).

To disable PFC operation on an interface, enter the `no pfc mode on` command in DCB Input Policy Configuration mode. PFC is enabled and disabled as global DCB operation is enabled (`dcb-enable`) or disabled (`no dcb-enable`).

You cannot enable PFC and link-level flow control at the same time on an interface.

Related Commands

- `dcb-input` — creates a DCB input policy.
**pfc no-drop queues**

Configure the port queues that still function as no-drop queues for lossless traffic.

**Syntax**

```
pfc no-drop queues queue-range
```

To remove the no-drop port queues, use the `no pfc no-drop queues` command.

**Parameters**

- `queue-range` Enter the queue range. Separate the queue values with a comma; specify a priority range with a dash; for example, `pfc no-drop queues 1,3` or `pfc no-drop queues 2-3`. The range is from 0 to 3.

**Defaults**
No lossless queues are configured.

**Command Modes**

INTERFACE

**Command History**

- **Version 8.3.16.1** Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

- The maximum number of lossless queues globally supported on the switch is two.
- The following lists the dot1p priority-queue assignments.

<table>
<thead>
<tr>
<th>dot1p Value in the Incoming Frame</th>
<th>Description heading</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>0</td>
</tr>
<tr>
<td>1</td>
<td>0</td>
</tr>
<tr>
<td>2</td>
<td>0</td>
</tr>
<tr>
<td>3</td>
<td>1</td>
</tr>
<tr>
<td>4</td>
<td>2</td>
</tr>
<tr>
<td>5</td>
<td>3</td>
</tr>
<tr>
<td>6</td>
<td>3</td>
</tr>
<tr>
<td>7</td>
<td>3</td>
</tr>
</tbody>
</table>

---

**pfc priority**

Configure the CoS traffic to be stopped for the specified delay.

**Syntax**

```
pfc priority priority-range
```

To delete the pfc priority configuration, use the `no pfc priority` command.
**Parameters**

**priority-range**
Enter the 802.1p values of the frames to be paused. Separate the priority values with a comma; specify a priority range with a dash; for example, pfc priority 1,3,5-7. The range is from 0 to 7.

**Defaults**

none

**Command Modes**

DCB INPUT POLICY

**Command History**

Version 8.3.16.1   Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

You can enable any number of 802.1p priorities for PFC. Queues to which PFC priority traffic is mapped are lossless by default. Traffic may be interrupted due to an interface flap (going down and coming up) when you reconfigure the lossless queues for no-drop priorities in a PFC input policy and reapply the policy to an interface.

The maximum number of lossless queues supported on the switch is two.

A PFC peer must support the configured priority traffic (as DCBX detects) to apply PFC.

**Related Commands**

dcb-input — creates a DCB input policy.

---

**priority-group**

To use with an ETS output policy, create an ETS priority group.

**Syntax**

```
priority-group group-name
```

To remove the priority group, use the **no priority-group** command.

**Parameters**

**group-name**
Enter the name of the ETS priority group. The maximum is 32 characters.

**Defaults**

none

**Command Modes**

CONFIGURATION

**Command History**

Version 8.3.16.1   Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

A priority group consists of 802.1p priority values that are grouped for similar bandwidth allocation and scheduling, and that share latency and loss requirements. All 802.1p priorities mapped to the same queue must be in the same priority group.
You must configure 802.1p priorities in priority groups associated with an ETS output policy. You can assign each dot1p priority to only one priority group.

The maximum number of priority groups supported in ETS output policies on an interface is equal to the number of data queues (4) on the port. The 802.1p priorities in a priority group can map to multiple queues.

If you configure more than one priority queue as strict priority or more than one priority group as strict priority, the higher numbered priority queue is given preference when scheduling data traffic.

**Related Commands**
- `priority-list` — configures the 802.1p priorities for an ETS output policy.
- `set-pgid` — configures the priority-group.

### priority-group qos-policy

Associate the 802.1p priority traffic in a priority group with the ETS configuration in a QoS output policy.

**Syntax**

```
priority-group group-name qos-policy ets-policy-name
```

To remove the 802.1p priority group, use the `no priority-group qos-policy` command.

**Parameters**

- `group-name` Enter the group name of the 802.1p priority group. The maximum is 32 characters.
- `ets-policy-name` Enter the ETS policy name.

**Defaults**

none

**Command Modes**

DCB OUTPUT POLICY

**Command History**

- **Version 8.3.16.1** Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

The ETS configuration associated with 802.1p priority traffic in a DCB output policy is used in DCBX negotiation with ETS peers.

If you disable ETS in an output policy applied to an interface using the `no ets` mode on command, any previously configured QoS settings at the interface or global level take effect. If you configure QoS settings at the interface or global level and in an output policy map (the `service-policy output` command), the QoS configuration in the output policy takes precedence.
Related Commands

• `dcb-output` — creates a DCB output policy.
• `dcb-policy output` — applies the output policy.

priority-list

Configure the 802.1p priorities for the traffic on which you want to apply an ETS output policy.

Syntax

```
priority-list value
```

To remove the priority list, use the `no priority-list` command.

Parameters

- `value` Enter the priority list value. Separate priority values with a comma; specify a priority range with a dash; for example, priority-list 3,5-7. The range is from 0 to 7.

Defaults

none

Command Modes

PRIORITY-GROUP

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

By default:

- All 802.1p priorities are grouped in priority group 0.
- 100% of the port bandwidth is assigned to priority group 0. The complete bandwidth is equally assigned to each priority class so that each class has 12 to 13%.

Related Commands

• `priority-group qos-policy` — associates an ETS priority group with an ETS output policy.
• `set-pgid` — configures the priority-group.

qos-policy-output ets

To configure the ETS bandwidth allocation and scheduling for priority traffic, create a QoS output policy.

Syntax

```
qos-policy-output policy-name ets
```

To remove the QoS output policy, use the `no qos-policy-output ets` command.
### Parameters

- **policy-name**: Enter the policy name. The maximum is 32 characters.

### Command Modes

- **CONFIGURATION**

### Command History

- **Version 8.3.16.1**: Introduced on the MXL 10/40GbE Switch IO Module.

### Usage Information

If an error occurs in an ETS output-policy configuration, the configuration is ignored and the scheduler and bandwidth allocation settings are reset to the ETS default values (all priorities are in the same ETS priority group and bandwidth is allocated equally to each priority).

If an error occurs when a port receives a peer's ETS configuration, the port's configuration is reset to the previously configured ETS output policy. If no ETS output policy was previously applied, the port is reset to the default ETS parameters.

### Related Commands

- scheduler — schedules the priority traffic in port queues.
- bandwidth-percentage — bandwidth percentage allocated to the priority traffic in port queues.

### scheduler

**Configure the method used to schedule priority traffic in port queues.**

**Syntax**

```plaintext
scheduler value
```

To remove the configured priority schedule, use the `no scheduler` command.

**Parameters**

- **value**: Enter schedule priority value. The valid values are:
  - `strict`: strict-priority traffic is serviced before any other queued traffic.
  - `werr`: weighted elastic round robin (werr) provides low-latency scheduling for priority traffic on port queues.

**Defaults**

Weighted elastic round robin (WERR) scheduling is used to queue priority traffic.

**Command Modes**

- **POLICY-MAP-OUT-ETS**

**Command History**

- **Version 8.3.16.1**: Introduced on the MXL 10/40GbE Switch IO Module.
Usage Information

dot1p priority traffic on the switch is scheduled to the current queue mapping. dot1p priorities within the same queue must have the same traffic properties and scheduling method.

ETS-assigned scheduling applies only to data queues, not to control queues.

The configuration of bandwidth allocation and strict-queue scheduling is not supported at the same time for a priority group. If you configure both, the configured bandwidth allocation is ignored for priority-group traffic when you apply the output policy on an interface.

Related Commands

- `qos-policy-output ets` — configures the ETS bandwidth allocation.
- `bandwidth-percentage` — bandwidth percentage allocated to priority traffic in port queues.

**set-pgid**

Configure the priority-group identifier.

**Syntax**

```
set-pgid value
```

To remove the priority group, use the `no set-pgid` command.

**Parameters**

- `value` Enter the priority group identification. The range is from 0 to 7.

**Defaults**

none

**Command Modes**

PRIORITY-GROUP

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**

- `priority-group qos-policy` — creates an ETS priority group.
- `priority-list` — configures the 802.1p priorities.

**show dcb**

Displays the data center bridging status, the number of PFC-enabled ports, and the number of PFC-enabled queues.

**Syntax**

```
show dcb [stack-unit unit-number]
```
Parameters

- **unit number**: Enter the DCB unit number. The range is from 0 to 5.

Command Modes

- EXEC Privilege

Command History

- **Version 8.3.16.1**: Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

- Specify a stack-unit number on the Master switch in a stack.

Example

```plaintext
Dell# show dcb
stack-unit 0 port-set 0
  DCB Status : Enabled
  PFC Port Count : 56 (current), 56 (configured)
  PFC Queue Count : 2 (current), 2 (configured)
```

**show interface dcbx detail**

Displays the DCBX configuration on an interface.

Syntax

```plaintext
show interface port-type slot/port dcbx detail
```

Parameters

- **port-type**: Enter the port type.
- **slot/port**: Enter the slot/port number.

Command Modes

- CONFIGURATION

Command History

- **Version 8.3.16.1**: Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

- To clear DCBX frame counters, use the `clear dcbx counters interface stack-unit/port` command.

The following describes the `show interface dcbx detail` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Interface</td>
<td>Interface type with chassis slot and port number.</td>

</tbody>
</table>
### Field Description

**Total DCBX Frames transmitted**
Number of DCBX frames sent from the local port.

**Total DCBX Frames received**
Number of DCBX frames received from the remote peer port.

**Total DCBX Frame errors**
Number of DCBX frames with errors received.

**Total DCBX Frames unrecognized**
Number of unrecognizable DCBX frames received.

**Example**

```
Dell(conf)# show interface tengigabitethernet 0/49 dcbx detail
Dell#show interface te 0/49 dcbx detail

E-ETS Configuration TLV enabled
  e-ETS Configuration TLV disabled
R-ETS Recommendation TLV enabled
  r-ETS Recommendation TLV disabled
P-PFC Configuration TLV enabled
  p-PFC Configuration TLV disabled
F-Application priority for FCOE enabled
  f-Application Priority for FCOE disabled
I-Application priority for iSCSI enabled
  i-Application Priority for iSCSI disabled

Interface TenGigabitEthernet 0/49
  Remote Mac Address 00:00:00:00:00:11
  Port Role is Auto-Upstream
  DCBX Operational Status is Enabled
  Is Configuration Source? TRUE

Local DCBX Compatibility mode is CEE
  Local DCBX Configured mode is CEE
  Peer Operating version is CEE
  Local DCBX TLVs Transmitted: ErPfi

  Total DCBX Frame errors 0
  Total DCBX Frames unrecognized 0
```
show interface ets

Displays the ETS configuration applied to egress traffic on an interface, including priority groups with priorities and bandwidth allocation.

Syntax

```
show interface port-type slot/port ets {summary | detail}
```

Parameters

- `port-type slot/port ets` Enter the port-type slot and port ETS information.
- `(summary | detail)` Enter the keyword `summary` for a summary list of results or enter the keyword `detail` for a full list of results.

Command Modes

`CONFIGURATION`

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

To clear ETS TLV counters, use the `clear ets counters interface port-type slot/port` command.

The following describes the `show interface summary` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Interface</td>
<td>Interface type with stack-unit and port number.</td>

show interface pfc

Displays the PFC configuration applied to ingress traffic on an interface, including priorities and link delay.

Syntax

```
show interface port-type slot/port pfc {summary | detail}
```

Parameters

- **port-type slot/port pfc**: Enter the port-type slot and port PFC information.
- **(summary | detail)**: Enter the keyword **summary** for a summary list of results or enter the keyword **detail** for a full list of results.

Command Modes

INTERFACE

Command History

- **Version 8.3.16.1**: Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

To clear the PFC TLV counters, use the `clear pfc counters interface port-type slot/port` command.

The following describes the `show interface pfc summary` command shown in the following example.
<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Interface</td>
<td>Interface type with stack-unit and port number.</td>
</tr>
<tr>
<td>Admin mode is on</td>
<td>PFC admin mode is on or off with a list of the configured PFC priorities. When the PFC admin mode is on, PFC advertisements are enabled to be sent and received from peers; received PFC configuration take effect. The admin operational status for a DCBX exchange of PFC configuration is enabled or disabled.</td>
</tr>
<tr>
<td>Admin is enabled</td>
<td>PFC admin mode is on or off with a list of the configured PFC priorities. When the PFC admin mode is on, PFC advertisements are enabled to be sent and received from peers; received PFC configuration take effect. The admin operational status for a DCBX exchange of PFC configuration is enabled or disabled.</td>
</tr>
<tr>
<td>Remote is enabled, Priority list</td>
<td>Operational status (enabled or disabled) of peer device for DCBX exchange of PFC configuration with a list of the configured PFC priorities. Willing status of peer device for DCBX exchange (Willing bit received in PFC TLV): enabled or disable.</td>
</tr>
<tr>
<td>list Remote Willing Status is enabled</td>
<td>Operational status (enabled or disabled) of peer device for DCBX exchange of PFC configuration with a list of the configured PFC priorities. Willing status of peer device for DCBX exchange (Willing bit received in PFC TLV): enabled or disable.</td>
</tr>
<tr>
<td>Local is enabled</td>
<td>DCBX operational status (enabled or disabled) with a list of the configured PFC priorities.</td>
</tr>
<tr>
<td>Operational status (local port)</td>
<td>Port state for current operational PFC configuration:</td>
</tr>
<tr>
<td></td>
<td>- <strong>Init</strong>: Local PFC configuration parameters were exchanged with the peer.</td>
</tr>
<tr>
<td></td>
<td>- <strong>Recommend</strong>: Remote PFC configuration parameters were received from the peer.</td>
</tr>
<tr>
<td></td>
<td>- <strong>Internally propagated</strong>: PFC configuration parameters were received from the configuration source.</td>
</tr>
<tr>
<td>PFC DCBX Oper status</td>
<td>Operational status for the exchange of the PFC configuration on the local port: match (up) or mismatch (down).</td>
</tr>
<tr>
<td>State Machine Type</td>
<td>Type of state machine used for DCBX exchanges of the PFC parameters: Feature — for legacy DCBX versions; Symmetric — for an IEEE version.</td>
</tr>
<tr>
<td>TLV Tx Status</td>
<td>Status of the PFC TLV advertisements: enabled or disabled.</td>
</tr>
<tr>
<td>PFC Link Delay</td>
<td>Link delay (in quanta) used to pause specified priority traffic.</td>
</tr>
<tr>
<td>Application Priority TLV: FCOE</td>
<td>Status of FCoE advertisements in application priority TLVs from the local DCBX port: enabled or disabled.</td>
</tr>
<tr>
<td>TLV Tx Status</td>
<td>Status of ISCSI advertisements in application priority TLVs from the local DCBX port: enabled or disabled.</td>
</tr>
<tr>
<td>Application Priority TLV: Local FCOE</td>
<td>Priority bitmap the local DCBX port uses in FCoE advertisements in application priority TLVs.</td>
</tr>
</tbody>
</table>
Field | Description
--- | ---
Application Priority TLV: Local ISCSI Priority Map | Priority bitmap the local DCBX port uses in ISCSI advertisements in application priority TLVs.
Application Priority TLV: Remote FCOE Priority Map | Status of FCoE advertisements in application priority TLVs from the remote peer port: enabled or disabled.
Application Priority TLV: Remote ISCSI Priority Map | Status of iSCSI advertisements in application priority TLVs from the remote peer port: enabled or disabled.

PFC TLV Statistics:
Input TLV pkts | Number of PFC TLVs received.
PFC TLV Statistics:
Output TLV pkts | Number of PFC TLVs transmitted.
PFC TLV Statistics:
Error pkts | Number of PFC error packets received.
PFC TLV Statistics:
Pause Tx pkts | Number of PFC pause frames transmitted.
PFC TLV Statistics:
Pause Rx pkts | Number of PFC pause frames received.

Example (Summary)
Dell# show interfaces tengigabitethernet 0/49 pfc summary
Interface TenGigabitEthernet 0/49
 Admin mode is on
 Admin is enabled
 Remote is enabled, Priority list is 4
 Remote Willing Status is enabled
 Local is enabled
 Oper status is Recommended
 PFC DCBX Oper status is Up
 State Machine Type is Feature
 TLV Tx Status is enabled
 PFC Link Delay 45556 pause quantams
 Application Priority TLV Parameters :
 --------------------------------------
 FCOE TLV Tx Status is disabled
 ISCSI TLV Tx Status is disabled
 Local FCOE PriorityMap is 0x8
 Local ISCSI PriorityMap is 0x10
 Remote FCOE PriorityMap is 0x8
 Remote ISCSI PriorityMap is 0x8

Dell# show interfaces tengigabitethernet 0/49 pfc detail
Interface TenGigabitEthernet 0/49
 Admin mode is on
 Admin is enabled
 Remote is enabled
 Remote Willing Status is enabled
 Local is enabled
Oper status is recommended
PFC DCBX Oper status is Up
State Machine Type is Feature
TLV Tx Status is enabled
PFC Link Delay 45556 pause quanta
Application Priority TLV Parameters:
--------------------------------------
FCOE TLV Tx Status is disabled
ISCSI TLV Tx Status is disabled
Local FCOE PriorityMap is 0x8
Local ISCSI PriorityMap is 0x10
Remote FCOE PriorityMap is 0x8
Remote ISCSI PriorityMap is 0x8
0 Input TLV pkts, 1 Output TLV pkts, 0 Error pkts,
0 Pause Tx pkts, 0 Pause Rx pkts

show interface pfc statistics

Displays counters for the PFC frames received and transmitted (by dot1p priority class) on an interface.

**Syntax**

```
show interface port-type slot/port pfc statistics
```

**Parameters**

- `port-type` Enter the port type.
- `slot/port` Enter the slot/port number.

**Command Modes**

INTERFACE

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Example**

```
Dell#show interfaces te 0/3 pfc statistics
Interface TenGigabitEthernet 0/3
Priority Rx XOFF Frames Rx Total Frames Tx Total Frames
--------------------------------------------------------
0        0              0               0
1        0              0               0
2        0              0               0
3        0              0               0
4        0              0               0
5        0              0               0
6        0              0               0
7        0              0               0
```

show qos dcb-input

Displays the PFC configuration in a DCB input policy.

**Syntax**

```
show qos dcb-input [pfc-profile]
```
Parameters

**pfc-profile** Enter the PFC profile.

Command Modes

CONFIGURATION

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Example

Dell(conf)# show qos dcb-input
dcb-input pfc-profile
  pfc link-delay 32
  pfc priority 0-1
dcb-input pfc-profile1
  no pfc mode on
  pfc priority 6-7

---

**show qos dcb-output**

Displays the ETS configuration in a DCB output policy.

**Syntax**

```
show qos dcb-output [ets-profile]
```

**Parameters**

[ets-profile] Enter the ETS profile.

**Command Modes**

EXEC Privilege

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Example

Dell# show qos dcb-output
dcb-output ets
  priority-group san qos-policy san
  priority-group ipc qos-policy ipc
  priority-group lan qos-policy lan

---

**show qos priority-groups**

Displays the ETS priority groups configured on the switch, including the 802.1p priority classes and ID of each group.

**Syntax**

```
show qos priority-groups
```

**Command Modes**

EXEC Privilege
show stack-unit stack-ports ets details

Displays the ETS configuration applied to egress traffic on stacked ports, including ETS Operational mode on each unit and the configured priority groups with dot1p priorities, bandwidth allocation, and scheduler type.

Syntax

```
show stack-unit {all | stack-unit} stack-ports {all | port-number} ets details
```

Parameters

- `stack-unit` Enter the stack unit identification.
- `port-number` Enter the port number.

Command Modes

CONFIGURATION

Command History

Version 8.3.16.1 Introduced on the MXP 10/40GbE Switch IO Module.

Example

```
Dell(conf)# show stack-unit all stack-ports all ets details

Stack unit 0 stack port all
Max Supported TC Groups is 4
Number of Traffic Classes is 1
Admin mode is on

Admin Parameters:
-------------------
Admin is enabled
TC-grp Priority#   Bandwidth TSA
-------------------
0                  0,1,2,3,4,5,6,7  100%  ETS
1                  - -
2                  - -
3                  - -
4                  - -
5                  - -
6                  - -
7                  - -
8                  - -

Stack unit 1 stack port all
Max Supported TC Groups is 4
Number of Traffic Classes is 1
Admin mode is on
Admin Parameters:
-------------------
```
show stack-unit stack-ports pfc details

Displays the PFC configuration applied to ingress traffic on stacked ports, including PFC Operational mode on each unit with the configured priorities, link delay, and number of pause packets sent and received.

Syntax

show stack-unit {all | stack-unit} stack-ports {all | port-number} pfc details

Parameters

stack-unit Enter the stack unit.
port-number Enter the port number.

Command Modes

CONFIGURATION

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Example

Dell(conf)# show stack-unit all stack-ports all pfc details

stack unit 0 stack-port all
  Admin mode is On
  Admin is enabled, Priority list is 4-5
  Local is enabled, Priority list is 4-5
  Link Delay 45556 pause quantum
  0 Pause Tx pkts, 0 Pause Rx pkts

stack unit 1 stack-port all
  Admin mode is On
  Admin is enabled, Priority list is 4-5
  Local is enabled, Priority list is 4-5
  Link Delay 45556 pause quantum
  0 Pause Tx pkts, 0 Pause Rx pkts
Debugging and Diagnostics

The basic debugging and diagnostic commands are supported by the Dell Networking operating system (Dell).

This chapter contains the following sections:

- Offline Diagnostic Commands
- Buffer Tuning Commands
- Hardware Commands

Offline Diagnostic Commands

The offline diagnostics test suite is useful for isolating faults and debugging hardware. While tests are running, the Dell operating system results are saved as a text file (TestReport-SU-X.txt) in the flash directory. This show file command is available only on master and standby.

Important Points to Remember

- Offline diagnostics can only be run when the unit is offline.
- You can only run offline diagnostics on a unit to which you are connected via the console. In other words, you cannot run diagnostics on a unit to which you are connected via a stacking link.
- Diagnostic results are printed to the screen. The Dell Networking OS does not write them to memory.
- Diagnostics only test connectivity, not the entire data path.

**diag stack-unit**

Run offline diagnostics on a stack unit.

**Syntax**

```plaintext
diag stack-unit number [alllevels | level0 | level1 | level2] verbose no-reboot
```

**Parameters**

- `number`
  - Enter the stack-unit number. The range is from 0 to 5.

- `alllevels`
  - Enter the keyword alllevels to run the complete set of offline diagnostic tests.

- `level0`
  - Enter the keyword level0 to run Level 0 diagnostics. Level 0 diagnostics check for the presence of various components and perform essential path verifications. In addition, they verify the identification registers of the components on the board.
**level1**  
Enter the keyword `level1` to run Level 1 diagnostics. Level 1 diagnostics is a smaller set of diagnostic tests with support for automatic partitioning. They perform status/self test for all the components on the board and test their registers for appropriate values. In addition, they perform extensive tests on memory devices (for example, SDRAM, flash, NVRAM, EEPROM, and CPLD) wherever possible. There are no tests on 10G links. At this level, stack ports are shut down automatically.

**level2**  
Enter the keyword `level2` to run Level 2 diagnostics. Level 2 diagnostics are a full set of diagnostic tests with no support for automatic partitioning. Level 2 diagnostics are used primarily for on-board loopback tests and more extensive component diagnostics. Various components on the board are put into Loopback mode and test packets are transmitted through those components. These diagnostics also perform snake tests using VLAN configurations. To test 10G links, physically remove the unit from the stack.

**verbose**  
Enter the keyword `verbose` to run the diagnostic in Verbose mode. Verbose mode gives more information in the output than Standard mode.

**no-reboot**  
Enter the keyword `no-reboot` to avoid automatic rebooting of the chassis after completion of diagnostic execution. Generally, this option is never used because if you run the diagnostic once again without rebooting the chassis, it may cause an issue with the diagnostic results..

**offline stack-unit**  
Place a stack unit in the offline state.

**Syntax**  
`offline stack-unit number`

**Parameters**  
`number`  
Enter the stack-unit number. The range is from 0 to 5.

**Defaults**  
none

**Command Modes**  
EXEC Privilege

**Command History**  
Version 8.3.16.1  
Introduced on the MXL 10/40GbE Switch IO Module.
Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The system reboots when the off-line diagnostics complete. This reboot is an automatic process. A warning message appears when the offline stack-unit command is implemented.

Warning - Diagnostic execution will cause stack-unit to reboot after completion of diags.

Proceed with Offline-Diags [confirm yes/no]:y

online stack-unit

Place a stack unit in the online state.

Syntax

online stack-unit number

Parameters

dedicated

Enter the keyword dedicated to configure the amount of dedicated buffer space per queue.

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Buffer Tuning Commands

The following sections detail the buffer tuning commands.

WARNING: Altering the buffer allocations is a sensitive operation. Do not use any buffer tuning commands without first contacting the Dell Networking Technical Assistance Center (TAC).

buffer (Buffer Profile)

Allocate an amount of dedicated buffer space, dynamic buffer space, or packet pointers to queues 0 to 3.

Syntax

buffer [dedicated | dynamic | packets-pointers] queue0 number queue1 number queue2 number queue3 number

Parameters

dedicated

Enter the keyword dedicated to configure the amount of dedicated buffer space per queue.
Enter the keyword `dynamic` to configure the amount of dynamic buffer space per Field Processor.

Enter the keywords `packets-pointers` to configure the number of packet pointers per queue.

Enter the keyword `queue0` and the number to allocate an amount of buffer space or packet pointers to Queue 0.

- Dedicated Buffer Range: 0 to 2013.
- Dynamic Buffer Range: FP: 0 to 2013. CSF: 0 to 131200 (in multiples of 80).
- Packet Pointer Range: 0 to 2047.

Enter the keyword `queue1` and the number to allocate an amount of buffer space or packet pointers to Queue 1.

- Dedicated Buffer Range: 0 to 2013.
- Dynamic Buffer Range: FP: 0 to 2013. CSF: 0 to 131200 (in multiples of 80).
- Packet Pointer Range: 0 to 2047.

Enter the keyword `queue2` and the number to allocate an amount of buffer space or packet pointers to Queue 2.

- Dedicated Buffer Range: 0 to 2013.
- Dynamic Buffer Range: FP: 0 to 2013. CSF: 0 to 131200 (in multiples of 80).
- Packet Pointer Range: 0 to 2047.

Enter the keyword `queue3` and the number to allocate an amount of buffer space or packet pointers to Queue 3.

- Dedicated Buffer Range: 0 to 2013.
- Dynamic Buffer Range: FP: 0 to 2013. CSF: 0 to 131200 (in multiples of 80).
- Packet Pointer Range: 0 to 2047.

**Defaults**

- `none`

**Command Modes**

- BUFFER PROFILE

**Command History**

**Version 8.3.16.1**

Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**

- `buffer-profile (Configuration)` — creates a buffer profile that can be applied to an interface.
buffer (Configuration)

Apply a buffer profile to all Field or Switch Fabric processors in a port-pipe.

**Syntax**

```markdown
buffer [csf | fp-uplink] port-set port-pipe buffer-policy buffer-profile
```

**Parameters**

- **csf**
  - Enter the keyword `csf` to apply a buffer profile to all Switch Fabric processors in a port-pipe.

- **fp-uplink**
  - Enter the keyword `fp-uplink` to apply a buffer profile to all Field Processors in a port-pipe.

- **port-set port-pipe**
  - Enter the keywords `port-set` then the port-pipe number. The range is 0 to 1.

- **buffer-policy buffer-profile**
  - Enter the keywords `buffer-policy` then the name of a buffer profile you created.

**Defaults**

- none

**Command Modes**

- BUFFER PROFILE

**Command History**

- **Version 8.3.16.10**
  - Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

If you attempt to apply a buffer profile to a non-existent port-pipe, the Dell Networking OS displays the following message. However, the configuration still appears in the running-config.

```
%DIFFSERV-2-DSA_BUFF_CARVING_INVALID_PORT_SET: Invalid FP port-set 2 for stack-unit 2. Valid range of port-set is <0-1>
```

When you remove a buffer-profile using the `no buffer-profile [fp | csf]` command from CONFIGURATION mode, the buffer-profile name still appears in the output of `show buffer-profile [detail | summary]`. After a line card reset, the buffer profile correctly returns to the default values, but the profile name remains. Remove it from the `show buffer-profile [detail | summary]` command output by entering `no buffer [fp-uplink | csf] buffer-policy` from CONFIGURATION mode and `no buffer-policy` from INTERFACE mode.

**Related Commands**

- `buffer-profile [Configuration]` — creates a buffer profile that can be applied to an interface.
**buffer-profile (Configuration)**

Create a buffer profile that can be applied to an interface.

**Syntax**

```
buffer-profile {fp | csf} profile-name {global {1Q | 4Q}}
```

**Parameters**

- **fp**
  - Enter the keyword `fp` to create a buffer profile for the Field Processor.

- **csf**
  - Enter the keyword `csf` to create a buffer profile for the Switch Fabric Processor.

- **profile-name**
  - Create a name for the buffer profile.

- **global**
  - Apply one of two pre-defined buffer profiles to all of the port-pipes in the system.

- **1Q**
  - Enter the keyword `1Q` to choose a pre-defined buffer profile for single queue (for example, non-QoS) applications.

- **4Q**
  - Enter the keyword `4Q` to choose a pre-defined buffer profile for four queue (for example, QoS) applications.

**Defaults**

Dynamic

**Command Modes**

CONFIGURATION

**Command History**

- **Version 9.2(0.0)**
  - Changed the default value from global 4Q to Dynamic.

- **Version 8.3.16.1**
  - Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

The `buffer-profile global` command fails if you have already applied a custom buffer-profile on an interface. Similarly, when you configure `buffer-profile global`, you cannot not apply `buffer-profile` on any interface.

If the default buffer-profile is active, the Dell OS displays an error message instructing you to remove the default configuration using the `no buffer-profile global` command.

Reload the system for the global buffer-profile to take effect.

**Related Commands**

- `buffer (Buffer Profile)` — allocates an amount of dedicated buffer space, dynamic buffer space, or packet pointers to queues from 0 to 3.
buffer-profile (Interface)

Apply a buffer profile to an interface.

**Syntax**

```
buffer-profile profile-name
```

**Parameters**

- `profile-name` Enter the name of the buffer profile you want to apply to the interface.

**Defaults**

none

**Command Modes**

INTERFACE

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**

buffer-profile (Configuration) — creates a buffer profile that can be applied to an interface.

show buffer-profile

Display the buffer profile that is applied to an interface.

**Syntax**

```
show buffer-profile {detail | summary} {csf | fp-uplink}
```

**Parameters**

- `detail` Display the buffer allocations of the applied buffer profiles.
- `summary` Display the buffer-profiles that are applied to line card port-pipes in the system.
- `csf` Display the Switch Fabric Processor buffer profiles that you have applied to line card port-pipes in the system.
- `fp-uplink` Display the Field Processor buffer profiles that you have applied to line card port-pipes in the system.

**Defaults**

none

**Command Modes**

EXEC Privilege

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Example**

```
Dell#show buffer-profile summary fp-uplink
Linecard Port-set Buffer-profile
0 0 test1
4 0 test2
```

Dell#
show buffer-profile interface

Display the buffer profile that is applied to an interface.

Syntax

```
show buffer-profile {detail | summary} interface interface slot/port
```

Parameters

- **detail**: Display the buffer allocations of a buffer profile.
- **summary**: Display the Field Processors and Switch Fabric Processors that are applied to the system.
- **interface**: Enter the keyword `interface` then the interface type, either `gigabitethernet` or `tengigabitethernet`.
- **slot/port**: Enter the slot and port number of the interface.

Defaults

`none`

Command Modes

`INTERFACE`

Command History

Version 8.3.16.1

Introduced on the MXL 10/40GbE Switch IO Module.

Example

```
Dell#show buffer-profile detail csf linecard 4 port-set 0
Linecard 4 Port-set 0
Buffer-profile test
Queue#  Dedicated Buffer  Buffer Packets
(Bytes)          (Bytes)
0       36960              718
1       18560              358
2       18560              358
3       18560              358
4       9600               64
5       9600               64
6       9600               64
7       9600               63
Dell#
```

Related Commands

- **buffer-profile (Configuration)** — creates a buffer profile that can be applied to an interface.
Hardware Commands

These commands display information from a hardware sub-component or ASIC.

clear hardware stack-unit

Clear statistics from selected hardware components.

**Syntax**

```
clear hardware stack-unit 0–5 {counters | unit 0–1 counters | cpu data-plane statistics | cpu party-bus statistics | stack-port 0–52}
```

**Parameters**

- **stack-unit 0–5**
  - Enter the keywords `stack-unit` then 0 to 5 to select a particular stack member and then enter one of the following command options to clear a specific collection of data.

- **counters**
  - Enter the keyword `counters` to clear the counters on the selected stack member.

- **unit 0–0 counters**
  - Enter the keyword `unit` along with a port-pipe number, from 0 to 1, then the keyword `counters` to clear the counters on the selected port-pipe.

- **cpu data-plane statistics**
  - Enter the keywords `cpu data-plane statistics` to clear the data plane statistics.

- **cpu party-bus statistics**
  - Enter the keywords `cpu party-bus statistics` to clear the management statistics.

- **stack-port 33–56**
  - Enter the keywords `stack-port` then the port number of the stacking port to clear the statistics of the particular stacking port. The range is from 33 to 56.

**NOTE:** You can identify stack port numbers by physical inspection of the rear modules. The numbering is the same as for the 10G ports. You can also inspect the output of the `show system stack-ports` command.

**Defaults**

- None

**Command Modes**

- EXEC Privilege

**Command History**

- **Version 8.3.16.1**
  - Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**

- `show hardware stack-unit` — displays the data plane or management plane input and output statistics of the designated component of the designated stack member.
clear hardware system-flow

Clear system-flow statistics from selected hardware components.

**Syntax**

```
clear hardware system-flow layer2 stack-unit 0–5 port-set 0–0 counters
```

**Parameters**

- `stack-unit 0–5` Enter the keywords `stack-unit` then 0 to 5 to select a particular stack member and then enter one of the following command options to clear a specific collection of data.
- `port-set 0–0 counters` Enter the keywords `port-set` along with a port-pipe number, then the keyword `counters` to clear the system-flow counters on the selected port-pipe.

**Defaults**

none

**Command Modes**

EXEC Privilege

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**

- `show hardware stack-unit` — displays the data plane or management plane input and output statistics of the designated component of the designated stack member.
- `show hardware layer2 acl` — Display Layer 2 ACL or eg data for the selected stack member and stack member port-pipe.

show hardware layer2 acl

Display Layer 2 ACL or eg data for the selected stack member and stack member port-pipe.

**Syntax**

```
show hardware layer2 acl stack-unit 0–5 port-set 0–0
```

**Parameters**

- `stack-unit 0–5` Enter the keyword `stack-unit` then 0 to 5 to select a stack ID.
- `port-set 0–0` Enter the keywords `port-set` with a port-pipe number.

**Defaults**

none

**Command Modes**

EXEC Privilege

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.
show hardware layer3

Display Layer 3 ACL or QoS data for the selected stack member and stack member port-pipe.

Syntax

```
show hardware layer3 {acl | qos} stack-unit 0–5 port-set 0–0
```

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>acl</td>
<td>qos</td>
</tr>
<tr>
<td>stack-unit 0–5</td>
<td>Enter the keywords stack-unit then a numeral from 0 to 5 to select a stack ID.</td>
</tr>
<tr>
<td>port-set 0–0</td>
<td>Enter the keyword port-set with a port-pipe number.</td>
</tr>
</tbody>
</table>

Defaults

none

Command Modes

EXEC Privilege

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

show hardware stack-unit

Display the data plane or management plane input and output statistics of the designated component of the designated stack member.

Syntax

```
show hardware stack-unit 0–5 {buffer [buffer unit | port [(1-56) | all] total buffer | buffer unit (1) port (1-56) queue [(0-14) | all] buffer-info} [phy-firmware-version] [cpu data-plane statistics [stack-port 0-52] | cpu party-bus statistics | cpu private-mgmt statistics | drops [unit 0-1 [port 1-56]] | stack-port 33-56 | unit 0-0 [counters | details | port-stats [detail] | register]}
```

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>stack-unit 0–5 (command-option)</td>
<td>Enter the keywords stack-unit then 0 to 5 to select a particular stack member and then enter one of the following command options to display a collection of data based on the option entered.</td>
</tr>
<tr>
<td>buffer</td>
<td>Enter the keyword buffer. To display the total buffer statistics for the stack unit, enter the keyword total-buffer. Enter the keywords buffer unit then total-buffer to display the buffer details per unit and mode of allocation. To display the forwarding plane statistics containing the packet buffer usage per port per stack unit, enter the keywords buffer unit then port and the port number (1-56 or all), then buffer-info. To display the forwarding plane statistics containing the packet buffer statistics per COS per port, enter the keywords buffer</td>
</tr>
</tbody>
</table>
unit and port (1-56), and queue (0-14 or all), and buffer-info. The buffer unit default is 1.

**phy-firmware-version**
Each member of the stack is updated automatically with the latest firmware while booting as well as during OIR. To dump the physical firmware version for stack units, enter the keywords `phy-firmware-version`.

**cpu data-plane statistics**
(Optional) Enter the keywords `cpu data-plane statistics` then the keywords `stack port` and its number from 0 to 52 to display the data plane statistics, which shows the High Gig (Higig) port raw input/output counter statistics to which the stacking module is connected.

**cpu party-bus statistics**
Enter the keywords `cpu party-bus statistics` to display the Management plane input/output counter statistics of the pseudo party bus interface.

**cpu private-mgmt statistics**
Enter the keywords `cpu private-mgmt statistics` to display the Management plane input/output counter statistics of the Private Management interface.

**drops [unit 0-0 [port 1-56]]**
Enter the keyword `drops` to display internal drops on the selected stack member. Optionally, use the keyword `unit` with 0 to select port-pipe 0, and then use `port 1-56` to select a port on that port-pipe.

**stack-port 33–56**
Enter the keywords `stack-port` and a stacking port number to select a stacking port for which to display statistics. Identify the stack port number as you would to identify a 10G port that was in the same place in one of the rear modules.

**NOTE:** You can identify stack port numbers by physical inspection of the rear modules. The numbering is the same as for the 10G ports. You can also inspect the output of the `show system stack-ports` command.

**unit 0–0 (counters | details | port-stats [detail] | register)**
Enter the keyword `unit` then 0 for port-pipe 0, and then enter one of the following keywords to troubleshoot errors on the selected port-pipe and to give status on why a port is not coming up to register level: `counters`, `details`, `port-stats [detail]`, or `register`.

---

**Defaults**
none

**Command Modes**
- EXEC
- EXEC Privilege

**Command History**
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Example**
```
Dell#show hardware stack-unit 0 phy-firmware-version
PortNumber Status   Programmed Version   SW Version
356
```
In the above example, the Status field represents presence of OPTM ports, Programmed version field represents loaded firmware version, and SW version represents the SDK version.

Example (data-plane)

```

Related Commands

- **clear hardware system-flow** — clears the statistics from selected hardware components.
- **show interfaces stack-unit** — displays information on all interfaces on a specific stack member.
- **show processes cpu** — Displays CPU usage information based on running processes.
- **show system stack-ports** — Displays information about the stacking ports on all switches in the stack.
- **show system** — Displays the current status of all stack members or a specific member.

---

**show hardware system-flow**

Display Layer 3 ACL or QoS data for the selected stack member and stack member port-pipe.

**Syntax**

```
show hardware system-flow layer2 stack-unit 0-5 port-set 0-0 [counters]
```
Parameters

**acl | qos**
For the selected stack member and stack member port-pipe, display which system flow entry the packet hits and what queue the packet takes as it dumps the raw system flow tables.

**stack-unit 0–5**
Enter the keywords `stack-unit` then 0 to 5 to select a stack member ID.

**port-set 0–0 [counters]**
Enter the keywords `port-set` with a port-pipe number.

(Optional) Enter the keyword `counters` to display hit counters for the selected ACL or QoS option.

Defaults
none

Command Modes
EXEC Privilege

Command History

| Introduced on the MXL 10/40GbE Switch IO Module. |

Dynamic Host Configuration Protocol (DHCP)

Dynamic host configuration protocol (DHCP) is an application layer protocol that dynamically assigns IP addresses and other configuration parameters to network end-stations (hosts) based on the configuration policies the network administrators determine.

An MXL switch can operate as a DHCP server or DHCP client. As a DHCP client, the switch requests an IP address from a DHCP server.

This chapter contains the following sections:

- Commands to Configure the System to be a DHCP Client
- Commands to Configure the System to be a DHCP Server
- Commands to Configure Secure DHCP

Commands to Configure the System to be a DHCP Server

To configure the system to be a DHCP server, use the following commands.

clear ip dhcp

Reset the DHCP counters.

**Syntax**

```
clear ip dhcp [binding {address | conflict | server statistics}]
```

**Parameters**

- **binding**
  Enter the keyword binding to delete all entries in the binding table.

- **address**
  Enter the IP address to clear the binding entry for a single IP address.

- **conflicts**
  Enter the keyword conflicts to delete all of the log entries created for IP address conflicts.

- **server statistics**
  Enter the keywords server statistics to clear all the server counter information.

**Defaults**

- none
### debug ip dhcp server

Display the Dell Networking OS debugging messages for DHCP.

**Syntax**
```
ddebug ip dhcp server [events | packets]
```

**Parameters**
- **events**
  - Enter the keyword `events` to display the DHCP state changes.
- **packet**
  - Enter the keyword `packet` to display packet transmission/reception.

**Defaults**
none

**Command Modes**
EXEC Privilege

**Command History**
- Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

### default-router

Assign a default gateway to clients based on the address pool.

**Syntax**
```
default-router address [address2...address8]
```

**Parameters**
- **address**
  - Enter a list of routers that may be the default gateway for clients on the subnet. You may specify up to eight routers. List them in order of preference.

**Defaults**
none

**Command Modes**
DHCP <POOL>

**Command History**
- Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.
**disable**

Disable the DHCP server.

**Syntax**

```plaintext
disable
```

DHCP Server is disabled by default. To enable the system to be a DHCP server, use the `no disable` command.

**Defaults**

Disabled

**Command Modes**

DHCP

**Command History**

Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.

---

**dns-server**

Assign a DNS server to clients based on address pool.

**Syntax**

```plaintext
dns-server address [address2...address8]
```

**Parameters**

- `address`
  - Enter a list of DNS servers that may service clients on the subnet. You may list up to eight servers, in order of preference.

**Defaults**

none

**Command Modes**

DHCP <POOL>

**Command History**

Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.

---

**domain-name**

Assign a domain to clients based on the address pool.

**Syntax**

```plaintext
domain-name name
```

**Parameters**

- `name`
  - Give a name to the group of addresses in a pool.

**Defaults**

none

**Command Modes**

DHCP <POOL>
excluded-address

Prevent the server from leasing an address or range of addresses in the pool.

**Syntax**

```
excluded-address [address | low-address high-address]
```

**Parameters**

- **address**
  - Enter a single address to be excluded from the pool.
- **low-address**
  - Enter the lowest address in a range of addresses to be excluded from the pool.
- **high-address**
  - Enter the highest address in a range of addresses to be excluded from the pool.

**Defaults**

none

**Command Modes**

DHCP

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

hardware-address

For manual configurations, specify the client hardware address.

**Syntax**

```
hardware-address address
```

**Parameters**

- **address**
  - Enter the hardware address of the client.

**Defaults**

none

**Command Modes**

DHCP <POOL>

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.
**host**

For manual (rather than automatic) configurations, assign a host to a single-address pool.

**Syntax**

```plaintext
host address
```

**Parameters**

- `address/mask` Enter the host IP address and subnet mask.

**Defaults**

- none

**Command Modes**

- DHCP <POOL>

**Command History**

- Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

---

**lease**

Specify a lease time for the addresses in a pool.

**Syntax**

```plaintext
lease {days [hours] [minutes] | infinite}
```

**Parameters**

- `days` Enter the number of days of the lease. The range is from 0 to 31.
- `hours` Enter the number of hours of the lease. The range is from 0 to 23.
- `minutes` Enter the number of minutes of the lease. The range is from 0 to 59.
- `infinite` Specify that the lease never expires.

**Defaults**

- 24 hours

**Command Modes**

- DHCP <POOL>

**Command History**

- Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

---

**netbios-name-server**

Specify the NetBIOS windows internet naming service (WINS) name servers, in order of preference, that are available to Microsoft dynamic host configuration protocol (DHCP) clients.

**Syntax**

```plaintext
netbios-name-server address [address2...address8]
```
Parameters

- **address**
  
Enter the address of the NETBIOS name server. You may enter up to eight, in order of preference.

Defaults

- **none**

Command Modes

- **DHCP <POOL>**

Command History

- **Version 8.3.16.1**
  
  Introduced on the MXL 10/40Gbe Switch IO Module.

---

### netbios-node-type

Specify the NetBIOS node type for a Microsoft DHCP client. Dell Networking recommends specifying clients as **hybrid**.

**Syntax**

```
netbios-node-type type
```

**Parameters**

- **type**
  
Enter the NETBIOS node type:
  
  - **Broadcast:** Enter the keyword **b-node**.
  - **Hybrid:** Enter the keyword **h-node**.
  - **Mixed:** Enter the keyword **m-node**.
  - **Peer-to-peer:** Enter the keyword **p-node**.

Defaults

- **Hybrid**

Command Modes

- **DHCP <POOL>**

Command History

- **Version 8.3.16.1**
  
  Introduced on the MXL 10/40GbE Switch IO Module.

---

### network

Specify the range of addresses in an address pool.

**Syntax**

```
network network /prefix-length
```

**Parameters**

- **network**
  
  Specified a range of addresses. Prefix-length range is from 17 to 31.

- **/prefix-length**

Defaults

- **none**
show ip dhcp binding

Display the DHCP binding table.

**Syntax**

```
show ip dhcp binding
```

**Defaults**

none

**Command Modes**

EXEC Privilege

**Command History**

Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.

show ip dhcp configuration

Display the DHCP configuration.

**Syntax**

```
show ip dhcp configuration [global | pool name]
```

**Parameters**

- `pool name`  Display the configuration for a DHCP pool.
- `global`  Display the DHCP configuration for the entire system.

**Defaults**

none

**Command Modes**

EXEC Privilege

**Command History**

Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.

show ip dhcp conflict

Display the address conflict log.

**Syntax**

```
show ip dhcp conflict address
```

**Parameters**

- `address`  Display a particular conflict log entry.
show ip dhcp server

Display the DHCP server statistics.

Syntax

show ip dhcp server statistics

Defaults

none

Command Modes

EXEC Privilege

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Commands to Configure the System to be a DHCP Client

To configure the system to be a DHCP client, use the following commands.

ip address dhcp

Configure an Ethernet interface to acquire its IP address from a DHCP network server.

Syntax

ip address dhcp

Command Modes

INTERFACE

Default

The Ethernet is not configured to operate as a DHCP client and receive a dynamic IP address.

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The ip address dhcp command enables an Ethernet interface to acquire a DHCP server-assigned dynamic IP address. This setting persists after a switch reboot. If you enter the shutdown command on the interface, DHCP transactions are stopped and the dynamically-acquired IP address is saved. To display the dynamic IP address and DHCP as the mode of IP address assignment, use the show
interface type slot/port command. If you later enter the no shutdown command and the lease timer for the dynamic IP address has expired, the IP address is unconfigured and the interface tries to acquire a new dynamic address from DHCP server.

You cannot configure a secondary (backup) IP address on an interface using the ip address dhcp command; you must use the ip address command at the interface configuration level.

To release a DHCP-assigned IP address and remove the interface from being a DHCP client, use the no ip address dhcp command. When you use the no ip address dhcp command:

- The IP address dynamically acquired from a DHCP server is released from the interface.
- The DHCP client is disabled on the interface; it can no longer acquire a dynamic IP address from a DHCP server.
- DHCP packet transactions on the interface are stopped.

To display the currently configure dynamic IP address and lease time, use the show ip dhcp lease command.

Other Commands Supported by the DHCP Client

The following commands are supported by the DHCP client.

clear ip dhcp client statistics

Display DHCP client statistics, including the number of DHCP messages sent and received on an interface.

Syntax

```
clear ip dhcp client statistics {all | interface type slot/port}
```

Parameters

- **all**
  
  Clear DHCP client statistics on all DHCP client-enabled interfaces on the switch.

- **interface type slot/ port**
  
  Clear DHCP client statistics on the specified interface.

  - For a 10-GigabitEthernet Ethernet interface, enter TenGigabitEthernet then the slot/port numbers; for example, tengigabitethernet 1/3.
  - For a 40-GigabitEthernet Ethernet interface, enter FortyGigabitEthernet then the slot/port numbers; for example, fortygigabitethernet 0/2.
debug ip dhcp clients events

Enable the display of log messages for the following events on DHCP client interfaces: IP address acquisition, IP address release, Renewal of IP address and lease time, and Release of an IP address.

**Syntax**

d debug ip dhcp client events [interface type slot/port]

**Parameters**

- **interface type slot/ port**: Display log messages for DHCP events on the specified interface.
  
  - For a 10-GigabitEthernet Ethernet interface, enter TenGigabitEthernet then the slot/port numbers; for example, tengigabitethernet 1/3.
  
  - For a 40-GigabitEthernet Ethernet interface, enter FortyGigabitEthernet then the slot/port numbers; for example, fortygigabitethernet 0/2.

**Defaults**

- none

**Command Modes**

- EXEC Privilege

**Command History**

- Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

debug ip dhcp clients packets

Enable the display of log messages for all DHCP packets sent and received on DHCP client interfaces.

**Syntax**

d debug ip dhcp client packets [interface type slot/port]

**Parameters**

- **interface type slot/ port**: Display log messages for DHCP packets sent and received on the specified interface.
  
  - For a 10-GigabitEthernet Ethernet interface, enter TenGigabitEthernet then the slot/port numbers; for example, tengigabitethernet 1/3.
  
  - For a 40-GigabitEthernet Ethernet interface, enter FortyGigabitEthernet then the slot/port numbers; for example, fortygigabitethernet 0/2.
release dhcp interface

Release the dynamically-acquired IP address on an Ethernet interface while retaining the DHCP client configuration on the interface.

Syntax

release dhcp interface type slot/port

Parameters

- interface type slot/port
  - For a 10-GigabitEthernet Ethernet interface, enter TenGigabitEthernet then the slot/port numbers; for example, tengigabitethernet 1/3.
  - For a 40-GigabitEthernet Ethernet interface, enter FortyGigabitEthernet then the slot/port numbers; for example, fortygigabitethernet 0/2.

Defaults
none

Command Modes
EXEC Privilege

Command History
Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
When you enter the release dhcp command, although the IP address that was dynamically-acquired from a DHCP server is released from an interface, the ability to acquire a new DHCP server-assigned address remains in the running configuration for the interface. To acquire a new IP address, enter either the renew dhcp command at the EXEC privilege level or the ip address dhcp command at the Interface Configuration level.

renew dhcp interface

Re-acquire a dynamic IP address on an Ethernet interface enabled as a DHCP client.

Syntax

renew dhcp interface type slot/port

Parameters

- interface type slot/port
  - For a 10-GigabitEthernet Ethernet interface, enter TenGigabitEthernet then the slot/port numbers; for example, tengigabitethernet 1/3.
For a 40-GigabitEthernet Ethernet interface, enter FortyGigabitEthernet then the slot/port numbers; for example, fortygigabitethernet 0/2.

### show ip dhcp client statistics

Display DHCP client statistics, including the number of DHCP messages sent and received on an interface.

**Syntax**

```
show ip dhcp client statistics {all | interface type slot/port}
```

**Parameters**

- `all` Display DHCP client statistics on all DHCP client-enabled interfaces on the switch.
- `interface type slot/port` Display DHCP client statistics on the specified interface.

- For a 10-GigabitEthernet Ethernet interface, enter TenGigabitEthernet then the slot/port numbers; for example, tengigabitethernet 1/3.
- For a 40-GigabitEthernet Ethernet interface, enter FortyGigabitEthernet then the slot/port numbers; for example, fortygigabitethernet 0/2.

**Defaults** none

**Command Modes** EXEC Privilege

**Command History**

- **Version 8.3.16.1** Introduced on the MXL 10/40GbE Switch IO Module.
**show ip dhcp lease**

Display lease information about the dynamic IP address currently assigned to a DHCP client-enabled interface.

**Syntax**

```
show ip dhcp lease [interface type slot/port]
```

**Parameters**

- `interface type slot/port`
  
  Display DHCP lease information on the specified interface.
  
  - For a 10-GigabitEthernet Ethernet interface, enter `Tengigabitethernet` then the slot/port numbers; for example, `tengigabitethernet 1/3`.
  
  - For a 40-GigabitEthernet Ethernet interface, enter `fortygigabitethernet` then the slot/port numbers; for example, `fortygigabitethernet 0/2`.

**Defaults**

Display DHCP lease information on all DHCP client-enabled interfaces on the switch.

**Command Modes**

EXEC Privilege

**Command History**

Version 8.3.16.1

Introduced on the MXL 10/40GbE Switch IO Module.

---

**Commands to Configure Secure DHCP**

DHCP, as defined by RFC 2131, provides no authentication or security mechanisms. Secure DHCP is a suite of features that protects networks that use dynamic address allocation from spoofing and attacks.

---

**arp inspection**

Enable dynamic arp inspection (DAI) on a VLAN.

**Syntax**

```
arp inspection
```

**Defaults**

Disabled

**Command Modes**

INTERFACE VLAN

**Command History**

Version 8.3.16.1

Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**

- `arp inspection-trust` — specifies a port as trusted so that ARP frames are not validated against the binding table.
**arp inspection-trust**

Specify a port as trusted so that ARP frames are not validated against the binding table.

**Syntax**

arp inspection-trust

**Defaults**

Disabled

**Command Modes**

- INTERFACE
- INTERFACE PORT-CHANNEL

**Command History**

Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**

- **arp inspection** — enables dynamic ARP inspection on a VLAN.

---

**clear ip dhcp snooping**

Clear the DHCP binding table.

**Syntax**

clear ip dhcp snooping binding

**Defaults**

none

**Command Modes**

EXEC Privilege

**Command History**

Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**

- **show ip dhcp snooping** — displays the contents of the DHCP binding table.

---

**ip dhcp snooping**

Enable DHCP snooping globally.

**Syntax**

[no] ip dhcp snooping

**Defaults**

Disabled

**Command Modes**

CONFIGURATION

**Command History**

Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.
When enabled, no learning takes place until you enable snooping on a VLAN. After disabling DHCP snooping, the binding table is deleted, and Option 82, IP Source Guard, and Dynamic ARP Inspection are disabled.

Introduced in the Dell Networking OS version 7.8.1.0, DHCP snooping was available for Layer 3 only and dependent on DHCP Relay Agent (ip helper-address). The Dell Networking OS version 8.2.1.0 extends DHCP Snooping to Layer 2, and you do not have to enable relay agent to snoop on Layer 2 interfaces.

Related Commands

- `ip dhcp snooping vlan` — enables DHCP snooping on one or more VLANs.

**ip dhcp snooping database**

Delay writing the binding table for a specified time.

**Syntax**

```
ip dhcp snooping database write-delay minutes
```

**Parameters**

- `minutes` The range is from 5 to 21600.

**Defaults**

`none`

**Command Modes**

`CONFIGURATION`

**Command History**

- **Version 8.3.16.1** — Introduced on the MXL 10/40GbE Switch IO Module.

**ip dhcp snooping binding**

Create a static entry in the DHCP binding table.

**Syntax**

```
[no] ip dhcp snooping binding mac address vlan-id vlan-id ip ip-address interface type slot/port lease number
```

**Parameters**

- `mac address` Enter the keyword `mac` then the MAC address of the host to which the server is leasing the IP address.
- `vlan-id vlan-id` Enter the keywords `vlan-id` then the VLAN to which the host belongs. The range is from 2 to 4094.
- `ip ip-address` Enter the keyword `ip` then the IP address that the server is leasing.
- `interface type` Enter the keyword `interface` then the type of interface to which the host is connected:
For a Ten-Gigabit Ethernet interface, enter the keyword `tengigabitethernet`.

For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE`.

**slot/port**

Enter the slot and port number of the interface.

**lease time**

Enter the keyword `lease` then the amount of time the IP address are leased. The range is from 1 to 4294967295.

**Defaults**

```
none
```

**Command Modes**

```
• EXEC
• EXEC Privilege
```

**Command History**

```
Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.
```

**Related Commands**

- `show ip dhcp snooping` — displays the contents of the DHCP binding table.

---

### ip dhcp snooping database renew

Renew the binding table.

**Syntax**

```
ip dhcp snooping database renew
```

**Defaults**

```
none
```

**Command Modes**

```
• EXEC
• EXEC Privilege
```

**Command History**

```
Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.
```

---

### ip dhcp snooping trust

Configure an interface as trusted.

**Syntax**

```
[no] ip dhcp snooping trust
```

**Defaults**

```
Untrusted
```

**Command Modes**

```
INTERFACE
```
ip dhcp source-address-validation

Enable the IP Source Guard.

Syntax
no ip dhcp source-address-validation [ipmac]

Parameters
ipmac

Enable IP+MAC Source Address Validation.

Defaults
Disabled

Command Modes
INTERFACE

Command History
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
Allocate at least one FP block to ipmacacl before you can enable IP+MAC Source Address Validation.

1. Use the cam-acl l2acl command from CONFIGURATION mode.
2. Save the running-config to the startup-config.
3. Reload the system.

ip dhcp snooping vlan

Enable DHCP Snooping on one or more VLANs.

Syntax
no ip dhcp snooping vlan name

Parameters
name
Enter the name of a VLAN on which to enable DHCP Snooping.

Defaults
Disabled

Command Modes
CONFIGURATION

Command History
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
When enabled, the system begins creating entries in the binding table for the specified VLANs.
NOTE: Learning only happens if there is a trusted port in the VLAN.

Related Commands

ip dhcp snooping trust — configures an interface as trusted.

ip dhcp relay

Enable Option 82.

Syntax

ip dhcp relay information-option [remote-id | trust-downstream]

Parameters

remote-id Configure the system to enable the remote-id string in option-82.

trust-downstream Configure the system to trust Option 82 when it is received from the previous-hop router.

Defaults Disabled

Command Modes CONFIGURATION

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

show ip dhcp snooping

Display the contents of the DHCP binding table or display the interfaces configured with IP Source Guard.

Syntax

show ip dhcp snooping [binding | source-address-validation]

Parameters

binding Display the interfaces configured with IP Source Guard.

source-address-validation Display the interfaces configured with IP Source Guard.

Defaults none

Command Modes

• EXEC

• EXEC Privilege

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.
### Related Commands

- `clear ip dhcp snooping` — clears the contents of the DHCP binding table.

### ip dhcp snooping verify mac-address

Validate a DHCP packet's source hardware address against the client hardware address field (CHADDR) in the payload.

Equal Cost Multi-Path (ECMP)

Equal cost multi-path (ECMP) is supported on the Dell Networking MXL 10/40GbE Switch IO Module.

ecmp-group

Provides a mechanism to monitor traffic distribution on an ECMP link bundle. A system log is generated when the standard deviation of traffic distribution on a member link exceeds a defined threshold.

Syntax

```
ecmp-group {ecmp-group-id interface interface | link-bundle-monitor}
```

To remove the selected interface, use the `ecmp-group no interface` command.

To disable link bundle monitoring, use the `ecmp-group no link-bundle-monitor` command.

Parameters

- **ecmp-group ID**: Enter the identifier number for the ECMP group. The range is from 2 to 64.
- **interface**: Enter the following keywords and slot/port to add the interface to the ECMP group:
  - 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
- **link-bundle-monitor**: Enter the keywords `link-bundle-monitor` to enable link bundle monitoring.

Defaults

Off

Command Modes

- CONFIGURATION
- CONFIGURATION ECMP-GROUP

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.
hash-algorithm

Changes the hash algorithm used to distribute traffic flows across a Port Channel.

Syntax

```
hash-algorithm {algorithm-number | (ecmp {crc16 | crc16cc | crc32MSB | crc32LSB | crc-upper | dest-ip | lsb | xor1 | xor2 | xor4 | xor8 | xor16} [number] lag {checksum | crc | xor} [number] nh-ecmp {checksum | crc | xor}[number] linecard number ip-sa-mask value ip-da-mask value | seed seed-value }
```

To return to the default hash algorithm, use the `no hash-algorithm` command.

To return to the default ECMP hash algorithm, use the `no hash-algorithm ecmp algorithm-value` command.

To remove the hash algorithm on a particular line card, use the `no hash-algorithm linecard number` command.

Parameters

- **algorithm-number**: Enter the algorithm number. The range is from 0 to 47.
- **ecmp (crc16 | crc16cc | crc32MSB | crc32LSB | crc-upper | dest-ip | lsb | xor1 | xor2 | xor4 | xor8 | xor16)**: TeraScale and ExaScale Only: Enter the keyword `ecmp` then one of the following options:
  - `crc16`: Use CRC16_BISYNC — 16 bit CRC16-bisync polynomial (default)
  - `crc16cc`: Use CRC16_CCITT — 16 bit CRC16 using CRC16-CCITT polynomial
  - `crc32MSB`: Use CRC32_UPPER — MSB 16 bits of computed CRC32
  - `crc32LSB`: Use CRC32_LOWER — LSB 16 bits of computed CRC32
  - `crc-upper`: Uses the upper 32 bits of the key for the hash computation
  - `dest-ip`: Uses the destination IP for ECMP hashing
  - `lsb`: Returns the LSB of the key as the hash
  - `xor1`: Use CRC16_BISYNC_AND_XOR1 — Upper 8 bits of CRC16-BISYNC and lower 8 bits of xor1
  - `xor2`: Use CRC16_BISYNC_AND_XOR2 — Upper 8 bits of CRC16-BISYNC and lower 8 bits of xor2
  - `xor4`: Use CRC16_BISYNC_AND_XOR4 — Upper 8 bits of CRC16-BISYNC and lower 8 bits of xor4
  - `xor8`: Use CRC16_BISYNC_AND_XOR8 — Upper 8 bits of CRC16-BISYNC and lower 8 bits of xor8
  - `xor16`: Use CR16 — 16 bit XOR
- **lag hash algorithm-value**: Enter the keyword `lag` then the LAG hash algorithm value. The range is from 0 to 47.
- **nh-ecmp hash algorithm-value**: (OPTIONAL) Enter the keyword `nh-ecmp` then the ECMP hash algorithm value.
linecard number

(Optional) Enter the keyword linecard then the linecard slot number.

ip-sa-mask value

(Optional) Enter the keywords ip-sa-mask then the ECMP/LAG hash mask value. The range is from 0 to FF. The default is FF.

ip-da-mask value

(Optional) Enter the keywords ip-da-mask then the ECMP/LAG hash mask value. The range is from 0 to FF. The default is FF.

Defaults

0 for hash-algorithm value on TeraScale and ExaScale IPSA and IPDA mask value is FF for a line card.

Command Modes

CONFIGURATION

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

To ensure that CRC is not used for LAG, set the default hash-algorithm method on ExaScale systems. For example, hash-algorithm ecmp xor lag checksum nh-ecmp checksum.

To achieve the functionality of hash-align on the ExaScale platform, do not use CRC as a hash-algorithm method.

The hash value calculated with the hash-algorithm command is unique to the entire chassis. The hash algorithm command with the line card option changes the hash for a particular line card by applying the mask specified in the IPSA and IPDA fields.

The line card option is applicable with the lag-hash-align microcode only (refer to CAM Profile Commands). Any other microcode returns an error message as follows:

- Dell(conf)#hash-algorithm linecard 5 ip-sa-mask ff ip-da-mask ff
- % Error: This command is not supported in the current microcode configuration

In addition, the linecard number ip-sa-mask value ip-da-mask value option has the following behavior to maintain bi-directionality:

- When hashing is done on both IPSA and IPDA, the ip-sa-mask and ip-da-mask values must be equal. (Single Linecard).
- When hashing is done only on IPSA or IPDA, the Dell Networking OS maintains bi-directionality with masks set to XX 00 for line card 1 and 00 XX for line card 2 (ip-sa-mask and ip-da-mask). The mask value must be the same for both line cards when using multiple line cards as ingress (where XX is any value from 00 to FF for both line cards). For example, assume that traffic is flowing between linecard 1 and linecard 2:
  - hash-algorithm linecard 1 ip-sa-mask aa ip-da-mask 00
hash-algorithm linecard 2 ip-sa-mask 00 ip-da-mask aa

The different hash algorithms are based on the number of Port Channel members and packet values. The default hash algorithm (number 0) yields the most balanced results in various test scenarios, but if the default algorithm does not provide a satisfactory distribution of traffic, use the hash-algorithm command to designate another algorithm.

When a Port Channel member leaves or is added to the Port Channel, the hash algorithm is recalculated to balance traffic across the members.

On TeraScale, if you do not enter the keyword ECMP or LAG, the Dell Networking OS assumes it to be common for both. If the keyword ECMP or LAG is entered separately, both should fall in the range of 0 to 23 or 24 to 47 since compression enable/disable is common for both TeraScale and ExaScale support the range 0-47. The default for ExaScale is 24.

hash-algorithm ecmp

Change the hash algorithm used to distribute traffic flows across an ECMP (equal-cost multipath routing) group.

Syntax

hash-algorithm ecmp {crc-upper} | {dest-ip} | {lsb}

To return to the default hash algorithm, use the no hash-algorithm ecmp command.

Parameters

- **crc-upper**: Uses the upper 32 bits of the key for the hash computation. The default is crc-lower.
- **dest-ip**: Uses the destination IP for ECMP hashing. The default is enabled.
- **lsb**: Returns the LSB of the key as the hash. The default is crc-lower.

Defaults

- crc-lower
- dest-ip enabled

Command Modes

CONFIGURATION

Command History

Version 9.2(0.0)  Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The hash value calculated with the hash-algorithm command is unique to the entire chassis. The default ECMP hash configuration is crc-lower. This command takes the lower 32 bits of the hash key to compute the egress port and is the “fallback” configuration if you have not configured anything else.
The different hash algorithms are based on the number of ECMP group members and packet values. The default hash algorithm yields the most balanced results in various test scenarios, but if the default algorithm does not provide satisfactory distribution of traffic, use this command to designate another algorithm.

When a member leaves or is added to the ECMP group, the hash algorithm is recalculated to balance traffic across the members.

**hash-algorithm seed**

Select the seed value for the ECMP, LAG, and NH hashing algorithm.

**Syntax**

```
hash-algorithm seed value [linecard slot] [port-set number]
```

**Parameters**

- `seed value`
  - Enter the keyword `seed` then the seed value. The range is from 0 to 4095.
- `linecard slot`
  - Enter the keyword `linecard` then the linecard slot number.
- `port-set number`
  - Enter the keywords `port-set` then the linecard port-pipe number.

**Defaults**

none

**Command Modes**

CONFIGURATION

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

Deterministic ECMP sorts ECMPs in order even though RTM provides them in a random order. However, the hash algorithm uses as a seed the lower 12 bits of the chassis MAC, which yields a different hash result for every chassis. This behavior means that for a given flow, even though the prefixes are sorted, two unrelated chassis select different hops.

The Dell Networking provides a CLI-based solution for modifying the hash seed to ensure that on each configured system, the ECMP selection is same. When configured, the same seed is set for ECMP, LAG, and NH, and is used for incoming traffic only.
NOTE: While the seed is stored separately on each port-pipe, the same seed is used across all CAMs.

You cannot separate LAG and ECMP but you can use different algorithms across the chassis with the same seed. If LAG member ports span multiple port-pipes and line cards, set the seed to the same value on each port-pipe to achieve deterministic behavior.

If the hash algorithm configuration is removed, the hash seed does not go to the original factory default setting.

**ip ecmp-group**

Enable and specify the maximum number of ecmp that the L3 CAM hold for a route. By default, when maximum paths are not configured, the CAM can hold a maximum of 16 ecmp per route.

**Syntax**

```
ip ecmp-group {maximum-paths | {number} {path-fallback}
```

To negate a command, use the `no ip ecmp-group maximum-paths` command.

**Parameters**

- **maximum-paths**: Specify the maximum number of ECMP for a route. The range is 2 to 64.
- **path-fallback**: Use the keywords `path-fallback` to enable this feature. If you enable the feature, re-enter this keyword to disable the feature.

**Defaults**

16

**Command Modes**

CONFIGURATION

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

You must save the new ECMP settings to the startup-config (write-mem) then reload the system for the new settings to take effect.

**Related Commands**

- `show ip cam stack-unit` — Display content-addressable memory (CAM) entries.

**link-bundle-distribution trigger-threshold**

Provides a mechanism to set the threshold to trigger when traffic distribution begins being monitored on an ECMP link bundle.

**Syntax**

```
link-bundle-distribution trigger-threshold [percent]
```

390
Parameters  

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>percent</td>
<td>Indicate the threshold value when traffic distribution starts being monitored on an ECMP link bundle. The range is from 1 to 90%. The default is 60%.</td>
</tr>
</tbody>
</table>

Command Modes  
EXEC Privilege

Command History  
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

link-bundle-monitor enable
Provides a mechanism to enable monitoring of traffic distribution on an ECMP link bundle.

Syntax  
link-bundle-monitor enable
To exit from ECMP group mode, use the exit command.

Command Modes  
- ECMP-GROUP
- PORT-CHANNEL INTERFACE

Command History  
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

show config
Display the ECMP configuration.

Syntax  
show config

Command Modes  
CONFIGURATION-ECMP-GROUP

Command History  
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.
show link-bundle distribution

Display the link-bundle distribution for the interfaces in the bundle, type of bundle (LAG or ECMP), and the most recently calculated interface utilization (either bytes per second rate or maximum rate) for each interface.

**Syntax**

```
show link-bundle-distribution
```

**Command Modes**

EXEC Privilege

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Example**

```
Dell#show link-bundle-distribution
Link-bundle trigger threshold - 60
ECMP bundle - 5 Utilization[In Percent] - 0 Alarm State - Inactive
Interface Line Protocol Utilization[In Percent]
Te 0/4    Up            5
Te 0/3    Up            30
```
FIPS Cryptography

To configure federal information processing standards (FIPS) cryptography, use the following commands on the MXL 10/40GbE Switch IO Module.

**fips mode enable**

Enable the FIPS cryptography mode on the platform.

**Syntax**

```plaintext
[no] fips mode enable
```

To disable the FIPS cryptography mode, use the `no fips mode enable` command.

**Default**

Disabled

**Command Modes**

CONFIGURATION

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Example**

```plaintext
Dell (conf)#fips mode enable
WARNING: Enabling FIPS mode will close all SSH/Telnet connection, restart those servers, and destroy all configured host keys.
proceed (y/n) ? y
Dell (conf)#
```

**Related Commands**

- `ssh` — opens an SSH connection specifying the hostname, username, port number, and version of the SSH client.

**show fips status**

Displays the status of the FIPS mode.

**Syntax**

```plaintext
show fips status
```

**Defaults**

None

**Command Modes**

EXEC
### show ip ssh

Display information about established SSH sessions

**Syntax**

```
show ip ssh
```

**Defaults**

none

**Command Modes**

EXEC

EXEC Privilege

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Introduced</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Example**

```
Dell#show ip ssh
SSH server                             : enabled.
SSH server version               : v1 and v2.
Password Authentication      : enabled.
Hostbased Authentication   : disabled.
RSA Authentication               : disabled.
Vty        Encryption    HMAC         Remote IP
1            3des-cbc        hmac-md5 10.1.20.48
2            3des-cbc        hmac-md5 10.1.20.48
```

With FIPS Mode enabled:

```
Dell#show ip ssh
SSH server                             : enabled.
SSH server version               : v2.
Password Authentication      : enabled.
Hostbased Authentication   : disabled.
RSA Authentication               : disabled.
Vty        Encryption    HMAC         Remote IP
0         aes128-cbc    hmac-shal  10.11.8.13
1         aes128-cbc    hmac-shal  10.1.20.48
```
ssh

Open an SSH connection specifying the hostname, username, port number, and version of the SSH client.

Syntax

```
ssh {hostname | ipv4 address | ipv6 address} [-c encryption cipher | -l username | -m HMAC algorithm | -p port-number | -v {1|2}]
```

Parameters

- **hostname**
  (OPTIONAL) Enter the IP address or the hostname of the remote device.

- **ipv4 address**
  (OPTIONAL) Enter the IP address in dotted decimal format A.B.C.D.

- **ipv6 address**
  (OPTIONAL) Enter the IPv6 address in the x:x::x::x format then the prefix length in the /x format. The range is from /0 to /128

  **NOTE:** The :: notation specifies successive hexadecimal fields of zeros.

- **-c encryption cipher**
  Enter the following encryption cipher to use. (For v2 clients only.) Without the FIPS mode enabled:
  - 3des-cbc: Force ssh to use 3des-cbc encryption cipher.

  With the FIPS mode enabled:
  - aes128-cbc: Force ssh to use the aes128-cbc encryption cipher.
  - aes256-cbc: Force ssh to use the aes256-cbc encryption cipher.

- **-l username**
  (OPTIONAL) Enter the keyword \-l then the user name used in this SSH session. The default is the user name of the user associated with the terminal.

- **-m HMAC algorithm**
  Enter one of the following HMAC algorithms to use. (For v2 clients only):

  Without the FIPS mode enabled:
  - hmac-sha1: Force ssh to use the hmac-sha1 HMAC algorithm.
  - hmac-sha1-96: Force ssh to use the hmac-sha1-96 HMAC algorithm.
  - hmac-md5: Force ssh to use the hmac-md5 HMAC algorithm.
  - hmac-md5-96: Force ssh to use the hmac-md5-96 HMAC algorithm.

  With the FIPS mode enabled:
  - hmac-sha1: Force ssh to use the hmac-sha1 HMAC algorithm.
-p port-number (OPTIONAL) Enter the keyword –p then the port number. The range is 1 to 65536. The default is 22.

-v {1|2} (OPTIONAL) Enter the keyword –v then the SSH version 1 or 2. The default: The version from the protocol negotiation.

NOTE: If the FIPS mode is enabled, this option does not display in the output.

Example

If FIPS mode is not enabled:

Dell#ssh 10.11.8.12 ?
-c Encryption cipher to use (for v2 client
-l User name option
-m HMAC algorithm to use (for v2 clients only)
-p SSH server port option (default 22)
-v SSH protocol version

Dell#ssh 10.11.8.12 -c ?
3des-cbc Force ssh to use 3des-cbc encryption cipher

Dell#ssh 10.11.8.12 -m ?
hmac-shal Force ssh to use hmac-shal HMAC algorithm
hmac-shal-96 Force ssh to use hmac-shal-96 HMAC algorithm
hmac-md5 Force ssh to use hmac-md5 HMAC algorithm
hmac-md5-96 Force ssh to use hmac-md5-96 HMAC algorithm

With FIPS mode enabled:

Dell#ssh 10.11.8.12 ?
-c Encryption cipher to use (for v2 client
-l User name option
-m HMAC algorithm to use (for v2 clients only)
-p SSH server port option (default 22)

Dell#ssh 10.11.8.12 -c ?
aes128-cbc Force ssh to use aes128-cbc encryption cipher
aes256-cbc Force ssh to use aes256-cbc encryption cipher

Dell#ssh 10.11.8.12 -m ?
hmac-shal Force ssh to use hmac-shal HMAC algorithm
hmac-shal-96 Force ssh to use hmac-shal-96 HMAC algorithm

- hmac-shal-96: Force ssh to use the hmac-shal–96 HMAC algorithm.
FIP Snooping

In a converged Ethernet network, an MXL Switch can operate as an intermediate Ethernet bridge to snoop on Fibre Channel over Ethernet initialization protocol (FIP) packets during the login process on Fibre Channel over Ethernet (FCoE) forwarders (FCFs).

Acting as a transit FIP snooping bridge, the switch uses dynamically-created ACLs to permit only authorized FCoE traffic to be transmitted between an FCoE end-device and an FCF. The following Dell Networking Operating System (OS) commands are used to configure and verify the FIP snooping feature.

clear fip-snooping database interface vlan

Clear FIP snooping information on a VLAN for a specified FCoE MAC address, ENode MAC address, or FCF MAC address, and remove the corresponding ACLs FIP snooping generates.

Syntax

```
clear fip-snooping database interface vlan vlan-id [fcoe-mac-address | enode-mac-address | fcf-mac-address]
```

Parameters

- `fcoe-mac-address`: Enter the FCoE MAC address to be cleared of FIP snooping information.
- `enode-mac-address`: Enter the ENode MAC address to be cleared of FIP snooping information.
- `fcf-mac-address`: Enter the FCF MAC address to be cleared of FIP snooping information.

Command Modes

EXEC Privilege

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

clear fip-snooping statistics

Clears the statistics on the FIP packets snooped on all VLANs, a specified VLAN, or a specified port interface.

Syntax

```
clear fip-snooping statistics [interface vlan vlan-id | interface port-type port/slot | interface port-channel port-channel-number]
```
**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>vlan-id</td>
<td>Enter the VLAN ID of the FIP packet statistics to be cleared.</td>
</tr>
<tr>
<td>port-type port/slot</td>
<td>Enter the port-type and slot number of the FIP packet statistics to be cleared.</td>
</tr>
<tr>
<td>port-channel-number</td>
<td>Enter the port channel number of the FIP packet statistics to be cleared.</td>
</tr>
</tbody>
</table>

### clear fip-snooping statistics

Clears the statistics on the FIP packets snooped on all VLANs, a specified VLAN, or a specified port interface.

**Syntax**

```plaintext
clear fip-snooping statistics [interface vlan vlan-id | interface port-type port/slot | interface port-channel port-channel-number]
```

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>vlan-id</td>
<td>Enter the VLAN ID of the FIP packet statistics to be cleared.</td>
</tr>
<tr>
<td>port-type port/slot</td>
<td>Enter the port-type and slot number of the FIP packet statistics to be cleared.</td>
</tr>
<tr>
<td>port-channel-number</td>
<td>Enter the port channel number of the FIP packet statistics to be cleared.</td>
</tr>
</tbody>
</table>

### feature fip-snooping

Enable FCoE transit and FIP snooping on a switch.

**Syntax**

```plaintext
feature fip-snooping
```

To disable the FCoE transit feature, use the `no feature fip-snooping` command.

**Defaults**

Disabled
fip-snooping enable

Enable FIP snooping on all VLANs or on a specified VLAN.

Syntax

fip-snooping enable

To disable the FIP snooping feature on all or a specified VLAN, use the no fip-snooping enable command.

Defaults

FIP snooping is disabled on all VLANs.

Command Modes

• CONFIGURATION

• VLAN INTERFACE

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The maximum number of FCFs supported per FIP snooping-enabled VLAN is four. The maximum number of FIP snooping sessions supported per ENode server is 16.

fip-snooping fc-map

Configure the FC-MAP value FIP snooping uses on all VLANs.

Syntax

fip-snooping fc-map fc-map-value

To return the configured FM-MAP value to the default value, use the no fip-snooping fc-map command.

Parameters

fc-map-value Enter the FC-MAP value FIP snooping uses. The range is from 0EFC00 to 0EFCFF.

Defaults

0x0EFC00

Command Modes

• CONFIGURATION

• VLAN INTERFACE
**fip-snooping port-mode fcf**

Configure the port for bridge-to-FCF links.

**Syntax**

```plaintext
fip-snooping port-mode fcf
```

To disable the bridge-to-FCF link on a port, use the `no fip-snooping port-mode fcf` command.

**Command Modes**

INTERFACE

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

The maximum number of FCFs supported per FIP snooping-enabled VLAN is four.

**show fip-snooping config**

Display the FIP snooping status and configured FC-MAP values.

**Syntax**

```plaintext
show fip-snooping config
```

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Example**

```
Dell# show fip-snooping config
FIP Snooping Feature enabled Status: Enabled
FIP Snooping Global enabled Status: Enabled
Global FC-MAP Value: 0X0EFC00

FIP Snooping enabled VLANs
VLAN  Enabled  FC-MAP
-----  ------   --------
100    TRUE    0X0EFC00
```
show fip-snooping enode

Display information on the ENodes in FIP-snooped sessions, including the ENode interface and MAC address, FCF MAC address, VLAN ID and FC-ID.

**Syntax**

```
show fip-snooping enode [enode-mac-address]
```

**Parameters**

- `enode-mac-address`
  Enter the MAC address of the ENodes to display.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

- **Version 8.3.16.1**
  Introduced on MXL 10/40GbE Switch IO Module

**Usage Information**

The following describes the `show fip-snooping enode` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ENode MAC</td>
<td>MAC address of the ENode.</td>
</tr>
<tr>
<td>ENode Interface</td>
<td>Slot/ port number of the interface connected to the ENode.</td>
</tr>
<tr>
<td>FCF MAC</td>
<td>MAC address of the FCF.</td>
</tr>
<tr>
<td>VLAN</td>
<td>VLAN ID number the session uses.</td>
</tr>
<tr>
<td>FC-ID</td>
<td>Fibre Channel session ID the FCF assigns.</td>
</tr>
</tbody>
</table>

**Example**

```
Dell# show fip-snooping enode
Enode MAC       Enode Interface FCF MAC           VLAN FC-ID
--------------- -------------- -------------- ---- ----- 
47:ae:52:1b:e3:cd Te 0/11         54:7f:ee:37:34:40 100
62:00:11
```

show fip-snooping fcf

Display information on the FCFs in FIP-snooped sessions, including the FCF interface and MAC address, FCF interface, VLAN ID, FC-MAP value, FKA advertisement period, and number of ENodes connected.

**Syntax**

```
show fip-snooping fcf [fcf-mac-address]
```

**Parameters**

- `fcf-mac-address`
  Enter the MAC address of the FCF to display.

**Command Modes**

- EXEC
- EXEC Privilege
show fip-snooping sessions

Display information on FIP-snooped sessions on all VLANs or a specified VLAN, including the ENode interface and MAC address, the FCF interface and MAC address, VLAN ID, FCoE MAC address and FCoE session ID number (FC-ID), worldwide node name (WWNN) and the worldwide port name (WWPN).

**Syntax**

```
show fip-snooping sessions [interface vlan vlan-id]
```

**Parameters**

- `vlan-id`: Enter the vlan-id of the specified VLAN to display.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

*Version 8.3.16.1* Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

The following describes the `show fip-snooping sessions` command shown in the following example.

```
Example

Dell# show fip-snooping sessions
FCF MAC       FCF Interface VLAN  FC-MAP   FKA_ADV_PERIOD   No of Enodes
------------- ------------- ---- ------ -------------- --------------
54:7f:ee:37:34:40 Po 22         100  0e:fc:00 4000            2
```

```

**show fip-snooping statistics**

Display statistics on the FIP packets snooped on all interfaces, including VLANS, physical ports, and port channels.

**Syntax**

```
show fip-snooping statistics [interface vlan vlan-id | interface port-type port/slot | interface port-channel port-channel-number]
```

**Parameters**

- **vlan-id**
  - Enter the VLAN ID of the FIP packet statistics displays.

- **port-type port/slot**
  - Enter the port-type and slot number of the FIP packet statistics displays.
**port-channel-number**  
Enter the port channel number of the FIP packet statistics displays.

**Command Modes**  
- EXEC  
- EXEC Privilege

**Command History**  
*Version 8.3.16.1*  
Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**  
The following describes the `show fip-snooping statistics` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Number of VLAN Requests</td>
<td>Number of FIP-snoop VLAN request frames received on the interface.</td>
</tr>
<tr>
<td>Number of VLAN Notifications</td>
<td>Number of FIP-snoop VLAN notification frames received on the interface.</td>
</tr>
<tr>
<td>Number of Multicast Discovery Solicits</td>
<td>Number of FIP-snoop multicast discovery solicit frames received on the interface.</td>
</tr>
<tr>
<td>Number of Unicast Discovery Solicits</td>
<td>Number of FIP-snoop unicast discovery solicit frames received on the interface.</td>
</tr>
<tr>
<td>Number of FLOGI</td>
<td>Number of FIP-snoop FLOGI request frames received on the interface.</td>
</tr>
<tr>
<td>Number of FDISC</td>
<td>Number of FIP-snoop FDISC request frames received on the interface.</td>
</tr>
<tr>
<td>Number of FLOGO</td>
<td>Number of FIP-snoop FLOGO frames received on the interface.</td>
</tr>
<tr>
<td>Number of ENode Keep Alives</td>
<td>Number of FIP-snoop ENode keep-alive frames received on the interface.</td>
</tr>
<tr>
<td>Number of VN Port Keep Alives</td>
<td>Number of FIP-snoop VN port (Virtual N-port) keep-alive frames received on the interface.</td>
</tr>
<tr>
<td>Number of Multicast Discovery Advertisements</td>
<td>Number of FIP-snoop multicast discovery advertisements received on the interface.</td>
</tr>
<tr>
<td>Number of Unicast Discovery Advertisements</td>
<td>Number of FIP-snoop unicast discovery advertisements received on the interface.</td>
</tr>
<tr>
<td>Number of FLOGI Accepts</td>
<td>Number of FIP FLOGI accept frames received on the interface.</td>
</tr>
<tr>
<td>Field</td>
<td>Description</td>
</tr>
<tr>

<tr>
<td>Number of Multicast Discovery Advertisement</td>
<td>4451</td>
</tr>
<tr>
<td>Number of Unicast Discovery Advertisement</td>
<td>2</td>
</tr>
<tr>
<td>Number of FLOGI Accepts</td>
<td>2</td>
</tr>
<tr>
<td>Number of FLOGI Rejects</td>
<td>0</td>
</tr>
<tr>
<td>Number of FDISC Accepts</td>
<td>16</td>
</tr>
<tr>
<td>Number of FDISC Rejects</td>
<td>0</td>
</tr>
<tr>
<td>Number of FLOGO Rejects</td>
<td>0</td>
</tr>
<tr>
<td>Number of CVL</td>
<td>0</td>
</tr>
<tr>
<td>Number of FCF Discovery Timeouts</td>
<td>0</td>
</tr>
<tr>
<td>Number of VN Port Session Timeouts</td>
<td>0</td>
</tr>
<tr>
<td>Number of Session failures due to Hardware Config</td>
<td>0</td>
</tr>
</tbody>
</table>

**show fip-snooping system**

Display information on the status of FIP snooping on the switch (enabled or disabled), including the number of FCoE VLANs, FCFs, ENodes, and currently active sessions.

**Syntax**

```
show fip-snooping system
```

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

- **Version 8.3.16.1** Introduced on the MXL 10/40GbE Switch IO Module.
show fip-snooping vlan

Display information on the FCoE VLANs on which FIP snooping is enabled.

Syntax

show fip-snooping vlan

Command Modes

• EXEC
• EXEC Privilege

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Example

Dell# show fip-snooping vlan
* = Default VLAN
VLAN FC-MAP FCFs Enodes Sessions
---- ------ ---- ------ --------
*1 - - - -
100 0X0EFC00 1 2 17
Force10 Resilient Ring Protocol (FRRP)

Force10 resilient ring protocol (FRRP) is supported on Dell Networking MXL 10/40GbE Switch IO Module. FRRP is a proprietary protocol for that offers fast convergence in a Layer 2 network without having to run the spanning tree protocol (STP). The resilient ring protocol is an efficient protocol that transmits a high-speed token across a ring to verify the link status. All the intelligence is contained in the master node with practically no intelligence required of the transit mode.

Important Points to Remember

- FRRP is media- and speed-independent.
- FRRP is a Dell Networking proprietary protocol that does not interoperate with any other vendor.
- Spanning Tree must be disabled on both primary and secondary interfaces before Resilient Ring protocol is enabled.
- A virtual local area network (VLAN) configured as the control VLAN for a ring cannot be configured as a control or member VLAN for any other ring.
- Member VLANs across multiple rings are not supported in Master nodes.
- If multiple rings share one or more member VLANs, they cannot share any links between them.
- Each ring can have only one Master node; all others are Transit nodes.

clear frrp

Clear the FRRP statistics counters.

Syntax

```
clear frrp [ring-id]
```

Parameters

- **ring-id**: (Optional) Enter the ring identification number. The range is from 1 to 255.

Defaults

none

Command Modes

EXEC

Command History

Version 9.2(0.0)  Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

Executing this command without the optional ring-id command clears the statistics counters on all the available rings. The system requires a command line confirmation before the command executes. This command clears the following counters:
• hello Rx and Tx counters
• Topology change Rx and Tx counters
• The number of state change counters

Example

Dell#clear frrp
Clear frrp statistics counter on all ring [confirm] yes
Dell#clear frrp 4
Clear frrp statistics counter for ring 4 [confirm] yes
Dell#

Related Commands

show frrp — displays the resilient ring protocol configuration.

deny frrp

Clear the FRRP statistics counters.

Syntax

deny frrp {event | packet | detail} [ring-id] [count number]

To disable debugging, use the no deny frrp {event | packet | detail} {ring-id} [count number] command.

Parameters

- **event**: Enter the keyword event to display debug information related to ring protocol transitions.
- **packet**: Enter the keyword packet to display brief debug information related to control packets.
- **detail**: Enter the keyword detail to display detailed debug information related to the entire ring protocol packets.
- **ring-id**: (Optional) Enter the ring identification number. The range is from 1 to 255.
- **count number**: Enter the keyword count then the number of debug outputs. The range is from 1 to 65534.

Defaults

Disabled.

Command Modes

CONFIGURATION (conf-frrp)

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

Because the resilient ring protocol can potentially transmit 20 packets per interface, restrict debug information.
description

Enter an identifying description of the ring.

Syntax

```
description Word
```

To remove the ring description, use the `no description [Word]` command.

Parameters

- **Word**: Enter a description of the ring. Maximum: 255 characters.

Defaults

- none

Command Modes

- CONFIGURATION (conf-frrp)

Command History

- **Version 9.2(0.0)**: Introduced on the MXL 10/40GbE Switch IO Module.

disable

Disable the resilient ring protocol.

Syntax

```
disable
```

To enable the Resilient Ring Protocol, use the `no disable` command.

Defaults

- Disabled

Command Modes

- CONFIGURATION (conf-frrp)

Command History

- **Version 9.2(0.0)**: Introduced on the MXL 10/40GbE Switch IO Module.

interface

Configure the primary, secondary, and control-vlan interfaces.

Syntax

```
interface {primary interface secondary interface control-vlan vlan-id}
```

To return to the default, use the `no interface {primary interface secondary interface control-vlan vlan-id}` command.

Parameters

- **primary interface**: Enter the keyword `primary` to configure the primary interface then one of the following interfaces and slot/port information:
• Fast Ethernet interface: enter the keyword FastEthernet then the slot/port information.
• Port Channel interface: enter the keyword port-channel then a number. The range is from 1 to 128.
• 10-Gigabit Ethernet interface: enter the keyword TenGigabitEthernet then the slot/port information
• 40-Gigabit Ethernet interface: enter the keyword fortyGigE then the slot/port information

**secondary interface**

Enter the keyword secondary to configure the secondary interface then one of the following interfaces and slot/port information:

• Fast Ethernet interface: enter the keyword FastEthernet then the slot/port information.
• Port Channel interface: enter the keyword port-channel then a number. The range is from 1 to 128.
• 10-Gigabit Ethernet interface: enter the keyword TenGigabitEthernet then the slot/port information
• 40-Gigabit Ethernet interface: enter the keyword fortyGigE then the slot/port information

**control-vlan vlan-id**

Enter the keyword control-vlan then the VLAN ID. The range is from 1 to 4094.

**Defaults**

none

**Command Modes**

CONFIGURATION (conf-frrp)

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

This command causes the Ring Manager to take ownership of the two ports after IFM validates the configuration. Ownership is relinquished for a port only when the interface does not play a part in any control VLAN, that is, the interface does not belong to any ring.

**Related Commands**

- *show frrp* — displays the resilient ring protocol configuration information.

---

**member-vlan**

Specify the member VLAN identification numbers.

**Syntax**

```
member-vlan {vlan-range}
```

To return to the default, use the no member-vlan {vlan-range} command.
### Parameters

**vlan-range**

Enter the member VLANs using VLAN IDs (separated by commas), a range of VLAN IDs (separated by a hyphen), a single VLAN ID, or a combination. For example: VLAN IDs (comma-separated): 3, 4, 6. Range (hyphen-separated): 5-10. Combination: 3, 4, 5-10, 8.

**Defaults**

none

**Command Modes**

CONFIGURATION (conf-frrp)

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

### mode

Set the Master or Transit mode of the ring.

**Syntax**

```plaintext
mode {master | transit}
```

To reset the mode, use the `no mode {master | transit}` command.

**Parameters**

- **master**
  - Enter the keyword `master` to set the Ring node to Master mode.

- **transit**
  - Enter the keyword `transit` to set the Ring node to Transit mode.

**Defaults**

Mode None

**Command Modes**

CONFIGURATION (conf-frrp)

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

### protocol frrp

Enter the Resilient Ring Protocol and designate a ring identification.

**Syntax**

```plaintext
protocol frrp {ring-id}
```

To exit the ring protocol, use the `no protocol frrp {ring-id}` command.

**Parameters**

- **ring-id**
  - Enter the ring identification number. The range is from 1 to 255.
show frrp

Display the resilient ring protocol configuration.

Syntax

```
show frrp [ring-id [summary]] | [summary]
```

Parameters

- `ring-id`: Enter the ring identification number. The range is from 1 to 255
- `summary`: (OPTIONAL) Enter the keyword `summary` to view just a summarized version of the Ring configuration.

Defaults

none

Command Modes

EXEC

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

Executing this command without the optional `ring-id` command clears the statistics counters on all the available rings. The system requires a command line confirmation before the command executes. This command clears the following counters:

- hello Rx and Tx counters
- Topology change Rx and Tx counters
- The number of state change counters

Example (Summary)

```
Dell#show frrp summary
Ring-ID State Mode  Ctrl_Vlan Member_Vlans
----------------------------------------------
 2       UP   Master   2        11-20, 25,27-30
31      UP   Transit  31       40-41
50      Down Transit 50       32
```

Example (1)

```
Dell#show frrp 1
Ring protocol 1 is in Master mode
Ring Protocol Interface:
   Primary : GigabitEthernet 0/16 State: Forwarding
```
Secondary: Port-channel 100 State: Blocking
Control Vlan: 1
Ring protocol Timers: Hello-Interval 50 msec Dead-Interval 150 msec
Ring Master’s MAC Address is 00:01:e8:13:a3:19
Topology Change Statistics: Tx:110 Rx:45
Hello Statistics: Tx:13028 Rx:12348
Number of state Changes: 34
Member Vlans: 1000-1009
Dell#

Example (2 Summary)
Dell#show frrp 2 summary
Dell#show frrp 2 summary
Ring-ID State Mode Ctrl_Vlan Member_Vlans
-----------------------------------------------
2     Up     Master 2     11-20, 25, 27-30
Dell#

Related Commands
protocol frrp — enters the resilient ring protocol and designate a ring identification.

timer
Set the hello interval or dead interval for the Ring control packets.

Syntax
timer {hello-interval milliseconds} | {dead-interval milliseconds}

To remove the timer, use the no timer {hello-interval milliseconds} | {dead-interval milliseconds} command.

Parameters

- **hello-interval milliseconds**
  - Enter the keyword hello-interval then the time, in milliseconds, to set the hello interval of the control packets. The milliseconds must be entered in increments of 50 millisecond; for example, 50, 100, 150, and so on. If an invalid value is entered, an error message is generated. The range is from 50 to 2000 ms. Default: 500 ms.

- **dead-interval milliseconds**
  - Enter the keyword dead-interval then the time, in milliseconds, to set the dead interval of the control packets. The range is from 50 to 6000 ms. Default: 1500 ms.

NOTE: The configured dead interval must be at least three times the hello interval.

Defaults

- 500 ms for hello-interval milliseconds
- 1500 ms for dead-interval milliseconds

415
Command Modes

CONFIGURATION (conf-frrp)

Command History

Version 9.2(0.0)  Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The hello interval command is the interval at which ring frames are generated from the primary interface of the master node. The dead interval command is the time that elapses before a time-out occurs.
GARP VLAN Registration (GVRP)

The Dell Networking operating system (Dell) supports the basic GVRP commands. The generic attribute registration protocol (GARP) mechanism allows the configuration of a GARP participant to propagate through a network quickly. A GARP participant registers or de-registers its attributes with other participants by making or withdrawing declarations of attributes. At the same time, based on received declarations or withdrawals, GARP handles attributes of other participants.

GVRP enables a device to propagate local virtual local area network (VLAN) registration information to other participant devices and dynamically update the VLAN registration information from other devices. The registration information updates local databases regarding active VLAN members and through which port the VLANs can be reached.

GVRP ensures that all participants on a bridged LAN maintain the same VLAN registration information. The VLAN registration information propagated by GVRP includes both manually configured local static entries and dynamic entries from other devices.

GVRP participants have the following components:

- The GVRP application
- GARP information propagation (GIP)
- GARP information declaration (GID)

Important Points to Remember

- GVRP is supported on Layer 2 ports only.
- All VLAN ports added by GVRP are tagged.
- GVRP is supported on untagged ports belonging to a default VLAN and tagged ports.
- GVRP cannot be enabled on untagged ports belonging to a non-default VLAN unless native VLAN is turned on.
- GVRP requires end stations with dynamic access network interface controller (NICs).
- Based on updates from GVRP-enabled devices, GVRP allows the system to dynamically create a port-based VLAN (unspecifed) with a specific VLAN ID and a specific port.
- On a port-by-port basis, GVRP allows the system to learn about GVRP updates to an existing port-based VLAN with that VLAN ID and IEEE 802.1Q tagging.
- GVRP allows the system to send dynamic GVRP updates about your existing port-based VLAN.
- GVRP updates are not sent to any blocked spanning tree protocol (STP) ports. GVRP operates only on ports that are in the forwarding state.
- GVRP operates only on ports that are in the STP forwarding state. If you enable GVRP, a port that changes to the STP Forwarding state automatically begin to participate in GVRP. A port that changes to an STP state other than forwarding no longer participates in GVRP.
• VLANs created dynamically with GVRP exist only as long as a GVRP-enabled device is sending updates. If the devices no longer send updates, or GVRP is disabled, or the system is rebooted, all dynamic VLANs are removed.

• GVRP manages the active topology, not non-topological data such as VLAN protocols. If a local bridge must classify and analyze packets by VLAN protocols, manually configure protocol-based VLANs, and simply rely on GVRP for VLAN updates. But if the local bridge must know only how to reach a given VLAN, then GVRP provides all necessary information.

• The VLAN topologies that GVRP learns are treated differently from VLANs that are statically configured. The GVRP dynamic updates are not saved in NVRAM, while static updates are saved in NVRAM. When GVRP is disabled, the system deletes all VLAN interfaces that were learned through GVRP and leaves unchanged all VLANs that were manually configured.

### clear gvrp statistics

Clear GVRP statistics on an interface.

**Syntax**

```plaintext
clear gvrp statistics interface interface
```

**Parameters**

- **interface**
  - Enter the following keywords and slot/port or number information:
    - For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
    - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
    - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.

**Defaults**

none

**Command Modes**

EXEC

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**

- `show gvrp statistics` — displays the GVRP statistics.

### debug gvrp

Enable debugging on GVRP.

**Syntax**

```plaintext
debug gvrp {config | events | pdu}
```

To disable debugging, use the `no debug gvrp {config | events | pdu}` command.
### Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>config</td>
<td>Enter the keyword <code>config</code> to enable debugging on the GVRP configuration.</td>
</tr>
<tr>
<td>event</td>
<td>Enter the keyword <code>event</code> to enable debugging on the JOIN/LEAVE events.</td>
</tr>
</tbody>
</table>
| pdu        | Enter the keyword `pdu` then one of the following Interface keywords and slot/port or number information:
- For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information. |

### Defaults

- Disabled.

### Command Modes

- EXEC

### Command History

- **Version 8.3.16.1** Introduced on the MXL 10/40GbE Switch IO Module.

### disable

Globally disable GVRP.

**Syntax**

```
disable
```

To re-enable GVRP, use the `no disable` command.

**Defaults**

Enabled.

**Command Modes**

- CONFIGURATION-GVRP

**Command History**

- **Version 8.3.16.1** Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**

- `gvrp enable` — enables GVRP on physical interfaces and LAGs.
- `protocol gvrp` — access GVRP protocol.
**garp timers**

Set the intervals (in milliseconds) for sending GARP messages.

**Syntax**

```
garp timers {join | leave | leave-all}
```

To return to the previous setting, use the `no garp timers {join | leave | leave-all}` command.

**Parameters**

- **join**
  
  Enter the keyword `join` then the number of milliseconds to configure the join time. The range is from 100 to 147483647 milliseconds. The default is 200 milliseconds.

  **NOTE:** Designate the milliseconds in multiples of 100.

- **leave**
  
  Enter the keyword `leave` then the number of milliseconds to configure the leave time. The range is from 100 to 2147483647 milliseconds. The default is 600 milliseconds.

  **NOTE:** Designate the milliseconds in multiples of 100.

- **leave-all**
  
  Enter the keywords `leave-all` then the number of milliseconds to configure the leave-all time. The range is from 100 to 2147483647 milliseconds. The default is 1000 milliseconds.

  **NOTE:** Designate the milliseconds in multiples of 100.

**Defaults**

As above.

**Command Modes**

CONFIGURATION-GVRP

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

- **Join Timer** — Join messages announce the willingness to register some attributes with other participants. For reliability, each GARP application entity sends a Join message twice and uses a join timer to set the sending interval.

- **Leave Timer** — Leave announces the willingness to de-register with other participants. Together with Join, Leave messages help GARP participants complete attribute reregistration and de-registration. The leave timer starts after receipt of a leave message sent for de-registering some attribute information. If a Join message is not received before the Leave time expires, the GARP application entity removes the attribute information as requested.

- **Leave All Timer** — The Leave All timer starts when a GARP application entity starts. When this timer expires, the entity sends a Leave-all message so that other entities can reregister their attribute information. Then the Leave-all time begins again.

**Related Commands**

- `show garp timers` — displays the current GARP times.
**gvrp enable**

Enable GVRP on physical interfaces and LAGs.

**Syntax**

```
gvrp enable
```

To disable GVRP on the interface, use the no gvrp enable command.

**Defaults**

Disabled.

**Command Modes**

CONFIGURATION-INTERFACE

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**

disable — globally disables GVRP.

gvrp registration — Configure the GVRP register type.

**gvrp registration**

Configure the GVRP register type.

**Syntax**

```
gvrp registration {fixed | normal | forbidden}
```

To return to the default, use the gvrp register normal command.

**Parameters**

- **fixed**
  
Enter the keyword fixed then the VLAN range in a comma-separated VLAN ID set.

- **normal**
  
Enter the keyword normal then the VLAN range in a comma-separated VLAN ID set. This setting is the default.

- **forbidden**
  
Enter the keyword forbidden then the VLAN range in a comma-separated VLAN ID set.

**Defaults**

normal

**Command Modes**

CONFIGURATION-INTERFACE

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

Fixed registration prevents an interface, configured using the command line, to belong to a VLAN (static configuration) from being unconfigured when it receives a Leave message. Therefore, Registration mode on that interface is fixed.

Normal registration is the default registration. The port’s membership in the VLAN depends on GVRP. The interface becomes a member of a VLAN after learning about the VLAN through GVRP. If the VLAN is removed from the port that sends GVRP advertisements to this device, the port stops being a member of the VLAN.
To advertise or learn about VLANs through GVRP, use the `forbidden` command when you do not want the interface.

**Related Commands**

- `show gvrp` — displays the GVRP configuration including the registration.

---

**protocol gvrp**

Access GVRP protocol — (config-gvrp)#.

**Syntax**

```
protocol gvrp
```

**Defaults**

Disabled.

**Command Modes**

- `CONFIGURATION`

**Command History**

- **Version 8.3.16.1** Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**

- `disable` — globally disables GVRP.

---

**show config**

Display the global GVRP configuration.

**Syntax**

```
show config
```

**Command Modes**

- `CONFIGURATION-GVRP`

**Command History**

- **Version 8.3.16.1** Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**

- `gvrp enable` — enables GVRP on physical interfaces and LAGs.
- `protocol gvrp` — accesses the GVRP protocol.

---

**show garp timers**

Display the GARP timer settings for sending GARP messages.

**Syntax**

```
show garp timers
```

---

422
### Defaults
none

### Command Modes
- EXEC
- EXEC Privilege

### Command History
Version 8.3.16.1
Introduced on the MXL 10/40GbE Switch IO Module.

### Example
```
Dell#show garp timers
GARP Timers Value (milliseconds)
--------------- -------------------
Join Timer        200
Leave Timer       600
LeaveAll Timer    10000
Dell#
```

### Related Commands
- `garp timers` — sets the intervals (in milliseconds) for sending GARP messages.

### show gvrp

Display the GVRP configuration.

#### Syntax
```
show gvrp [brief | interface]
```

#### Parameters
- **brief** (OPTIONAL) Enter the keyword `brief` to display a brief summary of the GVRP configuration.
- **interface** (OPTIONAL) Enter the following keywords and slot/port or number information:
  - For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.

#### Defaults
none

#### Command Modes
- EXEC
- EXEC Privilege

#### Command History
Version 8.3.16.1
Introduced on the MXL 10/40GbE Switch IO Module.

#### Usage Information
If no ports are GVRP participants, the message output changes from `GVRP Participants running on <port_list>` to `GVRP Participants running on no ports.`
Example

R3#show gvrp brief
GVRP Feature is currently enabled.
Port                   GVRP Status      Edge-Port
----------------------------------------------
Gi 3/0                 Disabled          No
Gi 3/1                 Disabled          No
Gi 3/2                 Enabled           No
Gi 3/3                 Disabled          No
Gi 3/4                 Disabled          No
Gi 3/5                 Disabled          No
Gi 3/6                 Disabled          No
Gi 3/7                 Disabled          No
Gi 3/8                 Disabled          No
R3#show gvrp brief

Related Commands

show gvrp statistics — displays the GVRP statistics.

clear gvrp statistics

Clear GVRP statistics on an interface.

Syntax

clear gvrp statistics {interface interface | summary}

Parameters

interface

Enter the following keywords and slot/port or number information:

- For a Port Channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.
- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.

summary

Enter the keyword summary to display just a summary of the GVRP statistics.

Defaults

none

Command Modes

- EXEC
- EXEC Privilege

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

Invalid messages/attributes skipped can occur in the following cases:

- The incoming GVRP PDU has an incorrect length.
- “End of PDU” was reached before the complete attribute could be parsed.
- The Attribute Type of the attribute that was being parsed was not the GVRP VID Attribute Type (0x01).
• The attribute that was being parsed had an invalid attribute length.
• The attribute that was being parsed had an invalid GARP event.
• The attribute that was being parsed had an invalid VLAN ID. The valid range is 1 - 4095.

A failed registration can occur for the following reasons:
• Join requests were received on a port that was blocked from learning dynamic VLANs (GVRP Blocking state).
• An entry for a new GVRP VLAN could not be created in the GVRP database.

Example
Dell#show gvrp statistics int tengig 1/0
Join Empty Received: 0
Join In Received: 0
Empty Received: 0
LeaveIn Received: 0
Leave Empty Received: 0
Leave All Received: 40
Join Empty Transmitted: 156
Join In Transmitted: 0
Empty Transmitted: 0
Leave In Transmitted: 0
Leave Empty Transmitted: 0
Leave All Transmitted: 41
Invalid Messages/Attributes skipped: 0
Failed Registrations: 0
Dell#

Related
Commands
show gvrp — displays the GVRP configuration.

show vlan

Display the global VLAN configuration.

Syntax
show vlan

Command Modes
• EXEC
• EXEC Privilege

Command History
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Example
Dell# show vlan
Codes: * - Default VLAN, G - GVRP VLANs, R - Remote Port Mirroring VLANs, P - Primary, C - Community, I - Isolated
Q: U - Untagged, T - Tagged
x - Dot1x untagged, X - Dot1x tagged
G - GVRP tagged, M - Vlan-stack, H - VSN tagged
i - Internal untagged, I - Internal tagged, v - VLT untagged, V - VLT tagged
NUM Status Description Q Ports
* 1 Active
U Te 3/20
U Te 5/20-21

G 10 Active
G Po128(Te 5/49) (dynamically
leanred vlan)
Dell

Related Commands

- `show gvrp statistics` — displays the GVRP statistics.
Internet Group Management Protocol (IGMP)

The IGMP commands are supported by the Dell Networking operating software (Dell).

IGMP Snooping Commands

The Dell Networking OS supports IGMP Snooping version 2 and 3 on all Dell Networking systems.

Important Points to Remember for IGMP Snooping

- The Dell Networking OS supports version 1, version 2, and version 3 hosts.
- The Dell Networking OS IGMP snooping implementation is based on IP multicast address (not based on Layer 2 multicast mac address) and the IGMP snooping entries are in Layer 3 flow table not in Layer 2 forwarding information base (FIB).
- The Dell Networking OS IGMP snooping implementation is based on draft-ietf-magma-snoop-10.
- IGMP snooping is not enabled by default on the switch.
- A maximum of 1800 groups and 600 virtual local area network (VLAN) are supported.
- IGMP snooping is not supported on a default VLAN interface.
- IGMP snooping is not supported over VLAN-Stack-enabled VLAN interfaces (you must disable IGMP snooping on a VLAN interface before configuring VLAN-Stack-related commands).
- IGMP snooping does not react to Layer 2 topology changes triggered by spanning tree protocol (STP).
- IGMP snooping reacts to Layer 2 topology changes multiple spanning tree protocol (MSTP) triggers by sending a general query on the interface that comes in the FWD state.

Important Points to Remember for IGMP Querier

- The IGMP snooping Querier supports version 2.
- You must configure an IP address to the VLAN interface for IGMP snooping Querier to begin. The IGMP snooping Querier disables itself when a VLAN IP address is cleared, and then it restarts itself when an IP address is reassigned to the VLAN interface.
- When enabled, IGMP snooping Querier does not start if there is a statically configured multicast router interface in the VLAN.
- When enabled, IGMP snooping Querier starts after one query interval in case no IGMP general query (with IP SA lower than its VLAN IP address) is received on any of its VLAN members.
- When enabled, IGMP snooping Querier periodically sends general queries with an IP source address of the VLAN interface. If it receives a general query on any of its VLAN member, it checks the IP source address of the incoming frame.
- If the IP SA in the incoming IGMP general query frame is lower than the IP address of the VLAN interface, the switch disables its IGMP snooping Querier functionality.
• If the IP SA of the incoming IGMP general query is higher than the VLAN IP address, the switch continues to work as an IGMP snooping Querier.

ip igmp access-group

To specify access control for packets, use this feature.

Syntax
```
ip igmp access-group access-list
```

To remove the feature, use the `no ip igmp access-group access-list` command.

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>access-list</code></td>
<td>Enter the name of the extended ACL (16 characters maximum).</td>
</tr>
</tbody>
</table>

Defaults

Not configured

Command Modes

INTERFACE (conf-if-interface-slot/port)

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The access list accepted is an extended ACL. To block IGMP reports from hosts, on a per-interface basis based on the group address and source address that you specify in the access list, use this feature.

ip igmp group-join-limit

To limit the number of IGMP groups that can be joined in a second, use this feature.

Syntax
```
ip igmp group-join-limit number
```

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>number</code></td>
<td>Enter the number of IGMP groups permitted to join in a second. The range is from 1 to 10000.</td>
</tr>
</tbody>
</table>

Defaults

none

Command Modes

CONFIGURATION (conf-if-interface-slot/port)

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.
ip igmp querier-timeout

Change the interval that must pass before a multicast router decides that there is no longer another multicast router that should be the querier.

Syntax

```
ip igmp querier-timeout seconds
```

To return to the default value, use the `no ip igmp querier-timeout` command.

Parameters

- **seconds**
  
  Enter the number of seconds the router must wait to become the new querier. The range is from 60 to 300. The default is **125 seconds**.

Defaults

- **125 seconds**

Command Modes

- INTERFACE

Command History

- **Version 8.3.16.1**
  
  Introduced on the MXL 10/40GbE Switch IO Module.

ip igmp query-interval

Change the transmission frequency of IGMP general queries the Querier sends.

Syntax

```
ip igmp query-interval seconds
```

To return to the default values, use the `no ip igmp query-interval` command.

Parameters

- **seconds**
  
  Enter the number of seconds between queries sent out. The range is from 1 to 18000. The default is **60 seconds**.

Defaults

- **60 seconds**

Command Modes

- INTERFACE

Command History

- **Version 8.3.16.1**
  
  Introduced on the MXL 10/40GbE Switch IO Module.
**ip igmp query-max Resp-time**

Set the maximum query response time advertised in general queries.

**Syntax**

```
ip igmp query-max-resp-time seconds
```

To return to the default values, use the `no ip igmp query-max-resp-time` command.

**Parameters**

- `seconds` Enter the number of seconds for the maximum response time. The range is from 1 to 25. The default is **10 seconds**.

**Defaults**

- **10 seconds**

**Command Modes**

- INTERFACE

**Command History**

- **Version 8.3.16.1** Introduced on the MXL 10/40GbE Switch IO Module.

---

**ip igmp version**

Manually set the version of the router to IGMPv2 or IGMPv3.

**Syntax**

```
ip igmp version {2 | 3}
```

**Parameters**

- **2** Enter the number 2 to set the IGMP version number to IGMPv2.
- **3** Enter the number 3 to set the IGMP version number to IGMPv3.

**Defaults**

- **2** (that is, IGMPv2)

**Command Modes**

- INTERFACE

**Command History**

- **Version 8.3.16.1** Introduced on the MXL 10/40GbE Switch IO Module.

---

**ip igmp snooping enable**

Enable IGMP snooping on all or a single VLAN. This command is the master on/off switch to enable IGMP snooping.

**Syntax**

```
ip igmp snooping enable
```

To disable IGMP snooping, use the `no ip igmp snooping enable` command.
Defaults

Disabled.

Command Modes

- CONFIGURATION
- INTERFACE VLAN

Command History

Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

To enable IGMP snooping, enter this command. When you enable this command from CONFIGURATION mode, IGMP snooping enables on all VLAN interfaces (except the default VLAN).

NOTE: Execute the no shutdown command on the VLAN interface for IGMP Snooping to function.

Related Commands

shutdown — (no shutdown) activates an interface.

ip igmp snooping fast-leave

Enable IGMP snooping fast-leave for this VLAN.

Syntax

ip igmp snooping fast-leave

To disable IGMP snooping fast leave, use the no igmp snooping fast-leave command.

Defaults

Not configured.

Command Modes

INTERFACE VLAN — (conf-if-vl-n)

Command History

Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

Queriers normally send some queries when a leave message is received prior to deleting a group from the membership database. There may be situations when you require a fast deletion of a group. When you enable IGMP fast leave processing, the switch removes an interface from the multicast group as soon as it detects an IGMP version 2 leave message on the interface.

ip igmp snooping flood

This command controls the flooding behavior of unregistered multicast data packets.

Syntax

ip igmp snooping flood
Defaults

Enabled.

Command Modes

CONFIGURATION

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

When you disable flooding, unregistered multicast data traffic is forwarded to only multicast router ports, both static and dynamic, in a VLAN. If there is no multicast router port in a VLAN, unregistered multicast data traffic is dropped.

On the MXL switch, when you configure `no ip igmp snooping flood`, the system forwards the frames on mrouter ports for first 96 IGMP snooping enabled VLANs. For all other VLANs, unregistered multicast packets are dropped.

**ip igmp snooping last-member-query-interval**

The last member query interval is the maximum response time inserted into Group-Specific queries sent in response to Group-Leave messages.

**Syntax**

```
ip igmp snooping last-member-query-interval milliseconds
```

To return to the default value, use the `no ip igmp snooping last-member-query-interval` command.

**Parameters**

- `milliseconds` Enter the interval in milliseconds. The range is from 100 to 65535. The default is 1000 milliseconds.

**Defaults**

1000 milliseconds

**Command Modes**

INTERFACE VLAN

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

This last-member-query-interval is also the interval between successive Group-Specific Query messages. To change the last-member-query interval, use this command.

**ip igmp snooping mrouter**

Statically configure a VLAN member port as a multicast router interface.

**Syntax**

```
ip igmp snooping mrouter interface interface
```

432
To delete a specific multicast router interface, use the `no igmp snooping mrouter interface interface` command.

**Parameters**

- `interface interface` Enter the following keywords and slot/port or number information:
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
  - For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.

**Defaults**

Not configured.

**Command Modes**

INTERFACE VLAN — `(conf-if-vl-n)`

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

The Dell Networking OS provides the capability of statically configuring the interface to which a multicast router is attached. To configure a static connection to the multicast router, enter the `ip igmp snooping mrouter interface` command in the VLAN context. The interface to the router must be a part of the VLAN where you are entering the command.

### ip igmp snooping querier

Enable IGMP querier processing for the VLAN interface.

**Syntax**

```
ip igmp snooping querier
```

To disable IGMP querier processing for the VLAN interface, use the `no ip igmp snooping querier` command.

**Defaults**

Not configured.

**Command Modes**

INTERFACE VLAN — `(conf-if-vl-n)`

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

This command enables the IGMP switch to send General Queries periodically. This behavior is useful when there is no multicast router present in the VLAN because the multicast traffic is not routed. Assign an IP address to the VLAN interface for the switch to act as a querier for this VLAN.
**show ip igmp snooping mrouter**

Display multicast router interfaces.

**Syntax**

```
show ip igmp snooping mrouter [vlan number]
```

**Parameters**

`vlan number` Enter the keyword `vlan` then the VLAN number. The range is from 1 to 4094.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Example**

```
Dell#show ip igmp snooping mrouter
Interface Router Ports
Vlan 2 Gi 13/3, Po 1
Dell#
```
Interfaces

The commands in this chapter are supported by Dell Networking operating software (Dell). This chapter contains the following sections:

- Basic Interface Commands
- Port Channel Commands
- Time Domain Reflectometer (TDR)
- UDP Broadcast

Basic Interface Commands

The following commands are for Physical, Loopback, and Null interfaces.

clear counters

Clear the counters used in the show interfaces commands for all virtual router redundancy protocol (VRRP) groups, virtual local area networks (VLANs), and physical interfaces, or selected ones.

**Syntax**

```
clear counters [interface] [vrrp [{vrid | vrf instance}]]
learning-limit]
```

**Parameters**

- **interface**
  - (OPTIONAL) Enter any of the following keywords and slot/port or number to clear counters from a specified interface:
    - For a Loopback interface, enter the keyword `loopback` then a number from 0 to 16383.
    - For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
    - For the management interface on the RPM, enter the keyword `ManagementEthernet` then slot/port information. The slot range is from 0 to 1 and the port range is 0.
    - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
    - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
    - For a VLAN, enter the keyword `VLAN` then a number from 1 to 4094.
clear counters

Clear the dampening counters on all the interfaces or just the specified interface.

Syntax

```
clear dampening [interface]
```

Parameters

- **interface** (OPTIONAL) Enter any of the following keywords and slot/port or number to clear counters from a specified interface:
  - For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.

Defaults

Without an interface specified, the command clears all interface dampening counters.
Command Modes

EXEC Privilege

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

On the MXL switch, after you enter the clear counters command and verify the results with the show interfaces command, the line rate is not reset to 0.00%.

Example

Dell#clear dampening gigabitethernet 1/2
Clear dampening counters on tengig 1/2 [confirm] y
Dell#

Related Commands

show interfaces dampening — displays interface dampening information.

dampening — configures dampening on an interface.

cx4-cable-length

Configure the length of the cable to be connected to the selected CX4 port.

Syntax

[no] cx4-cable-length {long | medium | short}

Parameters

- **long** | **medium** | **short**

Enter the keyword that matches the cable length to be used at the selected port:

- **short** = For 1-meter and 3-meter cable lengths.
- **medium** = For 5-meter cable length.
- **long** = For 10-meter and 15-meter cable lengths.

Defaults

medium

Command Modes

INTERFACE

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

This command only works on ports that the system recognizes as CX4 ports. The figures below shows an attempt to configure an XFP port with the command after inserting a CX4 converter into the port.

For details about using XFP ports with CX4 cables, refer to your MXL switch hardware guide.

Example (Unsuccessful)

Dell#show interfaces tengigabitethernet 0/26 | grep "XFP type"
Pluggable media present, XFP type is 10GBASE-CX4
Dell(conf-if-te-0/26)#cx4-cable-length short
% Error: Unsupported command.
Dell(conf-if-te-0/26)#cx4-cable-length medium
% Error: Unsupported command.
Dell(conf-if-te-0/26)#cx4-cable-length long
% Error: Unsupported command.
Dell(conf-if-te-0/26)#

Example
(Successful)
Dell#config
Dell(config)#interface tengigabitethernet 0/52
Dell(config-if-0/52)#cx4-cable-length long
Dell(config-if-0/52)#show config
!
interface TenGigabitEthernet 0/51
 no ip address
  cx4-cable-length long
  shutdown
Dell(config-if-0/52)#exit
Dell(config)#

Related Commands
show config – displays the configuration of the selected interface.

dampening
Configure dampening on an interface.

Syntax
dampening [([half-life] [reuse-threshold]) [suppress-threshold]] [max-suppress-time]]
To disable dampening, use the no dampening [([half-life] [reuse-threshold]) [suppress-threshold]] [max-suppress-time]] command.

Parameters

- **half-life**: Enter the number of seconds after which the penalty is decreased. The penalty decreases half after the half-life period expires. The range is from 1 to 30 seconds. The default is 5 seconds.
- **reuse-threshold**: Enter a number as the reuse threshold, the penalty value below which the interface state is changed to “up”. The range is from 1 to 20000. The default is 750.
- **suppress-threshold**: Enter a number as the suppress threshold, the penalty value above which the interface state is changed to “error disabled”. The range is from 1 to 20000. The default is 2500.
- **max-suppress-time**: Enter the maximum number for which a route can be suppressed. The default is four times the half-life value. The range is from 1 to 86400. The default is 20 seconds.

Defaults
Disabled.

Command Modes
INTERFACE (conf-if-)}

<tbody>
<tr>
<td>Important Points to Remember:</td>
</tr>
<tr>
<td>• Spaces between characters are not preserved after entering this command unless you enclose the entire description in quotation marks (&quot;desc_text&quot;).</td>
</tr>
</tbody>
</table>
• Entering a text string after the `description` command overwrites any previous text string that you previously configured as the description.

• The `shutdown` and `description` commands are the only commands that you can configure on an interface that is a member of a port-channel.

• Use the `show interfaces description` command to display descriptions configured for each interface.

Related Commands

`show interfaces description` — displays the description field of the interfaces.

duplex (1000/10000 Interfaces)

Configure duplex mode on any physical interfaces where the speed is set to 1000/10000.

Syntax

duplex {half | full}

To return to the default setting, use the `no duplex` command.

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>half</td>
<td>Enter the keyword <strong>half</strong> to set the physical interface to transmit only in one direction.</td>
</tr>
<tr>
<td>full</td>
<td>Enter the keyword <strong>full</strong> to set the physical interface to transmit in both directions.</td>
</tr>
</tbody>
</table>

Defaults

Not configured.

Command Modes

INTERFACE

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

**NOTE:** Starting with the Dell Networking OS version 7.8.1.0, when you use a copper SFP2 module with catalog number GP-SFP2-1T in the S25P module, you can manually set its speed with the `speed` command. When you set the speed to 10 Mbps or 100 Mbps, you can also execute the `duplex` command.

Related Commands

`speed (for 1000/10000/auto interfaces)` — sets the speed on the Base-T Ethernet interface.

`negotiation auto` — enables or disables auto-negotiation on an interface.
# flowcontrol

Control how the system responds to and generates 802.3x pause frames on 10G and 40Gig stack units.

**Syntax**

```
flowcontrol rx {off | on} tx {off | on} threshold
```

**Parameters**

- **rx on**
  
  Enter the keywords `rx on` to process the received flow control frames on this port. This is the default value for the receive side.

- **rx off**
  
  Enter the keywords `rx off` to ignore the received flow control frames on this port.

- **tx on**
  
  Enter the keywords `tx on` to send control frames from this port to the connected device when a higher rate of traffic is received. This is the default value on the send side.

- **tx off**
  
  Enter the keywords `tx off` so that flow control frames are not sent from this port to the connected device when a higher rate of traffic is received.

**Defaults**

- `rx off`
- `tx off`

**Command Modes**

`INTERFACE`

**Command History**

*Version 8.3.16.1*  
Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

The globally assigned 48-bit Multicast address 01-80-C2-00-00-01 is used to send and receive pause frames. To allow full-duplex flow control, stations implementing the pause operation instruct the MAC to enable the reception of frames with a destination address equal to this multicast address.

The pause:

- Starts when *either* the packet pointer or the buffer threshold is met (whichever is met first). When the discard threshold is met, packets are dropped.
- Ends when *both* the packet pointer and the buffer threshold fall below 50% of the threshold settings.

The *discard threshold* defines when the interface starts dropping the packet on the interface. This may be necessary when a connected device does not honor the flow control frame sent by the switch. The discard threshold should be larger than the *buffer threshold* so that the buffer holds at least hold at least three packets.

**On 4–port 10G stack units:** Changes in the flow-control values may not be reflected automatically in the `show interface` output for 10G interfaces. This is because 10G interfaces do not support auto-negotiation.
Important Points to Remember

- Do not enable `tx pause` when buffer carving is enabled. For information and assistance, consult Dell Networking TAC.

- Asymmetric flow control (`rx on tx off`, or `rx off tx on`) setting for the interface port less than 100 Mb/s speed is not permitted. The following error is returned:
  Can’t configure Asymmetric flowcontrol when speed <1G, config ignored

- The only configuration applicable to half duplex ports is `rx off tx off`. The following error is returned:
  Cannot configure Asymmetric flowcontrol when speed <1G, config ignored

- You cannot configure half duplex when the flow control configuration is on (default is `rx on tx on`). The following error is returned: Cannot configure half duplex when flowcontrol is on, config ignored

NOTE: The flow control must be off (`rx off tx off`) before configuring the half duplex.

Example (partial)

```
Dell(conf-if-tengig-0/1)#show config
!
interface TenGigabitEthernet 0/1
no ip address
switchport
no negotiation auto
flowcontrol rx off tx on
no shutdown
...
```

Example (Values)

This Example shows how the Dell Networking OS negotiates the flow control values between two Dell Networking chassis connected back-to-back using 1G copper ports.

Related Commands

**show running-config** — displays the flow configuration parameters (non-default values only).

**show interfaces** — displays the negotiated flow control parameters.

### interface

Configure a physical interface on the switch.

**Syntax**

```
interface interface
```

**Parameters**

- **interface**
  
  Enter one of the following keywords and slot/port or number information:
  
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.

**Defaults**

Not configured.

**Command Modes**

CONFIGURATION

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

You cannot delete a physical interface.

By default, physical interfaces are disabled (`shutdown`) and are in Layer 3 mode. To place an interface in mode, ensure that the interface’s configuration does not contain an IP address and enter the Port Channel Commands command.
Example

Dell(conf)#interface tengig 0/0
Dell(conf-if-tengig-0/0)#exit#

Related Commands
interface loopback — configures a Loopback interface.
interface null — configures a Null interface.
interface port-channel — configures a port channel.
interface vlan — configures a VLAN.
show interfaces — displays the interface configuration.

interface loopback

Configure a Loopback interface.

Syntax

interface loopback number

To remove a loopback interface, use the no interface loopback number command.

Parameters

number Enter a number as the interface number. The range is from 0 to 16383.

Defaults
Not configured.

Command Modes
CONFIGURATION

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Example

Dell(conf)#interface loopback 1655
Dell(conf-if-lo-1655)#

Related Commands
interface — configures a physical interface.
interface null — configures a Null interface.
interface port-channel — configures a port channel.
interface vlan — configures a VLAN.
interface ManagementEthernet

Configure the Management port on the system.

Syntax

interface ManagementEthernet slot/port

Parameters

slot/port Enter the keyword ManagementEthernet then the slot number (0 or 1) and port number zero (0).

Defaults

Not configured.

Command Modes

CONFIGURATION

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

You cannot delete a Management port.

The Management port is enabled by default (no shutdown). To assign an IP address to the Management port, use the ip address command.

Example

Dell(conf)#interface managementethernet 0/0
Dell(conf-if-ma-0/0)#

Related Commands

interface ManagementEthernet — configures a static route that points to the Management interface or a forwarding router.

duplex (1000/10000 Interfaces) — configure duplex mode on any physical interfaces where the speed is set to 1000/10000.

interface null

Configure a Null interface on the switch.

Syntax

interface null number

Parameters

number Enter zero (0) as the Null interface number.

Defaults

Not configured; number = 0

Command Modes

CONFIGURATION

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.
Usage
Information
You cannot delete the Null interface. The only configuration command possible in a Null interface is `ip unreachables`.

Example
Dell(conf)#interface null 0
Dell(conf-if-nu-0)#

Related
Commands
- `interface` — configures a physical interface.
- `interface loopback` — configures a Loopback interface.
- `interface port-channel` — configures a port channel.
- `interface vlan` — configures a VLAN.
- `ip unreachables` — enables generation of internet control message protocol (ICMP) unreachable messages.

interface range

This command permits configuration of a range of interfaces to which subsequent commands are applied (bulk configuration). Using the `interface range` command, you can enter identical commands for a range of interface.

Syntax
```
interface range interface, interface,...
```

Parameters
- `interface, interface,...` Enter the keywords `interface range` and one of the interfaces — slot/port, port-channel, or VLAN number. Select the range of interfaces for bulk configuration. You can enter up to six comma-separated ranges. Spaces are not required between the commas. Comma-separated ranges can include VLANs, port-channels, and physical interfaces.

Slot/Port information must contain a space before and after the dash. For example, `interface range gigabitethernet 0/1 - 5` is valid; `interface range gigabitethernet 0/1-5` is NOT valid.

- For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
- For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

Defaults
```
none
```

446
### Command Modes
**CONFIGURATION**

### Command History
**Version 8.3.16.1**  Introduced on the MXL 10/40GbE Switch IO Module.

### Usage Information
When creating an interface range, interfaces appear in the order they are entered; they are not sorted. The command verifies that interfaces are present (physical) or configured (logical).

#### Important Points to Remember:
- Bulk configuration is created if at least one interface is valid.
- Non-existing interfaces are excluded from the bulk configuration with a warning message.
- The `interface range` prompt includes interface types with slot/port information for valid interfaces. The prompt allows for a maximum of 32 characters. If the bulk configuration exceeds 32 characters, it is represented by an ellipsis (...).
- When the `interface range` prompt has multiple port ranges, the smaller port range is excluded from the prompt.
- If overlapping port ranges are specified, the port range is extended to the smallest start port and the biggest end port.

#### Example (Bulk)

```
Dell(conf)#interface range so 2/0-1, te 10/0, gi 3/0, fa 0/0
% Warning: Non-existing ports (not configured) are ignored by interface-range
```

#### Example (Multiple Ports)

```
Dell(conf)#interface range gi 2/0 - 23, gi 2/1 - 10
Dell(conf-if-range-gi-2/0-23#)
```

#### Example (Overlapping Ports)

```
Dell(conf)#interface range gi 2/1 - 11, gi 2/1 - 23
Dell(conf-if-range-gi-2/1-23#)
```

### Usage Information
Only VLAN and port-channel interfaces created using the `interface vlan` and `interface port-channel` commands can be used in the `interface range` command.

Use the `show running-config` command to display the VLAN and port-channel interfaces. VLAN or port-channel interfaces that are not displayed in the `show running-config` command cannot be used with the bulk configuration feature of the `interface range` command. You cannot create virtual interfaces (VLAN, Port-channel) using the `interface range` command.

#### NOTE:
If a range has VLAN, physical, port-channel, and SONET interfaces, only commands related to physical interfaces can be bulk configured. To configure commands specific to VLAN or port-channel, only those respective interfaces should be configured in a particular range.
Example (Single Range)

This example shows a single range bulk configuration.

Dell(config)# interface range gigabitethernet 5/1 - 23
Dell(config-if-range)# no shutdown
Dell(config-if-range)#

Example (Multiple Range)

This example shows how to use commas to add different interface types to the range enabling all Gigabit Ethernet interfaces in the range 5/1 to 5/23 and both Ten-Gigabit Ethernet interfaces 1/1 and 1/2.

Dell(config-if)# interface range gigabitethernet5/1-23,
tengigabitethernet1/1-2
Dell(config-if-range)# no shutdown
Dell(config-if-range)#

Example (Multiple Range)

This example shows how to use commas to add SONET, VLAN, and port-channel interfaces to the range.

Dell(config-if)# interface range gigabitethernet5/1-23,
tengigabitethernet1/1-2,
Vlan 2-100, Port 1-25
Dell(config-if-range)# no shutdown
Dell(config-if-range)#

Related Commands

interface port-channel — configures a port channel group.

interface vlan — configures a VLAN interface.

show config (from INTERFACE RANGE mode) — shows the bulk configuration interfaces.

show range — shows the bulk configuration ranges.

interface range macro (define) — defines a macro for an interface-range.

interface range macro (define)

Defines a macro for an interface range and then saves the macro in the running configuration.

Syntax

define interface range macro name interface , interface , ...

Parameters

name

Enter up to 16 characters for the macro name.

interface, interface...

Enter the keywords interface range and one of the interfaces — slot/port, port-channel, or VLAN number. Select the range of interfaces for bulk configuration. You can enter up to six comma-separated ranges. Spaces are not required between the commas. Comma-separated ranges can include VLANs, port-channels, and physical interfaces.

Slot/Port information must contain a space before and after the dash. For example, interface range
gigabitethernet 0/1 - 5 is valid; interface range
gigabitethernet 0/1-5 is NOT valid.

- For a Port Channel interface, enter the keywords port-
  channel then a number. The range is from 1 to 128.
- For a 10-Gigabit Ethernet interface, enter the keyword
  TenGigabitEthernet then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword
  fortyGigE then the slot/port information.
- For a VLAN, enter the keyword vlan then a number from
  1 to 4094.

Defaults

none

Command Modes

CONFIGURATION

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Example (Single Range)

This example shows how to define an interface range macro named test. Execute
the show running-config command to display the macro definition.

Dell(config)# define interface-range test
tengigabitethernet0/0-3, gigabitethernet 5/0-47, gigabitethernet 13/0-89

Dell# show running-config | grep define
define interface-range test tengigabitethernet0/0-3, gigabitethernet 5/0-47, gigabitethernet 13/0-89
Dell(config)#interface range macro test
Dell(config-if-range-te-0/0-3,gi-5/0-47,gi-13/0-89)#

Related Commands

interface range – configures a range of command (bulk configuration)

interface range macro name – runs an interface range macro.

interface range macro name

Run the interface-range macro to automatically configure the pre-defined range of interfaces.

Syntax

interface range macro name

Parameters

name

Enter the name of an existing macro.

Defaults

none

Command Modes

CONFIGURATION
Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Example (Single Range)

This example shows the macro named test that was defined earlier.

Dell(config)#interface range macro test
Dell(config-if-range-te-0/0-3,gi-5/0-47,gi-13/0-89)#

Related Commands

interface range — configures a range of command (bulk configuration).

interface range macro (define) — defines a macro for an interface range (bulk configuration).

interface vlan

Configure a VLAN. You can configure up to 4096 VLANs.

Syntax

interface vlan vlan-id

To delete a VLAN, use the no interface vlan vlan-id command.

Parameters

vlan-id

Enter a number as the VLAN Identifier. The range is from 1 to 4096.

Defaults

Not configured, except for the Default VLAN, which is configured as VLAN 1.

Command Modes

CONFIGURATION

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

For more information about VLANs and the commands to configure them, refer to the VLAN Stacking commands.

FTP, TFTP, and SNMP operations are not supported on a VLAN. MAC ACLs are not supported in VLANs. IP ACLs are supported. For more information, refer to the Access Control Lists (ACL) chapter.

Example

Dell(conf)#int vlan 3
Dell(conf-if-vl-3)#

Related Commands

interface — configures a physical interface.

interface loopback — configures a loopback interface.

interface null — configures a null interface.

interface port-channel — configures a port channel group.
show vlan — displays the current VLAN configuration on the switch.
shutdown — disables/enables the VLAN.
tagged — adds a Layer 2 interface to a VLAN as a tagged interface.
untagged — adds a Layer 2 interface to a VLAN as an untagged interface.

**intf-type cr4 autoneg**

Set the interface type as CR4 with auto-negotiation enabled.

**Syntax**

```
intf-type cr4 autoneg
```

If you configure `intf-type cr4 autoneg`, use the `no intf-type cr4 autoneg` command to set the interface type as cr4 with autonegotiation disabled.

**Defaults**

Not configured

**Command Modes**

CONFIGURATION

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

If you configure `interface type` as CR4 with auto-negotiation enabled, also configure CR4 with auto-negotiation. Many DAC cable link issues are resolved by setting the interface type as CR4.

**Related Commands**

`interface` — configures a physical interface.
`interface loopback` — configures a loopback interface.
`interface null` — configures a null interface.
`interface port-channel` — configures a port channel group.

**keepalive**

Send keepalive packets periodically to keep an interface alive when it is not transmitting data.

**Syntax**

```
keepalive [seconds]
```

To stop sending keepalive packets, use the `no keepalive` command.
**Parameters**

seconds  
(OPTIONAL) For interfaces with PPP encapsulation enabled, enter the number of seconds between keepalive packets. The range is from 0 to 23767. The default is **10 seconds**.

**Defaults**

Enabled.

**Command Modes**

INTERFACE

**Command History**

Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

When you configure keepalive, the system sends a self-addressed packet out of the configured interface to verify that the far end of a WAN link is up. When you configure no keepalive, the system does not send keepalive packets and so the local end of a WAN link remains up even if the remote end is down.

---

**monitor interface**

Monitor counters on a single interface or all interfaces on a line card. The screen is refreshed every five seconds and the CLI prompt disappears.

**Syntax**

```
monitor interface [interface]
```

To disable monitoring and return to the CLI prompt, press the q key.

**Parameters**

interface  
(OPTIONAL) Enter the following keywords and slot/port or number information:

- For the management port, enter the keyword managementethernet then the slot (0 or 1) and the port (0).
- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

In the Example, the delta column displays changes since the last screen refresh. The following are the monitor command menu options.
Key | Description
--- | ---
systest-3 | Displays the host name assigned to the system.
m | Change the view from a single interface to all interfaces on the line card or visa-versa.
c | Refresh the view.
b | Change the counters displayed from Packets on the interface to Bytes.
r | Change the [delta] column from change in the number of packets/bytes in the last interval to rate per second.
l | Change the view to the next interface on the line card, or if in line card mode, the next line card in the chassis.
a | Change the view to the previous interface on the line card, or if in line card mode, the previous line card in the chassis.
T | Increase the screen refresh rate.
t | Decrease the screen refresh rate.
q | Return to the CLI prompt.

Example (Single Interface)

systest-3 Monitor time: 00:00:06 Refresh Intvl.: 2s Time: 03:26:26

Interface: Gi 0/3, Enabled, Link is Up, Linespeed is 1000 Mbit

a - Page down

c - Clear screen
**mtu**

Set the link maximum transmission unit (MTU) (frame size) for an Ethernet interface.

**Syntax**

```plaintext
mtu value
```

To return to the default MTU value, use the `no mtu` command.

**Parameters**

- `value`

  Enter a maximum frame size in bytes. The range is from 594 to 9252. MXL Switch Range is from 594 to 12000. The default is 1554.

**Defaults**

1554

**Command Modes**

INTERFACE

**Command History**

Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

If the packet includes a Layer 2 header, the difference between the link MTU and IP MTU (ip mtu command) must be enough bytes to include the Layer 2 header.

- The IP MTU is adjusted automatically when you configure the Layer 2 MTU with the `mtu` command.

When you enter the `no mtu` command, The Dell Networking OS reduces the IP MTU value to 1536 bytes.

Link MTU and IP MTU considerations for port channels and VLANs are as follows.

**port channels:**

- All members must have the same link MTU value and the same IP MTU value.
- The port channel link MTU and IP MTU must be less than or equal to the link MTU and IP MTU values configured on the channel members. For example, if the members have a link MTU of 2100 and an IP MTU 2000, the port channel's MTU values cannot be higher than 2100 for link MTU or 2000 bytes for IP MTU.

**VLANs:**

- All members of a VLAN must have same IP MTU value.
- Members can have different Link MTU values. Tagged members must have a link MTU 4 bytes higher than untagged members to account for the packet tag.
- The VLAN link MTU and IP MTU must be less than or equal to the link MTU and IP MTU values configured on the VLAN members. For example, the VLAN contains tagged members with Link MTU of 1522 and IP MTU of 1500 and
untagged members with Link MTU of 1518 and IP MTU of 1500. The VLAN’s Link MTU cannot be higher than 1518 bytes and its IP MTU cannot be higher than 1500 bytes.

The following shows the difference between Link MTU and IP MTU.

<table>
<thead>
<tr>
<th>Layer 2 Overhead</th>

</tr>
</tbody>
</table>

**negotiation auto**

Enable auto-negotiation on an interface.

**Syntax**

```text
negotiation auto
```

To disable auto-negotiation, use the `no negotiation auto` command.

**Defaults**

Enabled.

**Command Modes**

INTERFACE

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

The `no negotiation auto` command is only available if you first manually set the speed of a port to 10Mbits or 100Mbits.

The `negotiation auto` command provides a `mode` option for configuring an individual port to forced-master/forced slave after you enable auto-negotiation.

If you do not use the `mode` option, the default setting is `slave`. If you do not configure forced-master or forced-slave on a port, the port negotiates to either a master or a slave state. Port status is one of the following:

- Forced-master
- Force-slave
- Master
- Slave
• Auto-neg Error — typically indicates that both ends of the node are configured with forced-master or forced-slave.

⚠️ CAUTION: Ensure that one end of your node is configured as forced-master and one is configured as forced-slave. If both are configured the same (that is, forced-master or forced-slave), the `show interfaces` command flaps between an auto-neg-error and forced-master/slave states.

You can display master/slave settings with the `show interfaces` command.

Example (Master/Slave)

```
Dell(conf)# int tengig 0/0
Dell(conf-if)#neg auto
Dell(conf-if-autoneg)# ?
end         Exit from configuration mode
exit        Exit from autoneg configuration mode
mode        Specify autoneg mode
no          Negate a command or set its defaults
show        Show autoneg configuration information
Dell(conf-if-autoneg)#mode ?
forced-master Force port to master mode
forced-slave Force port to slave mode
Dell(conf-if-autoneg)#
```

Example (Master/Slave, partial)

```
Dell#show interfaces configured
TenGigabitEthernet 13/18 is up, line protocol is up
Hardware is Dell Force10Eth, address is 00:01:e8:05:f7:fc
   Current address is 00:01:e8:05:f7:fc
Interface index is 474791997
MTU 1554 bytes, IP MTU 1500 bytes
LineSpeed 1000 Mbit, Mode full duplex, Master
ARP type: ARPA, ARP Timeout 04:00:00
Last clearing of "show interfaces" counters 00:12:42
Queueing strategy: fifo
Input Statistics:
...
```

User Information

Both sides of the link must have auto-negotiation enabled or disabled for the link to come up.

The following details the possible speed and auto-negotiation combinations for a line between two 10/100/1000 Base-T Ethernet interfaces.

**Port 0**

- auto-negotiation enabled* speed 1000 or auto
- auto-negotiation enabled speed 100
- auto-negotiation disabled speed 100
- auto-negotiation disabled speed 100
- auto-negotiation enabled* speed 1000 or auto

**Port 1**

- auto-negotiation enabled* speed 1000 or auto
- auto-negotiation enabled speed 100
- auto-negotiation disabled speed 100
- auto-negotiation enabled speed 100
- auto-negotiation disabled speed 100

**Link Status Between Port 1 and Port 2**

- Up at 1000 Mb/s
- Up at 100 Mb/s
- Up at 100 Mb/s
- Down
- Down

* You cannot disable auto-negotiation when the speed is set to 1000 or auto.

### portmode hybrid

To accept both tagged and untagged frames, set a physical port or port-channel. A port configured this way is identified as a hybrid port in report displays.

**Syntax**

```
portmode hybrid
```

To return a port to accept *either* tagged or untagged frames (non-hybrid), use the `no portmode hybrid` command.

**Defaults**

non-hybrid

**Command Modes**

INTERFACE (conf-if-slot/port)

**Command History**

*Version 8.3.16.1* Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

The following describes the `interface` command shown in the following example. This example sets a port as hybrid, makes the port a tagged member of VLAN 20, and an untagged member of VLAN 10, which becomes the native VLAN of the port. The port now accepts:

- untagged frames and classify them as VLAN 10 frames
- VLAN 20 tagged frames

The following describes the `do show interfaces` command shown in the following example. This example shows output with "Hybrid" as the newly added value for 802.1QTagged. The options for this field are:

- True — port is tagged
- False — port is untagged
- Hybrid — port accepts both tagged and untagged frames
The following describes the `interface vlan` command shown in the following example. This example shows unconfiguration of the hybrid port using the `no portmode hybrid` command.

**NOTE:** Remove all other configurations on the port before you can remove the hybrid configuration from the port.

**Example**

```
Dell(conf)#interface tengig 0/20
Dell(conf-if-te-0/20)#no shut
Dell(conf-if-te-0/20)#portmode hybrid
Dell(conf-if-te-0/20)#sw
Dell(conf-if-te-0/20)#int vlan 10
Dell(conf-if-vl-10)#tag tengig 0/20
Dell(conf-if-vl-10)#int vlan 20
Dell(conf-if-vl-20)#untag tengig 0/20
Dell(conf-if-vl-20)#
```

**Example (tagged hybrid)**

```
Dell(conf)#interface tengig 0/20
Dell(conf-if-te-0/20)#no shut
Dell(conf-if-te-0/20)#portmode hybrid
Dell(conf-if-te-0/20)#sw
Dell(conf-if-te-0/20)#int vlan 10
Dell(conf-if-vl-10)#int tengig 0/20
Dell(conf-if-vl-20)# untag tengig 0/20
Dell (conf-if-vl-20)#
Dell (conf-if-vl-20)#
Dell(conf)#do show interfaces switchport tengigabitethernet 3/20
Codes: U - Untagged, T - Tagged
       x - Dot1x untagged, X - Dot1x tagged
       G - GVRP tagged, M - Trunk, H - VSN tagged
       i - Internal untagged, I - Internal tagged, v - VLT untagged,
       V - VLT tagged
Name: TenGigabitEthernet 3/20

802.1QTagged: Hybrid
Vlan membership:
   Q  Vlans
   U  20
   T  10

Native VlanId: 20.
```

**Example (unconfigure the hybrid port)**

```
Dell(conf-if-vl-20)#interface vlan 10
Dell(conf-if-vl-10)#no untagged tengig 0/20
Dell(conf-if-vl-10)#interface vlan 20
Dell(conf-if-vl-20)#no tagged tengig 0/20
Dell(conf-if-vl-20)#interface tengig 0/20
Dell(conf-if-te-0/20)#no portmode hybrid
Dell(conf-if-vl-20)#
```
Related Commands

- `show interfaces switchport` — displays the configuration of switchport (Layer 2) interfaces on the switch.
- `vlan-stack trunk` — specifies an interface as a trunk port to the Stackable VLAN network.

rate-interval

Configure the traffic sampling interval on the selected interface.

Syntax

```
rate-interval seconds
```

Parameters

- `seconds` Enter the number of seconds for which to collect traffic data. The range is from 5 to 299 seconds.

**NOTE:** For 0 to 5 seconds, polling occurs every 5 seconds. For 6 to 10 seconds, polling occurs every 10 seconds. For any other value, polling occurs every 15 seconds.

Defaults

299 seconds

Command Modes

INTERFACE

Command History

- **Version 8.3.16.1** Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The output of the `show interfaces` command displays the configured rate interval, along with the collected traffic data.

Related Commands

- `show interfaces` — displays information on physical and virtual interfaces.

show config

Display the interface configuration.

Syntax

```
show config
```

Command Modes

INTERFACE

Command History

- **Version 8.3.16.1** Introduced on the MXL 10/40GbE Switch IO Module.

Example

```
Dell(conf-if)#show conf
!
```plaintext
interface GigabitEthernet 1/7
  no ip address
  switchport
  no shutdown
Dell(conf-if)#
```

### show config (from INTERFACE RANGE mode)

Display the bulk configured interfaces (interface range).

**Syntax**
```
show config
```

**Command Modes**
CONFIGURATION INTERFACE (conf-if-range)

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Example**
```
Dell(conf)#interface range gigabitethernet 1/1 - 2
Dell(conf-if-range-gi-1/1-2)#show config
!
interface GigabitEthernet 1/1
  no ip address
  switchport
  no shutdown
!
interface GigabitEthernet 1/2
  no ip address
  switchport
  no shutdown
Dell(conf-if-range-gi-1/1-2)#
```

### show interfaces

Display information on a specific physical interface or virtual interface.

**Syntax**
```
show interfaces interface
```

**Parameters**

- `interface`
  - Enter one of the following keywords and slot/port or number information:
    - For a Loopback interface, enter the keyword `loopback` then a number from 0 to 16383.
    - For a management interface, enter the keyword `ManagementEthernet` then the slot/port information. The slot range is 0 to 1 and the port range is 0.
    - For a Port Channel interface, enter the keywords `port-channel` then a number. The range is 1 to 128.
    - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.

For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

**Version 8.3.16.1**   Introduced on the MXL 10/40GbE Switch IO Module.

Use the `show interfaces` command for details on a specific interface. Use the `show interfaces stack-unit` command for details on all interfaces on the designated stack unit.

On the MXL switch, the `show interface` output displays incorrect rate information details over time for link monitoring when the rate-interval is configured for 5 seconds. Dell Networking recommends using higher rate-intervals, such as 15 to 299 seconds, to minimize the errors seen.

- **NOTE:** In the CLI output, the power value is rounded to a 3-digit value. For receive/transmit power that is less than 0.000, an `snmp query` returns the corresponding dbm value even though the CLI displays as 0.000.
- **NOTE:** After the counters are cleared, the line-rate continues to increase until it reaches the maximum line rate. When the maximum line rate is reached, there is no change in the line-rate.

**User Information**

The following table describes the `show interfaces` command shown in the 10G (TeraScale) Example below.

<table>
<thead>
<tr>
<th>Line</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>TenGigabitEthernet 2/0...</td>
<td>Interface type, slot/port, and administrative and line protocol status.</td>
</tr>
<tr>
<td>Hardware is...</td>
<td>Interface hardware information, assigned MAC address, and current address.</td>
</tr>
<tr>
<td>Interface index...</td>
<td>Displays the interface index number used by SNMP to identify the interface.</td>
</tr>
<tr>
<td>Internet address...</td>
<td>States whether an IP address is assigned to the interface. If an IP address is assigned, that address is displayed.</td>
</tr>
<tr>
<td>MTU 1554...</td>
<td>Displays link and IP MTU information.</td>
</tr>
<tr>
<td>LineSpeed</td>
<td>Displays the interface's line speed, duplex mode, and Slave.</td>
</tr>
<tr>
<td>ARP type...</td>
<td>Displays the ARP type and the ARP timeout value for the interface.</td>
</tr>
<tr>
<td>Line</td>
<td>Description</td>
</tr>
<tr>
<td>--------------------------</td>
<td>------------------------------------------------------------------------------------------------------------------------------------------------</td>

<td>- discarded = number of packets discarded without any processing</td>
</tr>
<tr>
<td></td>
<td>- collisions = number of packet collisions</td>
</tr>
<tr>
<td></td>
<td>- <code>wred</code> = count both packets discarded in the MAC and in the hardware-based queues</td>
</tr>
</tbody>
</table>
Line Rate information... Estimate of the input and output traffic rate over a designated interval (30 to 299 seconds). Traffic rate is displayed in bits, packets per second, and percent of line rate.

Time since... Elapsed time since the last interface status change (hh:mm:ss format).

Example (10G port)
Dell#show interfaces tengigabitethernet 2/0
TenGigabitEthernet 2/0 is up, line protocol is up
Hardware is Dell Force10Eth, address is 00:01:e8:05:f7:3a
Interface index is 100990998
Internet address is 213.121.22.45/28
MTU 1554 bytes, IP MTU 1500 bytes
LineSpeed 10000 Mbit
ARP type: ARPA, ARP Timeout 04:00:00
Last clearing of "show interfaces" counters 02:31:45
Queueing strategy: fifo
Input Statistics:
  0 packets, 0 bytes
  Input 0 IP Packets, 0 Vlans 0 MPLS
  0 64-byte pkts, 0 over 64-byte pkts, 0 over 127-byte pkts
  0 over 255-byte pkts, 0 over 511-byte pkts, 0 over 1023-byte pkts
  0 symbol errors, 0 runts, 0 giants, 0 throttles
  0 CRC, 0 IP Checksum, 0 overrun, 0 discarded
Output Statistics:
  1 packets, 64 bytes, 0 underruns
  0 Multicasts, 2 Broadcasts, 0 Unicasts
  0 IP Packets, 0 Vlans, 0 MPLS
  0 throttles, 0 discarded
Rate info (interval 299 seconds):
  Input 00.00 Mbits/sec, 0 packets/sec, 0.00% of line-rate
  Output 00.00 Mbits/sec, 0 packets/sec, 0.00% of line-rate
  Time since last interface status change: 00:00:27

Usage Information
The interface counter “over 1023-byte pkts” does not increment for packets in the range 9216 > x < 1023.

The Management port is enabled by default (no shutdown). If necessary, use the ip address command to assign an IP address to the Management port.

Example (1G SFP)
Dell#show interfaces tengigabitethernet 0/44
TenGigabitEthernet 0/44 is up, line protocol is up
Hardware is DellForce10Eth, address is 00:01:e8:43:00:01
  Current address is 00:01:e8:43:00:01
Port is present
Pluggable media present, SFP+ type is 10GBASE-SR
  Medium is MultiRate, Wavelength is 850nm
  SFP+ receive power reading is -3.6041dBm
Interface index is 4542081
Internet address is not set
Mode of IP Address Assignment : NONE
DHCP Client-ID :tenG1730001e8430001
MTU 1554 bytes, IP MTU 1500 bytes

463
LineSpeed 10000 Mbit
Flowcontrol rx off tx off
ARP type: ARPA, ARP Timeout 04:00:00
Last clearing of "show interface" counters 21:14:32
Queueing strategy: fifo
Input Statistics:
  94322888 packets, 6036664832 bytes
  94322888 64-byte pkts, 0 over 64-byte pkts, 0 over 127-byte pkts
  0 over 255-byte pkts, 0 over 511-byte pkts, 0 over 1023-byte pkts
  0 Multicasts, 94322888 Broadcasts
  0 runts, 0 giants, 0 throttles
  0 CRC, 0 overrun, 0 discarded
Output Statistics:
  180384 packets, 11926850 bytes, 0 underruns
  172622 64-byte pkts, 7762 over 64-byte pkts, 0 over 127-byte pkts
  0 over 255-byte pkts, 0 over 511-byte pkts, 0 over 1023-byte pkts
  7762 Multicasts, 87726 Broadcasts, 84896 Unicasts
  0 throttles, 0 discarded, 0 collisions
Rate info (interval 299 seconds):
  Input 00.00 Mbits/sec, 0 packets/sec, 0.00% of line-rate
  Output 00.00 Mbits/sec, 0 packets/sec, 0.00% of line-rate

Dell#

Example
(ManagementEthernet)

Dell#show interface managementethernet ?
0/0 Management Ethernet interface number
Dell#show interface managementethernet 0/0
ManagementEthernet 0/0 is up, line protocol is up
Hardware is DellForce10Eth, address is 00:1e:c9:f1:00:05
  Current address is 00:1e:c9:f1:00:05
Pluggable media not present
Interface index is 235159752
Internet address is 10.11.209.87/16
Mode of IP Address Assignment : MANUAL
DHCP Client-ID: mgmt001ec9f10005
Virtual-IP is not set
Virtual-IP IPv6 address is not set
MTU 1554 bytes, IP MTU 1500 bytes
LineSpeed 100 Mbit, Mode full duplex
ARP type: ARPA, ARP Timeout 04:00:00
Last clearing of "show interface" counters 5d4h57m
Queueing strategy: fifo
  Input 3448753 packets, 950008323 bytes, 3442163 multicast
    Received 0 errors, 0 discarded
  Output 4627 packets, 814226 bytes, 0 multicast
    Output 0 errors, 0 invalid protocol

Related Commands

  show interfaces configured — displays any interface with a non-default configuration.

  show interfaces stack-unit — displays information on all interfaces on a specific stack unit.

  strict-priority unicast — displays information of either rate limiting or rate policing on the interface.
show interfaces switchport — displays Layer 2 information about the interfaces.

show inventory — displays the MXL switch type, components (including media), Dell Networking OS version including hardware identification numbers, and configured protocols.

show ip interface — displays Layer 3 information about the interfaces.

show memory — displays the stack unit(s) status.

show range — displays all interfaces configured using the interface range command.

**show interfaces configured**

Display any interface with a non-default configuration.

**Syntax**

```plaintext
show interfaces configured
```

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

- **Version 8.3.16.1** — Introduced on the MXL 10/40GbE Switch IO Module.

**Example**

```plaintext
Dell#show interfaces configured
GigabitEthernet 13/18 is up, line protocol is up
Hardware is Force10Eth, address is 00:01:e8:05:f7:fc
  Current address is 00:01:e8:05:f7:fc
Interface index is 474791997
Internet address is 1.1.1.1/24
MTU 1554 bytes, IP MTU 1500 bytes
LineSpeed 1000 Mbit, Mode full duplex, Master
ARP type: ARPA, ARP Timeout 04:00:00
Last clearing of "show interfaces" counters 00:12:42
Queueing strategy: fifo
Input Statistics:
  10 packets, 10000 bytes
  0 Vlans
  0 64-byte pkts, 0 over 64-byte pkts, 0 over 127-byte pkts
  0 over 255-byte pkts, 10 over 511-byte pkts, 0 over 1023-byte pkts
  0 Multicasts, 0 Broadcasts
  0 runts, 0 giants, 0 throttles
  0 CRC, 0 overrun, 0 discarded
Output Statistics:
  1 packets, 64 bytes, 0 underruns
  1 64-byte pkts, 0 over 64-byte pkts, 0 over 127-byte pkts
  0 over 255-byte pkts, 0 over 511-byte pkts, 0 over 1023-byte pkts
  0 Multicasts, 1 Broadcasts, 0 Unicasts
  0 Vlans, 0 throttles, 0 discarded, 0 collisions
Rate info (interval 299 seconds):
  Input 00.00 Mbits/sec, 0 packets/sec, 0.00% of line-rate
```
show interfaces dampening

Display interface dampening information.

Syntax

    show interfaces dampening [[interface] [summary] [detail]]

Parameters

    interface  (Optional) Enter one of the following keywords and slot/port or number information:
       
       • For a Port Channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.
       • For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
       • For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.

    summary  (OPTIONAL) Enter the keyword summary to display the current summary of dampening data, including the number of interfaces configured and the number of interfaces suppressed, if any.

    detail  (OPTIONAL) Enter the keyword detail to display detailed interface dampening data.

Defaults

    none

Command Modes

    EXEC

Command History

    Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.

Example

    Dell#show interfaces dampening
    Interface Supp   Flaps Penalty Half-Life Reuse Suppress Max-Sup
    State
    Gi  3/2    Up     0     0        20       800   4500     120
    Gi 3/10   Up     0     0        5       750   2500     20
    Dell#

Related Commands

    dampening — configures dampening on an interface.

    show interfaces — displays information on a specific physical interface or virtual interface.
show interfaces configured — displays any interface with a non-default configuration.

show interfaces description

Display the descriptions configured on the interface.

Syntax

```
show interfaces [interface] description
```

Parameters

- `interface` (Optional) Enter one of the following keywords and slot/port or number information:
  - For Loopback interfaces, enter the keyword `loopback` then a number from 0 to 16383.
  - For the management interface on the RPM, enter the keyword `ManagementEthernet` then the slot/port information. The slot range is 0-0 and the port range is 0.
  - For the Null interface, enter the keywords `null 0`.
  - For a Port Channel interface, enter the keywords `port-channel` then a number. The range is 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
  - For VLAN interfaces, enter the keyword `vlan` then a number from 1 to 4094.

Command Modes

- EXEC
- EXEC Privilege

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The following describes the `show interfaces description command` shown in the Example below.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Interface</td>
<td>Displays the type of interface and associated slot and port number.</td>
</tr>
<tr>
<td>OK?</td>
<td>Indicates if the hardware is functioning properly.</td>
</tr>
<tr>
<td>Status</td>
<td>States whether the interface is enabled (up) or disabled (administratively down).</td>
</tr>
<tr>
<td>Protocol</td>
<td>States whether IP is enabled (up) or disabled (down) on the interface.</td>
</tr>
<tr>
<td>Field</td>
<td>Description</td>
</tr>
<tr>
<td>---------------</td>
<td>-----------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Description</td>
<td>Displays the description (if any) manually configured for the interface.</td>

**Related Commands**

- `show interfaces` – displays information on a specific physical interface or virtual interface.

### show interfaces stack-unit

Display information on all interfaces on a specific MXL switch stack member.

**Syntax**

```
show interfaces stack-unit unit-number
```

**Parameters**

- `unit-number` Enter the stack member number. The range is from 0 to 5.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

- **Version 8.3.16.1** Introduced on the MXL 10/40GbE Switch IO Module.

**Example**

Dell#show interfaces stack-unit 0
TenGigabitEthernet 0/1 is down, line protocol is down
Hardware is DellForce10Eth, address is 00:1e:c9:f1:00:05
Current address is 00:1e:c9:f1:00:05
Server Port AdminState is Down
Pluggable media not present
Interface index is 34148609
Internet address is not set
Mode of IP Address Assignment : NONE
DHCP Client-ID : tenG130001ec9f10005
MTU 1554 bytes, IP MTU 1500 bytes
LineSpeed auto
Flowcontrol rx off tx off
ARP type: ARPA, ARP Timeout 04:00:00
Last clearing of "show interface" counters 5d5h24m
Queueing strategy: fifo
Input Statistics:
  0 packets, 0 bytes
  0 64-byte pkts, 0 over 64-byte pkts, 0 over 127-byte pkts
  0 over 255-byte pkts, 0 over 511-byte pkts, 0 over 1023-byte pkts
  0 Multicasts, 0 Broadcasts
  0 runts, 0 giants, 0 throttles
  0 CRC, 0 overrun, 0 discarded
Output Statistics:
  0 packets, 0 bytes, 0 underruns
  0 64-byte pkts, 0 over 64-byte pkts, 0 over 127-byte pkts
  0 over 255-byte pkts, 0 over 511-byte pkts, 0 over 1023-byte pkts
  0 Multicasts, 0 Broadcasts, 0 Unicasts
  0 throttles, 0 discarded, 0 collisions
Rate info (interval 299 seconds):
  Input 00.00 Mbits/sec, 0 packets/sec, 0.00% of line-rate
  Output 00.00 Mbits/sec, 0 packets/sec, 0.00% of line-rate
Time since last interface status change: 5d5h23m

show hardware stack-unit — displays data plane and management plane input/ output statistics.

show interfaces — displays information on a specific physical interface or virtual interface.

show interfaces status

Display a summary of interface information or specify a stack unit and interface to display status information for that specific interface only.

Syntax

show interfaces [interface stack-unit unit-number] status

Parameters

interface (OPTIONAL) Enter one of the following keywords and slot/port or number information:

- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
show interfaces switchport

Display only virtual and physical interfaces in Layer 2 mode. This command displays the Layer 2 mode interfaces’ IEEE 802.1Q tag status and VLAN membership.

Syntax

```
show interfaces switchport [interface | stack-unit unit-id ]
```

Parameters

`interface` (OPTIONAL) Enter one of the following keywords and slot/port or number information:

- For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
- Enter the keyword `backup` to view the backup interface for this interface.
stack-unit unit-id

(OPTIONAL) Enter the keywords stack-unit then the stack member number. The range is from 0 to 5.

Command Modes
- EXEC
- EXEC Privilege

Command History
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
The following describes the show interfaces switchport command for the following example.

<table>
<thead>
<tr>
<th>Items</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Name</td>
<td>Displays the interface’s type, slot, and port number.</td>
</tr>
<tr>
<td>802.1QTagged</td>
<td>Displays whether if the VLAN tagged (‘True’), untagged (‘False’), or hybrid (‘Hybrid’), which supports both untagged and tagged VLANs by port 13/0.</td>
</tr>
<tr>
<td>Vlan membership</td>
<td>Lists the VLANs to which the interface is a member. Starting with the Dell Networking OS version 7.6.1, this field can display native VLAN membership by port 13/0.</td>
</tr>
</tbody>
</table>

Example

Dell#show interfaces switchport
Codes: U - Untagged, T - Tagged
        x - Dot1x untagged, X - Dot1x tagged
        G - GVRP tagged, M - Trunk, H - VSN tagged
        i - Internal untagged, I - Internal tagged, v - VLT
untagged, V - VLT
tagged

Name: TenGigabitEthernet 3/20
  802.1QTagged: Hybrid
  Vlan membership:
    Q  Vlans
    U  20
    T  10
  Native VlanId:  20.
Name: TenGigabitEthernet 5/20
  802.1QTagged: False
  Vlan membership:
    Q  Vlans
    U  1

Name: TenGigabitEthernet 5/21
  802.1QTagged: False
  Vlan membership:
    Q  Vlans
    U  1

Name: TenGigabitEthernet 5/49 (Port-channel 128)
  802.1QTagged: True
  Vlan membership:
    Q  Vlans
    G  10

Name: Port-channel 128
show interfaces transceiver

Display the physical status and operational status of an installed transceiver. The output also displays the transceiver’s serial number.

Syntax

```
show interfaces [tengigabitethernet slot/port | fortyGigE slot/port] transceiver
```

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>tengigabitethernet</td>
<td>For a 10G interface, enter the keyword tengigabitethernet then the slot/port information.</td>
</tr>
<tr>
<td>fortyGigE</td>
<td>For a 40G interface, enter the keyword fortyGigE then the slot/port information.</td>
</tr>
</tbody>
</table>

Command Modes

- EXEC
- EXEC Privilege

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Related Commands

**interface** — configures a physical interface on the switch.

**show ip interface** — displays Layer 3 information about the interfaces.

**show interfaces** — displays information on a specific physical interface or virtual interface.

**show inventory** — displays the switch type, components (including media), the Dell Networking OS version including hardware identification numbers, and configured protocols.

---

**show range**

Display all interfaces configured using the `interface range` command.

**Syntax**

```
show range
```

**Command Modes**

```
INTERFACE RANGE (config-if-range)
```

**Command History**

*Version 8.3.16.1*  
Introduced on the MXL 10/40GbE Switch IO Module.

**Example**

```
Dell(conf-if-range-te-0/16)#show range
interface tengigabitethernet 0/16
Dell(conf-if-range-te-0/16)#
```

**Related Commands**

**interface** — configures a physical interface on the switch.

**show ip interface** — displays Layer 3 information about the interfaces.

**show interfaces** — displays information on a specific physical interface or virtual interface.

---

**shutdown**

Disable an interface.

**Syntax**

```
shutdown
```

To activate an interface, use the `no shutdown` command.

**Defaults**

The interface is disabled.
The `shutdown` command marks a physical interface as unavailable for traffic. To discover if an interface is disabled, use the `show ip interface brief` command. Disabled interfaces are listed as down.

Disabling a VLAN or a port channel causes different behavior. When you disable a VLAN, the Layer 3 functions within that VLAN are disabled. Layer 2 traffic continues to flow. Entering the `shutdown` command on a port channel disables all traffic on the port channel and the individual interfaces within the port channel. To enable a port channel, enter `no shutdown` on the port channel interface and at least one interface within that port channel.

The `shutdown` and `description` commands are the only commands that you can configure on an interface that is a member of a port channel.

**Related Commands**

- `interface port-channel` — creates a port channel interface.
- `interface vlan` — creates a VLAN.
- `show ip interface` — displays the interface routing status. Add the keyword `brief` to display a table of interfaces and their status.

---

### speed (for 1000/10000/auto interfaces)

Set the speed for 1000/10000 Base-T Ethernet interfaces. Set both sides of a link to the same speed (1000/10000) or to auto or the link may not come up.

**Syntax**

```text
speed {1000 | 10000 | auto}
```

To return to the default setting, use the `no speed {1000 | 10000 | auto}` command.

**Parameters**

- **1000**
  - Enter the keyword `1000` to set the interface's speed to 1000 Mb/s.

- **10000**
  - Enter the keyword `10000` to set the interface's speed to 10000 Mb/s. Auto-negotiation is enabled. For more information, refer to `negotiation auto`.

- **auto**
  - Enter the keyword `auto` to set the interface to auto-negotiate its speed. Auto-negotiation is enabled. For more information, refer to `negotiation auto`. 
Defaults

auto

Command Modes

INTERFACE

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

This command is found on the 1000/10000 Base-T Ethernet interfaces.

When you enable auto, the system performs an automatic discovery to determine the optics installed and configure the appropriate speed.

When you configure a speed for the 1000/10000 interface, confirm the negotiation auto command setting. Both sides of the link must have auto-negotiation either enabled or disabled. For speed settings of 1000 or auto, the software sets the link to auto-negotiation and you cannot change that setting.

In the Dell Networking OS, the command speed 1000 is an exact equivalent of speed auto 1000 in IOS.

Related Commands
duplex (1000/10000 Interfaces) — configures duplex mode on physical interfaces with the speed set to 10/100.
negotiation auto — enables or disables auto-negotiation on an interface.

stack-unit portmode

Split a single 40G port into 4-10G ports on the MXL switch.

Syntax

stack-unit stack-unit port number portmode quad

Parameters

stack-unit Enter the stack member unit identifier of the stack member to reset. The range is 0 to 5.

number Enter the port number of the 40G port to be split. Enter one of the following port numbers for the MXL switch: 48, 52, 56, or 60.

Defaults Disabled.

Command Modes CONFIGURATION

NOTE: The MXL switch commands accept Unit ID numbers from 0 to 5, though the MXL switch supports stacking up to three units only with the Dell Networking OS version 8.3.7.1.
Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

Splitting a 40G port into 4x10G port is supported on standalone and stacked units.

- You cannot use split ports as stack-link to stack an MXL Switch.
- The split ports MXL switch unit cannot be a part of any stacked system.
- The unit number with the split ports must be the default (stack-unit 0).
- This set up can be verified using show system brief command. If the unit ID is different than 0, it must be renumbered to 0 before ports are split by using the stackunit id renumber 0 command in EXEC mode.

The quad port must be in a default configuration before it can be split into 4x10G ports. The 40G port is lost in the config when the port is split, so be sure that the port is also removed from other L2/L3 feature configurations.

The system must be reloaded after issuing the CLI for the change to take effect.

Port Channel Commands

A link aggregation group (LAG) is a group of links that appear to a MAC client as if they were a single link according to IEEE 802.3ad. In the Dell Networking OS, a LAG is referred to as a Port Channel.

- For the MXL switch, the maximum port channel ID is 128 and the maximum members per port channel is 16.

Because each port can be assigned to only one Port Channel, and each Port Channel must have at least one port, some of those nominally available Port Channels might have no function because they could have no members if there are not enough ports installed. In the MXL 10/40GbE Switch IO Module, those ports could be provided by stack members.

NOTE: The Dell Networking OS implementation of LAG or Port Channel requires that you configure a LAG on both switches manually. For information about Dell Networking OS link aggregation control protocol (LACP) for dynamic LAGs, refer to the Link Aggregation Control Protocol (LACP) chapter. For more information about configuring and using Port Channels, refer to the Dell Networking OS Configuration Guide.

channel-member

Add an interface to the Port Channel, while in INTERFACE PORTCHANNEL mode.

Syntax

channel-member interface

To delete an interface from a Port Channel, use the no channel-member interface command.
Parameters

interface (OPTIONAL) Enter any of the following keywords and slot/port or number information:

- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.

Defaults

Not configured.

Command Modes

INTERFACE PORTCHANNEL

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

Use the interface port-channel command to access this command.

You cannot add an interface to a Port Channel if the interface contains an IP address in its configuration.

Link MTU and IP MTU considerations for Port Channels are:

- All members must have the same link MTU value and the same IP MTU value.
- The Port Channel link MTU and IP MTU must be less than or equal to the link MTU and IP MTU values configured on the channel members. For example, if the members have a link MTU of 2100 and an IP MTU 2000, the Port Channel's MTU values cannot be higher than 2100 for link MTU or 2000 bytes for IP MTU.

When an interface is removed from a Port Channel with the no channel-member command, the interface reverts to its configuration prior to joining the Port Channel.

An interface can belong to only one Port Channel.

You can add up to 16 interfaces to a Port Channel on the MXL switch. The interfaces can be located on different line cards but must be the same physical type and speed (for example, all 10-Gigabit Ethernet interfaces). However, you can combine 100/1000 interfaces and GE interfaces in the same Port Channel.

If the Port Channel contains a mix of interfaces with 100 Mb/s speed and 1000 Mb/s speed, the software disables those interfaces whose speed does not match the speed of the first interface configured and enabled in the Port Channel. If that first interface goes down, the Port Channel does not change its designated speed; disable and re-enable the Port Channel or change the order of the channel members configuration to change the designated speed. If the Port Channel contains a mix of interfaces with 100 Mb/s speed and 1000 Mb/s speed, the software disables those interfaces whose speed does not match the speed of the first interface configured and enabled in the Port Channel. If that first interface goes down, the Port Channel does not change its designated speed; disable and re-enable the Port Channel or change the order of the channel members configuration.
configuration to change the designated speed. For more information about Port Channels, refer to the Dell Networking OS Configuration Guide.

**Related Commands**

- `description` — assigns a descriptive text string to the interface.
- `interface port-channel` — creates a Port Channel interface.
- `shutdown` — disables/enables the port channel.

## group

Group two LAGs in a supergroup (“fate-sharing group” or “failover group”).

**Syntax**

```
group group_number port-channel number port-channel number
```

To remove an existing LAG supergroup, use the `no group group_number` command.

**Parameters**

- `group_number` Enter an integer from 1 to 32 that uniquely identifies this LAG fate-sharing group.
- `port-channel number` Enter the keywords `port-channel` then an existing LAG number. Enter this keyword/variable combination twice, identifying the two paired LAGs.

**Defaults**

none

**Command Modes**

PORT-CHANNEL FAILOVER-GROUP (conf-po-failover-grp)

**Command History**

Version 8.3.16.1

**Example**

```
Dell(conf)#port-channel failover-group
Dell(conf-po-failover-grp)#group 1 port-channel 1 port-channel 2
Dell(conf-po-failover-grp)#
```

**Related Commands**

- `port-channel failover-group` — accesses PORT-CHANNEL FAILOVER-GROUP mode to configure a LAG failover group.
- `show interfaces port-channel` — displays information on configured Port Channel groups.
interface port-channel

Create a Port Channel interface, which is a link aggregation group (LAG) containing 16 physical interfaces on the XML switch.

Syntax

```
interface port-channel channel-number
```

To delete a Port Channel, use the `no interface port-channel channel-number` command.

Parameters

- **channel-number**
  For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.

Defaults

Not configured.

Command Modes

CONFIGURATION

Command History

- **Version 8.3.16.1**
  Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

Port Channel interfaces are logical interfaces and can be either in Layer 2 mode (by using the `switchport` command) or Layer 3 mode (by configuring an IP address). You can add a Port Channel in Layer 2 mode to a VLAN.

A Port Channel can contain both 100/1000 interfaces and GE interfaces. Based on the first interface configured in the Port Channel and enabled, the Dell Networking OS determines if the Port Channel uses 100 Mb/s or 1000 Mb/s as the common speed. For more information, refer to `channel-member`.

If the line card is in a Jumbo mode chassis, you can also configure the `mtu` and `ip mtu` commands. The Link MTU and IP MTU values configured on the channel members must be greater than the Link MTU and IP MTU values configured on the Port Channel interface.

```
NOTE: In a Jumbo-enabled system, you must configure all members of a Port Channel with the same link MTU values and the same IP MTU values.
```

Example

```
Dell(conf)#int port-channel 2
Dell(conf-if-po-2)#
```

Related Commands

- `channel-member` — adds a physical interface to the LAG.
- `interface` — configures a physical interface.
- `interface loopback` — configures a Loopback interface.
- `interface null` — configures a null interface.
- `interface vlan` — configures a VLAN.
shutdoen — disables/enables the port channel.

**minimum-links**

Configure the minimum number of links in a LAG (Port Channel) that must be in "oper up" status for the LAG to be also in "oper up" status.

**Syntax**

```
minimum-links number
```

**Parameters**

- **number**
  
  Enter the number of links in a LAG that must be in "oper up" status. The range is from 1 to 16. The default is 1.

**Defaults**

1

**Command Modes**

INTERFACE

**Command History**

- **Version 8.3.16.1**
  
  Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

If you use this command to configure the minimum number of links in a LAG that must be in "oper up" status, the LAG must have at least that number of "oper up" links before it can be declared as up. For example, if the required minimum is four, and only three are up, the LAG is considered down.

**port-channel failover-group**

To configure a LAG failover group, access PORT-CHANNEL FAILOVER-GROUP mode.

**Syntax**

```
port-channel failover-group
```

To remove all LAG failover groups, use the `no port-channel failover-group` command.

**Defaults**

none

**Command Modes**

CONFIGURATION

**Command History**

- **Version 8.3.16.1**
  
  Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

This feature groups two LAGs to work in tandem as a supergroup. For example, if one LAG goes down, the other LAG is taken down automatically, providing an alternate path to reroute traffic, avoiding oversubscription on the other LAG. You can use both static and dynamic (LACP) LAGs to configure failover groups. For
more information, refer to the “Port Channel” chapter in the Dell Networking OS Configuration Guide.

**Related Command**

- **group** — groups two LAGs in a supergroup (‘fate-sharing group’).
- **show interfaces port-channel** — displays information on configured Port Channel groups.

### show config

Display the current configuration of the selected LAG.

**Syntax**

```
show config
```

**Command Modes**

- INTERFACE PORTCHANNEL

**Command History**

</table>

**Example**

```
Dell(conf-if-po-1)#show config
!
interface Port-channel 1
  no ip address
  shutdown
Dell(conf-if-po-1)#
```

### show interfaces port-channel

Display information on configured Port Channel groups.

**Syntax**

```
show interfaces port-channel [channel-number] [brief]
```

**Parameters**

- **channel-number**
  - For a Port Channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.
- **brief**
  - (OPTIONAL) Enter the keyword brief to display only the port channel number, the state of the port channel, and the number of interfaces in the port channel.

**Command Modes**

- EXEC
- EXEC Privilege

The following describes the `show interfaces port-channel` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Port-Channel 1...</td>
<td>Displays the LAG's status. In the Example, the status of the LAG’s LAG fate-sharing group (“Failover-group”) is listed.</td>
</tr>
<tr>
<td>Hardware is...</td>
<td>Displays the interface's hardware information and its assigned MAC address.</td>
</tr>
<tr>
<td>Port-channel is part...</td>
<td>Indicates whether the LAG is part of a LAG fate-sharing group (“Failover-group”).</td>
</tr>
<tr>
<td>Internet address...</td>
<td>States whether an IP address is assigned to the interface. If an IP address is assigned, that address is displayed.</td>
</tr>
<tr>
<td>MTU 1554...</td>
<td>Displays link and IP MTU.</td>
</tr>
<tr>
<td>LineSpeed</td>
<td>Displays the interface’s line speed. For a port channel interface, it is the line speed of the interfaces in the port channel.</td>
</tr>
<tr>
<td>Members in this...</td>
<td>Displays the interfaces belonging to this port channel.</td>
</tr>
<tr>
<td>ARP type:...</td>
<td>Displays the ARP type and the ARP timeout value for the interface.</td>
</tr>
<tr>
<td>Last clearing...</td>
<td>Displays the time when the <code>show interfaces counters</code> were cleared.</td>
</tr>
<tr>
<td>Queueing strategy.</td>
<td>States the packet queuing strategy. FIFO means first in first out.</td>
</tr>
<tr>
<td>packets input...</td>
<td>Displays the number of packets and bytes into the interface.</td>
</tr>
<tr>
<td>Input 0 IP packets...</td>
<td>Displays the number of packets with IP headers, VLAN tagged headers, and MPLS headers. The number of packets may not add correctly because a VLAN tagged IP packet counts as both a VLAN packet and an IP packet.</td>
</tr>
<tr>
<td>0 64-byte...</td>
<td>Displays the size of packets and the number of those packets entering that interface. This information is displayed over two lines.</td>
</tr>
<tr>
<td>Received 0...</td>
<td>Displays the type and number of errors or other specific packets received. This information is displayed over three lines.</td>
</tr>
<tr>
<td>Output 0...</td>
<td>Displays the type and number of packets sent out the interface. This information is displayed over three lines.</td>
</tr>
<tr>
<td>Rate information...</td>
<td>Displays the traffic rate information into and out of the interface. Traffic rate is displayed in bits and packets per second.</td>
</tr>
<tr>
<td>Time since...</td>
<td>Displays the time since the last change in the configuration of this interface.</td>
</tr>
</tbody>
</table>
Dell#show interfaces port-channel
Port-channel 1 is down, line protocol is down
Hardware address is 00:1e:c9:f1:00:05, Current address is 00:1e:c9:f1:00:05
Interface index is 1107755009
Minimum number of links to bring Port-channel up is 1
Internet address is not set

</tr>
<tr>
<td>(untitled)</td>
<td>Displays the status of the physical interfaces (up or down).</td>
</tr>
<tr>
<td></td>
<td>• In Layer 2 port channels, an * (asterisk) indicates which interface is the primary port of the port channel. The primary port sends out interface PDU.</td>
</tr>
</tbody>
</table>
### Field Description
- In Layer 3 port channels, the primary port is not indicated.

**Example (brief)**
```
Dell#show int po 1 brief
Codes: L - LACP Port-channel

   LAG Mode Status   Uptime   Ports
  1   L3   down   00:00:00 Te 0/16 (Down)
Dell#
```

**Related Commands**
- `show lacp` — displays the LACP matrix.

---

**Time Domain Reflectometer (TDR)**

TDR is useful for troubleshooting an interface that is not establishing a link; either it is flapping or not coming up at all. TDR detects open or short conditions of copper cables on 100/1000 Base-T modules.

**Important Points to Remember**
- The interface and port must be enabled (configured — refer to the `interface` command) before running TDR. An error message is generated if you have not enabled the interface.
- The interface on the far-end device must be shut down before running TDR.
- Because TDR is an intrusive test on an interface that is not establishing a link, do not run TDR on an interface that is passing traffic.
- When testing between two devices, do not run the test on both ends of the cable.

**tdr-cable-test**

Test the condition of copper cables on 100/1000 Base-T modules.

**Syntax**
```
tdr-cable-test interface
```

**Parameters**
- `interface` Enter the keyword `TenGigabitEthernet` then the slot/port information for the 100/1000 Ethernet interface.

**Defaults**
none

**Command Modes**
EXEC

**Command History**
- **Version 8.3.16.1** — Introduced on the MXL 10/40GbE Switch IO Module.
show tdr

Display the TDR test results.

Syntax

```
show tdr interface
```

Parameters

- `interface` Enter the keyword TenGigabitEthernet then the slot/port information for the 100/1000 Ethernet interface.

Defaults

none

Command Modes

EXEC

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

If the TDR test has not been run, an error message is generated:

```
%Error: Please run the TDR test first
```

The following describes the TDR test status.

<table>
<thead>
<tr>
<th>Status</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>OK Status:</strong> Terminated</td>
<td>TDR test is complete, no fault is detected on the cable, and the test is terminated.</td>
</tr>
<tr>
<td><strong>Length:</strong> 92 (+/- 1) meters, <strong>Status:</strong> Shorted</td>
<td>A short is detected on the cable. The location, in this Example is 92 meters. The short is accurate to plus or minus one meter.</td>
</tr>
<tr>
<td><strong>Length:</strong> 93 (+/- 1) meters, <strong>Status:</strong> Open</td>
<td>An opening is detected on the cable. The location, in this Example is 93 meters. The open is accurate to plus or minus one meter.</td>
</tr>
<tr>
<td><strong>Status:</strong> Impedance Mismatch</td>
<td>There is an impedance mismatch in the cables.</td>
</tr>
</tbody>
</table>

Example

```
Dell#show tdr tengigabitethernet 10/47
Time since last test: 00:00:02
   Pair A, Length: OK Status: Terminated
```
UDP Broadcast

The user datagram protocol (UDP) broadcast feature is a software-based method to forward low throughput (not to exceed 200pps) IP/UDP broadcast traffic arriving on a physical or VLAN interface.

Important Points to Remember

- Routing information protocol (RIP) is not supported with the UDP Broadcast feature.
- If you configure this feature on an interface using the `ip udp-helper udp-port` command, the `ip directed-broadcast` command becomes ineffective on that interface.
- The existing `show interface` command has been modified to display the configured broadcast address.

**debug ip udp-helper**

Enable UDP debug and display the debug information on a console.

**Syntax**

```plaintext
debu ip udp-helper
```

To disable debug information, use the `no debug ip udp-helper` command.

**Defaults**

Debug disabled.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

*Version 8.3.16.1* Introduced on the MXL 10/40GbE Switch IO Module.

**Example**

```plaintext
Dell#debug ip udp-helper
UDP helper debugging is on
01:20:22: Pkt rcvd on Gi 5/0 with IP DA (0xffffffff) will be sent on Gi 5/1 Gi 5/2 Vlan 3
01:44:54: Pkt rcvd on Gi 7/0 is handed over for DHCP processing.
```

**Related Commands**

- `ip udp-broadcast-address` — configures a UDP IP address for broadcast.
- `ip udp-helper udp-port` — enables the UDP broadcast feature on an interface.
show ip udp-helper — displays the configured UDP helper(s) on all interfaces.

**ip udp-broadcast-address**

Configure an IP UDP address for broadcast.

**Syntax**

```
ip udp-broadcast-address address
```

To delete the configuration, use the `no ip udp-broadcast-address address` command.

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>address</code></td>
<td>Enter an IP broadcast address in dotted decimal format (A.B.C.D).</td>
</tr>
</tbody>
</table>

**Defaults**

Not configured.

**Command Modes**

INTERFACE (config-if)

**Command History**

Version 8.3.16.1

Enter an IP broadcast address in dotted decimal format (A.B.C.D).

**Usage Information**

When a UDP broadcast packet is flooded out of an interface, and the outgoing interface is configured using this command, the outgoing packet’s IP destination address is replaced with the configured broadcast address.

**Related Commands**

- `debug ip udp-helper` — enables debug and displays the debug information on a console.
- `show ip udp-helper` — displays the configured UDP helpers on all interfaces.

**ip udp-helper udp-port**

Enable the UDP broadcast feature on an interface either for all UDP ports or a specified list of UDP ports.

**Syntax**

```
ip udp-helper udp-port [udp-port-list]
```

To disable the UDP broadcast on a port, use the `no ip udp-helper udp-port [udp-port-list]` command.

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>udp-port-list</code></td>
<td>(OPTIONAL) Enter up to 16 comma-separated UDP port numbers.</td>
</tr>
</tbody>
</table>

**NOTE:** If you do not use this option, all UDP ports are considered by default.
Defaults
none

Command Modes
INTERFACE (config-if)

Command History

Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
If you configure the `ip helper-address` command and `ip udp-helper udp-port` command, the behavior is that the UDP broadcast traffic with port numbers 67/68 is unicast relayed to the DHCP server per the `ip helper-address` configuration. This occurs regardless if the `ip udp-helper udp-port` command contains port numbers 67/68 or not.

If you only configure the `ip udp-helper udp-port` command, all the UDP broadcast traffic is flooded, including ports 67/68 traffic if those ports are part of the `udp-port-list`.

Related Commands
`ip helper-address` — configures the destination broadcast or host address for the DHCP server.
`debug ip udp-helper` — enables debug and displays the debug information on a console.
`show ip udp-helper` — displays the configured UDP helpers on all interfaces.

show ip udp-helper

Display the configured UDP helpers on all interfaces.

Syntax

```
show ip udp-helper
```

Defaults
none

Command Modes
EXEC

Command History

Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.

Example

```
Dell#show ip udp-helper
-----------------------------------------
Port     UDP  port  list
-----------------------------------------
Gi 10/0  656, 658
Gi 10/1   All
```

Related Commands
`debug ip udp-helper` — enables debug and displays the debug information on a console.

`ip udp-broadcast-address` — configures a UDP IP address for broadcast.
ip udp-helper udp-port — enables the UDP broadcast feature on an interface either for all UDP ports or a specified list of UDP ports.
IPv4 Routing

The basic IPv4 commands are supported by Dell Networking operating system.

arp

To associate an IP address with a MAC address in the switch, use address resolution protocol (ARP).

Syntax

```
arp ip-address mac-address interface
```

To remove an ARP address, use the `no arp ip-address` command.

Parameters

- **ip-address**: Enter an IP address in dotted decimal format.
- **mac-address**: Enter a MAC address in nnnn.nnnn.nnnn format.
- **interface**: (OPTIONAL) Enter any of the following keywords and slot/port or number information:
  - For the Management interface, enter the keyword `ManagementEthernet` then the slot/port information. The slot range is from 0 to 1 and the port range is 0.
  - For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.

Defaults

Not configured.

Command Modes

- CONFIGURATION

Command History

```
Version 8.3.16.1    Introduced on the MXL 10/40GbE Switch IO Module.
```

Usage Information

- You cannot use Class D or Class E IP addresses or zero IP address (0.0.0.0) when creating a static ARP. Zero MAC addresses (00:00:00:00:00:00) are also invalid.

Related Commands

- `clear arp-cache` — clears dynamic ARP entries from the ARP table.
- `show arp` — displays the ARP table.
arp learn-enable

Enable ARP learning using gratuitous ARP.

Syntax
arp learn-enable

Defaults
Disabled

Command Modes
CONFIGURATION

Command History
Version 8.3.16.1
Introduced on the MXL 10/40GbE Switch IO Module.

arp retries

Set the number of ARP retries in case the system does not receive an ARP reply in response to an ARP request.

Syntax
arp retries number

Parameters
number
Enter the number of retries. The range is from 5 to 20. The default is 5.

Defaults
5

Command Modes
CONFIGURATION

Command History
Version 8.3.16.1
Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
Retries are 20 seconds apart.

Related Commands
show arp retries — displays the configured number of ARP retries.

arp timeout

Set the time interval for an ARP entry to remain in the ARP cache.

Syntax
arp timeout minutes

Parameters
seconds
Enter the number of minutes. The range is from 0 to 35790. The default is 240 minutes.

Defaults
240 minutes (4 hours)
clear arp-cache

Clear the dynamic ARP entries from a specific interface or optionally delete (no-refresh) ARP entries from the content addressable memory (CAM).

**Syntax**

```
clear arp-cache [interface | ip ip-address] [no-refresh]
```

**Parameters**

- **interface**  
  (OPTIONAL) Enter the following keywords and slot/port or number information:
  - For the Management interface, enter the keyword ManagementEthernet then the slot/port information. The slot range is from 0 to 1 and the port range is 0.
  - For a Port Channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
  - For a VLAN, enter the keyword vlan then a number from 1 to 4094.

- **ip ip-address**  
  (OPTIONAL) Enter the keyword ip then the IP address of the ARP entry you wish to clear.

- **no-refresh**  
  (OPTIONAL) Enter the keywords no-refresh to delete the ARP entry from CAM. Or use this option with interface or ip ip-address to specify which dynamic ARP entries you want to delete.

**NOTE:** Transit traffic may not be forwarded during the period when deleted ARP entries are resolved again and re-installed in CAM. Use this option with extreme caution.

**Command Modes**

EXEC Privilege

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.
clear host
Remove one or all dynamically learned host table entries.

Syntax
```
clear host name
```

Parameters
- `name` Enter the name of the host to delete. Enter `*` to delete all host table entries.

Command Modes
- EXEC Privilege

Command History
- Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

---

clear ip fib stack-unit
Clear all forwarding information base (FIB) entries in the specified stack unit (use this command with caution, refer to Usage Information.)

Syntax
```
clear ip fib stack-unit unit-number
```

Parameters
- `unit-number` Enter the number of the stack unit. The range is from 0 to 5.

Command Modes
- EXEC
- EXEC Privilege

Command History
- Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
To clear Layer 3 CAM inconsistencies, use this command.

⚠️ CAUTION: Executing this command causes traffic disruption.

Related Commands
- `show ip fib stack-unit` — shows FIB entries.

---

clear ip route
Clear one or all routes in the routing table.

Syntax
```
clear ip route * | ip-address mask
```

Parameters
- `*` Enter an asterisk (*) to clear all learned IP routes.
**clear tcp statistics**

Clear TCP counters.

**Syntax**

```
clear tcp statistics
```

**Command Modes**

EXEC Privilege

**Command History**

Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.

**debug arp**

View information on ARP transactions.

**Syntax**

```
debug arp [interface] [count value]
```

To stop debugging ARP transactions, use the `no debug arp` command.

**Parameters**

- **interface**  (OPTIONAL) Enter the following keywords and slot/port or number information:
  - For the Management interface, enter the keyword ManagementEthernet then the slot/port information. The slot range is from 0 to 1 and the port range is 0.
  - For a Port Channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
For a VLAN, enter the keyword `vlan` then a number from 1 to 4094.

`count value` (OPTIONAL) Enter the keyword `count` then the count value. The range is from 1 to 65534.

**Defaults**

- none

**Command Modes**

- EXEC Privilege

**Command History**

- **Version 8.3.16.1**
  - Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

To stop packets from flooding the user terminal when debugging is turned on, use the `count` option.

### debug ip dhcp

Enable debug information for dynamic host configuration protocol (DHCP) relay transactions and display the information on the console.

**Syntax**

```text
debug ip dhcp
To disable debug, use the `no debug ip dhcp` command.
```

**Defaults**

- Debug disabled

**Command Modes**

- EXEC Privilege

**Command History**

- **Version 8.3.16.1**
  - Introduced on the MXL 10/40GbE Switch IO Module.

**Example**

Dell#debug ip dhcp
00:12:21 : %RELAY-I-PACKET: BOOTP REQUEST (Unicast) received at interface 113.3.3.17 BOOTP Request, hops = 0, XID = 0xbf05140f, secs = 0, hwaddr = 00:60:CF:20:7B:8C, giaddr = 0.0.0.0
00:12:21 : %RELAY-I-BOOTREQUEST: Forwarded BOOTREQUEST for 00:60:CF:20:7B:8C to 14.4.4.2
00:12:26 : %RELAY-I-PACKET: BOOTP REQUEST (Unicast) received at interface 113.3.3.17 BOOTP Request, hops = 0, XID = 0xbf05140f, secs = 5, hwaddr = 00:60:CF:20:7B:8C, giaddr = 0.0.0.0

Dell#

Related Commands

- **ip helper-address** — specifies the destination broadcast or host address for the DHCP server request.
- **ip helper-address hop-count disable** — disables the hop-count increment for the DHCP relay agent.

**debug ip icmp**

View information on the internal control message protocol (ICMP).

**Syntax**

```
debug ip icmp [interface] [count value]
```

To disable debugging, use the `no debug ip icmp` command.

**Parameters**

- **interface** (OPTIONAL) Enter the following keywords and slot/port or number information:
  - For the Management interface, enter the keyword ManagementEthernet then the slot/port information. The slot range is from 0 to 1 and the port range is 0.
  - For a Port Channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
  - For a VLAN, enter the keyword vlan then a number from 1 to 4094.

- **count value** (OPTIONAL) Enter the keyword count then the count value. The range is from 1 to 65534. The default is **Infinity**.
Command Modes
EXEC Privilege

Command History
Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.

Example
ICMP: echo request rcvd from src 40.40.40.40
ICMP: src 40.40.40.40, dst 40.40.40.40, echo reply
ICMP: src 40.40.40.40, dst 40.40.40.40, echo reply
ICMP: echo request sent to dst 40.40.40.40
ICMP: echo request rcvd from src 40.40.40.40
ICMP: src 40.40.40.40, dst 40.40.40.40, echo reply
ICMP: src 40.40.40.40, dst 40.40.40.40, echo reply
ICMP: echo request sent to dst 40.40.40.40

Usage Information
To stop packets from flooding the user terminal when debugging is turned on, use the count option.

dbge ip packet
View a log of IP packets sent and received.

Syntax
dbge ip packet [access-group name] [count value] [interface]

To disable debugging, use the no dbge ip packet [access-group name] [count value] [interface] command.

Parameters
access-group name
Enter the keywords access-group then the access list name (maximum 16 characters) to limit the debug output based on the defined rules in the ACL.

count value
(Optional) Enter the keyword count then the count value. The range is from 1 to 65534. The default is Infinity.

interface
(Optional) Enter the following keywords and slot/port or number information:

- For the Management interface, enter the keyword ManagementEthernet then the slot/port information. The slot range is from 0 to 1 and the port range is 0.
- For a Port Channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.
- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
- For a VLAN, enter the keyword vlan then a number from 1 to 4094.
**Command Modes**

EXEC Privilege

**Command History**

Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

The following describes the debug ip packet command in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>s=</td>
<td>Lists the source address of the packet and the name of</td>
</tr>
<tr>
<td></td>
<td>the interface (in parentheses) that received the packet.</td>
</tr>
<tr>
<td>d=</td>
<td>Lists the destination address of the packet and the</td>
</tr>
<tr>
<td></td>
<td>name of the interface (in parentheses) through which</td>
</tr>
<tr>
<td></td>
<td>the packet is being sent out on the network.</td>
</tr>
<tr>
<td>len</td>
<td>Displays the packet's length.</td>
</tr>
<tr>
<td>sending,</td>
<td>The last part of each line lists the status of the</td>
</tr>
<tr>
<td>rcvd,</td>
<td>packet.</td>
</tr>
<tr>
<td>fragment,</td>
<td></td>

<tr>
<td>broad/multicast</td>
<td></td>
</tr>
<tr>
<td>proto, unrouteable</td>
<td></td>
</tr>
</tbody>
</table>

**TCP src=** Displays the source and destination ports, the sequence number, the acknowledgement number, and the window size of the packets in that TCP packets.

**UDP src=** Displays the source and destination ports for the UDP packets.

**ICMP type=** Displays the ICMP type and code.

**IP Fragment** States that it is a fragment and displays the unique number identifying the fragment (Ident) and the offset (in 8-byte units) of this fragment (fragment offset) from the beginning of the original datagram.

**Example**

```
IP: s=10.1.2.62 (local), d=10.1.2.206 (Ma 0/0), len 54, sending
   TCP src=23, dst=40869, seq=2112994894, ack=606901739, win=8191 ACK PUSH
IP: s=10.1.2.206 (Ma 0/0), d=10.1.2.62, len 40, rcvd
   TCP src=0, dst=0, seq=0, ack=0, win=0
IP: s=10.1.2.62 (local), d=10.1.2.206 (Ma 0/0), len 226, sending
   TCP src=23, dst=40869, seq=2112994896, ack=606901739, win=8192 ACK PUSH
IP: s=10.1.2.216 (Ma 0/0), d=10.1.2.255, len 78, rcvd
   UDP src=0, dst=0
IP: s=10.1.2.62 (local), d=10.1.2.3 (Ma 0/0), len 1500, sending fragment
   IP Fragment, Ident = 4741, fragment offset = 0
   ICMP type=0, code=0
IP: s=10.1.2.62 (local), d=10.1.2.3 (Ma 0/0), len 1500, sending fragment
   IP Fragment, Ident = 4741, fragment offset = 1480
IP: s=40.40.40.40 (local), d=224.0.0.5 (Gi 4/11), len 64, sending broad/multicast
   proto=89
```
Usage Information

To stop packets from flooding the user terminal when debugging is turned on, use the count option.

The access-group option supports only the equal to (eq) operator in TCP ACL rules. Port operators not equal to (neq), greater than (gt), less than (lt), or range are not supported in access-group option (refer to the following example). ARP packets (arp) and Ether-type (ether-type) are also not supported in the access-group option. The entire rule is skipped to compose the filter.

The access-group option pertains to:

- IP protocol number: from 0 to 255
- Internet control message protocol (icmp) but not the ICMP message type (from 0 to 255)
- Any internet protocol (ip)
- Transmission Control Protocol (tcp) but not on the rst, syn, or urg bits
- User Datagram Protocol (udp)

In the case of ambiguous access control list rules, the debug ip packet access-control command is disabled. A message appears identifying the error (refer to the Example below).

Example (Error Messages)

Dell#debug ip packet access-group test
%Error: port operator GT not supported in access-list debug
%Error: port operator RANGE not supported in access-list debug
%Error: port operator NEQ not supported in access-list debug

Dell#00:10:45: %RPM0-P:CP
%IPMGR-3-DEBUG_IP_PACKET_ACL_AMBIGUOUS_EXP: Ambiguous rules not supported in access-list debug, access-list debugging is turned off
Dell#

ip address

Assign a primary and secondary IP address to the interface.

Syntax

    ip address ip-address mask [secondary]

To delete an IP address from an interface, use the no ip address [ip-address] command.
Parameters

- **ip-address**
  - Enter an IP address in dotted decimal format.

- **mask**
  - Enter the mask of the IP address in slash prefix format (for example, /24).

- **secondary**
  - (OPTIONAL) Enter the keyword secondary to designate the IP address as the secondary address.

Defaults

Not configured.

Command Modes

- INTERFACE

Command History

- **Version 8.3.16.1**
  - Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

- You must be in INTERFACE mode before you add an IP address to an interface.
- Assign an IP address to an interface prior to entering ROUTER OSPF mode.

**ip directed-broadcast**

Enables the interface to receive directed broadcast packets.

Syntax

```
ip directed-broadcast
```

To disable the interface from receiving directed broadcast packets, use the `no ip directed-broadcast` command.

Defaults

Disabled (that is, the interface does not receive directed broadcast packets)

Command Modes

- INTERFACE

Command History

- **Version 8.3.16.1**
  - Introduced on the MXL 10/40GbE Switch IO Module.

**ip domain-list**

Configure names to complete unqualified host names.

Syntax

```
ip domain-list name
```

To remove the name, use the `no ip domain-list name` command.

Parameters

- **name**
  - Enter a domain name to be used to complete unqualified names (that is, incomplete domain names that cannot be resolved).
ip domain-list

To configure a list of possible domain names, configure the `ip domain-list` command up to six times.

If you configure both the `ip domain-name` and `ip domain-list` commands, the software tries to resolve the name using the `ip domain-name` command. If the name is not resolved, the software goes through the list of names configured with the `ip domain-list` command to find a match.

To enable dynamic resolution of hosts, use the following steps:

- specify a domain name server with the `ip name-server` command
- enable DNS with the `ip domain-lookup` command

To view current bindings, use the `show hosts` command. To view a DNS-related configuration, use the `show running-config resolve` command.

Related Commands:
- `ip domain-name` — specifies a DNS server.

### ip domain-lookup

To address resolution (that is, DNS), enable dynamic host-name.

**Syntax**

```
ip domain-lookup
```

To disable DNS lookup, use the `no ip domain-lookup` command.

**Defaults**

Disabled.

**Command Modes**

CONFIGURATION

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

To fully enable DNS, also specify one or more domain name servers with the `ip name-server` command.

The Dell Networking OS does not support sending DNS queries over a VLAN. DNS queries are sent out all other interfaces, including the Management port.

To view current bindings, use the `show hosts` command.
Related Commands

**ip name-server** — specifies a DNS server.

**show hosts** — Views the current bindings.

---

**ip domain-name**

Configure one domain name for the switch.

**Syntax**

```
ip domain-name name
```

To remove the domain name, use the **no ip domain-name** command.

**Parameters**

- **name**
  
  Enter one domain name to be used to complete unqualified names (that is, incomplete domain names that cannot be resolved).

**Defaults**

Not configured.

**Command Modes**

CONFIGURATION

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

You can only configure one domain name with the **ip domain-name** command. To configure more than one domain name, configure the **ip domain-list** command up to six times.

To enable dynamic resolution of hosts, use the following steps:

- specify a domain name server with the **ip name-server** command
- enable DNS with the **ip domain-lookup** command

To view current bindings, use the **show hosts** command.

**Related Commands**

**ip domain-list** — configures additional names.

---

**ip helper-address**

Specify the address of a DHCP server so that DHCP broadcast messages can be forwarded when the DHCP server is not on the same subnet as the client.

**Syntax**

```
ip helper-address ip-address
```

To remove a DHCP server address, use the **no ip helper-address** command.
Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>ip-address</strong></td>
<td>Enter an IP address in dotted decimal format (A.B.C.D).</td>
</tr>
</tbody>
</table>

Defaults

Not configured.

Command Modes

INTERFACE

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

You can add multiple DHCP servers by entering the `ip helper-address` command multiple times. If multiple servers are defined, an incoming request is sent simultaneously to all configured servers and the reply is forwarded to the DHCP client.

The Dell Networking OS uses standard DHCP ports, that is UDP ports 67 (server) and 68 (client) for DHCP relay services. It listens on port 67 and if it receives a broadcast, the software converts it to unicast, and forwards to it to the DHCP-server with source port=68 and destination port=67.

The server replies with source port=67, destination port=67 and the system forwards to the client with source port=67, destination port=68.

### ip helper-address hop-count disable

Disable the hop-count increment for the DHCP relay agent.

Syntax

```plaintext
ip helper-address hop-count disable
```

To re-enable the hop-count increment, use the `no ip helper-address hop-count disable` command.

Defaults

Enabled; the hops field in the DHCP message header is incremented by default.

Command Modes

CONFIGURATION

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

This command disables the incrementing of the hops field when boot requests are relayed to a DHCP server through the Dell Networking OS. If the incoming boot request already has a non-zero hops field, the message is relayed with the same value for hops. However, the message is discarded if the hops field exceeds 16, to comply with the relay agent behavior specified in RFC 1542.

Related Commands

- `ip helper-address` — specifies the destination broadcast or host address for DHCP server requests.
**show running-config** — displays the current configuration and changes from the default values.

### ip host

Assign a name and IP address to be used by the host-to-IP address mapping table.

**Syntax**

```
ip host name ip-address
```

To remove an IP host, use the `no ip host name [ip-address]` command.

**Parameters**

- **name**
  - Enter a text string to associate with one IP address.
- **ip-address**
  - Enter an IP address, in dotted decimal format, to be mapped to the name.

**Defaults**

Not configured.

**Command Modes**

CONFIGURATION

**Command History**

- **Version 8.3.16.1**
  - Introduced on the MXL 10/40GbE Switch IO Module.

### ip max-frag-count

Set the maximum number of fragments allowed in one packet for packet re-assembly.

**Syntax**

```
ip max-frag-count count
```

To place no limit on the number of fragments allowed, use the `no ip max-frag-count` command.

**Parameters**

- **count**
  - Enter a number for the number of fragments allowed for re-assembly. The range is from 2 to 256.

**Defaults**

No limit is set on number of fragments allowed.

**Command Modes**

CONFIGURATION

**Command History**

- **Version 8.3.16.1**
  - Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

To avoid denial of service (DOS) attacks, keep the number of fragments allowed for re-assembly low.
ip name-server

Enter up to six IPv4 addresses of name servers. The order you enter the addresses determines the order of their use.

**Syntax**

```
ip name-server ipv4-address [ipv4-address2...ipv4-address6]
```

To remove a name server, use the `no ip name-server ip-address` command.

**Parameters**

- `ipv4-address` Enter the IPv4 address, in dotted decimal format, of the name server to be used.
- `ipv4-address2...ipv4-address6` (OPTIONAL) Enter up five more IPv4 addresses, in dotted decimal format, of name servers to be used. Separate the addresses with a space.

**Defaults**

No name servers are configured.

**Command Modes**

CONFIGURATION

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

The system does not support sending DNS queries over a VLAN. DNS queries are sent out on all other interfaces, including the Management port.

ip proxy-arp

Enable proxy ARP on an interface.

**Syntax**

```
ip proxy-arp
```

To disable proxy ARP, use the `no ip proxy-arp` command.

**Defaults**

Enabled.

**Command Modes**

INTERFACE

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**

- `show ip interface` — displays the interface routing status and configuration.
ip route

Assign a static route to the switch.

Syntax

ip route {destination mask (ip-address | interface [ip-address] | [distance] | [permanent] | tag tag-value)}

To delete a specific static route, use the no ip route destination mask command.

To delete all routes matching a certain route, use the no ip route destination mask command.

Parameters

destination

Enter the IP address in dotted decimal format of the destination device.

mask

Enter the mask in the slash prefix format (/x) of the destination IP address.

ip-address

Enter the IP address of the forwarding router in dotted decimal format.

interface

Enter the keyword interface then the slot/port number.
- For a Loopback interface, enter the keyword loopback then a number from zero (0) to 16383.
- For the null interface, enter the keyword null then zero (0).
- For a Port Channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.
- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
- For a VLAN, enter the keyword vlan then a number from 1 to 4094.

distance

(Optional) Enter the value of the distance metric assigned to the route. The range is from 1 to 255.

permanent

(Optional) Enter the keyword permanent to specify that the route must not be removed even if the interface assigned to that route goes down. The route must be currently active to be installed in the routing table. If you disable the interface, the route is removed from the routing table.

tag tag-value

(Optional) Enter the keyword tag then a number to assign to the route. The range is from 1 to 4294967295.

Defaults

Not configured.

Command Modes

CONFIGURATION
Command History

Version 9.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

Using the following example of a static route: ip route 33.33.33.0 /24 tengigabitethernet 0/0 172.31.5.43

- The software installs a next hop that is not on the directly connected subnet but which recursively resolves to a next hop on the interface’s configured subnet. In the example, if gig 0/0 has an ip address on subnet 2.2.2.0 and if 172.31.5.43 recursively resolves to 2.2.2.0, the system installs the static route.
- When the interface goes down, the system withdraws the route.
- When the interface comes up, the system re-installs the route.
- When recursive resolution is “broken,” the system withdraws the route.
- When recursive resolution is satisfied, the system re-installs the route.

Related Commands

show ip route — views the switch routing table.

ip source-route

Enable the system to forward IP packets with source route information in the header.

Syntax

ip source-route

To drop packets with source route information, use the no ip route-source command.

Defaults

Enabled.

Command Modes

CONFIGURATION

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

ip unreachables

Enable the generation of internet control message protocol (ICMP) unreachable messages.

Syntax

ip unreachables

To disable the generation of ICMP messages, use the no ip unreachable command.

Defaults

Disabled.
management route

Configure a static route that points to the Management interface or a forwarding router.

**Syntax**
```
management route {{ipv4-address}/mask | {forwarding-router-address | managementethernet}
```

To remove a static route, use the `no management route{ipv4-address mask | {ipv6-address prefix-length}}{forwarding-router-address | managementethernet}` command.

**Parameters**
- `ipv4-address` Enter an IPv4 Address (A.B.C.D) then the prefix-length for the IP address of the management interface.
- `forwarding-router-address` Enter an IPv4 address of a forwarding router.
- `managementethernet` Enter the keyword `managementethernet` for the Management interface.

**Defaults**
Not configured.

**Command Modes**
CONFIGURATION

**Command History**
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**
When a static route (or a protocol route) overlaps with Management static route, the static route (or a protocol route) is preferred over the Management Static route. Also, Management static routes and the Management Connected prefix are not reflected in the hardware routing tables. Separate routing tables are maintained for IPv4 and IPv6 management routes. This command manages both tables.

**Related Commands**
- `interface ManagementEthernet` — configures the Management port on the system.
show arp
Display the ARP table.

**Syntax**
```
show arp [interface interface | ip ip-address [mask] | macaddress mac-address [mac-address mask]] [static | dynamic] [summary]
```

**Parameters**
- `interface` (OPTIONAL) Enter the following keywords and slot/port or number information:
  - For the Management interface, enter the keyword managementethernet then the slot/port information.
  - For a Port Channel interface, enter the keyword port-channel then a number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
  - For a VLAN, enter the keyword vlan then a number from 1 to 4094.
- `ip ip-address mask` (OPTIONAL) Enter the keyword ip then an IP address in the dotted decimal format. Enter the optional IP address mask in the slash prefix format (/x).
- `macaddress mac-address mask` (OPTIONAL) Enter the keyword macaddress then a MAC address in nn:nn:nn:nn:nn:nn format. Enter the optional MAC address mask in nn:nn:nn:nn:nn format also.
- `static` (OPTIONAL) Enter the keyword static to view entries entered manually.
- `dynamic` (OPTIONAL) Enter the keyword dynamic to view dynamic entries.
- `summary` (OPTIONAL) Enter the keyword summary to view a summary of ARP entries.

**Command Modes**
EXEC Privilege

**Command History**
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**
The following example shows two VLANs that are associated with a private VLAN (PVLAN) (refer to Private VLAN (PVLAN)).

The following describes the `show arp` command shown in the following example.

<table>
<thead>
<tr>
<th>Row Heading</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Protocol</td>
<td>Displays the protocol type.</td>
</tr>
</tbody>
</table>
### Row Heading | Description
---|---
Address | Displays the IP address of the ARP entry.
Age(min) | Displays the age (in minutes) of the ARP entry.
Hardware Address | Displays the MAC address associated with the ARP entry.
Interface | Displays the first two letters of the interfaces type and the slot/port associated with the ARP entry.
VLAN | Displays the VLAN ID, if any, associated with the ARP entry.
CPU | Lists which CPU the entries are stored on.

#### Example

```
Dell>show arp
Protocol Address     Age(min) Hardware Address Interface VLAN CPU
-------------------------------------------------------------------
Internet 10.11.8.6     167    00:01:e9:45:00:03 Ma 0/0 - CP
Internet 10.11.68.14   124    00:01:e9:45:00:03 Ma 0/0 - CP
Internet 10.11.209.254 0      00:01:e9:45:00:03 Ma 0/0 - CP
```

**NOTE:** In this example, Line 1 shows community VLAN 200 (in primary VLAN 10) in a PVLAN. Line 2 shows primary VLAN 10.

```
Dell#show arp
Protocol Address  Age(min) Hardware Address  Interface VLAN CPU
-------------------------------------------------------------------
Internet 5.5.5.1       -  00:01:e8:43:96:5e  -      Vl 10 pv 200 CP
Internet 5.5.5.10      -  00:01:e8:44:99:55  -      Vl 10 CP
Internet 10.1.2.4      1  00:01:e8:d5:9e:e2  Ma 0/0 - CP
Internet 10.10.10.4    1  00:01:e8:d5:9e:e2  Ma 0/0 - CP
Internet 10.16.127.53  1  00:01:e8:d5:9e:e2  Ma 0/0 - CP
Internet 10.16.134.254 20 00:01:e8:d5:9e:e2  Ma 0/0 - CP
Internet 133.33.33.4   1  00:01:e8:d5:9e:e2  Ma 0/0 - CP
```

#### Usage Information

The following describes the `show arp summary` command shown in the following example.

**Row Heading | Description**
---|---
Total Entries | Lists the total number of ARP entries in the ARP table.
Static Entries | Lists the total number of configured or static ARP entries.
Dynamic Entries | Lists the total number of learned or dynamic ARP entries.
**show arp retries**

Display the configured number of ARP retries.

**Syntax**

```
show arp retries
```

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module

**Related Commands**

arp retries — sets the number of ARP retries in case the system does not receive an ARP reply in response to an ARP request.

**show hosts**

View the host table and DNS configuration.

**Syntax**

```
show hosts
```

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

The following describes the `show hosts` command in the following example.

<table>
<thead>
<tr>
<th>Row Heading</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>CPU</td>
<td>Lists which CPU the entries are stored on.</td>
</tr>
</tbody>
</table>

```
Example (Summary)
```

```
#show arp summary
TotalEntries Static Entries Dynamic Entries CPU
----------------------------------------------
3             0               3           CP
Dell
```

**Related Commands**

ip local-proxy-arp — enables/disables Layer 3 communication in secondary VLANs.

switchport mode private-vlan — sets PVLAN mode of the selected port.
<table>

<tr>
<td>Default domain...</td>
<td>Displays the domain name (if configured).</td>
</tr>
<tr>
<td>Name/address lookup...</td>
<td>States if DNS is enabled on the system.</td>
</tr>
<tr>
<td></td>
<td>• If DNS is enabled, the Name/Address lookup is domain service.</td>
</tr>
<tr>
<td></td>
<td>• If DNS is not enabled, the Name/Address lookup is static mapping</td>
</tr>
<tr>
<td>Name servers are...</td>
<td>Lists the name servers, if configured.</td>
</tr>
<tr>
<td>Host</td>
<td>Displays the host name assigned to the IP address.</td>
</tr>
<tr>
<td>Flags</td>
<td>Classifies the entry as one of the following:</td>
</tr>
<tr>
<td></td>
<td>• perm — the entry was manually configured and will not time out</td>
</tr>
<tr>
<td></td>
<td>• temp — the entry was learned and will time out after 72 hours of inactivity.</td>
</tr>
<tr>
<td></td>
<td>Also included in the flag is an indication of the validity of the route:</td>
</tr>
<tr>
<td></td>
<td>• ok — the entry is valid.</td>
</tr>
<tr>
<td></td>
<td>• ex — the entry expired.</td>
</tr>
<tr>
<td></td>
<td>• ?? — the entry is suspect.</td>
</tr>
<tr>
<td>TTL</td>
<td>Displays the amount of time until the entry ages out of the cache. For dynamically learned entries only.</td>
</tr>
<tr>
<td>Type</td>
<td>Displays IP as the type of entry.</td>
</tr>
<tr>
<td>Address</td>
<td>Displays the IP addresses assigned to the host.</td>
</tr>
</tbody>
</table>

**Example**

Dell# show hosts
Default domain is not set
Name/address lookup uses static mappings
Name servers are not set

<table>
<thead>
<tr>
<th>Host</th>
<th>Flags</th>

<td>192.71.18.2</td>
</tr>
<tr>
<td>Z10-3</td>
<td>(perm, OK)</td>
<td>-</td>
<td>IP</td>
<td>192.71.23.1</td>
</tr>
</tbody>
</table>

Dell#

**Related Commands**

- **traceroute** — views the DNS resolution.
- **ip host** — configures a host.
show ip cam stack-unit

Display CAM entries.

Syntax
show ip cam stack-unit {0-5} [port-set {pipe-number} | {ip-address mask [longer-prefixes]}| detail | member-info | summary]

Parameters
- **0–5**: Enter the stack-unit ID from 0 to 5
- **pipe-number**: Enter the number of the Port-Pipe number. The range is from 0 to 0
- **ip-address** [longer-prefixes]: (OPTIONAL) Enter the IP address and mask of a route to CAM entries for that route only. Enter the keywords longer-prefixes to view routes with a common prefix.
- **detail**: Enter the keyword detail to display the group index ID used by the ecmp routes in the CAM.
- **member-info**: Enter the keywords member-info to display the group index used by the ecmp, the number of egress ports (members) for the ecmp, and the port details of each member. The detail information under member-info gives the MAC address, VLAN ID, and gateway of every member port of the ecmp.
- **summary**: (OPTIONAL) Enter the keyword summary to view a table listing route prefixes and the total number routes which can be entered in to CAM.

Command Modes
- EXEC
- EXEC Privilege

Command History
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
The following describes the show ip cam command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Destination</td>
<td>Displays the destination route of the index.</td>
</tr>
<tr>
<td>EC</td>
<td>Displays the number of equal cost multipaths (ECMP) available for the default route for non-Jumbo line cards. For Jumbo line cards, displays 0,1 when ECMP is more than eight.</td>
</tr>
<tr>
<td>CG</td>
<td>Displays 0.</td>
</tr>
<tr>
<td>V</td>
<td>Displays a 1 if the entry is valid and a 0 otherwise.</td>
</tr>
</tbody>
</table>
### Field Description

**C**
Displays the CPU bit. 1 indicates that a packet hitting this entry is forwarded to the CP or RP2, depending on Egress port.

**V Id**
Displays the VLAN ID. If the entry is 0, the entry is not part of a VLAN.

**Mac Addr**
Displays the next-hop router’s MAC address.

**Port**
Displays the egress interface. Use the second half of the entry to determine the interface. For example, in the entry 17cl CP, the CP is the pertinent portion.

- CP = control processor
- Gi = Gigabit Ethernet interface
- Te = 10-Gigabit Ethernet interface

#### Example

```
Dell#show ip cam stack-unit 0 port-set 0 10.10.10.10/32 longer-prefixes

<table>
<thead>
<tr>
<th>Destination</th>
<th>EC</th>
<th>CG</th>
<th>V</th>
<th>C</th>
<th>VId</th>
<th>Mac-Addr</th>
<th>Port</th>
</tr>
</thead>
<tbody>
<tr>
<td>10.10.10.10</td>
<td>0</td>
<td>0</td>
<td>1</td>
<td>1</td>
<td>0</td>
<td>00:00:00:00:00:00:00:00:00</td>
<td>3f01 CP</td>
</tr>
</tbody>
</table>

Dell#
```

#### Usage Information

The following describes the show ip cam ecmp-group command shown in the following example.

**Field**

**Prefix Length**
Displays the prefix-length or mask for the IP address configured on the linecard 0 port pipe 0.

**Current Use**
Displays the number of routes currently configured for the corresponding prefix or mask on the linecard 0 port pipe 0.

**Initial Size**
Displays the CAM size the system allocates for the corresponding mask. The system adjusts the CAM size if the number of routes for the mask exceeds the initial allocation.

#### Example

```
Dell#show ip cam stack-unit 0 po 0 ecmp-group detail

<table>
<thead>
<tr>
<th>Destination</th>
<th>EC</th>
<th>CG</th>
<th>V</th>
<th>C</th>
<th>VId</th>

Dell#
```
show ip fib stack-unit

View all FIB entries.

Syntax

```
show ip fib stack-unit 0–5 [ip-address [mask] [longer-prefixes] | summary]
```

Parameters

- `0–5` Enter the unit ID, from 0 to 5.
- `ip-address` (OPTIONAL) Enter the IP address of the network destination to view only information on that destination. Enter the IP address in dotted decimal format (A.B.C.D). Enter the mask in slash prefix format (/X).
- `mask` (OPTIONAL) Enter the mask in slash prefix format (/X).
- `longer-prefixes` (OPTIONAL) Enter the keywords longer-prefixes to view all routes with a common prefix.
- `summary` (OPTIONAL) Enter the keyword summary to view the total number of prefixes in the FIB.

Command Modes

- EXEC
- EXEC Privilege

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The following describes the show ip fib stack-unit command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Destination</td>
<td>Lists the destination IP address.</td>
</tr>
<tr>
<td>Gateway</td>
<td>Displays either the word “direct” and an interface for a directly connected route or the remote IP address used to forward the traffic.</td>
</tr>
<tr>
<td>First-Hop</td>
<td>Displays the first hop IP address.</td>
</tr>
<tr>
<td>Mac-Addr</td>
<td>Displays the MAC address.</td>
</tr>
<tr>
<td>Port</td>
<td>Displays the egress-port information.</td>
</tr>
<tr>
<td>Field</td>
<td>Description</td>
</tr>
<tr>
<td>-------</td>
<td>-------------</td>
</tr>
<tr>
<td>VId</td>
<td>Displays the VLAN ID. If no VLAN is assigned, zero (0) is listed.</td>
</tr>
<tr>
<td>EC</td>
<td>Displays the number of ECMP paths.</td>
</tr>
</tbody>
</table>

**Example**

```
Dell#show ip fib stack-unit 0

Destination    Gateway      First-Hop    Mac-Addr
Port    VId EC
---------------------------------------------------------------
10.10.10.10/32 Direct, Nu 0  0.0.0.0   00:00:00:00:00:00 BLK
HOLE 0 0

Dell>
```

**Related Commands**

- `clear ip fib stack-unit` — clear FIB entries on a specified stack-unit.

**show ip interface**

View IP-related information on all interfaces.

**Syntax**

```
show ip interface [interface | brief] [configured]
```

**Parameters**

- `interface` (OPTIONAL) Enter the following keywords and slot/port or number information:
  - For a Loopback interface, enter the keyword `Loopback` then a number from 0 to 16383.
  - For the Management interface, enter the keyword `ManagementEthernet` then zero (0).
  - For the Null interface, enter the keyword `null` then zero (0).
  - For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
  - For a VLAN, enter the keyword `vlan` then a number from 1 to 4094.

- `brief` (OPTIONAL) Enter the keyword `brief` to view a brief summary of the interfaces and whether an IP address is assigned.

- `configured` (OPTIONAL) Enter the keyword `configured` to display the physical interfaces with non-default configurations only.
Command Modes

- EXEC
- EXEC Privilege

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The following describes the show ip interface command shown in the following example.

<table>
<thead>
<tr>
<th>Lines</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>TenGigabitEthernet 0/0...</td>
<td>Displays the interface's type, slot/port, and physical and line protocol status.</td>
</tr>
<tr>
<td>Internet address...</td>
<td>States whether an IP address is assigned to the interface. If an IP address is assigned, that address is displayed.</td>
</tr>
<tr>
<td>IP MTU is...</td>
<td>Displays IP MTU value.</td>
</tr>
<tr>
<td>Inbound access...</td>
<td>Displays the name of the configured incoming access list. If none is configured, the phrase “not set” is displayed.</td>
</tr>
<tr>
<td>Proxy ARP...</td>
<td>States whether proxy ARP is enabled on the interface.</td>
</tr>
<tr>
<td>Split horizon...</td>
<td>States whether split horizon for RIP is enabled on the interface.</td>
</tr>
<tr>
<td>Poison Reverse...</td>
<td>States whether poison for RIP is enabled on the interface.</td>
</tr>
<tr>
<td>ICMP redirects...</td>
<td>States if ICMP redirects are sent.</td>
</tr>
<tr>
<td>ICMP unreachables...</td>
<td>States if ICMP unreachable messages are sent.</td>
</tr>
</tbody>
</table>

Example

Dell#show ip int te 0/0
TenGigabitEthernet 0/0 is down, line protocol is down
Internet address is not set
IP MTU is 1500 bytes
Inbound access list is not set
Proxy ARP is enabled
Split Horizon is enabled
Poison Reverse is disabled
ICMP redirects are not set
ICMP unreachables are not sent

Dell#

Usage Information

The following describes the show ip interface brief command shown in the following example.

<table>
<thead>
<tr>
<th>Fields</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Interface</td>
<td>Displays type of interface and the associated slot and port number.</td>
</tr>
<tr>
<td>IP-Address</td>
<td>Displays the IP address for the interface, if configured.</td>
</tr>
<tr>
<td>Ok?</td>
<td>Indicates if the hardware is functioning properly.</td>
</tr>
<tr>
<td>Fields</td>
<td>Description</td>
</tr>
<tr>
<td>----------------</td>
<td>----------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Method</td>
<td>Displays “Manual” if the configuration is read from the saved configuration.</td>
</tr>
<tr>
<td>Status</td>
<td>States whether the interface is enabled (up) or disabled (administratively down).</td>
</tr>
<tr>
<td>Protocol</td>
<td>States whether IP is enabled (up) or disabled (down) on the interface.</td>
</tr>
</tbody>
</table>

**Example (Brief)**

```
Dell#show ip int brief
Interface                  IP-Address  OK? Method Status          Protocol
GigabitEthernet 1/0        unassigned  NO  Manual  administratively down down
GigabitEthernet 1/1        unassigned  NO  Manual  administratively down down
GigabitEthernet 1/2        unassigned  YES Manual up                    up
GigabitEthernet 1/3        unassigned  YES Manual up                    up
GigabitEthernet 1/4        unassigned  YES Manual up                    up
GigabitEthernet 1/5        10.10.10.1  YES Manual up                    up
GigabitEthernet 1/6        unassigned  NO  Manual  administratively down down
```

**show ip management-route**

View the IP addresses assigned to the Management interface.

**Syntax**

```
show ip management-route [all | connected | summary | static]
```

**Parameters**

- **all** (OPTIONAL) Enter the keyword all to view all IP addresses assigned to all Management interfaces on the switch.
- **connected** (OPTIONAL) Enter the keyword connected to view only routes directly connected to the Management interface.
- **summary** (OPTIONAL) Enter the keyword summary to view a table listing the number of active and non-active routes and their sources.
- **static** (OPTIONAL) Enter the keyword static to view non-active routes also.

**Command Modes**

- EXEC
- EXEC Privilege
show ip protocols

View information on all routing protocols enabled and active on the switch.

Syntax

```
show ip protocols
```

Command Modes

- EXEC
- EXEC Privilege

Example

```
Dell#show ip protocols
Routing Protocol is "bgp 1"
Cluster Id is set to 20.20.20.3
Router Id is set to 20.20.20.3
Fast-external-fallover enabled
Regular expression evaluation optimization enabled
Capable of ROUTE_REFRESH
For Address Family IPv4 Unicast
BGP table version is 0, main routing table version 0
Distance: external 20 internal 200 local 200
Neighbor(s):
Address : 20.20.20.2
Filter-list in : foo
Route-map in : foo
Weight : 0
Address : 5::6
Weight : 0
Dell#
```

show ip route

View information, including how they were learned, about the IP routes on the switch.

Syntax

```
show ip route [hostname | ip-address [mask] [longer-prefixes] | list prefix-list [process-id | all | connected | static | summary]
```
Parameters

- **ip-address** *(OPTIONAL)* Specify a name of a device or the IP address of the device to view more detailed information about the route.

- **mask** *(OPTIONAL)* Specify the network mask of the route. Use this parameter with the IP address parameter.

- **longer-prefixes** *(OPTIONAL)* Enter the keywords `longer-prefixes` to view all routes with a common prefix.

- **list prefix-list** *(OPTIONAL)* Enter the keyword `list` and the name of a configured prefix list. For more information, refer to the `show ip route list` command.

- **process-id** *(OPTIONAL)* Specify that only OSPF routes with a certain process ID must be displayed.

- **connected** *(OPTIONAL)* Enter the keyword `connected` to view only the directly connected routes.

- **all** *(OPTIONAL)* Enter the keyword `all` to view both active and non-active routes.

- **static** *(OPTIONAL)* Enter the keyword `static` to view only routes the `ip route` command configures.

- **summary** *(OPTIONAL)* Enter the keyword `summary`. For more information, refer to the `show ip route summary` command.

Command Modes

- EXEC
- EXEC Privilege

Command History

- **Version 8.3.16.1** Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The following describes the `show ip route all` command in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>(undefined)</td>
<td>Identifies the type of route:</td>
</tr>
<tr>
<td></td>
<td>• C = connected</td>
</tr>
<tr>
<td></td>
<td>• S = static</td>
</tr>
<tr>
<td></td>
<td>• R = RIP</td>
</tr>
<tr>
<td></td>
<td>• B = BGP</td>
</tr>
<tr>
<td></td>
<td>• IN = internal BGP</td>
</tr>
<tr>
<td></td>
<td>• EX = external BGP</td>
</tr>
<tr>
<td></td>
<td>• LO = Locally Originated</td>
</tr>
<tr>
<td></td>
<td>• O = OSPF</td>
</tr>
<tr>
<td></td>
<td>• IA = OSPF inter area</td>
</tr>
<tr>
<td></td>
<td>• N1 = OSPF NSSA external type 1</td>
</tr>
</tbody>
</table>

525
Field | Description
--- | ---
• N2 = OSPF NSSA external type 2
• E1 = OSPF external type 1
• E2 = OSPF external type 2
• i = IS-IS
• L1 = IS-IS level-1
• L2 = IS-IS level-2
• IA = IS-IS inter-area
• * = candidate default
• > = non-active route
• + = summary routes

Destination | Identifies the route’s destination IP address
Gateway | Identifies whether the route is directly connected and on which interface the route is configured.
Dist/Metric | Identifies if the route has a specified distance or metric.
Last Change | Identifies when the route was last changed or configured.

Example

Dell#show ip route all
Codes:C- connected, S - static, R - RIP
B- BGP, IN - internal BGP, EX - external BGP, LO - Locally Originated
O- OSPF, IA - OSPF inter area N1 - OSPF NSSA external type 1
N2- OSPF NSSA external type 2, E1 - OSPF external type 1
E2- OSPF external type 2, i - IS-IS, L1 - IS-IS level-1
L2- IS-IS level-2, IA - IS-IS inter area, * - candidate default
> - non-active route + - summary route

Gateway of last resort is not set

<table>
<thead>
<tr>
<th>Destination</th>
<th>Gateway</th>
<th>Dist/Metric</th>
<th>Last Change</th>
</tr>
</thead>
<tbody>
<tr>
<td>R 3.0.0.0/8</td>
<td>via 100.10.10.10, So 2/8 120/1</td>

</tr>
<tr>
<td></td>
<td>via 101.10.10.10, So 2/9</td>
<td></td>
<td></td>
</tr>
<tr>
<td>100.10.10.0/24</td>
<td>Direct, So 2/8</td>
<td>0/0</td>
<td>00:08:54</td>
</tr>
<tr>
<td>&gt; R 100.10.10.0/24</td>
<td>Direct, So 2/8</td>
<td>120/0</td>
<td>00:08:54</td>
</tr>
<tr>
<td>C 101.10.10.0/24</td>
<td>Direct, So 2/9</td>
<td>0/0</td>
<td>00:09:15</td>
</tr>
<tr>
<td>&gt; R 101.10.10.0/24</td>
<td>Direct, So 2/9</td>
<td>120/0</td>
<td>00:09:15</td>
</tr>
</tbody>
</table>

Example (Summary)

Dell#show ip route summary
Route Source | Active Routes | Non-active Routes
connected | 2 | 0
static | 1 | 0
Total | 3 | 0
Total 3 active route(s) using 612 bytes
R1_E600i>show ip route static ?
| Pipe through a command
<cr>
R1_E600i>show ip route static
show ip route list

Display IP routes in an IP prefix list.

Syntax

```
show ip route list
```

Parameters

**prefix-list** Enter the name of a configured prefix list.

Command Modes

- EXEC
- EXEC Privilege

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Example

```
Dell#show ip route list test

Codes: C-connected, S-static, R-RIP, B-BGP, IN-internal BGP, EX-external BGP, LO-locally Originated,
O-OSPF, IA-OSPF inter area, N1-OSPF NSSA external type 1,
N2-OSPF NSSA external type 2, E1-OSPF external type 1,
E2-OSPF external type 2, i-IS-IS, L1-IS-IS level-1,
L2-IS-IS level-2, IA-IS-IS inter area, *-candidate default,
>-non-active route, +-summary route

Gateway of last resort is not set

```

<table>
<thead>
<tr>
<th>Destination</th>

</tr>
</tbody>
</table>

Related Commands

- **ip prefix-list** — enters CONFIGURATION-IP PREFIX-LIST mode and configures a prefix list.

- **show ip prefix-list summary** — displays a summary of the configured prefix lists.
show ip route summary

View a table summarizing the IP routes in the switch.

**Syntax**

```
show ip route summary
```

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

The following describes the `show ip route summary` shown in the following example.

<table>
<thead>
<tr>
<th>Column Heading</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Route Source</td>
<td>Identifies how the route is configured in the system.</td>
</tr>
<tr>
<td>Active Routes</td>
<td>Identifies the best route if a route is learned from two protocol sources.</td>
</tr>
<tr>
<td>Non-active Routes</td>
<td>Identifies the back-up routes when a route is learned by two different protocols. If the best route or active route goes down, the non-active route becomes the best route.</td>
</tr>
<tr>
<td>ospf 100</td>
<td>If routing protocols (OSPF, RIP) are configured and routes are advertised, then information on those routes is displayed.</td>
</tr>
<tr>
<td>Total 1388 active...</td>
<td>Displays the number of active and non-active routes and the memory usage of those routes. If there are no routes configured in the system, this line does not appear.</td>
</tr>
</tbody>
</table>

**Example**

```
Dell>show ip route summary

Route Source       Active Routes  Non-active Routes
connected           17            0
static              3             0
ospf 100            1368           2
Intra-area: 762 Inter-area: 1 External-1: 600 External-2: 5
Total               1388           2
Total 1388 active route(s) using 222440 bytes
Total 2 non-active route(s) using 128 bytes
Dell>
```

**Related Commands**

- `show ip route` — displays information about the routes found in the switch.
show ip traffic

View IP, ICMP, UDP, TCP and ARP traffic statistics.

Syntax
show ip traffic

Command Modes
EXEC Privilege

Command History
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
The following describes the show ip traffic summary shown in the following example.

<table>
<thead>
<tr>
<th>Keyword</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>unknown protocol...</td>
<td>No receiver for these packets. Counts packets whose protocol type field is not recognized by the system.</td>
</tr>
<tr>
<td>not a gateway...</td>
<td>Packets can not be routed; the host/network is unreachable.</td>
</tr>
<tr>
<td>security failures...</td>
<td>Counts the number of received unicast/multicast packets that could not be forwarded due to:</td>
</tr>
<tr>
<td></td>
<td>• route not found for unicast/multicast; ingress interfaces do not belong to the destination multicast group</td>
</tr>
<tr>
<td></td>
<td>• destination IP address belongs to reserved prefixes; the host/network is unreachable</td>
</tr>
<tr>
<td>bad options...</td>
<td>Unrecognized IP option on a received packet.</td>
</tr>
<tr>
<td>Frags:</td>
<td>IP fragments received.</td>
</tr>
<tr>
<td>... reassembled</td>
<td>Number of IP fragments that were reassembled.</td>
</tr>
<tr>
<td>... timeouts</td>
<td>Number of times a timer expired on a reassembled queue.</td>
</tr>
<tr>
<td>... too big</td>
<td>Number of invalid IP fragments received.</td>
</tr>
<tr>
<td>... couldn't fragment</td>
<td>Number of packets that could not be fragmented and forwarded.</td>
</tr>
<tr>
<td>...encapsulation...</td>
<td>Counts packets which could not be forwarded due to ARP resolution failure. The system sends an arp request prior to forwarding an IP packet.</td>
</tr>
<tr>
<td>failed</td>
<td>If a reply is not received, the system repeats the request three times. These packets are counted in encapsulation failed.</td>
</tr>
<tr>
<td>Rcvd:</td>
<td></td>
</tr>
<tr>
<td>...short packets</td>
<td>The number of bytes in the packet are too small.</td>
</tr>
<tr>
<td>...bad length</td>
<td>The length of the packet was not correct.</td>
</tr>
<tr>
<td>...no port broadcasts</td>
<td>The incoming broadcast/multicast packet did not have any listener.</td>
</tr>
<tr>
<td>Keyword</td>
<td>Definition</td>
</tr>
<tr>
<td>------------</td>
<td>---------------------------------------------------------------------------</td>
</tr>
<tr>
<td>socket full</td>
<td>The applications buffer is full and the incoming packet are dropped.</td>
</tr>
</tbody>
</table>

The F10 Monitoring MIB provides access to the following statistics.

- **IP Statistics: Bcast: Received**: Object = f10BcastPktRecv, OIDs = 1.3.6.1.4.1.6027.3.3.5.1.1
- **IP Statistics: Bcast: Sent**: Object = f10BcastPktSent, OIDs = 1.3.6.1.4.1.6027.3.3.5.1.2
- **IP Statistics: Mcast: Received**: Object = f10McastPktRecv, OIDs = 1.3.6.1.4.1.6027.3.3.5.1.3
- **IP Statistics: Mcast: Sent**: Object = f10McastPktSent, OIDs = 1.3.6.1.4.1.6027.3.3.5.1.4
- **ARP Statistics: Rcvd: Request**: Object = f10ArpReqRecv, OIDs = 1.3.6.1.4.1.6027.3.3.5.2.1
- **ARP Statistics: Rcvd: Replies**: Object = f10ArpReplyRecv, OIDs = 1.3.6.1.4.1.6027.3.3.5.2.3
- **ARP Statistics: Sent: Request**: Object = f10ArpReqSent, OIDs = 1.3.6.1.4.1.6027.3.3.5.2.2
- **ARP Statistics: Sent: Replies**: Object = f10ArpReplySent, OIDs = 1.3.6.1.4.1.6027.3.3.5.2.4
- **ARP Statistics: Sent: Proxy**: Object = f10ArpProxySent, OIDs = 1.3.6.1.4.1.6027.3.3.5.2.5

**Example**

Dell#show ip traffic
IP statistics:
- Rcvd: 10021161 total, 3197480 local destination
- 2501 format errors, 390 checksum errors, 0 bad hop count
- 0 unknown protocol, 0 not a gateway
- 115 security failures, 0 bad options
- Frags: 0 reassembled, 0 timeouts, 0 too big
- 0 fragmented, 0 couldn't fragment
- Bcast: 6281 received, 0 sent; Mcast: 500 received, 0 sent
- Sent: 6573260 generated, 0 forwarded
- 3830 encapsulation failed, 0 no route

ICMP statistics:
- Rcvd: 0 format errors, 0 checksum errors, 0 redirects, 3 unreachable
- 0 echo, 0 echo reply, 0 mask requests, 0 mask replies, 0 quench
- 0 parameter, 0 timestamp, 0 info request, 0 other
- Sent: 0 redirects, 1 unreachable, 0 echo, 0 echo reply
- 0 mask requests, 0 mask replies, 0 quench, 0 timestamp
- 0 info reply, 0 time exceeded, 0 parameter problem

UDP statistics:
- Rcvd: 2938110 total, 14 checksum errors, 1 no port
- 0 short packets, 0 bad length, 1883908 no port broadcasts
- 0 socket full
- Sent: 329731 total, 1883908 forwarded broadcasts

--More--
show tcp statistics

View information on TCP traffic through the switch.

Syntax

```
show tcp statistics
```

Command Modes

- EXEC Privilege

Command History

Version 8.3.16.1
Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The following describes the `show tcp statistics cp` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Rcvd:</td>
<td>Displays the number and types of TCP packets received by the switch.</td>
</tr>
<tr>
<td>0 checksum error...</td>
<td>Displays the number of packets received with the following:</td>
</tr>
<tr>
<td>329 packets...</td>
<td>Displays the number of packets and bytes received in sequence.</td>
</tr>
<tr>
<td>17 dup...</td>
<td>Displays the number of duplicate packets and bytes received.</td>
</tr>
<tr>
<td>0 partially...</td>
<td>Displays the number of partially duplicated packets and bytes received.</td>
</tr>
<tr>
<td>7 out-of-order...</td>
<td>Displays the number of packets and bytes received out of order.</td>
</tr>
<tr>
<td>0 packets with data after window</td>
<td>Displays the number of packets and bytes received that exceed the switch’s window size.</td>
</tr>
<tr>
<td>0 packets after close</td>
<td>Displays the number of packet received after the TCP connection was closed.</td>
</tr>
<tr>
<td>0 window probe packets...</td>
<td>Displays the number of window probe and update packets received.</td>
</tr>
<tr>
<td>41 dup ack...</td>
<td>Displays the number of duplicate acknowledgement packets and acknowledgement packets with data received.</td>
</tr>
<tr>
<td>10184 ack...</td>
<td>Displays the number of acknowledgement packets and bytes received.</td>
</tr>
<tr>
<td>Field</td>
<td>Description</td>
</tr>
<tr>
<td>-------------------------------</td>
<td>-----------------------------------------------------------------------------</td>
</tr>
<tr>
<td><strong>Sent:</strong></td>
<td>Displays the total number of TCP packets sent and the number of urgent packets sent.</td>
</tr>
<tr>
<td>25 control packets...</td>
<td>Displays the number of control packets sent and the number retransmitted.</td>
</tr>
<tr>
<td>11603 data packets...</td>
<td>Displays the number of data packets sent.</td>
</tr>
<tr>
<td>24 data packets retransmitted</td>
<td>Displays the number of data packets resent.</td>
</tr>
<tr>
<td>355 ack.</td>
<td>Displays the number of acknowledgement packets sent and the number of packet delayed.</td>
</tr>
<tr>
<td>0 window probe...</td>
<td>Displays the number of window probe and update packets sent.</td>
</tr>
<tr>
<td>7 Connections initiated...</td>
<td>Displays the number of TCP connections initiated, accepted, and established.</td>
</tr>
<tr>
<td>14 Connections closed...</td>
<td>Displays the number of TCP connections closed, dropped.</td>
</tr>
<tr>
<td>20 Total rxmt...</td>
<td>Displays the number of times the switch tried to re-send data and the number of connections dropped during the TCP retransmit timeout period.</td>
</tr>
<tr>
<td>0 Keepalive...</td>
<td>Lists the number of keepalive packets in timeout, the number keepalive probes and the number of TCP connections dropped during keepalive.</td>
</tr>
</tbody>
</table>

**Example**

Dell#show tcp statistics

Rcvd: 9849 Total, 0 no port
  0 checksum error, 0 bad offset, 0 too short
5735 packets (7919 bytes) in sequence
20 dup packets (2 bytes)
  0 partially dup packets (0 bytes)
  1 out-of-order packets (0 bytes)
  0 packets ( 0 bytes) with data after window
  0 packets after close
  0 window probe packets, 0 window update packets
  0 dup ack packets, 0 ack packets with unsend data
  6671 ack packets (152813 bytes)

Sent: 6778 Total, 0 urgent packets
  7 control packets
  6674 data packets (152822 bytes)
  12 data packets (1222 bytes) retransmitted
  85 ack only packets (5677 delayed)
  0 window probe packets, 0 window update packets
  0 Connections initiated, 7 connections accepted, 7 connections established
  8 Connections closed (including 4 dropped, 0 embryonic dropped)
  12 Total rxmt timeout, 1 connections dropped in rxmt timeout
  26 Keepalive timeout, 25 keepalive probe, 1 Connections...
dropped in keepalive
Dell#  

Related Commands  
- **show ip cam stack-unit** — displays the CAM table.
Internet Protocol Security (IPSec)

Internet protocol security (IPSec) is an end-to-end security scheme for securing IP communications by authenticating and encrypting all packets in a session. Use IPSec between hosts, gateways, or hosts and gateways.

IPSec uses a series of protocol functions to achieve information security:

- **Authentication Headers (AH)** — Connectionless integrity and origin authentication for IP packets.
- **Encapsulating Security Payloads (ESP)** — Confidentiality, authentication, and data integrity for IP packets.
- **Security Associations (SA)** — Algorithm-provided parameters required for AH and ESP protocols.

IPSec capability is available on control (protocol) and management traffic; end-node support is required.

IPSec supports two operational modes: Transport and Tunnel.

- **Transport** is the default mode for IPSec and encrypts only the payload of the packet. Routing information is unchanged.
- **Tunnel mode** is used to encrypt the entire packet, including the routing information in the IP header. Tunnel mode is typically used in creating virtual private networks (VPNs).

Transport mode provides IP packet payload protection using ESP. You can use ESP alone or in combination with AH to provide additional authentication. AH protects data from modification but does not provide confidentiality.

SA is the configuration information that specifies the type of security provided to the IPSec flow. The SA is a set of algorithms and keys used to authenticate and encrypt the traffic flow. The AH and ESP use SA to provide traffic protection for the IPSec flow.

**NOTE:**

Due to performance limitations on the control processor, you cannot enable IPSec on all packets in a communication session.

**crypto ipsec transform-set**

Create a transform set, or combination of security algorithms and protocols, of cryptos.

**Syntax**

```
crypto ipsec transform-set name {ah-authentication {md5|sha1|null} | esp-authentication {md5|sha1|null} | esp-encryption {3des|cbc|des|null}}
```

To delete a transform set, use the `no crypto ipsec transform-set name {ah-authentication {md5|sha1|null} | esp-authentication {md5|sha1|null} | esp-encryption {3des|cbc|des|null}}` command.
Parameters

**name**
Enter the name for the transform set.

**ah-authentication**
Enter the keywords `ah-authentication` then the transform type of operation to apply to traffic. The transform type represents the encryption or authentication applied to traffic.

- **md5** — Use Message Digest 5 (MD5) authentication.
- **sha1** — Use Secure Hash Algorithm 1 (SHA-1) authentication.
- **null** — Causes an encryption policy configured for the area to not be inherited on the interface.

**esp-authentication**
Enter the keywords `esp-authentication` then the transform type of operation to apply to traffic. The transform type represents the encryption or authentication applied to traffic.

- **md5** — Use Message Digest 5 (MD5) authentication.
- **sha1** — Use Secure Hash Algorithm 1 (SHA-1) authentication.
- **null** — Causes an encryption policy configured for the area to not be inherited on the interface.

**esp-encryption**
Enter the keywords `esp-encryption` then the transform type of operation to apply to traffic. The transform type represents the encryption or authentication applied to traffic.

- **3des** — Use 3DES encryption.
- **cbc** — Use CDC encryption.
- **des** — Use DES encryption.
- **null** — Causes an encryption policy configured for the area to not be inherited on the interface.

Defaults

*none*

Command Modes

**CONFIGURATION**

Command History

**Version 9.2(0.0)**

Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

- Both sides of the link must specify the same transform set.
- You can create up to 64 transform sets.

Example

```
Dell(conf)#int ten 0/4
Dell(conf-if-te-0/4)#ipv6 address 200:1::/64 eui64
Dell(conf)#int ten 0/6
Dell(conf-if-te-0/6)#ipv6 address 801:10::/64 eui64
```
crypto ipsec policy

Create a crypto policy used by ipsec.

Syntax

crypto ipsec policy name seq-num ipsec-manual

To delete a crypto policy entry, use the no crypto ipsec policy name seq-num ipsec-manual command.

Parameters

name Enter the name for the crypto policy set.
seq-num Enter the sequence number assigned to the crypto policy entry.

Defaults

none

Command Modes

CONFIGURATION

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

This command creates a crypto policy entry and enters the crypto policy configuration mode for configuring the flow parameters.

Example

Dell(conf)#crypto ipsec policy West 10 ipsec-manual
Dell(conf-crypto-policy)#

management crypto-policy

Apply the crypto policy to management traffic.

Syntax

management crypto-policy name

To remove the management traffic crypto policy, use the no management crypto-policy name command.

Parameters

name Enter the name for the crypto policy.

Defaults

none

Command Modes

CONFIGURATION

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.
match

Match a sequence number to the transmission control protocol (TCP)/user datagram protocol (UDP) packets.

**Syntax**

```
match seq-num {tcp | udp} {ipv6 | ip} port-num dest-ip dest-port-num
```

To remove the match filter for the crypto map, use the no match seq-num command.

**Parameters**

- `seq-num` Enter the match command sequence number. The range is from 0 to 255.
- `tcp` Enter the keyword tcp to configure a TCP access list filter.
- `udp` Enter the keyword udp to configure a UDP access list filter.
- `ipv6` Enter the source IPv6 address.
- `ip` Enter the source IPv4 address.
- `port-num` Enter the source port number. The range is from 0 to 65535
- `dest-ip` Enter the destination IP address.
- `dest-port-num` Enter the destination port number. The range is from 0 to 65535.

**Defaults**

none

**Command Modes**

CONFIG-CRYPTO-POLICY

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

UDP is not supported. Only TCP 23 telnet and 21 FTP are supported.

**Example**

```
Dell(conf-crypto-policy)#match 0 tcp a::1 /128 0 a::2 /128 23
Dell(conf-crypto-policy)#match 1 tcp a::1 /128 23 a::2 /128 0
Dell(conf-crypto-policy)#match 2 tcp a::1 /128 0 a::2 /128 21
Dell(conf-crypto-policy)#match 3 tcp a::1 /128 21 a::2 /128 0
Dell(conf-crypto-policy)#match 4 tcp 1.1.1.1 /32 0 1.1.1.2 /32 23
Dell(conf-crypto-policy)#match 5 tcp 1.1.1.1 /32 23 1.1.1.2 /32 0
Dell(conf-crypto-policy)#match 6 tcp 1.1.1.1 /32 0 1.1.1.2 /32 21
Dell(conf-crypto-policy)#match 7 tcp 1.1.1.1 /32 21 1.1.1.2 /32 0
```
**session-key**

Specify the session keys used in the crypto policy entry.

**Syntax**

```
session-key {inbound | outbound} {ah spi hex-key-string | esp spi encrypt hex-key-string auth hex-key-string}
```

To delete the session key information from the crypto policy, use the `no session-key {inbound | outbound} {ah | esp}` command.

**Parameters**

- **name**
  
  Enter the name of the host to delete. Enter * to delete all host table entries.

- **inbound**
  
  Specify the inbound session key for IPSec.

- **outbound**
  
  Specify the outbound session key for IPSec.

- **ah**
  
  Use the AH protocol when you select the AH transform set in the crypto policy.

- **esp**
  
  Use the ESP protocol when you select the ESP transform set in the crypto policy.

- **spi**
  
  Enter the security parameter index number.

- **hex-key-string**
  
  Enter the session key in hex format (a string of 8, 16, or 20 bytes). For DES algorithms, specify at least 16 bytes per key. For SHA algorithms, specify at least 20 bytes per key.

- **encrypt**
  
  Indicates the ESP encryption transform set key string.

- **auth**
  
  Indicates the ESP authentication transform set key string.

**Defaults**

none

**Command Modes**

CONF-CRYPTO-POLICY

**Command History**

Version 9.2(0.0)  Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

- This command is only available in the ipsec-manual model.
- The key information entry is associated with the global method for enabling clear text or encrypted display in the running config.

---

**show crypto ipsec transform-set**

Display the transform set configuration.

**Syntax**

```
show crypto ipsec transform-set name
```

---
Parameters

name          Enter the name of the transform set.

Command Modes

EXEC

Command History

Version 9.2(0.2)  Introduced on the MXL 10/40GbE Switch IO Module.

Example

Dell#show crypto ipsec transform-set

Transform-Set Name    : dallas
Transform-Set refCnt  : 0
AH Transform          :
ESP Auth Transform    :
ESP Encry Transform   : 3des
Dell#

show crypto ipsec policy

Display the crypto policy configuration.

Syntax

show crypto ipsec policy name

Parameters

name          Enter the name for the crypto policy set.

Command Modes

EXEC

Command History

Version 9.2(0.0)  Introduced on the MXL 10/40GbE Switch IO Module.

Example

Dell#show crypto ipsec policy

Dell#
transform-set

Specify the transform set the crypto policy uses.

Syntax

```
transform-set transform-set-name
```

To delete a transform set from the crypto policy, use the `no transform-set transform-set-name` command.

Parameters

- `transform-set-name` Enter the name for the crypto policy transform set.

Defaults

- none

Command Modes

- CONFIG-CRYPTO-POLICY

Command History

- Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.
IPv6 Access Control Lists (IPv6 ACLs)

IPv6 ACLs and IPv6 Route Map commands are supported on Dell Networking MXL switch.

**NOTE**: For IPv4 ACL commands, refer to the **Access Control Lists (ACL)** chapter.

### Important Points to Remember

- Certain platforms require manual CAM usage space allotment. For more information, refer to the [cam-acl (Configuration)](command) command.
- Egress IPv6 ACL and IPv6 ACL on the Loopback interface is not supported.
- Reference to an empty ACL permits any traffic.
- ACLs are not applied to self-originated traffic (for example, Control Protocol traffic not affected by IPv6 ACL because the routed bit is not set for Control Protocol traffic and for egress ACLs the routed bit must be set).
- You can use the same access list name for both IPv4 and IPv6 ACLs.
- You can apply both IPv4 and IPv6 ACLs on an interface at the same time.
- You can apply IPv6 ACLs on physical interfaces and a logical interfaces (Port-channel/VLAN).
- Non-contiguous masks are not supported in source or destination addresses in IPv6 ACL entries.
- Because the prefix mask is specified in /x format in IPv6 ACLs, inverse mask is not supported.

### IPv6 ACL Commands

The following commands configure IPv6 ACLs.

**cam-acl**

Allocate space for IPv6 ACLs.

**Syntax**

```
cam-acl {default | l2acl 1-10 ipv4acl 1-10 ipv6acl 0-10 ipv4qos 1-10 l2qos 1-10}
```

**Parameters**

- **default**
  - Use the default CAM profile settings, and set the CAM as follows:
    - L3 ACL (ipv4acl): 6
    - L2 ACL(l2acl): 5
Allocate space to support IPv6 ACLs. Enter all of the profiles and a range. Enter the CAM profile name then the amount to be allotted. The total space allocated must equal 13. The ipv6acl range must be a factor of 2.

Command Modes

- **CONFIGURATION**

Command History

- **Version 9.2(0.0)**
  Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

- For the new settings to take effect, save the new CAM settings to the startup-config (write-mem or copy run start), then reload the system.

- The total amount of space allowed is 16 FP blocks. System flow requires three blocks and these blocks cannot be reallocated.

- When configuring space for IPv6 ACLs, the total number of Blocks must equal 13.

- Ranges for the CAM profiles are from 1 to 10, except for the ipv6acl profile which is from 0 to 10. The ipv6acl allocation must be a factor of 2 (2, 4, 6, 8, 10).

### cam-acl-egress

Allocate space for IPv6 egress ACLs.

**Syntax**

```
cam-acl-egress {default | l2acl 1-4 ipv4acl 1-4 ipv6acl 0-4}
```

**Parameters**

- **default**
  Use the default CAM profile settings, and set the CAM as follows:
  - L2 ACL (l2acl): 1
  - L3 ACL (ipv4acl): 1
  - IPv6 L3 ACL (ipv6acl): 2

- **l2acl 1-4**
  Allocate space to support IPv6 ACLs. Enter all of the profiles and a range. Enter the CAM profile name then the amount to be allotted. The total space allocated must equal 13. The ipv6acl range must be a factor of 2.
Command History

**Version 9.2(0.0)** Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

For the new settings to take effect, save the new CAM settings to the startup-config (write-mem or copy run start), then reload the system.

The total amount of space allowed is 16 FP Blocks. System flow requires three blocks and these blocks cannot be reallocated.

When configuring space for IPv6 ACLs, the total number of Blocks must equal 13.

Ranges for the CAM profiles are from 1 to 10, except for the ipv6acl profile which is from 0 to 10. The ipv6acl allocation must be a factor of 2 (2, 4, 6, 8, 10).

Example

```
Dell#
Dell#configure
Dell(conf)#cam-acl-egress ?
default Reset Egress CAM ACL entries to default setting
l2acl Set L2-ACL entries
Dell(conf)#cam-acl-egress l2acl ?
<1-4> Number of FP blocks for l2acl
Dell(conf)#cam-acl-egress l2acl 1 ?
ipv4acl Set IPV4-ACL entries
Dell(conf)#cam-acl-egress l2acl 1 ipv4acl 1 ?
ipv6acl Set IPV6-ACL entries
Dell(conf)#cam-acl-egress l2acl 1 ipv4acl 1 ipv6acl ?
<0-4> Number of FP blocks for IPV6 (multiples of 2)
Dell(conf)#cam-acl-egress l2acl 1 ipv4acl 1 ipv6acl 2
```

**ipv6 access-list**

Configure an access list based on IPv6 addresses or protocols.

Syntax

```
ipv6 access-list access-list-name
```

To delete an access list, use the `no ipv6 access-list access-list-name` command.

Parameters

- `access-list-name` Enter the access list name as a string, up to 140 characters.

Defaults

All access lists contain an implicit “deny any”; that is, if no match occurs, the packet is dropped.

Command Modes

- **CONFIGURATION**

Command History

- **Version 9.2(0.0)** Introduced on the MXL 10/40GbE Switch IO Module.
Usage Information
The number of entries allowed per ACL is hardware-dependent. For detailed specification on entries allowed per ACL, refer to your line card documentation.

Related Commands
show config — views the current configuration.

ipv6 control-plane egress-filter
Enable egress Layer 3 ACL lookup for IPv6 CPU traffic.

Syntax
ipv6 control-plane egress-filter

Defaults
Not enabled.

Command Modes
EXEC Privilege

Command History
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

permit
To configure a filter that matches the filter criteria, select an IPv6 protocol number, ICMP, IPv6, TCP, or UDP.

Syntax
permit {ipv6-protocol-number | icmp | ipv6 | tcp | udp}

Parameters
- **ipv6-protocol-number**
  - Enter an IPv6 protocol number. The range is from 0 to 255.
- **icmp**
  - Enter the keyword icmp to filter internet Control Message Protocol version 6.
- **ipv6**
  - Enter the keyword ipv6 to filter any internet Protocol version 6.
- **tcp**
  - Enter the keyword tcp to filter the Transmission Control protocol.
- **udp**
  - Enter the keyword udp to filter the User Datagram Protocol.

Defaults
Not configured.

546
permit icmp

To allow all or specific internet control message protocol (ICMP) messages, configure a filter.

Syntax

```
permit icmp {source address mask | any | host ipv6-address} 
(destination address | any | host ipv6-address) [message-type] 
[count [byte]] | [log] [monitor]
```

To remove this filter, you have two choices:

- Use the `no seq sequence-number` command if you know the filter's sequence number.
- Use the `no permit icmp {source address mask | any | host ipv6-address} 
(destination address | any | host ipv6-address) [message-type]` command.

Parameters

- **source address**
  Enter the IPv6 address of the network or host from which the packets were sent in the x:x:x:x::x format then the prefix length in the /x format. The range is from /0 to /128. The :: notation specifies successive hexadecimal fields of zero.

- **mask**
  Enter a network mask in /prefix format (/x).

- **any**
  Enter the keyword any to specify that all routes are subject to the filter.

- **host ipv6-address**
  Enter the keyword host then the IPv6 address of the host in the x:x:x:x::x format. The :: notation specifies successive hexadecimal fields of zero.

- **destination address**
  Enter the IPv6 address of the network or host to which the packets are sent in the x:x:x:x::x format then the prefix length in the /x format. The range is from /0 to /128. The :: notation specifies successive hexadecimal fields of zero.

- **message-type**
  (OPTIONAL) Enter an ICMP message type, either with the type (and code, if necessary) numbers or with the name of the message type. The range is from 0 to 255 for ICMP type and from 0 to 255 for ICMP code.

- **count**
  (OPTIONAL) Enter the keyword count to count packets the filter processes.

- **byte**
  (OPTIONAL) Enter the keyword byte to count bytes the filter processes.
log (OPTIONAL) Enter the keyword log to have the information kept in an ACL log file.

monitor (OPTIONAL) Enter the keyword monitor to monitor traffic on the monitoring interface specified in the flow-based monitoring session along with the filter operation.

Defaults Not configured.

Command Modes ACCESS-LIST

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

show cam-acl

Show space allocated for IPv6 ACLs.

Syntax show cam-acl

Command Modes • EXEC
• EXEC Privilege

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Example Dell#show cam-acl

-- Chassis Cam ACL --
Current Settings (in block sizes)
L2Acl : 5
Ipv4Acl : 6
Ipv6Acl : 0
Ipv4Qos : 1
L2Qos : 1

-- Line card 4 --
Current Settings (in block sizes)
L2Acl : 5
Ipv4Acl : 6
Ipv6Acl : 0
Ipv4Qos : 1
L2Qos : 1

Dell#show cam-acl

Example (Manual Profiles)

Dell#show cam-acl

-- Chassis Cam ACL --
Current Settings (in block sizes)
L2Acl : 2
Ipv4Acl : 2
Ipv6Acl : 4
show cam-acl-egress

Show information on FP groups allocated for egress ACLs.

Syntax
show cam-acl-egress

Command Modes
- EXEC
- EXEC Privilege

Command History
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Example
Dell#show cam-acl-egress

-- Chassis Egress Cam ACL --
Current Settings(in block sizes)
L2Acl  :  1
Ipv4Acl :  1
Ipv6Acl :  2

-- Stack unit 0 --
Current Settings(in block sizes)
L2Acl  :  1
Ipv4Acl :  1
Ipv6Acl :  2

Dell#show cam-acl

Related Commands
cam-acl — configures CAM profiles to support IPv6 ACLs.
IPv6 Basics

This chapter describes IPv6 basic commands for the MXL 10/40GbE Switch IO Module.

clear ipv6 fib

Clear (refresh) all forwarding information base (FIB) entries on a linecard or stack unit.

Syntax

```
clear ipv6 fib linecard slot | stack-unit unit-number
```

Parameters

- `slot` Enter the slot number to clear the FIB for a linecard.
- `unit-number` Enter the stack member number.

Command Modes

EXEC Privilege

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

clear ipv6 route

Clear (refresh) all or a specific route from the IPv6 routing table.

Syntax

```
clear ipv6 route { * | ipv6-address prefix-length }
```

Parameters

- `*` Enter the * to clear (refresh) all routes from the IPv6 routing table.
- `ipv6-address prefix-length` Enter the IPv6 address in the x:x:x::x format then the prefix length in the /x format. The range is from /0 to /128.

NOTE: The :: notation specifies successive hexadecimal fields of zeros.

Command Modes

EXEC Privilege

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.
clear ipv6 mld_host
Clear the IPv6 MLD host counters and reset the elapsed time.

Syntax
```
clear ipv6 mld_host
```

Command Modes
```
EXEC
```

Command History
```
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.
```

ipv6 address autoconfig
Configure IPv6 address auto-configuration for the management interface.

Syntax
```
ipv6 address autoconfig
```
To disable the address autoconfig operation on the management interface, use the
```
no ipv6 address autoconfig
```
command.

Default
```
Disabled
```

Command Modes
```
INTERFACE (management interface only)
```

Command History
```
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.
```

Usage Information
```
• SAA can configure up to two addresses. If any preferred prefix or valid timers
time out, the corresponding address are deprecated or removed. If an address
is removed due to a time-out, an address from the current unused prefix is used
to create a new address. If there are no remaining prefixes, the software waits
to receive a new prefix from the RA.

• If auto-configuration is enabled, all IPv6 addresses on that management
interface are auto-configured. Manual and auto-configurations are not
supported on a single management interface.

• Removing auto-configuration removes all auto-configured IPv6 addresses and
the link-local IPv6 address from that management interface.

• IPv6 addresses on a single management interface cannot be members of the
same subnet.

• IPv6 secondary addresses on management interfaces across a platform must be
members of the same subnet.

• IPv6 secondary addresses on management interfaces should not match the
virtual IP address and should not be in the same subnet as the virtual IP.
```

552
ipv6 address

Configure an IPv6 address to an interface.

Syntax

ipv6 address {ipv6-address prefix-length}

To remove the IPv6 address, use the no ipv6 address {ipv6-address prefix-length} command.

Parameters

ipv6-address prefix-length

Enter the IPv6 address in the x:x:x:x::x format then the prefix length in the /x format. The range is from /0 to /128.

NOTE: The :: notation specifies successive hexadecimal fields of zeros.

Defaults

none

Command Modes

INTERFACE

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

- If two addresses are configured, delete an existing address before configuring a new address.
- If the last manually-configured global IPv6 address is removed using the “no” form of the command, the link-local IPv6 address is removed automatically.
- IPv6 addresses on a single management interface cannot be members of the same subnet.
- IPv6 secondary addresses on management interfaces across platform must be members of the same subnet.
- IPv6 secondary addresses on management interfaces should not match the virtual IP address and should not be in the same subnet as the virtual IP.

Example

Dell(conf)#interface gigabitethernet 10/0
Dell(conf-if-gi-10/0)#ipv6 address ?
X::X::X::X IPv6 address
Dell(conf-if-gi-10/0)#ipv6 address 2002:1:2::3 ?
<0-128> Prefix length in bits
Dell(conf-if-gi-10/0)#ipv6 address 2002:1:2::3 /96 ?
<cr>
Dell(conf-if-gi-10/0)#ipv6 address 2002:1:2::3 /96
Dell(conf-if-gi-10/0)#show config
!
interface GigabitEthernet 10/0
  no ip address
  ipv6 address 2002:1:2::3 /96
  no shutdown
Dell(conf-if-gi-10/0)#
ipv6 address eui64

Configure IPv6 EUI64 address configuration on the interface.

Syntax
ipv6 address {ipv6-address prefix-length} eui64

To disable IPv6 EUI64 address autoconfiguration, use the no ipv6 address {ipv6-address prefix-length} eui64 command.

Parameters
- **ipv6-address**
  Enter the IPv6 prefix in the x:x:x:x::x format then the prefix length in the /x format. The range is from /0 to /128.

- **prefix-length**

**NOTE:** The :: notation specifies successive hexadecimal fields of zeros.

Defaults
none

Command Modes
CONFIGURATION

Command History
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
This command allows you to create an EUI64 address based on the specified prefix and MAC address only. Prefixes may be configured on the interface using the ipv6 nd prefix command without creating an EUI64 address.

Example
Dell(conf)#int ten 0/4
Dell(conf-if-te-0/4)#ipv6 address 200:1::/64 eui64
Dell(conf)#int ten 0/6
Dell(conf-if-te-0/6)#ipv6 address 801:10::/64 eui64

ipv6 control-plane icmp error-rate-limit

Configure the maximum number of ICMP error packets per second that can be sent per second.

Syntax
ipv6 control-plane icmp error-rate-limit {1-200}

To restore the default value, use the no ipv6 control-plane icmp error-rate-limit command.

Parameters
- **pps**
  Enter the maximum number of error packets generated per second. The range is from 1 to 200, where 0 disables the rate-limiting.

Defaults
100 pps

Command Modes
CONFIGURATION
ipv6 flowlabel-zero

Configure system to set the flow label field in the packets to zero.

Syntax

ipv6 flowlabel-zero

To disable the 0 from being set in the field and allow the rotocol operations to fill
the field, use the no ipv6 flowlabel-zero command.

Default

Disabled

Command Modes

CONFIGURATION

Command History

Version 9.2(0.0)  Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

If the flowlabel value is already set for BGP or SSH, the system defaults to the
already configured value. All packets on the same connection are considered part
of the same flow by the system. For new connections, set the new flowlabel to
zero.

ipv6 host

Assign a name and IPv6 address the host-to-IPv6 address mapping table uses.

Syntax

ipv6 host name ipv6-address

To remove an IP host, use the no ipv6 host name {ipv6-address}.

Parameters

name

Enter a text string to associate with one IP address.

ipv6-address

Enter the IPv6 address (X:X:X:X::X) to be mapped to the
name.

Defaults

Not configured.

Command Modes

CONFIGURATION

Command History

Version 9.2(0.0)  Introduced on the MXL 10/40GbE Switch IO Module.
**ipv6 name-server**

Enter up to six IPv6 addresses of name servers. The order you enter the addresses determines the order of their use.

**Syntax**

```plaintext
ipv6 name-server ipv6-address [ipv6-address2... ipv6-address6]
```

To remove a name server, use the `no ipv6 name-server ipv6-address` command.

**Parameters**

- `ipv6-address` Enter the IPv6 address (X:X::X::X) of the name server to be used.
  
  **NOTE:** The :: notation specifics successive hexadecimal fields of zeros.

- `ipv6-address2... ipv6-address6` (OPTIONAL) Enter up to five more IPv6 addresses, in the x:x::x format, of name servers to be used. Separate the IPv6 addresses with a space.

**Defaults**

- none

**Command Modes**

- CONFIGURATION

**Command History**

- **Version 9.2(0.0)** Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

You can separately configure both IPv4 and IPv6 domain name servers.

**ipv6 nd dad attempts**

To perform duplicate address detection (DAD) on the management interface, configure the number of neighbor solicitation messages that are sent.

**Syntax**

```plaintext
ipv6 nd dad attempts {number of attempts}
```

To restore the default value, use the `no ipv6 nd dad attempts` command.

**Parameters**

- `number of attempts` Enter the number of attempts to be made to detect a duplicate address. The range is from 0 to 15. Setting the value to 0 disables DAD on the interface.

**Defaults**

- 3 attempts

**Command Modes**

- INTERFACE (management interface only)
ipv6 nd prefix

Specify which IPv6 prefixes are included in Neighbor Advertisements.

Syntax: ipv6 nd prefix {ipv6-prefix | prefix-length | default} [no-advertise] | [no-autoconfig] [no-rtr-address] [off-link] [lifetime {valid | infinite} {preferred | infinite}]

Parameters:
- **ipv6-prefix**: Enter an IPv6 prefix.
- **prefix-length**: Enter the prefix then the prefix length. The length range is from 0 to 128.
- **default**: Enter the keyword default to set default parameters for all prefixes.
- **no-advertise**: Enter the keyword no-advertise to prevent the specified prefix from being advertised.
- **no-autoconfig**: Enter the keywords no-autoconfig to disable Stateless Address Autoconfiguration.
- **no-rtr-address**: Enter the keyword no-rtr-address to exclude the full router address from router advertisements (the R bit is not set).
- **off-link**: Enter the keywords off-link to advertise the prefix without stating to recipients that the prefix is either on-link or off-link.
- **valid-lifetime | infinite**: Enter the amount of time that the prefix is advertised, or enter infinite for an unlimited amount of time. The range is from 0 to 4294967295. The default is 2592000. The maximum value means that the preferred lifetime does not expire for the valid-life time parameter.
- **preferred-lifetime | infinite**: Enter the amount of time that the prefix is preferred, or enter infinite for an unlimited amount of time. The range is from 0 to 4294967295. The default is 2592000. The maximum value means that the preferred lifetime and does not expire.
Usage Information

By default, all prefixes configured as addresses on the interface are advertised. This command allows control over the individual parameters per prefix; you can use the `default` keyword to use the default parameters for all prefixes. If a prefix has been configured with lifetime parameter values, the default values cannot be applied using the `ipv6 nd prefix default no-autoconfig` command.

**ipv6 route**

Establish a static IPv6 route.

**Syntax**

```
ipv6 route ipv6-address prefix-length {ipv6-address | interface [distance] [tag value] [permanent]}
```

To remove the IPv6 route, use the `no ipv6 route ipv6-address prefix-length {ipv6-address | interface [distance] [tag value] [permanent]}` command.

**Parameters**

- `ipv6-address prefix-length`
  
  Enter the IPv6 address in the `x:x:x:x::x` format then the prefix length in the `/x` format. The range is from `/0` to `/128`.

  **NOTE:** The `::` notation specifies successive hexadecimal fields of zeros.

- `interface`
  
  (OPTIONAL) Enter the following keywords and slot/port or number information:

  - For a loopback interface, enter the keyword `loopback` then a number from zero (0) to 16383.
  - For the null interface, enter the keyword `null` then zero (0).
  - For a port channel interface, enter the keyword `port-channel` then the port channel number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
  - For a tunnel interface, enter the keyword `tunnel` then the tunnel interface number. The range is from 1 to 16383.
  - For a VLAN interface, enter the keyword `VLAN` then the vlan number. The range is from 1 to 4094.

If you configure a static IPv6 route using an egress interface and enter the `ping` command to reach the destination IPv6 address, the ping operation may not work. Configure the IPv6 route using a next-hop IPv6 address in order for the `ping` command to detect the destination address.
**ipv6-address**  
(Optional) Enter the forwarding router IPv6 address in the x:x:x:x:x format.

- **NOTE:** The :: notation specifies successive hexadecimal fields of zeros.

**distance**  
(Optional) Enter a number as the metric distance assigned to the route. The range is from 1 to 255.

**tag value**  
(Optional) Enter the keyword tag then a tag value number. The range is from 1 to 4294967295.

**permanent**  
(Optional) Enter the keyword permanent to specify that the route is not to be removed, even if the interface assigned to that route goes down.

- **NOTE:** If you disable the interface with an IPv6 address associated with the keyword permanent, the route disappears from the routing table.

---

**Defaults**

<table>
<thead>
<tr>
<th>Command Modes</th>
<th>Configuration</th>
</tr>
</thead>
</table>

**Command History**

Version 9.2(0.0)  
Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

When the interface goes down, the system withdraws the route. The route is re-installed by the system when the interface comes back up. When a recursive resolution is "broken," the system withdraws the route. The route is re-installed by the system when the recursive resolution is satisfied.

After an IPv6 static route interface is created, if an IP address is not assigned to a peer interface, the peer must be manually pinged to resolve the neighbor information.

**Example**

```
Dell(conf)#ipv6 route 44::0 /64 33::1 ?
<1-255>                Distance metric for this route
permanent              Permanent route
tag                    Set tag for this route

Dell(conf)#ipv6 route 55::0 /64 ?
X:X:X:X::X             Forwarding router's address
gigabitethernet        Gigabit Ethernet interface
loopback                Loopback interface
null                    Null interface
port-channel            Port channel interface
sonet                   Sonet interface
tenGigabitethernet      TenGigabit Ethernet interface
vlan                    VLAN interface

Dell(conf)#ipv6 route 55::0 /64 gigabitethernet 9/0 ?
<1-255>                Distance metric for this route
X:X:X:X::X             Forwarding router's address
permanent              Permanent route
tag                    Set tag for this route
```
Dell(conf)#ipv6 route 55::0 /64 gigabitethernet 9/0 66::1 ?
<1-255>                Distance metric for this route
permanent              Permanent route
tag                    Set tag for this route
Dell#

Related Commands
show ipv6 route — views the IPv6 configured routes.

ipv6 unicast-routing

Enable IPv6 Unicast routing.

Syntax
ipv6 unicast-routing
To disable unicast routing, use the no ipv6 unicast-routing command.

Defaults
Enabled

Command Modes
CONFIGURATION

Command History
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
Because this command is enabled by default, it does not appear in the running configuration. When you disable unicast routing, the no ipv6 unicast-routing command is included in the running configuration. Whenever unicast routing is disabled or re-enabled, the system generates a syslog message indicating the action.

Disabling unicast routing on a chassis causes the following behavior:

- static and protocol learned routes are removed from RTM and from the CAM; packet forwarding to these routes is terminated
- connected routes and resolved neighbors remain in the CAM and new IPv6 neighbors are still discoverable
- additional protocol adjacencies (OSPFv3 and BGP4) are brought down and no new adjacencies are formed
- the IPv6 address family configuration (under router bgp) is deleted
- IPv6 Multicast traffic continues to flow unhindered

show ipv6 cam stack-unit

Displays the IPv6 CAM entries for the specified stack-unit.

Syntax
show ipv6 cam stack-unit unit-number port-set {0-1} [summary | index | ipv6 address]
Parameters

- **unit-number**: Enter the stack unit's ID number. The range is from 0 to 11.
- **port-set**: Enter the keyword Port Set.
- **summary** *(OPTIONAL)*: Enter the keyword summary to display a table listing network prefixes and the total number prefixes which can be entered into the IPv6 CAM.
- **index** *(OPTIONAL)*: Enter the index in the IPv6 CAM.
- **ipv6-address**: Enter the IPv6 address in the x:x:x:x::x/n format to display networks that have more specific prefixes. The range is from /0 to /128.

**NOTE**: The :: notation specifies successive hexadecimal fields of zeros.

Defaults
none

Command Modes
- EXEC
- EXEC Privilege

Command History
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

**NOTE**: If a route has a mask greater than 64, no output is displayed and no output is displayed for show ipv6 cam stack-unit unit-number port-set {0-1} ipv6-address, but an equivalent /64 entry would be listed in the show ipv6 cam stack-unit unit-number port-set {0-1} output. Similarly, if there is more than one ECMP object with a destination route that has a mask greater than 64, if the first 64 bits in the destination routes of the ECMP objects are the same, only one route is installed in CAM even though multiple ECMP path entries exist.

**show ipv6 control-plane icmp**

Displays the status of the icmp control-plane setting for the error eate limit setting.

**Syntax**

`show ipv6 control-plane icmp`

**Default**
100

**Command Modes**
EXEC

**Command History**
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.
show ipv6 fib stack-unit

View all FIB entries.

Syntax

```
show ipv6 fib stack-unit unit-number [summary | ipv6-address]
```

Parameters

- **slot-number**
  - Enter the number of the stack unit. The range is from 0 to 11.
- **summary**
  - (OPTIONAL) Enter the keyword `summary` to view a summary of entries in IPv6 CAM.
- **ipv6-address**
  - Enter the IPv6 address in the `x:x:x::x/n` format to display networks that have more specific prefixes. The range is from /0 to /128.

**NOTE:** The `::` notation specifies successive hexadecimal fields of zeros.

Command Modes

- EXEC
- EXEC Privilege

Command History

- **Version 9.2(0.0)**
  - Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

Host tables are not stored in CAM tables. Entries for camIndex displays as zero (0) on the `show ipv6 fib stack-unit` output for neighbor entries, such as address resolution protocol (ARP) entries.

show ipv6 flowlabel-zero

Display the flow label zero setting.

Syntax

```
show ipv6 flowlabel-zero
```

Default

Disabled

Command Modes

- EXEC

Command History

- **Version 9.2(0.0)**
  - Introduced on the MXL 10/40GbE Switch IO Module.

Related Commands

- `ipv6 nd dad attempts` — Configure system to set the flow label field in the packets to zero.
show ipv6 interface

Display the status of interfaces configured for IPv6.

Syntax

```
show ipv6 interface [interface] [brief] [configured] [gigabitethernet slot | slot/port] [linecard slot-number] [loopback interface-number] [managementethernet slot/port] [port-channel number] [tengigabitethernet slot | slot/port] [fortyGigE slot | slot/port] [vlan vlan-id]
```

Parameters

- **interface** (OPTIONAL) Enter the following keywords and slot/port or number information:
  - For a Loopback interface, enter the keyword Loopback then a number from 0 to 16383.
  - For the Null interface, enter the keyword null then zero (0).
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
  - For stacking, enter the keywords stack-unit then the stack-unit ID.
  - For a tunnel interface, enter the keyword tunnel then the tunnel ID.
  - For a VLAN interface, enter the keyword VLAN.
  - For a port channel interface, enter the keywords port-channel.

- **brief** (OPTIONAL) View a summary of IPv6 interfaces.

- **configured** (OPTIONAL) View information on all IPv6 configured interfaces.

- **gigabitethernet** (OPTIONAL) View information for an IPv6 gigabitethernet interface.

- **linecard slot/port** (OPTIONAL) View information for a specific IPv6 linecard or stack-unit. The range is 0 to 11.

- **managementethernet slot/port** (OPTIONAL) View information on an IPv6 Management port. Enter the slot number (0-1) and port number zero (0).

- **loopback** (OPTIONAL) View information for IPv6 Loopback interfaces.

- **port-channel** (OPTIONAL) View information for IPv6 port channels.

- **tengigabitethernet** (OPTIONAL) View information for an IPv6 tengigabitethernet interface.

- **fortyGigE** (OPTIONAL) View information for an IPv6 fortygigabitethernet interface.

- **vlan** (OPTIONAL) View information for IPv6 VLANs.
Defaults

none

Command Modes

• EXEC
• EXEC Privilege

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The Management port is enabled by default (no shutdown). If necessary, use the ipv6 address command to assign an IPv6 address to the Management port.

Example

Dell# show ipv6 int te 0/5
TenGigabitEthernet 0/5 is up, line protocol is up
IPV6 is enabled
Link Local address: fe80::201:e8ff:fe8a:e8f7
Global Unicast address(es):
  2001::1, subnet is 2001::/64
  2002::1, subnet is 2002::/120
  2003::1, subnet is 2003::/120
  2004::1, subnet is 2004::/32
Global Anycast address(es):
Joined Group address(es):
ND MTU is 0
ICMP redirects are not sent
DAD is enabled, number of DAD attempts: 3
ND advertised reachable time is 0 milliseconds
ND advertised retransmit interval is 0 milliseconds
ND router advertisements are sent every 200 to 600 seconds
ND router advertisements live for 1800 seconds

Dell#

Example

Dell# show ipv6 int man 0/0
ManagementEthernet 0/0 is up, line protocol is up
IPV6 is enabled
Link Local address: fe80::201:e8ff:fe8a:e8f7
Global Unicast address(es):
  Actual address is 600::1, subnet is 600::/64
Virtual-IP IPv6 address is not set
Global Anycast address(es):
Joined Group address(es):
IPv6 Basics | 785
ND MTU is 1500
ICMP redirects are not sent
DAD is enabled, number of DAD attempts: 3
ND reachable time is 31000 milliseconds
ND base reachable time is 30000 milliseconds
ND retransmit interval is 1000 milliseconds
ND hop limit is 64

Dell#
Dell#

Example (Brief)

Dell#show ipv6 interface brief
TenGigabitEthernet 0/44          [up/up]
  fe80::201:e8ff:fe8b:3883
  4001:2::3/64

Example (tunnel)

Dell#show ipv6 interface tunnel 1
Tunnel 1 is up, line protocol is up
IPV6 is enabled
Link Local address: fe80::201:e8ff:fe04:62c4
Global Unicast address(es):
  2001:db8::1, subnet is 2001::/64
Global Anycast address(es):
  Joined Group address(es):
    ff02::1
    ff02::2
    ff02::1:ff00::1
    ff02::1:ff04:62c4
MTU is 1500
ICMP redirects are not sent
DAD is enabled: number of DAD attempts: 1
ND reachable time is 30 seconds
ND advertised reachable time is 30 seconds
ND advertised retransmit interval is 30 seconds
ND router advertisements are sent every 200 seconds
ND router advertisements live for 1800 seconds

show ipv6 mld_host

Display the IPv6 MLD host counters.

Syntax

show ipv6 mld_host

Command Modes

EXEC

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The following describes the show ipv6 mld-host command shown in the following example.
<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Valid MLD Packets</td>
<td>The total number of packets received and sent from the last time the elapsed time was cleared.</td>
</tr>
<tr>
<td>Reports</td>
<td>The total number of reports (queries and unsolicited reports generated from joins or leaves) that have been received or sent.</td>
</tr>
<tr>
<td>Leaves</td>
<td>The number of Multicast leaves that have been sent.</td>
</tr>
<tr>
<td>MLDv1 queries</td>
<td>The number of MLDv1 queries that have been received.</td>
</tr>
<tr>
<td>MLDv2 queries</td>
<td>The number of MLDv2 queries that have been received.</td>
</tr>
<tr>
<td>Malformed Packets</td>
<td>The number of MLDv1 and MLDv2 packets that do not match the requirement for a valid MLD packet.</td>
</tr>
</tbody>
</table>

Example

MLD Host Traffic Counters
Elapsed time since counters cleared: 0028:33:52

<table>
<thead>
<tr>
<th>Field</th>
<th>Received</th>
<th>Sent</th>
</tr>
</thead>
<tbody>
<tr>
<td>Valid MLD Packets</td>
<td>97962</td>
<td>18036</td>
</tr>
<tr>
<td>Reports</td>
<td>79962</td>
<td>18034</td>
</tr>
<tr>
<td>Leaves</td>
<td>----</td>
<td>0</td>
</tr>
<tr>
<td>MLDv2 Queries</td>
<td>18000</td>
<td>----</td>
</tr>
<tr>
<td>MLDv1 Queries</td>
<td>0</td>
<td>----</td>
</tr>
</tbody>
</table>

Errors:
Malformed Packets: 4510

show ipv6 route
Displays the IPv6 routes.

Syntax

```
show ipv6 route [ipv6-address prefix-length] [hostname] [all] [bgp as number] [connected] [isis tag] [list prefix-list name] [ospf process-id] [rip] [static] [summary]
```

Parameters

- **ipv6-address prefix-length** (OPTIONAL) Enter the IPv6 address in the x:x::x::x format then the prefix length in the /x format. The range is from /0 to /128.

  - **NOTE**: The :: notation specifies successive hexadecimal fields of zeros.

- **hostname** (OPTIONAL) View information for this IPv6 routes with Host Name.

- **all** (OPTIONAL) View information for all IPv6 routes.

- **bgp** (OPTIONAL) View information for all IPv6 BGP routes.

- **connected** (OPTIONAL) View only the directly connected IPv6 routes.

- **isis** (OPTIONAL) View information for all IPv6 IS-IS routes.
list (OPTIONAL) View the IPv6 prefix list.
ospf (OPTIONAL) View information for all IPv6 OSPF routes.
rip (OPTIONAL) View information for all IPv6 RIP routes.
static (OPTIONAL) View only routes configured by the ipv6 route command.
summary (OPTIONAL) View a brief list of the configured IPv6 routes.

Defaults none

Command Modes • EXEC
• EXEC Privilege

Command History Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information The following describes the show ipv6 route command shown in the following examples.

Field Description
(undefined) Identifies the type of route:
• L = Local
• C = connected
• S = static
• R = RIP
• B = BGP
• IN = internal BGP
• EX = external BGP
• LO = Locally Originated
• O = OSPF
• IA = OSPF inter-area
• N1 = OSPF NSSA external type 1
• N2 = OSPF NSSA external type 2
• E1 = OSPF external type 1
• E2 = OSPF external type 2
• i = IS-IS
• L1 = IS-IS level-1
• L2 = IS-IS level-2
• IA = IS-IS inter-area
• * = candidate default
• > = non-active route
• + = summary routes

Destination Identifies the route’s destination IPv6 address.
Field Description
Gateway Identifies whether the route is directly connected and on which interface the route is configured.
Dist/Metric Identifies if the route has a specified distance or metric.
Last Change Identifies when the route was last changed or configured.

Example
Dell#show ipv6 route
Codes:C-connected, L-local, S-static, R-RIP, B-BGP, IN-internal BGP, EX-external BGP, LO-locally Originated, O-OSPF, IA-OSPF inter area, N1-OSPF NSSA external type 1, N2-OSPF NSSA external type 2, E1-OSPF external type 1, E2-OSPF external type 2, i-IS-IS, L1-IS-IS level-1, L2-IS-IS level-2, IA-IS-IS inter area, *-candidate default, Gateway of last resort is not set

Destination Dist/Metric, Gateway, Last Change
----------------------------------------------
C  2001::/64 [0/0] Direct, Gi 1/1, 00:28:49
C  2002::/120 [0/0] Direct, Gi 1/1, 00:28:49
C  2003::/120 [0/0] Direct, Gi 1/1, 00:28:49
C  2004::/32 [0/0] Direct, Gi 1/1, 00:28:49
L  fe80::/10 [0/0] Direct, Nu 0, 00:29:09

Example (Summary)
Dell#show ipv6 route summary
Route Source Active Routes Non-active Routes
connected 5 0
static 0 0
Total 5 0
Total 5 active route(s) using 952 bytes

trust ipv6-diffserv
Allows the dynamic classification of IPv6 DSCP.

Syntax
trust ipv6-diffserv
To remove the definition, use the no trust ipv6-diffserv command.

Defaults
none

Command Modes
CONFIGURATION-POLICY-MAP-IN

Command History
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.
When you configure trust IPv6 diffserv, matched bytes/packets counters are not incremented in the `show qos statistics` command.

Trust diffserv (IPv4) can co-exist with trust ipv6-diffserv in an Input Policy Map. Dynamic classification happens based on the mapping as shown:

<table>
<thead>
<tr>
<th>IPv6 Service Class Field</th>
<th>Queue ID</th>
</tr>
</thead>
<tbody>
<tr>
<td>111XXXXX</td>
<td>7</td>
</tr>
<tr>
<td>110XXXXX</td>
<td>6</td>
</tr>
<tr>
<td>101XXXXX</td>
<td>5</td>
</tr>
<tr>
<td>100XXXXX</td>
<td>4</td>
</tr>
<tr>
<td>011XXXXX</td>
<td>3</td>
</tr>
<tr>
<td>010XXXXX</td>
<td>2</td>
</tr>
<tr>
<td>001XXXXX</td>
<td>1</td>
</tr>
<tr>
<td>000XXXXX</td>
<td>0</td>
</tr>
</tbody>
</table>
IPv6 Border Gateway Protocol (IPv6 BGP)

IPv6 Border Gateway Protocol (IPv6 BGP) is supported on Dell Networking platforms. This chapter includes the following sections:

- IPv6 BGP Commands
- IPv6 MBGP Commands

IPv6 BGP Commands

BGP is an external gateway protocol that transmits interdomain routing information within and between autonomous systems (AS). BGP version 4 (BGPv4) supports classless interdomain routing and the aggregation of routes and AS paths. Basically, two routers (called neighbors or peers) exchange information including full routing tables and periodically send messages to update those routing tables.

The following commands allow you to configure and enable BGP.

address family

This command changes the context to subsequent address family identifier (SAFI).

Syntax

```
address family ipv6 unicast
```

To remove SAFI context, use the no address family ipv6 unicast command.

Parameters

- **ipv6**
  
Enter the keyword ipv6 to specify the address family as IPv6.

- **unicast**
  
Enter the keyword unicast to specify multicast as SAFI.

Defaults

IPv6 Unicast

Command Modes

ROUTER BGPV6-ADDRESS FAMILY

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.
Usage Information

After this command is executed, all subsequent commands apply to this address family. You can exit from this AFI/SAFI to the IPv6 Unicast (the default) family by entering the `exit` command and returning to the Router BGP context.

aggregate-address

Summarize a range of prefixes to minimize the number of entries in the routing table.

Syntax

```
aggregate-address ipv6-address prefix-length [advertise-map map-name] [as-set] [attribute-map map-name] [summary-only] [suppress-map map-name]
```

Parameters

- `ipv6-address prefix-length` Enter the IPv6 address in the x:x:x::x format then the prefix length in the / x format. The range is from /0 to /128.

  **NOTE:** The :: notation specifies successive hexadecimal fields of zeros.

- `advertise-map map-name` (OPTIONAL) Enter the keywords `advertise-map` then the name of a configured route map to set filters for advertising an aggregate route.

- `as-set` (OPTIONAL) Enter the keywords `as-set` to generate path attribute information and include it in the aggregate. AS_SET includes AS_PATH and community information from the routes included in the aggregated route.

- `attribute-map map-name` (OPTIONAL) Enter the keywords `attribute-map` then the name of a configured route map to modify attributes of the aggregate, excluding AS_PATH and NEXT_HOP attributes.

- `summary-only` (OPTIONAL) Enter the keywords `summary-only` to advertise only the aggregate address. Specific routes are not advertised.

- `suppress-map map-name` (OPTIONAL) Enter the keywords `suppress-map` then the name of a configured route map to identify which more-specific routes in the aggregate are suppressed.

Defaults

Not configured.

Command Modes

- ROUTER BGP ADDRESS FAMILY
- ROUTER BGP ADDRESS FAMILY IPv6

Command History

- **Version 9.2(0.0)** Introduced on the MUX 10/40GbE Switch IO Module.
At least one of the routes included in the aggregate address must be in the BGP routing table for the configured aggregate to become active.

Do not add the as-set parameter to the aggregate if routes within the aggregate are constantly changing as the aggregate will flap to keep track of the changes in the AS_PATH.

In route maps used in the suppress-map parameter, routes meeting the deny clause are not suppress; in other words, they are allowed. The opposite is true: routes meeting the permit clause are suppressed.

If the route is injected using the network command, that route still appears in the routing table if you configure the summary-only parameter in the aggregate-address command.

The summary-only parameter suppresses all advertisements. If you want to suppress advertisements to only specific neighbors, use the neighbor distribute-list command.

In the show ip bgp ipv6 unicast command, aggregates contain an 'a' in the first column and routes suppressed by the aggregate contain an 's' in the first column.

bgp always-compare-med

Allows you to enable comparison of the MULTI_EXIT_DISC (MED) attributes in the paths from different external ASs.

**Syntax**

```
bgp always-compare-med
```

To disable comparison of MED, use the no bgp always-compare-med command.

**Defaults**

Disabled (that is, the software only compares MEDs from neighbors within the same AS).

**Command Modes**

ROUTER BGP

**Command History**

Version 9.2(0.0)Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

Any update without a MED attribute is the least preferred route.

If you enable this command, use the capture bgp-pdu max-buffer-size * command to recompute the best path.
bgp bestpath as-path ignore

Ignore the AS PATH in BGP best path calculations.

**Syntax**

```plaintext
bgp bestpath as-path ignore
To return to the default, use the no bgp bestpath as-path ignore command.
```

**Defaults**

Disabled (that is, the software considers the AS_PATH when choosing a route as best).

**Command Modes**

ROUTER BGP

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

If you enable this command, use the capture bgp-pdu max-buffer-size * command to recompute the best path.

bgp bestpath med confed

Enable MULTI_EXIT_DISC (MED) attribute comparison on paths learned from BGP confederations.

**Syntax**

```plaintext
bgp bestpath med confed
To disable MED comparison on BGP confederation paths, use the no bgp bestpath med confed command.
```

**Defaults**

Disabled.

**Command Modes**

ROUTER BGP

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

The software compares the MEDs only if the path contains no external autonomous system numbers.

If you enable this command, use the capture bgp-pdu max-buffer-size * command to recompute the best path.
**bgp bestpath med missing-as-best**

During path selection, indicate a preference to paths with missing MED (MULTI_EXIT_DISC) over those paths with an advertised MED attribute.

**Syntax**

```
bgp bestpath med missing-as-best
To return to the default selection, use the no bgp bestpath med missing-as-best command.
```

**Defaults**

Disabled.

**Command Modes**

ROUTER BGP

**Command History**

Version 9.2(0.0) Introduced on the MUXL 10/40GbE Switch IO Module.

**Usage Information**

The MED is a 4-byte unsigned integer value and the default behavior is to assume a missing MED as 4294967295. This command causes a missing MED to be treated as 0. During path selection, paths with a lower MED are preferred over those with a higher MED.

---

**bgp client-to-client reflection**

Allows you to enable route reflection between clients in a cluster.

**Syntax**

```
bgp client-to-client reflection
To disable client-to-client reflection, use the no bgp client-to-client reflection command.
```

**Defaults**

Enabled when a route reflector is configured.

**Command Modes**

ROUTER BGP

**Command History**

Version 9.2(0.0) Introduced on the MUXL 10/40GbE Switch IO Module.

**Usage Information**

Route reflection to clients is not necessary if all client routers are fully meshed.

**Related Commands**

- `bgp cluster-id` — assigns and ID to a BGP cluster with two or more route reflectors.
- `neighbor route-reflector-client` — configures a route reflector and clients.
bgp cluster-id

Assign a cluster ID to a BGP cluster with more than one route reflector.

Syntax

```
bgp cluster-id {ip-address | number}
```

To delete a cluster ID, use the `no bgp cluster-id {ip-address | number}` command.

Parameters

- **ip-address**: Enter an IP address as the route reflector cluster ID.
- **number**: Enter a route reflector cluster ID as a number from 1 to 4294967295.

Defaults

Not configured.

Command Modes

ROUTER BGP

Command History

Version 9.2(0.0)
Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

When a BGP cluster contains only one route reflector, the cluster ID is the route reflector’s router ID. For redundancy, a BGP cluster may contain two or more route reflectors and you assign a cluster ID with the `bgp cluster-id` command. Without a cluster ID, the route reflector cannot recognize route updates from the other route reflectors within the cluster.

The default format for displaying the cluster-id is dotted decimal, but if you enter the cluster-id as an integer, it displays as an integer.

Related Commands

- `bgp client-to-client reflection` — enables route reflection between the route reflector and the clients.
- `neighbor route-reflector-client` — configures a route reflector and clients.
- `show ip bgp ipv6 unicast cluster-list` — views paths with a cluster ID.

bgp confederation identifier

Configure an identifier for a BGP confederation.

Syntax

```
bgp confederation identifier as-number
```

To delete a BGP confederation identifier, use the `no bgp confederation identifier as-number` command.

Parameters

- **as-number**: Enter the AS number. The range is from 1 to 65535.
**bgp confederation peers**

Specify the autonomous systems (ASs) that belong to the BGP confederation.

**Syntax**

```plaintext
bgp confederation peers as-number [ ...as-number ]
```

To remove bgp confederation peers, use the no bgp confederation peer command.

**Parameters**

- `as-number`
  - Enter the AS number. The range is 1 to 65535.
- `...as-number`
  - (OPTIONAL) Enter up to 16 confederation numbers. The range is from 1 to 65535.

**Defaults**

Not configured.

**Command Modes**

ROUTER BGP

**Command History**

- **Version 9.2(0.0)**: Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

The Autonomous Systems configured in this command are visible to the EBGP neighbors. Each Autonomous System is fully meshed and contains a few connections to other Autonomous Systems. After specifying autonomous systems numbers for the BGP confederation, recycle the peers to update their configuration.

**Related Commands**

- `bgp confederation identifier` — configures a confederation ID.
**bgp dampening**

Enable BGP route dampening and configure the dampening parameters.

**Syntax**

```
bgp dampening [half-life reuse suppress max-suppress-time]
[route-map map-name]
```

**Parameters**

- **half-life** (OPTIONAL) Enter the number of minutes after which the Penalty is decreased. After the router assigns a Penalty of 1024 to a route, the Penalty is decreased by half, after the half-life period expires. The range is from 1 to 45. The default is **15 minutes**.

- **reuse** (OPTIONAL) Enter a number as the reuse value, which is compared to the flapping route's Penalty value. If the Penalty value is less than the reuse value, the flapping route is once again advertised (or no longer suppressed). The range is from 1 to 20000. The default is **750**.

- **suppress** (OPTIONAL) Enter a number as the suppress value, which is compared to the flapping route's Penalty value. If the Penalty value is greater than the suppress value, the flapping route is no longer advertised (that is, it is suppressed). The range is from 1 to 20000. The default is **2000**.

- **max-suppress-time** (OPTIONAL) Enter the maximum number of minutes a route can be suppressed. The default is four times the half-life value. The range is from 1 to 255. The default is **60 minutes**.

- **route-map map-name** (OPTIONAL) Enter the keywords `route-map` then the name of a configured route map. Only match commands in the configured route map are supported.

**Defaults**

Disabled.

**Command Modes**

ROUTER BGPV6-ADDRESS FAMILY

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

If you enter `bgp dampening`, the default values for half-life, reuse, suppress, and max-suppress-time are applied. The parameters are position-dependent; therefore, if you configure one parameter, you must configure the parameters in the order they appear in the command.

**Related Commands**

- `show ip bgp ipv6 unicast dampened-paths` — views the BGP paths.
**bgp default local-preference**

Change the default local preference value for routes exchanged between internal BGP peers.

**Syntax**

```
bgp default local-preference
```

To return to the default value, use the `no bgp default local-preference` command.

**Parameters**

*value*

Enter a number to assign to routes as the degree of preference for those routes. When routes are compared, the higher the degree of preference or local preference value, the more the route is preferred. The range is from 0 to 4294967295. The default is **100**.

**Defaults**

100

**Command Modes**

ROUTER BGP

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

---

**bgp enforce-first-as**

Disable (or enable) enforce-first-as check for updates received from EBGP peers.

**Syntax**

```
bgp enforce-first-as
```

To turn off the default, use the `no bgp enforce-first-as` command.

**Defaults**

Enabled.

**Command Modes**

ROUTER BGP

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

This is enabled by default; that is, for all updates received from EBGP peers, BGP ensures that the first AS of the first AS segment is always the AS of the peer. If not, the update is dropped and a counter is incremented. To view the failed enforce-first-as check counter, use the show ip bgp ipv6 unicast neighbors command.

If you disable enforce-first-as, view it using the show ip protocols command.
Related Commands

- `show ip bgp ipv6 unicast neighbors` — displays IPv6 routing information exchanged by BGP neighbors.
- `show ip protocols` — views information on routing protocols.

bgp fast-external-fallover

Enable the fast external fallover feature, which immediately resets the BGP session if a link to a directly connected external peer fails.

```
Syntax
bgp fast-external-fallover

To disable fast external fallover, use the `no bgp fast-external-fallover` command.
```

Defaults
Enabled.

Command Modes
ROUTER BGP

Command History

- Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The `bgp fast-external-fallover` command appears in the `show config` command output.

bgp four-octet-as-support

Enable 4-byte support for the BGP process.

```
Syntax
bgp four-octet-as-support

To disable fast external fallover, use the `no bgp four-octet-as-support` command.
```

Defaults
Disabled (supports 2-Byte format)

Command Modes
ROUTER BGP

Command History

- Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

Routers supporting 4-Byte ASNs advertise that function in the OPEN message. The behavior of a 4-Byte router is slightly different depending on whether it is speaking to a 2-Byte router or a 4-Byte router.
When creating Confederations, all the routers in the Confederation must be 4- or 2-byte identified routers. You cannot mix them.

Where the 2-Byte format is from 1 to 65535, the 4-Byte format is from 1 to 4294967295. Both formats are accepted, and the advertisements reflect the entered format.

For more information about using the 2- or 4-Byte format, refer to the Dell Networking OS Configuration Guide.

**bgp graceful-restart**

Enable graceful restart on a BGP neighbor, a BGP node, or designate a local router to support graceful restart as a receiver only.

**Syntax**

```
bgp graceful-restart [restart-time seconds] [stale-path-time seconds] [role receiver-only]
```

To return to the default, enter the `no bgp graceful-restart` command.

**Parameters**

- `neighbor ip-address | peer-group-name`
  - Enter the keyword `neighbor` then one of the options:
    - `ip-address` of the neighbor in IP address format of the neighbor
    - `peer-group-name` of the neighbor peer group

- `restart-time seconds`
  - Enter the keywords `restart-time` then the maximum number of seconds needed to restart and bring up all peers. The range is from 1 to 3600 seconds. The default is 120 seconds.

- `stale-path-time seconds`
  - Enter the keywords `stale-path-time` then the maximum number of seconds to wait before restarting a peer’s stale paths. The default is 360 seconds.

- `role receiver-only`
  - Enter the keywords `role receiver-only` to designate the local router to support graceful restart as a receiver only.

**Defaults**

As above

**Command Modes**

ROUTER BGP

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

This feature is advertised to BGP neighbors through a capability advertisement. In Receiver Only mode, BGP saves the advertised routes of peers that support this capability when they restart.
**bgp log-neighbor-changes**

Enable logging of BGP neighbor resets.

**Syntax**

```plaintext
ebgp log-neighbor-changes
```

To disable logging, use the `no bgp log-neighbor-changes` command.

**Defaults**

Enabled.

**Command Modes**

ROUTER BGP

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

The `bgp log-neighbor-changes` command appears in the `show config` command output.

**Related Commands**

- `show config` — views the current configuration.

---

**bgp non-deterministic-med**

Compare MEDs of paths from different autonomous systems (ASs).

**Syntax**

```plaintext
bgp non-deterministic-med
```

To return to the default, use the `no bgp non-deterministic-med` command.

**Defaults**

Disabled (that is, paths/routes for the same destination but from different ASs does not have their MEDs compared).

**Command Modes**

ROUTER BGP

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

In Non-Deterministic mode, paths are compared in the order in which they arrive. This method can lead to the system choosing different best paths from a set of paths, depending on the order in which they are received from the neighbors because MED may or may not get compared between adjacent paths. In Deterministic mode (no `bgp non-deterministic-med`), the system compares MED between adjacent paths within an AS group because all paths in the AS group are from the same AS.

When you change the path selection from Deterministic to Non-Deterministic mode, the path selection for existing paths remains Deterministic until you enter the `capture bgp-pdu max-buffer-size` command to clear existing paths.
### bgp recursive-bgp-next-hop

Enable next-hop resolution through other routes learned by BGP.

**Syntax**

```
bgp recursive-bgp-next-hop
```

To disable next-hop resolution, use the `no bgp recursive-bgp-next-hop` command.

**Defaults**

Enabled.

**Command Modes**

ROUTER BGP

**Command History**

*Version 9.2(0.0)* Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

This command is a knob to disable BGP next-hop resolution using BGP learned routes. During the next-hop resolution, only the first route that the next-hop resolves through is verified for the route’s protocol source and is checked if the route is learned from BGP or not.

For this command to take effect and to keep the BGP database consistent, you need the `clear ip bgp` command. Execute the `clear ip bgp` command right after executing this command.

**Related Commands**

- `capture bgp-pdu max-buffer-size`

### bgp regex-eval-optz-disable

Disables the Regex Performance engine that optimizes complex regular expression with BGP.

**Syntax**

```
bgp regex-eval-optz-disable
```

To re-enable optimization engine, use the `no bgp regex-eval-optz-disable` command.

**Defaults**

Enabled.

**Command Modes**

ROUTER BGP (conf-router_bgp)

**Command History**

*Version 9.2(0.0)* Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

BGP uses regular expressions (regex) to filter route information. In particular, the use of regular expressions to filter routes based on AS-PATHs and communities is quite common. In a large scale configuration, filtering millions of routes based on regular expressions can be quite CPU intensive, as a regular expression evaluation involves generation and evaluation of complex finite state machines.
BGP policies, containing regular expressions to match as-path and communities, tend to use a lot of CPU processing time, which in turn affects the BGP routing convergence. Additionally, the `show bgp` commands, which are filtered through regular expressions, use up CPU cycles particularly with large databases. The Regex Engine Performance Enhancement feature optimizes the CPU usage by caching and reusing regular expression evaluation results. This caching and reuse may be at the expense of RP1 processor memory.

**Related Commands**

- `show ip protocols` — views information on all routing protocols enabled and active.

## bgp router-id

Assign a user-given ID to a BGP router.

**Syntax**

```plaintext
bgp router-id ip-address
```

To delete a user-assigned IP address, use the `no bgp router-id` command.

**Parameters**

- `ip-address` Enter an IP address in dotted decimal format to reset only that BGP neighbor.

**Defaults**

The router ID is the highest IP address of the Loopback interface or, if no Loopback interfaces are configured, the highest IP address of a physical interface on the router.

**Command Modes**

ROUTER BGP

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

Peering sessions are reset when you change the router ID of a BGP router.

## bgp soft-reconfig-backup

Use this command only when route-refresh is not negotiated between peers to avoid having a peer re-send BGP updates.

**Syntax**

```plaintext
bgp soft-reconfig-backup
```

To return to the default setting, use the `no bgp soft-reconfig-backup` command.

**Defaults**

Off
**Command Modes**

ROUTER BGPV6 ADDRESS FAMILY (conf-router_bgpv6_af)

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

When you enable soft-reconfiguration for a neighbor and you execute the `clear ip bgp soft in` command, the update database stored in the router replays and updates are reevaluated. With this command, the replay and update process is triggered only if route-refresh request is not negotiated with the peer. If the request is negotiated (after execution of `clear ip bgp soft in`), BGP sends a route-refresh request to the neighbor and receives all of the peer’s updates.

**Related Commands**

clear ip bgp ipv6 unicast soft — activates inbound policies for IPv6 routes without resetting the BGP TCP session.

capture bgp-pdu neighbor (ipv6)

Enable capture of an IPv6 BGP neighbor packet.

**Syntax**

capture bgp-pdu neighbor ipv6-address direction {both | rx | tx}

To disable capture of the IPv6 BGP neighbor packet, use the `no capture bgp-pdu neighbor ipv6-address` command.

**Parameters**

- **ipv6-address**
  Enter the IPv6 address of the target BGP neighbor.

- **direction (both | rx | tx)**
  Enter the keyword direction and a direction — either `rx` for inbound, `tx` for outbound, or both.

**Defaults**

Not configured.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**

capture bgp-pdu max-buffer-size — enables route reflection between the route reflector and the clients.

show capture bgp-pdu neighbor — configures a route reflector and clients.
**capture bgp-pdu max-buffer-size**

Set the size of the BGP packet capture buffer. This buffer size pertains to both IPv4 and IPv6 addresses.

**Syntax**
capture bgp-pdu max-buffer-size 100-10240000

**Parameters**
- **100-10240000**  Enter a size for the capture buffer.
- **0**

**Defaults**
40960000 bytes

**Command Modes**
- EXEC
- EXEC Privilege

**Command History**
Version 9.2(0.0)  Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**
capture bgp-pdu neighbor (ipv6) — enables route reflection between the route reflector and the clients.

show capture bgp-pdu neighbor — configures a route reflector and clients.

---

**clear ip bgp * (asterisk)**

Reset all BGP sessions in the specified category. The soft parameter (BGP Soft Reconfiguration) clears the policies without resetting the TCP connection.

**Syntax**
clear ip bgp * [ipv4 multicast soft [in | out] | ipv6 unicast soft [in | out] | soft [in | out]]

**Parameters**
- *****  Enter an asterisk ( * ) to reset all BGP sessions.
- **ipv4 multicast soft [in | out]**    (OPTIONAL) Enter the keywords ipv4 multicast soft [in | out] to set options within the specified IPv4 address family.
- **ipv6 unicast soft [in | out]**    (OPTIONAL) Enter the keywords ipv6 multicast soft [in | out] to set options within the specified IPv6 address family.
- **soft**    (OPTIONAL) Enter the keyword soft to configure and activate policies without resetting the BGP TCP session, that is, BGP Soft Reconfiguration.

**NOTE:** If you enter clear ip bgp ip6-address soft, both inbound and outbound policies are reset.

- **in**    (OPTIONAL) Enter the keyword in to activate only inbound policies.
(OPTIONAL) Enter the keyword `out` to activate only outbound policies.

**Command Modes**

EXEC Privilege

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

### clear ip bgp as-number

Reset BGP sessions. The soft parameter (BGP Soft Reconfiguration) clears the policies without resetting the TCP connection.

**Syntax**

```
clear ip bgp as-number [flap-statistics | ipv4 {multicast {flap-statistics | soft {in | out}} | unicast {flap-statistics | soft {in | out}} | ipv6 unicast {flap-statistics | soft {in | out}} | soft {in | out}]
```

**Parameters**

- `as-number` Enter an autonomous system (AS) number to reset neighbors belonging to that AS. If used without a qualifier, the keyword resets all neighbors belonging to that AS. The range is from 1 to 65535.
- `flap-statistics` (OPTIONAL) Enter the keywords `flap-statistics` to clear all flap statistics belonging to that AS or a specified address family within that AS.
- `ipv4` (OPTIONAL) Enter the keyword `ipv4` to select options for that address family.
- `ipv6` (OPTIONAL) Enter the keyword `ipv6` to select options for that address family.
- `unicast` (OPTIONAL) Enter the keyword `unicast` to select the unicast option within the selected address family.
- `multicast` (OPTIONAL) Enter the keyword `multicast` to select the multicast option within the selected address family. Multicast is supported on IPv4 only.
- `soft` (OPTIONAL) Enter the keyword `soft` to configure and activate policies without resetting the BGP TCP session; that is, BGP Soft Reconfiguration.

**NOTE:** If you enter `clear ip bgp ipv6-address soft`, both inbound and outbound policies are reset.

- `in` (OPTIONAL) Enter the keyword `in` to activate only inbound policies.
out (OPTIONAL) Enter the keyword out to activate only outbound policies.

Command Modes
EXEC Privilege

Command History
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

clear ip bgp ipv6-address

Reset BGP sessions specific to an IPv6 address. The soft parameter (BGP Soft Reconfiguration) clears the policies without resetting the TCP connection.

Syntax

clear ip bgp ipv6-address [flap-statistics | ipv4 {multicast {flap-statistics | soft {in | out}} | unicast {flap-statistics | soft {in | out}} | ipv6 unicast {flap-statistics | soft {in | out}}] soft [in | out]

Parameters

ipv6-address Enter an IPv6 address to reset neighbors belonging to that IP. Used without a qualifier, the keyword ipv6-address resets all neighbors belonging to that IP.

flap-statistics (OPTIONAL) Enter the keywords flap-statistics to clear all flap statistics belonging to that AS or a specified address family within that IP.

ipv4 (OPTIONAL) Enter the keyword ipv4 to select options for that address family.

ipv6 (OPTIONAL) Enter the keyword ipv6 to select options for that address family.

unicast (OPTIONAL) Enter the keyword unicast to select the unicast option within the selected address family.

multicast (OPTIONAL) Enter the keyword multicast to select the multicast option within the selected address family. Multicast is supported on IPv4 only.

soft (OPTIONAL) Enter the keyword soft to configure and activate policies without resetting the BGP TCP session; that is, BGP Soft Reconfiguration.

NOTE: If you enter clear ip bgp ipv6-address soft, both inbound and outbound policies are reset.

in (OPTIONAL) Enter the keyword in to activate only inbound policies.

out (OPTIONAL) Enter the keyword out to activate only outbound policies.
clear ip bgp peer-group

Reset a peer-group's BGP sessions.

**Syntax**
clear ip bgp peer-group peer-group-name

**Parameters**
- `peer-group-name` Enter the peer group name to reset the BGP sessions within that peer group.

**clear ip bgp ipv6 dampening**

Clear information on route dampening and return suppressed route to active state.

**Syntax**
clear ip bgp ipv6 unicast dampening [ipv6-address]

**Parameters**
- `ipv6-address` Enter the IPv6 address in the x:x:x:x::x format then the prefix length in the /x format. The range is from /0 to /128.

**NOTE:** The :: notation specifies successive hexadecimal fields of zeros.

**Command Modes**
EXEC Privilege

**Command History**
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.
# clear ip bgp ipv6 flap-statistics

Clear BGP flap statistics, which includes number of flaps and the time of the last flap.

## Syntax

```
clear ip bgp ipv6 unicast flap-statistics [ipv6-address | filter-list as-path-name | regexp regular-expression]
```

## Parameters

- **ipv6-address** (OPTIONAL) Enter the IPv6 address in the x:x:x:x::x format then the prefix length in the /x format. The range is from /0 to /128.

  NOTE: The :: notation specifies successive hexadecimal fields of zeros.

- **filter-list as-path-name** (OPTIONAL) Enter the keywords `filter-list` then the name of a configured AS-PATH list.

- **regexp regular-expression** (OPTIONAL) Enter the keyword `regexp` then the regular expressions. Use one or a combination of the following:
  - . (period) matches on any single character, including white space
  - * (asterisk) matches on sequences in a pattern (zero or more sequences)
  - + (plus sign) matches on sequences in a pattern (one or more sequences)
  - ? (question mark) matches sequences in a pattern (0 or 1 sequences)
  - [ ] (brackets) matches a range of single-character patterns.
  - ^ (caret) matches the beginning of the input string. (If the caret is used at the beginning of a sequence or range, it matches on everything BUT the characters specified.)
  - $ (dollar sign) matches the end of the output string.

## Command Modes

- **EXEC Privilege**

## Command History

- **Version 9.2(0.0)** Introduced on the MXL 10/40GbE Switch IO Module.

## Usage Information

If you enter the `clear ip bgp ipv6 flap-statistics` command without parameters, all the statistics clear.

## Related Commands

- `show ip bgp ipv6 unicast flap-statistics` — views BGP flap statistics.
**clear ip bgp ipv6 unicast soft**

Clear and reapply policies for IPv6 unicast routes without resetting the TCP connection; that is, perform BGP soft reconfiguration.

**Syntax**
```
clear ip bgp {* | as-number | ipv4-neighbor-addr | ipv6-neighbor-addr | peer-group name} ipv6 unicast soft [in | out]
```

**Parameters**
- `*` Clear and reapply policies for all BGP sessions.
- `as-number` Clear and reapply policies for all neighbors belonging to the AS. The range is from 0 to 65535 (2 Byte), from 1 to 4294967295 (4 Byte), or from 0.1 to 0.65535.65535 (Dotted format).
- `ipv4-neighbor-addr | ipv6-neighbor-addr` Clear and reapply policies for a neighbor.
- `peer-group name` Clear and reapply policies for all BGP routers in the specified peer group.
- `ipv6 unicast` Clear and reapply policies for all IPv6 unicast routes.
- `in` Reapply only inbound policies.
  
  **NOTE:** If you enter `soft`, without an `in` or `out` option, both inbound and outbound policies are reset.
- `out` Reapply only outbound policies.
  
  **NOTE:** If you enter `soft`, without an `in` or `out` option, both inbound and outbound policies are reset.

**Command Modes**
- EXEC Privilege

**Command History**
- Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

---

**debug ip bgp**

Allows you to view all information on BGP, including BGP events, keepalives, notifications, and updates.

**Syntax**
```
debug ip bgp [ipv6-address | peer-group peer-group-name] [in | out]
```

To disable all BGP debugging, use the `no debug ip bgp` command.

**Parameters**
- `ipv6-address` (OPTIONAL) Enter the IPv6 address in the x:x:x:x:x format then the prefix length in the /x format. The range is from /0 to /128.
**NOTE:** The :: notation specifies successive hexadecimal fields of zeros.

**peer-group**
Enter the keywords `peer-group` then the name of the peer group.

**peer-group-name**

**in**
(Optional) Enter the keyword `in` to view only information on inbound BGP routes.

**out**
(Optional) Enter the keyword `out` to view only information on outbound BGP routes.

**Command Modes**

**EXEC Privilege**

**Command History**

**Version 9.2(0.0)** Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

To view information on both incoming and outgoing routes, do not include the `in` and `out` parameters in the `debugging` command. The `in` and `out` parameters cancel each other; for example, if you enter `debug ip bgp in` and then enter `debug ip bgp out`, you do not see information on the incoming routes.

Entering a `no debug ip bgp` command removes all configured debug commands for BGP.

**Related Commands**

- `debug ip bgp events` — views information about BGP events.
- `debug ip bgp keepalives` — views information about BGP keepalives.
- `debug ip bgp notifications` — views information about BGP notifications.
- `debug ip bgp updates` — views information about BGP updates.

### debug ip bgp events

Allows you to view information on local BGP state changes and other BGP events.

**Syntax**

```
depug ip bgp [ipv6-address | peer-group peer-group-name] events [in | out]
```

To disable debugging, use the `no debug ip bgp ipv6-address | peer-group peer-group-name] events command.

**Parameters**

- `ipv6-address` (Optional) Enter the IPv6 address in the x:x:x:x::x format then the prefix length in the /x format. The range is from /0 to /128.
NOTE: The :: notation specifies successive hexadecimal fields of zeros.

peer-group
peer-group-name
Enter the keywords peer-group then the name of the peer group.
in
(OPTIONAL) Enter the keyword in to view only information on inbound BGP routes.
out
(OPTIONAL) Enter the keyword out to view only information on outbound BGP routes.

Command Modes
EXEC Privilege

Command History
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
Entering a no debug ip bgp command removes all configured debug commands for BGP.

d debug ip bgp ipv6 dampening
View information on dampened (non-active) IPv6 routes.

Syntax
d debug ip bgp ipv6 unicast dampening [in | out]
To disable debugging, use the no debug ip bgp ipv6 unicast dampening command.

Parameters
in
(OPTIONAL) Enter the keyword in to view only inbound dampened routes.
out
(OPTIONAL) Enter the keyword out to view only outbound dampened routes.

Command Modes
EXEC Privilege

Command History
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
Entering a no debug ip bgp command removes all configured debug commands for BGP.

Related Commands
show ip bgp ipv6 unicast dampened-paths — views BGP dampened routes.
debug ip bgp ipv6 unicast soft-reconfiguration

Enable soft-reconfiguration debugging for IPv6 unicast routes.

```
Syntax
debug ip bgp [ipv4-address | ipv6-address | peer-group-name] ipv6 unicast soft-reconfiguration
To disable debugging, use the no debug ip bgp [ipv4-address | ipv6-address | peer-group-name] ipv6 unicast soft-reconfiguration command.
```

```
Parameters
ipv4-address | ipv6-address Enter the IP address of the neighbor on which you want to enable soft-reconfiguration debugging.
peer-group-name Enter the name of the peer group on which you want to enable soft-reconfiguration debugging.
ipv6 unicast Debug soft reconfiguration for IPv6 unicast routes.
```

```
Defaults
Disabled.
```

```
Command Modes
EXEC Privilege
```

```
Command History
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.
```

```
Usage Information
This command turns on BGP soft-reconfiguration inbound debugging for IPv6 unicast routes. If no neighbor is specified, debug is turned on for all neighbors.
```

```
Related Commands
show ip bgp ipv6 unicast dampened-paths — views BGP dampened routes.
```

ddebug ip bgp keepalives

Allows you to view information about BGP keepalive messages.

```
Syntax
debug ip bgp [ipv6-address | peer-group peer-group-name] keepalives [in | out]
To disable debugging, use the no debug ip bgp [ipv6-address | peer-group peer-group-name] keepalives [in | out] command.
```

```
Parameters
ipv6-address (OPTIONAL) Enter the IPv6 address in the x:x:x:x::x format then the prefix length in the /x format. The range is /0 to /128.
```

```
NOTE: The :: notation specifies successive hexadecimal fields of zeros.
```
### debug ip bgp notifications

Allows you to view information about BGP notifications received from neighbors.

**Syntax**

```plaintext
debug ip bgp [ipv6-address | peer-group peer-group-name] notifications [in | out]
To disable debugging, use the `no debug ip bgp [ipv6-address | peer-group peer-group-name] notifications [in | out]` command.
```

**Parameters**

- `ipv6-address` (OPTIONAL) Enter the IPv6 address in the `x:x::x` format then the prefix length in the `/x` format. The range is from `/0` to `/128.
  
  **NOTE:** The `::` notation specifies successive hexadecimal fields of zeros.

- `peer-group peer-group-name` (OPTIONAL) Enter the keywords `peer-group` then the name of the peer group.

- `in` (OPTIONAL) Enter the keyword `in` to view BGP notifications received from neighbors.

- `out` (OPTIONAL) Enter the keyword `out` to view BGP notifications sent to neighbors.

**Command Modes**

- EXEC Privilege

**Command History**

- **Version 9.2(0.0)** Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

Entering a `no debug ip bgp` command removes all configured debug commands for BGP.
### debug ip bgp updates

Allows you to view information about BGP updates.

#### Syntax

```plaintext
debug ip bgp [ipv6-address | peer-group peer-group-name | ipv6 unicast [ipv6-address]] updates [in | out | prefix-list prefix-list-name]
```

To disable debugging, use the `no debug ip bgp [ip-address | peer-group peer-group-name | ipv6 unicast [ipv6-address]] updates [in | out]` command.

#### Parameters

- `ipv6-address` (OPTIONAL) Enter the IPv6 address in the `x:x:x:x:x` format then the prefix length in the `/x` format. The range is from `/0` to `/128`.

  **NOTE:** The `::` notation specifies successive hexadecimal fields of zeros.

- `peer-group peer-group-name` (OPTIONAL) Enter the keywords `peer-group` then the name of the peer group.

- `ipv6 unicast [ipv6-address]` (OPTIONAL) Enter the keywords `ipv6 unicast`, and, optionally, an `ipv6 address`.

- `in` (OPTIONAL) Enter the keyword `in` to view only BGP updates received from neighbors.

- `out` (OPTIONAL) Enter the keyword `out` to view only BGP updates sent to neighbors.

#### Command Modes

EXEC Privilege

#### Command History

- **Version 9.2(0.0)** Introduced on the MXL 10/40GbE Switch IO Module.

#### Usage Information

Entering a `no debug ip bgp` command removes all configured debug commands for BGP.
**default-metric**

Allows you to change the metrics of redistributed routes to locally originated routes. Use this command with the redistribute command.

**Syntax**

```
default-metric number
```

To return to the default setting, use the `no default-metric` command.

**Parameters**

- **number**
  
Enter a number as the metric to be assigned to routes from other protocols. The range is from 1 to 4294967295.

**Defaults**

```
0
```

**Command Modes**

ROUTER BGP

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

The `default-metric` command in BGP sets the value of the BGP MULT_EXIT_DISC (MED) attribute for redistributed routes only.

**Related Commands**

- `bgp always-compare-med` — enables comparison of all BGP MED attributes.
- `redistribute` — redistributes routes from other routing protocols into BGP.

---

**description**

Enter a description of the BGP routing protocol.

**Syntax**

```
description {description}
```

To remove the description, use the `no description {description}` command.

**Parameters**

- **description**
  
Enter a description to identify the BGP protocol (80 characters maximum).

**Defaults**

```
none
```

**Command Modes**

ROUTER BGP

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**

- `router bgp` — enters ROUTER mode on the switch.
distance bgp

Configure three administrative distances for routes.

Syntax

distance bgp external-distance internal-distance local-distance
To return to default values, use the no distance bgp command.

Parameters

- **external-distance**
  Enter a number to assign to routes learned from a neighbor external to the AS. The range is from 1 to 255. The default is 20.

- **internal-distance**
  Enter a number to assign to routes learned from a router within the AS. The range is from 1 to 255. The default is 200.

- **local-distance**
  Enter a number to assign to routes learned from networks listed in the network command. The range is from 1 to 255. The default is 200.

Defaults

- external-distance = 20
- internal-distance = 200
- local-distance = 200

Command Modes

- ROUTER BGPV6-ADDRESS FAMILY

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

⚠️ **CAUTION:** Dell Force10 recommends that you do not change the administrative distance of internal routes. Changing the administrative distances may cause routing table inconsistencies.

The higher the administrative distance assigned to a route means that your confidence in that route is low. Routes assigned an administrative distance of 255 are not installed in the routing table.

Routes from confederations are treated as internal BGP routes.

maximum-paths

Configure the maximum number of parallel routes (multipath support) BGP supports.

Syntax

maximum-paths {ebgp | ibgp} number
To return to the default values, use the no maximum-paths command.
### Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>ebgp</strong></td>
<td>Enter the keyword <code>ebgp</code> to enable multipath support for External BGP routes.</td>
</tr>
<tr>
<td><strong>ibgp</strong></td>
<td>Enter the keyword <code>ibgp</code> to enable multipath support for Internal BGP routes.</td>
</tr>
<tr>
<td><strong>number</strong></td>
<td>Enter a number as the maximum number of parallel paths. The range is from 1 to 16. The default is 1.</td>
</tr>
</tbody>
</table>

### Defaults

- 1

### Command Modes

- ROUTER BGPV6-ADDRESS FAMILY

### Command History

- **Version 9.2(0.0)**: Introduced on the MXL 10/40GbE Switch IO Module.

### Usage Information

If you enable this command, use the `capture bgp-pdu max-buffer-size` command to recompute the best path.

---

### neighbor activate

This command allows the specified neighbor/peer group to be enabled for the current AFI/SAFI.

**Syntax**

```
neighbor {ipv6-address | peer-group-name} activate
```

To disable, use the `no neighbor {ipv6-address | peer-group-name} activate` command.

**Parameters**

- **ipv6-address**: Enter the IPv6 address in the `x:x:x::x` format.

  **NOTE**: The :: notation specifies successive hexadecimal fields of zeros.

- **peer-group-name**: Identify a peer group by name.

- **activate**: Enter the keyword `activate` to enable the identified neighbor or peer group in the new AFI/SAFI.

**Defaults**

- Disabled.

**Command Modes**

- ROUTER BGPV6-ADDRESS FAMILY

**Command History**

- **Version 9.2(0.0)**: Introduced on the MXL 10/40GbE Switch IO Module.
Usage Information

By default, when you create a neighbor/peer group configuration in the Router BGP context, it is enabled for the IPv6/Unicast AFI/SAFI. By using activate in the new context, the neighbor/peer group is enabled for AFI/SAFI.

neighbor advertisement-interval

Set the advertisement interval between BGP neighbors or within a BGP peer group.

Syntax

neighbor {ipv6-address | peer-group-name} advertisement-interval seconds

To return to the default value, use the no neighbor {ipv6-address | peer-group-name} advertisement-interval command.

Parameters

ipv6-address

Enter the IPv6 address in the x:x:x::x format.

NOTE: The :: notation specifies successive hexadecimal fields of zeros.

peer-group-name

Enter the name of the peer group to set the advertisement interval for all routers in the peer group.

seconds

Enter a number as the time interval, in seconds, between BGP advertisements. The range is from 0 to 600 seconds. The default is 5 seconds for internal BGP peers and 30 seconds for external BGP peers.

Defaults

- seconds = 5 seconds (internal peers)
- seconds = 30 seconds (external peers)

Command Modes

ROUTER BGPV6-ADDRESS FAMILY

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

neighbor allowas-in

Set the number of times an AS number can occur in the AS path.

Syntax

neighbor {ip-address | peer-group-name} allowas-in number

To return to the default value, use the no neighbor {ip-address | peer-group-name} allowas-in command.
**Parameters**

- **ip-address**: Enter the IPv6 address in the x:x:x:x::x format.
  
  **NOTE**: The :: notation specifies successive hexadecimal fields of zeros.

- **peer-group-name**: Enter the name of the peer group to set the advertisement interval for all routers in the peer group.

- **number**: Enter a number of times to allow this neighbor ID to use the AS path. The range is from 1 to 10.

**Defaults**

Not configured.

**Command Modes**

ROUTER BGP

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**

- `bgp four-octet-as-support` — enables 4-Byte support for the BGP process.

---

### neighbor default-originate

Inject the default route to a BGP peer or neighbor.

**Syntax**

```
neighbor {ipv6-address | peer-group-name} default-originate [route-map map-name]
```

To remove a default route, use the no neighbor {ipv6-address | peer-group-name} default-originate [route-map map-name] command.

**Parameters**

- **ipv6-address**: Enter the IPv6 address in the x:x:x::x format.
  
  **NOTE**: The :: notation specifies successive hexadecimal fields of zeros.

- **peer-group-name**: Enter the name of the peer group to set the default route of all routers in that peer group.

- **route-map map-name**: (OPTIONAL) Enter the keywords route-map then the name of a configured route map.

**Defaults**

Not configured.

**Command Modes**

ROUTER BGPV6-ADDRESS FAMILY

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.
Usage Information

If you apply a route map to a BGP peer or neighbor with the neighbor default-originate command configured, the software does not apply the set filters in the route map to that BGP peer or neighbor.

neighbor description

Assign a character string describing the neighbor or group of neighbors (peer group).

Syntax

neighbor {ipv6-address | peer-group-name} description text

To delete a description, use the no neighbor {ipv6-address | peer-group-name} description text command.

Parameters

ipv6-address

Enter the IPv6 address in the x:x:x:x::x format.

NOTE: The :: notation specifies successive hexadecimal fields of zeros.

peer-group-name

Enter the name of the peer group.

text

Enter a continuous text string up to 80 characters.

Defaults

Not configured.

Command Modes

ROUTER BGP

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

neighbor distribute-list

Distribute BGP information using an established prefix list.

Syntax

neighbor {ipv6-address | peer-group-name} distribute-list prefix-list-name {in | out}

To delete a neighbor distribution list, use the no neighbor {ipv6-address | peer-group-name} distribute-list prefix-list-name {in | out} command.

Parameters

ipv6-address

Enter the IPv6 address in the x:x:x:x::x format.

NOTE: The :: notation specifies successive hexadecimal fields of zeros.
**neighbor ebgp-multihop**

Attempt and accept BGP connections to external peers on networks that are not directly connected.

**Syntax**

```
neighbor {ipv6-address | peer-group-name} ebgp-multihop [ttl]
```

To disallow and disconnect connections, use the `no neighbor {ipv6-address | peer-group-name} ebgp-multihop [ttl]` command.

**Parameters**

- `ipv6-address` Enter the IPv6 address in the `x:x:x:x::x` format.
  
  **NOTE:** The `::` notation specifies successive hexadecimal fields of zeros.

- `peer-group-name` Enter the name of the peer group.

- `ttl` (OPTIONAL) Enter the number of hops as the time to live (ttl) value. The range is from 1 to 255. The default is **255**.

**Defaults**

Disabled.

**Command Modes**

ROUTER BGP

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.
Usage Information

To prevent loops, the neighbor ebgp-multihop command does not install default routes of the multihop peer. Networks not directly connected are not considered valid for best path selection.

neighbor fall-over

Enable or disable fast fall-over for BGP neighbors.

Syntax

neighbor {ipv6-address | peer-group-name} fall-over

To disable, use the no neighbor {ipv6-address | peer-group-name} fall-over command.

Parameters

ipv6-address Enter the IPv6 address in the x:x:x:x::x format.

peer-group-name Enter the name of the peer group.

Defaults

Disabled.

Command Modes

ROUTER BGP

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

When you enable fall-over, BGP keeps track of IP or IPv6 reachability to the peer remote address and the peer local address. Whenever either address becomes unreachable (for example, no active route exists in the routing table for peer IP or IPv6 destination/local address), BGP brings down the session with the peer.

Related Commands

show ip bgp ipv6 unicast neighbors — displays IPv6 routing information exchanged by BGP neighbors.

neighbor filter-list

Configure a BGP filter based on the AS-PATH attribute.

Syntax

neighbor {ipv6-address | peer-group-name} filter-list as-path-name {in | out}

To delete a BGP filter, use the no neighbor {ipv6-address | peer-group-name} filter-list as-path-name {in | out} command.
Parameters

ipv6-address
Enter the IPv6 address in the x:x::x format.

NOTE: The :: notation specifies successive hexadecimal fields of zeros.

peer-group-name
Enter the name of the peer group to apply the filter to all routers in the peer group.

in
Enter the keyword in to filter inbound BGP routes.

out
Enter the keyword out to filter outbound BGP routes.

Defaults
Not configured.

Command Modes
ROUTER BGPV6-ADDRESS FAMILY

Command History
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

neighbor maximum-prefix
Control the number of network prefixes received.

Syntax
neighbor {ipv6-address | peer-group-name} maximum-prefix
maximum [threshold] [warning-only]

To return to the default values, use the no neighbor {ipv6-address | peer-
group-name} maximum-prefix maximum [threshold] [warning-only] command.

Parameters
ipv6-address
Enter the IPv6 address in the x:x::x format.

NOTE: The :: notation specifies successive hexadecimal fields of zeros.

peer-group-name
Enter the name of the peer group.

maximum
Enter a number as the maximum number of prefixes allowed for this BGP router. The range is from 1 to 4294967295.

threshold
(Optional) Enter a number to be used as a percentage of the maximum value. When the number of prefixes reaches this percentage of the maximum value, the software sends a message. The range is from 1 to 100 percent. The default is 75.

warning-only
(Optional) Enter the keyword warning-only to set the router to send a log message when the maximum value is reached. If this parameter is not set, the router stops peering when the maximum number of prefixes is reached.
neighbor X:X:X::X password

Enable TCP MD5 Authentication for an IPv6 BGP peer session.

Syntax

```
neighbor x:x:x::x password {7 <encrypt-pass> | <clear-pass>}
```

To return to the default setting, use the `no neighbor x:x:x::x password` command.

Parameters

- `encrypt-pass` Enter the encrypted password.
- `clear-pass` Enter the clear text password.

Defaults

Disabled.

Command Modes

ROUTER BGPV6-ADDRESS FAMILY

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The TCP session is authentication and prevents the data from being compromised.
neighbor next-hop-self

Allows you to configure the router as the next hop for a BGP neighbor. (This command is used for IBGP).

Syntax
neighbor {ipv6-address | peer-group-name} next-hop-self

To return to the default setting, use the no neighbor {ipv6-address | peer-group-name} next-hop-self command.

Parameters

- **ipv6-address**: Enter the IPv6 address in the x:x:x:x::x format.
  
  **NOTE**: The :: notation specifies successive hexadecimal fields of zeros.

- **peer-group-name**: (OPTIONAL) Enter the name of the peer group.

Defaults
Disabled.

Command Modes
ROUTE BGPV6-ADDRESS FAMILY

Command History
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
If you configure the set ipv6 next-hop command in ROUTE-MAP mode, its configuration takes precedence over the neighbor next-hop-self command.

neighbor peer-group (assigning peers)

Allows you to assign one peer to a existing peer group.

Syntax
neighbor ipv6-address peer-group peer-group-name

To delete a peer from a peer group, use the no neighbor ipv6-address peer-group peer-group-name command.

Parameters

- **ipv6-address**: Enter the IPv6 address in the x:x:x:x::x format.
  
  **NOTE**: The :: notation specifies successive hexadecimal fields of zeros.

- **peer-group-name**: Enter the keywords peer-group then the name of a configured peer group (maximum 16 characters).

Defaults
Not configured.

Command Modes
ROUTER BGP
You can assign up to 64 peers to one peer group.

When you add a peer to a peer group, it inherits all the peer group’s configured parameters. A peer cannot become part of a peer group if any of the following commands are configured on the peer:

- neighbor advertisement-interval
- neighbor distribute-list
- neighbor filter-list
- neighbor next-hop-self
- neighbor route-map
- neighbor route-reflector-client
- neighbor send-community

A neighbor may keep its configuration after it was added to a peer group if the neighbor’s configuration is more specific than the peer group’s and the neighbor’s configuration does not affect outgoing updates.

A peer group must exist before you add a peer to it. If the peer group is disabled (shutdown) the peers within the group are also disabled (shutdown).

Related Commands
- capture bgp-pdu max-buffer-size — resets BGP sessions.
- neighbor peer-group (creating group) — creates a peer group.
- show ip bgp ipv6 unicast peer-group — views BGP peers.
- show ip bgp ipv6 unicast neighbors — views BGP neighbors configurations.

neighbor peer-group (creating group)

Allows you to create a peer group and assign it a name.

Syntax
neighbor peer-group-name peer-group

To delete a peer group, use the no neighbor peer-group-name peer-group command.

Parameters
- peer-group-name: Enter a text string up to 16 characters long as the name of the peer group.

Defaults
Not configured.
neighbor peer-group passive

Enable passive peering on a BGP peer group; that is, the peer group does not send an OPEN message, but does respond to one.

Syntax

neighbor peer-group-name peer-group passive

To delete a passive peer-group, use the no neighbor peer-group-name peer-group passive command.

Parameters

peer-group-name

Enter a text string up to 16 characters long as the name of the peer group.

Defaults

Not configured.

Command Modes

ROUTER BGP

Command History

Version 9.2(0.0)  Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

After you configure a peer group as passive, you must assign it a subnet using the neighbor subnet command.

Related Commands

neighbor subnet  — assigns a subnet to a dynamically configured BGP neighbor.
**neighbor remote-as**

Create and specify the remote peer to the BGP neighbor.

**Syntax**

```
neighbor {ipv6-address | peer-group-name} remote-as number
```

To delete a remote AS entry, use the `no neighbor {ipv6-address | peer-group-name} remote-as number` command.

**Parameters**

- **ipv6-address**: Enter the IPv6 address in the x:x:x:x format.

  **NOTE**: The :: notation specifies successive hexadecimal fields of zeros.

- **peer-group-name**: Enter a text string up to 16 characters long as the name of the peer group.

- **number**: Enter a number of the AS. The range is from 1 to 65535.

**Defaults**

Not configured.

**Command Modes**

ROUTER BGP

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

If the `number` parameter is the same as the AS number used in the `router bgp` command, the remote AS entry in the neighbor is considered an internal BGP peer entry.

This command creates a peer and the newly created peer is disabled (`shutdown`).

**Related Commands**

- `router bgp` — enters the ROUTER BGP mode and configure routes in an AS.

---

**neighbor remove-private-as**

Remove private AS numbers from the AS-PATH of outgoing updates.

**Syntax**

```
neighbor {ipv6-address | peer-group-name} remove-private-as
```

To return to the default, use the `no neighbor {ipv6-address | peer-group-name} remove-private-as` command.

**Parameters**

- **ipv6-address**: Enter the IPv6 address in the x:x:x:x format.

  **NOTE**: The :: notation specifies successive hexadecimal fields of zeros.
peer-group-name

Enter the name of the peer group to remove the private AS numbers.

Defaults

Disabled (that is, the private AS number are not removed).

Command Modes

ROUTER BGPV6-ADDRESS FAMILY

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

Applies to external border gateway protocol (EBGP) neighbors only.

If the AS-PATH contains both public and private AS number or contains AS numbers of an EBGP neighbor, the private AS numbers are not removed.

If a confederation contains private AS numbers in its AS-PATH, the software removes the private AS numbers only if they follow the confederation numbers in the AS path.

Private AS numbers are from 64512 to 65535.

neighbor route-map

Apply an established route map to either incoming or outbound routes of a BGP neighbor or peer group.

Syntax

neighbor {ipv6-address | peer-group-name} route-map map-name {in | out}

To remove the route map, use the no neighbor {ipv6-address | peer-group-name} route-map map-name {in | out} command.

Parameters

ipv6-address

Enter the IPv6 address in the x:x:x:x::x format.

NOTE: The :: notation specifies successive hexadecimal fields of zeros.

peer-group-name

Enter the name of the peer group.

map-name

Enter the name of an established route map. If the Route map is not configured, the default is deny (to drop all routes).

in

Enter the keyword in to filter inbound routes.

out

Enter the keyword out to filter outbound routes.

Defaults

Not configured.
### neighbor route-reflector-client

Configure a neighbor as a member of a route reflector cluster.

**Syntax**

```
neighbor {ipv6-address | peer-group-name} route-reflector-client
```

To indicate that the neighbor is not a route reflector client or to delete a route reflector configuration, use the `no neighbor {ipv6-address | peer-group-name} route-reflector-client` command.

**Parameters**

- **ipv6-address**
  
Enter the IPv6 address in the `x:x:x:x::x` format.

  **NOTE:** The `::` notation specifies successive hexadecimal fields of zeros.

- **peer-group-name**
  
Enter the name of the peer group. All routers in the peer group receive routes from a route reflector.

**Defaults**

Not configured.

**Command Modes**

ROUTER BGPV6-ADDRESS FAMILY

**Command History**

- **Version 9.2(0.0)**
  
  Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

The first time you enter this command it configures the neighbor as a route reflector and members of the route-reflector cluster. Internal BGP (IBGP) speakers do not need to be fully meshed if you configure a route reflector.

When all clients of a route reflector are disabled, the neighbor is no longer a route reflector.
**neighbor send-community**

Send a COMMUNITY attribute to a BGP neighbor or peer group. A COMMUNITY attribute indicates that all routes with that attribute belong to the same community grouping.

**Syntax**

```
neighbor {ipv6-address | peer-group-name} send-community
```

To disable sending a COMMUNITY attribute, use the `no neighbor {ipv6-address | peer-group-name} send-community` command.

**Parameters**

- `ipv6-address`
  - Enter the IPv6 address in the `x:x:x::x` format.
  - **NOTE:** The `::` notation specifies successive hexadecimal fields of zeros.

- `peer-group-name`
  - Enter the name of the peer group. All routers in the peer group receive routes from a route reflector.

**Defaults**

Not configured and COMMUNITY attributes are not sent to neighbors.

**Command Modes**

`ROUTER BGP`

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

---

**neighbor shutdown**

Disable a BGP neighbor or peer group.

**Syntax**

```
neighbor {ipv6-address | peer-group-name} shutdown
```

To enable a disabled neighbor or peer group, use the `no neighbor {ipv6-address | peer-group-name} shutdown` command.

**Parameters**

- `ipv6-address`
  - Enter the IPv6 address in the `x:x:x::x` format.
  - **NOTE:** The `::` notation specifies successive hexadecimal fields of zeros.

- `peer-group-name`
  - Enter the name of the peer group to disable or enable all routers within the peer group.

**Defaults**

Enabled (that is, BGP neighbors and peer groups are disabled.)

**Command Modes**

`ROUTER BGP`

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.
Usage
Peers that are enabled within a peer group are disabled when their peer group is
disabled.
The neighbor shutdown command terminates all BGP sessions on the BGP
neighbor or BGP peer group. Use this command with caution as it terminates the
specified BGP sessions. When a neighbor or peer group is shutdown, use the show
ip bgp ipv6 unicast summary command to confirm its status.

Related
Commands
show ip bgp ipv6 unicast summary — displays the current BGP configuration.
show ip bgp ipv6 unicast neighbors — displays IPv6 routing information exchanged
by BGP neighbors.

neighbor soft-reconfiguration inbound
Enable a BGP soft-reconfiguration and start storing updates for inbound IPv6 unicast routes.

Syntax
neighbor {ipv4-address | ipv6-address | peer-group-name} soft-reconfiguration inbound

Parameters
ipv4-address | ipv6-address
peer-group-name
Enter the IP address of the neighbor for which you want to
start storing inbound routing updates.
Enter the name of the peer group for which you want to start
storing inbound routing updates.

Defaults
Disabled.

Command Modes
ROUTER BGPv6 ADDRESS FAMILY (conf-router_bgpv6_af)

Command History
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage
This command enables soft-reconfiguration for the specified BGP neighbor. BGP
stores all updates for inbound IPv6 unicast routes the neighbor receives but does not reset the peer-session.

⚠️ CAUTION: Inbound update storage is a memory-intensive operation. The
entire BGP update database from the neighbor is stored in memory
regardless of the inbound policy results applied on the neighbor.

Related
Commands
show ip bgp ipv6 unicast neighbors — displays IPv6 routing information BGP
neighbors exchange.
neighbor subnet

Enable passive peering so that the members of the peer group are dynamic.

Syntax

```
neighbor peer-group-name subnet subnet-number mask
```

To remove passive peering, use the `no neighbor peer-group-name subnet subnet-number mask` command.

Parameters

- **subnet-number**: Enter a subnet number in dotted decimal format (A.B.C.D.) as the allowable range of addresses included in the Peer group. To allow all addresses, enter `0::0/0`.
- **mask**: Enter a prefix mask in /prefix-length format (/x).

Defaults

Not configured.

Command Modes

- ROUTER BGP

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

neighbor timers

Set keepalive and hold time timers for a BGP neighbor or a peer group.

Syntax

```
neighbor {ipv6-address | peer-group-name} timers keepalive holdtime
```

To return to the default values, use the `no neighbor {ipv6-address | peer-group-name} timers command`.

Parameters

- **ipv6-address**: Enter the IPv6 address in the x:x:x:x:x format.
  
  NOTE: The :: notation specifies successive hexadecimal fields of zeros.

- **peer-group-name**: Enter the name of the peer group to set the timers for all routers within the peer group.

- **keepalive**: Enter a number for the time interval, in seconds, between keepalive messages sent to the neighbor routers. The range is from 1 to 65535. The default is **60 seconds**.

- **holdtime**: Enter a number for the time interval, in seconds, between the last keepalive message and declaring the router dead. The range is from 3 to 65535. The default is **180 seconds**.
Defaults

- keepalive = 60 seconds
- holdtime = 180 seconds

Command Modes

ROUTER BGP

Command History

Version 9.2(0.0)   Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

Timer values configured with the neighbor timers command override the timer values configured with the timers bgp command.

When two neighbors, configured with different keepalive and holdtime values, negotiate for new values, the resulting values are as follows:

- the lower of the holdtime values is the new holdtime value
- whichever is the lower value; one-third of the new holdtime value, or the configured keepalive value is the new keepalive value

neighbor update-source

Enable the software to use Loopback interfaces for TCP connections for BGP sessions.

Syntax

neighbor {ipv6-address | peer-group-name} update-source loopback interface
To use the closest interface, use the no neighbor {ipv6-address | peer-group-name} update-source loopback interface command.

Parameters

ipv6-address     Enter the IPv6 address in the x:x:x:x::x format.

peer-group-name  Enter the name of the peer group to set the timers for all routers within the peer group.

loopback interface Enter the keyword loopback then a number of the loopback interface. The range is from 0 to 16383.

Defaults

Not configured.

Command Modes

ROUTER BGP

Command History

Version 9.2(0.0)   Introduced on the MXL 10/40GbE Switch IO Module.
Usage Information
Loopback interfaces are up constantly and the BGP session may need one interface constantly up to stabilize the session. The neighbor update-source command is not necessary for directly connected internal BGP sessions.

neighbor weight
Assign a weight to the neighbor connection, which is used to determine the best path.

Syntax
neighbor {ipv6-address | peer-group-name} weight weight
To remove a weight value, use the no neighbor {ipv6-address | peer-group-name} weight weight command.

Parameters
ipv6-address
Enter the IPv6 address in the x:x:x:x::x format.

peer-group-name
Enter the name of the peer group to set the timers for all routers within the peer group.

weight
Enter a number as the weight. The range is from 0 to 65535. The default is 0.

Defaults
0

Command Modes
ROUTER BGP

Command History
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
In the system best path selection process, the path with the highest weight value is preferred.

NOTE: To apply the weight to the connection and recompute the best path, reset the neighbor connection (the capture bgp-pdu max-buffer-size * command).

network
Specify the networks for the BGP process and enter them in the BGP routing table.

Syntax
network ipv6-address prefix-length [route-map map-name]
To remove a network, use the no network ip-address mask [route-map map-name] command.
network backdoor

Specify this IGP route as the preferred route.

Syntax

```
network ipv6-address prefix-length backdoor
```

To remove a network, use the `no network ipv6-address prefix-length backdoor` command.

Parameters

- `ipv6-address prefix-length` Enter the IPv6 address in the x:x:x:x::x format then the prefix length in the /x format. The range is from /0 to /128.

  **NOTE:** The :: notation specifies successive hexadecimal fields of zeros.

Defaults

Not configured.

Related Commands

- `network` — configures a network.
- `redistribute` — redistributes routes into BGP.
**Command Modes**

ROUTER BGPV6-ADDRESS FAMILY

**Command History**

Version 9.2(0.0)  Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

Though the system does not generate a route due to backdoor config, there is an option for injecting/ sourcing a local route in presence of network backdoor config on a learned route.

---

**redistribute**

Redistribute routes into BGP.

**Syntax**

```plaintext
redistribute {connected | static} [route-map map-name]
```

To disable redistribution, use the `no redistribute {connected | static}` command.

**Parameters**

- **connected**
  - Enter the keyword `connected` to redistribute routes from physically connected interfaces.

- **static**
  - Enter the keyword `static` to redistribute manually configured routes. These routes are treated as incomplete routes.

- **route-map**
  - Enter the keywords `route-map` then the name of an established route map.
  
  If the route map is not configured, the default is `deny` (to drop all routes).

**Defaults**

Not configured.

**Command Modes**

ROUTER BGPV6-ADDRESS FAMILY

**Command History**

Version 9.2(0.0)  Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

If you do not configure the `default-metric` command, in addition to the redistribute command, or there is no route map to set the metric, the metric for redistributed static and connected is "0".

To redistribute the default route (0::0/0), configure the `neighbor default-originate` command.

**Related Commands**

- `neighbor default-originate` — injects the default route.
**redistribute isis**

Redistribute IS-IS routes into BGP.

**Syntax**

```plaintext
redistribute isis [level-1 | level-1-2 | level-2] [metric metric-value | metric-type {external | internal}] [route-map map-name]
```

To stop redistribution of IS-IS routes, use the `no redistribute isis` command.

**Parameters**

- `level-1` | `level-1-2` | `level-2` *(OPTIONAL)* Enter the type (level) of routes to redistribute.
- `metric` *(OPTIONAL)* Assign metric to an interface for use with IPv6 information.
- `metric-type` *(OPTIONAL)* The external link type associated with the default route advertised into a routing domain. You must specify one of the following:
  - external
  - `internal` *(default)*
- `route-map map-name` *(OPTIONAL)* Enter the keywords `route-map` then the name of an established route map.
  If the route map is not configured, the default is `deny` (to drop all routes).

**Defaults**

Not configured.

**Command Modes**

`ROUTER BGPV6-ADDRESS FAMILY`

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

---

**redistribute ospf**

Redistribute OSPFv3 routes into BGP.

**Syntax**

```plaintext
redistribute ospf process-id [[match external [1 | 2]] [match internal]] [route-map map-name]
```

To stop redistribution of OSPF routes, use the `no redistribute ospf process-id` command.

**Parameters**

- `process-id` Enter the number of the OSPFv3 process. The range is from 1 to 65535.
match external (1 | 2) Enter the keywords match external to redistribute OSPF external routes. You can specify 1 or 2 to redistribute those routes only.

match internal Enter the keywords match internal to redistribute OSPFv3 internal routes only.

route-map map-name (OPTIONAL) Enter the keywords route-map then the name of an established route map. If the route map is not configured, the default is deny (to drop all routes).

Defaults Not configured.

Command Modes ROUTER BGPV6-ADDRESS FAMILY

Command History Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information When you enter the redistribute ospf process-id command without any other parameters, the system redistributes all OSPF internal routes, external type 1 routes, and external type 2 routes.

router bgp

Enter ROUTER BGP mode to configure and enable BGP.

Syntax

router bgp as-number

To disable BGP, use the no router bgp as-number command.

Parameters

as-number Enter the AS number. The range is from 1 to 65535.

Defaults Not enabled.

Command Modes CONFIGURATION

Command History Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.
**show capture bgp-pdu neighbor**

Display BGP packet capture information for an IPv6 address.

**Syntax**

```
show capture bgp-pdu neighbor ipv6-address
```

**Parameters**

- `ipv6-address`: Enter the IPv6 address (X:X:X:X::X) of a BGP neighbor.

**Defaults**

- EXEC
- EXEC Privilege

**Command Modes**

- CONFIGURATION

**Command History**

- Version 9.2(0.0) Introduced on the MxL 10/40GbE Switch IO Module.

**Related Command**

- `capture bgp-pdu neighbor (ipv6)` — enables capture of an IPv6 BGP neighbor packet.
- `capture bgp-pdu max-buffer-size` — specifies a size for the capture buffer.

---

**show config**

View the current ROUTER BGP configuration.

**Syntax**

```
show config
```

**Command Modes**

- ROUTER BGPV6-ADDRESS FAMILY

**Command History**

- Version 9.2(0.0) Introduced on the MxL 10/40GbE Switch IO Module.

**Example**

```
Dell(conf-router_bgp)#show conf
!
router bgp 18508
neighbor RR-CLIENT peer-group
neighbor RR-CLIENT remote-as 18508
neighbor RR-CLIENT no shutdown
neighbor RR-CLIENT-PASSIV peer-group passive
neighbor RR-CLIENT-PASSIV remote-as 18508
neighbor RR-CLIENT-PASSIV subnet 9000::9:0/120
neighbor RR-CLIENT-PASSIV no shutdown
neighbor 1109::33 remote-as 18508
neighbor 1109::33 update-source Loopback 101
neighbor 1109::33 no shutdown
neighbor 2222::220 remote-as 18508
neighbor 2222::220 route-reflector-client
neighbor 2222::220 update-source Loopback 100
neighbor 2222::220 no shutdown
neighbor 4000::33 remote-as 18508
```
neighbor 4000::33 no shutdown
neighbor 4000::60 remote-as 18508
neighbor 4000::60 no shutdown
neighbor 9000::1:2 remote-as 640
no neighbor 9000::1:2 activate
neighbor 9000::1:2 no shutdown

show ip bgp ipv6 unicast
View the current BGP information.

Syntax
show ip bgp ipv6 unicast [network [network-mask] [longer-prefixes]]

Parameters
- **network** (OPTIONAL) Enter the network address (in dotted decimal format) of the BGP network to view information only on that network.
- **network-mask** (OPTIONAL) Enter the keywords network mask (in slash prefix format) of the BGP network address.
- **longer-prefixes** (OPTIONAL) Enter the keywords longer-prefixes to view all routes with a common prefix.

Command Modes
- EXEC
- EXEC Privilege

Command History
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
When you enable the bgp non-deterministic-med command, the show ip bgp command output for a BGP route does not list the INACTIVE reason.

show ip bgp ipv6 unicast cluster-list
View BGP neighbors in a specific cluster.

Syntax
show ip bgp ipv6 unicast cluster-list [cluster-id]

Parameters
- **cluster-id** (OPTIONAL) Enter the cluster id in dotted decimal format.

Command Modes
- EXEC
- EXEC Privilege
show ip bgp ipv6 unicast community

View information on all routes with community attributes or view specific BGP community groups.

Syntax

```
show ip bgp ipv6 unicast community [community-number] [local-as] [no-export] [no-advertise]
```

Parameters

- **community-number**
  - Enter the community number in AA:NN format where AA is the AS number (2 bytes) and NN is a value specific to that autonomous system. You can specify up to eight community numbers to view information on those community groups.

- **local-AS**
  - Enter the keywords local-AS to view all routes with the COMMUNITY attribute of NO_EXPORT_SUBCONFED. All routes with the NO_EXPORT_SUBCONFED (0xFFFFFF03) community attribute must not be advertised to external BGP peers.

- **no-advertise**
  - Enter the keywords no-advertise to view all routes containing the well-known community attribute of NO_ADVERTISE. All routes with the NO_ADVERTISE (0xFFFFFF02) community attribute must not be advertised to other BGP peers.

- **no-export**
  - Enter the keywords no-export to view all routes containing the well-known community attribute of NO_EXPORT. All routes with the NO_EXPORT (0xFFFFFF01) community attribute must not be advertised outside a BGP confederation boundary.

Command Modes

- EXEC
- EXEC Privilege

Command History

- **Version 9.2(0.0)**
  - Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

To view the total number of COMMUNITY attributes found, use the `show ip bgp ipv6 unicast summary` command. The text line above the route table states the number of COMMUNITY attributes found.
**show ip bgp ipv6 unicast community-list**

View routes that are affected by a specific community list.

**Syntax**

```
show ip bgp ipv6 unicast community-list community-list-name [exact-match]
```

**Parameters**

- `community-list-name` (Enter the name of a configured IP community list.)
- `exact-match` (OPTIONAL) Enter the keywords `exact-match` to display only for an exact match of the communities.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

- Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**show ip bgp ipv6 unicast dampened-paths**

View BGP routes that are dampened (non-active).

**Syntax**

```
show ip bgp ipv6 unicast dampened-paths
```

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

- Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**show ip bgp ipv6 unicast detail**

Display BGP internal information for IPv6 Unicast address family.

**Syntax**

```
show ip bgp ipv6 unicast detail
```

**Defaults**

none

**Command Modes**

- EXEC
- EXEC Privilege
show ip bgp ipv6 unicast extcommunity-list

View information on all routes with Extended Community attributes.

Syntax

show ip bgp ipv6 unicast extcommunity-list [list name]

Parameters

list name
Enter the extended community list name you wish to view.

Command Modes

• EXEC
• EXEC Privilege

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

To view the total number of COMMUNITY attributes found, use the show ip bgp ipv6 unicast summary command. The text line above the route table states the number of COMMUNITY attributes found.

The show ip bgp ipv6 unicast community command without any parameters lists BGP routes with at least one BGP community attribute and the output is the same as for the show ip bgp ipv6 unicast command output.

show ip bgp ipv6 unicast filter-list

View the routes that match the filter lists.

Syntax

show ip bgp ipv6 unicast filter-list as-path-name

Parameters

as-path-name
Enter the name of an AS-PATH.

Command Modes

• EXEC
• EXEC Privilege

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.
show ip bgp ipv6 unicast flap-statistics

View flap statistics on BGP routes.

**Syntax**

```
show ip bgp ipv6 unicast flap-statistics [ipv6-address prefix-length] [filter-list as-path-name] [regexp regular-expression]
```

**Parameters**

- **ipv6-address prefix-length**
  - Enter the IPv6 address in the x:x:x::x format then the prefix length in the /x format. The range is from /0 to /128.
  - **NOTE:** The :: notation specifies successive hexadecimal fields of zeros.

- **filter-list as-path-name**
  - (OPTIONAL) Enter the keywords filter-list then the name of a configured AS-PATH ACL.

- **regexp regular-expression**
  - Enter a regular expression then use one or a combination of the following characters to match:
    - . = (period) any single character (including a white space).
    - * = (asterisk) the sequences in a pattern (0 or more sequences).
    - + = (plus) the sequences in a pattern (1 or more sequences).
    - ? = (question mark) sequences in a pattern (either 0 or 1 sequences).
    - [ ] = (brackets) a range of single-character patterns.
    - ^ = (caret) the beginning of the input string. If the caret is used at the beginning of a sequence or range, it matches on everything BUT the characters specified.
    - $ = (dollar sign) the end of the output string.
  - **NOTE:** You must enter an escape sequence (CTRL+v) prior to entering the ? regular expression.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

---

show ip bgp ipv6 unicast inconsistent-as

View routes with inconsistent originating autonomous system (AS) numbers; that is, prefixes that are announced from the same neighbor AS but with a different AS-Path.

**Syntax**

```
show ip bgp ipv6 unicast inconsistent-as
```
show ip bgp ipv6 unicast neighbors

Displays information on IPv6 unicast routes exchanged by BGP neighbors.

**Syntax**

```
show ip bgp ipv6 unicast neighbors [ipv4-neighbor-addr | ipv6-neighbor-addr] [advertised-routes | dampened-routes | detail | flap-statistics | routes | received-routes [network [network-mask]]] | denied-routes [network [network-mask]]]
```

**Parameters**

- `ipv6 unicast`: Enter the keywords `ipv6 unicast` to view information only related to IPv6 unicast routes.
- `ipv4-neighbor-addr | ipv6-neighbor-addr`: (OPTIONAL) Enter the IP address of the neighbor to view only BGP route information exchanged with that neighbor.
- `advertised-routes`: (OPTIONAL) Enter the keywords `advertised-routes` to view only the routes the neighbor sent.
- `dampened-routes`: (OPTIONAL) Enter the keywords `dampened-routes` to view information on dampened routes from the BGP neighbor.
- `detail`: (OPTIONAL) Enter the keyword `detail` to view neighbor-specific internal information for the IPv4 Unicast address family.
- `flap-statistics`: (OPTIONAL) Enter the keywords `flap-statistics` to view flap statistics on the neighbor’s routes.
- `routes`: (OPTIONAL) Enter the keyword `routes` to view only the neighbor’s feasible routes.
- `received-routes [network [network-mask]]`: (OPTIONAL) Enter the keywords `received-routes` then either the network address (in dotted decimal format) or the network mask (in slash prefix format) to view all information received from neighbors.

**NOTE:** You must configure the `neighbor soft-reconfiguration inbound` command prior to viewing all the information received from the neighbors.

- `denied-routes [network [network-mask]]`: (OPTIONAL) Enter the keywords `denied-routes` then either the network address (in dotted decimal format) or the network mask (in slash prefix format) to view all information on routes denied using neighbor inbound filters.
Command Modes

- EXEC
- EXEC Privilege

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The following describes the `show ip bgp ipv6 unicast neighbors` command shown in the Example below.

<table>
<thead>
<tr>
<th>Lines Beginning With</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>BGP neighbor</td>
<td>Displays the BGP neighbor address and its AS number. The last phrase in the line indicates whether the link between the BGP router and its neighbor is an external or internal one. If they are located in the same AS, then the link is internal; otherwise, the link is external.</td>
</tr>
<tr>
<td>BGP version</td>
<td>Displays the BGP version (always version 4) and the remote router ID.</td>
</tr>
<tr>
<td>BGP state</td>
<td>Displays the neighbor's BGP state and the amount of time in hours:minutes:seconds it has been in that state.</td>
</tr>
<tr>
<td>Last read</td>
<td>This line displays the following information:</td>
</tr>
<tr>
<td></td>
<td>• last read is the time (hours:minutes:seconds) the router reads a message from its neighbor</td>
</tr>
<tr>
<td></td>
<td>• hold time is the number of seconds configured between messages from its neighbor</td>
</tr>
<tr>
<td></td>
<td>• keepalive interval is the number of seconds between keepalive messages to help ensure that the TCP session is still alive</td>
</tr>
<tr>
<td>Received messages</td>
<td>This line displays the number of BGP messages received, the number of notifications (error messages), and the number of messages waiting in a queue for processing.</td>
</tr>
<tr>
<td>Sent messages</td>
<td>The line displays the number of BGP messages sent, the number of notifications (error messages), and the number of messages waiting in a queue for processing.</td>
</tr>
<tr>
<td>Received updates</td>
<td>This line displays the number of BGP updates received and sent.</td>
</tr>
<tr>
<td>Soft reconfiguration</td>
<td>This line indicates that soft reconfiguration inbound is configured.</td>
</tr>
<tr>
<td>Minimum time</td>
<td>Displays the minimum time, in seconds, between advertisements.</td>
</tr>
<tr>
<td>(List of inbound and outbound policies)</td>
<td>Displays the policy commands configured and the names of the Route map, AS-PATH ACL, or Prefix list configured for the policy.</td>
</tr>
<tr>
<td>Lines Beginning With</td>
<td>Description</td>
</tr>
<tr>
<td>----------------------</td>
<td>-------------</td>
</tr>
<tr>
<td>For address family:</td>
<td>Displays IPv6 Unicast as the address family.</td>
</tr>
<tr>
<td>BGP table version</td>
<td>Displays which version of the primary BGP routing table the router and the neighbor are using.</td>
</tr>
<tr>
<td>Prefixes accepted</td>
<td>Displays the number of network prefixes accepted by the router and the amount of memory used to process those prefixes.</td>
</tr>
<tr>
<td>Prefixes advertised</td>
<td>Displays the number of network prefixes advertised, the number rejected, and the number withdrawn from the BGP routing table.</td>
</tr>
<tr>
<td>Connections established</td>
<td>Displays the number of TCP connections established and dropped between the two peers to exchange BGP information.</td>
</tr>
<tr>
<td>Last reset</td>
<td>Displays the amount of time since the peering session was last reset. Also states if the peer resets the peering session. If the peering session was never reset, the word “never” is displayed.</td>
</tr>
<tr>
<td>Local host:</td>
<td>Displays the peering address of the local router and the TCP port number.</td>
</tr>
<tr>
<td>Foreign host:</td>
<td>Displays the peering address of the neighbor and the TCP port number.</td>
</tr>
</tbody>
</table>

**Example**

```bash
dell#show ip bgp ipv6 unicast neighbors

BGP neighbor is 5ffe:10::3, remote AS 1, external link
BGP version 4, remote router ID 5.5.5.3
BGP state ESTABLISHED, in this state for 00:00:32
Last read 00:00:32, last write 00:00:32
Hold time is 180, keepalive interval is 60 seconds
Received 1404 messages, 0 in queue
3 opens, 1 notifications, 1394 updates
6 keepalives, 0 route refresh requests
Sent 48 messages, 0 in queue
3 opens, 2 notifications, 0 updates
43 keepalives, 0 route refresh requests
Minimum time between advertisement runs is 30 seconds
Minimum time before advertisements start is 0 seconds

Capabilities received from neighbor for IPv6 Unicast :
MULTIPROTO_EXT(1)
ROUTE_REFRESH(2)
CISCO_ROUTE_REFRESH(128)

Capabilities advertised to neighbor for IPv6 Unicast :
MULTIPROTO_EXT(1)
ROUTE_REFRESH(2)
CISCO_ROUTE_REFRESH(128)

For address family: IPv6 Unicast
BGP table version 12, neighbor version 12
```
show ip bgp ipv6 unicast peer-group

Allows you to view information on the BGP peers in a peer group.

Syntax

show ip bgp ipv6 unicast peer-group [peer-group-name [summary]]
Parameters

peer-group-name  (OPTIONAL) Enter the name of a peer group to view information about that peer group only.
detail  (OPTIONAL) Enter the keyword detail to view peer-group-specific information for the IPv6 address family.
summary  (OPTIONAL) Enter the keyword summary to view status information of the peers in that peer group. The output is the same as that found in the show ip bgp ipv6 unicast summary command.

Command Modes

- EXEC
- EXEC Privilege

Command History

Version 9.2(0.0)  Introduced on the MXL 10/40GbE Switch IO Module.

Example

Dell#show ip bgp peer-group
Peer-group RR-CLIENT, remote AS 18508
  BGP version 4
  Minimum time between advertisement runs is 5 seconds
  For address family: IPv4 Unicast
  BGP neighbor is RR-CLIENT, peer-group internal,
  Number of peers in this group 1
  Peer-group members (* - outbound optimized):
    9000::4:

Peer-group RR-CLIENT-PASSIV, remote AS 18508
  BGP version 4
  Minimum time between advertisement runs is 5 seconds
  For address family: IPv4 Unicast
  BGP neighbor is RR-CLIENT-PASSIV, peer-group internal,
  Number of peers in this group 1
  Peer-group members (* - outbound optimized):
    9000::9:2*

Dell#

show ip bgp ipv6 unicast summary

Allows you to view the status of all BGP connections.

Syntax

show ip bgp ipv6 unicast summary

Command Modes

- EXEC
- EXEC Privilege
show ip bgp next-hop

View all next hops (using learned routes only) with current reachability and flap status. This command only displays one path, even if the next hop is reachable by multiple paths.

**Syntax**

```
show ip bgp next-hop [local-routes]
```

**Parameters**

- `local-routes` (OPTIONAL) Show next-hop information for local routes.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

- **Version 9.2(0.0)** Introduced on the MXL 10/40GbE Switch IO Module.

**Example**

```
Dell#show ip bgp next-hop
Next-hop              Via                  RefCount Cost  Flaps  Time Elapsed
9000::5:2 9000::5:2, Gi 8/38  2  0  0  0:00:23:22
9000::6:2 9000::6:2, Gi 8/38  2  0  0  0:00:23:22
9000::7:2 9000::7:2, Gi 8/38  2  0  0  0:00:23:22
9000::9:2 9000::9:2, Gi 8/38  6000  0  0  0:00:23:16
9000::a:2 9000::a:2, Gi 8/38  0  0  0:00:23:22
Dell#
```
**show ip bgp paths**

View all the BGP path attributes in the BGP database.

**Syntax**

```
show ip bgp paths [regexp regular-expression]
```

**Parameters**

- `regexp regular-expression` Enter a regular expression then use one or a combination of the following characters to match:
  - . = (period) any single character (including a white space).
  - * = (asterisk) the sequences in a pattern (0 or more sequences).
  - + = (plus) the sequences in a pattern (1 or more sequences).
  - ? = (question mark) sequences in a pattern (either 0 or 1 sequences).
  - [] = (brackets) a range of single-character patterns.
  - ^ = (caret) the beginning of the input string. If the caret is used at the beginning of a sequence or range, it matches on everything BUT the characters specified.
  - $ = (dollar sign) the end of the output string.

**NOTE:** You must enter an escape sequence (CTRL+v) prior to entering the `?` regular expression.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**show ip bgp paths as-path**

View all unique AS-PATHs in the BGP database.

**Syntax**

```
show ip bgp paths as-path
```

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.
show ip bgp paths community

View all unique COMMUNITY numbers in the BGP database.

Syntax
show ip bgp paths community

Command Modes
- EXEC
- EXEC Privilege

Command History
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

show ip bgp paths extcommunity

View all unique extended community information in the BGP database.

Syntax
show ip bgp paths extcommunity

Command Modes
- EXEC
- EXEC Privilege

Command History
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

show ip bgp regexp

Allows you to view the subset of BGP routing table matching the regular expressions specified.

Syntax
show ip bgp regexp regular-expression [character]

Parameters
- regular-expression [character]
  Enter a regular expression then use one or a combination of the following characters to match:
  - . = (period) any single character (including a white space).
  - * = (asterisk) the sequences in a pattern (0 or more sequences).
  - + = (plus) the sequences in a pattern (1 or more sequences).
  - ? = (question mark) sequences in a pattern (either 0 or 1 sequences).

  **NOTE:** You must enter an escape sequence (CTRL+v) prior to entering the ? regular expression.
  - [ ] = (brackets) a range of single-character patterns.
timers bgp

Allows you to adjust the BGP network timers for all neighbors.

Syntax
timers bgp keepalive holdtimer

To return to the default values, use the no timers bgp command.

Parameters

keepalive
Enter the time interval (in seconds) between which the system sends keepalive messages. The range is from 1 to 65535. The default is 60 seconds.

holdtimer
Enter the time interval (in seconds) that the system waits since the last keepalive message before declaring a BGP peer dead. The range is from 3 to 65535. The default is 180 seconds.

Defaults

• keepalive = 60 seconds
• holdtimer = 180 seconds

Command Modes

ROUTER BGP

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Related Commands

neighbor timers — adjusts BGP timers for a specific peer or peer group.
IPv6 MBGP Commands

Multiprotocol BGP (MBGP) is an enhanced BGP that enables multicast routing policy throughout the Internet and connecting multicast topologies between BGP and autonomous systems (AS). The Dell Networking operating software MBGP is implemented as per IETF RFC 1858.

address family

This command changes the context to subsequent address family identifier (SAFI).

Syntax

```
address family ipv6 unicast
```

To remove SAFI context, use the `no address family ipv6 unicast` command.

Parameters

- **ipv6**: Enter the keyword `ipv6` to specify the address family as IPv6.
- **unicast**: Enter the keyword `unicast` to specify multicast as SAFI.

Defaults

IPv6 Unicast

Command Modes

ROUTER BGPV6-ADDRESS FAMILY

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

After this command is executed, all subsequent commands apply to this address family. You can exit from this AFI/SAFI to the IPv6 Unicast (the default) family by entering the `exit` command and returning to the Router BGP context.

aggregate-address

Summarize a range of prefixes to minimize the number of entries in the routing table.

Syntax

```
aggregate-address ipv6-address prefix-length [advertise-map map-name] [as-set] [attribute-map map-name] [summary-only] [suppress-map map-name]
```

Parameters

- **ipv6-address**: Enter the IPv6 address in the x:x:x::x format then the prefix length in the /x format. The range is from /0 to /128.
- **prefix-length**: Enter the keyword `prefix-length` to specify the prefix length.

**NOTE**: The :: notation specifies successive hexadecimal fields of zeros.
<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>advertise-map</td>
<td>(OPTIONAL) Enter the keywords advertise-map then the name of a configured route map to set filters for advertising an aggregate route.</td>
</tr>
<tr>
<td>as-set</td>
<td>(OPTIONAL) Enter the keywords as-set to generate path attribute information and include it in the aggregate. AS_SET includes AS_PATH and community information from the routes included in the aggregated route.</td>
</tr>
<tr>
<td>attribute-map</td>
<td>(OPTIONAL) Enter the keywords attribute-map then the name of a configured route map to modify attributes of the aggregate, excluding AS_PATH and NEXT_HOP attributes.</td>
</tr>
<tr>
<td>summary-only</td>
<td>(OPTIONAL) Enter the keywords summary-only to advertise only the aggregate address. Specific routes are not advertised.</td>
</tr>
<tr>
<td>suppress-map</td>
<td>(OPTIONAL) Enter the keywords suppress-map then the name of a configured route map to identify which more-specific routes in the aggregate are suppressed.</td>
</tr>
</tbody>
</table>

**Defaults**

Not configured.

**Command Modes**

ROUTER-BGPV6-ADDRESS FAMILY

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

At least one of the routes included in the aggregate address must be in the BGP routing table for the configured aggregate to become active.

Do not add the as-set parameter to the aggregate. If routes within the aggregate are constantly changing, the aggregate flaps to keep track of the changes in the AS_PATH.

In route maps used in the suppress-map parameter, routes meeting the deny clause are not suppress; in other words, they are allowed. The opposite is true: routes meeting the permit clause are suppressed.

If the route is injected using the network command, that route stills appear in the routing table if the summary-only parameter is configured in the aggregate-address command.

The summary-only parameter suppresses all advertisements. If you want to suppress advertisements to only specific neighbors, use the neighbor distribute-list command.
**bgp dampening**

Enable MBGP route dampening.

**Syntax**

```
bgp dampening [half-life time] [route-map map-name]
```

To disable route dampening, use the `no bgp dampening [half-life time] [route-map map-name]` command.

**Parameters**

- **half-life time** (OPTIONAL) Enter the number of minutes after which the Penalty is decreased. After the router assigns a Penalty of 1024 to a route, the Penalty is decreased by half, after the half-life period expires. The range is from 1 to 45. The default is **15 minutes**.

- **route-map map-name** (OPTIONAL) Enter the keywords `route-map` then the name of a configured route map. Only match commands in the configured route map are supported.

**Defaults**

Disabled.

**Command Modes**

ROUTER BGPV6-ADDRESS FAMILY

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

---

**clear ip bgp ipv6 unicast**

Reset MBGP sessions.

**Syntax**

```
clear ip bgp ipv6 unicast * ipv6-address prefix-length [dampening | flap-statistics] peer-group
```

**Parameters**

- ***** Enter the character * to clear all peers.

- **ipv6-address prefix-length** Enter the IPv6 address in the x:x:x:x::x format then the prefix length in the /x format. The range is from /0 to /128.

  **NOTE:** The :: notation specifies successive hexadecimal fields of zeros.

- **dampening** (OPTIONAL) Enter the keyword dampening to clear route flap dampening information.

- **flap-statistics** (OPTIONAL) Enter the keywords flap-statistics to reset the flap statistics on all prefixes from that neighbor.

- **peer-group** (OPTIONAL) Enter the keywords peer-group to clear all members of a peer-group.
Command Modes
EXEC Privilege

Command History
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

clear ip bgp ipv6 unicast dampening

Clear information on route dampening.

Syntax
clear ip bgp dampening ipv6 unicast [network network-mask]

Parameters
network (OPTIONAL) Enter the IPv6 network address in x:x:x:x format.

network-mask If you enter the network address, next enter the network mask, from 0 to 128.

Command Modes
EXEC Privilege

Command History
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

clear ip bgp ipv6 unicast flap-statistics

Clear BGP flap statistics, which includes the number of flaps and the time of the last flap.

Syntax
clear ip bgp ipv6 unicast flap-statistics [network | filter-list list | regexp regexp]

Parameters
network (OPTIONAL) Enter the IPv6 network address in x:x:x:x format to clear flap statistics.

filter-list list (OPTIONAL) Enter the keywords filter-list then the name of a configured AS-PATH list (maximum 16 characters).

regexp regexp (OPTIONAL) Enter the keyword regexp then regular expressions. Use one or a combination of the following:

- . (period) matches on any single character, including white space.
- * (asterisk) matches on sequences in a pattern (zero or more sequences).
- + (plus sign) matches on sequences in a pattern (one or more sequences).
- ? (question mark) matches sequences in a pattern (0 or 1 sequences).
• [ ] (brackets) matches a range of single-character patterns.
• ^ (caret) matches the beginning of the input string. (If the caret is used at the beginning of a sequence or range, it matches on everything BUT the characters specified.)
• $ (dollar sign) matches the end of the output string.

Command Modes

EXEC Privilege

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

debug ip bgp ipv6 unicast dampening

View information on routes being dampened.

Syntax
debug ip bgp ipv6 unicast dampening

To disable debugging, use the no debug ip bgp ipv6 unicast dampening command.

Parameters
dampening

Enter the keyword dampening to clear route flap dampening information.

Command Modes

EXEC Privilege

Command History

Version 9.2(0.0) Introduced on the S4820T.

debug ip bgp ipv6 unicast peer-group updates

View information about BGP peer-group updates.

Syntax
debug ip bgp ipv6 unicast peer-group peer-group-name updates [in | out]

To disable debugging, use the no debug ip bgp ipv6 unicast peer-group peer-group-name updates [in | out] command.

Parameters

peer-group peer-group-name

Enter the keywords peer-group then the name of the peer-group.
**debug ip bgp ipv6 unicast updates**

View information about BGP updates.

**Syntax**

```
debug ip bgp ipv6 unicast ipv6-address prefix-length updates [in | out]
```

**Parameters**

- `ipv6-address prefix-length` Enter the IPv6 address in the x:x::x format then the prefix length in the /x format. The range is from /0 to /128.
  
  **NOTE:** The :: notation specifies successive hexadecimal fields of zeros.

- `updates` Enter the keyword updates to view BGP update information.

- `in` (OPTIONAL) Enter the keyword in to view only BGP updates received from neighbors.

- `out` (OPTIONAL) Enter the keyword out to view only BGP updates sent to neighbors.

**Defaults**

Disabled.

**Command Modes**

EXEC Privilege

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.
distance bgp

Define an administrative distance for routes.

**Syntax**

```
distance bgp external-distance internal-distance local-distance
```

To return to default values, use the `no distance bgp` command.

**Parameters**

- `external-distance` Enter a number to assign to routes learned from a neighbor external to the AS. The range is from 1 to 255. The default is 20.
- `internal-distance` Enter a number to assign to routes learned from a router within the AS. The range is from 1 to 255. The default is 200.
- `local-distance` Enter a number to assign to routes learned from networks listed in the network command. The range is from 1 to 255. The default is 200.

**Defaults**

- `external-distance = 20`
- `internal-distance = 200`
- `local-distance = 200`

**Command Modes**

ROUTER BGPV6-ADDRESS FAMILY

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

⚠️ **CAUTION**: Dell Networking recommends that you do not change the administrative distance of internal routes. Changing the administrative distances may cause routing table inconsistencies.

The higher the administrative distance assigned to a route means that your confidence in that route is low. Routes assigned an administrative distance of 255 are not installed in the routing table.

Routes from confederations are treated as internal BGP routes.

neighbor activate

Allows you to enable a specified neighbor/peer group for the current address and subsequent address family identifier (AFI/SAFI).

**Syntax**

```
neighbor [ipv6-address | peer-group-name] activate
```

To disable, use the `no neighbor [ipv6-address | peer-group-name] activate` command.
Parameters

ipv6-address  Enter the IPv6 address in the x:x:x:x::x format.

NOTE: The :: notation specifies successive hexadecimal fields of zeros.

peer-group-name  Identify a peer group by name.

activate  Enter the keyword activate to enable the identified neighbor or peer group in the new AFI/SAFI.

Defaults  Disabled.

Command Modes  ROUTER BGPV6-ADDRESS FAMILY

Command History  Version 9.2(0.0)  Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information  By default, when a neighbor/peer group configuration is created in the Router BGP context, it is enabled for the IPv6/Unicast AFI/SAFI. By using activate in the new context, the neighbor/peer group is enabled for AFI/SAFI.

Related Command  address family  — changes the context to SAFI.

neighbor advertisement-interval

Set the advertisement interval between BGP neighbors or within a BGP peer group.

Syntax

neighbor {ipv6-address | peer-group-name} advertisement-interval seconds

To return to the default value, use the no neighbor {ipv6-address | peer-group-name} advertisement-interval command.

Parameters

ipv6-address  Enter the IPv6 address in the x:x:x:x::x format.

NOTE: The :: notation specifies successive hexadecimal fields of zeros.

peer-group-name  Enter the name of the peer group to set the advertisement interval for all routers in the peer group.

seconds  Enter a number as the time interval, in seconds, between BGP advertisements. The range is from 0 to 600 seconds. The default is 5 seconds for internal BGP peers and 30 seconds for external BGP peers.

Defaults  •  seconds = 5 seconds (internal peers)
• seconds = 30 seconds (external peers)

Command Modes
ROUTER BGPV6-ADDRESS FAMILY

Command History
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

neighbor default-originate
Inject the default route to a BGP peer or neighbor.

Syntax
neighbor {ipv6-address | peer-group-name} default-originate
[route-map map-name]

To remove a default route, use the no neighbor {ipv6-address | peer-
group-name} default-originate command.

Parameters
ipv6-address Enter the IPv6 address in the x:x::x format.

NOTE: The :: notation specifies successive hexadecimal fields of zeros.

peer-group-
name Enter the name of the peer group to set the default route of all routers in that peer group.

route-map (OPTIONAL) Enter the keywords route-map then the name of a configured route map.

Defaults
Not configured.

Command Modes
ROUTER BGPV6-ADDRESS FAMILY

Command History
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

neighbor distribute-list
Distribute BGP information using an established prefix list.

Syntax
neighbor {ipv6-address | peer-group-name} distribute-list prefix-list-name {in | out}

To delete a neighbor distribution list, use the no neighbor {ipv6-address | peer-group-name} distribute-list prefix-list-name {in | out} command.
Parameters

- **ipv6-address**: Enter the IPv6 address in the x:x:x:x::x format.
  - **NOTE**: The :: notation specifies successive hexadecimal fields of zeros.

- **peer-group-name**: Enter the name of the peer group.

- **prefix-list-name**: Enter the name of an established prefix list. If the prefix list is not configured, the default is **permit** (to allow all routes).

- **in**: Enter the keyword in to distribute only inbound traffic.

- **out**: Enter the keyword out to distribute only outbound traffic.

Defaults

Not configured.

Command Modes

- ROUTER BGPV6-ADDRESS FAMILY

Command History

- **Version 9.2(0.0)**: Introduced on the MXL 10/40Gbe Switch IO Module.

Related Commands

- `neighbor filter-list` — assigns a AS-PATH list to a neighbor or peer group.
- `neighbor route-map` — assigns a route map to a neighbor or peer group.

**neighbor filter-list**

Configure a BGP filter based on the AS-PATH attribute.

**Syntax**

```plaintext
neighbor [ipv6-address | peer-group-name] filter-list aspath access-list-name [in | out]
```

To delete a BGP filter, use the `no neighbor [ipv6-address | peer-group-name] filter-list aspath access-list-name [in | out]` command.

**Parameters**

- **ipv6-address**: Enter the IPv6 address in the x:x:x:x::x format.
  - **NOTE**: The :: notation specifies successive hexadecimal fields of zeros.

- **peer-group-name**: Enter the name of the peer group to apply the filter to all routers in the peer group.

- **access-list-name**: Enter the name of an established AS-PATH access list. If the AS-PATH access list is not configured, the default is **permit** (to allow routes).

- **in**: Enter the keyword in to filter inbound BGP routes.
Enter the keyword `out` to filter outbound BGP routes.

**Defaults**
Not configured.

**Command Modes**
ROUTER BGPV6-ADDRESS FAMILY

**Command History**
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

### neighbor maximum-prefix

Control the number of network prefixes received.

**Syntax**
```
neighbor {ipv6-address | peer-group-name} maximum-prefix maximum [threshold] [warning-only]
```

To return to the default values, use the `no neighbor {ipv6-address | peer-group-name} maximum-prefix maximum [threshold] [warning-only]` command.

**Parameters**
- `ipv6-address`: Enter the IPv6 address in the `x:x:x:x::x` format.
  
  **NOTE**: The `::` notation specifies successive hexadecimal fields of zeros.

- `peer-group-name`: Enter the name of the peer group.

- `maximum`: Enter a number as the maximum number of prefixes allowed for this BGP router. The range is from 1 to 4294967295.

- `threshold` (OPTIONAL): Enter a number to be used as a percentage of the maximum value. When the number of prefixes reaches this percentage of the maximum value, the software sends a message. The range is from 1 to 100 percent. The default is 75.

- `warning-only` (OPTIONAL): Enter the keyword `warning-only` to set the router to send a log message when the maximum value is reached. If this parameter is not set, the router stops peering when the maximum number of prefixes is reached.

**Defaults**
threshold = 75

**Command Modes**
ROUTER BGPV6-ADDRESS FAMILY

**Command History**
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.
neighbor next-hop-self

Allows you to configure the router as the next hop for a BGP neighbor.

**Syntax**
```
neighbor {ipv6-address | peer-group-name} next-hop-self
```

To return to the default setting, use the `no neighbor {ipv6-address | peer-
 group-name} next-hop-self` command.

**Parameters**
- `ipv6-address`
  - Enter the IPv6 address in the `x:x:x:x::x` format.
  - **NOTE:** The :: notation specifies successive hexadecimal fields of zeros.
- `peer-group-name`
  - (OPTIONAL) Enter the name of the peer group.

**Defaults**
Disabled.

**Command Modes**
- ROUTER BGPV6-ADDRESS FAMILY

**Command History**
Version 9.2(0.0) Introduced on the M6100 Series and 5480G Switch.

**Usage Information**
If you configure the `set ipv6 next-hop` command in ROUTE-MAP mode, its configuration takes precedence over the `neighbor next-hop-self` command.

neighbor remove-private-as

Remove private AS numbers from the AS-PATH of outgoing updates.

**Syntax**
```
neighbor {ipv6-address | peer-group-name} remove-private-as
```

To return to the default, use the `no neighbor {ipv6-address | peer-
 group-name} remove-private-as` command.

**Parameters**
- `ipv6-address`
  - Enter the IPv6 address in the `x:x:x:x::x` format.
  - **NOTE:** The :: notation specifies successive hexadecimal fields of zeros.
- `peer-group-name`
  - Enter the name of the peer group to remove the private AS numbers.

**Defaults**
Disabled (that is, the private AS number are not removed).

**Command Modes**
- ROUTER BGPV6-ADDRESS FAMILY
**neighbor route-map**

Apply an established route map to either incoming or outbound routes of a BGP neighbor or peer group.

**Syntax**

```
neighbor {ipv6-address | peer-group-name} route-map map-name {in | out}
```

To remove the route map, use the `no neighbor {ipv6-address | peer-group-name} route-map map-name {in | out}` command.

**Parameters**

- **ipv6-address**: Enter the IPv6 address in the x:x:x::x format.
  - **NOTE**: The :: notation specifies successive hexadecimal fields of zeros.
- **peer-group-name**: Enter the name of the peer group.
- **map-name**: Enter the name of an established route map. If the Route map is not configured, the default is `deny` (to drop all routes).
- **in**: Enter the keyword `in` to filter inbound routes.
- **out**: Enter the keyword `out` to filter outbound routes.

**Defaults**

Not configured.

**Command Modes**

ROUTER BGPV6-ADDRESS FAMILY

**Command History**

- **Version 9.2(0.0)**: Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

When you apply a route map to outbound routes, only routes that match at least one section of the route map are permitted.

If you identify a peer group by name, the peers in that peer group inherit the characteristics in the Route map used in this command. If you identify a peer by IP address, the Route map overwrites either the inbound or outbound policies on that peer.
**neighbor route-reflector-client**

Configure a neighbor as a member of a route reflector cluster.

Syntax

```
neighbor {ipv6-address | peer-group-name} route-reflector-client
```

To indicate that the neighbor is not a route reflector client or to delete a route reflector configuration, use the `no neighbor {ipv6-address | peer-group-name} route-reflector-client` command.

Parameters

- **ipv6-address**
  - Enter the IPv6 address in the x:x:x::x format.
  - **NOTE:** The :: notation specifies successive hexadecimal fields of zeros.

- **peer-group-name**
  - Enter the name of the peer group. All routers in the peer group receive routes from a route reflector.

Defaults

Not configured.

Command Modes

- ROUTER BGPV6-ADDRESS FAMILY

Command History

Version 9.2(0.0)  Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The first time you enter this command it configures the neighbor as a route reflector and members of the route-reflector cluster. Internal BGP (IBGP) speakers do not need to be fully meshed if you configure a route reflector.

When all clients of a route reflector are disabled, the neighbor is no longer a route reflector.

**network**

Specify the networks for the BGP process and enter them in the BGP routing table.

Syntax

```
network ipv6-address [route-map map-name]
```

To remove a network, use the `no network ipv6-address [route-map map-name]` command.

Parameters

- **ipv6-address**
  - Enter the IPv6 address in the x:x:x::x format.
  - **NOTE:** The :: notation specifies successive hexadecimal fields of zeros.
route-map map-name

(Optional) Enter the keywords route-map then the name of an established route map.
If the route map is not configured, the default is deny (to drop all routes).

Defaults
Not configured.

Command Modes
ROUTER BGPV6-ADDRESS FAMILY

Command History
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
The software resolves the network address configured by the network command with the routes in the main routing table to ensure that the networks are reachable using non-BGP routes and non-default routes.

Related Commands
redistribute — redistributes routes into BGP.

redistribute
Redistribute routes into BGP.

Syntax
redistribute {connected | static} [route-map map-name]

To disable redistribution, use the no redistribute {connected | static} command.

Parameters
connected Enter the keyword connected to redistribute routes from physically connected interfaces.

static Enter the keyword static to redistribute manually configured routes. These routes are treated as incomplete routes.

route-map map-name

(Optional) Enter the keywords route-map then the name of an established route map.
If the route map is not configured, the default is deny (to drop all routes).

Defaults
Not configured.

Command Modes
ROUTER BGPV6-ADDRESS FAMILY

Command History
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.
Usage Information

If you do not configure the `default-metric` command, in addition to the `redistribute` command, or there is no route map to set the metric, the metric for redistributed static and connected is “0”.

To redistribute the default route (0::0/0), configure the `neighbor default-originate` command.

Related Commands

`neighbor default-originate` — injects the default route.

show ip bgp ipv6 unicast

View the current BGP information.

Syntax

```
show ip bgp ipv6 unicast [network [network-mask] [longer-prefixes]]
```

Parameters

- `network` (OPTIONAL) Enter the network address (in dotted decimal format) of the BGP network to view information only on that network.
- `network-mask` (OPTIONAL) Enter the keywords `network mask` (in slash prefix format) of the BGP network address.
- `longer-prefixes` (OPTIONAL) Enter the keywords `longer-prefixes` to view all routes with a common prefix.

Command Modes

- EXEC
- EXEC Privilege

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

When you enable the `bgp non-deterministic-med` command, the `show ip bgp` command output for a BGP route does not list the INACTIVE reason.

show ip bgp ipv6 unicast cluster-list

View BGP neighbors in a specific cluster.

Syntax

```
show ip bgp ipv6 unicast cluster-list [cluster-id]
```

Parameters

- `cluster-id` (OPTIONAL) Enter the cluster id in dotted decimal format.
show ip bgp ipv6 unicast community

View information on all routes with community attributes or view specific BGP community groups.

Syntax

```
show ip bgp ipv6 unicast community [community-number] [local-as] [no-export] [no-advertise]
```

Parameters

- **community-number**: Enter the community number in AA:NN format where AA is the AS number (2 bytes) and NN is a value specific to that autonomous system. You can specify up to eight community numbers to view information on those community groups.
- **local-AS**: Enter the keywords `local-AS` to view all routes with the COMMUNITY attribute of NO_EXPORT_SUBCONFED. All routes with the NO_EXPORT_SUBCONFED (0xFFFFFF03) community attribute must not be advertised to external BGP peers.
- **no-advertise**: Enter the keywords `no-advertise` to view all routes containing the well-known community attribute of NO_ADVERTISE. All routes with the NO_ADVERTISE (0xFFFFFF02) community attribute must not be advertised to other BGP peers.
- **no-export**: Enter the keywords `no-export` to view all routes containing the well-known community attribute of NO_EXPORT. All routes with the NO_EXPORT (0xFFFFFF01) community attribute must not be advertised outside a BGP confederation boundary.

Command Modes

- EXEC
- EXEC Privilege

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

To view the total number of COMMUNITY attributes found, use the `show ip bgp ipv6 unicast summary` command. The text line above the route table states the number of COMMUNITY attributes found.
show ip bgp ipv6 unicast community-list

View routes that are affected by a specific community list.

Syntax

```
show ip bgp ipv6 unicast community-list community-list-name
```

Parameters

- `community-list-name` Enter the name of a configured IP community list.

Command Modes

- EXEC
- EXEC Privilege

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

show ip bgp ipv6 unicast dampened-paths

View BGP routes that are dampened (non-active).

Syntax

```
show ip bgp ipv6 unicast dampened-paths
```

Command Modes

- EXEC
- EXEC Privilege

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

show ip bgp ipv6 unicast detail

Display detailed BGP information.

Syntax

```
show ip bgp ipv6 unicast detail
```

Command Modes

- EXEC
- EXEC Privilege

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Example

```
R2_Training#show ip bgp ipv6 unicast detail
Detail information for BGP Node
bgpNdP 0x41a17000 : NdTmrP 0x41a17000 : NdKATmrP 0x41a17014 : NdTics 327741 :
NhLocAS 1 : NdState 2 : NdRPMPrim 1 : NdListSoc 13
```
show ip bgp ipv6 unicast filter-list

View the routes that match the filter lists.

**Syntax**

```plaintext
show ip bgp ipv6 unicast filter-list as-path-name
```

**Parameters**

- `as-path-name` Enter the name of an AS-PATH.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

show ip bgp ipv6 unicast flap-statistics

View flap statistics on BGP routes.

**Syntax**

```plaintext
show ip bgp ipv6 unicast flap-statistics [ipv6-address prefix-length] [filter-list as-path-name] [regexp regular-expression]
```

**Parameters**

- `ipv6-address prefix-length` Enter the IPv6 address in the x:x:x::x format then the prefix length in the /x format. The range is from /0 to /128.

  **NOTE:** The :: notation specifies successive hexadecimal fields of zeros.
filter-list as-path-name

(OPTIONAL) Enter the keywords filter-list then the name of a configured AS-PATH ACL.

regexp regular-expression

Enter a regular expression then use one or a combination of the following characters to match:

• . = (period) any single character (including a white space).
• * = (asterisk) the sequences in a pattern (0 or more sequences).
• + = (plus) the sequences in a pattern (1 or more sequences).
• ? = (question mark) sequences in a pattern (either 0 or 1 sequences).

NOTE: You must enter an escape sequence (CTRL+v) prior to entering the ? regular expression.

• [ ] = (brackets) a range of single-character patterns.
• ^ = (caret) the beginning of the input string. If the caret is used at the beginning of a sequence or range, it matches on everything BUT the characters specified.
• $ = (dollar sign) the end of the output string.

Command Modes

• EXEC
• EXEC Privilege

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Example

Dell#show ip bgp ipv6 unicast flap-statistics
BGP table version is 8, local router ID is 5.5.10.4
Status codes: s suppressed, S stale, d damped, h history, * valid, > best Path
source: I - internal, a - aggregate, c - confed-external, r - redistributed, n - network
Origin codes: i - IGP, e - EGP, ? - incomplete

Dell#
### show ip bgp ipv6 unicast inconsistent-as

View routes with inconsistent originating autonomous system (AS) numbers; that is, prefixes that are announced from the same neighbor AS but with a different AS-Path.

**Syntax**

```
show ip bgp ipv6 unicast inconsistent-as
```

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

### show ip bgp ipv6 unicast neighbors

Allows you to view the information exchanged by BGP neighbors.

**Syntax**

```
show ip bgp ipv6 unicast neighbors [ipv6-address prefix-length [advertised-routes | dampened-routes | detail | flap-statistics | routes]]
```

**Parameters**

- **ipv6-address**
  - **prefix-length**
    - (OPTIONAL) Enter the IPv6 address in the x:x:x:x::x format then the prefix length in the /x format. The range is from /0 to /128.
    - **NOTE:** The :: notation specifies successive hexadecimal fields of zeros.

- **advertised-routes**
  - (OPTIONAL) Enter the keywords advertised-routes to view only the routes the neighbor sent.

- **dampened-routes**
  - (OPTIONAL) Enter the keywords dampened-routes to view information on dampened routes from the BGP neighbor.

- **flap-statistics**
  - (OPTIONAL) Enter the keywords flap-statistics to view flap statistics on the neighbor’s routes.

- **detail**
  - (OPTIONAL) Display detailed neighbor information.

- **routes**
  - (OPTIONAL) Enter the keyword routes to view only the neighbor’s feasible routes.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.
The following describes the `show ip bgp ipv6 unicast neighbors` command shown in the Example below.

<table>
<thead>
<tr>
<th>Lines Beginning With</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>BGP neighbor</td>
<td>Displays the BGP neighbor address and its AS number. The last phrase in the line indicates whether the link between the BGP router and its neighbor is an external or internal one. If they are located in the same AS, then the link is internal; otherwise, the link is external.</td>
</tr>
<tr>
<td>BGP version</td>
<td>Displays the BGP version (always version 4) and the remote router ID.</td>
</tr>
<tr>
<td>BGP state</td>
<td>Displays the neighbor’s BGP state and the amount of time in hours:minutes:seconds it has been in that state.</td>
</tr>
<tr>
<td>Last read</td>
<td>This line displays the following information:</td>
</tr>
<tr>
<td></td>
<td>• last read is the time (hours:minutes:seconds) the router reads a message from its neighbor</td>
</tr>
<tr>
<td></td>
<td>• hold time is the number of seconds configured between messages from its neighbor</td>
</tr>
<tr>
<td></td>
<td>• keepalive interval is the number of seconds between keepalive messages to help ensure that the TCP session is still alive</td>
</tr>
<tr>
<td>Received messages</td>
<td>This line displays the number of BGP messages received, the number of notifications (error messages), and the number of messages waiting in a queue for processing.</td>
</tr>
<tr>
<td>Sent messages</td>
<td>The line displays the number of BGP messages sent, the number of notifications (error messages), and the number of messages waiting in a queue for processing.</td>
</tr>
<tr>
<td>Received updates</td>
<td>This line displays the number of BGP updates received and sent.</td>
</tr>
<tr>
<td>Minimum time</td>
<td>Displays the minimum time, in seconds, between advertisements.</td>
</tr>
<tr>
<td>(List of inbound and outbound policies)</td>
<td>Displays the policy commands configured and the names of the Route map, AS-PATH ACL, or Prefix list configured for the policy.</td>
</tr>
<tr>
<td>For address family:</td>
<td>Displays IPv6 Unicast as the address family.</td>
</tr>
<tr>
<td>BGP table version</td>
<td>Displays which version of the primary BGP routing table the router and the neighbor are using.</td>
</tr>
<tr>
<td>Accepted Prefixes</td>
<td>Displays the number of network prefixes accepted by the router and the amount of memory used to process those prefixes.</td>
</tr>
<tr>
<td>Lines Beginning With</td>
<td>Description</td>
</tr>
<tr>
<td>----------------------</td>
<td>-------------</td>
</tr>
<tr>
<td>Prefixes advertised</td>
<td>Displays the number of network prefixes advertised, the number rejected, and the number withdrawn from the BGP routing table.</td>
</tr>
<tr>
<td>Connections established</td>
<td>Displays the number of TCP connections established and dropped between the two peers to exchange BGP information.</td>
</tr>
<tr>
<td>Last reset</td>
<td>Displays the amount of time since the peering session was last reset. Also states if the peer resets the peering session. If the peering session was never reset, the word “never” is displayed.</td>
</tr>
<tr>
<td>Local host:</td>
<td>Displays the peering address of the local router and the TCP port number.</td>
</tr>
<tr>
<td>Foreign host:</td>
<td>Displays the peering address of the neighbor and the TCP port number.</td>
</tr>
</tbody>
</table>

**Example**

Dell#show ip bgp ipv6 unicast neighbors

BGP neighbor is 5ffe:10::3, remote AS 1, external link
  BGP version 4, remote router ID 5.5.5.3
  BGP state ESTABLISHED, in this state for 00:00:32
  Last read 00:00:32, last write 00:00:32
  Hold time is 180, keepalive interval is 60 seconds
  Received 1404 messages, 0 in queue
    3 opens, 1 notifications, 1394 updates
    6 keepalives, 0 route refresh requests
  Sent 48 messages, 0 in queue
    3 opens, 2 notifications, 0 updates
    43 keepalives, 0 route refresh requests
  Minimum time between advertisement runs is 30 seconds
  Minimum time before advertisements start is 0 seconds

Capabilities received from neighbor for IPv6 Unicast :
  MULTIPROTO_EXT(1)
  ROUTE_REFRESH(2)
  CISCO_ROUTE_REFRESH(128)

Capabilities advertised to neighbor for IPv6 Unicast :
  MULTIPROTO_EXT(1)
  ROUTE_REFRESH(2)
  CISCO_ROUTE_REFRESH(128)

For address family: IPv6 Unicast
  BGP table version 12, neighbor version 12
  2 accepted prefixes consume 32 bytes

  Prefixes accepted 1 (consume 4 bytes), withdrawn 0 by peer
  Prefixes advertised 0, rejected 0, withdrawn 0 from peer
  Connections established 3; dropped 2
  Last reset 00:00:39, due to Closed by neighbor

Notification History
  'OPEN error/Bad AS' Sent : 0 Recv: 1

Local host: 5ffe:10::4, Local port: 179
show ip bgp ipv6 unicast peer-group

Allows you to view information on the BGP peers in a peer group.

Syntax

show ip bgp ipv6 unicast peer-group [peer-group-name [summary]]

Parameters

- **peer-group-name** (OPTIONAL) Enter the name of a peer group to view information about that peer group only.
- **summary** (OPTIONAL) Enter the keyword summary to view status information of the peers in that peer group. The output is the same as that found in the show ip bgp ipv6 unicast summary command.

Command Modes

- EXEC
- EXEC Privilege

660
**show ip bgp ipv6 unicast summary**

Allows you to view the status of all BGP connections.

**Syntax**

```
show ip bgp ipv6 unicast summary
```

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

Version 9.2(0.0)  Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

The following describes the `show ip bgp ipv6 unicast summary` command shown in the Example below.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>BGP router identifier</td>
<td>Displays the local router ID and the AS number.</td>
</tr>
<tr>
<td>BGP table version</td>
<td>Displays the BGP table version and the main routing table version.</td>
</tr>
<tr>
<td>network entries</td>
<td>Displays the number of network entries, route paths, and the amount of memory used to process those entries.</td>
</tr>
<tr>
<td>BGP path attribute entries</td>
<td>Displays the number of BGP path attributes and the amount of memory used to process them.</td>
</tr>
<tr>
<td>BGP AS-PATH entries</td>
<td>Displays the number of BGP AS-PATH attributes processed and the amount of memory used to process them.</td>
</tr>
<tr>
<td>BGP community entries</td>
<td>Displays the number of BGP COMMUNITY attributes processed and the amount of memory used to process them. The show ip bgp ipv6 unicast community command provides more details on the COMMUNITY attributes.</td>
</tr>
<tr>

Dell# ```
iSCSI Optimization

Internet small computer system interface (iSCSI) optimization enables quality-of-service (QoS) treatment for iSCSI storage traffic.
To configure and verify the iSCSI optimization feature, use the following Dell Networking operating software commands.

advertise dcbx-app-tlv

Configure DCBX to send iSCSI TLV advertisements.

Syntax
advertise dcbx-app-tlv iscsi

To disable DCBX iSCSI TLV advertisements, use the no advertise dcbx-app-tlv iscsi command.

Defaults
Disabled.

Command Modes
PROTOCAL LLDP

Command History
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
You can configure iSCSI TLVs to send either globally or on a specified interface. The interface configuration takes priority over global configuration.

iscsi aging time

Set the aging time for iSCSI sessions.

Syntax
iscsi aging time time

To remove the iSCSI session aging time, use the no iscsi aging time command.

Parameters
time

Enter the aging time for the iSCSI session. The range is from 5 to 43,200 minutes.

Defaults
10 minutes
**iscsi cos**

Set the QoS policy that is applied to the iSCSI flows.

**Syntax**

```
iscsi cos {enable | disable | dot1p vlan-priority-value [remark] | dscp dscp-value [remark]}
```

To disable the QoS policy, use the `no iscsi cos dscp` command.

**Parameters**

- **enable**
  - Enter the keyword `enable` to allow the application of preferential QoS treatment to iSCSI traffic so that the iSCSI packets are scheduled in the switch with a dot1p priority 4 regardless of the VLAN priority tag in the packet. The default is: the iSCSI packets are handled with dot1p priority 4 without remark.

- **disable**
  - Enter the keyword `disable` to disable the application of preferential QoS treatment to iSCSI frames.

- **dot1p vlan-priority-value**
  - Enter the dot1p value of the VLAN priority tag assigned to the incoming packets in an iSCSI session. The range is from 0 to 7. The default is the dot1p value in ingress iSCSI frames is not changed and is the same priority is used in iSCSI TLV advertisements if you did not enter the `iscsi priority-bits` command.

- **dscp dscp-value**
  - Enter the DSCP value assigned to the incoming packets in an iSCSI session. The valid range is from 0 to 63. The default is: the DSCP value in ingress packets is not changed.

- **remark**
  - Marks the incoming iSCSI packets with the configured dot1p or DSCP value when they egress to the switch. The default is: the dot1p and DSCP values in egress packets are not changed.

**Defaults**

Disabled.

**Command Modes**

- CONFIGURATION

**Command History**

- Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.
iscsi enable
Globally enable iSCSI optimization.

Syntax  
iscsi enable
To disable iSCSI optimization, use the no iscsi enable command.

Parameters  
enable  
Enter the keyword enable to enable the iSCSI optimization feature.

Defaults  
Disabled.

Command Modes  
CONFIGURATION

Command History  
Version 8.3.16.1  
Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information  
When you enable the iSCSI feature using the iscsi enable command, flow control settings are set to rx on tx off on all interfaces.

iscsi priority-bits
Configure the priority bitmap that advertises in the iSCSI application TLVs.

Syntax  
iscsi priority-bits
To remove the configured priority bitmap, use the no iscsi priority-bits command.

Defaults  
4 (0x10 in the bitmap)

Command Modes  
PROTOCOL LLDP (only on the global, not on the interface)

Command History  
Version 8.3.16.1  
Introduced on the MXL 10/40GbE Switch IO Module.

iscsi profile-compellant
Configure the auto-detection of Dell Compellent arrays on a port.

Syntax  
iscsi profile-compellant

Defaults  
Dell Compellent disk arrays are not detected.
**Command Modes**

**Version 8.3.16.1**

Introduced on the MXL 10/40GbE Switch IO Module.

---

**iscsi target port**

Configure the iSCSI target ports and optionally, the IP addresses on which iSCSI communication is monitored.

**Syntax**

```
iscsi target port [tcp-port-2...tcp-port-16]ip-address [ip-address]
```

To remove the configured iSCSI target ports or IP addresses, use the `no iscsi target port` command.

**Parameters**

- `tcp-port-2...tcp-port-16`
  - Enter the tcp-port number of the iSCSI target ports. The tcp-port-\(n\) is the TCP port number or a list of TCP port numbers on which the iSCSI target listens to requests. Separate port numbers with a comma. The default is `860, 3260`.

- `ip-address`
  - (Optional) Enter the ip-address that the iSCSI monitors. The ip-address specifies the IP address of the iSCSI target.

**Defaults**

860, 3260

**Command Modes**

**CONFIGURATION**

**Command History**

**Version 8.3.16.1**

Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

- You can configure up to 16 target TCP ports on the switch in one command or multiple commands.

- When you use the `no iscsi target port` command and the TCP port you wish to delete is one bound to a specific IP address, the IP address value must be included in the command.

---

**show iscsi**

Display the currently configured iSCSI settings.

**Syntax**

```
show iscsi
```

666
show iscsi session

Display information about active iSCSI sessions on the switch.

Syntax

```
show iscsi session
```

Command Modes

- EXEC
- EXEC Privilege

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Example

```
Dell# show iscsi session
Session 0:
-----------------------------------------------
Target: iqn.2001-05.com.equallogic:0-8a0906-0e70c2002-10a0018426a48c94-iom010
Initiator: iqn.1991-05.com.microsoft:win-x9l8v27yajg
ISID: 400001370000

Session 1:
-----------------------------------------------
Target: iqn.2001-05.com.equallogic:0-8a0906-0f60c2002-0360018428d48c94-iom011
Initiator: iqn.1991-05.com.microsoft:win-x9l8v27yajg
ISID: 400001370000.
```
Related Commands

- `show iscsi` — displays the currently configured iSCSI settings.
- `show iscsi sessions detailed` — displays detailed information about active iSCSI sessions on the switch.
- `show run iscsi` — shows `run iscsi`.

show iscsi session detailed

Display detailed information on active iSCSI sessions on the switch.

Syntax

```plaintext
show iscsi session detailed [session isid]
```

Parameters

- `isid` Enter the session’s iSCSI ID to display detailed information about the specified iSCSI session.

Command Modes

- EXEC
- EXEC Privilege

Command History

- **Version 8.3.16.1** Introduced on the MXL 10/40GbE Switch IO Module.

Example

```plaintext
Dell# show iscsi session detailed
Session 0 :
-----------------------------------------------
Up Time: 00:00:01:28 (DD:HH:MM:SS)
Time for aging out: 00:00:09:34 (DD:HH:MM:SS)
ISID: 806978696102
Initiator Initiator Target Target Connection
IP Address TCP Port IP Address TCPPort ID
10.10.0.44 33345 10.10.0.101 3260 0

Session 1 :
-----------------------------------------------
Up Time: 00:00:01:22 (DD:HH:MM:SS)
Time for aging out: 00:00:09:31 (DD:HH:MM:SS)
ISID: 806978696102
Initiator Initiator Target Target Connection
IP Address TCP Port IP Address TCPPort ID
10.10.0.53 33432 10.10.0.101 3260 0
```

Related Commands

- `show iscsi` — displays the currently configured iSCSI settings.
- `show iscsi sessions` — displays information about active iSCSI sessions on the switch.
- `show run iscsi` — shows `run iscsi`. 
show run iscsi

Display all globally configured non-default iSCSI settings in the current session.

Syntax

show run iscsi

Command Modes

EXEC Privilege

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Related Commands

- `show iscsi` — displays the currently configured iSCSI settings.
- `show iscsi sessions` — show iscsi session — displays detailed information about active iSCSI sessions on the switch.
- `show iscsi sessions detailed` — displays detailed information on active iSCSI sessions on the switch.
Intermediate System to Intermediate System (IS-IS)

The intermediate system to intermediate system (IS-IS) protocol for IPv4 and IPv6 is supported on the on the MXL 10/40GbE Switch IO Module.

IS-IS is an interior gateway protocol that uses a shortest-path-first algorithm. IS-IS facilitates the communication between open systems, supporting routers passing both IP and OSI traffic.

A router is considered an intermediate system. Networks are partitioned into manageable routing domains, called areas. Intermediate systems send, receive, and forward packets to other routers within their area (Level 1 and Level 1-2 devices). Only Level 1-2 and Level 2 devices communicate with other areas.

IS-IS protocol standards are listed in the Standard Compliance chapter in the Dell Networking OS Configuration Guide.

NOTE: The fundamental mechanisms of IS-IS are the same between IPv4 and IPv6. Where there are differences between the two versions, they are identified and clarified in this chapter. Except where identified, the information in this chapter applies to both protocol versions.

adjacency-check

Verify that the “protocols supported” field of the IS-IS neighbor contains matching values to this router.

Syntax

adjacency-check

To disable adjacency check, use the no adjacency-check command.

Defaults

Enabled.

Command Modes

- ROUTER ISIS (for IPv4)
- CONFIGURATION-ROUTER-ISIS-ADDRESS-FAMILY-IPV6 (for IPv6)

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

To perform protocol-support consistency checks on hello packets, use this command. The adjacency-check is enabled by default.
advertise

Leak routes between levels (distribute IP prefixes between Level 1 and Level 2 and vice versa).

Syntax

advertise {level1-into-level2 | level2-into-level1} prefix-list-name

To return to the default, use the no advertise {level1-into-level2 | level2-into-level1}[prefix-list-name] command.

Parameters

level1-into-level2 Enter the keywords level1-into-level2 to advertise Level 1 routes into Level 2 LSPs. This setting is the default.

level2-into-level1 Enter the keywords level2-into-level1 to advertise Level 2 inter-area routes into Level 1 LSPs. This behavior is described in RFC 2966.

prefix-list-name Enter the name of a configured IP prefix list. Routes meeting the criteria of the IP Prefix list are leaked.

Defaults

level1-into-level2 (Level 1 to Level 2 leaking enabled.)

Command Modes

- ROUTER ISIS (for IPv4)
- CONFIGURATION-ROUTER-ISIS-ADDRESS-FAMILY-IPV6 (for IPv6)

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

You cannot disable leaking from one level to another; however, you can regulate the rate flow from one level to another using an IP Prefix list. If you do not configure the IP Prefix list, all routes are leaked.

You can find more information in IETF RFC 2966, Domain-wide Prefix Distribution with Two-Level IS-IS.

area-password

Configure a hash message authentication code (HMAC) password for an area.

Syntax

area-password [hmac-md5 | encryption-type] password

To delete a password, use the no area-password command.

Parameters

hmac-md5 (OPTIONAL) Enter the keywords hmac-md5 to encrypt the password.

encryption-type (OPTIONAL) Enter 7 to encrypt the password using DES.
password

Enter a 1 to 16-character length alphanumeric string to prevent unauthorized access or incorrect routing information corrupting the link state database. The password is processed as plain text, which only provides limited security.

Defaults
Not configured.

Command Modes
ROUTER ISIS

Command History
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
To prevent the link state database from receiving incorrect routing information from unauthorized routers, use the area-password command on routers within an area.

The configured password injects into Level 1 LSPs, CSNPs, and PSNPs.

Related Commands
- domain-password — allows you to set the authentication password for a routing domain.
- isis password — allows you to configure an authentication password for an interface.

clear config

Clear IS-IS configurations that display under the router isis heading of the show running-config command output.

Syntax
clear config

Command Modes
ROUTER ISIS

Command History
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
⚠️ CAUTION: Use caution when you enter this command. Back up your configuration prior to using this command or your IS-IS configuration will be erased.
clear isis

Restart the IS-IS process. All IS-IS data is cleared.

Syntax

```
clear isis [tag] (* | database | traffic)
```

Parameters

- **tag**
  - (Optional) Enter an alphanumeric string to specify the IS-IS routing tag area.
- **\***
  - Enter the keyword \* to clear all IS-IS information and restart the IS-IS process. This command removes IS-IS neighbor information and IS-IS LSP database information and the full SPF calculation is done.
- **database**
  - Clears IS-IS LSP database information.
- **traffic**
  - Clears IS-IS counters.

Command Modes

EXEC Privilege

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

clns host

Define a name-to-network service mapping point (NSAP) that you use with commands that require NSAPs and system IDs.

Syntax

```
clns host name nsap
```

Parameters

- **name**
  - Enter an alphanumeric string to identify the name-to-NSAP mapping.
- **nsap**
  - Enter a specific NSAP address that is associated with the name parameter.

Defaults

Not configured.

Command Modes

ROUTER ISIS

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

To configure a shortcut name that you can use instead of entering a long string of numbers associated with an NSAP address, use this command.

Related Commands

- **hostname dynamic** — enables dynamic learning of host names from routers in the domain and allows the routers to advertise the host names in LSPs.
**debug isis**

Enable debugging for all IS-IS operations.

**Syntax**

```
debug isis
```

To disable debugging of IS-IS, use the `no debug isis` command.

**Command Modes**

EXEC Privilege

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

Entering `debug isis` enables all debugging parameters.

To display all debugging information in one output, use this command. To turn off debugging, you normally enter separate `no` forms of each command. To disable all debug messages for IS-IS at once, enter the `no debug isis` command.

**debug isis adj-packets**

Enable debugging on adjacency-related activity such as hello packets that are sent and received on IS-IS adjacencies.

**Syntax**

```
debug isis adj-packets [interface]
```

To turn off debugging, use the `no debug isis adj-packets [interface]` command.

**Parameters**

- `interface` (OPTIONAL) Identifies the interface type slot/port as one of the following:
  - For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a VLAN, enter the keyword `vlan` then a number from 1 to 4094.

**Command Modes**

EXEC Privilege

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.
**debug isis local-updates**

To debug IS-IS local update packets, enable debugging on a specific interface and provides diagnostic information.

**Syntax**

`debug isis local-updates [interface]`

To turn off debugging, use the `no debug isis local-updates [interface]` command.

**Parameters**

`interface` (OPTIONAL) Identifies the interface type slot/port as one of the following:

- For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a VLAN, enter the keyword `vlan` then a number from 1 to 4094.

**Command Modes**

EXEC Privilege

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

---

**debug isis snp-packets**

To debug IS-IS complete sequence number PDU (CSNP) and partial sequence number PDU (PSNP) packets, enable debugging on a specific interface and provides diagnostic information.

**Syntax**

`debug isis snp-packets [interface]`

To turn off debugging, use the `no debug isis snp-packets [interface]` command.

**Parameters**

`interface` (OPTIONAL) Identifies the interface type slot/port as one of the following:

- For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a VLAN, enter the keyword `vlan` then a number from 1 to 4094.

**Command Modes**

EXEC Privilege

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.
debug isis spf-triggers
Enable debugging on the events that triggered IS-IS shortest path first (SPF) events for debugging purposes.

Syntax

```
debug isis spf-triggers
```
To turn off debugging, use the `no debug isis spf-triggers` command.

Parameters

- `interface` (OPTIONAL) Identifies the interface type slot/port as one of the following:
  - For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a VLAN, enter the keyword `vlan` then a number from 1 to 4094.

Command Modes

- EXEC Privilege

Command History

- Introduced on the MXL 10/40GbE Switch IO Module.
default-information originate

Generates a default route into an IS-IS routing domain and controls the distribution of default information.

Syntax

```
default-information originate [always] [metric metric] [route-map map-name]
```

To disable the generation of a default route into the specified IS-IS routing domain, use the `no default-information originate [always] [metric metric] [route-map map-name]` command.

Parameters

- `always` (OPTIONAL) Enter the keyword `always` to have the default route always advertised.
- `metric metric` (OPTIONAL) Enter the keyword `metric` then a number to assign to the route. The range is from 0 to 16777215.
- `route-map map-name` (OPTIONAL) A default route the routing process generates if the route map is satisfied.

Defaults

Not configured.

Command Modes

- ROUTER ISIS (for IPv4)
- CONFIGURATION-ROUTER-ISIS-ADDRESS-FAMILY-IPV6 (for IPv6)

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

When you use this command to redistribute routes into a routing domain, the router becomes an autonomous system (AS) boundary router. An AS boundary router does not always generate a default route into a routing domain. The router still requires its own default route before it can generate one.

How a metric value assigned to a default route advertises depends on the `metric-style` command configuration. If the `metric-style` command is set for Narrow mode and the metric value in the `default-information originate` command is set to a number higher than 63, the metric value advertised in the LSPs is 63. If the `metric-style` command is set for Wide mode, the metric value in the `default-information originate` command is advertised.

Related Commands

- `redistribute` — redistributes routes from one routing domain to another routing domain.
- `isis metric` — configures a metric for an interface.
- `metric-style` — sets the metric style for the router.
- `show isis database` — displays the IS-IS link state database.
**description**

Enter a description of the IS-IS routing protocol.

**Syntax**

```plaintext
description {description}
```

To remove the description, use the `no description {description}` command.

**Parameters**

- `description` Enter a description to identify the IS-IS protocol (80 characters maximum).

**Defaults**

none

**Command Modes**

- ROUTER ISIS

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**

- `router isis` — Enter ROUTER mode on the switch.

---

**distance**

Define the administrative distance for learned routes.

**Syntax**

```plaintext
distance weight [ip-address mask [prefix-list]]
```

To return to the default values, use the `no distance weight` command.

**Parameters**

- `weight` The administrative distance value indicates the reliability of a routing information source. The range is from 1 to 255. (A higher relative value indicates lower reliability. Routes with smaller values are given preference.) The default is 115.

- `ip-address` mask (OPTIONAL) Enter an IP address in dotted decimal format and enter a mask in either dotted decimal or /prefix format.

- `prefix-list` (OPTIONAL) Enter the name of a prefix list name.

**Defaults**

weight = 115

**Command Modes**

- ROUTER ISIS (for IPv4)
- CONFIGURATION-ROUTER-ISIS-ADDRESS-FAMILY-IPV6 (for IPv6)

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.
The administrative distance indicates the trust value of incoming packets. A low administrative distance indicates a high trust rate. A high value indicates a lower trust rate. For example, a weight of 255 is interpreted that the routing information source is not trustworthy and should be ignored.

**distribute-list in**

Filter network prefixes received in updates.

**Syntax**

```
distribute-list prefix-list-name in [interface]
```

To return to the default values, use the `no distribute-list prefix-list-name in [interface]` command.

**Parameters**

- `prefix-list-name` Specify the prefix list to filter prefixes in routing updates.
- `interface` (OPTIONAL) Identifies the interface type slot/port as one of the following:
  - For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a VLAN, enter the keyword `vlan` then a number from 1 to 4094.

**Defaults**

Not configured.

**Command Modes**

- ROUTER ISIS (for IPv4)
- CONFIGURATION-ROUTER-ISIS-ADDRESS-FAMILY-IPV6 (for IPv6)

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**

- `distribute-list out` — suppresses networks from being advertised in updates.
- `redistribute` — redistributes routes from one routing domain to another routing domain.
**distribute-list out**

Suppress network prefixes from being advertised in outbound updates.

**Syntax**

distribute-list prefix-list-name out [connected | bgp as number | ospf process-id | rip | static]

To return to the default values, use the no distribute-list prefix-list-name out [bgp as number connected | ospf process-id | rip | static] command.

**Parameters**

- **prefix-list-name** Specify the prefix list to filter prefixes in routing updates.
- **connected** (OPTIONAL) Enter the keyword connected for directly connected routing process.
- **ospf process-id** (OPTIONAL) Enter the keyword ospf then the OSPF process-ID number. The range is from 1 to 65535.
- **bgp as number** (OPTIONAL) Enter the BGP then the AS Number. The range is from 1 to 65535.
- **rip** (OPTIONAL) Enter the keyword rip for RIP routes.
- **static** (OPTIONAL) Enter the keyword static for user-configured routing process.

**Defaults**
Not configured.

**Command Modes**

- ROUTER ISIS (for IPv4)
- CONFIGURATION-ROUTER-ISIS-ADDRESS-FAMILY-IPV6 (for IPv6)

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

You can assign a name to a routing process so a prefix list IS applied to only the routes derived from the specified routing process.

**Related Commands**

- **distribute-list in** — filters the networks received in updates.
- **redistribute** — redistributes routes from one routing domain to another routing domain.

---

**distribute-list redistributed-override**

Suppress flapping of routes when the same route is redistributed into IS-IS from multiple routers in the network.

**Syntax**

distribute-list redistributed-override in
To return to the default, use the no distribute-list redistributed-override command.

 Defaults
 Command Modes
 • ROUTER ISIS (for IPv4)
 • CONFIGURATION-ROUTER-ISIS-ADDRESS-FAMILY-IPV6 (for IPv6)

 Command History
 Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

 Usage Information
 When you execute this command, IS-IS does not download the route to the routing table if the same route was redistributed into IS-IS routing protocol on the same router.

domain-password

Set the authentication password for a routing domain.

 Syntax
domain-password [hmac-md5 | encryption-type] password
To disable the password, use the no domain-password command.

 Parameters
 hmac-md5 (OPTIONAL) Enter the keywords hmac-md5 to encrypt the password using MD5.
 encryption-type (OPTIONAL) Enter 7 to encrypt the password using DES.
 password Enter an alphanumeric string up to 16 characters long. If you do not specify an encryption type or hmac-md5 keywords, the password is processed as plain text which provides limited security.

 Defaults
 No default password.

 Command Modes
 ROUTER ISIS

 Command History
 Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

 Usage Information
 The domain password is inserted in Level 2 link state PDUs (LSPs), complete sequence number PDUs (CSNPs), and partial sequence number PDUs (PSNPs).

 Related Commands
 • area-password — configures an IS-IS area authentication password.
 • isis priority — configures the authentication password for an interface.
graceful-restart ietf

Enable graceful restart on an IS-IS router.

Syntax

```
graceful-restart ietf
```

To return to the default, use the `no graceful-restart ietf` command.

Parameters

- **ietf**
  
Enter `ietf` to enable graceful restart on the IS-IS router.

Defaults

Graceful restart disabled.

Command Modes

ROUTER ISIS

Command History

- **Version 9.2(0.0)**
  
  Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

Every graceful restart enabled router’s HELLO PDUs includes a restart TLV. This restart enables (re)starting as well as the existing ISIS peers to detect the GR capability of the routers on the connected network. A flag in the Restart TLV contains restart request (RR), restart acknowledge (RA) and suppress adjacency advertisement (SA) bit flags.

The ISIS graceful restart-enabled router can co-exist in mixed topologies where some routers are graceful restart-enabled and others are not. For neighbors that are not graceful restart-enabled, the restarting router brings up the adjacency per the usual methods.

graceful-restart interval

Set the graceful restart grace period, the time during that all graceful restart attempts are prevented.

Syntax

```
graceful-restart interval minutes
```

To return to the default, use the `no graceful-restart interval interval` command.

Parameters

- **minutes**
  
Enter the graceful-restart interval minutes. The range is from 1 to 20 minutes. The default is 5 minutes.

Defaults

- **5 minutes**

Command Modes

ROUTER ISIS

Command History

- **Version 9.2(0.0)**
  
  Introduced on the MXL 10/40GbE Switch IO Module.
graceful-restart t1

Set the graceful restart wait time before unacknowledged restart requests are generated. This wait time is the interval before the system sends a restart request (an IIH with RR bit set in Restart TLV) until the CSNP is received from the helping router.

Syntax

```
graceful-restart t1 {interval seconds | retry-times value}
```

To return to the default, use the `no graceful-restart t1` command.

Parameters

- **interval**
  - Enter the keyword `interval` to set the wait time. The range is from 5 to 120 seconds. The default is **5 seconds**.
- **retry-times**
  - Enter the keywords `retry-times` to set the number of times the request interval is extended until a CSNP is received from the helping router. The range is from 1 to 10 attempts. The default is **1**.

Defaults

Refer to Parameters.

Command Modes

- ROUTER ISIS

Command History

Version 9.2(0.0)
Introduced on the MXL 10/40GbE Switch IO Module.

graceful-restart t2

Configure the wait time for the graceful restart timer T2 that a restarting router uses as the wait time for each database to synchronize.

Syntax

```
graceful-restart t2 (level-1 | level-2) seconds
```

To return to the default, use the `no graceful-restart t2` command.

Parameters

- **level-1, level-2**
  - Enter the keywords `level-1` or `level-2` to identify the database instance type to which the wait interval applies.
- **seconds**
  - Enter the `graceful-restart t2` time in seconds. The range is from 5 to 120 seconds. The default is **30 seconds**.

Defaults

**30 seconds**

Command Modes

- ROUTER ISIS

Command History

Version 9.2(0.0)
Introduced on the MXL 10/40GbE Switch IO Module.
graceful-restart t3

Configure the overall wait time before graceful restart completes.

Syntax

graceful-restart t3 (adjacency | manual) seconds

To return to the default, use the no graceful-restart t3 command.

Parameters

adjacency Enter the keyword adjacency so that the restarting router receives the remaining time value from its peer and adjusts its T3 value so if you have configured this option.

manual Enter the keyword manual to specify a time value that the restarting router uses. The range is from 50 to 120 seconds. The default is 30 seconds.

Defaults

manual, 30 seconds

Command Modes

ROUTER ISIS

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The running router sets the remaining time value to the current adjacency hold time. You can override this setting by implementing this command.

Override the default restart-wait time by entering the no graceful-restart restart-wait command. When you disable restart-wait, the current adjacency hold time is used.

Set the t3 timer to adjacency on the restarting router when implementing this command. The restarting router gets the remaining time value from its peer and adjusts its T3 value so only when you have configured graceful-restart t3 adjacency.

Related Commands

graceful-restart restart-wait — enables the graceful restart maximum wait time before a restarting peer comes up.

graceful-restart restart-wait

Enable the graceful restart maximum wait time before a restarting peer comes up.

Syntax

NOTE: Set the t3 timer to adjacency on the restarting router when implementing this command.

graceful-restart restart-wait seconds

To return to the default, use the no graceful-restart restart-wait command.
Parameters

seconds

Enter the graceful restart time in seconds. The range is from 5 to 300 seconds. The default is 30 seconds.

Defaults

30 seconds

Command Modes

ROUTER ISIS

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Related Commands

graceful-restart t3 — configures the overall wait time before graceful restart completes.

hello padding

Use to turn ON or OFF padding for LAN and point-to-point hello PDUs or to selectively turn padding ON or OFF for LAN or point-to-point hello PDUs.

Syntax

hello padding [multi-point | point-to-point]
To return to the default, use the no hello padding [multi-point | point-to-point] command.

Parameters

multi-point

(Optional) Enter the keywords multi-point to pad only LAN hello PDUs.

point-to-point

(Optional) Enter the keywords point-to-point to pad only point-to-point PDUs.

Defaults

Both LAN and point-to-point hello PDUs are padded.

Command Modes

ROUTER ISIS

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

IS-IS hellos are padded to the full maximum transmission unit (MTU) size. Padding IS-IS Hellos (IIHS) to the full MTU provides early error detection of large frame transmission problems or mismatched MTUs on adjacent interfaces.

Related Commands

isis hello padding — turns ON or OFF hello padding on an interface basis.
**hostname dynamic**

Enables dynamic learning of hostnames from routers in the domain and allows the routers to advertise the hostname in LSPs.

**Syntax**

```
hostname dynamic
```

To disable this command, use the `no hostname dynamic` command.

**Defaults**

Enabled.

**Command Modes**

ROUTER ISIS

**Command History**

Version 9.2(0.0)  
Turn ON or OFF hello padding on an interface basis.

**Usage Information**

To build name-to-systemID mapping tables through the protocol, use this command. All `show` commands that display systems also display the hostname.

**Related Commands**

- `clns host` — defines a name-to-NSAP mapping.

---

**ignore-lsp-errors**

Ignore LSPs with bad checksums instead of purging those LSPs.

**Syntax**

```
ignore-lsp-errors
```

To return to the default values, use the `no ignore-lsp-errors` command.

**Defaults**

In IS-IS, the default deletes LSPs with internal checksum errors (`no ignore-lsp-errors`).

**Command Modes**

ROUTER ISIS

**Command History**

Version 9.2(0.0)  
Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

IS-IS normally purges LSPs with an incorrect data link checksum causing the LSP source to regenerate the message. A cycle of purging and regenerating LSPs can occur when a network link continues to deliver accurate LSPs even though there is a link causing data corruption. This process could cause disruption to your system operation.
ip router isis

Configure IS-IS routing processes on an interface and attach an area tag name to the routing process.

Syntax

ip router isis [tag]

To disable IS-IS on an interface, use the no ip router isis [tag] command.

Parameters

tag (OPTIONAL) The tag you specify identifies a specific area routing process. If you do not specify a tag, a null tag is assigned.

Defaults

No processes are configured.

Command Modes

INTERFACE

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

To assign a network entity title to enable IS-IS, use the net command.

Related Commands

• net — configures an IS-IS network entity title (NET) for the routing process.
• router isis — enables the IS-IS routing protocol.

ipv6 router isis

Enable the IPv6 IS-IS routing protocol and specify an IPv6 IS-IS process.

Syntax

ipv6 router isis [tag]

To disable IS-IS routing, use the no router isis [tag] command.

Parameters

tag (OPTIONAL) This parameter is a unique name for a routing process. A null tag is assumed if the tag option is not specified. The tag name must be unique for all IP router processes for a given router.

Defaults

Not configured.

Command Modes

ROUTER ISIS

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

Configure a network entity title (the net command) to specify the area address and the router system ID.
To establish adjacencies and establish dynamic routing, enable routing on one or more interfaces.

You can configure only one IS-IS routing process to perform Level 2 routing. A level-1-2 designation performs Level 1 and Level 2 routing at the same time.

Related Commands

- net — configures an IS-IS network entity title (NET) for the routing process.
- is-type — assigns a type for a given area.

**isis circuit-type**

Configure the adjacency type on interfaces.

**Syntax**

```plaintext
isis circuit-type {level-1 | level-1-2 | level-2-only}
```

To return to the default values, use the `no isis circuit-type` command.

**Parameters**

- `level-1` You can form a Level 1 adjacency if there is at least one common area address between this system and neighbors. You cannot form Level 2 adjacencies on this interface.

- `level-1-2` You can form a Level 1 and Level 2 adjacencies when the neighbor is also configured as Level-1-2 and there is at least one common area, if not, a Level 2 adjacency is established. This setting is the default.

- `level-2-only` You can form a Level 2 adjacencies when other Level 2 or Level 1-2 routers and their interfaces are configured for Level 1-2 or Level 2. Level 1 adjacencies cannot be established on this interface.

**Defaults**

`level-1-2`

**Command Modes**

`INTERFACE`

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40Gbe Switch IO Module.

**Usage Information**

Because the default establishes Level 1 and Level 2 adjacencies, you do not need to configure this command. Routers in an IS-IS system must be configured as a Level 1-only, Level 1-2, or Level 2-only system.

Only configure interfaces as Level 1 or Level 2 on routers that are between areas (for example, a Level 1-2 router) to prevent the software from sending unused hello packets and wasting bandwidth.
isis csnp-interval

Configure the IS-IS complete sequence number PDU (CSNP) interval on an interface.

Syntax

```
isis csnp-interval seconds [level-1 | level-2]
```

To return to the default values, use the `no isis csnp-interval [seconds] [level-1 | level-2]` command.

Parameters

- **seconds**: Interval of transmission time between CSNPs on multi-access networks for the designated intermediate system. The range is from 0 to 65535. The default is 10.
- **level-1**: (OPTIONAL) Independently configures the interval of time between transmission of CSNPs for Level 1.
- **level-2**: (OPTIONAL) Independently configures the interval of time between transmission of CSNPs for Level 2.

Defaults

```
seconds = 10; level-1 (if not otherwise specified)
```

Command Modes

```
INTERFACE
```

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The default values of this command are typically satisfactory transmission times for a specific interface on a designated intermediate system. To maintain database synchronization, the designated routers send CSNPs.

You can configure Level 1 and Level 2 CSNP intervals independently.

isis csnp-interval

Configure the IS-IS complete sequence number PDU (CSNP) interval on an interface.

Syntax

```
isis csnp-interval seconds [level-1 | level-2]
```

To return to the default values, use the `no isis csnp-interval [seconds] [level-1 | level-2]` command.

Parameters

- **seconds**: Interval of transmission time between CSNPs on multi-access networks for the designated intermediate system. The range is from 0 to 65535. The default is 10.
- **level-1**: (OPTIONAL) Independently configures the interval of time between transmission of CSNPs for Level 1.
- **level-2**: (OPTIONAL) Independently configures the interval of time between transmission of CSNPs for Level 2.
isis hello-multiplier

Specify the number of IS-IS hello packets a neighbor must miss before the router declares the adjacency down.

**Syntax**

```
isis hello-multiplier multiplier [level-1 | level-2]
```

To return to the default values, use the `no isis hello-multiplier [multiplier] [level-1 | level-2]` command.

**Parameters**

- **multiplier**
  - Specifies an integer that sets the multiplier for the hello holding time. Never configure a hello-multiplier lower than the default (3). The range is from 3 to 1000. The default is 3.

- **level-1**
  - (OPTIONAL) Select this value to configure the hello multiplier independently for Level 1 adjacencies. This value is the default.

- **level-2**
  - (OPTIONAL) Select this value to configure the hello multiplier independently for Level 2 adjacencies.

**Defaults**

- multiplier = 3; level-1 (if not otherwise specified)

**Command Modes**

- INTERFACE

**Command History**

- **Version 9.2(0.0)** Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

- The holdtime (the product of the hello-multiplier multiplied by the hello-interval) determines how long a neighbor waits for a hello packet before declaring the neighbor is down so routes can be recalculated.
**isis hello padding**

Turn ON or OFF padding of hello PDUs from INTERFACE mode.

**Syntax**

```plaintext
isis hello padding

To return to the default, use the `no isis hello padding` command.
```

**Defaults**

Padding of hello PDUs is enabled (ON).

**Command Modes**

INTERFACE

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

Hello PDUs are “padded” only when both the global and interface padding options are ON. Turning either one OFF disables padding for the corresponding interface.

**Related Commands**

`hello padding` — turns ON or OFF padding for LAN and point-to-point hello PDUs.

---

**isis ipv6 metric**

Assign metric to an interface for use with IPv6 information.

**Syntax**

```plaintext
isis ipv6 metric default-metric [level-1 | level-2]

To return to the default values, use the `no ipv6 isis metric [default-metric] [level-1 | level-2]` command.
```

**Parameters**

- `default-metric` Metric assigned to the link and used to calculate the cost from each other router via the links in the network to other destinations. You can configure this metric for Level 1 or Level 2 routing. The range is from 0 to 16777215. The default is 10.

- `level-1` (OPTIONAL) Enter the keywords `level-1` to configure the shortest path first (SPF) calculation for Level 1 (intra-area) routing. This value is the default.

- `level-2` (OPTIONAL) Enter the keywords `level-2` to configure the SPF calculation for Level 2 (inter-area) routing.

**Defaults**

- `default-metric = 10; level-1` (if not otherwise specified)

**Command Modes**

INTERFACE

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.
**Usage Information**
Dell Networking recommends configuring metrics on all interfaces. Without configuring this command, the IS-IS metrics are similar to hop-count metrics.

**isis metric**

Assign a metric to an interface.

**Syntax**
```plaintext
isis metric default-metric [level-1 | level-2]
```

To return to the default values, use the `no isis metric [default-metric] [level-1 | level-2]` command.

**Parameters**

- `default-metric` Metric assigned to the link and used to calculate the cost from each other router via the links in the network to other destinations. You can configure this metric for Level 1 or Level 2 routing. The range is from 0 to 63 for narrow and transition metric styles and from 0 to 16777215 for wide metric styles. The default is 10.

- `level-1` (OPTIONAL) Enter the keywords `level-1` to configure the shortest path first (SPF) calculation for Level 1 (intra-area) routing. This setting is the default.

- `level-2` (OPTIONAL) Enter the keywords `level-2` to configure the SPF calculation for Level 2 (inter-area) routing.

**Defaults**
`default-metric = 10; level-1` (if not otherwise specified)

**Command Modes**
`INTERFACE`

**Command History**
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**
Dell Networking recommends configuring metrics on all interfaces. Without configuring this command, the IS-IS metrics are similar to hop-count metrics.

**isis network point-to-point**

Enable the software to treat a broadcast interface as a point-to-point interface.

**Syntax**
```plaintext
isis network point-to-point
```

To disable the feature, use the `no isis network point-to-point` command.
isis password

Configure an authentication password for an interface.

Syntax

```plaintext
isis password [hmac-md5] password [level-1 | level-2]
```

To delete a password, use the `no isis password [password] [level-1 | level-2]` command.

Parameters

- `encryption-type` (OPTIONAL) Enter 7 to encrypt the password using DES.
- `hmac-md5` (OPTIONAL) Enter the keywords `hmac-md5` to encrypt the password using MD5.
- `password` Assign the interface authentication password.
- `level-1` (OPTIONAL) Independently configures the authentication password for Level 1. The router acts as a station router for Level 1 routing. This setting is the default.
- `level-2` (OPTIONAL) Independently configures the authentication password for Level 2. The router acts as an area router for Level 2 routing.

Defaults

No default password. `level-1` (if not otherwise specified).

Command Modes

INTERFACE

Command History

- **Version 9.2(0.0)** Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

To protect your network from unauthorized access, use this command to prevent unauthorized routers from forming adjacencies.

You can assign different passwords for different routing levels by using the keywords `level-1` and `level-2`.

The `no` form of this command disables the password for Level 1 or Level 2 routing, using the respective keywords `level-1` or `level-2`. 
This password provides limited security as it is processed as plain text.

**isis priority**

Set the priority of the designated router you select.

**Syntax**

```plaintext
isis priority value [level-1 | level-2]
```

To return to the default values, use the `no isis priority [value] [level-1 | level-2]` command.

**Parameters**

- `value`
  - This value sets the router priority. The higher the value, the higher the priority. The range is from 0 to 127. The default is 64.
- `level-1`
  - (OPTIONAL) Specify the priority for Level 1. This setting is the default.
- `level-2`
  - (OPTIONAL) Specify the priority for Level 2.

**Defaults**

- `value = 64; level-1` (if not otherwise specified).

**Command Modes**

- `INTERFACE`

**Command History**

- **Version 9.2(0.0)**
  - Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

You can configure priorities independently for Level 1 and Level 2. Priorities determine which router on a LAN is the designated router. Priorities are advertised within hellos. The router with the highest priority becomes the designated intermediate system (DIS).

- **NOTE**: Routers with a priority of 0 cannot be a designated router.

Setting the priority to 0 lowers the chance of this system becoming the DIS, but does not prevent it. If all the routers have priority 0, one with highest MAC address becomes DIS even though its priority is 0.

**is-type**

Configure IS-IS operating level for a router.

**Syntax**

```plaintext
is-type {level-1 | level-1-2 | level-2-only}
```

To return to the default values, use the `no is-type` command.
Parameters

- **level-1**: Allows a router to act as a Level 1 router.
- **level-1-2**: Allows a router to act as both a Level 1 and Level 2 router. This setting is the default.
- **level-2-only**: Allows a router to act as a Level 2 router.

Defaults

- **level-1-2**

Command Modes

- **ROUTER ISIS**

Command History

- **Version 9.2(0.0)**: Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The IS-IS protocol automatically determines area boundaries and are able to keep Level 1 and Level 2 routing separate. Poorly planned use of this feature may cause configuration errors, such as accidental area partitioning.

If you are configuring only one area in your network, you do not need to run both Level 1 and Level 2 routing algorithms. You can configure the IS type as Level 1.

---

**log-adjacency-changes**

Generate a log messages for adjacency state changes.

**Syntax**

```
log-adjacency-changes
To disable this function, use the no log-adjacency-changes command.
```

**Defaults**

Adjacency changes are not logged.

**Command Modes**

- **ROUTER ISIS**

**Command History**

- **Version 9.2(0.0)**: Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

This command allows you to monitor adjacency state changes, which are useful when you monitor large networks. Messages are logged in the system’s error message facility.

---

**lsp-gen-interval**

Set the minimum interval between successive generations of link-state packets (LSPs).

**Syntax**

```
lsp-gen-interval [level-1 | level-2] interval seconds
[initial_wait_interval seconds [second_wait_interval seconds]]
```

696
To restore default values, use the `no lsp-gen-interval [level-1 | level-2] interval seconds [initial_wait_interval seconds [second_wait_interval seconds]]` command.

**Parameters**

- **level-1**: (OPTIONAL) Enter the keywords `level-1` to apply the configuration to generation of Level-1 LSPs.
- **level-2**: (OPTIONAL) Enter the keywords `level-2` to apply the configuration to generation of Level-2 LSPs.
- **interval seconds**: Enter the maximum number of seconds between LSP generations. The range is from 0 to 120 seconds. The default is 5 seconds.
- **initial_wait_interval seconds**: (OPTIONAL) Enter the initial wait time, in seconds, before running the first LSP generation. The range is from 0 to 120 seconds. The default is 1 second.
- **second_wait_interval seconds**: (OPTIONAL) Enter the wait interval, in seconds, between the first and second LSP generation. The range is from 0 to 120 seconds. The default is 5 seconds.

**Defaults**

Refer to Parameters.

**Command Modes**

ROUTER ISIS

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

LSP throttling slows down the frequency at which LSPs are generated during network instability. Even though throttling LSP generations slows down network convergence, no throttling can result in a network not functioning as expected. If network topology is unstable, throttling slows down the scheduling of LSP generations until the topology regains its stability.

The first generation is controlled by the initial wait interval and the second generation is controlled by the second wait interval. Each subsequent wait interval is twice as long as the previous one until the wait interval reaches the maximum wait time specified (interval seconds). After the network calms down and there are no triggers for two times the maximum interval, fast behavior is restored (the initial wait time).

**lsp-mtu**

Set the maximum transmission unit (MTU) of IS-IS link-state packets (LSPs). This command only limits the size of LSPs this router generates.

**Syntax**

```
lsp-mtu size
```
To return to the default values, use the `no lsp-mtu` command.

**Parameters**

- **size**
  
  The maximum LSP size, in bytes. The range is from 128 to 1497 for Non-Jumbo mode and from 128 to 9195 for Jumbo mode. The default is **1497**.

**Defaults**

- **1497** bytes.

**Command Modes**

- ROUTER ISIS

**Command History**

- **Version 9.2(0.0)**
  
  Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

The link MTU and the LSP MTU size must be the same.

Because each device can generate a maximum of 255 LSPs, consider carefully whether you use the `lsp-mtu` command.

---

**lsp-refresh-interval**

Set the link state PDU (LSP) refresh interval. LSPs must be refreshed before they expire. When the LSPs are not refreshed after a refresh interval, they are kept in a database until their `max-lsp-lifetime` reaches zero and then LSPs is purged.

**Syntax**

```text
lsp-refresh-interval seconds
```

To restore the default refresh interval, use the `no lsp-refresh-interval` command.

**Parameters**

- **seconds**
  
  The LSP refresh interval, in seconds. This value has to be less than the seconds value specified with the `max-lsp-lifetime` command. The range is from 1 to 65535 seconds. The default is **900**.

**Defaults**

- **900** seconds

**Command Modes**

- ROUTER ISIS

**Command History**

- **Version 9.2(0.0)**
  
  Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

The refresh interval determines the rate at which route topology information is transmitted preventing the information from becoming obsolete.

The refresh interval must be less than the LSP lifetime specified with the `max-lsp-lifetime` command. A low value reduces the amount of time that undetected link
state database corruption can persist at the cost of increased link utilization. A higher value reduces the link utilization the flooding of refreshed packets causes.

Related Commands

max-lsp-lifetime — sets the maximum interval that LSPs persist without being refreshed.

max-area-addresses

Configure manual area addresses.

Syntax

max-area-addresses number

To return to the default values, use the no max-area-addresses command.

Parameters

number Set the maximum number of manual area addresses. The range is from 3 to 6. The default is 3.

Defaults

3 addresses

Command Modes

ROUTER ISIS

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

To configure the number of area addresses on router, use this command. This value must be consistent with routers in the same area, otherwise the router forms only Level 2 adjacencies. The value must be same among all the routers to form Level 1 adjacencies.

max-lsp-lifetime

Set the maximum time that link-state packets (LSPs) exist without being refreshed.

Syntax

max-lsp-lifetime seconds

To restore the default time, use the no max-lsp-lifetime command.

Parameters

seconds The maximum lifetime of LSP in seconds. This value must be greater than the lsp-refresh-interval command. The higher the value the longer the LSPs are kept. The range is from 1 to 65535. The default is 1200.

Defaults

1200 seconds
maximum-paths

Allows you to configure the maximum number of equal cost paths allowed in a routing table.

Syntax

```
maximum-paths number
```

To return to the default values, use the `no maximum-paths` command.

Parameters

- `number` Enter a number as the maximum number of parallel paths an IP routing installs in a routing table. The range is from 1 to 16. The default is 4.

Defaults

4

Command Modes

- ROUTER ISIS (for IPv4)
- CONFIGURATION-ROUTER-ISIS-ADDRESS-FAMILY-IPV6 (for IPv6)

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

metric-style

To generate and accept old-style, new-style, or both styles of type, length, and values (TLV), configure a router.

Syntax

```
metric-style {narrow [transition] | transition | wide [transition]} [level-1 | level-2]
```

To return to the default values, use the `no metric-style {narrow [transition] | transition | wide [transition]} [level-1 | level-2]` command.
| Parameters | narrow   | Allows you to generate and accept old-style TLVs. The metric range is from 0 to 63. |
|           | transition | Allows you to generate both old-style and new-style TLVs. The metric range is from 0 to 63. |
|           | wide      | Allows you to generate and accept only new-style TLVs. The metric range is from 0 to 16777215. |
|           | level-1   | Enables the metric style on Level 1. |
|           | level-2   | Enables the metric style on Level 2. |

<table>
<thead>
<tr>
<th>Defaults</th>
<th>narrow; if no Level is specified, Level-1 and Level-2 are configured.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Command Modes</td>
<td>ROUTER ISIS</td>
</tr>
</tbody>
</table>

| Command History | Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module. |

| Usage Information | If you enter the metric-style wide command, the system generates and accepts only new-style TLVs. The router uses less memory and other resources rather than generating both old-style and new-style TLVs. The new-style TLVs have wider metric fields than old-style TLVs. |

| Related Commands | isis metric — configures a metric for an interface. |

**multi-topology**

Enables multi-topology IS-IS. It also allows enabling/disabling of old and new style TLVs for IP prefix information in the LSPs.

<table>
<thead>
<tr>

| Command History | Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module. |
net

To configure an IS-IS network entity title (NET) for a routing process, use this mandatory command. If you did not configure a NET, the IS-IS process does not start.

Syntax

net network-entity-title

To remove a net, use the no net network-entity-title command.

Parameters

network-entity-title

Specify the area address and system ID for an IS-IS routing process. The first 1 to 13 bytes identify the area address. The next 6 bytes identify the system ID. The last 1 byte is the selector byte, always identified as zero zero (00). This argument can be applied to an address or a name.

Defaults

Not configured.

Command Modes

ROUTER ISIS

Command History

Version 9.2(0.0)
Introduced on the MXL 10/40GbE Switch IO Module.

passive-interface

Suppress routing updates on an interface. This command stops the router from sending updates on that interface.

Syntax

passive-interface interface

To delete a passive interface configuration, use the no passive-interface interface command.

Parameters

interface

Enter the following keywords and slot/port or number information:

- For a 1-Gigabit Ethernet interface, enter the keyword GigabitEthernet then the slot/port information.
- For Loopback interface, enter the keyword loopback then a number from 0 to 16383.
- For a Port Channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.
- For a SONET interface, enter the keyword sonet then the slot/port information.
- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- For a VLAN, enter the keyword vlan then a number from 1 to 4094.
Defaults Not configured.

Command Modes ROUTER ISIS

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

Although the passive interface does not send nor receive routing updates, the network on that interface is still included in the IS-IS updates sent using other interfaces.

redistribute

Redistribute routes from one routing domain to another routing domain.

Syntax

redistribute {static | connected | rip} [level-1 | level-1-2 | level-2] [metric metric-value] [metric-type {external | internal}] [route-map map-name]

To end redistribution or disable any of the specified keywords, use the no redistribute {static | connected | rip} [metric metric-value] [metric-type {external | internal}] [level-1 | level-1-2 | level-2] [route-map map-name] command.

Parameters

- **connected**: Enter the keyword connected to redistribute active routes into IS-IS.
- **rip**: Enter the keyword rip to redistribute RIP routes into IS-IS.
- **static**: Enter the keyword static to redistribute user-configured routes into IS-IS.
- **metric metric-value**: (OPTIONAL) Assign a value to the redistributed route. The range is from 0 to 16777215. The default is 0. Use a value that is consistent with the destination protocol.
- **metric-type {external | internal}**: (OPTIONAL) The external link type associated with the default route advertised into a routing domain. Specify one of the following:
  - external
  - internal
- **level-1**: (OPTIONAL) Routes are independently redistributed into IS-IS as Level 1 routes.
- **level-1-2**: (OPTIONAL) Routes are independently redistributed into IS-IS as Level-1-2 routes.
- **level-2**: (OPTIONAL) Routes are independently redistributed into IS-IS as Level 2 routes. This setting is the default.

703
route-map  
map-name

(OPTIONAL) If you do not enter the route-map argument, all routes are redistributed. If a map-name value is not specified, no routers are imported.

Defaults

- metric metric-value = 0
- metric-type= internal; level-2

Command Modes

- ROUTER ISIS (for IPv4)
- CONFIGURATION-ROUTER-ISIS-ADDRESS-FAMILY-IPV6 (for IPv6)

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

To redistribute a default route (0.0.0.0/0), configure the default-information originate command.

Changing or disabling a keyword in this command does not affect the state of the other command keywords.

When an LSP with an internal metric is received, the system considers the route cost while considering the advertised cost to reach the destination.

Redistributed routing information is filtered with the distribute-list out command to ensure that the routes are properly are passed to the receiving routing protocol.

How a metric value assigned to a redistributed route is advertised depends on how on the configuration of the metric-style command. If the metric-style command is set for Narrow or Transition mode and the metric value in the redistribute command is set to a number higher than 63, the metric value advertised in LSPs is 63. If the metric-style command is set for Wide mode, the metric value in the redistribute command is advertised.

Related Commands

- default-information originate — generates a default route for the IS-IS domain.
- distribute-list out — suppresses networks from being advertised in updates. This command filters redistributed routing information.

redistribute bgp

Redistribute routing information from a BGP process. (New command in Release 6.3.1.)

Syntax

```
redistribute bgp AS number [level-1| level-1-2 | level-2] [metric metric-value] [metric-type {external| internal}] [route-map map-name]
```
To return to the default values, use the no redistribute bgp command with the appropriate parameters.

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>AS number</strong></td>
<td>Enter a number that corresponds to the autonomous system number. The range is from 1 to 65535.</td>
</tr>
<tr>
<td><strong>level-1</strong></td>
<td>(OPTIONAL) Routes are independently redistributed into IS-IS Level 1 routes only.</td>
</tr>
<tr>
<td><strong>level-1-2</strong></td>
<td>(OPTIONAL) Routes are independently redistributed into IS-IS Level 1 and Level 2 routes.</td>
</tr>
<tr>
<td><strong>level-2</strong></td>
<td>(OPTIONAL) Routes are independently redistributed into IS-IS as Level 2 routes only. This setting is the default.</td>
</tr>
<tr>
<td><strong>metric metric-value</strong></td>
<td>(OPTIONAL) The value used for the redistributed route. Use a metric value that is consistent with the destination protocol. The range is from 0 to 16777215. The default is 0.</td>
</tr>
<tr>
<td><strong>metric-type</strong></td>
<td>(OPTIONAL) The external link type associated with the default route advertised into a routing domain. The two options are:</td>
</tr>
<tr>
<td></td>
<td>• external</td>
</tr>
<tr>
<td></td>
<td>• internal</td>
</tr>
<tr>
<td><strong>route-map map-name</strong></td>
<td>map-name is an identifier for a configured route map. The route map filters imported routes from the source routing protocol to the current routing protocol. If you do not specify a map-name, all routes are redistributed. If you specify a keyword, but fail to list route map tags, no routes are imported.</td>
</tr>
</tbody>
</table>

**Defaults**

IS-IS Level 2 routes only

**Command Modes**

- ROUTER ISIS (for IPv4)
- CONFIGURATION-ROUTER-ISIS-ADDRESS-FAMILY-IPV6 (for IPv6)

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

BGP to IS-IS redistribution supports "match" options using route maps. You can set the metric value, level, and metric-type of redistributed routes by the redistribution command. You can "set" more advanced options using route maps.

**Example**

Dell(conf)#router is
Dell(conf-router_isis)#redistribute bgp 1 level-1 metric 32
Dell(conf-router_isis)#metric-type external
Dell(conf-router_isis)#route-map rmap-isis-to-bgp
Dell(conf-router_bgp)#show running-config isis

router isis
redistribute bgp 1 level-1 metric 32 metric-type external
redistribute ospf

Redistribute routing information from an OSPF process.

Syntax

redistribute ospf process-id [level-1 | level-1-2 | level-2] [match {internal | external}] [metric metric-value] [metric-type {external | internal}] [route-map map-name]

To return to the default values, use the no redistribute ospf process-id [level-1 | level-1-2 | level-2] [match {internal | external}] [metric metric-value] [metric-type {external | internal}] [route-map map-name] command.

Parameters

- **process-id**: Enter a number that corresponds to the OSPF process ID to be redistributed. The range is from 1 to 65535.
- **metric metric-value**: (OPTIONAL) The value used for the redistributed route. Use a metric value that is consistent with the destination protocol. The range is from 0 to 16777215. The default is 0.
- **metric-type {external | internal}**: (OPTIONAL) The external link type associated with the default route advertised into a routing domain. The two options are:
  - external
  - internal
- **level-1**: (OPTIONAL) Routes are independently redistributed into IS-IS as Level 1 routes.
- **level-1-2**: (OPTIONAL) Routes are independently redistributed into IS-IS as Level-1-2 routes.
- **level-2**: (OPTIONAL) Routes are independently redistributed into IS-IS as Level 2 routes. This setting is the default.
- **match {external | internal}**: (OPTIONAL) The command used for OSPF to route and redistribute into other routing domains. The values are
  - internal
  - external
- **route-map map-name**: map-name is an identifier for a configured route map. The route map should filter imported routes from the source routing protocol to the current routing protocol.
If you do not specify a map-name, all routes are redistributed. If you specify a keyword, but fail to list route map tags, no routes are imported.

Defaults
Refer to Parameters.

Command Modes
- ROUTER ISIS (for IPv4)
- CONFIGURATION-ROUTER-ISIS-ADDRESS-FAMILY-IPV6 (for IPv6)

Command History
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
How a metric value assigned to a redistributed route is advertised depends on how on the configuration of the metric-style command. If the metric-style command is set for narrow mode and the metric value in the redistribute ospf command is set to a number higher than 63, the metric value advertised in LSPs is 63. If the metric-style command is set for wide mode, the metric value in the redistribute ospf command is advertised.

router isis
Allows you to enable the IS-IS routing protocol and to specify an IP IS-IS process.

Syntax
router isis [tag]
To disable IS-IS routing, use the no router isis [tag] command.

Parameters
tag
(OPTIONAL) This is a unique name for a routing process. A null tag is assumed if the tag option is not specified. The tag name must be unique for all IP router processes for a given router.

Defaults
Not configured.

Command Modes
ROUTER ISIS

Command History
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
Configure a network entity title (the net command) to specify the area address and the router system ID.

Enable routing on one or more interfaces to establish adjacencies and establish dynamic routing.

You can configure only one IS-IS routing process to perform Level 2 routing. A level-1-2 designation performs Level 1 and Level 2 routing at the same time.
set-overload-bit

To set the overload bit in its non-pseudonode LSPs, configure the router. This setting prevents other routers from using it as an intermediate hop in their shortest path first (SPF) calculations.

**Syntax**

```plaintext
set-overload-bit
```

To return to the default values, use the `no set-overload-bit` command.

**Defaults**

Not set.

**Command Modes**

- `ROUTER ISIS (for IPv4)`
- `CONFIGURATION-ROUTER-ISIS-ADDRESS-FAMILY-IPV6 (for IPv6)`

**Command History**

- **Version 9.2(0.0)**: Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

Set the overload bit when a router experiences problems, such as a memory shortage due to an incomplete link state database which can result in an incomplete or inaccurate routing table. If you set the overload bit in its LSPs, other routers ignore the unreliable router in their SPF calculations until the router has recovered.

show config

Display the changes you made to the IS-IS configuration. Default values are not shown.

**Syntax**

```plaintext
show config
```

**Command Modes**

- `ROUTER ISIS (for IPv4)`
- `CONFIGURATION-ROUTER-ISIS-ADDRESS-FAMILY-IPV6 (for IPv6)`

**Command History**

- **Version 9.2(0.0)**: Introduced on the MXL 10/40GbE Switch IO Module.

**Example**

```
Dell(conf-router_isis)#show config
!
router isis
```
clns host ISIS 49.0000.0001.F100.E120.0013.00
log-adjacency-changes
net 49.0000.0001.F100.E120.0013.00
!
  address-family ipv6 unicast
  maximum-paths 16
  multi-topology transition
  set-overload-bit
  spf-interval level-1 100 15 20
  spf-interval level-2 120 20 25
  exit-address-family

Example
(Address-Family_IPv6)
The bold section identifies that Multi-Topology IS-IS is enabled in Transition mode.

Dell(conf-router_isis-af_ipv6)#show conf
!
  address-family ipv6 unicast
  maximum-paths 16
  multi-topology transition
  set-overload-bit
  spf-interval level-1 100 15 20
  spf-interval level-2 120 20 25
  exit-address-family

show isis database
Display the IS-IS link state database.

Syntax
show isis database [level-1 | level-2] [local] [detail | summary] [lspid]

Parameters
level-1 (OPTIONAL) Displays the Level 1 IS-IS link-state database.
level-2 (OPTIONAL) Displays the Level 2 IS-IS link-state database.
local (OPTIONAL) Displays local link-state database information.
detail (OPTIONAL) Detailed link-state database information of each LSP displays when specified. If not specified, a summary displays.
summary (OPTIONAL) Summary of link-state database information displays when specified.
lspid (OPTIONAL) Display only the specified LSP.

Command Modes
- EXEC
- EXEC Privilege

Command History
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.
The following describes the `show isis database` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>IS-IS Level-1/Level-2 Link State Database</td>
<td>Displays the IS-IS link state database for Level 1 or Level 2.</td>
</tr>
<tr>
<td>LSPID</td>
<td>Displays the LSP identifier. The first six octets are the System ID of the originating router. The first six octets are the System ID of the originating router. The next octet is the pseudonode ID. If this byte is not zero, the LSP describes system links. If this byte is zero (0), the LSP describes the state of the originating router. The designated router for a LAN creates and floods a pseudonode LSP and describes the attached systems. The last octet is the LSP number. An LSP is divided into multiple LSP fragments if there is more data than cannot fit in a single LSP. Each fragment has a unique LSP number. An * after the LSPID indicates that the system originates an LSP where this command was issued.</td>
</tr>
<tr>
<td>LSP Seq Num</td>
<td>This value is the sequence number for the LSP that allows other systems to determine if they have received the latest information from the source.</td>
</tr>
<tr>
<td>LSP Checksum</td>
<td>This is the checksum of the entire LSP packet.</td>
</tr>
<tr>
<td>LSP Holdtime</td>
<td>This value is the amount of time, in seconds, that the LSP remains valid. A zero holdtime indicates that this is a purged LSP and is being removed from the link state database. A value between brackets indicates the duration that the purged LSP stays in the database before being removed.</td>
</tr>
<tr>
<td>ATT</td>
<td>This value represents the Attach bit. This value indicates that the router is a Level 2 router and can reach other areas. Level 1-only routers and Level 1-2 routers that have lost connection to other Level 2 routers use the Attach bit to find the closest Level 2 router. They point a default route to the closest Level 2 router.</td>
</tr>
<tr>
<td>P</td>
<td>This value represents the P bit. This bit is always set to zero as Dell Networking does not support area partition repair.</td>
</tr>
<tr>
<td>OL</td>
<td>This value represents the overload bit, determining congestion. If the overload bit is set, other routers do not use this system as a transit router when calculating routes.</td>
</tr>
</tbody>
</table>
Example

The bold sections identify that MultiTopology IS-IS is enabled.

```
show isis interface

Display detailed IS-IS interface status and configuration information.

Syntax

show isis interface [interface]

Parameters

interface  (OPTIONAL) Enter the following keywords and slot/port or number information:

- For Loopback interface, enter the keyword loopback then a number from 0 to 16383.
- For a Port Channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.
- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- For a VLAN, enter the keyword vlan then a number from 1 to 4094.

Command Modes

- EXEC
- EXEC Privilege

Command History

Version 9.2(0.0)  Introduced on the MXL 10/40GbE Switch IO Module.

Example

Dell>show isis int

--More--
show isis neighbors

Display information about neighboring (adjacent) routers.

**Syntax**

```
show isis neighbors [level-1 | level-2] [detail] [interface]
```

**Parameters**

- **level-1** (OPTIONAL) Displays information about Level 1 IS-IS neighbors.
- **level-2** (OPTIONAL) Displays information about Level 2 IS-IS neighbors.
- **detail** (OPTIONAL) Displays detailed information about neighbors.
- **interface** (OPTIONAL) Enter the following keywords and slot/port or number information:
  - For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a VLAN, enter the keyword `vlan` then a number from 1 to 4094.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

Use this command to confirm that the neighbor adjacencies are operating correctly. If you suspect that they are not, you can verify the specified area addresses of the routers by using the `show isis neighbors` command.

The following describes the `show isis neighbors` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>System Id</td>
<td>The value that identifies a system in an area.</td>
</tr>
<tr>
<td>Interface</td>
<td>The interface, slot, and port in which the router was discovered.</td>
</tr>
<tr>
<td>State</td>
<td>The value providing status about the adjacency state. The range is Up and Init.</td>
</tr>
<tr>
<td>Type</td>
<td>This value displays the adjacency type (Layer 2, Layer 2 or both).</td>
</tr>
<tr>
<td>Priority</td>
<td>IS-IS priority the neighbor advertises. The neighbor with highest priority becomes the designated router for the interface.</td>
</tr>
<tr>
<td>Field</td>
<td>Description</td>
</tr>
<tr>
<td>------------</td>
<td>-----------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Uptime</td>
<td>Displays the interfaces uptime.</td>
</tr>
<tr>
<td>Circuit Id</td>
<td>The neighbor’s interpretation of the designated router for the interface.</td>
</tr>
</tbody>
</table>

**Example**

The bold sections below identify that Multi-Topology IS-IS is enabled.

Dell#show isis neighbors
System Id Interface State Type Priority Uptime Circuit Id

49.0000.0001
IP Address(es): 25.1.1.3*
MAC Address: 0000.0000.0000
Hold Time: 28
Link Local Address: fe80::201:e8ff:fe00:492c
Topology: IPv4 IPv6, Common (IPv4 IPv6)
Adjacency being used for MTs: IPv4 IPv6

Dell#

**show isis protocol**

Display IS-IS routing information.

**Syntax**

show isis protocol

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Example**

The bold section identifies that Multi-Topology IS-IS is enabled.

Dell#show isis protocol
IS-IS Router: <Null Tag>
System Id: F100.E120.0013 IS-Type: level-1-2
Manual area address(es):
49.0000.0001
Routing for area address(es):
49.0000.0001
Interfaces supported by IS-IS:
GigabitEthernet 1/0 - IP - IPv6
GigabitEthernet 1/1 - IP - IPv6
GigabitEthernet 1/10 - IP - IPv6
Loopback 0 - IP - IPv6
Redistributing:
Distance: 115
Generate narrow metrics: level-1-2
Accept narrow metrics: level-1-2
show isis traffic

This command allows you to display IS-IS traffic interface information.

**Syntax**

```
show isis traffic [interface]
```

**Parameters**

- `interface`

  (OPTIONAL) Identifies the interface type slot/port as one of the following:
  - For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a VLAN, enter the keyword `vlan` then a number from 1 to 4094.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

The following describes the `show isis traffic` command shown in the following example.

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Level-1/Level-2 Hellos (sent/rcvd)</td>
<td>Displays the number of Hello packets sent and received.</td>
</tr>
<tr>
<td>PTP Hellos (sent/rcvd)</td>
<td>Displays the number of point-to-point Hellos sent and received.</td>
</tr>
<tr>
<td>Level-1/Level-2 LSPs sourced (new/refresh)</td>
<td>Displays the number of new and refreshed LSPs.</td>
</tr>
<tr>
<td>Level-1/Level-2 LSPs flooded (sent/rcvd)</td>
<td>Displays the number of flooded LSPs sent and received.</td>
</tr>
<tr>
<td>Level-1/Level-2 LSPs CSNPs (sent/rcvd)</td>
<td>Displays the number of CSNP LSPs sent and received.</td>
</tr>
<tr>
<td>Item</td>
<td>Description</td>
</tr>
<tr>
<td>-------------------------------</td>
<td>-----------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Level-1/Level-2 LSPs PSNPs (sent/rcvd)</td>
<td>Displays the number of PSNP LPSs sent and received.</td>
</tr>
<tr>
<td>Level-1/Level-2 DR Elections</td>
<td>Displays the number of times designated router elections ran.</td>
</tr>
<tr>
<td>Level-1/Level-2 SPF Calculations</td>
<td>Displays the number of shortest path first calculations.</td>
</tr>
<tr>
<td>LSP checksum errors received</td>
<td>Displays the number of checksum errors LSPs received.</td>
</tr>
<tr>
<td>LSP authentication failures</td>
<td>Displays the number of LSP authentication failures.</td>
</tr>
</tbody>
</table>

Example

```
Dell#sho is traffic
IS-IS: Level-1 Hellos (sent/rcvd) : 0/721
IS-IS: Level-2 Hellos (sent/rcvd) : 900/943
IS-IS: PTP Hellos (sent/rcvd) : 0/0
IS-IS: Level-1 LSPs sourced (new/refresh) : 0/3
IS-IS: Level-1 LSPs flooded (sent/rcvd) : 0/0
IS-IS: Level-2 LSPs flooded (sent/rcvd) : 5934/5217
IS-IS: Level-1 LSPs CSNPs (sent/rcvd) : 0/0
IS-IS: Level-2 LSPs CSNPs (sent/rcvd) : 472/238
IS-IS: Level-1 LSPs PSNPs (sent/rcvd) : 0/0
IS-IS: Level-2 LSPs PSNPs (sent/rcvd) : 10/337
IS-IS: Level-1 DR Elections : 4
IS-IS: Level-2 DR Elections : 4
IS-IS: Level-1 SPF Calculations : 0
IS-IS: Level-2 SPF Calculations : 389
IS-IS: LSP checksum errors received : 0
IS-IS: LSP authentication failures : 0
Dell#
```

**spf-interval**

Specify the minimum interval between shortest path first (SPF) calculations.

**Syntax**

```
spf-interval [level-1 | level-2] interval seconds
[initial_wait_interval seconds [second_wait_interval seconds]]
```

To restore default values, use the `no spf-interval [level-1 | level-2] interval seconds [initial_wait_interval seconds [second_wait_interval seconds]]` command.

**Parameters**

- `level-1` (OPTIONAL) Enter the keyword `level-1` to apply the configuration to Level-1 SPF calculations.
level-2

(Optional) Enter the keyword level-2 to apply the configuration to Level-2 SPF calculations.

interval seconds

Enter the maximum number of seconds between SPF calculations. The range is from 0 to 120 seconds. The default is 10 seconds.

initial_wait_interval seconds

(Optional) Enter the initial wait time, in seconds, before running the first SPF calculations. The range is from 0 to 120 seconds. The default is 5 seconds.

second_wait_interval seconds

(Optional) Enter the wait interval, in seconds, between the first and second SPF calculations. The range is from 0 to 120 seconds. The default is 5 seconds.

Defaults

Refer to Parameters.

Command Modes

- ROUTER ISIS (for IPv4)
- CONFIGURATION-ROUTER-ISIS-ADDRESS-FAMILY-IPV6 (for IPv6)

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

This command spf-interval in CONFIG-ROUTER-ISIS-AF-IPV6 mode is used for IPv6 Multi-Topology route computation only. If using Single Topology mode, use the spf-interval command in CONFIG-ROUTER-ISIS mode for both IPv4 and IPv6 route computations.

SPF throttling slows down the frequency at which route calculations are performed during network instability. Even though throttling route calculations slows down network convergence, not throttling can result in a network not functioning as expected. If network topology is unstable, throttling slows down the scheduling of route calculations until the topology regains its stability.

The first route calculation is controlled by the initial wait interval and the second calculation is controlled by the second wait interval. Each subsequent wait interval is twice as long as the previous one until the wait interval reaches the maximum wait time specified (interval seconds). After the network calms down and there are no triggers for two times the maximum interval, fast behavior is restored (the initial wait time).
Link Aggregation Control Protocol (LACP)

This chapter contains commands for Dell Networks’s implementation of the link aggregation control protocol (LACP) for creating dynamic link aggregation groups (LAGs) — known as “port-channels” in the Dell Networking operating software.

NOTE: For static LAG commands, refer to Port Channel Commands in the Interfaces chapter, based on the standards specified in the IEEE 802.3 Carrier sense multiple access with collision detection (CSMA/CD) access method and physical layer specifications.

clear lacp counters

Clear port channel counters.

Syntax

```
clear lacp port-channel-number counters
```

Parameters

- `port-channel-number` Enter a port-channel number. The range is from 1 to 128.

Defaults

Without a Port Channel specified, the command clears all Port Channel counters.

Command Modes

- EXEC
- EXEC Privilege

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Related Commands

- `show lacp` — displays the LACP configuration.

debug lacp

Debug LACP (configuration, events, and so on).

Syntax

```
debug lacp [config | events | pdu [interface [in | out]]]
```

To disable LACP debugging, use the `no [config | events | pdu [interface [in | out]]]` command.

Parameters

- `config` (OPTIONAL) Enter the keyword `config` to debug the LACP configuration.
events  (OPTIONAL) Enter the keyword events to debug the LACP event information.

pdu  (OPTIONAL) Enter the keyword pdu to debug the LACP Protocol Data Unit information.

interface in | out  (OPTIONAL) Enter the following keywords and slot/port or number information:
  • For a Ten-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  • For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.

Optional, enter an in or out parameter:
  • Receive enter in
  • Transmit enter out

Defaults  none

Command Modes
  • EXEC
  • EXEC Privilege

Command History
  Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.

lACP long-timeout

Configure a long timeout period (30 seconds) for an LACP session.

Syntax  lACP long-timeout

To reset the timeout period to a short timeout (1 second), use the no lACP long-timeout command.

Defaults  1 second

Command Modes
  INTERFACE (conf-if-po-number)

Command History
  Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
  This command applies to dynamic port-channel interfaces only. When applied on a static port-channel, this command has no effect.

Related Commands
  show lacp — displays the LACP configuration.
**lacp port-priority**

To influence which ports will be put in Standby mode when there is a hardware limitation that prevents all compatible ports from aggregating, configure the port priority.

**Syntax**

```plaintext
lacp port-priority priority-value
```

To return to the default setting, use the `no lacp port-priority priority-value` command.

**Parameters**

- **priority-value**
  
Enter the port-priority value. The higher the value number, the lower the priority. The range is from 1 to 65535. The default is **32768**.

**Defaults**

- **32768**

**Command Modes**

- **INTERFACE**

**Command History**

- **Version 8.3.16.1** Introduced on the MXL 10/40GbE Switch IO Module.

**lacp system-priority**

Configure the LACP system priority.

**Syntax**

```
lacp system-priority priority-value
```

**Parameters**

- **priority-value**
  
Enter the port-priority value. The higher the value number, the lower the priority. The range is from 1 to 65535. The default is **32768**.

**Defaults**

- **32768**

**Command Modes**

- **INTERFACE**

**Command History**

- **Version 8.3.16.1** Introduced on the MXL 10/40GbE Switch IO Module.

**port-channel mode**

Configure the LACP port channel mode.

**Syntax**

```
port-channel number mode [active] [passive] [off]
```
Parameters

**number**
Enter the keywords `number` then a number.

**active**
Enter the keyword `active` to set the mode to the active state.

- **NOTE**: LACP modes are defined in Usage Information.

**passive**
Enter the keyword `passive` to set the mode to the passive state.

- **NOTE**: LACP modes are defined in Usage Information.

**off**
Enter the keyword `off` to set the mode to the off state.

- **NOTE**: LACP modes are defined in Usage Information.

Defaults

`off`

Command Modes

`INTERFACE`

Command History

- **Version 8.3.16.1**: Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

**LACP Modes**

<table>
<thead>
<tr>
<th>Mode</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>active</td>
<td>An interface is in an active negotiating state in this mode. LACP runs on any link configured in the active state and also automatically initiates negotiation with other ports by initiating LACP packets.</td>
</tr>
<tr>
<td>passive</td>
<td>An interface is not in an active negotiating state in this mode. LACP runs on any link configured in the passive state. Ports in a passive state respond to negotiation requests from other ports that are in active states. Ports in a passive state respond to LACP packets.</td>
</tr>
<tr>
<td>off</td>
<td>An interface cannot be part of a dynamic port channel in off mode. LACP does not run on a port configured in off mode.</td>
</tr>
</tbody>
</table>

**port-channel-protocol lACP**

Enable LACP on any LAN port.

**Syntax**

```
port-channel-protocol lACP
```

To disable LACP on a LAN port, use the `no port-channel-protocol lACP` command.
show lacp

Display the LACP matrix.

Syntax

```
show lacp port-channel-number [sys-id | counters]
```

Parameters

- **port-channel-number**: Enter a port-channel number. The range is from 1 to 128.
- **sys-id**: (OPTIONAL) Enter the keywords `sys-id` and the value that identifies a system.
- **counters**: (OPTIONAL) Enter the keyword `counters` to display the LACP counters.

Defaults

Without a Port Channel specified, the command clears all Port Channel counters.

Command Modes

- EXEC
- EXEC Privilege

Command History

`Version 8.3.16.1` Introduced on the MXL 10/40GbE Switch IO Module.

Example (Port-Channel-Number)

```
Dell#show lacp 1
Port-channel 1 admin up, oper up, mode lacp
Actor System ID:Priority 32768, Address 0001.e800.a12b
Partner System ID:Priority 32768, Address 0001.e801.45a5
Actor Admin Key 1, Oper Key 1, Partner Oper Key 1
LACP LAG 1 is an aggregatable link
```
Port Gi 10/6 is enabled, LACP is enabled and mode is lacp

Actor   Admin: State ACEHJLMP Key 1    Priority 128
        Oper: State ACEGIKNP Key 1    Priority 128

Partner Admin: State BDFHJLMP Key 0    Priority 0
             Oper: State BCEGIKNP Key 1    Priority 128

Dell#

Example (Sys-id)

Dell#show lACP 1 sys-id
Actor    System ID: Priority 32768, Address 0001.e800.a12b
Partner  System ID: Priority 32768, Address 0001.e801.45a5

Dell#

Example (Counter)

Dell#show lACP 1 counters
----------------------------------------------------
<table>
<thead>
<tr>
<th>Port</th>
<th>LACP PDU</th>
<th>Marker PDU</th>
<th>Unknown</th>
<th>Illegal</th>
</tr>
</thead>
<tbody>
<tr>
<td>Gi 10/6</td>
<td>200</td>
<td>200</td>
<td>0</td>
<td>0</td>
</tr>
</tbody>
</table>

Dell#

Related Commands

- clear lACP counters — clears the LACP counters.
- show interfaces port-channel — displays information on configured Port Channel groups.
Layer 2

This chapter describes commands to configure Layer 2 features.
This chapter contains the following sections:

- MAC Addressing Commands
- Virtual LAN (VLAN) Commands

MAC Addressing Commands

The following commands are related to configuring, managing, and viewing MAC addresses.

clear mac-address-table

Clear the MAC address table.

**Syntax**

```
clear mac-address-table dynamic {address mac-address | all | interface interface | vlan vlan-id}
```

**Parameters**

- **address mac-address** Enter the keyword address then a MAC address in nn:nn:nn:nn:nn:nn format.
- **all** Enter the keyword all to delete all MAC address entries in the MAC address table.
- **interface interface** Enter the following keywords and slot/port or number information:
  - For a Port Channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
- **vlan vlan-id** Enter the keyword vlan then a VLAN ID number from 1 to 4094.

**Command Modes**

EXEC Privilege
mac-address-table aging-time

Specify an aging time for MAC addresses to remove from the MAC address table.

Syntax

mac-address-table aging-time seconds

Parameters

- **seconds**: Enter either zero (0) or a number as the number of seconds before MAC addresses are relearned. To disable aging of the MAC address table, enter 0. The range is from 10 to 1000000. The default is 1800 seconds.

Defaults

- 1800 seconds

Command Modes

- CONFIGURATION

Command History

- Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Related Commands

- **mac learning-limit** — sets the MAC address learning limits for a selected interface.
- **show mac-address-table aging-time** — displays the MAC aging time.

mac-address-table static

Associate specific MAC or hardware addresses to an interface and virtual local area networks (VLANs).

Syntax

mac-address-table static mac-address output interface] vlan vlan-id}

To remove a MAC address, use the no mac-address-table static mac-address output interface vlan vlan-id command.

Parameters

- **mac-address**: Enter the 48-bit hexadecimal address in nn:nn:nn:nn:nn format.
- **output interface**: Enter the keyword output then one of the following interfaces for which traffic is forwarded:
  - For a Port Channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
• For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.

```plaintext
vlan vlan-id
```
Enter the keyword `vlan` then a VLAN ID number from 1 to 4094.

**Defaults**
Not configured.

**Command Modes**
CONFIGURATION

**Command History**
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**
`show mac-address-table` — displays the MAC address table.

---

### mac-address-table station-move refresh-arp

Ensure that address resolution protocol (ARP) refreshes the egress interface when a station move occurs due to a topology change.

**Syntax**
```
[no] mac-address-table station-move refresh-arp
```

**Defaults**
none

**Command Modes**
CONFIGURATION

**Command History**
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**
For details about using this command, refer to the "NIC Teaming" section of the Layer 2 chapter in the *Dell Networking OS Configuration Guide*.

---

### mac learning-limit

Limit the maximum number of MAC addresses (static + dynamic) learned on a selected interface.

**Syntax**
```
mac learning-limit address_limit [dynamic] [no-station-move|station-move][sticky]
```

**Parameters**
- **address_limit**
  Enter the maximum number of MAC addresses that can be learned on the interface. The range is from 1 to 1000000.
- **dynamic**
  (OPTIONAL) Enter the keyword `dynamic` to allow aging of MACs even though a learning limit is configured.
no-station-move  (OPTIONAL) Enter the keywords no-station-move to disallow a station move (associate the learned MAC address with the most recently accessed port) on learned MAC addresses.

station-move  (OPTIONAL) Enter the keywords station-move to allow a station move on learned MAC addresses.

sticky  (OPTIONAL) Enter the keyword sticky to allow configuring the sticky mac feature along with the learning limit.

**Defaults**

```
dynamic
```

**NOTE:** "Static" means manually entered addresses, which do not age.

**Command Modes**

```
INTERFACE
```

**Command History**

```
Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.
```

**Usage Information**

This command and its options are supported on physical interfaces, static LAGs, LACP LAGs, and VLANs.

If you do not specify the vlan option, the MAC address counters are not VLAN-based. That is, the sum of the addresses learned on all VLANs (not having any learning limit configuration) is counted against the MAC learning limit.

MAC Learning Limit violation logs and actions are not available on a per-VLAN basis.

With the keyword no-station-move option, MAC addresses learned through this feature on the selected interface persist on a per-VLAN basis, even if received on another interface. Enabling or disabling this option has no effect on already learned MAC addresses.

After the MAC address learning limit is reached, the MAC addresses do not age out unless you add the dynamic option. To clear statistics on MAC address learning, use the clear counters command with the learning-limit parameter.

When a channel member is added to a port-channel and there is not enough ACL CAM space, the MAC limit functionality on that port-channel is undefined. When this occurs, un–configure the existing configuration first and then reapply the limit with a lower value.

**Related Commands**

`clear counters` — Clear counters used in the show interface command.

`clear mac-address-table dynamic` — clears the MAC address table of all MAC address learned dynamically.

`show mac learning-limit` — displays MAC learning-limit configuration.
mac learning-limit learn-limit-violation

Configure an action for a MAC address learning-limit violation.

Syntax

```
mac learning-limit learn-limit-violation {log | shutdown}
```

To return to the default, use the `no mac learning-limit learn-limit-violation {log | shutdown}` command.

Parameters

- **log**: Enter the keyword `log` to generate a syslog message on a learning-limit violation.
- **shutdown**: Enter the keyword `shutdown` to shut down the port on a learning-limit violation.

Defaults

none

Command Modes

INTERFACE (conf-if-interface-slot/port)

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

This command is supported on physical interfaces, static LAGs, and LACP LAGs.

Related Commands

- `show mac learning-limit` — displays details of the mac learning-limit.

mac learning-limit station-move-violation

Specify the actions for a station move violation.

Syntax

```
mac learning-limit station-move-violation {log | shutdown-both | shutdown-offending | shutdown-original}
```

To disable a configuration, use the `no mac learning-limit station-move-violation` command, then the configured keyword.

Parameters

- **log**: Enter the keyword `log` to generate a syslog message on a station move violation.
- **shutdown-both**: Enter the keyword `shutdown-both` to shut down both the original and offending interface and generate a syslog message.
- **shutdown-offending**: Enter the keywords `shutdown-offending` to shut down the offending interface and generate a syslog message.
- **shutdown-original**: Enter the keywords `shutdown-original` to shut down the original interface and generate a syslog message.
Defaults

none

Command Modes
INTERFACE (conf-if-interface-slot/port)

Command History
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
This command is supported on physical interfaces, static LAGs, and LACP LAGs.

Related Commands
show mac learning-limit — displays details of the mac learning-limit.

mac learning-limit reset

Reset the MAC address learning-limit error-disabled state.

Syntax
mac learning-limit reset

Defaults
none

Command Modes
• EXEC
• EXEC Privilege

Command History
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

show cam mac stack-unit

Display the content addressable memory (CAM) size and the portions allocated for MAC addresses and for MAC ACLs.

Syntax
show cam mac stack-unit unit_number port-set port-pipe count [vlan vlan-id] [interface interface]

Parameters

stack-unit (REQUIRED) Enter the keyword stack-unit then a stack member number to select the stack member number to select the linecard for which to gather information. The range is 0 to 5.

unit_number

port-set port-pipe (REQUIRED) Enter the keywords port-set then a Port-Pipe number to select the Port-Pipe for which to gather information. The range is 0.

port-pipe

address mac-addr (OPTIONAL) Enter the keyword address then a MAC address in the nn:nn:nn:nn:nn:nn format to display information on that MAC address.

mac-addr
**show mac-address-table**

Display the MAC address table.

**Syntax**

```plaintext
show mac-address-table [dynamic | static] [address mac-address | interface interface | vlan vlan-id] [count [vlan vlan-id] [interface interface interface-type [slot[/port]]]]
```

**Parameters**

- `dynamic` (OPTIONAL) Enter the keyword `dynamic` to display only those MAC addresses the switch dynamically learns. Optionally, you can also add one of these combinations: `address/mac-address`, `interface/interface`, or `vlan vlan-id`.

- `static` (OPTIONAL) Enter the keyword `static` to display only those MAC addresses specifically configured on the switch. Optionally, you can also add one of these combinations: `address/mac-address`, `interface/interface`, or `vlan vlan-id`.

- `address mac-address` (OPTIONAL) Enter the keyword `address` then a MAC address in the `nn:nn:nn:nn:nn:nn` format to display information on that MAC address.
(OPTIONAL) Enter the keyword `interface` then the interface type, slot and port information:

- For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.

(OPTIONAL) Instead of entering the keyword `interface` then the interface type, slot and port information, as above, you can enter the interface type, then just a slot number.

(OPTIONAL) Enter the keyword `vlan` then the VLAN ID to display the MAC address assigned to the VLAN. The range is 1 to 4094.

(OPTIONAL) Enter the keyword `count`, then optionally, by an interface or VLAN ID, to display total or interface-specific static addresses, dynamic addresses, and MAC addresses in use.

---

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

The following describes the `show mac-address-table` command shown in the following example.

<table>
<thead>
<tr>
<th>Column Heading</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>VlanId</td>
<td>Displays the VLAN ID number.</td>
</tr>
<tr>
<td>Type</td>
<td>Lists whether the MAC address was manually configured (Static), learned dynamically (Dynamic), or associated with a specific port (Sticky).</td>
</tr>
<tr>

<tr>
<td>Type</td>
<td>Lists whether the MAC address was manually configured (Static), learned (Dynamic), or associated with a specific port (Sticky). An (N) indicates that the specified MAC address has been learnt by a neighbor and is synced to the node.</td>
</tr>
</tbody>
</table>
| Interface      | Displays the interface type and slot/port information. The following abbreviations describe the interface types:
  - gi — Gigabit Ethernet then a slot/port
  - po — Port Channel then a number. The range is from 1 to 255. \n  - so — SONET then a slot/port.
  - te — 10–Gigabit Ethernet then a slot/port. |
| State          | Lists if the MAC address is in use (Active) or not in use (Inactive). |

The following describes the `show mac-address-table count` command shown in the following example.

<table>
<thead>
<tr>
<th>Line Beginning With</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>MAC Entries...</td>
<td>Displays the number of MAC entries learned per VLAN.</td>
</tr>
<tr>
<td>Dynamic Address...</td>
<td>Lists the number of dynamically learned MAC addresses.</td>
</tr>
<tr>
<td>Static Address...</td>
<td>Lists the number of user-defined MAC addresses.</td>
</tr>
<tr>
<td>Total MAC...</td>
<td>Lists the total number of MAC addresses the switch uses.</td>
</tr>
</tbody>
</table>

**Example (Count)**

Dell#show mac-address-table count
MAC Entries for all vlans :
Dynamic Address Count :                5
Static Address (User-defined) Count :  0
Total MAC Addresses in Use:            5
Dell#
show mac-address-table aging-time

Display the aging times assigned to the MAC addresses on the switch.

Syntax

```
show mac-address-table aging-time [vlan vlan-id]
```

Parameters

- **vlan vlan-id** (OPTIONAL) Enter the keyword `vlan` then the VLAN ID to display the MAC address assigned to the VLAN. The range is from 1 to 4094.

Command Modes

- EXEC
- EXEC Privilege

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Example

```
Dell#show mac-address-table aging-time
Mac-address-table aging time : 1800
Dell#
```

Related Commands

- `show mac-address-table` — displays the current MAC address configuration.
- `show mac learning-limit` — displays MAC address learning limits set for various interfaces.

show mac learning-limit

Display MAC address learning limits set for various interfaces.

Syntax

```
show mac learning-limit [violate-action] [detail] [interface interface]
```

Parameters

- **violate-action** (OPTIONALLY) Enter the keywords `violate-action` to display the MAC learning limit violation status.
- **detail** (OPTIONAL) Enter the keyword `detail` to display the MAC learning limit in detail.
- **interface** (OPTIONAL) Enter the keyword `interface` with the following keywords and slot/port or number information:
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.

Related Commands

- `show mac-address-table` — displays the current MAC address configuration.
For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.

### Command Modes
- EXEC
- EXEC Privilege

### Command History
**Version 8.3.16.1**
Introduced on the MXL 10/40GbE Switch IO Module.

### Example
```
Dell# show mac learning-limit
Interface   Learning  Dynamic  Static  Unknown  SA
Slot/port    Limit     MAC count MAC count  Drops
Dell#
```

## Virtual LAN (VLAN) Commands

The following commands configure and monitor virtual LANs (VLANs). VLANs are a virtual interface and use many of the same commands as physical interfaces.

You can configure an IP address and Layer 3 protocols on a VLAN called Inter-VLAN routing. FTP, TFTP, ACLs and SNMP are not supported on a VLAN.

Occasionally, while sending broadcast traffic over multiple Layer 3 VLANs, the VRRP state of a VLAN interface may continually switch between Master and Backup.

- **NOTE:** For more information, refer to VLAN Stacking and VLAN-related commands, such as `portmode hybrid` in the Interfaces chapter.

### description

Add a description about the selected VLAN.

**Syntax**
```
description description
```

**Parameters**
- `description` Enter a text string description to identify the VLAN (80 characters maximum).

**Defaults**
none

**Command Modes**
INTERFACE VLAN

**Command History**
**Version 8.3.16.1**
Introduced on the MXL 10/40GbE Switch IO Module.
default vlan-id

Specify a VLAN as the Default VLAN.

Syntax

```plaintext
default vlan-id vlan-id
```

To remove the default VLAN status from a VLAN and VLAN 1 does not exist, use the
no default vlan-id vlan-id syntax.

Parameters

- **vlan-id**: Enter the VLAN ID number of the VLAN to become the new Default VLAN. The range is from 1 to 4094. The default is 1.

Defaults

The Default VLAN is VLAN 1.

Command Modes

- **CONFIGURATION**

Command History

- **Version 8.3.16.1**: Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

To return VLAN 1 as the Default VLAN, use the ```(default-vlan-id 1)``` command.

The Default VLAN contains only untagged interfaces.

Related Commands

- **interface vlan** — configures a VLAN.

default-vlan disable

Disable the default VLAN so that all switchports are placed in the Null VLAN until they are explicitly configured as a member of another VLAN.

Defaults

- **Enabled**.

Command Modes

- **CONFIGURATION**

Command History

- **Version 8.3.16.1**: Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The ```no default vlan disable``` command is not listed in the running-configuration, but when the default VLAN is disabled, ```default-vlan disable``` is listed in the running-configuration.

show vlan — displays the VLAN configuration.
name

Assign a name to the VLAN.

Syntax

name vlan-name

To remove the name from the VLAN, use the no name command.

Parameters

vlan-name Enter up to 32 characters as the name of the VLAN.

Defaults
Not configured.

Command Modes INTERFACE VLAN

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
To display information about a named VLAN, enter the show vlan command with the name parameter or the show interfaces description command.

Related Commands
description — assigns a descriptive text string to the interface.
interface vlan — configures a VLAN.
show vlan — displays the current VLAN configurations on the switch.

show config

Display the current configuration of the selected VLAN.

Syntax

show config

Command Modes INTERFACE VLAN

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Example

Dell(conf-if-vl-100)#show config
!
interface Vlan 1
description a
no ip address
mtu 2500
shutdown
Dell(conf-if-vl-100)#
show vlan

Display the current VLAN configurations on the switch.

Syntax

show vlan [brief | id vlan-id | name vlan-name]

Parameters

brief (OPTIONAL) Enter the keyword brief to display the following information:
- VLAN ID
- VLAN name (left blank if none is configured)
- Spanning Tree Group ID
- MAC address aging time
- IP address

id vlan-id (OPTIONAL) Enter the keyword id then a number from 1 to 4094. Only information on the VLAN specified is displayed.

name vlan-name (OPTIONAL) Enter the keyword name then the name configured for the VLAN. Only information on the VLAN named is displayed.

Command Modes

- EXEC
- EXEC Privilege

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The following describes the show vlan command shown in the following example.

<table>
<thead>
<tr>
<th>Column Heading (Column 1 — no heading)</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>NUM</td>
<td>Displays existing VLAN IDs.</td>
</tr>
<tr>
<td>Status</td>
<td>Displays the word Inactive for inactive VLANs and the word Active for active VLANs.</td>
</tr>
<tr>
<td>Q</td>
<td></td>
</tr>
</tbody>
</table>
- Displays G for GVRP tagged
- M for member of a VLAN-Stack VLAN
- T for tagged interface

| NUM | Displays existing VLAN IDs. |
| Status | Displays the word Inactive for inactive VLANs and the word Active for active VLANs. |
| Q | | 
- Displays G for GVRP tagged
- M for member of a VLAN-Stack VLAN
- T for tagged interface

738

</tr>
<tr>
<td>v (not capitalized v) for VLT untagged</td>
</tr>
<tr>
<td>V (capitalized V) for VLT tagged</td>
</tr>
</tbody>
</table>

Ports

Displays the type, slot, and port information.

| Po = port channel |
| Gi = gigabit Ethernet |
| Te = ten-gigabit Ethernet |

Example

Dell#show vlan

Codes: * - Default VLAN, G - GVRP VLANs, R - Remote Port Mirroring VLANs, P - Primary, C - Community, I - Isolated
Q: U - Untagged, T - Tagged
x - Dot1x untagged, X - Dot1x tagged
G - GVRP tagged, M - Vlan-stack, H - VSN tagged
i - Internal untagged, I - Internal tagged, v - VLT untagged, V - VLT tagged

<table>
<thead>
<tr>
<th>NUM</th>
<th>Status</th>
<th>Description</th>
<th>Q Ports</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Inactive</td>
<td>a</td>
<td></td>

<td></td>
</tr>
<tr>
<td>1002</td>
<td>Active</td>
<td>T Te 0/3,13,55-56</td>
<td></td>
</tr>
</tbody>
</table>

Dell#

Example (VLAN ID)

Dell# show vlan id 40

Codes: * - Default VLAN, G - GVRP VLANs, R - Remote Port Mirroring VLANs, P - Primary, C - Community, I - Isolated
Q: U - Untagged, T - Tagged
x - Dot1x untagged, X - Dot1x tagged
G - GVRP tagged, M - Vlan-stack, H - VSN tagged
i - Internal untagged, I - Internal tagged, v - VLT untagged, V - VLT tagged

<table>
<thead>
<tr>
<th>NUM</th>
<th>Status</th>
<th>Description</th>
<th>Q Ports</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Inactive</td>
<td>a</td>
<td></td>
</tr>
</tbody>
</table>

Dell#

Example (Brief)

Dell#show vlan brief

VLAN Name STG MAC Aging IP Address
---- ------------------------------
1 0 0 unassigned
Example (Name)

```
Dellconf)#interface vlan 222
Dell(conf-if-vl-222)#name test
Dell(conf-if-vl-222)#do show vlan name test

Codes: * - Default VLAN, G - GVRP VLANs
Q: U - Untagged, T - Tagged
  x - Dot1x untagged, X - Dot1x tagged
  G - GVRP tagged, M - Vlan-stack

  NUM  Status Description  Q Ports
   222  Inactive            U Gi 1/22

Dell(conf-if-vl-222)#
```

Related Commands

- `vlan-stack compatible` — enables the Stackable VLAN feature on the selected VLAN.
- `interface vlan` — configures a VLAN.

tagged

Add a Layer 2 interface to a VLAN as a tagged interface.

Syntax

```
tagged interface
```

To remove a tagged interface from a VLAN, use the `no tagged interface` command.

Parameters

- `interface` Enter the following keywords and slot/port or number information:
  - For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.

Defaults

All interfaces in Layer 2 mode are untagged.

Command Modes

- INTERFACE VLAN

Command History

- **Version 8.3.16.1** Introduced on the MXL 10/40GbE Switch IO Module.
Usage Information

When you use the `no tagged` command, the interface is automatically placed in the Default VLAN as an untagged interface unless the interface is a member of another VLAN. If the interface belongs to several VLANs, remove it from all VLANs to change it to an untagged interface.

Tagged interfaces can belong to multiple VLANs, while untagged interfaces can only belong to one VLAN at a time.

Related Commands

- `interface vlan` — configures a VLAN.
- `untagged` — specifies which interfaces in a VLAN are untagged.

**track ip**

Track the Layer 3 operational state of a Layer 3 VLAN, using a subset of the VLAN member interfaces.

**Syntax**

```
track ip interface
```

To remove the tracking feature from the VLAN, use the `no track ip interface` command.

**Parameters**

- `interface` Enter the following keywords and slot/port or number information:
  - For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.

**Defaults**

Not configured.

**Command Modes**

INTERFACE VLAN

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

When this command is configured, the VLAN is operationally UP if any of the interfaces specified in the `track ip` command are operationally UP, and the VLAN is operationally DOWN if none of the tracking interfaces are operationally UP.

If the `track ip` command is not configured, the VLAN’s Layer 3 operational state depends on all the members of the VLAN.
The Layer 2 state of the VLAN, and hence the Layer 2 traffic, is not affected by the track ip command configuration.

**Related Commands**

- `interface vlan` — configures a VLAN.
- `tagged` — specifies which interfaces in a VLAN are tagged.

## untagged

Add a Layer 2 interface to a VLAN as an untagged interface.

**Syntax**

```plaintext
untagged interface
```

To remove an untagged interface from a VLAN, use the `no untagged interface` command.

**Parameters**

- `interface`

  Enter the following keywords and slot/port or number information:
  
  - For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.

**Defaults**

All interfaces in Layer 2 mode are untagged.

**Command Modes**

- INTERFACE VLAN

**Command History**

- **Version 8.3.16.1**
  
  Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

Untagged interfaces can only belong to one VLAN.

In the Default VLAN, you cannot use the `no untagged interface` command. To remove an untagged interface from all VLANs, including the Default VLAN, enter INTERFACE mode and use the `no switchport` command.

**Related Commands**

- `interface vlan` — configures a VLAN.
- `tagged` — specifies which interfaces in a VLAN are tagged.
Link Layer Discovery Protocol (LLDP)

Link layer discovery protocol (LLDP) advertises connectivity and management from the local station to the adjacent stations on an IEEE 802 LAN.

LLDP facilitates multi-vendor interoperability by using standard management tools to discover and make available a physical topology for network management. The Dell Networking operating software implementation of LLDP is based on IEEE standard 801.1ab.

The starting point for using LLDP is invoking LLDP with the protocol lldp command in either CONFIGURATION or INTERFACE mode.

The information LLDP distributes is stored by its recipients in a standard management information base (MIB). You can access the information by a network management system through a management protocol such as simple network management protocol (SNMP).

For details about implementing LLDP/LLDP-MED, refer to the Link Layer Discovery Protocol chapter of the Dell Networking OS Configuration Guide.

advertise dot1-tlv

Advertise dot1 TLVs (Type, Length, Value).

Syntax

advertise dot1-tlv {port-protocol-vlan-id | port-vlan-id | vlan-name}

To remove advertised dot1-tlv, use the no advertise dot1-tlv {port-protocol-vlan-id | port-vlan-id | vlan-name} command.

Parameters

- **port-protocol-vlan-id**
  - Enter the keywords port-protocol-vlan-id to advertise the port protocol VLAN identification TLV.

- **port-vlan-id**
  - Enter the keywords port-vlan-id to advertise the port VLAN identification TLV.

- **vlan-name**
  - Enter the keywords vlan-name to advertise the vlan-name TLV.

Defaults

Disabled.

Command Modes

CONFIGURATION (conf-lldp) and INTERFACE (conf-if-interface-lldp)

Command History

Version 8.3.16.1 
Introduced on the MXL 10/40GbE Switch IO Module.
Related Commands

- `protocol lldp (Configuration)` — enables LLDP globally.
- `debug lldp interface` — debugs LLDP.
- `show lldp neighbors` — displays the LLDP neighbors.
- `show running-config lldp` — displays the LLDP running configuration.

advertise dot3-tlv

Advertise dot3 TLVs (Type, Length, Value).

Syntax

```
advertise dot3-tlv {max-frame-size}
```

To remove advertised dot3-tlv, use the `no advertise dot3-tlv {max-frame-size}` command.

Parameters

- `max-frame-size` Enter the keywords `max-frame-size` to advertise the dot3 maximum frame size.

Defaults
none

Command Modes
CONFIGURATION (conf-lldp) and INTERFACE (conf-if-interface-lldp)

Command History
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

advertise management-tlv

Advertise management TLVs (Type, Length, Value).

Syntax

```
advertise management-tlv {system-capabilities | system-description | system-name}
```

To remove advertised management TLVs, use the `no advertise management-tlv {system-capabilities | system-description | system-name}` command.

Parameters

- `system-capabilities` Enter the keywords `system-capabilities` to advertise the system capabilities TLVs to the LLDP peer.
- `system-description` Enter the keywords `system-description` to advertise the system description TLVs to the LLDP peer.
- `system-name` Enter the keywords `system-name` to advertise the system name TLVs to the LLDP peer.
clear lldp counters

Clear LLDP transmitting and receiving counters for all physical interfaces or a specific physical interface.

**Syntax**
clear lldp counters interface

**Parameters**
- **interface**
Enter the following keywords and slot/port or number information:
  - For a 10-Gigabit Ethernet interface, enter the keyword tenGigabitEthernet then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.

**Defaults**
none

**Command Modes**
EXEC Privilege

**Command History**
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

---

clear lldp neighbors

Clear LLDP neighbor information for all interfaces or a specific interface.

**Syntax**
clear lldp neighbors {interface}

**Parameters**
- **interface**
Enter the following keywords and slot/port or number information:
  - For a 10-Gigabit Ethernet interface, enter the keyword tenGigabitEthernet then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.

**Defaults**
none

**Command Modes**
EXEC Privilege

**Command History**
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.
Defaults none
Command Modes EXEC Privilege
Command History Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

dbg lldp interface
To display timer events, neighbor additions or deletions, and other information about incoming and outgoing packets, enable LLDP debugging.

Syntax debug lldp interface {interface | all}{events | packet {brief | detail} {tx | rx | both}}
To disable debugging, use the no debug lldp interface {interface | all}{events} {packet {brief | detail} {tx | rx | both}} command.

Parameters

interface Enter the following keywords and slot/port or number information:

- For a 10-Gigabit Ethernet interface, enter the keyword tenGigabitEthernet then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.

all (OPTIONAL) Enter the keyword all to display information on all interfaces.

events (OPTIONAL) Enter the keyword events to display major events such as timer events.

packet (OPTIONAL) Enter the keyword packet to display information regarding packets coming in or going out.

brief (OPTIONAL) Enter the keyword brief to display brief packet information.

detail (OPTIONAL) Enter the keyword detail to display detailed packet information.

rx (OPTIONAL) Enter the keyword rx to display receive-only packet information.

both (OPTIONAL) Enter the keyword both to display both receive and transmit packet information.
Defaults none
Command Modes EXEC Privilege
Command History Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

disable

Enable or disable LLDP.

Syntax disable

To enable LLDP, use the no disable command.

Defaults Enabled, that is no disable.
Command Modes CONFIGURATION (conf-lldp) and INTERFACE (conf-if-interface-ldpd)
Command History Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Related Commands
protocol lldp (Configuration) — enables LLDP globally.
debug lldp interface — debugs LLDP.
show lldp neighbors — displays the LLDP neighbors.
show running-config lldp — displays the LLDP running configuration.

hello

Configure the rate at which the LLDP control packets are sent to its peer.

Syntax hello seconds

To revert to the default, use the no hello seconds command.

Parameters
seconds Enter the rate, in seconds, at which the control packets are sent to its peer. The rate is from 5 to 180 seconds. The default is 30 seconds.

Defaults 30 seconds
**mode**

To receive or transmit, set LLDP.

**Syntax**

```
mode {tx | rx}
```

To return to the default, use the `no mode {tx | rx}` command.

**Parameters**

- **tx**
  
  Enter the keyword `tx` to set the mode to transmit.

- **rx**
  
  Enter the keyword `rx` to set the mode to receive.

**Defaults**

Both transmit and receive.

**Command Modes**

CONFIGURATION (conf-lldp) and INTERFACE (conf-if-interface-lldp)

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**

- protocol lldp (Configuration) — enables LLDP globally.
- show lldp neighbors — displays the LLDP neighbors.

---

**multiplier**

Set the number of consecutive misses before LLDP declares the interface dead.

**Syntax**

```
multiplier integer
```

To return to the default, use the `no multiplier integer` command.

**Parameters**

- **integer**
  
  Enter the number of consecutive misses before the LLDP declares the interface dead. The range is from 2 to 10.

**Defaults**

4 x hello

**Command Modes**

CONFIGURATION (conf-lldp) and INTERFACE (conf-if-interface-lldp)
**protocol lldp (Configuration)**

Enable the LLDP globally on the switch.

**Syntax**

```
protocol lldp
```

To disable LLDP globally on the chassis, use the `no protocol lldp` command.

**Defaults**

Enabled.

**Command Modes**

CONFIGURATION (conf-lldp)

**Command History**

Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.

**protocol lldp (Interface)**

Enter the LLDP protocol in INTERFACE mode.

**Syntax**

```
[no] protocol lldp
```

To return to the global LLDP configuration mode, use the `no protocol lldp` command from Interface mode.

**Defaults**

LLDP is not enabled on the interface.

**Command Modes**

INTERFACE (conf-if-interface-lldp)

**Command History**

Version 8.3.16.1

**Usage Information**

Before LLDP can be configured on an interface, it must be enabled globally from CONFIGURATION mode. This command places you in LLDP mode on the interface; it does not enable the protocol.

When you enter the LLDP protocol in the Interface context, it overrides global configurations. When you execute the `no protocol lldp` from INTERFACE mode, interfaces begin to inherit the configuration from global LLDP CONFIGURATION mode.
show lldp neighbors

Display LLDP neighbor information for all interfaces or a specified interface.

Syntax

show lldp neighbors [interface] [detail]

Parameters

interface (OPTIONAL) Enter the following keywords and slot/port or number information:

- For a 10-Gigabit Ethernet interface, enter the keyword tenGigabitEthernet then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.

detail (OPTIONAL) Enter the keyword detail to display all the TLV information, remote management IP addresses, timers, and LLDP tx and rx counters.

Defaults

none

Command Modes

EXEC Privilege

Command History

Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module

Usage Information

Omitting the keyword detail displays only the remote chassis ID, Port ID, and Dead Interval.

Example

R1(conf-if-gi-1/31)#do show lldp neighbors
Loc PortID Rem Host Name       Rem     Port Id Rem Chassis Id
--------------------------------------------------------------
Gi 1/21    R2  GigabitEthernet 2/11   00:01:e8:06:95:3e
Gi 1/31    R3  GigabitEthernet 3/11   00:01:e8:09:c2:4a

show lldp statistics

Display the LLDP statistical information.

Syntax

show lldp statistics

Defaults

none

Command Modes

EXEC Privilege

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Example

Dell#show lldp statistics
---------- LLDP GLOBAL STATISTICS ON CHASSIS ----------
Total number of neighbors: 2
Last table change time: 1w5d4h, In ticks: 52729764
show running-config lldp

Display the current global LLDP configuration.

Syntax

show running-config lldp

Defaults

none

Command Modes

EXEC Privilege

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Example

Dell#show running-config lldp
!
protocol lldp
   advertise dot1-tlv port-protocol-vlan-id port-vlan-id
   advertise dot3-tlv max-frame-size
   advertise management-tlv system-capabilities system-description
   hello 15
   multiplier 3
   no disable
Dell#

LLDP-MED Commands

The following are the LLDP-MED (Media Endpoint Discovery) commands.
The LLDP-MED commands are an extension of the set of LLDP TLV advertisement commands.

As defined by ANSI/TIA-1057, LLDP-MED provides organizationally specific TLVs (Type Length Value), so
that endpoint devices and network connectivity devices can advertise their characteristics and
configuration information. The Organizational Unique Identifier (OUI) for the Telecommunications
Industry Association (TIA) is 00-12-BB.

- LLDP-MED Endpoint Device — any device that is on an IEEE 802 LAN network edge, can
  communicate using IP, and uses the LLDP-MED framework.
- LLDP-MED Network Connectivity Device — any device that provides access to an IEEE 802 LAN to an
  LLDP-MED endpoint device, and supports IEEE 802.1AB (LLDP) and TIA-1057 (LLDP-MED). The Dell
  Networking system is an LLDP-MED network connectivity device.

Regarding connected endpoint devices, LLDP-MED provides network connectivity devices with the ability to:
advertise med guest-voice

To advertise a separate limited voice service for a guest user with their own IP telephony handset or other appliances that support interactive voice services, configure the system.

Syntax

```
advertise med guest-voice {vlan-id layer2_priority DSCP_value}
    | {priority-tagged number}
```

To return to the default, use the `no advertise med guest-voice {vlan-id layer2_priority DSCP_value} | {priority-tagged number}` command.

Parameters

- `vlan-id`: Enter the VLAN ID. The range is from 1 to 4094.
- `layer2_priority`: Enter the Layer 2 priority. The range is from 0 to 7.
- `DSCP_value`: Enter the DSCP value. The range is from 0 to 63.
- `priority-tagged number`: Enter the keywords `priority-tagged` followed the Layer 2 priority. The range is from 0 to 7.

Defaults

Unconfigured.

Command Modes

`CONFIGURATION (conf-lldp)`

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Related Commands

- `protocol lldp (Configuration)` — enables LLDP globally.
- `debug lldp interface` — debugs LLDP.
- `show lldp neighbors` — displays the LLDP neighbors.
- `show running-config lldp` — displays the LLDP running configuration.

advertise med guest-voice-signaling

To advertise a separate limited voice service for a guest user when the guest voice control packets use a separate network policy than the voice data, configure the system.

Syntax

```
advertise med guest-voice-signaling {vlan-id layer2_priority DSCP_value}
    | {priority-tagged number}
```
To return to the default, use the `no advertise med guest-voice-signaling {vlan-id layer2_priority DSCP_value} | {priority-tagged number}` command.

**Parameters**

- **vlan-id**
  - Enter the VLAN ID. The range is from 1 to 4094.
- **layer2_priority**
  - Enter the Layer 2 priority. The range is from 0 to 7.
- **DSCP_value**
  - Enter the DSCP value. The range is from 0 to 63.
- **priority-tagged number**
  - Enter the keywords `priority-tagged` then the Layer 2 priority. The range is from 0 to 7.

**Defaults**

unconfigured.

**Command Modes**

CONFIGURATION (conf-lldp)

**Command History**

Version 8.3.16.1
Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**

debug lldp interface — debugs LLDP.

show lldp neighbors — displays the LLDP neighbors.

show running-config lldp — displays the LLDP running configuration.

## advertise med location-identification

To advertise a location identifier, configure the system.

**Syntax**

```
advertise med location-identification {coordinate-based value | civic-based value | ecs-elin value}
```

To return to the default, use the `no advertise med location-identification {coordinate-based value | civic-based value | ecs-elin value}` command.

**Parameters**

- **coordinate-based value**
  - Enter the keywords `coordinate-based` then the coordinated based location in hexadecimal value of 16 bytes.
- **civic-based value**
  - Enter the keywords `civic-based` then the civic based location in hexadecimal format. The range is from 6 to 255 bytes.
- **ecs-elin value**
  - Enter the keywords `ecs-elin` then the Emergency Call Service (ecs) Emergency Location Identification Number (elin) numeric location string. The range is from 10 to 25 characters.
**advertise med power-via-mdi**

To advertise the Extended Power via MDI TLV, configure the system.

**Syntax**

```
advertise med power-via-mdi
```

To return to the default, use the `no advertise med power-via-mdi` command.

**Defaults**

unconfigured.

**Command Modes**

CONFIGURATION (conf-lldp)

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

Advertise the Extended Power via MDI on all ports that are connected to an 802.3af powered, LLDP-MED endpoint device.

**Related Commands**

- `debug lldp interface` — debugs LLDP.
- `show lldp neighbors` — displays the LLDP neighbors.
- `show running-config lldp` — displays the LLDP running configuration.
advertise med softphone-voice

To advertise softphone to enable IP telephony on a computer so that the computer can be used as a phone, configure the system.

**Syntax**

```
advertise med softphone-voice {vlan-id} | {priority-tagged number}
```

To return to the default, use the `no advertise med softphone-voice {vlan-id} | {priority-tagged number}` command.

**Parameters**

- **vlan-id**
  - Enter the VLAN ID. The range is from 1 to 4094.
- **priority-tagged number**
  - Enter the keywords `priority-tagged` then the Layer 2 priority. The range is from 0 to 7.

**Defaults**

unconfigured.

**Command Modes**

CONFIGURATION (conf-lldp)

**Command History**

Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**

- `debug lldp interface` — debugs LLDP.
- `show lldp neighbors` — displays the LLDP neighbors.
- `show running-config lldp` — displays the LLDP running configuration.

advertise med streaming-video

To advertise streaming video services for broadcast or multicast-based video, configure the system. This command does not include video applications that rely on TCP buffering.

**Syntax**

```
advertise med streaming-video {vlan-id} | {priority-tagged number}
```

To return to the default, use the `no advertise med streaming-video {vlan-id} | {priority-tagged number}` command.

**Parameters**

- **vlan-id**
  - Enter the VLAN ID. The range is from 1 to 4094.
- **priority-tagged number**
  - Enter the keywords `priority-tagged` then the Layer 2 priority. The range is from 0 to 7.

**Defaults**

unconfigured.
advertise med video-conferencing

To advertise dedicated video conferencing and other similar appliances that support real-time interactive video, configure the system.

Syntax

```
advertise med video-conferencing {vlan-id} | {priority-tagged number}
```

To return to the default, use the `no advertise med video-conferencing {vlan-id} | {priority-tagged number}` command.

Parameters

- **vlan-id**: Enter the VLAN ID. The range is from 1 to 4094.
- **priority-tagged number**: Enter the keywords priority-tagged then the Layer 2 priority. The range is from 0 to 7.

Defaults

unconfigured.

Command Modes

CONFIGURATION (conf-lldp)

Command History

- **Version 8.3.16.1**: Introduced on the MXL 10/40GbE Switch IO Module.

Related Commands

- `debug lldp interface` — debugs LLDP.
- `show lldp neighbors` — displays the LLDP neighbors.
- `show running-config lldp` — displays the LLDP running configuration.
advertise med voice-signaling

To advertise when voice control packets use a separate network policy than voice data, configure the system.

**Syntax**

advertise med voice-signaling {vlan-id} | {priority-tagged number}

To return to the default, use the no advertise med voice-signaling {vlan-id} | {priority-tagged number} command.

**Parameters**

- **vlan-id**: Enter the VLAN ID. The range is from 1 to 4094.
- **priority-tagged number**: Enter the keywords priority-tagged then the Layer 2 priority. The range is from 0 to 7.

**Defaults**

unconfigured.

**Command Modes**

CONFIGURATION (conf-lldp)

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**

- `debug lldp interface` — debugs LLDP.
- `show lldp neighbors` — displays the LLDP neighbors.
- `show running-config lldp` — displays the LLDP running configuration.

advertise med voice

To advertise a dedicated IP telephony handset or other appliances supporting interactive voice services, configure the system.

**Syntax**

advertise med voice {vlan-id} | {priority-tagged number}

To return to the default, use the no advertise med voice {vlan-id} | {priority-tagged number} command.

**Parameters**

- **vlan-id**: Enter the VLAN ID. The range is from 1 to 4094.
- **priority-tagged number**: Enter the keywords priority-tagged then the Layer 2 priority. The range is from 0 to 7.

**Defaults**

unconfigured.

**Command Modes**

CONFIGURATION (conf-lldp)
**advertise med voice-signaling**

To advertise when voice control packets use a separate network policy than voice data, configure the system.

**Syntax**

```
advertise med voice-signaling {vlan-id} | {priority-tagged number}
```

To return to the default, use the `no advertise med voice-signaling {vlan-id} | {priority-tagged number}` command.

**Parameters**

- `vlan-id` Enter the VLAN ID. The range is from 1 to 4094.
- `priority-tagged number` Enter the keywords `priority-tagged` then the Layer 2 priority. The range is from 0 to 7.

**Defaults**

unconfigured.

**Command Modes**

CONFIGURATION (conf-lldp)

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**

- `debug lldp interface` — debugs LLDP.
- `show lldp neighbors` — displays the LLDP neighbors.
- `show running-config lldp` — displays the LLDP running configuration.
Multicast Source Discovery Protocol (MSDP)

Multicast source discovery protocol (MSDP) connects multiple PIM Sparse-Mode (PIM-SM) domains together. MSDP peers connect using TCP port 639. Peers send keepalives every 60 seconds. A peer connection is reset after 75 seconds if no MSDP packets are received. MSDP connections are parallel with MBGP connections.

```
clear ip msdp peer
```

Reset the TCP connection to the peer and clear all the peer statistics.

**Syntax**
```
clear ip msdp peer {peer address}
```

**Parameters**
- `peer address` Enter the peer address in a dotted decimal format (A.B.C.D.).

**Defaults**
Not configured.

**Command Modes**
EXEC Privilege

**Command History**
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

```
clear ip msdp sa-cache
```

Clears the entire source-active cache, the source-active entries of a particular multicast group, rejected, or local source-active entries.

**Syntax**
```
clear ip msdp sa-cache {group-address | rejected-sa | local}
```

**Parameters**
- `group-address` Enter the group IP address in dotted decimal format (A.B.C.D.).
- `rejected-sa` Enter the keywords rejected-sa to clear the cache source-active entries that are rejected because the RPF check failed, an SA filter or limit is configured, the RP or MSDP peer is unreachable, or because of a format error.
Enter the keyword `local` to clear out local PIM advertised entries. It applies the redistribute filter (if present) while adding the local PIM SA entries to the SA cache.

**Clears the entire source-active cache, the source-active entries of a particular multicast group, rejected, or local source-active entries.**

**Syntax**
```
clear ip msdp sa-cache [group-address | rejected-sa | local]
```

**Parameters**
- `group-address`: Enter the group IP address in dotted decimal format (A.B.C.D.).
- `rejected-sa`: Enter the keyword `rejected-sa` to clear the cache source-active entries that are rejected because the RPF check failed, an SA filter or limit is configured, the RP or MSDP peer is unreachable, or because of a format error.
- `local`: Enter the keyword `local` to clear out local PIM advertised entries. It applies the redistribute filter (if present) while adding the local PIM SA entries to the SA cache.

**Defaults**
Without any options, this command clears the entire source-active cache.

**Command Modes**
EXEC Privilege

**Command History**
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Turn on MSDP debugging.**

**Syntax**
```
debug ip msdp {event peer address | packet peer address | pim}
```

To turn debugging off, use the `no debug ip msdp {event peer address | packet peer address | pim}` command.
Parameters

**event peer address**
Enter the keyword `event` then the peer address in a dotted decimal format (A.B.C.D.).

**packet peer address**
Enter the keyword `packet` then the peer address in a dotted decimal format (A.B.C.D.).

**pim**
Enter the keyword `pim` to debug advertisement from PIM.

Defaults
Not configured.

Command Modes
EXEC Privilege

Command History
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**ip msdp cache-rejected-sa**

Enable an MSDP cache for the rejected source-active entries.

Syntax
```
ip msdp cache-rejected-sa {number}
```

To clear the MSDP rejected source-active entries, use the `no ip msdp cache-rejected-sa {number}` command then the `ip msdp cache-rejected-sa {number}` command.

Parameters

**number**
Enter the number of rejected SA entries to cache. The range is from 0 to 32766.

Defaults
none

Command Modes
CONFIGURATION

Command History
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Related Commands

`show ip msdp sa-cache rejected-sa` — Displays the rejected SAs in the SA cache.

**ip msdp default-peer**

Define a default peer from which to accept all source-active (SA) messages.

Syntax
```
ip msdp default-peer peer address [list name]
```

To remove the default peer, use the `no ip msdp default-peer {peer address} list name command.`
Parameters

- **peer address**
  
Enter the peer address in a dotted decimal format (A.B.C.D.)

- **list name**
  
Enter the keywords list name and specify a standard access list that contains the RP address that should be treated as the default peer. If no access list is specified, then all SAs from the peer are accepted.

Defaults

Not configured.

Command Modes

- **CONFIGURATION**

Command History

- **Version 9.2(0.0)**
  
  Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

If a list is not specified, all SA messages received from the default peer are accepted. You can enter multiple default peer commands.

---

**ip msdp log-adjacency-changes**

Enable logging of MSDP adjacency changes.

**Syntax**

```
ip msdp log-adjacency-changes
```

To disable logging, use the

```
no ip msdp log-adjacency-changes
```

**Defaults**

Not configured.

**Command Modes**

- **CONFIGURATION**

**Command History**

- **Version 9.2(0.0)**
  
  Introduced on the MXL 10/40GbE Switch IO Module.

---

**ip msdp mesh-group**

To be a member of a mesh group, configure a peer.

**Syntax**

```
ip msdp mesh-group {name} {peer address}
```

To remove the peer from a mesh group, use the

```
no ip msdp mesh-group {name} {peer address}
```

**Parameters**

- **name**
  
Enter a string of up to 16 characters long for as the mesh group name.

- **peer address**
  
Enter the peer address in a dotted decimal format (A.B.C.D.).
An MSDP mesh group is a mechanism for reducing SA flooding, typically in an intra-domain setting. When some subset of a domain's MSDP speakers are fully meshed, they can be configured into a mesh-group. If member X of a mesh-group receives a SA message from an MSDP peer that is also a member of the mesh-group, member X accepts the SA message and forwards it to all of its peers that are not part of the mesh-group. However, member X cannot forward the SA message to other members of the mesh-group.

**ip msdp originator-id**

Configure the MSDP Originator ID.

**Syntax**

```
ip msdp originator-id {interface}
```

To remove the originator-id, use the `no ip msdp originator-id {interface}` command.

**Parameters**

- `interface` Enter the following keywords and slot/port or number information:
  - For a Loopback interface, enter the keyword `loopback` then a number from 0 to 16383.
  - For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
  - For a SONET interface, enter the keywords `sonet` then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
  - For a VLAN, enter the keyword `vlan` then a number from 1 to 4094.
ip msdp peer

Configure an MSDP peer.

Syntax

ip msdp peer peer address [connect-source] [description] [sa-limit number]

To remove the MSDP peer, use the no ip msdp peer peer address [connect-source interface] [description name] [sa-limit number] command.

Parameters

- **peer address**: Enter the peer address in a dotted decimal format (A.B.C.D.).
- **connect-source interface**: Enter the keywords connect-source then one of the interfaces and slot/port or number information:
  - For a Fast Ethernet interface, enter the keyword FastEthernet then the slot/ port information.
  - For a Loopback interface, enter the keyword loopback then a number from 0 to 16383.
  - For a Port Channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
  - For a VLAN, enter the keyword vlan then a number from 1 to 4094.
- **description name**: (OPTIONAL) Enter the keyword description then a description name (maximum 80 characters) to designate a description for the MSDP peer.
- **sa-limit number**: (OPTIONAL) Enter the maximum number of SA entries in SA-cache. The range is from 1 to 500000. The default is 500000.

Defaults

As described in the Parameters section.

Command Modes

- **CONFIGURATION**

Command History

- **Version 9.2(0.0)**: Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The connect-source option is used to supply a source IP address for the TCP connection. When an interface is specified using the connect-source option, the primary configured address on the interface is used.

If the total number of SA messages received from the peer is already larger than the limit when this command is applied, those SA messages continue to be accepted. To enforce the limit in such situation, use the clear ip msdp peer command to reset the peer.
ip msdp redistribute

Filter local PIM SA entries in the SA cache. SAs which the ACL denies time out and are not refreshed. Until they time out, they continue to reside in the MSDP SA cache.

**Syntax**

```
ip msdp redistribute [list acl-name]
```

**Parameters**

- `list acl-name` Enter the name of an extended ACL that contains permitted SAs. If you do not use this option, all local entries are blocked.

**Defaults**

Not configured.

**Command Modes**

CONFIGURATION

**Command History**

- **Version 9.2(0.0)** Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

Modifications to the ACL do not have an immediate effect on the sa-cache. To apply the redistribute filter to entries already present in the SA cache, use the `clear ip msdp sa-cache local` command.

ip msdp sa-filter

Permit or deny MSDP source active (SA) messages based on multicast source and/or group from the specified peer.

**Syntax**

```
ip msdp sa-filter {in | out} peer-address list [access-list name]
```

Remove this configuration using the `no ip msdp sa-filter {in | out} peer address list [access-list name]` command.

**Parameters**

- `in` Enter the keyword `in` to enable incoming SA filtering.
- `out` Enter the keyword `out` to enable outgoing SA filtering.
**peer-address**

Enter the peer address of the MSDP peer in a dotted decimal format (A.B.C.D.).

**access-list name**

Enter the name of an extended ACL that contains permitted SAs. If you do not use this option, all local entries are blocked.

**Defaults**

Not configured.

**Command Modes**

CONFIGURATION

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

---

**ip msdp sa-limit**

Configure the upper limit of source-active (SA) entries in SA-cache.

**Syntax**

```
ip msdp sa-limit number
To return to the default, use the no ip msdp sa-limit number command.
```

**Parameters**

- **number**
  
Enter the maximum number of SA entries in SA-cache. The range is from 0 to 40000.

**Defaults**

50000

**Command Modes**

CONFIGURATION

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

The system counts the SA messages originated by itself and those messages received from the MSDP peers. When the total SA messages reach this limit, the subsequent SA messages are dropped (even if they pass RPF checking and policy checking).

If the total number of SA messages is already larger than the limit when this command is applied, those SA messages that are already in the software continue to be accepted. To enforce the limit in such situation, use the `clear ip msdp sa-cache` command.

**Related Commands**

- `ip msdp peer` — configures the MSDP peer.
- `clear ip msdp peer` — clears the MSDP peer.
- `show ip msdp` — displays the MSDP information
ip msdp shutdown

Administratively shut down a configured MSDP peer.

**Syntax**

```
ip msdp shutdown {peer address}
```

**Parameters**

- **peer address**: Enter the peer address in a dotted decimal format (A.B.C.D.).

**Defaults**

Not configured.

**Command Modes**

CONFIGURATION

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

ip multicast-msdp

Enable MSDP.

**Syntax**

```
ip multicast-msdp
```

To exit MSDP, use the no ip multicast-msdp command.

**Defaults**

Not configured.

**Command Modes**

CONFIGURATION

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

show ip msdp

Display the MSDP peer status, SA cache, or peer summary.

**Syntax**

```
show ip msdp {peer peer address | sa-cache | summary}
```

**Parameters**

- **peer peer address**: Enter the keyword peer then the peer address in a dotted decimal format (A.B.C.D.).
- **sa-cache**: Enter the keywords sa-cache to display the Source-Active cache.
- **summary**: Enter the keyword summary to display an MSDP peer summary.

**Defaults**

Not configured.
show ip msdp sa-cache rejected-sa

Display the rejected SAs in the SA cache.

**Syntax**

show ip msdp sa-cache rejected-sa

**Defaults**

none

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Example**

Dell#sh ip msdp sa-cache rejected-sa

Dell#
Multiple Spanning Tree Protocol (MSTP)

Multiple spanning tree protocol (MSTP), as implemented by the Dell Networking operating system, conforms to IEEE 802.1s.

debug spanning-tree mstp

Enable debugging of the multiple spanning tree protocol and view information on the protocol.

Syntax

debug spanning-tree mstp [all | bpdu interface {in | out} | events]

Parameters

- **all** (OPTIONAL) Enter the keyword all to debug all spanning tree operations.
- **bpdu interface** (in | out) (OPTIONAL) Enter the keyword bpdu to debug bridge protocol data units (BPDU).
- **interface** (in | out) (OPTIONAL) Enter the interface keyword along with the type slot/port of the interface you want displayed. Type slot/port options are the following:
  - For a Port Channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.

  Optionally, enter an in or out parameter with the optional interface:

  - For Receive, enter the keyword in.
  - For Transmit, enter the keyword out.

- **events** (OPTIONAL) Enter the keyword events to debug MSTP events.

Command Modes

- EXEC Privilege

Command History

- Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.
Example

Dell#debug spanning-tree mstp bpdu tengigabitethernet 0/16 ?
in Receive (in)
out Transmit (out)
Dell#

description

Enter a description of the multiple spanning tree.

Syntax

description {description}
To remove the description, use the no description {description} command.

Parameters

description

Enter a description to identify the multiple spanning tree
(maximum 80 characters).

Defaults

none

Command Modes

SPANNING TREE (The prompt is “config-mstp.”)

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Related Commands

protocol spanning-tree mstp — enters MULTIPLE SPANNING TREE mode on the switch.

disable

Globally disable the multiple spanning tree protocol on the switch.

Syntax

disable
To enable MSTP, enter the no disable command.

Defaults

disabled.

Command Modes

MULTIPLE SPANNING TREE

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Related Commands

protocol spanning-tree mstp — enters MULTIPLE SPANNING TREE mode.
**disable**

Enable bridge protocol data units (BPDU) filter globally to filter transmission of BPDU on port-fast enabled interfaces.

**Syntax**

```
edge-port bpdufilter default
```

To disable global bpdu filter default, use the `no edge-port bpdufilter default` command.

**Defaults**

disabled.

**Command Modes**

MULTIPLE SPANNING TREE

**Command History**

Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module

---

**forward-delay**

The amount of time the interface waits in the Blocking State and the Learning State before transitioning to the Forwarding State.

**Syntax**

```
forward-delay seconds
```

To return to the default setting, use the `no forward-delay` command.

**Parameters**

- `seconds` Enter the number of seconds the interface waits in the Blocking State and the Learning State before transiting to the Forwarding State. The range is from 4 to 30. The default is **15 seconds**.

**Defaults**

15 seconds

**Command Modes**

MULTIPLE SPANNING TREE

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**

- `max-age` — changes the wait time before MSTP refreshes protocol configuration information.
- `hello-time` — changes the time interval between bridge protocol data units (BPDUs).
**hello-time**

Set the time interval between generation of MSTB bridge protocol data units (BPDUs).

**Syntax**

```
hello-time seconds
```

To return to the default value, use the `no hello-time` command.

**Parameters**

- `seconds`
  - Enter a number as the time interval between transmission of BPDUs. The range is from 1 to 10. The default is **2 seconds**.

**Defaults**

**Command Modes**

MULTIPLE SPANNING TREE

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**

- `edge-port bpdufilter default` — the amount of time the interface waits in the Blocking State and the Learning State before transitioning to the Forwarding State.
- `max-age` — changes the wait time before MSTP refreshes protocol configuration information.

**max-age**

To maintain configuration information before refreshing that information, set the time interval for the MSTB.

**Syntax**

```
max-age seconds
```

To return to the default values, use the `no max-age` command.

**Parameters**

- `max-age`
  - Enter a number of seconds the system waits before refreshing configuration information. The range is from 6 to 40. The default is **20 seconds**.

**Defaults**

**Command Modes**

MULTIPLE SPANNING TREE

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**

- `edge-port bpdufilter default` — the amount of time the interface waits in the Blocking State and the Learning State before transitioning to the Forwarding State.
hello-time — changes the time interval between BPDUs.

max-hops

Configure the maximum hop count.

Syntax

```
max-hops number
```

To return to the default values, use the `no max-hops` command.

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>range</td>
<td>Enter a number for the maximum hop count. The range is from 1 to 40. The default is 20.</td>
</tr>
</tbody>
</table>

Defaults

20 hops

Command Modes

MULTIPLE SPANNING TREE

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The `max-hops` command is a configuration command that applies to both the IST and all MST instances in the MSTP region. The BPDUs sent out by the root switch set the remaining-hops parameter to the configured value of `max-hops`. When a switch receives the BPDU, it decrements the received value of the remaining hops and uses the resulting value as remaining-hops in the BPDUs. If the remaining-hops reach zero, the switch discards the BPDU and ages out any information that it holds for the port.

msti

Configure multiple spanning tree instance, bridge priority, and one or multiple VLANs mapped to the MST instance.

Syntax

```
msti instance {vlan range | bridge-priority priority}
```

To disable mapping or bridge priority, use the `no msti instance {vlan range | bridge-priority priority}` command.

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>msti instance</td>
<td>Enter the MSTP instance. The range is from zero (0) to 63.</td>
</tr>
<tr>
<td>vlan range</td>
<td>Enter the keyword vlan then the identifier range value. The range is from 1 to 4094.</td>
</tr>
<tr>
<td>bridge-priority priority</td>
<td>Enter the keywords bridge-priority then a value in increments of 4096 as the bridge priority. The range is from zero (0) to 61440.</td>
</tr>
</tbody>
</table>
Valid priority values are: 0, 4096, 8192, 12288, 16384, 20480, 24576, 28672, 32768, 36864, 40960, 45056, 49152, 53248, 57344, and 61440. All other values are rejected.

**name**

The name you assign to the multiple spanning tree region.

**Syntax**

```
name region-name
```

To remove the region name, use the `no name` command.

**Parameters**

- `region-name` Enter the MST region name. The range is 32 character limit.

**Defaults**

no default name.

**Command Modes**

MULTIPLE SPANNING TREE

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

For two MSTP switches to be within the same MSTP region, the switches must share the same region name (including matching case).

**Related Commands**

- `msti` — maps the VLAN(s) to an MST instance.
- `revision` — assigns the revision number to the MST configuration.
**protocol spanning-tree mstp**

To enable and configure the multiple spanning tree group, enter MULTIPLE SPANNING TREE mode.

**Syntax**

```
protocol spanning-tree mstp
```

To disable the multiple spanning tree group, use the `no protocol spanning-tree mstp` command.

**Defaults**

Not configured.

**Command Modes**

CONFIGURATION

**Command History**

Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

MSTP is not enabled when you enter MULTIPLE SPANNING TREE mode. To enable MSTP globally on the switch, enter the `no disable` command while in MULTIPLE SPANNING TREE mode.

For more information about the multiple spanning tree protocol, refer to the Dell Networking OS Configuration Guide.

**Example**

```
Dell(conf)#protocol spanning-tree mstp
Dell(config-mstp)#no disable
```

**Related Commands**

`disable` — disables multiple spanning tree.

---

**revision**

The revision number for the multiple spanning tree configuration.

**Syntax**

```
revision range
```

To return to the default values, use the `no revision` command.

**Parameters**

- `range`  
  
  Enter the revision number for the MST configuration. The range is from 0 to 65535. The default is 0.

**Defaults**

0

**Command Modes**

MULTIPLE SPANNING TREE

**Command History**

Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.
Usage Information
For two MSTP switches to be within the same MST region, the switches must share the same revision number.

Related Commands
msti — maps the VLAN(s) to an MST instance.
name — assigns the region name to the MST region.

show config
View the current configuration for the mode. Only non-default values are shown.

Syntax
show config

Command Modes
MULTIPLE SPANNING TREE

Command History
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Example
Dell(conf-mstp)#show config
!
protocol spanning-tree mstp
no disable
name CustomerSvc
revision 2
MSTI 10 VLAN 101-105
max-hops 5
Dell(conf-mstp)#

show spanning-tree mst configuration
View the multiple spanning tree configuration.

Syntax
show spanning-tree mst configuration

Command Modes
• EXEC
• EXEC Privilege

Command History
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
Enable the multiple spanning tree protocol prior to using this command.

Example
Dell#show spanning-tree mst configuration
MST region name: CustomerSvc
Revision: 2
MSTI VID
show spanning-tree msti

View the multiple spanning tree instance.

Syntax

```
show spanning-tree msti [instance-number [brief]] [guard]
```

Parameters

- `instance-number` (Optional) Enter the multiple spanning tree instance number. The range is from 0 to 63.
- `brief` (Optional) Enter the keyword brief to view a synopsis of the MST instance.
- `guard` (Optional) Enter the keyword guard to display the type of guard enabled on an MSTP interface and the current port state.

Command Modes

- EXEC
- EXEC Privilege

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

Enable the multiple spanning tree protocol prior to using this command.

Example

```
Dell#show spanning-tree msti 0 brief
MSTI 0 VLANs mapped 1-4094
Executing IEEE compatible Spanning Tree Protocol
Root ID Priority 32768, Address 0001.e800.0204

<td>0</td>
<td>FWD</td>
<td>None</td>
<td>No</td>
</tr>
<tr>
<td>Te 0/42</td>
<td></td>
<td>0</td>
<td>FWD</td>
<td>None</td>
<td>No</td>
</tr>
<tr>
<td>Te 0/43</td>
<td></td>
<td>0</td>
<td>FWD</td>
<td>None</td>
<td>No</td>
</tr>
</tbody>
</table>
```

spanning-tree
Enable the multiple spanning tree protocol on the interface.

Syntax
```
spanning-tree
```

To disable the multiple spanning tree protocol on the interface, use the `no spanning-tree` command.

Parameters
```
spanning-tree
```
Enter the keywords `spanning-tree` to enable the MSTP on the interface.

Defaults
Enable.

Command Modes
INTERFACE

Command History
```
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.
```
spanning-tree msti

Configure multiple spanning tree instance cost and priority for an interface.

Syntax

```
spanning-tree msti instance {cost cost | priority priority}
```

Parameters

- **msti instance**: Enter the keyword `msti` and the MST instance number. The range is from zero (0) to 63.
- **cost cost** (OPTIONAL) Enter the keyword `cost` then the port cost value. The range is from 1 to 200000. The defaults are:
  - 40-Gigabit Ethernet interface = 1400
  - 10-Gigabit Ethernet interface = 2000
  - Port Channel interface with one 10 Gigabit Ethernet = 2000
  - Port Channel with two 10 Gigabit Ethernet = 1800
  - Port Channel with two 100 Mbps Ethernet = 180000
- **priority priority** Enter keyword `priority` then a value in increments of 16 as the priority. The range is from 0 to 240. The default is `128`.

Defaults

- cost = depends on the interface type
- priority = `128`

Command Modes

```
INTERFACE
```

Command History

- **Version 8.3.16.1**Introduced on the MXL 10/40GbE Switch IO Module.

spanning-tree mstp

Configures a Layer 2 MSTP interface as an edge port with (optionally) a bridge protocol data unit (BPDU) guard, or enables the root guard or loop guard feature on the interface.

Syntax

```
spanning-tree mstp {edge-port [bpduguard [shutdown-on-violation]] | bpdufilter| rootguard}
```

Parameters

- **edge-port**: Enter the keywords `edge-port` to configure the interface as a multiple spanning tree edge port.
- **bpduguard** (OPTIONAL) Enter the keyword `portfast` to enable Portfast to move the interface into forwarding mode immediately after the root fails.
  - Enter the keyword `bpduguard` to disable the port when it receives a BPDU.
**bpdufilter**

(Optionalal) Enter the keyword `edgeport` to enable edge port configuration to move the interface into forwarding mode immediately after the root fails. Enter the keyword `bpdufilter` to stop sending and receiving BPDUs on the port-fast enabled ports.

**shutdown-on-violation**

(Optionalal) Enter the keywords `shutdown-on-violation` to hardware disable an interface when a BPDU is received and the port is disabled.

**rootguard**

Enter the keyword `rootguard` to enable root guard on an MSTP port or port-channel interface.

---

**Command Modes**

`INTERFACE`

**Command History**

*Version 8.3.16.1* Introduced on the MXL 10/40GbE Switch IO Module.

---

**Usage Information**

On an MSTP switch, a port configured as an edge port immediately transitions to the forwarding state. Only ports connected to end-hosts should be configured as an edge port. Consider an edge port similar to a port with `spanning-tree portfast` enabled.

Root guard and loop guard cannot be enabled at the same time on a port. For example, if you configure loop guard on a port on which root guard is already configured, the following error message is displayed: % Error: RootGuard is configured. Cannot configure LoopGuard.

When used in an MSTP network, if root guard blocks a boundary port in the CIST, the port is also blocked in all other MST instances.

Enabling Portfast BPDU guard and loop guard at the same time on a port results in a port that remains in a blocking state and prevents traffic from flowing through it. For example, when Portfast BPDU guard and loop guard are both configured:

- If a BPDU is received from a remote device, BPDU guard places the port in an err-disabled blocking state and no traffic is forwarded on the port.
- If no BPDU is received from a remote device, loop guard places the port in a loop-inconsistent blocking state and no traffic is forwarded on the port.

---

**tc-flush-standard**

Enable the MAC address flushing after receiving every topology change notification.

**Syntax**

```
tc-flush-standard
```

To disable, use the `no tc-flush-standard` command.
Defaults
Disabled.

Command Modes
CONFIGURATION

Command History

Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
By default, the system implements an optimized flush mechanism for MSTP. This mechanism helps in flushing the MAC addresses only when necessary (and less often) allowing for faster convergence during topology changes. However, if a standards-based flush mechanism is needed, this knob command can be turned on to enable flushing MAC addresses after receiving every topology change notification.
Multicast

The multicast commands are supported by Dell Networking operating system.
This chapter contains the following sections:

- IPv4 Multicast Commands
- IPv6 Multicast Commands

IPv4 Multicast Commands

The following section contains the IPv4 multicast commands.

clear ip mroute

Clear learned multicast routes on the multicast forwarding table. To clear the protocol-independent multicast (PIM) tree information base, use the clear ip pim tib command.

Syntax

clear ip mroute {group-address [source-address] | * | snooping}

Parameters

group-address [source-address] Enter the multicast group address and source address (if desired), in dotted decimal format, to clear information on a specific group.

* Enter * to clear all multicast routes.

snooping Enter the keyword snooping to delete multicast snooping route table entries.

Command Modes

EXEC Privilege

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Related Commands

show ip pim tib — shows the PIM tree information base.
ip mroute

Assign a static mroute.

Syntax

```
ip mroute destination mask {ip-address | null 0| {{bgp| ospf} process-id | isis | rip | static} {ip-address | tag | null 0}} [distance]
```

To delete a specific static mroute, use the `ip mroute destination mask {ip-address | null 0| {{bgp| ospf} process-id | isis | rip | static} {ip-address | tag | null 0}} [distance]` command.

To delete all mroutes matching a certain mroute, use the `no ip mroute destination mask` command.

Parameters

- **destination**: Enter the IP address in dotted decimal format of the destination device.
- **mask**: Enter the mask in slash prefix formation (/x) or in dotted decimal format.
- **null 0**: (OPTIONAL) Enter the keyword `null` then zero (0).
- **protocol [process-id | tag] ip-address**: (OPTIONAL) Enter one of the routing protocols:
  - Enter the BGP as-number then the IP address in dotted decimal format of the reverse path forwarding (RPF) neighbor. The range is from 1 to 65535.
  - Enter the OSPF process identification number then the IP address in dotted decimal format of the RPF neighbor. the range is from 1 to 65535.
  - Enter the IS-IS alphanumeric tag string then the IP address in dotted decimal format of the RPF neighbor.
  - Enter the RIP IP address in dotted decimal format of the RPF neighbor.
- **static ip-address**: (OPTIONAL) Enter the Static IP address in dotted decimal format of the RPF neighbor.
- **ip-address**: (OPTIONAL) Enter the IP address in dotted decimal format of the RPF neighbor.
- **distance**: (OPTIONAL) Enter a number as the distance metric assigned to the mroute. The range is from 0 to 255.

Defaults

- Not configured.

Command Modes

- CONFIGURATION

Command History

- Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.
ip multicast-limit

To limit the number of multicast entries on the system, use this feature.

Syntax
ip multicast-limit limit

Parameters
limit Enter the desired maximum number of multicast entries on the system. The range is from 1 to 50000.

Defaults
15000 routes.

Command Modes
CONFIGURATION

Command History
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
This feature allows you to limit the number of multicast entries on the system. This number is the total of all the multicast entries on all line cards in the system. On each line card, the multicast module only installs the maximum number of entries, depending on the configured CAM profile.

To store multicast routes, use the IN-L3-McastFib CAM partition. It is a separate hardware limit that exists per port-pipe. This hardware space limitation can supersede any software-configured limit. The opposite is also true, the CAM partition might not be exhausted at the time the system-wide route limit set by the ip multicast-limit command is reached.

ip multicast-routing

Enable IP multicast forwarding.

Syntax
ip multicast-routing

To disable multicast forwarding, use the no ip multicast-routing command.

Defaults
Disabled.

Command Modes
CONFIGURATION

Command History
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.
After you enable multicast, you can enable IGMP and PIM on an interface. In INTERFACE mode, enter the `ip pim sparse-mode` command to enable IGMP and PIM on the interface.

**Related Commands**

`ip pim sparse-mode` — enables IGMP and PIM on an interface.

### show ip mroute

View the multicast routing table.

**Syntax**

```plaintext
show ip mroute [static | group-address [source-address] | count | snooping [vlan vlan-id] [group-address [source-address]] | summary | vlt [group-address [source-address] | count]
```

**Parameters**

- `static` (OPTIONAL) Enter the keyword `static` to view static multicast routes.
- `group-address` (OPTIONAL) Enter the multicast group-address to view only routes associated with that group.
  
  Enter the source-address to view routes with that group-address and source-address.
- `count` (OPTIONAL) Enter the keyword `count` to view the number of multicast routes and packets.
- `snooping [vlan vlan-id] [group-address [source-address]]`
  
  Enter the keyword `snooping` to display information on the multicast routes PIM-SM snooping discovers.
  
  Enter a VLAN ID to limit the information displayed to the multicast routes PIM-SM snooping discovers on a specified VLAN. The VLAN ID range is from 1 to 4094.
  
  Enter a multicast group address and, optionally, a source multicast address in dotted decimal format (A.B.C.D) to limit the information displayed to the multicast routes PIM-SM snooping discovers for a specified multicast group and source.
- `summary` (OPTIONAL) Enter the keyword `summary` to view a summary of all routes.
- `vlt` (OPTIONAL) Enter the keyword `vlt` to view multicast routes with a spanned incoming interface. Enter a multicast group address in dotted decimal format (A.B.C.D) to limit the information displayed to the multicast routes for a specified multicast group and optionally a source multicast address in dotted decimal format (A.B.C.D) to limit the information.
displayed for a specified multicast source. Enter the keyword count to display the total number of multicast routes with the spanned IIF.

**Command Modes**
- EXEC
- EXEC Privilege

**Command History**
Version 9.2.(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Example (Static)**
Dell#show ip mroute static
Mroute: 23.23.23.0/24, interface: Lo 2
Protocol: static, distance: 0, route-map: none, last change: 00:00:23

**Example (Snooping)**

  GigabitEthernet 3/12
  GigabitEthernet 3/13

(*, 224.20.20.1), uptime 00:05:12
Incoming interface: GigabitEthernet 3/12
Outgoing interface list:
  GigabitEthernet 3/4
### Usage Information

The following describes the `show ip mroute` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>(S, G)</td>
<td>Displays the forwarding entry in the multicast route table.</td>
</tr>
<tr>
<td>uptime</td>
<td>Displays the amount of time the entry has been in the multicast forwarding table.</td>
</tr>
<tr>
<td>Incoming interface</td>
<td>Displays the reverse path forwarding (RPF) information towards the source for (S,G) entries and the RP for (*,G) entries.</td>
</tr>
<tr>
<td>Outgoing interface list</td>
<td>Lists the interfaces that meet one of the following:</td>
</tr>
<tr>
<td></td>
<td>• a directly connected member of the Group</td>
</tr>
<tr>
<td></td>
<td>• statically configured member of the Group</td>
</tr>
<tr>
<td></td>
<td>• received a (*,G) or (S,G) Join message</td>
</tr>
</tbody>
</table>

#### Example

```
Dell#show ip mroute

IP Multicast Routing Table

(*, 224.10.10.1), uptime 00:05:12
  Incoming interface: GigabitEthernet 3/12
  Outgoing interface list:
    GigabitEthernet 3/13

(1.13.1.100, 224.10.10.1), uptime 00:04:03
  Incoming interface: GigabitEthernet 3/4
  Outgoing interface list:
    GigabitEthernet 3/12
    GigabitEthernet 3/13

(*, 224.20.20.1), uptime 00:05:12
  Incoming interface: GigabitEthernet 3/12
  Outgoing interface list:
    GigabitEthernet 3/4
```

### show ip rpf

View reverse path forwarding.

#### Syntax

```
show ip rpf
```

#### Command Modes

- EXEC
- EXEC Privilege

#### Command History

Version 9.2(0.0)
Network administrators use static mroutes to control the reachability of the multicast sources. If a PIM-registered multicast source is reachable using static mroute as well as unicast route, the distance of each route is examined and the route with shorter distance is the one the PIM selects for reachability.

NOTE: The default distance of mroutes is zero (0) and is CLI configurable on a per route basis.

Example:
```
Dell#show ip rpf
RPF information for 10.10.10.9
  RPF interface: Gi 3/4
  RPF neighbor: 165.87.31.4
  RPF route/mask: 10.10.10.9/255.255.255.255
  RPF type: unicast
```

IPv6 Multicast Commands

The following section contains the IPv6 multicast commands.

debuge ipv6 mld_host

Enable the collection of debug information for MLD host transactions.

Syntax:
```
[no] debug ipv6 mld_host [int-count | interface type] [slot/port-range]
```

To discontinue collection of debug information for the MLD host transactions, use the `no debug ipv6 mld_host` command.

Parameters:
- `int-count` Enter the keyword `count` to indicate the number of required debug messages.
- `interface type` Enter the following keywords and slot/port information:
  - For a 10G Ethernet interface, enter the keyword `tengigabitethernet` then the slot/port information.
  - For a 40G interface, enter the keyword `fortyGigE` then the slot/port information.
  - For a management interface, enter the keyword `managementinterface` then the slot/port information.
  - For a port-channel interface, enter the keywords `port-channel` then the slot/port information.
  - For a VLAN interface, enter the keyword `vlan` then the slot/port information.

Default: Disabled
Command Modes EXEC

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

To debug the MLD protocol for all ports or for specified ports, use the debug ipv6 mld_host command. Displayed information includes when a query is received, when a report is sent, when a mcast joins or leaves a group, and some reasons why an MLD query is rejected.

ip multicast-limit

To limit the number of multicast entries on the system, use this feature.

Syntax

ip multicast-limit limit

Parameters

limit Enter the desired maximum number of multicast entries on the system. The range is from 1 to 50000.

Defaults

15000 routes.

Command Modes CONFIGURATION

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

This feature allows you to limit the number of multicast entries on the system. This number is the total of all the multicast entries on all line cards in the system. On each line card, the multicast module only installs the maximum number of entries, depending on the configured CAM profile.

To store multicast routes, use the IN-L3-McastFib CAM partition. It is a separate hardware limit that exists per port-pipe. This hardware space limitation can supersede any software-configured limit. The opposite is also true, the CAM partition might not be exhausted at the time the system-wide route limit set by the ip multicast-limit command is reached.
Neighbor Discovery Protocol (NDP)

The Dell Networking operating software supports the network discovery protocol for IPv6. The neighbor discovery protocol for IPv6 is defined in RFC 2461 as part of the Stateless Address Autoconfiguration protocol. It replaces the Address Resolution Protocol used with IPv4. NDP defines mechanisms for solving the following problems:

- Router discovery: Hosts can locate routers residing on a link
- Prefix discovery: Hosts can discover address prefixes for the link
- Parameter discovery
- Address autoconfiguration — configuration of addresses for an interface
- Address resolution — mapping from IP address to link-layer address
- Next-hop determination
- Neighbor unreachability detection (NUD): Determine that a neighbor is no longer reachable on the link.
- Duplicate address detection (DAD): Allow a node to check whether a proposed address is already in use.
- Redirect: The router can inform a node about a better first-hop.

NDP uses the following five ICMPv6 packet types in its implementation:

- Router Solicitation
- Router Advertisement
- Neighbor Solicitation
- Neighbor Advertisement
- Redirect

clear ipv6 neighbors

Delete all entries in the IPv6 neighbor discovery cache or neighbors of a specific interface. Static entries are not removed using this command.

**Syntax**

```
clear ipv6 neighbors [ipv6-address] [interface]
```

**Parameters**

- `ipv6-address` Enter the IPv6 address of the neighbor in the x:x:x:x:x format to remove a specific IPv6 neighbor.

  **NOTE:** The :: notation specifies successive hexadecimal fields of zero.

- `interface` To remove all neighbor entries learned on a specific interface, enter the keyword `interface` then the interface type and slot/port or number information of the interface:
For a Fast Ethernet interface, enter the keyword `fastEthernet` then the slot/port information.

- For a Port Channel interface, enter the keywords `port-channel` then a number.
- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
- For a VLAN, enter the keyword `vlan` then the VLAN ID. The range is from 1 to 4094.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**ipv6 neighbor**

Configure a static entry in the IPv6 neighbor discovery.

**Syntax**

```
ipv6 neighbor {ipv6-address} {interface interface} {hardware_address}
```

To remove a static IPv6 entry from the IPv6 neighbor discovery, use the `no ipv6 neighbor {ipv6-address} {interface interface}` command.

**Parameters**

- `ipv6-address` Enter the IPv6 address of the neighbor in the x:x:x:x format.

  - **NOTE:** The :: notation specifies successive hexadecimal fields of zero.

- `interface interface` Enter the keyword `interface` then the interface type and slot/port or number information:
  - For a Fast Ethernet interface, enter the keyword `fastEthernet` then the slot/port information.
  - For a Port Channel interface, enter the keywords `port-channel` then a number.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
**hardware_addr**

**Defaults**

none

**Command Modes**

CONFIGURATION

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

---

**show ipv6 neighbors**

Display IPv6 discovery information. Entering the command without options shows all IPv6 neighbor addresses stored on the control processor (CP).

**Syntax**

```
show ipv6 neighbors [ipv6-address] [cpu {rp1 [ipv6-address] | rp2 [ipv6-address]}] [interface interface]
```

**Parameters**

- **ipv6-address**
  
  Enter the IPv6 address of the neighbor in the x:x:x::* format.
  
  **NOTE:** The :: notation specifies successive hexadecimal fields of zero.

- **CPU**
  
  Enter the keyword cpu then either rp1 or rp2 (Route Processor 1 or 2), optionally then an IPv6 address to display the IPv6 neighbor entries stored on the designated RP.

- **interface**
  
  Enter the keyword interface then the interface type and slot/port or number information:

  - For a Fast Ethernet interface, enter the keyword fastEthernet then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
  - For a VLAN, enter the keyword vlan then the VLAN ID. The range is from 1 to 4094.

**Defaults**

none

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.
Dell#show ipv6 neighbors

Dell#
Open Shortest Path First (OSPFv2 and OSPFv3)

The MXL 10/40GbE Switch IO Module platform supports open shortest path first version 2 (OSPFv2) for IPv4 and version 3 (OSPFv3) for IPv6. Up to 16 OSPF instances can be run simultaneously on the MXL Switch.

OSPF is an Interior Gateway Protocol (IGP), which means that it distributes routing information between routers in a single Autonomous System (AS). OSPF is also a link-state protocol in which all routers contain forwarding tables derived from information about their links to their neighbors.

The fundamental mechanisms of OSPF (flooding, DR election, area support, SPF calculations, and so on) are the same for OSPFv2 and OSPFv3. OSPFv3 runs on a per-link basis instead of on a per-IP-subnet basis.

This chapter is divided into two sections. There is no overlap between the two sets of commands. You cannot use an OSPFv2 command in the IPv6 OSPFv3 mode.

- OSPFv2 Commands
- OSPFv3 Commands

**NOTE:**
Multi-process OSPF is supported on IPV4 OSPFv2 only. It is not supported on IPv6 OSPFv3.

The CLI requires that you include the Process ID when entering ROUTER-OSPF mode. Each command entered applies to the specified OSPFv2 process only.

OSPFv2 Commands

The Dell Networking implementation of OSPFv2 is based on IETF RFC 2328.

**area default-cost**

Set the metric for the summary default route the area border router (ABR) generates into the stub area. Use this command on the border routers at the edge of a stub area.

**Syntax**

```plaintext
area area-id default-cost cost
```

To return default values, use the `no area area-id default-cost` command.
area nssa

Specify an area as a not so stubby area (NSSA).

Syntax

area area-id nssa [default-information-originate] [no-redistribution] [no-summary]

To delete an NSSA, use the no area area-id nssa command.

Parameters

area-id Specify the OSPF area in dotted decimal format (A.B.C.D.) or enter a number from zero (0) to 65535.

no-redistribution (OPTIONAL) Specify that the redistribute command does not distribute routes into the NSSA. Only use this command in an NSSA area border router (ABR).

default-information-originate (OPTIONAL) Allows external routing information to be imported into the NSSA by using Type 7 default.

no-summary (OPTIONAL) Specify that no summary LSAs should be sent into the NSSA.

Defaults

Not configured.

Command Modes

ROUTER OSPF

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.
area range

Summarize routes matching an address/mask at an area border router (ABR).

Syntax

```
area area-id range ip-address mask [not-advertise]
```

To disable route summarization, use the `no area area-id range ip-address mask` command.

Parameters

- **area-id**: Specify the OSPF area in dotted decimal format (A.B.C.D.) or enter a number from zero (0) to 65535.
- **ip-address**: Specify an IP address in dotted decimal format.
- **mask**: Specify a mask for the destination prefix. Enter the full mask (for example, 255.255.255.0).
- **not-advertise**: (OPTIONAL) Enter the keywords `not-advertise` to set the status to DoNotAdvertise (that is, the Type 3 summary-LSA is suppressed and the component networks remain hidden from other areas.)

Defaults

Not configured.

Command Modes

ROUTER OSPF

Command History

Version 8.3.16.1
Introduced on the MXL 10/40Gbe Switch IO Module.

Usage Information

Only the routes within an area are summarized, and that summary is advertised to other areas by the ABR. External routes are not summarized.

Related Commands

- `area stub` — creates a stub area.
- `router ospf` — enters ROUTER OSPF mode to configure an OSPF instance.

area stub

Configure a stub area, which is an area not connected to other areas.

Syntax

```
area area-id stub [no-summary]
```

To delete a stub area, use the `no area area-id stub` command.

Parameters

- **area-id**: Specify the OSPF area in dotted decimal format (A.B.C.D.) or enter a number from zero (0) to 65535.
- **no-summary**: (OPTIONAL) Enter the keywords `no-summary` to prevent the ABR from sending summary Link State Advertisements (LSAs) into the stub area.
### auto-cost

Specify how the OSPF interface cost is calculated based on the reference bandwidth method.

**Syntax**

```plaintext
auto-cost [reference-bandwidth ref-bw]
```

To return to the default bandwidth or to assign cost based on the interface type, use the `no auto-cost [reference-bandwidth]` command.

**Parameters**

- **ref-bw** (OPTIONAL) Specify a reference bandwidth in megabits per second. The range is from 1 to 4294967. The default is **100 megabits per second**.

**Defaults**

**100 megabits per second**.

**Command Modes**

ROUTER OSPF

**Command History**

**Version 8.3.16.1** Introduced on the MXL 10/40GbE Switch IO Module.

### clear ip ospf

Clear all OSPF routing tables.

**Syntax**

```plaintext
clear ip ospf process-id [process]
```

**Parameters**

- **process-id**  Enter the OSPF Process ID to clear a specific process. If no Process ID is entered, all OSPF processes are cleared.

- **process** (OPTIONAL) Enter the keyword `process` to reset the OSPF process.
clear ip ospf statistics

Clear the packet statistics in interfaces and neighbors.

Syntax

```
clear ip ospf process-id statistics [interface name {neighbor router-id}]
```

Parameters

- `process-id` Enter the OSPF Process ID to clear a specific process. If no Process ID is entered, all OSPF processes are cleared.
- `interface name` (OPTIONAL) Enter the keyword interface then one of the following interface keywords and slot/port or number information:
  - For Port Channel groups, enter the keywords port-channel then a number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  - For a VLAN, enter the keyword vlan then a number from 1 to 4094.
  - For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
- `neighbor router-id` (OPTIONAL) Enter the keyword neighbor then the neighbor’s router-id in dotted decimal format (A.B.C.D.).

Defaults

none

Command Modes

EXEC Privilege

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Related Commands

- `show ip ospf statistics` — displays the OSPF statistics.
**debug ip ospf**

Display debug information on OSPF. Entering the `debug ip ospf` commands enables OSPF debugging for the first OSPF process.

**Syntax**

```
debug ip ospf process-id [bfd |event | packet | spf | database-timer rate-limit]
```

To cancel the `debug` command, use the `no debug ip ospf` command.

**Parameters**

- **process-id**
  Enter the OSPF Process ID to clear a specific process. If no Process ID is entered, all OSPF processes are cleared.
- **bfd**
  (OPTIONAL) Enter the keyword `bfd` to debug only OSPF BFD information.
- **event**
  (OPTIONAL) Enter the keyword `event` to debug only OSPF event information.
- **packet**
  (OPTIONAL) Enter the keyword `packet` to debug only OSPF packet information.
- **spf**
  (OPTIONAL) Enter the keyword `spf` to display the Shortest Path First information.
- **database-timer rate-limit**
  (OPTIONAL) Enter the keywords `database-timer rate-limit` to display the LSA throttling timer information.

**Command Modes**

EXEC Privilege

**Command History**

Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

The following describes the debug ip ospf command shown in the Example below.

<table>
<thead>
<tr>

default-information originate

To generate a default external route into an OSPF routing domain, configure the system.

Syntax

default-information originate [always] [metric metric-value] [metric-type type-value] [route-map map-name]

To return to the default values, use the no default-information originate command.

Parameters

- **always** (OPTIONAL) Enter the keyword always to specify that default route information must always be advertised.
- **metric metric-value** (OPTIONAL) Enter the keyword metric then a number to configure a metric value for the route. The range is from 1 to 16777214.
- **metric-type type-value** (OPTIONAL) Enter the keywords metric-type then an OSPF link state type of 1 or 2 for default routes. The values are:
  - 1 = Type 1 external route
  - 2 = Type 2 external route
- **route-map map-name** (OPTIONAL) Enter the keywords route-map then the name of an established route map.

Defaults

Disabled.

Command Modes

- ROUTER OSPF

Command History

- **Version 8.3.16.1** Introduced on the MXL 10/40GbE Switch IO Module.

Related Commands

- redistribute — redistributes routes from other routing protocols into OSPF.
**default-metric**

Change the metrics of redistributed routes to a value useful to OSPF. Use this command with the redistribute command.

**Syntax**

```
default-metric number
```

To return to the default values, use the `no default-metric [number]` command.

**Parameters**

- `number`
  - Enter a number as the metric. The range is from 1 to 16777214.

**Defaults**

Disabled.

**Command Modes**

ROUTER OSPF

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**

- `redistribute` — redistributes routes from other routing protocols into OSPF.

---

**description**

Add a description about the selected OSPF configuration.

**Syntax**

```
description description
```

To remove the OSPF description, use the `no description` command.

**Parameters**

- `description`
  - Enter a text string description to identify the OSPF configuration (80 characters maximum).

**Defaults**

none

**Command Modes**

ROUTER OSPF

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**

- `show ip ospf asbr` — displays the VLAN configuration.
distance

Define an administrative distance for particular routes to a specific IP address.

Syntax

distance weight [ip-address mask access-list-name]

To delete the settings, use the no distance weight [ip-address mask access-list-name] command.

Parameters

- **weight**: Specify an administrative distance. The range is from 1 to 255. The default is 110.
- **ip-address**: (OPTIONAL) Enter a router ID in the dotted decimal format. If you enter a router ID, include the mask for that router address.
- **mask**: (OPTIONAL) Enter a mask in dotted decimal format or /n format.
- **access-list-name**: (OPTIONAL) Enter the name of an IP standard access list, up to 140 characters.

Defaults

- 110

Command Modes

- ROUTER OSPF

Command History

- Version 8.3.1.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

distance ospf

Configure an OSPF distance metric for different types of routes.

Syntax

distance ospf [external dist3] [inter-area dist2] [intra-area dist1]

To delete these settings, use the no distance ospf command.

Parameters

- **external dist3**: (OPTIONAL) Enter the keyword external then a number to specify a distance for external type 5 and 7 routes. The range is from 1 to 255. The default is 110.
- **inter-area dist2**: (OPTIONAL) Enter the keywords inter-area then a number to specify a distance metric for routes between areas. The range is from 1 to 255. The default is 110.
- **intra-area dist1**: (OPTIONAL) Enter the keywords intra-area then a number to specify a distance metric for all routes within an area. The range is from 1 to 255. The default is 110.
Defaults

- external dist3 = 110
- inter-area dist2 = 110
- intra-area dist1 = 110

Command Modes

- ROUTER OSPF

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

To specify a distance for routes learned from other routing domains, use the redistribute command.

distribute-list in

Apply a filter to incoming routing updates from OSPF to the routing table.

Syntax

distribute-list prefix-list-name in [interface]

To delete a filter, use the no distribute-list prefix-list-name in [interface] command.

Parameters

prefix-list-name

Enter the name of a configured prefix list.

interface

(OPTIONAL) Enter one of the following keywords and slot/port information:

- For Port Channel groups, enter the keywords port-channel then a number. The range is from 1 to 128.
- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- For a VLAN, enter the keyword vlan then a number from 1 to 4094.
- For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.

Defaults

Not configured.

Command Modes

- ROUTER OSPF

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.
distribute-list out

To restrict certain routes destined for the local routing table after the SPF calculation, apply a filter.

**Syntax**

distribute-list prefix-list-name out [bgp | connected | isis | rip | static]

To remove a filter, use the no distribute-list prefix-list-name out [bgp | connected | isis | rip | static] command.

**Parameters**

- **prefix-list-name**
  - Enter the name of a configured prefix list.

- **bgp** (OPTIONAL) Enter the keyword bgp to specify that BGP routes are distributed.

- **connected** (OPTIONAL) Enter the keyword connected to specify that connected routes are distributed.

- **isis** (OPTIONAL) Enter the keyword isis to specify that IS-IS routes are distributed.

- **rip** (OPTIONAL) Enter the keyword rip to specify that RIP routes are distributed.

- **static** (OPTIONAL) Enter the keyword static to specify that only manually configured routes are distributed.

**Defaults**

Not configured.

**Command Modes**

ROUTER OSPF

**Command History**

Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

The `distribute-list out` command applies to routes autonomous system boundary routers (ASBRs) redistributes into OSPF. It can be applied to external type 2 and external type 1 routes, but not to intra-area and inter-area routes.

---

fast-convergence

This command sets the minimum LSA origination and arrival times to zero (0), allowing more rapid route computation so that convergence takes less time.

**Syntax**

fast-convergence {number}

To cancel fast-convergence, use the no fast convergence command.

**Parameters**

- **number**
  - Enter the convergence level desired. The higher this parameter is set, the faster OSPF converge takes place. The range is from 1 to 4.
flood-2328

Enable RFC-2328 flooding behavior.

Syntax

flood-2328

To disable, use the no flood-2328 command.

Defaults

Disabled.

Command Modes

ROUTER OSPF

Command History

Version 8.3.16.1

Usage Information

In OSPF, flooding is the most resource-consuming task. The flooding algorithm, described in RFC-2328, requires that OSPF flood LSAs (Link State Advertisements) on all interfaces, as governed by LSA’s flooding scope (see Section 13 of the RFC). When multiple direct links connect two routers, the RFC-2328 flooding algorithm generates significant redundant information across all links.

By default, the system implements an enhanced flooding procedure that dynamically and intelligently determines when to optimize flooding. Whenever possible, the OSPF task attempts to reduce flooding overhead by selectively flooding on a subset of the interfaces between two routers.

When you enable flood-2328, this command configures the system to flood LSAs on all interfaces.
graceful-restart grace-period

Specifies the time duration, in seconds, that the router’s neighbors continue to advertise the router as fully adjacent regardless of the synchronization state during a graceful restart.

Syntax

```
graceful-restart grace-period seconds
```

To disable the grace period, use the `no graceful-restart grace-period` command.

Parameters

- `seconds` Time duration, in seconds, that specifies the duration of the restart process before OSPF terminates the process. The range is from 40 to 1800 seconds.

Defaults

Not Configured

Command Modes

ROUTER OSPF

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

graceful-restart helper-reject

Specify the OSPF router to not act as a helper during graceful restart.

Syntax

```
graceful-restart helper-reject ip-address
```

To return to default value, use the `no graceful-restart helper-reject` command.

Parameters

- `ip-address` Enter the OSPF router-id, in IP address format, of the restart router that will not act as a helper during graceful restart.

Defaults

Not configured.

Command Modes

ROUTER OSPF

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.
graceful-restart mode

Enable the graceful restart mode.

Syntax

```plaintext
graceful-restart mode [planned-only | unplanned-only]
```

To disable graceful restart mode, use the `no graceful-restart mode` command.

Parameters

- **planned-only** (OPTIONAL) Enter the keywords `planned-only` to indicate graceful restart is supported in a planned restart condition only.
- **unplanned-only** (OPTIONAL) Enter the keywords `unplanned-only` to indicate graceful restart is supported in an unplanned restart condition only.

Defaults

Support for both planned and unplanned failures.

Command Modes

- ROUTER OSPF

Command History

- Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

graceful-restart role

Specify the role for your OSPF router during graceful restart.

Syntax

```plaintext
graceful-restart role [helper-only | restart-only]
```

To disable graceful restart role, use the `no graceful-restart role` command.

Parameters

- **role helper-only** (OPTIONAL) Enter the keywords `helper-only` to specify the OSPF router is a helper only during graceful restart.
- **role restart-only** (OPTIONAL) Enter the keywords `restart-only` to specify the OSPF router is a restart only during graceful-restart.

Defaults

By default, OSPF routers are both helper and restart routers during a graceful restart.

Command Modes

- ROUTER OSPF

Command History

- Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.
ip ospf auth-change-wait-time

OSPF provides a grace period while OSPF changes its interface authentication type. During the grace period, OSPF sends out packets with new and old authentication scheme until the grace period expires.

Syntax
ip ospf auth-change-wait-time seconds
To return to the default, use the no ip ospf auth-change-wait-time command.

Parameters
seconds Enter the seconds. The range is from 0 to 300.

Defaults
zero (0) seconds.

Command Modes
INTERFACE

Command History
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

ip ospf authentication-key

Enable authentication and set an authentication key on OSPF traffic on an interface.

Syntax
ip ospf authentication-key [encryption-type] key
To delete an authentication key, use the no ip ospf authentication-key command.

Parameters
encryption-type (OPTIONAL) Enter 7 to encrypt the key.
key Enter an eight-character string. Strings longer than eight characters are truncated.

Defaults
Not configured.

Command Modes
INTERFACE

Command History
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
All neighboring routers in the same network must use the same password to exchange OSPF information.
**ip ospf cost**

Change the cost associated with the OSPF traffic on an interface.

**Syntax**

```plaintext
ip ospf cost cost
```

To return to default value, use the `no ip ospf cost` command.

**Parameters**

- `cost`  
  Enter a number as the cost. The range is from 1 to 65535.

**Defaults**

The default cost is based on the reference bandwidth.

**Command Modes**

INTERFACE

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

If this command is not configured, cost is based on the `auto-cost` command.

When you configure OSPF over multiple vendors, to ensure that all routers use the same cost, use the `ip ospf cost` command. Otherwise, OSPF routes improperly.

**Related Commands**

- `auto-cost` — controls how the OSPF interface cost is calculated.

**ip ospf dead-interval**

Set the time interval since the last hello-packet was received from a router. After the interval elapses, the neighboring routers declare the router dead.

**Syntax**

```plaintext
ip ospf dead-interval seconds
```

To return to the default values, use the `no ip ospf dead-interval` command.

**Parameters**

- `seconds`  
  Enter the number of seconds for the interval. The range is from 1 to 65535. The default is 40 seconds.

**Defaults**

40 seconds

**Command Modes**

INTERFACE

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

By default, the dead interval is four times the default hello-interval.
**ip ospf hello-interval**

Specify the time interval between the hello packets sent on the interface.

**Syntax**

```
ip ospf hello-interval seconds
```

To return to the default value, use the `no ip ospf hello-interval` command.

**Parameters**

- `seconds` Enter the number of seconds for the interval. The range is from 1 to 65535. The default is **10 seconds**.

**Defaults**

- **10 seconds**

**Command Modes**

- INTERFACE

**Command History**

- **Version 8.3.16.1** Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

The time interval between the hello packets must be the same for routers in a network.

**Related Commands**

- `ip ospf dead-interval` — sets the time interval before a router is declared dead.

---

**ip ospf message-digest-key**

Enable OSPF MD5 authentication and send an OSPF message digest key on the interface.

**Syntax**

```
ip ospf message-digest-key keyid md5key
```

To delete a key, use the `no ip ospf message-digest-key keyid` command.

**Parameters**

- `keyid` Enter a number as the key ID. The range is from 1 to 255.

- `key` Enter a continuous character string as the password.

**Defaults**

No MD5 authentication is configured.

**Command Modes**

- INTERFACE

**Command History**

- **Version 8.3.16.1** Introduced on the MXL 10/40GbE Switch IO Module.
You can configure a maximum of six digest keys on an interface. Of the available six digest keys, the switches select the MD5 key that is common. The remaining MD5 keys are unused.

To change to a different key on the interface, enable the new key while the old key is still enabled. The system sends two packets: the first packet authenticated with the old key and the second packet authenticated with the new key. This process ensures that the neighbors learn the new key and communication is not disrupted by keeping the old key enabled.

After the reply is received and the new key is authenticated, delete the old key. Dell recommends keeping only one key per interface.

NOTE: The MD5 secret is stored as plain text in the configuration file with service password encryption. Write down or otherwise record the key. You cannot learn the key once it is configured. Use caution when changing the key.

**ip ospf mtu-ignore**

Disable OSPF MTU mismatch detection upon receipt of database description (DBD) packets.

**Syntax**

```plaintext
ip ospf mtu-ignore
```

To return to the default, use the `no ip ospf mtu-ignore` command.

**Defaults**

Enabled.

**Command Modes**

INTERFACE

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**ip ospf network**

Set the network type for the interface.

**Syntax**

```plaintext
ip ospf network {broadcast | point-to-point}
```

To return to the default, use the `no ip ospf network` command.

**Parameters**

- **broadcast**
  - Enter the keyword `broadcast` to designate the interface as part of a broadcast network.

- **point-to-point**
  - Enter the keywords `point-to-point` to designate the interface as part of a point-to-point network.
ip ospf priority

To determine the designated router for the OSPF network, set the priority of the interface.

Syntax

```
ip ospf priority number
```

To return to the default setting, use the `no ip ospf priority` command.

Parameters

- **number**: Enter a number as the priority. The range is from 0 to 255. The default is 1.

Defaults

1

Command Modes INTERFACE

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

Setting a priority of 0 makes the router ineligible for election as a designated router or backup designated router.

Use this command for interfaces connected to multi-access networks, not point-to-point networks.

ip ospf retransmit-interval

Set the retransmission time between lost link state advertisements (LSAs) for adjacencies belonging to the interface.

Syntax

```
ip ospf retransmit-interval seconds
```

To return to the default values, use the `no ip ospf retransmit-interval` command.

Parameters

- **seconds**: Enter the number of seconds as the interval between retransmission. The range is from 1 to 3600. The default is 5 seconds.
ip ospf transmit-delay

To send a link state update packet on the interface, set the estimated time elapsed.

Syntax

```
ip ospf transmit-delay seconds
```

Parameters

- **seconds**: Enter the number of seconds as the interval between retransmission. The range is from 1 to 3600. The default is 1 second.

This value must be greater than the transmission and propagation delays for the interface.

log-adjacency-changes

To send a Syslog message about changes in the OSPF adjacency state, set the system.

Syntax

```
log-adjacency-changes
```

To disable the Syslog messages, use the `no log-adjacency-changes` command.
### maximum-paths

Enable the software to forward packets over multiple paths.

**Syntax**
```
maximum-paths number
```

To disable packet forwarding over multiple paths, use the `no maximum-paths` command.

**Parameters**
- **number**: Specify the number of paths. The range for OSPFv2 is from 1 to 16. The default for OSPFv2 is 4 paths. The range for OSPFv3 is from 1 to 64. The default for OSPFv3 is 8 paths.

**Defaults**
- 4

**Command Modes**
- ROUTER OSPF for OSPFv2
- ROUTER OSPFv3 for OSPFv3

**Command History**
- **Version 9.2(0.0)**: Added support for OSPFv3.
- **Version 8.3.16.1**: Introduced on the MXL 10/40GbE Switch IO Module.

### mib-binding

Enable this OSPF process ID to manage the SNMP traps and process SNMP queries.

**Syntax**
```
mib-binding
```

To mib-binding on this OSPF process, use the `no mib-binding` command.

**Defaults**
- none.

**Command Modes**
- ROUTER OSPF

**Command History**
- **Version 8.3.16.1**: Introduced on the MXL 10/40GbE Switch IO Module.
**Usage Information**

This command is either enabled or disabled. If no OSPF process is identified as the MIB manager, the first OSPF process is used.

If an OSPF process has been selected, it must be disabled prior to assigning new process ID the MIB responsibility.

**network area**

Define which interfaces run OSPF and the OSPF area for those interfaces.

**Syntax**

```plaintext
network ip-address mask area area-id
```

To disable an OSPF area, use the `no network ip-address mask area area-id` command.

**Parameters**

- **ip-address**
  - Specify a primary or secondary address in dotted decimal format. The primary address is required before adding the secondary address.

- **mask**
  - Enter a network mask in /prefix format. (/x)

- **area-id**
  - Enter the OSPF area ID as either a decimal value or in a valid IP address. Decimal value range is from 0 to 65535. IP address format is dotted decimal format A.B.C.D.

  **NOTE:** If the area ID is smaller than 65535, it is converted to a decimal value. For example, if you use an area ID of 0.0.0.1, it is converted to 1.

**Command Modes**

- ROUTER OSPF

**Command History**

- **Version 8.3.16.1**
  - Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

To enable OSPF on an interface, the `network area` command must include, in its range of addresses, the primary IP address of an interface.

  **NOTE:** An interface can be attached only to a single OSPF area.

If you delete all the network area commands for Area 0, the `show ip ospf` command output does not list Area 0.
passive-interface

Suppress both receiving and sending routing updates on an interface.

Syntax

passive-interface (default | interface)

To enable both the receiving and sending routing, use the no passive-interface interface command.

To return all OSPF interfaces (current and future) to active, use the no passive-interface default command.

Parameters

default

Enter the keyword default to make all OSPF interfaces (current and future) passive.

interface

Enter the following keywords and slot/port or number information:

- For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
- For Port Channel groups, enter the keywords port-channel then a number. The range is from 1 to 128.
- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- For a VLAN, enter the keyword vlan then a number from 1 to 4094.

Command Modes

ROUTER OSPF

Command History

Version 8.3.19.0

Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

Although the passive interface does not send or receive routing updates, the network on that interface is still included in OSPF updates sent using other interfaces.

The default keyword sets all interfaces as passive. You can then configure individual interfaces, where adjacencies are desired, using the no passive-interface interface command. The no form of this command is inserted into the configuration for individual interfaces when the no passive-interface interface command is issued while passive-interface default is configured.

This command behavior has changed as follows:

passive-interface interface

- The previous no passive-interface interface is removed from the running configuration.
- The ABR status for the router is updated.
- **Save** `passive-interface interface` into the running configuration.

`passive-interface default`

- All present and future OSPF interfaces are marked as **passive**.
- Any adjacency is explicitly terminated from all OSPF interfaces.
- All previous `passive-interface interface` commands are removed from the running configuration.
- All previous `no passive-interface interface` commands are removed from the running configuration.

`no passive-interface interface`

- Remove the interface from the passive list.
- The ABR status for the router is updated.
- If `passive-interface default` is specified, then **save** `no passive-interface interface` into the running configuration.

No `passive-interface default`

- Clear everything and revert to the default behavior.
- All previously marked passive interfaces are removed.
- May update ABR status.

### redistribute

Redistribute information from another routing protocol throughout the OSPF process.

**Syntax**

```
redistribute {connected | rip | static} [metric metric-value] [metric-type type-value] [route-map map-name] [tag tag-value]
```

To disable redistribution, use the `no redistribute {connected | isis | rip | static}` command.

**Parameters**

- **connected**
  - Enter the keyword `connected` to specify that information from active routes on interfaces is redistributed.

- **rip**
  - Enter the keyword `rip` to specify that RIP routing information is redistributed.

- **static**
  - Enter the keyword `static` to specify that information from static routes is redistributed.

- **metric metric-value**
  - (OPTIONAL) Enter the keyword `metric` then a number. The range is from 0 (zero) to 16777214.

- **metric-type type-value**
  - (OPTIONAL) Enter the keywords `metric-type` then one of the following:
• 1 = OSPF External type 1
• 2 = OSPF External type 2

route-map
  (OPTIONAL) Enter the keywords route-map then the name of the route map.
map-name
  (OPTIONAL) Enter the name of the route map.
tag tag-value
  (OPTIONAL) Enter the keyword tag then a number. The range is from 0 to 4294967295.

Defaults
  Not configured.

Command Modes
  ROUTER OSPF

Command History
  Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
  To redistribute the default route (0.0.0.0/0), configure the default-information originate command.

Related Commands
  default-information originate  — generates a default route into the OSPF routing domain.

redistribute bgp

Redistribute BGP routing information throughout the OSPF instance.

Syntax
  redistribute bgp as number [metric metric-value] | [metric-type type-value] | [tag tag-value]
  To disable redistribution, use the no redistribute bgp as number [metric metric-value] | [metric-type type-value] [tag tag-value] command.

Parameters
  as number  Enter the autonomous system number. The range is from 1 to 65535.
  metric metric-value  (OPTIONAL) Enter the keyword metric then the metric-value number. The range is from 0 to 16777214.
  metric-type type-value  (OPTIONAL) Enter the keyword metric-type then one of the following:
    • 1 = for OSPF External type 1
    • 2 = for OSPF External type 2
  tag tag-value  (OPTIONAL) Enter the keyword tag to set the tag for routes redistributed into OSPF. The range is from 0 to 4294967295.

Defaults
  none
**redistribute isis**

Redistribute IS-IS routing information throughout the OSPF instance.

**Syntax**
```
redistribute isis [tag] [level-1 | level-1-2 | level-2] [metric metric-value | metric-type type-value] [route-map map-name] [tag tag-value]
```

To disable redistribution, use the **no redistribute isis [tag] [level-1 | level-1-2 | level-2] [metric metric-value | metric-type type-value] [route-map map-name] [tag tag-value]** command.

**Parameters**
- **tag** (OPTIONAL) Enter the name of the IS-IS routing process.
- **level-1** (OPTIONAL) Enter the keywords level-1 to redistribute only IS-IS Level-1 routes.
- **level-1-2** (OPTIONAL) Enter the keywords level-1-2 to redistribute both IS-IS Level-1 and Level-2 routes.
- **level-2** (OPTIONAL) Enter the keywords level-2 to redistribute only IS-IS Level-2 routes.
- **metric metric-value** (OPTIONAL) Enter the keyword metric then a number. The range is from 0 (zero) to 4294967295.
- **metric-type type-value** (OPTIONAL) Enter the keywords metric-type then one of the following:
  - 1 = for OSPF External type 1
  - 2 = for OSPF External type 2
- **route-map map-name** (OPTIONAL) Enter the keywords route-map then the name of the route map.
- **tag tag-value** (OPTIONAL) Enter the keyword tag to set the tag for routes redistributed into OSPF. The range is from 0 to 4294967295.

**Defaults**
Not configured.

**Command Modes**
- ROUTER OSPF

**Command History**
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.
router-id

To configure a fixed router ID, use this command.

Syntax

    router-id ip-address

To remove the fixed router ID, use the no router-id ip-address command.

Parameters

    ip-address

        Enter the router ID in the IP address format.

Defaults

    none.

Command Modes

    ROUTER OSPF

Command History

    Version 8.3.16.1    Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

    You can configure an arbitrary value in the IP address format for each router. However, each router ID must be unique. If you use this command on an OSPF router process, which is already active (that is, has neighbors), a prompt reminding you that changing the router-id brings down the existing OSPF adjacency. The new router ID is effective at the next reload.

Example

    Dell(conf)#router ospf 100
    Dell(conf-router_ospf)#router-id 1.1.1.1
    Changing router-id will bring down existing OSPF adjacency [y/n]:
    Dell(conf-router_ospf)#show config
    !
    router ospf 100
    router-id 1.1.1.1
    Dell(conf-router_ospf)#no router-id
    Changing router-id will bring down existing OSPF adjacency [y/n]:
    Dell#

router ospf

To configure an OSPF instance, enter ROUTER OSPF mode.

Syntax

    router ospf process-id

To clear an OSPF instance, use the no router ospf process-id command.

Parameters

    process-id

        Enter a number for the OSPF instance. The range is from 1 to 65535.

Defaults

    Not configured.
**show config**

Display the non-default values in the current OSPF configuration.

**Syntax**

```
show config
```

**Command Modes**

- ROUTER OSPF

**Command History**

version 8.3.16.1

Introduced on the MXL 10/40GbE Switch IO Module.

**Example**

```
Dell(conf-router_ospf)#show config
!
router ospf 3
passive-interface FastEthernet 0/1
Dell(conf-router_ospf)#
```

**show ip ospf**

Display information on the OSPF process configured on the switch.

**Syntax**

```
show ip ospf process-id
```

**Parameters**

- **process-id**
  
  Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

version 8.3.16.1

Introduced on the MXL 10/40GbE Switch IO Module.
Usage Information

If you delete all the network area commands for Area 0, the `show ip ospf` command output does not list Area 0.

The following describes the `show ip ospf` command shown in the following example.

<table>
<thead>
<tr>
<th>Line Beginning with</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&quot;Routing Process...&quot;</td>
<td>Displays the OSPF process ID and the IP address associated with the process ID.</td>
</tr>
<tr>
<td>&quot;Supports only...&quot;</td>
<td>Displays the number of Type of Service (TOS) routes supported.</td>
</tr>
<tr>
<td>&quot;SPF schedule...&quot;</td>
<td>Displays the delay and hold time configured for this process ID.</td>
</tr>
<tr>
<td>&quot;Convergence Level&quot;</td>
<td></td>
</tr>
<tr>
<td>&quot;Min LSA...&quot;</td>
<td>Displays the intervals set for LSA transmission and acceptance.</td>
</tr>
<tr>
<td>&quot;Number of...&quot;</td>
<td>Displays the number and type of areas configured for this process ID.</td>
</tr>
</tbody>
</table>

Example

```
Dell#show ip ospf 10
Routing Process ospf 10 with ID 1.1.1.1 Virtual router default-vrf
Supports only single TOS (TOS0) routes
SPF schedule delay 5 secs, Hold time between two SPFs 10 secs
Convergence Level 0
Min LSA origination 0 msec, Min LSA arrival 1000 msec
Min LSA hold time 5000 msec, Max LSA wait time 5000 msec
Number of area in this router is 1, normal 1 stub 0 nssa 0
Area BACKBONE (0)
    Number of interface in this area is 1
    SPF algorithm executed 205 times
    Area ranges are

Dell#
```

Related Commands

- `show ip ospf database` — displays information about the OSPF routes configured.
- `show ip ospf interface` — displays the OSPF interfaces configured.
- `show ip ospf neighbor` — displays the OSPF neighbors configured.

**show ip ospf asbr**

Display all autonomous system boundary router (ASBR) routers visible to OSPF.

Syntax

```
show ip ospf process-id asbr
```
**Parameters**

**process-id**
- Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.

**Defaults**
- none

**Command Modes**
- EXEC
- EXEC Privilege

**Command History**
- Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**
- To isolate problems with external routes, use this command. In OSPF, external routes are calculated by adding the LSA cost to the cost of reaching the ASBR router. If an external route does not have the correct cost, use this command to determine if the path to the originating router is correct. The display output is not sorted in any order.
- **NOTE:** ASBRs that are not in directly connected areas are also displayed.
- You can determine if an ASBR is in a directly connected area (or not) by the flags. For ASBRs in a directly connected area, E flags are set. In the following example, router 1.1.1.1 is in a directly connected area since the Flag is E/-/-/.

**Example**

Dell#show ip ospf 1 asbr

<table>
<thead>
<tr>
<th>RouterID</th>
<th>Flags</th>
<th>Cost</th>
<th>Nexthop</th>
<th>Interface</th>
<th>Area</th>
</tr>
</thead>
<tbody>
<tr>
<td>3.3.3.3</td>
<td>-/-/-</td>
<td>2</td>
<td>10.0.0.2</td>
<td>Gi 0/1</td>
<td>1</td>
</tr>
<tr>
<td>1.1.1.1</td>
<td>E/-/-</td>
<td>0</td>
<td>0.0.0.0</td>
<td>-</td>
<td>0</td>
</tr>
</tbody>
</table>

**show ip ospf database**

Display all LSA information. If you do not enable OSPF on the switch, no output is generated.

**Syntax**

```
show ip ospf process-id database [database-summary]
```

**Parameters**

**process-id**
- Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.

**database-summary**
- (OPTIONAL) Enter the keywords database-summary to the display the number of LSA types in each area and the total number of LSAs.
Command Modes

- EXEC
- EXEC Privilege

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The following describes the show ip ospf process-id database command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Link ID</td>
<td>Identifies the router ID.</td>
</tr>
<tr>
<td>ADV Router</td>
<td>Identifies the advertising router's ID.</td>
</tr>
<tr>
<td>Age</td>
<td>Displays the link state age.</td>
</tr>
<tr>
<td>Seq#</td>
<td>Identifies the link state sequence number. This number allows you to identify old or duplicate link state advertisements.</td>
</tr>
<tr>
<td>Checksum</td>
<td>Displays the Fletcher checksum of an LSA's complete contents.</td>
</tr>
<tr>
<td>Link count</td>
<td>Displays the number of interfaces for that router.</td>
</tr>
</tbody>
</table>

Example

Dell>show ip ospf 1 database

OSPF Router with ID (11.1.2.1) (Process ID 1)
Router (Area 0.0.0.0)

Dell>
show ip ospf database asbr-summary

Display information about autonomous system (AS) boundary LSAs.

Syntax

```
show ip ospf process-id database asbr-summary [link-state-id] [adv-router ip-address]
```

Parameters

- **process-id**: Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.
- **link-state-id**: (OPTIONAL) Specify LSA ID in dotted decimal format. The LSA ID value depends on the LSA type, and it can be one of the following:
  - the network’s IP address for Type 3 LSAs or Type 5 LSAs
  - the router’s OSPF router ID for Type 1 LSAs or Type 4 LSAs
  - the default destination (0.0.0.0) for Type 5 LSAs
- **adv-router ip-address**: (OPTIONAL) Enter the keywords `adv-router` and the ip-address to display only the LSA information about that router.

Command Modes

- EXEC
- EXEC Privilege

Command History

Version 8.3.16.1
Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The following describes the `show ip ospf database asbr-summary` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>LS Age</td>
<td>Displays the LSA’s age.</td>
</tr>
<tr>
<td>Options</td>
<td>Displays the optional capabilities available on router. The following options can be found in this item:</td>
</tr>
<tr>
<td></td>
<td>• TOS-capability or No TOS-capability is displayed depending on whether the router can support Type of Service.</td>
</tr>
<tr>
<td></td>
<td>• DC or No DC is displayed depending on whether the originating router can support OSPF over demand circuits.</td>
</tr>
</tbody>
</table>

Related Commands

- `show ip ospf database asbr-summary` — displays only ASBR summary LSA information.
<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>LS Type</td>
<td>Displays the LSA’s type.</td>
</tr>
<tr>
<td>Link State ID</td>
<td>Displays the Link State ID.</td>
</tr>
<tr>
<td>Advertising Router</td>
<td>Identifies the advertising router’s ID.</td>
</tr>
<tr>
<td>Checksum</td>
<td>Displays the Fletcher checksum of the LSA’s complete contents.</td>
</tr>
<tr>
<td>Length</td>
<td>Displays the length in bytes of the LSA.</td>
</tr>
<tr>
<td>Network Mask</td>
<td>Displays the network mask implemented on the area.</td>
</tr>
<tr>
<td>TOS</td>
<td>Displays the Type of Service (TOS) options. Option 0 is the only option.</td>
</tr>
<tr>
<td>Metric</td>
<td>Displays the LSA metric.</td>
</tr>
</tbody>
</table>

**Example**

Dell#show ip ospf 100 database asbr-summary

    OSPF Router with ID (1.1.1.10) (Process ID 100)

    Summary Asbr (Area 0.0.0.0)
    LS age: 1437
    Options: (No TOS-capability, No DC, E)
    LS type: Summary Asbr
    Link State ID: 103.1.50.1
    Advertising Router: 1.1.1.10
    LS Seq Number: 0x8000000f
    Checksum: 0x8221
    Length: 28
    Network Mask: /0
      TOS: 0 Metric: 2

    LS age: 473
    Options: (No TOS-capability, No DC, E)
    LS type: Summary Asbr
    Link State ID: 104.1.50.1
    Advertising Router: 1.1.1.10
    LS Seq Number: 0x80000010
    Checksum: 0x4198
    Length: 28
    --More--

**Related Commands**

- `show ip ospf database` — displays OSPF database information.
show ip ospf database external

Display information on the AS external (type 5) LSAs.

Syntax
show ip ospf process-id database external [link-state-id] [adv-router ip-address]

Parameters
process-id Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.

link-state-id (OPTIONAL) Specify LSA ID in dotted decimal format. The LSA ID value depends on the LSA type, and it can be one of the following:
- the network’s IP address for Type 3 LSAs or Type 5 LSAs
- the router’s OSPF router ID for Type 1 LSAs or Type 4 LSAs
- the default destination (0.0.0.0) for Type 5 LSAs

adv-router ip-address (OPTIONAL) Enter the keywords adv-router and the ip-address to display only the LSA information about that router.

Command Modes
- EXEC
- EXEC Privilege

Command History
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
The following describes the show ip ospf process-id database external command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>LS Age</td>
<td>Displays the LSA’s age.</td>
</tr>
<tr>
<td>Options</td>
<td>Displays the optional capabilities available on router. The following options can be found in this item:</td>
</tr>
<tr>
<td></td>
<td>• TOS-capability or No TOS-capability is displayed depending on whether the router can support Type of Service.</td>
</tr>
<tr>
<td></td>
<td>• DC or No DC is displayed depending on whether the originating router can support OSPF over demand circuits.</td>
</tr>
<tr>
<td></td>
<td>• E or No E is displayed on whether the originating router can accept AS External LSAs.</td>
</tr>
<tr>
<td>LS Type</td>
<td>Displays the LSA’s type.</td>
</tr>
<tr>
<td>Link State ID</td>
<td>Displays the Link State ID.</td>
</tr>
<tr>
<td>Field</td>
<td>Description</td>
</tr>
<tr>
<td>------------------</td>
<td>-----------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Advertising Router</td>
<td>Identifies the router ID of the LSA’s originating router.</td>
</tr>
<tr>
<td>LS Seq Number</td>
<td>Identifies the link state sequence number. This number enables you to identify old or duplicate LSAs.</td>
</tr>
<tr>
<td>Checksum</td>
<td>Displays the Fletcher checksum of the LSA’s complete contents.</td>
</tr>
<tr>
<td>Length</td>
<td>Displays the length in bytes of the LSA.</td>
</tr>
<tr>
<td>Network Mask</td>
<td>Displays the network mask implemented on the area.</td>
</tr>
<tr>
<td>Metrics Type</td>
<td>Displays the external type.</td>
</tr>
<tr>
<td>TOS</td>
<td>Displays the Type of Service (TOS) options. Option 0 is the only option.</td>
</tr>
<tr>
<td>Metric</td>
<td>Displays the LSA metric.</td>
</tr>
<tr>
<td>Forward Address</td>
<td>Identifies the address of the forwarding router. Data traffic is forwarded to this router. If the forwarding address is 0.0.0.0, data traffic is forwarded to the originating router.</td>
</tr>
<tr>
<td>External Route Tag</td>
<td>Displays the 32-bit field attached to each external route.</td>
</tr>
</tbody>
</table>

The OSPF protocol does not use this field, but you can use the field for external route management.

**Example**

Dell#show ip ospf 1 database external

```
    OSPF Router with ID (20.20.20.5) (Process ID 1)
    
    Type-5 AS External

    LS age: 612
    Options: (No TOS-capability, No DC, E)
    LS type: Type-5 AS External
    Link State ID: 12.12.12.2
    Advertising Router: 20.31.3.1
    LS Seq Number: 0x80000007
    Checksum: 0x4cde
    Length: 36
    Network Mask: /32
        Metrics Type: 2
        TOS: 0
        Metrics: 25
        Forward Address: 0.0.0.0
        External Route Tag: 43

    LS age: 1868
    Options: (No TOS-capability, DC)
    LS type: Type-5 AS External
    Link State ID: 24.216.12.0
    Advertising Router: 20.20.20.8
    LS Seq Number: 0x80000005
    Checksum: 0xa00e
    Length: 36
    Network Mask: /24
        Metrics Type: 2
        TOS: 0
        Metrics: 1
```
show ip ospf database network

Display the network (type 2) LSA information.

**Syntax**

```
show ip ospf process-id database network [link-state-id] [adv-router ip-address]
```

**Parameters**

- **process-id**: Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.
- **link-state-id**: (OPTIONAL) Specify LSA ID in dotted decimal format. The LSA ID value depends on the LSA type, and it can be one of the following:
  - the network's IP address for Type 3 LSAs or Type 5 LSAs
  - the router's OSPF router ID for Type 1 LSAs or Type 4 LSAs
  - the default destination (0.0.0.0) for Type 5 LSAs
- **adv-router ip-address**: (OPTIONAL) Enter the keywords `adv-router` and the ip-address to display only the LSA information about that router.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

*Version 8.3.16.1*  
Introduced on the MXL 10/40Gbe Switch IO Module.

**Usage Information**

The following describes the `show ip ospf process-id database network` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>

    Length: 36
    Network Mask: /24
      Attached Router: 192.10.10.2
      Attached Router: 20.20.20.1
      Attached Router: 20.20.20.5

Dell#```

**Related Commands**

- `show ip ospf database` — displays OSPF database information.
show ip ospf database nssa-external

Display NSSA-External (type 7) LSA information.

Syntax

```
show ip ospf database nssa-external [link-state-id] [adv-router ip-address]
```

Parameters

- `link-state-id` (OPTIONAL) Specify LSA ID in dotted decimal format. The LSA ID value depends on the LSA type, and it can be one of the following:
  - the network’s IP address for Type 3 LSAs or Type 5 LSAs
  - the router’s OSPF router ID for Type 1 LSAs or Type 4 LSAs
  - the default destination (0.0.0.0) for Type 5 LSAs

- `adv-router ip-address` (OPTIONAL) Enter the keywords `adv-router` and the `ip-address` to display only the LSA information about that router.

Command Modes

- EXEC
- EXEC Privilege

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Related Commands

- `show ip ospf database` — displays OSPF database information.

show ip ospf database opaque-area

Display the opaque-area (type 10) LSA information.

Syntax

```
show ip ospf process-id database opaque-area [link-state-id] [adv-router ip-address]
```

Parameters

- `process-id` Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.

- `link-state-id` (OPTIONAL) Specify LSA ID in dotted decimal format. The LSA ID value depends on the LSA type, and it can be one of the following:
  - the network’s IP address for Type 3 LSAs or Type 5 LSAs
  - the router’s OSPF router ID for Type 1 LSAs or Type 4 LSAs
  - the default destination (0.0.0.0) for Type 5 LSAs
adv-router ip-address  (OPTIONAL) Enter the keywords adv-router and the ip-address to display only the LSA information about that router.

Command Modes
- EXEC
- EXEC Privilege

Command History
Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
The following describes the show ip ospf process-id database opaque-area command shown in the following example.

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>LS Age</td>
<td>Displays the LSA's age.</td>

</tr>
<tr>
<td>Opaque Type</td>
<td>Displays the Opaque type field (the first 8 bits of the Link State ID).</td>
</tr>
<tr>
<td>Opaque ID</td>
<td>Displays the Opaque type-specific ID (the remaining 24 bits of the Link State ID).</td>
</tr>
</tbody>
</table>

Example

Dell>show ip ospf 1 database opaque-area

OSPF Router with ID (3.3.3.3) (Process ID 1)
Type-10 Opaque Link Area (Area 0)

LS age: 1133
Options: (No TOS-capability, No DC, E)
LS type: Type-10 Opaque Link Area
Link State ID: 1.0.0.1
Advertising Router: 10.16.1.160
LS Seq Number: 0x80000416

836
**show ip ospf database opaque-as**

Display the opaque-as (type 11) LSA information.

**Syntax**

```
show ip ospf process-id database opaque-as [link-state-id] [adv-router ip-address]
```

**Parameters**

- **process-id** 
  Enter the OSPF process ID to show a specific process. If you do not enter the process ID, the command applies only to the first OSPF process.

- **link-state-id** 
  (OPTIONAL) Specify LSA ID in dotted decimal format. The LSA ID value depends on the LSA type, and it can be one of the following:
  - the network’s IP address for Type 3 LSAs or Type 5 LSAs
  - the router’s OSPF router ID for Type 1 LSAs or Type 4 LSAs
  - the default destination (0.0.0.0) for Type 5 LSAs

- **adv-router ip-address** 
  (OPTIONAL) Enter the keywords adv-router and the ip-address to display only the LSA information about that router.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

Version 8.3.16.1 
Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**

- `show ip ospf database` — displays OSPF database information.
show ip ospf database opaque-link

Display the opaque-link (type 9) LSA information.

**Syntax**
```
show ip ospf process-id database opaque-link [link-state-id] [adv-router ip-address]
```

**Parameters**
- **process-id**: Enter the OSPF process ID to show a specific process. If you do not enter the process ID, the command applies only to the first OSPF process.
- **link-state-id**: (OPTIONAL) Specify LSA ID in dotted decimal format. The LSA ID value depends on the LSA type, and it can be one of the following:
  - the network’s IP address for Type 3 LSAs or Type 5 LSAs
  - the router’s OSPF router ID for Type 1 LSAs or Type 4 LSAs
  - the default destination (0.0.0.0) for Type 5 LSAs
- **adv-router ip-address**: (OPTIONAL) Enter the keywords `adv-router` then the IP address of an Advertising Router to display only the LSA information about that router.

**Command Modes**
- EXEC
- EXEC Privilege

**Command History**
- **Version 8.3.16.1**: Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**
- `show ip ospf database` — displays OSPF database information.

---

show ip ospf database router

Display the router (type 1) LSA information.

**Syntax**
```
show ip ospf process-id database router [link-state-id] [adv-router ip-address]
```

**Parameters**
- **process-id**: Enter the OSPF Process ID to show a specific process. If you do not enter a process ID, the command applies only to the first OSPF process.
- **link-state-id**: (OPTIONAL) Specify LSA ID in dotted decimal format. The LSA ID value depends on the LSA type, and it can be one of the following:
• the network’s IP address for Type 3 LSAs or Type 5 LSAs
• the router’s OSPF router ID for Type 1 LSAs or Type 4 LSAs
• the default destination (0.0.0.0) for Type 5 LSAs

`adv-router ip-address`  
(Optional) Enter the keywords `adv-router` then the IP address of an Advertising Router to display only the LSA information about that router.

**Command Modes**

• EXEC
• EXEC Privilege

**Command History**

Version 8.3.16.1  
Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

The following describes the `show ip ospf process-id database router` command shown in the following example.

Example

Dell#show ip ospf 100 database router

```
OSPF Router with ID (1.1.1.10) (Process ID 100)

  Router (Area 0)

  LS age: 967
  Options: (No TOS-capability, No DC, E)
  LS type: Router
  Link State ID: 1.1.1.10
  Advertising Router: 1.1.1.10
  LS Seq Number: 0x8000012f
  Checksum: 0x3357
  Length: 144
  AS Boundary Router
  Area Border Router
  Number of Links: 10

  Link connected to: a Transit Network
    (Link ID) Designated Router address: 192.68.129.1
    (Link Data) Router Interface address: 192.68.129.1
    Number of TOS metric: 0
      TOS 0 Metric: 1

  Link connected to: a Transit Network
    (Link ID) Designated Router address: 192.68.130.1
    (Link Data) Router Interface address: 192.68.130.1
    Number of TOS metric: 0
      TOS 0 Metric: 1

  Link connected to: a Transit Network
    (Link ID) Designated Router address: 192.68.142.2
    (Link Data) Router Interface address: 192.68.142.2
    Number of TOS metric: 0
      TOS 0 Metric: 1

  Link connected to: a Transit Network
    (Link ID) Designated Router address: 192.68.141.2
    (Link Data) Router Interface address: 192.68.141.2
    Number of TOS metric: 0
      TOS 0 Metric: 1

  Link connected to: a Transit Network
    (Link ID) Designated Router address: 192.68.140.2
    (Link Data) Router Interface address: 192.68.140.2
    Number of TOS metric: 0
      TOS 0 Metric: 1

  Link connected to: a Stub Network
    (Link ID) Network/subnet number: 11.1.5.0
--More--
```
show ip ospf database summary

Display the network summary (type 3) LSA routing information.

**Syntax**
```
show ip ospf process-id database summary [link-state-id] [adv-router ip-address]
```

**Parameters**

- `process-id` Enter the OSPF process ID to show a specific process. If you do not enter a process ID, the command applies only to the first OSPF process.
- `link-state-id` (OPTIONAL) Specify LSA ID in dotted decimal format. The LSA ID value depends on the LSA type, and it can be one of the following:
  - the network’s IP address for Type 3 LSAs or Type 5 LSAs
  - the router’s OSPF router ID for Type 1 LSAs or Type 4 LSAs
  - the default destination (0.0.0.0) for Type 5 LSAs
- `adv-router ip-address` (OPTIONAL) Enter the keywords `adv-router` then the IP address of an Advertising Router to display only the LSA information about that router.

**Command Modes**
- EXEC
- EXEC Privilege

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

The following describes the `show ip ospf process-id database summary` command shown in the following example.

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>LS Age</td>
<td>Displays the LSA age.</td>
</tr>
<tr>
<td>Options</td>
<td>Displays the optional capabilities available on router. The following options can be found in this item:</td>
</tr>
<tr>
<td></td>
<td>• TOS-capability or No TOS-capability is displayed depending on whether the router can support Type of Service.</td>
</tr>
<tr>
<td></td>
<td>• DC or No DC is displayed depending on whether the originating router can support OSPF over demand circuits.</td>
</tr>
</tbody>
</table>
### Item Description
- E or No E is displayed on whether the originating router can accept AS External LSAs.

<table>
<thead>
<tr>
<th>LS Type</th>
<th>Displays the LSA type.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Link State ID</td>
<td>Displays the Link State ID.</td>
</tr>
<tr>
<td>Advertising Router</td>
<td>Identifies the router ID of the LSA’s originating router.</td>
</tr>
<tr>
<td>LS Seq Number</td>
<td>Displays the link state sequence number. This number allows you to identify old or duplicate LSAs.</td>
</tr>
<tr>
<td>Checksum</td>
<td>Displays the Fletcher checksum of an LSA’s complete contents.</td>
</tr>
<tr>
<td>Length</td>
<td>Displays the length in bytes of the LSA.</td>
</tr>
<tr>
<td>Network Mask</td>
<td>Displays the network mask implemented on the area.</td>
</tr>
<tr>
<td>TOS</td>
<td>Displays the TOS options. Option 0 is the only option.</td>
</tr>
<tr>
<td>Metric</td>
<td>Displays the LSA metrics.</td>
</tr>
</tbody>
</table>

#### Example

```bash
#show ip ospf 100 database summary

OSPF Router with ID (1.1.1.10) (Process ID 100)

  Summary Network (Area 0.0.0.0)

  LS age: 1551
  Options: (No TOS-capability, DC, E)
  LS type: Summary Network
  Link State ID: 192.68.16.0
  Advertising Router: 192.168.17.1
  LS Seq Number: 0x80000054
  Checksum: 0xb5a2
  Length: 28
  Network Mask: /24
    TOS: 0 Metric: 1

  LS age: 9
  Options: (No TOS-capability, No DC, E)
  LS type: Summary Network
  Link State ID: 192.68.32.0
  Advertising Router: 1.1.1.10
  LS Seq Number: 0x80000016
  Checksum: 0xb9da
  Length: 28
  Network Mask: /24
    TOS: 0 Metric: 1

  LS age: 7
  Options: (No TOS-capability, No DC, E)
  LS type: Summary Network
  Link State ID: 192.68.33.0
  Advertising Router: 1.1.1.10
  LS Seq Number: 0x80000016
  Checksum: 0x987c
  Length: 28
  Network Mask: /26
    TOS: 0 Metric: 1
```
show ip ospf interface

Display the OSPF interfaces configured. If OSPF is not enabled on the switch, no output is generated.

**Syntax**

```
show ip ospf process-id interface [interface]
```

**Parameters**

- `process-id` Enter the OSPF process ID to show a specific process. If you do not enter a process ID, the command applies only to the first OSPF process.
- `interface` (OPTIONAL) Enter the following keywords and slot/port or number information:
  - For the null interface, enter the keyword `null` then zero (0).
  - For Loopback interfaces, enter the keyword `loopback` then a number from 0 to 16383.
  - For Port Channel groups, enter the keywords `port-channel` then a number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a VLAN, enter the keyword `vlan` then the VLAN ID. The range is from 1 to 4094.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

The following describes the `show ip ospf process-id interface` command shown in the following example.

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>GigabitEthernet...</td>
<td>This line identifies the interface type slot/port and the status of the OSPF protocol on that interface.</td>
</tr>
<tr>
<td>Internet Address...</td>
<td>This line displays the IP address, network mask and area assigned to this interface.</td>
</tr>
<tr>
<td>Item</td>
<td>Description</td>
</tr>
<tr>
<td>-----------------------------</td>
<td>-----------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Process ID...</td>
<td>This line displays the OSPF Process ID, Router ID, Network type and cost metric for this interface.</td>
</tr>
<tr>
<td>Transmit Delay...</td>
<td>This line displays the interface’s settings for Transmit Delay, State, and Priority. In the State setting, BDR is Backup Designated Router.</td>
</tr>
<tr>
<td>Designated Router...</td>
<td>This line displays the ID of the Designated Router and its interface address.</td>
</tr>
<tr>
<td>Backup Designated...</td>
<td>This line displays the ID of the Backup Designated Router and its interface address.</td>
</tr>
<tr>
<td>Timer intervals...</td>
<td>This line displays the interface’s timer settings for Hello interval, Dead interval, Transmit Delay (Wait), and Retransmit Interval.</td>
</tr>
<tr>
<td>Hello due...</td>
<td>This line displays the amount time until the next Hello packet is sent out this interface.</td>
</tr>
<tr>
<td>Neighbor Count...</td>
<td>This line displays the number of neighbors and adjacent neighbors. Listed below this line are the details about each adjacent neighbor.</td>
</tr>
</tbody>
</table>

**Example**

```
Dell>show ip ospf int

TenGigabitEthernet 13/17 is up, line protocol is up
Internet Address 192.168.1.2/30, Area 0.0.0.1
Process ID 1, Router ID 192.168.253.2, Network Type BROADCAST, Cost: 1
    Designated Router (ID) 192.168.253.2, Interface address 192.168.1.2
    Backup Designated Router (ID) 192.168.253.1, Interface address 192.168.1.1
    Timer intervals configured, Hello 10, Dead 40, Wait 40, Retransmit 5
    Hello due in 00:00:02
    Neighbor Count is 1, Adjacent neighbor count is 1
        Adjacent with neighbor 192.168.253.1 (Backup Designated Router)

TenGigabitEthernet 13/23 is up, line protocol is up
Internet Address 192.168.0.1/24, Area 0.0.0.1
Process ID 1, Router ID 192.168.253.2, Network Type BROADCAST, Cost: 1
    Transmit Delay is 1 sec, State DROTHER, Priority 1
    Designated Router (ID) 192.168.253.5, Interface address 192.168.0.4
    Backup Designated Router (ID) 192.168.253.3, Interface address 192.168.0.2
    Timer intervals configured, Hello 10, Dead 40, Wait 40, Retransmit 5
    Hello due in 00:00:08
    Neighbor Count is 3, Adjacent neighbor count is 2
        Adjacent with neighbor 192.168.253.5 (Designated Router)
        Adjacent with neighbor 192.168.253.3 (Backup Designated Router)
```
show ip ospf neighbor

Display the OSPF neighbors connected to the local router.

**Syntax**

```
show ip ospf process-id neighbor
```

**Parameters**

- **process-id**
  
  Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.

**Command Modes**

- EXEC Privilege

**Command History**

- **Version 8.3.16.1**
  
  Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

The following describes the `show ip ospf process-id neighbor` command shown in the following example.

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Neighbor ID</td>
<td>Displays the neighbor router ID.</td>
</tr>
<tr>
<td>Pri</td>
<td>Displays the priority assigned neighbor.</td>
</tr>
<tr>
<td>State</td>
<td>Displays the OSPF state of the neighbor.</td>
</tr>
<tr>
<td>Dead Time</td>
<td>Displays the expected time until the system declares the neighbor dead.</td>
</tr>
<tr>
<td>Address</td>
<td>Displays the IP address of the neighbor.</td>
</tr>
<tr>
<td>Interface</td>
<td>Displays the interface type slot/port information.</td>
</tr>
<tr>
<td>Area</td>
<td>Displays the neighbor’s area (process ID).</td>
</tr>
</tbody>
</table>

**Example**

```
Dell#show ip ospf 34 neighbor

Neighbor ID Pri State       Dead Time Address  Interface Area
20.20.20.7  1 FULL/DR     00:00:32 182.10.10.3 Gi 0/0 0.0.0.2
192.10.10.2 1 FULL/DR     00:00:37 192.10.10.2 Gi 0/1 0.0.0.1
20.20.20.1  1 FULL/DROTHER00:00:36 192.10.10.4 Gi 0/1 0.0.0.1
Dell#
```
show ip ospf routes

Display routes OSPF calculates and stores in OSPF RIB.

Syntax

```
show ip ospf process-id routes
```

Parameters

```
process-id
```

Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.

Defaults

none

Command Modes

- EXEC
- EXEC Privilege

Command History

Version 8.3.16.1

Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

This command is useful in isolating routing problems between the OSPF and the RTM. For example, if a route is missing from the RTM/FIB but is visible from the display output of this command, the problem is with downloading the route to the RTM.

This command has the following limitations:

- The display output is sorted by prefixes; intra-area ECMP routes are not displayed together.
- For Type 2 external routes, Type 1 cost is not displayed.

Example

```
Dell#show ip ospf 100 route
Prefix Cost Nexthop Interface Area  Type
1.1.1.1 1  0.0.0.0   Lo 0      0     Intra-Area
3.3.3.3 2  13.0.0.3  Gi 0/47   1     Intra-Area
13.0.0.0 1  0.0.0.0   Gi 0/47   0     Intra-Area
150.150.150.0 2  13.0.0.3  Gi 0/47   -     External
172.30.1.0 2  13.0.0.3  Gi 0/47   1     Intra-Area
Dell#
```

show ip ospf statistics

Display OSPF statistics.

Syntax

```
show ip ospf process-id statistics global | [interface name {neighbor router-id}]`
```

Parameters

```
process-id
```

Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.
Enter the keyword `global` to display the packet counts received on all running OSPF interfaces and packet counts OSPF neighbors receive and transmit.

**(interface name)** *(OPTIONAL)* Enter the keyword `interface` then one of the following interface keywords and slot/port or number information:

- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
- For Port Channel groups, enter the keywords `port-channel` then a number. The range is from 1 to 128.
- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a VLAN, enter the keyword `vlan` then a number from 1 to 4094.

**(neighbor router-id)** *(OPTIONAL)* Enter the keyword `neighbor` then the neighbor’s router-id in dotted decimal format (A.B.C.D.).

**Defaults**
none

**Command Modes**
- EXEC
- EXEC Privilege

**Command History**
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**
The following describes the `show ip ospf statistics process-id global` command shown in the following example.

<table>
<thead>
<tr>
<th>Row Heading</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Total</td>
<td>Displays the total number of packets the OSPF process receives/transmits.</td>
</tr>
<tr>
<td>Error</td>
<td>Displays the error count while receiving and transmitting packets by the OSPF process.</td>
</tr>
<tr>
<td>Hello</td>
<td>Number of OSPF Hello packets.</td>
</tr>
<tr>
<td>DDiscr</td>
<td>Number of database description packets.</td>
</tr>
<tr>
<td>LSReq</td>
<td>Number of link state request packets.</td>
</tr>
<tr>
<td>LSUpd</td>
<td>Number of link state update packets.</td>
</tr>
<tr>
<td>LSACK</td>
<td>Number of link state acknowledgement packets.</td>
</tr>
<tr>
<td>TxQ-Len</td>
<td>The transmission queue length.</td>
</tr>
<tr>
<td>RxQ-Len</td>
<td>The reception queue length.</td>
</tr>
<tr>
<td>Tx-Mark</td>
<td>The highest number mark in the transmission queue.</td>
</tr>
<tr>
<td>Rx-Mark</td>
<td>The highest number mark in the reception queue.</td>
</tr>
<tr>
<td>Row Heading</td>
<td>Description</td>
</tr>
<tr>
<td>-------------</td>

</tr>
<tr>
<td>Other-Q</td>
<td>The queue, for transmission or reception, for the link state acknowledgement, database description, and update packets.</td>
</tr>
</tbody>
</table>

The following describes the error definitions for the `show ip ospf statistics process-id` global command.

<table>
<thead>
<tr>
<th>Error Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Intf_Down</td>
<td>Received packets on an interface that is either down or OSPF is not enabled.</td>
</tr>
<tr>
<td>Non-Dr</td>
<td>Received packets with a destination address of ALL_DRS even though SELF is not a designated router.</td>
</tr>
<tr>
<td>Self-Org</td>
<td>Receive the self originated packet.</td>
</tr>
<tr>
<td>Wrong_Len</td>
<td>The received packet length is different to what was indicated in the OSPF header.</td>
</tr>
<tr>
<td>Invld-Nbr</td>
<td>LSA, LSR, LSU, and DDB are received from a peer which is not a neighbor peer.</td>
</tr>
<tr>
<td>Nbr-State</td>
<td>LSA, LSR, and LSU are received from a neighbor with stats less than the loading state.</td>
</tr>
<tr>
<td>Auth-Error</td>
<td>Simple authentication error.</td>
</tr>
<tr>
<td>MD5-Error</td>
<td>MD5 error</td>
</tr>
<tr>
<td>Cksum-Err</td>
<td>Checksum Error</td>
</tr>
<tr>
<td>Version</td>
<td>Version mismatch</td>
</tr>
<tr>
<td>AreaMismatch</td>
<td>Area mismatch</td>
</tr>
<tr>
<td>Conf-Issue</td>
<td>The received hello packet has a different hello or dead interval than the configuration.</td>
</tr>
<tr>
<td>No-Buffer</td>
<td>Buffer allocation failure.</td>
</tr>
<tr>
<td>Seq-no</td>
<td>A sequence no errors occurred during the database exchange process.</td>
</tr>
<tr>
<td>Socket</td>
<td>Socket Read/Write operation error.</td>
</tr>
<tr>
<td>Q-overflow</td>
<td>Packets dropped due to queue overflow.</td>
</tr>
<tr>
<td>Unknown-Pkt</td>
<td>Received packet is not an OSPF packet.</td>
</tr>
</tbody>
</table>

**Example**

Dell#show ip ospf 10 statistics global

OSPF Packet Count
The `show ip ospf process-id statistics` command displays the error packet count received on each interface as:

- The hello-timer remaining value for each interface
- The wait-timer remaining value for each interface
- The grace-timer remaining value for each interface
- The packet count received and transmitted for each neighbor
- Dead timer remaining value for each neighbor
- Transmit timer remaining value for each neighbor
- The LSU Q length and its highest mark for each neighbor
- The LSR Q length and its highest mark for each neighbor

**Example (Statistics)**

```
Dell#show ip ospf 10 statistics
Interface TenGigabitEthernet 4/45
Error packets (Receive statistics)
    Intf-Down 0 Non-Dr 0 Self-Org 0
    Wrong-Len 0 Invld-Nbr 0 Nbr-State 0
    Auth-Error 0 MD5-Error 0 Chksum 0
    Version 0 AreaMisMatch 0 Conf-Issue 0
    SeqNo-Err 0 Unknown-Pkt 0 Bad-LsReq 0
    RtidZero 0
Neighbor ID 3.1.1.2
Packet Statistics
    Hello DDiscr LSReq LSUpd LSAck
        RX 47 2 1 3 2
        TX 46 3 1 3 2
Timers
    Hello 1 Wait 0 Grace 0
    Dead 37 Transmit 0
Queue Statistics
    LSU-Q-Len 0 LSU-Q-Wmark 1
```
show ip ospf timers rate-limit

Show the LSA currently in the queue waiting for timers to expire.

Syntax

```
show ip ospf process-id timers rate-limit
```

Parameters

- `process-id` Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.

Defaults

none

Command Modes

- EXEC
- EXEC Privilege

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Example

```
Dell#show ip ospf 10 timers rate-limit

List of LSAs in rate limit Queue
LSA id: 1.1.1.0 Type: 3 Adv Rtid: 3.3.3.3 Expiry time: 00:00:09.111
LSA id: 3.3.3.3 Type: 1 Adv Rtid: 3.3.3.3 Expiry time: 00:00:23.96
Dell#
```

show ip ospf topology

Display routers in directly connected areas.

Syntax

```
show ip ospf process-id topology
```

Parameters

- `process-id` Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.

Defaults

none
Command Modes

- EXEC
- EXEC Privilege

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

To isolate problems with inter-area and external routes, use this command. In OSPF inter-area and external routes are calculated by adding LSA cost to the cost of reaching the router. If an inter-area or external route is not of correct cost, the display can determine if the path to the originating router is correct or not.

Example

Dell#show ip ospf 1 topology

<table>
<thead>
<tr>
<th>Router ID</th>
<th>Flags</th>
<th>Cost</th>
<th>Nexthop</th>
<th>Interface</th>
<th>Area</th>
</tr>
</thead>
<tbody>
<tr>
<td>3.3.3.3</td>
<td>E/B/-/</td>
<td>1</td>
<td>20.0.0.3</td>
<td>Gi 13/1</td>
<td>0</td>
</tr>
<tr>
<td>1.1.1.1</td>
<td>E/-/-/</td>
<td>1</td>
<td>10.0.0.1</td>
<td>Gi 7/1</td>
<td>1</td>
</tr>
</tbody>
</table>

Dell#

summary-address

To advertise one external route, set the OSPF ASBR.

Syntax

summary-address ip-address mask [not-advertise] [tag tag-value]

To disable summary address, use the no summary-address ip-address mask command.

Parameters

- **ip-address**: Specify the IP address in dotted decimal format of the address to summarize.
- **mask**: Specify the mask in dotted decimal format of the address to summarize.
- **not-advertise**: (OPTIONAL) Enter the keywords not-advertise to suppress that match the network prefix/mask pair.
- **tag tag-value**: (OPTIONAL) Enter the keyword tag then a value to match on routes redistributed through a route map. The range is from 0 to 4294967295.

Defaults

Not configured.

Command Modes

ROUTER OSPF

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The area range command summarizes routes for the different areas.

With the not-advertise parameter configured, you can use this command to filter out some external routes. For example, if you want to redistribute static routes
to OSPF, but you don’t want OSPF to advertise routes with prefix 1.1.0.0, you can configure the summary-address 1.1.0.0 255.255.0.0 not-advertise to filter out all the routes fall in range 1.1.0.0/16.

Related Commands

area range — summarizes routes within an area.

timers spf

Set the time interval between when the switch receives a topology change and starts a shortest path first (SPF) calculation.

Syntax

timers spf delay holdtime

To return to the default, use the no timers spf command.

Parameters

delay Enter a number as the delay. The range is from 0 to 4294967295. The default is 5 seconds.

holdtime Enter a number as the hold time. The range is from 0 to 4294967295. The default is 10 seconds.

Defaults

• delay = 5 seconds
• holdtime = 10 seconds

Command Modes

ROUTER OSPF

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

Setting the delay and holdtime parameters to a low number enables the switch to an alternate path quickly but requires more CPU usage.

timers throttle lsa all

Configure LSA transmit intervals.

Syntax

timers throttle lsa all {start-interval | hold-interval | max-interval}

To return to the default, use the no timers throttle lsa command.

Parameters

start-interval Set the minimum interval between initial sending and resending the same LSA. The range is from 0 to 600,000 milliseconds.
**hold-interval**

Set the next interval to send the same LSA. This interval is the time between sending the same LSA after the start-interval has been attempted. The range is from 1 to 600,000 milliseconds.

**max-interval**

Set the maximum amount of time the system waits before sending the LSA. The range is from 1 to 600,000 milliseconds.

### Defaults

- **start-interval**: 0 msec
- **hold-interval**: 5000 msec
- **max-interval**: 5000 msec

### Command Modes

ROUTER OSPF

### Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

### Usage Information

LSAs are sent after the start-interval and then after hold-interval until the maximum interval is reached. In throttling, exponential backoff is used when sending same LSA, so that the interval is multiplied until the maximum time is reached. For example, if the `start-interval 5000` and `hold-interval 1000` and `max-interval 100,000`, the LSA is sent at 5000 msec, then 1000 msec, then 2000 msec, then 4000 until 100,000 msec is reached.

---

**timers throttle lsa arrival**

Configure the LSA acceptance intervals.

### Syntax

```
timers throttle lsa arrival arrival-time
```

To return to the default, use the `no timers throttle lsa command`.

### Parameters

**arrival-time**

Set the interval between receiving the same LSA repeatedly, to allow sufficient time for the system to accept the LSA. The range is from 0 to 600,000 milliseconds.

### Defaults

1000 msec

### Command Modes

ROUTER OSPF

### Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.
**OSPFv3 Commands**

Open shortest path first version 3 (OSPFv3) for IPv6 is supported on the MXL Switch platform. The fundamental mechanisms of OSPF (flooding, DR election, area support, SPF calculations, and so on) remain unchanged. However, OSPFv3 runs on a per-link basis instead of on a per-IP-subnet basis. Most changes were necessary to handle the increased address size of IPv6.

The Dell Networking implementation of OSPFv3 is based on IETF RFC 2740.

**area authentication**

Configure an IPsec authentication policy for OSPFv3 packets in an OFSPFv3 area.

**Syntax**

```
area area-id authentication ipsec spi number {MD5 | SHA1} [key-encryption-type] key
```

**Parameters**

- **area area-id**
  - Area for which OSPFv3 traffic is to be authenticated. For area-id, you can enter a number. The range is from 0 to 4294967295.

- **ipsec spi number**
  - Security Policy index (SPI) value that identifies an IPsec security policy. The range is from 256 to 4294967295.

- **MD5 | SHA1**
  - Authentication type: Message Digest 5 (MD5) or Secure Hash Algorithm 1 (SHA-1).

- **key-encryption-type**
  - (OPTIONAL) Specifies if the key is encrypted. The values are 0 (key is not encrypted) or 7 (key is encrypted).

- **key**
  - Text string used in authentication.

  For MD5 authentication, the key must be 32 hex digits (non-encrypted) or 64 hex digits (encrypted).

  For SHA-1 authentication, the key must be 40 hex digits (non-encrypted) or 80 hex digits (encrypted).

**Defaults**

Not configured.

**Command Modes**

ROUTER OSPFv3

854
### Command History

**Version 9.2(0.0)**
Introduced on the MXL 10/40GbE Switch IO Module.

### Usage Information

Before you enable IPsec authentication on an OSPFv3 area, you must first enable OSPFv3 globally on the router. Configure the same authentication policy (same SPI and key) on each interface in an OSPFv3 link.

An SPI number must be unique to one IPsec security policy (authentication or encryption) on the router.

If you have enabled IPsec encryption in an OSPFv3 area with the `area encryption` command, you cannot use the `area authentication` command in the area at the same time.

The configuration of IPsec authentication on an interface-level takes precedence over an area-level configuration. If you remove an interface configuration, an area authentication policy that has been configured is applied to the interface.

### area encryption

Configure an IPsec encryption policy for OSPFv3 packets in an OSPFv3 area.

**Syntax**

```
area area-id encryption ipsec spi number esp encryption-algorithm [key-encryption-type] key authentication-algorithm [key-encryption-type] key | null
```

To remove an IPsec encryption policy from an interface, use the `no area area-id encryption spi number` command.

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>area area-id</td>
<td>Area for which OSPFv3 traffic is to be encrypted. For <code>area-id</code>, enter a number. The range is from 0 to 4294967295.</td>
</tr>
<tr>
<td>ipsec spi number</td>
<td>Security Policy index (SPI) value that identifies an IPsec security policy. The range is from 256 to 4294967295.</td>
</tr>
<tr>
<td>esp encryption-algorithm</td>
<td>Encryption algorithm used with ESP. Valid values are: 3DES, DES, AES-CBC, and NULL. For AES-CBC, only the AES-128 and AES-192 ciphers are supported.</td>
</tr>
</tbody>
</table>
**key-encryption-algorithm**  
(Optional) Specifies if the key is encrypted.  
Valid values: 0 (key is not encrypted) or 7 (key is encrypted).

**key**  
Text string used in encryption.  
The required lengths of a non-encrypted or encrypted key are:  
- 3DES - 48 or 96 hex digits; DES - 16 or 32 hex digits; AES-CBC - 32 or 64 hex digits for AES-128 and 48 or 96 hex digits for AES-192.

**authentication-algorithm**  
Specifies the authentication algorithm to use for encryption.  
Valid values are **MD5** or **SHA1**.

**key-encryption-type**  
(Optional) Specifies if the authentication key is encrypted.  
Valid values: 0 (key is not encrypted) or 7 (key is encrypted).

**key**  
Text string used in authentication.  
For **MD5** authentication, the key must be 32 hex digits (non-encrypted) or 64 hex digits (encrypted).  
For **SHA-1** authentication, the key must be 40 hex digits (non-encrypted) or 80 hex digits (encrypted).

**null**  
Causes an encryption policy configured for the area to not be inherited on the interface.

<table>
<thead>
<tr>
<th>Defaults</th>
<th>Not configured.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Command Modes</td>
<td>ROUTER OSPFv3</td>
</tr>
</tbody>
</table>

**Command History**  
Version 9.2(0.0)  
Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**  
Before you enable IPsec encryption on an OSPFv3 interface, first enable OSPFv3 globally on the router. Configure the same encryption policy (same SPI and keys) on each interface in an OSPFv3 link.

An SPI value must be unique to one IPsec security policy (authentication or encryption) on the router.

When you configure encryption for an OSPFv3 area with the `area encryption` command, you enable both IPsec encryption and authentication. However, when
If you enable authentication on an area with the `area authentication` command, you do not enable encryption at the same time.

If you have enabled IPsec authentication in an OSPFv3 area with the `area authentication` command, you cannot use the `area encryption` command in the area at the same time.

The configuration of IPsec encryption on an interface-level takes precedence over an area-level configuration. If you remove an interface configuration, an area encryption policy that has been configured is applied to the interface.

clear ipv6 ospf process

Reset an OSPFv3 router process without removing or re-configuring the process.

```
Syntax
clear ipv6 ospf process

Command Modes
• EXEC
• EXEC Privilege

Command History
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.
```

debug ipv6 ospf bfd

Display debug information and interface types for BFD on OSPF IPv6 packets.

```
Syntax
[no] debug ipv6 ospf bfd [interface]

To cancel the debug command, use the no debug ipv6 ospf command.

Parameters
interface (OPTIONAL) Enter one of the following keywords and slot/port or number information:

• For a 1-Gigabit Ethernet interface, enter the keyword GigabitEthernet then the slot/port information.
• For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
• For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
• For a Port Channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.
• For a tunnel interface, enter the keyword tunnel then a number. The range is from 1 to 16383.
```
For a VLAN, enter the keyword `vlan` then a number from 1 to 4094.

**Command Modes**
EXEC Privilege

**Command History**
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**
The following section describes the command fields.

<table>
<thead>
<tr>
<th>Lines Beginning With or Including</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>OSPFv3...</td>
<td>Debugging is on for all OSPFv3 packets and all interfaces.</td>
</tr>
<tr>
<td>05:21:01</td>
<td>Displays the time stamp.</td>
</tr>
<tr>
<td>Sending Ver:3</td>
<td>Sending OSPF3 version.</td>
</tr>
</tbody>
</table>

**Example**
```

00:59:45 : OSPFv3INFO: OSPFV3 updating NBR state
```
**debug ipv6 ospf**

Display debug information and interface types on OSPF IPv6 packets or events.

**Syntax**

```
debug ipv6 ospf {packet | events} [interface]
```

**Parameters**

- `interface` *(OPTIONAL)* Enter one of the following keywords and slot/port or number information:
  - For a 1-Gigabit Ethernet interface, enter the keyword `GigabitEthernet` then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
  - For a Port Channel interface, enter the keyword `port-channel` then a number. The range is 1 to 128.
  - For a tunnel interface, enter the keyword `tunnel` then a number. The range is 1 to 16383.
  - For a VLAN, enter the keyword `vlan` then a number from 1 to 4094.

**Command Modes**

- EXEC Privilege

**Command History**

- Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

---

**default-information originate**

Configure the system to generate a default external route into an OSPFv3 routing domain.

**Syntax**

```
default-information originate [always] [metric metric-value] [metric-type type-value] [route-map map-name]
```

To return to the default values, use the `no default-information originate` command.

**Parameters**

- `always` *(OPTIONAL)* Enter the keyword `always` to specify that default route information must always be advertised.
- `metric metric-value` *(OPTIONAL)* Enter the keyword `metric` then a number to configure a metric value for the route. The range is from 1 to 16777214.
- `metric-type type-value` *(OPTIONAL)* Enter the keywords `metric-type` then an OSPFv3 link state type of 1 or 2 for default routes. The values are:
• 1 = Type 1 external route
• 2 = Type 2 external route

route-map (OPTIONAL) Enter the keywords route-map then the name of an established route map.

Defaults
Disabled.

Command Modes
ROUTER OSPFv3

Command History
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

graceful-restart grace-period
Enable OSPFv3 graceful restart globally by setting the grace period (in seconds) that an OSPFv3 router’s neighbors continues to advertise the router as adjacent during a graceful restart.

Syntax
graceful-restart grace-period seconds
To disable OSPFv3 graceful restart, enter no graceful-restart grace-period.

Parameters
seconds Time duration, in seconds, that specifies the duration of the restart process before OSPFv3 terminates the process. The range is from 40 to 1800 seconds.

Defaults
OSPFv3 graceful restart is disabled and functions in a helper-only role.

Command Modes
ROUTER OSPFv3

Command History
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
By default, OSPFv3 graceful restart is disabled and functions only in a helper role to help restarting neighbor routers in their graceful restarts when it receives a Grace LSA.

To enable OSPFv3 graceful restart, enter the ipv6 router ospf command to enter OSPFv3 configuration mode and then configure a grace period using the graceful-restart grace-period command. The grace period is the length of time that OSPFv3 neighbors continue to advertise the restarting router as though it is fully adjacent. When graceful restart is enabled (restarting role), an OSPFv3 restarting expects its OSPFv3 neighbors to help when it restarts by not advertising the broken link.

When you enable the helper-reject role on an interface with the ipv6 ospf graceful-restart helper-reject command, you reconfigure OSPFv3 graceful restart to
function in a "restarting-only" role. In a "restarting-only" role, OSPFv3 does not participate in the graceful restart of a neighbor.

**graceful-restart mode**

Specify the type of events that trigger an OSPFv3 graceful restart.

**Syntax**

```
graceful-restart mode {planned-only | unplanned-only}
```

To disable graceful restart mode, enter `no graceful-restart mode`.

**Parameters**

- `planned-only` (OPTIONAL) Enter the keywords `planned-only` to indicate graceful restart is supported in a planned restart condition only.
- `unplanned-only` (OPTIONAL) Enter the keywords `unplanned-only` to indicate graceful restart is supported in an unplanned restart condition only.

**Defaults**

OSPFv3 graceful restart supports both planned and unplanned failures.

**Command Modes**

```
ROUTER OSPFv3
```

**Command History**

- **Version 9.2(0.0)**
  - Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

OSPFv3 graceful restart supports planned-only and/or unplanned-only restarts. The default is support for both planned and unplanned restarts.

- A planned restart occurs when you enter the `redundancy force-failover rpm` command to force the primary RPM to switch to the backup RPM. During a planned restart, OSPF sends out a Type-11 Grace LSA before the system switches over to the backup RPM.
- An unplanned restart occurs when an unplanned event causes the active RPM to switch to the backup RPM, such as when an active process crashes, the active RPM is removed, or a power failure happens. During an unplanned restart, OSPF sends out a Grace LSA when the backup RPM comes online.

By default, both planned and unplanned restarts trigger an OSPFv3 graceful restart. Selecting one or the other mode restricts OSPFv3 to the single selected mode.
ipv6 ospf area

Enable IPv6 OSPF on an interface.

Syntax

ipv6 ospf process-id area area-id

To disable OSPFv6 routing for an interface, use the no ipv6 ospf process-id area area-id command.

Parameters

- **process-id**: Enter the process identification number.
- **area area-id**: Specify the OSPF area. The range is from 0 to 65535.

Defaults
none

Command Modes
INTERFACE

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

ipv6 ospf authentication

Enable IPv6 OSPF on an interface.

Syntax

ipv6 ospf authentication {null | ipsec spi number {MD5 | SHA1} [key-encryption-type] key}

To remove an IPsec authentication policy from an interface, use the no ipv6 ospf authentication spi number command.

To remove null authentication on an interface to allow the interface to inherit the authentication policy configured for the OSPFv3 area, use the no ipv6 ospf authentication null command.

Parameters

- **null**: Causes an authentication policy configured for the area to not be inherited on the interface.
- **ipsec spi number**: Security Policy index (SPI) value that identifies an IPsec security policy. The range is from 256 to 4294967295.
- **MD5 | SHA1**: Authentication type: Message Digest 5 (MD5) or Secure Hash Algorithm 1 (SHA-1).
- **key-encryption-type** (OPTIONAL): Specifies if the key is encrypted.
  - Valid values: 0 (key is not encrypted) or 7 (key is encrypted).
- **key**: Text string used in authentication.
For MD5 authentication, the key must be 32 hex digits (non-encrypted) or 64 hex digits (encrypted).

For SHA-1 authentication, the key must be 40 hex digits (non-encrypted) or 80 hex digits (encrypted).

Defaults
Not configured.

Command Modes
INTERFACE

Command History
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
Before you enable IPsec authentication on an OSPFv3 interface, first enable IPv6 unicast routing globally, configure an IPv6 address and enable OSPFv3 on the interface, and assign the interface to an area.

An SPI value must be unique to one IPsec security policy (authentication or encryption) on the router. Configure the same authentication policy (same SPI and key) on each OSPFv3 interface in a link.

ipv6 ospf bfd all-neighbors
Establish BFD sessions with all OSPFv3 neighbors on a single interface or use non-default BFD session parameters.

Syntax
ipv6 ospf bfd all-neighbors [disable | [interval interval min_rx min_rx multiplier value role {active | passive}]]

To disable all BFD sessions on an OSPFv3 interface implicitly, use the no ipv6 ospf bfd all-neighbors disable command.

Parameters
disable 
(Optional) Enter the keyword disable to disable BFD on this interface.

interval milliseconds
(Optional) Enter the keyword interval to specify non-default BFD session parameters beginning with the transmission interval. The range is from 50 to 1000. The default is 100.

min_rx milliseconds
Enter the keywords min_rx to specify the minimum rate at which the local system would like to receive control packets from the remote system. The range is from 50 to 100. The default is 100.

multiplier value
Enter the keyword multiplier to specify the number of packets that must be missed in order to declare a session down. The range is from 3 to 50. The default is 3.

role {active | passive}
Specify the role that the local system assumes:
- active - Active system initiates the BFD session. Both systems can be active for the same session.
- passive - Passive system does not initiate a session. It only responds to a request for session initialization from the active system.

Usage Information
To disable all BFD sessions on an OSPFv3 interface implicitly, use the no ipv6 ospf bfd all-neighbors disable command.

ipv6 ospf bfd all-neighbors [disable | [interval interval min_rx min_rx multiplier value role {active | passive}]]
To disable all BFD sessions on an OSPFv3 interface implicitly, use the no ipv6 ospf bfd all-neighbors disable command.
role [active | passive]
Enter the role that the local system assumes:

- **active** — The active system initiates the BFD session. Both systems can be active for the same session.
- **passive** — The passive system does not initiate a session. It only responds to a request for session initialization from the active system.

The default is **Active**.

**Defaults**
See Parameters.

**Command Modes**
INTERFACE

**Command History**
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**
This command provides the flexibility to fine-tune the timer values based on individual interface needs when you configure the `ipv6 ospf bfd` command in CONFIGURATION mode. Any timer values specified with this command overrides timers set using the `bfd all-neighbors` command. Using the no form of this command does not disable BFD if you configured BFD in CONFIGURATION mode.

To disable BFD on a specific interface while BFD is configured in CONFIGURATION mode, use the keyword disable.

**ipv6 ospf cost**
Explicitly specify the cost of sending a packet on an interface.

**Syntax**

```
ipv6 ospf interface-cost
```

**Parameters**

- `interface-cost` Enter a unsigned integer value expressed as the link-state metric. The range is from 1 to 65535.

**Defaults**
Default cost based on the bandwidth.

**Command Modes**
INTERFACE

**Command History**
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**
In general, the path cost is calculated as:

\[10^8 / \text{bandwidth}\]
Using this formula, the default path cost is calculated as:

- GigabitEthernet—Default cost is 1
- TenGigabitEthernet—Default cost is 1
- FortygigEthernet — Default cost is 1
- Ethernet—Default cost is 10

**ipv6 ospf dead-interval**

Set the time interval since the last hello-packet was received from a router. After the time interval elapses, the neighboring routers declare the router down.

**Syntax**

```
ipv6 ospf dead-interval seconds
```

**Parameters**

- `seconds` Enter the time interval in seconds. The range is from 1 to 65535 seconds.

**Defaults**

40 seconds (Ethernet).

**Command Modes**

INTERFACE

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

By default, the dead interval is four times longer than the default `ipv6 ospf hello-interval` command.

**ipv6 ospf encryption**

Configure an IPsec encryption policy for OSPFv3 packets on an IPv6 interface.

**Syntax**

```
ipv6 ospf encryption {null | ipsec spi number esp encryption-algorithm [key-encryption-type] key authentication-algorithm [key-encryption-type] key}
```

To remove an IPsec encryption policy from an interface, use the `no ipv6 ospf encryption spi number` command.

To remove null authentication on an interface to allow the interface to inherit the authentication policy configured for the OSPFv3 area, use the `no ipv6 ospf encryption null` command.
Parameters

- **null**
  Causes an encryption policy configured for the area to not be inherited on the interface.

- **ipsec spi number**
  Security Policy index (SPI) value that identifies an IPsec security policy. The range is from 256 to 4294967295.

- **esp encryption-algorithm**
  Encryption algorithm used with ESP.
  Valid values are: 3DES, DES, AES-CBC, and NULL.
  For AES-CBC, only the AES-128 and AES-192 ciphers are supported.

- **key-encryption-type**
  (OPTIONAL) Specifies if the key is encrypted.
  Valid values: 0 (key is not encrypted) or 7 (key is encrypted).

- **key**
  Text string used in authentication.

  The required lengths of a non-encrypted or encrypted key are:
  - 3DES - 48 or 96 hex digits
  - DES - 16 or 32 hex digits
  - AES-CBC - 32 or 64 hex digits for AES-128 and 48 or 96 hex digits for AES-192

- **authentication-algorithm**
  Specifies the authentication algorithm to use for encryption.
  Valid values are MD5 or SHA1.

- **key-encryption-type**
  (OPTIONAL) Specifies if the authentication key is encrypted.
  Valid values: 0 (key is not encrypted) or 7 (key is encrypted).

- **key**
  Text string used in authentication.

  For MD5 authentication, the key must be 32 hex digits (non-encrypted) or 64 hex digits (encrypted).

  For SHA-1 authentication, the key must be 40 hex digits (non-encrypted) or 80 hex digits (encrypted).

**Defaults**
Not configured.

**Command Modes**
INTERFACE

**Command History**
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.
Before you enable IPsec encryption on an OSPFv3 interface, first enable IPv6 unicast routing globally, configure an IPv6 address and enable OSPFv3 on the interface, and assign the interface to an area.

An SPI value must be unique to one IPsec security policy (authentication or encryption) on the router. Configure the same encryption policy (same SPI and key) on each OSPFv3 interface in a link.

**ipv6 ospf graceful-restart helper-reject**

Configure an OSPFv3 interface to not act upon the Grace LSAs that it receives from a restarting OSPFv3 neighbor.

**Syntax**

`ipv6 ospf graceful-restart helper-reject`

To disable the helper-reject role, use the `no ipv6 ospf graceful-restart helper-reject` command.

**Defaults**

The helper-reject role is not configured.

**Command Modes**

`INTERFACE`

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

By default, OSPFv3 graceful restart is disabled and functions only in a helper role to help restarting neighbor routers in their graceful restarts when it receives a Grace LSA.

When configured in a helper-reject role, an OSPFv3 router ignores the Grace LSAs that it receives from a restarting OSPFv3 neighbor.

The graceful-restart role command is not supported in OSPFv3. When you enable the helper-reject role on an interface, you reconfigure an OSPFv3 router to function in a “restarting-only” role.

**ipv6 ospf hello-interval**

Specify the time interval between the hello packets sent on the interface.

**Syntax**

`ipv6 ospf hello-interval seconds`

**Parameters**

- `seconds` Enter the time interval in seconds as the time between hello packets. The range is from 1 to 65525 seconds.
Defaults

Command Modes

Command History

Usage Information

Defaults 10 seconds (Ethernet).

Command Modes INTERFACE

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

The time interval between hello packets must be the same for routers in a network.

ipv6 ospf priority

To determine the Designated Router for the OSPFv3 network, set the priority of the interface.

Syntax

ipv6 ospf priority number

To return to the default time interval, use the no ipv6 ospf priority command.

Parameters

number Enter the number as the priority. The range is from 1 to 255.

Defaults 1

Command Modes INTERFACE

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Setting a priority of 0 makes the router ineligible for election as a Designated Router or Backup Designated Router.

Use this command for interfaces connected to multi-access networks, not point-to-point networks.

ipv6 router ospf

Enable OSPF for IPv6 router configuration.

Syntax

ipv6 router ospf process-id

To exit OSPF for IPv6, use the no ipv6 router ospf process-id command.
Parameters

**process-id**

Enter the process identification number. The range is from 1 to 65535.

Defaults

none

Command Modes

CONFIGURATION

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

maximum-paths

Enable the software to forward packets over multiple paths.

Syntax

maximum-paths number

To disable packet forwarding over multiple paths, use the no maximum-paths command.

Parameters

**number**

Specify the number of paths. The range is from 1 to 64. The default is 8 paths.

Defaults

4

Command Modes

ROUTER OSPF for OSPFv3

Command History

Version 9.2(0.0) Added support for OSPFv3.

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

passive-interface

Disable (suppress) sending routing updates on an interface.

Syntax

passive-interface {default | interface}

To enable sending routing updates on an interface, use the no passive-interface interface command.

To return all OSPF interfaces (current and future) to active, use the no passive-interface default command.
### Parameters

<table>
<thead>
<tr>
<th>Default</th>
<th>Enter the keyword <code>default</code> to make all OSPF interfaces (current and future) passive.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Interface</td>
<td>Enter the following keywords and slot/port or number information:</td>
</tr>
<tr>
<td>• For a 40-Gigabit Ethernet interface, enter the keyword <code>fortyGigE</code> then the slot/port information.</td>
<td></td>
</tr>
<tr>
<td>• For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information.</td>
<td></td>
</tr>
<tr>
<td>• For a Port Channel interface, enter the keywords <code>port-channel</code> then a number. The range is from 1 to 128.</td>
<td></td>
</tr>
<tr>
<td>• For a VLAN, enter the keyword <code>vlan</code> then a number from 1 to 4094.</td>
<td></td>
</tr>
</tbody>
</table>

### Command Modes

- ROUTER OSPF for OSPFv2
- ROUTER OSPFv3 for OSPFv3

### Command History

- **Version 9.2(0.0)** Added support for OSPFv3.
- **Version 8.3.16.1** Introduced on the MXL 10/40GbE Switch IO Module.

### Usage Information

By default, no interfaces are passive. Routing updates are sent to all interfaces on which the routing protocol is enabled.

If you disable the sending of routing updates on an interface, the particular address prefix continues to be advertised to other interfaces, and updates from other routers on that interface continue to be received and processed.

OSPFv3 for IPv6 routing information is not sent or received through the specified router interface. The specified interface address appears as a stub network in the OSPFv3 for IPv6 domain.

### redistribute

Redistribute information from another routing protocol into OSPFv3 throughout the OSPF process.

#### Syntax

```
redistribute {bgp as number} {connected | static} [metric metric-value] [metric-type type-value] [route-map map-name] [tag tag-value]
```

To disable redistribution, use the `no redistribute {connected | static}` command.
Parameters

**bgp as number**
Enter the keyword bgp then the autonomous system number.

The range is from 1 to 65535.

**connected**
Enter the keyword connected to redistribute routes from physically connected interfaces.

**static**
Enter the keyword static to redistribute manually configured routes.

**metric metric-value**
Enter the keyword metric then the metric value.

The range is from 0 to 16777214.

The default is **20**.

**metric-type type-value**
(Optional) Enter the keywords metric-type then the OSPFv3 link state type of 1 or 2 for default routes. The values are:

- 1 for a type 1 external route
- 2 for a type 2 external route

The default is **2**.

**route-map map-name**
(Optional) Enter the keywords route-map then the name of an established route map. If the route map is not configured, the default is **deny** (to drop all routes).

**tag tag-value**
(Optional) Enter the keyword tag to set the tag for routes redistributed into OSPFv3.

The range is from 0 to 4294967295

The default is **0**.

**Defaults**
Not configured.

**Command Modes**
ROUTER OSPF for OSPFv2

ROUTER OSPFv3 for OSPFv3

**Command History**
Version 9.2(0.0) Added support for OSPFv3.

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.
Usage Information
To redistribute the default route (x:x:x:x::x), use the default-information originate command.

Related Commands
default-information originate — generates a default route into the OSPF routing domain.

router-id
Designate a fixed router ID.

Syntax
router-id ip-address

To return to the previous router ID, use the no router-id ip-address command.

Parameters
ip-address
Enter the router ID in the dotted decimal format.

Defaults
The router ID is selected automatically from the set of IPv4 addresses configured on a router.

Command Modes
ROUTER OSPFv3 for OSPFv3

Command History
Version 9.2(0.0) Added support for OSPFv3.
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
You can configure an arbitrary value in the IP address for each router. However, each router ID must be unique.

If this command is used on an OSPFv3 process that is already active (has neighbors), all the neighbor adjacencies are brought down immediately and new sessions are initiated with the new router ID.

Example
Dell(conf)#router ospf 100
Dell(conf-router_ospf)#router-id 1.1.1.1
Changing router-id will bring down existing OSPF adjacency [y/n]:

Dell(conf-router_ospf)#show config
! router ospf 100
router-id 1.1.1.1
Dell(conf-router_ospf)#no router-id
Changing router-id will bring down existing OSPF adjacency [y/n]:
Dell#
**show crypto ipsec policy**

Display the configuration of IPsec authentication and encryption policies.

**Syntax**

```
show crypto ipsec policy [name name]
```

**Parameters**

- **name name**  
  (OPTIONAL) Displays configuration details about a specified policy.

**Defaults**

none

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

Version 9.2(0.0)  
Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

The `show crypto ipsec policy` command output displays the AH and ESP parameters configured in IPsec security policies, including the SPI number, keys, and algorithms used.

When configured in a helper-reject role, an OSPFv3 router ignores the Grace LSAs that it receives from a restarting OSPFv3 neighbor.

**show crypto ipsec sa ipv6**

Display the IPsec security associations (SAs) used on OSPFv3 interfaces.

**Syntax**

```
show crypto ipsec sa ipv6 [interface interface]
```

**Parameters**

- **interface interface**  
  (OPTIONAL) Displays information about the SAs used on a specified OSPFv3 interface, where `interface` is one of the following values:

  - For a 1-Gigabit Ethernet interface, enter `GigabitEthernet` then the slot/part number.
  - For a Port Channel interface, enter `port-channel` then the port channel number.
  - For a 10-Gigabit Ethernet interface, enter `TenGigabitEthernet` then the slot/port number.
  - For a 40-Gigabit Ethernet interface, enter `fortyGigE` then the slot/port number.
  - For a VLAN interface, enter `vlan` `vlan-id` The valid VLAN IDs range is from 1 to 4094.
show ipv6 ospf database

Display information in the OSPFv3 database, including link-state advertisements (LSAs).

Syntax:

show ipv6 ospf database [database-summary | grace-lsa]

Parameters:

- database-summary: (OPTIONAL) Enter the keywords database-summary to view a summary of database LSA information.
- grace-lsa: (OPTIONAL): Enter the keywords grace-lsa to display the Type-11 Grace LSAs sent and received on an OSPFv3 router.

Defaults:

none

Command Modes:

EXEC
EXEC Privilege

Command History:

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information:

The `show crypto ipsec sa ipv6` command output displays security associations set up for OSPFv3 links in IPsec authentication and encryption policies on the router.
show ipv6 ospf interface

View OSPFv3 interface information.

Syntax
show ipv6 ospf [interface]

Parameters
interface
(Optional) Enter one of the following keywords and slot/ port or number information:
- For a 1-Gigabit Ethernet interface, enter the keyword GigabitEthernet and the slot/port information.
- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet and the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE and the slot/port information.
- For a Port Channel interface, enter the keywords port- channel and a number. The range is from 1 to 128.
- For a Tunnel interface, enter the keywords tunnel and a number. The range is from 1 to 16383.
- For a VLAN, enter the keyword vlan and a number from 1 to 4094.

Defaults
none

Command Modes
EXEC

Command History
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
If you enable BFD at the global level, show ipv6 ospf interface shows the BFD provisioning.

If you enable BFD at the interface level, show ipv6 ospf interface shows the BFD interval timers.

Example
Dell#show ipv6 ospf interface gigabitethernet 1/0

GigabitEthernet 1/0 is up, line protocol is up
Link Local Address fe80::201:e8ff:fe17:5bbd, Interface ID 67420217
Area 0, Process ID 1, Instance ID 0, Router ID 11.1.1.1
NetworkType BROADCAST, Cost: 1, Passive: No
Transmit Delay is 100 sec, State DR, Priority 1
Interface is using OSPF global mode BFD configuration.
Designated router on this network is 11.1.1.1 (local)
No backup designated router on this network
Timer intervals configured, Hello 10, Dead 40, Wait 1, Retransmit 5

Dell#
show ipv6 ospf neighbor

Display the OSPF neighbor information on a per-interface basis.

Syntax

show ipv6 ospf neighbor [interface]

Parameters

interface (OPTIONAL) Enter the following keywords and slot/port or number information:

- For a 1-Gigabit Ethernet interface, enter the keyword GigabitEthernet then the slot/port information.
- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
- For a Port Channel interface, enter the keywords port-channel then a number. The range is 1 to 128.
- For a VLAN, enter the keyword vlan then the VLAN ID. The range is 1 to 4094.

Defaults

none

Command Modes

EXEC

EXEC Privilege

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.
Port Monitoring

The port monitoring feature allows you to monitor network traffic by forwarding a copy of each incoming or outgoing packet from one port to another port.

Important Points to Remember

- Port monitoring is supported on physical ports only. Logical interfaces, such as Port Channels and virtual local area networks (VLANs), are not supported.
- The Dell Networking operating software supports as many monitor sessions on a system as the number of port-pipes.
- The monitoring (destination, “MG”) and monitored (source, “MD”) ports must be on the same switch.
- A monitoring port can monitor any physical port in the chassis.
- Only one MG and one MD may be in a single port-pipe.
- A monitoring port can monitor more than one port.
- More than one monitored port can have the same destination monitoring port.
- The Dell Networking OS supports multiple source ports to be monitored by a single destination port in one monitor session.
- One monitor session can have only one MG port.

NOTE: The monitoring port should not be a part of any other configuration.

description

Enter a description of this monitoring session.

Syntax

description {description}
To remove the description, use the no description {description} command.

Parameters

description Enter a description regarding this session (80 characters maximum).

Defaults

none

Command Modes

MONITOR SESSION (conf-mon-sess-session-ID)
**monitor session**

Create a session for monitoring traffic with port monitoring.

**Syntax**

```
monitor session session-ID
```

To delete a session, use the `no monitor session session-ID` command.

To delete all monitor sessions, use the `no monitor session all` command.

**Parameters**

- **session-ID**: Enter a session identification number. The range is from 0 to 65535.

**Defaults**

- none

**Command Modes**

- CONFIGURATION

**Command History**

- **Version 8.3.16.1**: Introduced on the M I/O Aggregator.

**Usage Information**

The `monitor` command is saved in the running configuration at Monitor Session mode level and can be restored after a chassis reload.

**Example**

```
Dell(conf)# monitor session 60
Dell(conf-mon-sess-60)
```

**Related Command**

- `show monitor session` — displays the monitor session.
- `show running-config monitor session` — displays the running configuration of a monitor session.

---

**show config**

Display the current monitor session configuration.

**Syntax**

```
show config
```

**Defaults**

- none
**Command Modes**

MONITOR SESSION (conf-mon-sess-session-ID)

**Command History**

*Version 8.3.16.1*  Introduced on the M I/O Aggregator.

**Example**

Dell (conf-mon-sess-11)#show config
!
monitor session 11
   source GigabitEthernet 10/0 destination GigabitEthernet 10/47 direction rx
Dell#

### show monitor session

Display the monitor information of a particular session or all sessions.

**Syntax**

```
show monitor session {session-ID}
```

To display monitoring information for all sessions, use the `show monitor session` command.

**Parameters**

*session-ID* *(OPTIONAL)* Enter a session identification number. The range is from 0 to 65535.

**Defaults**

none

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

*Version 8.3.16.1*  Introduced on the M I/O Aggregator.

**Example**

```
Dell#show monitor session 11
SessionID  Source   Destination   Direction Mode
---------  ------   ------------- --------- -------
11         Gi 10/0  Gi 10/47      rx        interface
```

**Related Commands**

- `monitor session` — creates a session for monitoring.

### show running-config monitor session

Display the running configuration of all monitor sessions or a specific session.

**Syntax**

```
show running-config monitor session {session-ID}
```

---

879
To display the running configuration for all monitor sessions, use the show running-config monitor session command.

**Parameters**

- **session-ID** (OPTIONAL) Enter a session identification number. The range from 0 to 65535.

**Defaults**

- none

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

- **Version 8.3.16.1** Introduced on the M I/O Aggregator.

**Usage Information**

The `monitor` command is saved in the running configuration at the Monitor Session mode level and can be restored after a chassis reload.

**Example**

```
Dell#show running-config monitor session
!
monitor session 8
  source GigabitEthernet 10/46 destination GigabitEthernet 10/1 direction rx
!
monitor session 11
  source GigabitEthernet 10/0 destination GigabitEthernet 10/47 direction rx
Dell#show running-config monitor session 11
!
monitor session 11
  source GigabitEthernet 10/0 destination GigabitEthernet 10/47 direction rx
```

**Related Commands**

- `monitor session` — creates a session for monitoring.
- `show monitor session` — displays a monitor session.

---

**source (port monitoring)**

Configure a port monitor source.

**Syntax**

```
source interface destination interface direction {rx | tx | both}
```

To disable a monitor source, use the **no source interface destination interface direction {rx | tx | both} command.**

**Parameters**

- **interface**
  
Enter the one of the following keywords and slot/port information:
For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.

For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.

**destination**

Enter the keyword destination to indicate the interface destination.

**direction (rx | tx | both)**

Enter the keyword direction then one of the packet directional indicators.

- **rx**: to monitor receiving packets only.
- **tx**: to monitor transmitting packets only.
- **both**: to monitor both transmitting and receiving packets.

**Defaults**

none

**Command Modes**

MONITOR SESSION (conf-mon-sess-session-ID)

**Command History**

Version 8.3.16.1 Introduced on the M I/O Aggregator.

**Example**

```
Dell(conf-mon-sess-11)#source gi 10/0 destination gi 10/47 direction rx
Dell(conf-mon-sess-11)#
```
PIM-Sparse Mode (PIM-SM)

The protocol-independent multicast (PIM) commands are supported by the Dell Networking operating software.

This chapter contains the following sections:

- IPv4 PIM-Sparse Mode Commands
- IPv6 PIM-Sparse Mode Commands

IPv4 PIM-Sparse Mode Commands

The following describes the IPv4 PIM-sparse mode (PIM-SM) commands.

**clear ip pim rp-mapping**

The bootstrap router (BSR) feature uses this command to remove all or particular rendezvous point (RP) advertisement.

**Syntax**

```
clear ip pim rp-mapping [rp-address]
```

**Parameters**

- `rp-address`  (OPTIONAL) Enter the RP address in dotted decimal format (A.B.C.D).

**Command Modes**

EXEC Privilege

**Command History**

Version 9.2(0.0)  Introduced on the MXL 10/40GbE Switch IO Module.

**clear ip pim tib**

Clear PIM tree information from the PIM database.

**Syntax**

```
clear ip pim tib [group]
```

**Parameters**

- `group`  (OPTIONAL) Enter the multicast group address in dotted decimal format (A.B.C.D).
debug ip pim

View IP PIM debugging messages.

debug ip pim [bsr | events | group | packet [in | out] | register | state | timer [assert | hello | joinprune | register]]

To disable PIM debugging, use the no debug ip pim command or use the undebug all to disable all the debugging commands.

Parameters

bsr (OPTIONAL) Enter the keyword bsr to view PIM Candidate RP/BSR activities.

events (OPTIONAL) Enter the keyword events to view PIM messages with events.

group (OPTIONAL) Enter the keyword group to view PIM messages for a specific group.

packet [in | out] (OPTIONAL) Enter the keyword packet to view PIM packets. Enter one of the optional parameters:

• in: to view incoming packets
• out: to view outgoing packets

register (OPTIONAL) Enter the keyword register to view PIM register address in dotted decimal format (A.B.C.D).

state (OPTIONAL) Enter the keyword state to view PIM state changes.
timer [assert | hello | joinprune | register]  

(Optional) Enter the keyword timer to view PIM timers. Enter one of the optional parameters:

- assert: to view the assertion timer
- hello: to view the PIM neighbor keepalive timer
- joinprune: to view the expiry timer (join/prune timer)
- register: to view the register suppression timer

Defaults

Disabled.

Command Modes

EXEC Privilege

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

ip pim bsr-border

Define the border of PIM domain by filtering inbound and outbound PIM-BSR messages per interface.

Syntax

ip pim bsr-border

To return to the default value, use the no ip pim bsr-border command.

Defaults

Disabled.

Command Modes

INTERFACE

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

This command is applied to the subsequent PIM-BSR. Existing BSR advertisements are cleaned up by time-out. To clean the candidate RP advertisements, use the clear ip pim rp-mapping command.

ip pim bsr-candidate

To join the Bootstrap election process, configure the PIM router.

Syntax

ip pim bsr-candidate interface [hash-mask-length] [priority]

To return to the default value, use the no ip pim bsr-candidate command.

Parameters

- interface: Enter the following keywords and slot/port or number information:
For a Loopback interface, enter the keyword `loopback` then a number from 0 to 16383.

- For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a VLAN, enter the keyword `vlan` then a number from 1 to 4094.

`hash-mask-length` (OPTIONAL) Enter the hash mask length. The range is from zero (0) to 32. The default is 30.

`priority` (OPTIONAL) Enter the priority used in Bootstrap election process. The range is from zero (0) to 255. The default is zero (0).

**Defaults**
Not configured.

**Command Modes**
- CONFIGURATION

**Command History**
- Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

### ip pim dr-priority

Change the designated router (DR) priority for the interface.

**Syntax**
```text
ip pim dr-priority priority-value
```
To remove the DR priority value assigned, use the `no ip pim dr-priority` command.

**Parameters**
- `priority-value` Enter a number. Preference is given to larger/higher number. The range is from 0 to 4294967294. The default is 1.

**Defaults**
1

**Command Modes**
- INTERFACE

**Command History**
- Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**
The router with the largest value assigned to an interface becomes the designated router. If two interfaces contain the same designated router priority value, the interface with the largest interface IP address becomes the designated router.
**ip pim join-filter**

Permit or deny PIM Join/Prune messages on an interface using an extended IP access list. This command prevents the PIM-SM router from creating state based on multicast source and/or group.

**Syntax**

```
ip pim join-filter ext-access-list (in | out)
```

To remove the access list, use the `no ip pim join-filter ext-access-list (in | out)` command.

**Parameters**

- `ext-access-list` Enter the name of an extended access list.
- `in` Enter this keyword to apply the access list to inbound traffic.
- `out` Enter this keyword to apply the access list to outbound traffic.

**Defaults**

none

**Command Modes**

INTERFACE

**Command History**

*Version 9.2(0.0)* Introduced on the MXL 10/40GbE Switch IO Module.

**Example**

```
Dell(conf)# ip access-list extended iptv-channels
Dell(config-ext-nacl)# permit ip 10.1.2.3/24 225.1.1.0/24
Dell(config-ext-nacl)# permit ip any 232.1.1.0/24
Dell(config-ext-nacl)# permit ip 100.1.1.0/16 any
Dell(config-if-gi-1/1)# ip pim join-filter iptv-channels in
Dell(config-if-gi-1/1)# ip pim join-filter iptv-channels out
```

**Related Commands**

- `ip access-list extended` — configure an access list based on IP addresses or protocols.

**ip pim ingress-interface-map**

When the Dell Networking system is the RP, statically map potential incoming interfaces to (*,G) entries to create a lossless multicast forwarding environment.

**Syntax**

```
ip pim ingress-interface-map std-access-list
```

**Parameters**

- `std-access-list` Enter the name of a standard access list.

**Defaults**

none

**Command Modes**

INTERFACE

**Command History**

*Version 9.2(0.0)* Introduced on the MXL 10/40GbE Switch IO Module.
Example

Dell(conf)# ip access-list standard map1
Dell(config-std-nacl)# permit 224.0.0.1/24
Dell(config-std-nacl)#exit
Dell(conf)#int gig 1/1
Dell(config-if-gi-1/1)# ip pim ingress-interface-map map1

**ip pim neighbor-filter**

To prevent a router from participating in protocol independent multicast (PIM), configure this feature.

**Syntax**

```
ip pim neighbor-filter {access-list}
```

To remove the restriction, use the `no ip pim neighbor-filter {access-list}` command.

**Parameters**

- `access-list` Enter the name of a standard access list. Maximum 16 characters.

**Defaults**

None

**Command Modes**

CONFIGURATION

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

Do not enter this command before creating the access-list.

**ip pim query-interval**

Change the frequency of PIM Router-Query messages.

**Syntax**

```
ip pim query-interval seconds
```

To return to the default value, use the `no ip pim query-interval seconds` command.

**Parameters**

- `seconds` Enter a number as the number of seconds between router query messages. The range is from 0 to 65535. The default is 30 seconds.

**Defaults**

30 seconds

**Command Modes**

INTERFACE
ip pim register-filter

To prevent a PIM source DR from sending register packets to an RP for the specified multicast source and group, use this feature.

Syntax

```
ip pim register-filter access-list
```

To return to the default, use the `no ip pim register-filter access-list` command.

Parameters

- `access-list` : Enter the name of an extended access list. Maximum 16 characters.

Defaults

- Not configured.

Command Modes

- CONFIGURATION

Command History

- Version 9.2(0.0) : Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The access name is an extended IP access list that denies PIM register packets to RP at the source DR based on the multicast and group addresses. Do not enter this command before creating the access-list.

ip pim rp-address

Configure a static PIM rendezvous point (RP) address for a group or access-list.

Syntax

```
ip pim rp-address address {group-address group-address mask} override
```

To remove an RP address, use the `no ip pim rp-address address {group-address group-address mask} override` command.

Parameters

- `address` : Enter the RP address in dotted decimal format (A.B.C.D).
- `group-address` : Enter the keywords `group-address` then a group-address mask, in dotted decimal format (/xx), to assign that group address to the RP.
- `override` : Enter the keyword `override` to override the BSR updates with static RP. The override takes effect immediately during enable/disable.

Defaults

- Not configured.

Command Modes

- CONFIGURATION
ip pim rp-candidate

To send out a Candidate-RP-Advertisement message to the bootstrap (BS) router or define group prefixes that are defined with the RP address to PIM BSR, configure a PIM router.

Syntax

    ip pim rp-candidate {interface [priority]}

To return to the default value, use the no ip pim rp-candidate {interface [priority]} command.

Parameters

    interface
        Enter the following keywords and slot/port or number information:
        - For a Gigabit Ethernet interface, enter the keyword GigabitEthernet then the slot/port information.
        - For a Loopback interface, enter the keyword loopback then a number from 0 to 16383.
        - For a Port Channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.
        - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
        - For a VLAN, enter the keyword vlan then a number from 1 to 4094.

    priority
        (OPTIONAL) Enter the priority used in Bootstrap election process. The range is zero (0) to 255. The default is 192.

Defaults

    Not configured.

Command Modes

    CONFIGURATION

Command History

    Version 9.2(0.0)  Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

    First-hop routers use this address by to send register packets on behalf of source multicast hosts. The RP addresses are stored in the order in which they are entered.
    RP addresses learned using BSR take priority over static RP addresses. Without the override option, RPs advertised by the BSR updates take precedence over the statically configured RPs.
**ip pim sparse-mode**

Enable PIM sparse mode and IGMP on the interface.

**Syntax**

```
ip pim sparse-mode
```

To disable PIM sparse mode and IGMP, use the `no ip pim sparse-mode` command.

**Defaults**

Disabled.

**Command Modes**

INTERFACE

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

The interface must be enabled (the `no shutdown` command) and not have the `switchport` command configured. Multicast must also be enabled globally (using the `ip multicast-lag-hashing` command). PIM is supported on the port-channel interface.

**ip pim sparse-mode sg-expiry-timer**

Enable expiry timers globally for all sources, or for a specific set of (S,G) pairs an access list defines.

**Syntax**

```
ip pim sparse-mode sg-expiry-timer seconds [access-list name]
```

To disable configured timers and return to default mode, use the `no ip pim sparse-mode sg-expiry-timer` command.

**Parameters**

- `seconds`
  - Enter the number of seconds the S, G entries are retained. The range is from 211 to 86400.

- `access-list name`
  - (OPTIONAL) Enter the name of a previously configured Extended ACL to enable the expiry time to specified S,G entries.

**Defaults**

Disabled. The default expiry timer (with no times configured) is 210 sec.
**ip pim spt-threshold**

To switch to the shortest path tree when the traffic reaches the specified threshold value, configure the PIM router.

**Syntax**

```
ip pim spt-threshold value | infinity
```

To return to the default value, use the `no ip pim spt-threshold` command.

**Parameters**

- `value` *(OPTIONAL)* Enter the traffic value in kilobits per second. The default is 10 packets per second. A value of zero (0) causes a switchover on the first packet.
- `infinity` *(OPTIONAL)* Enter the keyword `infinity` to never switch to the source-tree.

**Defaults**

Not configured.

**Command Modes**

CONFIGURATION

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

This command is applicable to last hop routers on the shared tree towards the rendezvous point (RP).

---

**no ip pim snooping dr-flood**

Disable the flooding of multicast packets to the PIM designated router.

**Syntax**

```
no ip pim snooping dr-flood
```

To re-enable the flooding of multicast packets to the PIM designated router, use the `ip pim snooping dr-flood` command.

**Defaults**

Enabled.
By default, when you enable PIM-SM snooping, a switch floods all multicast traffic to the PIM designated router (DR), including unnecessary multicast packets. To minimize the traffic sent over the network to the designated router, you can disable designated-router flooding.

When designated-router flooding is disabled, PIM-SM snooping only forwards the multicast traffic, which belongs to a multicast group for which the switch receives a join request, on the port connected towards the designated router.

If the PIM DR flood is not disabled (default setting):

- Multicast traffic is transmitted on the egress port towards the PIM DR if the port is not the incoming interface.
- Multicast traffic for an unknown group is sent on the port towards the PIM DR. When DR flooding is disabled, multicast traffic for an unknown group is dropped.

**Related Commands**

- `ip pim sparse-mode` — enables PIM-SM snooping.

### show ip pim bsr-router

View information on the Bootstrap router.

**Syntax**

```plaintext
show ip pim bsr-router
```

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

- `Version 9.2(0.0)` Introduced on the MXL 10/40GbE Switch IO Module.

**Example**

```plaintext
E600-7-rpm0#show ip pim bsr-router
PIMv2 Bootstrap information
 This system is the Bootstrap Router (v2)
 BSR address: 7.7.7.7 (?)
 Uptime: 16:59:06, BSR Priority: 0, Hash mask length: 30
 Next bootstrap message in 00:00:08

 This system is a candidate BSR
  Candidate BSR address: 7.7.7.7, priority: 0, hash mask length: 30
```
show ip pim interface

View information on the interfaces with IP PIM enabled.

Syntax

show ip pim interface

Command Modes

- EXEC
- EXEC Privilege

Command History

Version 9.2(0.0)  Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The following describes the show ip pim interface command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Address</td>
<td>Lists the IP addresses of the interfaces participating in PIM.</td>
</tr>
<tr>
<td>Interface</td>
<td>List the interface type, with either slot/port information or ID (VLAN or Port Channel), of the interfaces participating in PIM.</td>
</tr>
<tr>
<td>Ver/Mode</td>
<td>Displays the PIM version number and mode for each interface participating in PIM:</td>
</tr>
<tr>
<td>Nbr Count</td>
<td>Displays the number of PIM neighbors discovered over this interface.</td>
</tr>
<tr>
<td>Query Intvl</td>
<td>Displays the query interval for Router Query messages on that interface (configured with ip pim query-interval command).</td>
</tr>
<tr>
<td>DR Prio</td>
<td>Displays the Designated Router priority value configured on the interface (use the ip pim dr-priority command).</td>
</tr>
<tr>
<td>DR</td>
<td>Displays the IP address of the Designated Router for that interface.</td>
</tr>
</tbody>
</table>

Example

```
E600-7-RPM0#show ip pim interface
Address     Interface Ver Nbr       Query DR     DR
            Mode Count Intvl Prio
172.21.200.254 Gi 7/9  v2/ 0 30 1  172.21.200.254
172.60.1.2   Gi 7/11 v2/S  0 30 1  172.60.1.2
192.3.1.1    Gi 7/16 v2/S  1 30 1  192.3.1.1
192.4.1.1    Gi 13/5 v2/S  0 30 1  192.4.1.1
172.21.110.1 Gi 13/6 v2/S  0 30 1  172.21.110.1
172.21.203.1 Gi 13/7 v2/S  0 30 1  172.21.203.1
```
show ip pim neighbor

View PIM neighbors.

**Syntax**

```
show ip pim neighbor
```

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

The following describes the `show ip pim neighbor` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Neighbor address</td>
<td>Displays the IP address of the PIM neighbor.</td>
</tr>
<tr>
<td>Interface</td>
<td>List the interface type, with either slot/port information or ID (VLAN or Port Channel), on which the PIM neighbor was found.</td>
</tr>
<tr>
<td>Uptime/expires</td>
<td>Displays the amount of time the neighbor has been up then the amount of time until the neighbor is removed from the multicast routing table (that is, until the neighbor hold time expires).</td>
</tr>
<tr>
<td>Ver</td>
<td>Displays the PIM version number.</td>
</tr>
<tr>
<td></td>
<td>• v2 = PIM version 2</td>
</tr>
<tr>
<td>DR prio/Mode</td>
<td>Displays the Designated Router priority and the mode.</td>
</tr>
<tr>
<td></td>
<td>• 1 = default Designated Router priority (use the <code>ip pim dr-priority</code> command)</td>
</tr>
<tr>
<td></td>
<td>• DR = Designated Router</td>
</tr>
<tr>
<td></td>
<td>• S = Sparse mode</td>
</tr>
</tbody>
</table>

**Example**

```
Dell#show ip pim neighbor
Neighbor   Interface  Uptime/Expires    Ver   DR
Address                                      Prio/Mode
127.87.3.4 Gi 7/16   09:44:58/00:01:24  v2   1 / S
Dell#
```

show ip pim rp

View all multicast groups-to-RP mappings.

**Syntax**

```
show ip pim rp [mapping | group-address]
```
Parameters

- **mapping** (OPTIONAL) Enter the keyword mapping to display the multicast groups-to-RP mapping and information on how RP is learnt.
- **group-address** (OPTIONAL) Enter the multicast group address mask in dotted decimal format to view RP for a specific group.

Command Modes

- EXEC
- EXEC Privilege

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Example

```bash
Dell#sh ip pim rp
Group       RP
224.2.197.115   165.87.20.4
224.2.217.146   165.87.20.4
224.3.3.3       165.87.20.4
225.1.2.1       165.87.20.4
225.1.2.2       165.87.20.4
229.1.2.1       165.87.20.4
229.1.2.2       165.87.20.4
Dell#
```

Example (Mapping)

```bash
Dell#sh ip pim rp mapping
Group(s): 224.0.0.0/4
RP: 165.87.20.4, v2
  Info source: 165.87.20.5, via bootstrap, priority 0
  Uptime: 00:03:11, expires: 00:02:46
RP: 165.87.20.3, v2
  Info source: 165.87.20.5, via bootstrap, priority 0
  Uptime: 00:03:11, expires: 00:03:03
Dell#
```

Example (Address)

```bash
Dell#sh ip pim rp 229.1.2.1
Group       RP
229.1.2.1   165.87.20.4
Dell#
```

**show ip pim snooping interface**

Display information on VLAN interfaces with PIM-SM snooping enabled.

**Syntax**

```
show ip pim snooping interface [vlan vlan-id]
```

**Parameters**

- **vlan vlan-id** (OPTIONAL) Enter a VLAN ID to display information about a specified VLAN configured for PIM-SM snooping. The valid VLAN IDs range is from 1 to 4094.
**Command Modes**
- EXEC
- EXEC Privilege

**Command History**

Version 9.2(0.0)  Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

The following describes the **show ip pim snooping interface commands** shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Interface</td>
<td>Displays the VLAN interfaces with PIM-SM snooping enabled.</td>
</tr>
</tbody>
</table>
| Ver/Mode   | Displays the PIM version number for each VLAN interface with PIM-SM snooping enabled:
  - v2 = PIM version 2
  - S = PIM Sparse mode |
| Nbr Count  | Displays the number of neighbors learned through PIM-SM snooping on the interface. |
| DR Prio    | Displays the Designated Router priority value configured on the interface (ip pim dr-priority command). |
| DR         | Displays the IP address of the Designated Router for that interface. |

**Example ( #2)**

```
Dell#show ip pim snooping interface
Interface Ver Nbr Count DR Prio
Vlan 2 v2 3 1 165.87.32.2
```

**show ip pim snooping neighbor**

Display information on PIM neighbors learned through PIM-SM snooping.

**Syntax**

```
show ip pim snooping neighbor [vlan vlan-id]
```

**Parameters**

- **vlan vlan-id**  (OPTIONAL) Enter a VLAN ID to display information about PIM neighbors that PIM-SM snooping discovered on a specified VLAN. The valid VLAN IDs range is from 1 to 4094.

**Command Modes**
- EXEC
- EXEC Privilege
show ip pim snooping neighbor

Display information from the tree information base (TIB) PIM-SM snooping discovered about multicast group members and states.

**Syntax**

```
show ip pim snooping neighbor
```

**Parameters**

- `vlan vlan-id` (OPTIONAL) Enter a VLAN ID to display TIB information PIM-SM snooping discovered on a specified VLAN. The valid VLAN IDs range is from 1 to 4094.
**group-address** *(OPTIONAL)* Enter the group address in dotted decimal format (A.B.C.D) to display TIB information PIM-SM snooping discovered for a specified multicast group.

**source-address** *(OPTIONAL)* Enter the source address in dotted decimal format (A.B.C.D) to display TIB information PIM-SM snooping discovered for a specified multicast source.

### Command Modes
- EXEC
- EXEC Privilege

### Command History
**Version 9.2(0.0)** Introduced on the MXL 10/40GbE Switch IO Module.

### Usage Information
The following describes the `show ip pim snooping tib` commands shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>(S, G)</td>
<td>Displays the entry in the PIM multicast snooping database.</td>
</tr>
<tr>
<td>uptime</td>
<td>Displays the amount of time the entry has been in the PIM multicast route table.</td>
</tr>
<tr>
<td>expires</td>
<td>Displays the amount of time until the entry expires and is removed from the database.</td>
</tr>
<tr>
<td>RP</td>
<td>Displays the IP address of the RP/source for this entry.</td>
</tr>
<tr>
<td>flags</td>
<td>List the flags to define the entries:</td>
</tr>
<tr>
<td></td>
<td>• S = PIM Sparse Mode</td>
</tr>
<tr>
<td></td>
<td>• C = directly connected</td>
</tr>
<tr>
<td></td>
<td>• L = local to the multicast group</td>
</tr>
<tr>
<td></td>
<td>• P = route was pruned</td>
</tr>
<tr>
<td></td>
<td>• R = the forwarding entry is pointing toward the RP</td>
</tr>
<tr>
<td></td>
<td>• F = Dell Networking OS is registering this entry for a multicast source</td>
</tr>
<tr>
<td></td>
<td>• T = packets were received via Shortest Tree Path</td>
</tr>
<tr>
<td></td>
<td>• J = first packet from the last hop router is received and the entry is ready to switch to SPT</td>
</tr>
<tr>
<td></td>
<td>• K = acknowledge pending state</td>
</tr>
</tbody>
</table>

**Incoming interface** Displays the reverse path forwarding (RPF) interface towards the RP/source.

**RPF neighbor** Displays the next hop from this interface towards the RP/source.

**Outgoing interface list:** Lists the interfaces that meet one of the following criteria:

- a directly connect member of the Group
- statically configured member of the Group
Field | Description
--- | ---
• received a (*,G) Join message

Example

```
Dell#show ip pim snooping tib

PIM Multicast Snooping Table
Flags: J/P - (*,G) Join/Prune, j/p - (S,G) Join/Prune
SGR-P - (S,G,R) Prune
Timers: Uptime/Expires
* : Inherited port

(*, 225.1.2.1), uptime 00:00:01, expires 00:02:59, RP
165.87.70.1, flags: J
Incoming interface: Vlan 2, RPF neighbor 0.0.0.0
Outgoing interface list:
  GigabitEthernet 4/11 RPF 165.87.32.2 00:00:01/00:02:59
  GigabitEthernet 4/13 Upstream Port    -/-
```

```
Dell#show ip pim snooping tib vlan 2 225.1.2.1 165.87.1.7

PIM Multicast Snooping Table
Flags: J/P - (*,G) Join/Prune, j/p - (S,G) Join/Prune
SGR-P - (S,G,R) Prune
Timers: Uptime/Expires
* : Inherited port

(165.87.1.7, 225.1.2.1), uptime 00:00:08, expires 00:02:52,
flags: j
Incoming interface: Vlan 2, RPF neighbor 0.0.0.0
Outgoing interface list:
  GigabitEthernet 4/11 Upstream Port    -/-
  GigabitEthernet 4/13 DR Port          -/-
  GigabitEthernet 4/20 RPF 165.87.32.10 00:00:08/00:02:52
```

**show ip pim summary**

View information about PIM-SM operation.

**Syntax**

```
show ip pim summary
```

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

*Version 9.2(0.0)* Introduced on the MXL 10/40GbE Switch IO Module.

**Example**

```
Dell#show ip pim summary

PIM TIB version 495
Uptime 22:44:52
Entries in PIM-TIB/MFC : 2/2

Active Modes :
  PIM-SNOOPING
```
show ip pim tib

View the PIM tree information base (TIB).

Syntax

show ip pim tib [group-address [source-address]]

Parameters

- **group-address**: (OPTIONAL) Enter the group address in dotted decimal format (A.B.C.D).
- **source-address**: (OPTIONAL) Enter the source address in dotted decimal format (A.B.C.D).

Command Modes

- EXEC
- EXEC Privilege
### Command History

**Version 9.2(0.0)** Introduced on the MXL 10/40GbE Switch IO Module.

The following describes the `show ip pim tib` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>(S, G)</td>
<td>Displays the entry in the multicast PIM database.</td>
</tr>
<tr>
<td>uptime</td>
<td>Displays the amount of time the entry has been in the PIM route table.</td>

</table>

### Example

```
Dell#show ip pim tib
PIM Multicast Routing Table
Flags: D- Dense, S- Sparse, C- Connected, L- Local, P- Pruned,
       R- RP-bit set, F- Register flag, T- SPT-bit set, J- Join
       SPT,
       M- MSDP created entry, A- Candidate for MSDP
Advertised
       K- Ack-Pending State
Timers: Uptime/Expires
```
Interface state: Interface, next-Hop, State/Mode

(*, 226.1.1.1), uptime 01:29:19, expires 00:00:52, RP
10.211.2.1, flags: SCJ
  Incoming interface: GigabitEthernet 4/23, RPF neighbor
10.211.1.2
  Outgoing interface list:
    GigabitEthernet 8/0

(*, 226.1.1.2), uptime 00:18:08, expires 00:00:52, RP
10.211.2.1, flags: SCJ
  Incoming interface: GigabitEthernet 4/23, RPF neighbor
10.211.1.2
  Outgoing interface list:
    GigabitEthernet 8/0

(*, 226.1.1.3), uptime 00:18:08, expires 00:00:52, RP
10.211.2.1, flags: SCJ
  Incoming interface: GigabitEthernet 4/23, RPF neighbor
10.211.1.2
  Outgoing interface list:
    GigabitEthernet 8/0

(*, 226.1.1.4), uptime 00:18:08, expires 00:00:52, RP
10.211.2.1, flags: SCJ
  Incoming interface: GigabitEthernet 4/23, RPF neighbor
10.211.1.2
  Outgoing interface list:
    GigabitEthernet 8/0

**show running-config pim**

Display the current configuration of PIM-SM snooping.

**Syntax**

`show running-config pim`

**Command Modes**

EXEC Privilege

**Command History**

Version 9.2(0.0) 
Introduced on the MXL 10/40GbE Switch IO Module.

**Example**

```
Dell#show running-config pim
!
ip pim snooping enable
```

**Related Commands**

- `ip pim sparse-mode` — enables PIM-SM snooping.
IPv6 PIM-Sparse Mode Commands

The following describes the IPv6 PIM-sparse mode (PIM-SM) commands.

**ipv6 pim bsr-border**

Define the border of PIM domain by filtering inbound and outbound PIM-BSR messages per interface.

**Syntax**

```
ipv6 pim bsr-border
```

**Defaults**

Disabled.

**Command Modes**

INTERFACE

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

This command is applied to the subsequent PIM-BSR messages. Existing BSR advertisements are cleaned up by time-out.

**ipv6 pim bsr-candidate**

Configure the router as a bootstrap (BSR) candidate.

**Syntax**

```
ipv6 pim bsr-candidate interface [hash-mask-length] [priority]
```

To disable the bootstrap candidate, use the `no ipv6 pim bsr-candidate` command.

**Parameters**

- **interface**
  - Enter the following keywords and slot/port or number information:
    - For a Loopback interface, enter the keyword `loopback` then a number from 0 to 16383.
    - For a Port Channel interface, enter the keywords `port-channel` then a number.
    - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
    - For a VLAN, enter the keyword `vlan` then a number from 1 to 4094.

- **hash-mask-length** (OPTIONAL) Enter the hash mask length for RP selection. The range is from 0 to 128. The default is 126.

- **priority** (OPTIONAL) Enter the priority value for Bootstrap election process. The range is from 0 to 255. The default is 0.
ipv6 pim dr-priority

Change the designated router (DR) priority for the IPv6 interface.

Syntax
ipv6 pim dr-priority priority-value
To remove the DR priority value assigned, use the no ipv6 pim dr-priority command.

Parameters
priority-value Enter a number. Preference is given to larger/higher number. The range is from 0 to 4294967294. The default is 1.

Defaults 1

Command Modes INTERFACE

Command History
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
The router with the largest value assigned to an interface becomes the designated router. If two interfaces contain the same designated router priority value, the interface with the largest interface IP address becomes the designated router.

ipv6 pim join-filter

Permit or deny PIM Join/Prune messages on an interface using an access list. This command prevents the PIM-SM router from creating state based on multicast source and/or group.

Syntax
ipv6 pim join-filter access-list

Parameters
access-list Enter the name of an extended access list.
in Enter the keyword in to apply the access list to inbound traffic.
out Enter the keyword out to apply the access list to outbound traffic.
Defaults

Command
Modes

Command
History

Example

Dell(conf)#ipv6 access-list JOIN-FIL_ACL
Dell(conf-ipv6-acl)#permit ipv6 165:87:34::0/112 ff0e::
225:1:2:0/112
Dell(conf-ipv6-acl)#permit ipv6 any ff0e::230:1:2:0/112
Dell(conf-ipv6-acl)#permit ipv6 165:87:32::0/112 any
Dell(conf-ipv6-acl)#exit
Dell(conf)#interface gigabitethernet 0/84
Dell(conf-if-gi-0/84)#ipv6 pim join-filter JOIN-FIL_ACL in
Dell(conf-if-gi-0/84)#ipv6 pim join-filter JOIN-FIL_ACL out

ipv6 pim query-interval

Change the frequency of IPv6 PIM router-query messages.

Syntax

ipv6 pim query-interval seconds

To return to the default value, use the no ipv6 pim query-interval seconds command.

Parameters

seconds

Enter a number as the number of seconds between router query messages. The range is from 0 to 65535. The default is 30 seconds.

Defaults

30 seconds

Command
Modes

INTERFACE

Command
History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

ipv6 pim neighbor-filter

Prevent the system from forming a PIM adjacency with a neighboring system.

Syntax

ipv6 pim neighbor-filter {access-list}

Parameters

access-list Enter the name of a standard access list. Maximum 16 characters.
Defaults
none

Command Modes
CONFIGURATION

Command History
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
Do not enter this command before creating the access-list.

**ipv6 pim register-filter**

Configure the source DR so that it does not send register packets to the RP for the specified sources and groups.

**Syntax**
ipv6 pim register-filter access-list

**Parameters**
access-list Enter the name of the extended ACL that contains the sources and groups to filter.

**Defaults**
none

**Command Modes**
CONFIGURATION

**Command History**
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Example**
Dell(conf)#ipv6 pim register-filter REG-FIL_ACL
Dell(conf)#ipv6 access-list REG-FIL_ACL
Dell(conf-ipv6-acl)#deny ipv6 165:87:34::10/128 ff0e:: 225:1:2:0/112
Dell(conf-ipv6-acl)#permit ipv6 any any
Dell(conf-ipv6-acl)#exit

**ipv6 pim rp-address**

Configure a static PIM rendezvous point (RP) address for a group. First-hop routers use this address to send register packets on behalf of the source multicast host.

**Syntax**
ipv6 pim rp-address address group-address group-address mask override

**Example**
Dell(conf)#ipv6 pim rp-address address group-address group-address mask override

To remove an RP address, use the no ipv6 pim re-address address group-address group-address mask override command.
### Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>address</td>
<td>Enter the IPv6 RP address in the x:x:x:x format.</td>
</tr>
<tr>
<td></td>
<td><strong>NOTE:</strong> The :: notation specifies successive hexadecimal fields of zero.</td>
</tr>
<tr>
<td>group-address</td>
<td>Enter the keywords group-address then the group address in the x:x:x:x format and then the mask in /nn format to assign that group address to the RP.</td>
</tr>
<tr>
<td></td>
<td><strong>NOTE:</strong> The :: notation specifies successive hexadecimal fields of zero.</td>
</tr>
<tr>
<td>override</td>
<td>Enter the keyword override to override the BSR updates with static RP. The override takes effect immediately during enable/disable.</td>
</tr>
<tr>
<td></td>
<td><strong>NOTE:</strong> This option is applicable to multicast group range.</td>
</tr>
</tbody>
</table>

### Defaults

none

### Command Modes

CONFIGURATION

### Command History

**Version 9.2(0.0)**

Introduced on the MXL 10/40GbE Switch IO Module.

### Usage Information

The RP addresses are stored in the order in which they are entered. RP addresses learned via BSR take priority over static RP addresses.

Without the override option, the BSR-advertised RPs updates take precedence over the statically configured RPs.

---

**ipv6 pim rp-candidate**

Specify an interface as an RP candidate.

**Syntax**

```
ipv6 pim rp-candidate interface [priority-value]
```

**Parameters**

<table>
<thead>
<tr>
<th>parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>interface</td>
<td>Enter the following keywords and slot/port or number information:</td>
</tr>
<tr>
<td></td>
<td>• For a Loopback interface, enter the keyword loopback then a number from 0 to 16383.</td>
</tr>
<tr>
<td></td>
<td>• For a Port Channel interface, enter the keywords port-channel then a number.</td>
</tr>
<tr>
<td></td>
<td>• For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.</td>
</tr>
<tr>
<td></td>
<td>• For a VLAN, enter the keyword vlan then a number from 1 to 4094.</td>
</tr>
<tr>
<td><strong>priority-value</strong></td>
<td>(OPTIONAL) Enter a number as the priority of this RP Candidate, which is included in the Candidate-RP-Advertisements. The range is 0 (highest) to 255 (lowest).</td>
</tr>
<tr>
<td>-------------------</td>
<td>--------------------------------------------------------------------------------------------------</td>
</tr>
</tbody>
</table>

**Defaults**
none

**Command Modes**
CONFIGURATION

**Command History**
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

### ipv6 pim sparse-mode

Enable IPv6 PIM sparse mode on the interface.

**Syntax**
ipv6 pim sparse-mode

To disable IPv6 PIM sparse mode, use the no ipv6 pim sparse-mode command.

**Defaults**
Disabled.

**Command Modes**
INTERFACE

**Command History**
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**
Enable the interface (use the no shutdown command) and not have the switchport command configured. Also enable Multicast globally. PIM is supported on the port-channel interface.

### ipv6 pim spt-threshold

Specifies when a PIM leaf router should join the shortest path tree.

**Syntax**
ipv6 pim spt-threshold 

To return to the default value, use the no ipv6 pim spt-threshold command.

**Parameters**

- **kbps**
Enter a traffic rate in kilobytes per second. The range is from 0 to 4294967 kbps. The default is 10 kbps.

- **infinity**
Enter the keyword infinity to have all sources for the specified group use the shared tree and never join shortest path tree (SPT).
show ipv6 pim bsr-router

View information on the Bootstrap router (v2).

Syntax
show ipv6 pim bsr-router

Command Modes
• EXEC
• EXEC Privilege

Command History
Version 9.2(0.0)

Example
Dell#show ipv6 pim bsr-router
PIMv2 Bootstrap information
This system is the Bootstrap Router (v2)
BSR address: 14::2
Uptime: 00:02:54, BSR Priority: 0, Hash mask length: 126
Next bootstrap message in 00:00:06

This system is a candidate BSR
Candidate BSR address: 14::2, priority: 0, hash mask length: 126
Dell

show ipv6 pim interface

Display IPv6 PIM enabled interfaces.

Syntax
show ipv6 pim interface

Command Modes
• EXEC
• EXEC Privilege

Command History
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.
Example

Dell#show ipv6 pim interface
Interface Ver/ Nbr Query DR
Mode Count Intvl Prio
Gi 10/3 v2/S 1 30 1
Address : fe80::201:e8ff:fe02:140f
DR : this router
Gi 10/11 v2/S 0 30 1
Address : fe80::201:e8ff:fe02:1417
DR : this router
Dell#

show ipv6 pim neighbor

Displays IPv6 PIM neighbor information.

Syntax

show ipv6 pim neighbor [detail]

Parameters

detail (OPTIONAL) Enter the keyword detail to displayed PIM neighbor detailed information.

Command Modes

• EXEC
• EXEC Privilege

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Example

Dell#show ipv6 pim neighbor detail
Neighbor Interface Uptime/Expires Ver DR
Address Prio/Mode
fe80::201:e8ff:fe00:6265 Gi 10/3 00:07:39/00:01:42 v2 1 / S
165:87:50::6
Dell#

show ipv6 pim rp

View all multicast groups-to-RP mappings.

Syntax

show ipv6 pim rp [mapping | group-address]

Parameters

mapping (OPTIONAL) Enter the keyword mapping to display the multicast groups-to-RP mapping and information on how RP is learnt.

group-address (OPTIONAL) Enter the multicast group address mask in dotted decimal format to view RP for a specific group.
show ipv6 pim tib

View the IPv6 PIM multicast-routing database (tree information base — tib).

Syntax

show ipv6 pim tib [group-address [source-address]]

Parameters

- **group-address**: (OPTIONAL) Enter the multicast group address in the x:x:x:x format to view RP mappings for a specific group.
  - **NOTE**: The :: notation specifies successive hexadecimal fields of zero.

- **source-address**: (OPTIONAL) Enter the source address in the x:x:x:x format.
  - **NOTE**: The :: notation specifies successive hexadecimal fields of zero.

Command Modes

- EXEC
- EXEC Privilege

Command History

- **Version 9.2(0.0)**: Introduced on the MXL 10/40GbE Switch IO Module.

Example

Dell#show ipv6 pim tib
PIM Multicast Routing Table
Flags: D - Dense, S - Sparse, C - Connected, L - Local, P - Pruned,

Dell#
Private VLAN (PVLAN)

Private VLANs extend the Dell Networking OS security suite by providing Layer 2 isolation between ports within the same private VLAN. A private VLAN partitions a traditional VLAN into subdomains identified by a primary and secondary VLAN pair.

The Dell Networking OS private VLAN implementation is based on RFC 3069.

For more information, refer to the following commands. The command output is augmented in the Dell Networking OS version 7.8.1.0 at later to provide PVLAN data:

- show arp
- show vlan

Private VLAN Concepts

Primary VLAN:

The primary VLAN is the base VLAN and can have multiple secondary VLANs. There are two types of secondary VLAN — community VLAN and isolated VLAN:

- A primary VLAN can have any number of community VLANs and isolated VLANs.
- Private VLANs block all traffic to isolated ports except traffic from promiscuous ports. Traffic received from an isolated port is forwarded only to promiscuous ports or trunk ports.

Community VLAN:

A community VLAN is a secondary VLAN of the primary VLAN:

- Ports in a community VLAN can talk to each other. Also, all ports in a community VLAN can talk to all promiscuous ports in the primary VLAN and vice versa.
- Devices on a community VLAN can communicate with each other using member ports, while devices in an isolated VLAN cannot.

Isolated VLAN:

An isolated VLAN is a secondary VLAN of the primary VLAN:

- Ports in an isolated VLAN cannot talk to each other. Servers would be mostly connected to isolated VLAN ports.
- Isolated ports can talk to promiscuous ports in the primary VLAN, and vice versa.

Port Types:

- Community port: A community port is a port that belongs to a community VLAN and is allowed to communicate with other ports in the same community VLAN and with promiscuous ports.
• **Isolated port**: An isolated port is a port that, in Layer 2, can only communicate with promiscuous ports that are in the same PVLAN.

• **Promiscuous port**: A promiscuous port is a port that is allowed to communicate with any other port type.

• **Trunk port**: A trunk port carries VLAN traffic across switches:
  - A trunk port in a PVLAN is always tagged.
  - A trunk port in Tagged mode carries primary or secondary VLAN traffic. The tag on the packet helps identify the VLAN to which the packet belongs.
  - A trunk port can also belong to a regular VLAN (non-private VLAN).

### ip local-proxy-arp

Enable/disable Layer 3 communication between secondary VLANs in a private VLAN.

**Syntax**

```plaintext
[no] ip local-proxy-arp
```

To disable Layer 3 communication between secondary VLANs in a private VLAN, use the `no ip local-proxy-arp` command in INTERFACE VLAN mode for the primary VLAN.

To disable Layer 3 communication in a particular secondary VLAN, use the `no ip local-proxy-arp` command in INTERFACE VLAN mode for the selected secondary VLAN.

**NOTE**: Even after you disable `ip-local-proxy-arp` (use `no ip-local-proxy-arp`) in a secondary VLAN, Layer 3 communication may happen between some secondary VLAN hosts, until the address resolution protocol (ARP) timeout happens on those secondary VLAN hosts.

**Defaults**

Layer 3 communication is disabled between secondary VLANs in a private VLAN.

**Command Modes**

INTERFACE VLAN

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**

- `private-vlan mode` — sets the mode of the selected VLAN to community, isolated, or primary.
- `private-vlan mapping secondary-vlan` — maps secondary VLANs to the selected primary VLAN.
- `show arp` — displays the ARP table.
- `show interfaces private-vlan` — displays the type and status of the PVLAN interfaces.
- `show vlan private-vlan` — displays the PVLANs and/or interfaces that are part of a PVLAN.
**switchport mode private-vlan** — sets PVLAN mode of the selected port.

---

**private-vlan mapping secondary-vlan**

Map secondary VLANs to the selected primary VLAN.

**Syntax**

```
[no] private-vlan mapping secondary-vlan vlan-list
```

To remove specific secondary VLANs from the configuration, use the **no** command syntax.

**Parameters**

- **vlan-list**
  
  Enter the list of secondary VLANs to associate with the selected primary VLAN. The list can be in comma-delimited or hyphenated-range format, following the convention for the range input.

**Defaults**

none

**Command Modes**

INTERFACE VLAN

**Command History**

- **Version 8.3.16.1**
  
  Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

The list of secondary VLANs can be:

- Specified in comma-delimited or hyphenated-range format.
- Specified with this command even before they have been created.
- Amended by specifying the new secondary VLAN to be added to the list.

**Related Commands**

- **private-vlan mode** — sets the mode of the selected VLAN to community, isolated, or primary.
- **show interfaces private-vlan** — displays the type and status of the PVLAN interfaces.
- **show vlan private-vlan** — displays the PVLANs and/or interfaces that are part of a PVLAN.
- **show vlan private-vlan mapping** — displays the primary-secondary VLAN mapping.
- **switchport mode private-vlan** — sets PVLAN mode of the selected port.
private-vlan mode

Set PVLAN mode of the selected VLAN to community, isolated, or primary.

Syntax

[no] private-vlan mode {community | isolated | primary}

To remove the PVLAN configuration, use the no private-vlan mode {community | isolated | primary} command syntax.

Parameters

- **community**: Enter the keyword `community` to set the VLAN as a community VLAN.
- **isolated**: Enter the keyword `isolated` to configure the VLAN as an isolated VLAN.
- **primary**: Enter the keyword `primary` to configure the VLAN as a primary VLAN.

Defaults

none

Command Modes

INTERFACE VLAN

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The VLAN:

- can be in only one mode, either `community`, `isolated`, or `primary`.
- mode `community` or `isolated` even before associating it to a primary VLAN. This secondary VLAN continues to work normally as a normal VLAN even though it is not associated to a primary VLAN. (A syslog message indicates this.)
- must not have a port in it when VLAN mode is being set.

Only ports (and port channels) configured as promiscuous, host, or PVLAN trunk ports (as previously described) can be added to the PVLAN. No other regular ports can be added to the PVLAN.

After using this command to configure a VLAN as a primary VLAN, use the private-vlan mapping secondary-vlan command to map secondary VLANs to this VLAN.

Related Commands

- `private-vlan mapping secondary-vlan` — maps secondary VLANs to the selected primary VLAN.
- `show interfaces private-vlan` — displays the type and status of the PVLAN interfaces.
- `show vlan private-vlan` — displays the PVLANs and/or interfaces that are part of a PVLAN.
- `show vlan private-vlan mapping` — displays the primary-secondary VLAN mapping.
**switchport mode private-vlan** — sets PVLAN mode of the selected port.

**show interfaces private-vlan**

Display type and status of PVLAN interfaces.

**Syntax**

```
show interfaces private-vlan [interface interface]
```

**Parameters**

- `interface` (OPTIONAL) Enter the keyword `interface` then the ID of the specific interface for which to display PVLAN status.

**Defaults**

none

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

This command has two types of display — a list of all PVLAN interfaces or for a specific interface. Examples of both types of output are shown below.

The following describes the `show interfaces private-vlan` command shown in the following examples.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Interface</td>
<td>Displays the type of interface and associated slot and port number.</td>
</tr>
<tr>
<td>Vlan</td>
<td>Displays the VLAN ID of the designated interface.</td>
</tr>
<tr>
<td>PVLAN-Type</td>
<td>Displays the type of VLAN in which the designated interface resides.</td>
</tr>
<tr>
<td>Interface Type</td>
<td>Displays the PVLAN port type of the designated interface.</td>
</tr>
<tr>
<td>Status</td>
<td>States whether the interface is operationally up or down.</td>
</tr>
</tbody>
</table>

**Example (All)**

Dell# show interfaces private-vlan

```
Interface Vlan PVLAN-Type Interface Type Status
--------- ---- ---------- -------------- --------
Gi 2/1    10   Primary    Promiscuous  Up
Gi 2/2    100  Isolated   Host        Down
Gi 2/3    10   Primary    Trunk       Up
Gi 2/4    101  Community  Host        Up
```

**Example (Specific)**

Dell# show interfaces private-vlan Gi 2/2

```
Interface Vlan PVLAN-Type Interface Type Status
--------- ---- ---------- -------------- --------
Gi 2/2    100  Isolated   Host        Up
```
private-vlan mode — sets the mode of the selected VLAN to community, isolated, or primary.

show vlan private-vlan — displays the PVLANs and/or interfaces that are part of a PVLAN.

show vlan private-vlan mapping — displays the primary-secondary VLAN mapping.

switchport mode private-vlan — sets PVLAN mode of the selected port.

show vlan private-vlan

Display PVLANs and/or interfaces that are part of a PVLAN.

Syntax

```
show vlan private-vlan [community | interface | isolated | primary | primary_vlan | interface interface]
```

Parameters

- **community** (OPTIONAL) Enter the keyword community to display VLANs configured as community VLANs, along with their interfaces.
- **interface** (OPTIONAL) Enter the keyword interface to display VLANs configured as community VLANs, along with their interfaces.
- **isolated** (OPTIONAL) Enter the keyword isolated to display VLANs configured as isolated VLANs, along with their interfaces.
- **primary** (OPTIONAL) Enter the keyword primary to display VLANs configured as primary VLANs, along with their interfaces.
- **primary_vlan** (OPTIONAL) Enter a private VLAN ID or secondary VLAN ID to display interface details about the designated PVLAN.
- **interface interface** (OPTIONAL) Enter the keyword interface and an interface ID to display the PVLAN configuration of the designated interface.

Defaults

none

Command Modes

- EXEC
- EXEC Privilege

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

Examples of all types of command output are shown below. The first type of output is the result of not entering an optional keyword. It displays a detailed list of all PVLANs and their member VLANs and interfaces. The other types of output show details about PVLAN subsets.
The following describes the `show private-vlan` command shown in the Examples below.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Primary</strong></td>
<td>Displays the VLAN ID of the designated or associated primary VLAN(s).</td>
</tr>
<tr>
<td><strong>Secondary</strong></td>
<td>Displays the VLAN ID of the designated or associated secondary VLAN(s).</td>
</tr>
<tr>
<td><strong>Type</strong></td>
<td>Displays the type of VLAN in which the listed interfaces reside.</td>
</tr>
<tr>
<td><strong>Active</strong></td>
<td>States whether the interface is operationally up or down.</td>
</tr>
<tr>
<td><strong>Ports</strong></td>
<td>Displays the interface IDs in the listed VLAN.</td>
</tr>
</tbody>
</table>

**Example (All)**

Dell# show vlan private-vlan

<table>
<thead>
<tr>
<th>Primary</th>
<th>Secondary</th>
<th>Type</th>
<th>Active</th>
<th>Ports</th>
</tr>
</thead>
<tbody>
<tr>
<td>10</td>
<td>primary</td>
<td>Yes</td>
<td>Gi 2/1,3</td>
<td></td>
</tr>
<tr>
<td>100</td>
<td>isolated</td>
<td>Yes</td>
<td>Gi 2/2</td>
<td></td>
</tr>
<tr>
<td>101</td>
<td>community</td>
<td>Yes</td>
<td>Gi 2/10</td>
<td></td>
</tr>
<tr>
<td>20</td>
<td>primary</td>
<td>Yes</td>
<td>Po 10, 12-13</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>Gi 3/1</td>
<td></td>
</tr>
<tr>
<td>200</td>
<td>isolated</td>
<td>Yes</td>
<td>Gi 3/2,4-6</td>
<td></td>
</tr>
<tr>
<td>201</td>
<td>community</td>
<td>No</td>
<td></td>
<td></td>
</tr>
<tr>
<td>202</td>
<td>community</td>
<td>Yes</td>
<td>Gi 3/11-12</td>
<td></td>
</tr>
</tbody>
</table>

**Example (Primary)**

Dell# show vlan private-vlan primary

<table>
<thead>
<tr>
<th>Primary</th>
<th>Secondary</th>
<th>Type</th>
<th>Active</th>
<th>Ports</th>
</tr>
</thead>
<tbody>
<tr>
<td>10</td>
<td>primary</td>
<td>Yes</td>
<td>Gi 2/1,3</td>
<td></td>
</tr>
<tr>
<td>20</td>
<td>primary</td>
<td>Yes</td>
<td>Gi 3/1,3</td>
<td></td>
</tr>
</tbody>
</table>

**Example (Isolated)**

Dell# show vlan private-vlan isolated

<table>
<thead>
<tr>
<th>Primary</th>
<th>Secondary</th>
<th>Type</th>
<th>Active</th>
<th>Ports</th>
</tr>
</thead>
<tbody>
<tr>
<td>10</td>
<td>primary</td>
<td>Yes</td>
<td>Gi 2/1,3</td>
<td></td>
</tr>
<tr>
<td>100</td>
<td>isolated</td>
<td>Yes</td>
<td>Gi 2/2,4-6</td>
<td></td>
</tr>
<tr>
<td>200</td>
<td>isolated</td>
<td>Yes</td>
<td>Gi 3/2,4-6</td>
<td></td>
</tr>
</tbody>
</table>

**Example (Community)**

Dell# show vlan private-vlan community

<table>
<thead>
<tr>
<th>Primary</th>
<th>Secondary</th>
<th>Type</th>
<th>Active</th>
<th>Ports</th>
</tr>
</thead>
<tbody>
<tr>
<td>10</td>
<td>primary</td>
<td>Yes</td>
<td>Gi 2/1,3</td>
<td></td>
</tr>
<tr>
<td>101</td>
<td>community</td>
<td>Yes</td>
<td>Gi 2/7-10</td>
<td></td>
</tr>
<tr>
<td>20</td>
<td>primary</td>
<td>Yes</td>
<td>Po 10, 12-13</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>Gi 3/1</td>
<td></td>
</tr>
<tr>
<td>201</td>
<td>community</td>
<td>No</td>
<td></td>
<td></td>
</tr>
<tr>
<td>202</td>
<td>community</td>
<td>Yes</td>
<td>Gi 3/11-12</td>
<td></td>
</tr>
</tbody>
</table>

**Example (Specific)**

Dell# show vlan private-vlan interface Gi 2/1

<table>
<thead>
<tr>
<th>Primary</th>
<th>Secondary</th>
<th>Type</th>
<th>Active</th>
<th>Ports</th>
</tr>
</thead>
<tbody>
<tr>
<td>10</td>
<td>primary</td>
<td>Yes</td>
<td>Gi 2/1</td>
<td></td>
</tr>
</tbody>
</table>

921
If the VLAN ID is that of a primary VLAN, the entire private VLAN output is displayed, as shown below. If the VLAN ID is a secondary VLAN, only its primary VLAN and its particular secondary VLAN properties are displayed, as shown in the second Example.

Example

Dell# show vlan private-vlan 10
Primary Secondary Type      Active  Ports
------- --------- --------- -------------------
10   primary   Yes     Gi 2/1,3
102  isolated  Yes     Gi 0/4
101  community Yes     Gi 2/7-10

Example

Dell# show vlan private-vlan 102
Primary Secondary Type      Active  Ports
------- --------- --------- -------------------
10   Primary   Yes     Po 1
     Gi 0/2
102  Isolated  Yes     Gi 0/4

Related Commands

private-vlan mode — sets the mode of the selected VLAN to community, isolated, or primary.

show interfaces private-vlan — displays type and status of PVLAN interfaces.

show vlan private-vlan mapping — displays the primary-secondary VLAN mapping.

switchport mode private-vlan — sets PVLAN mode of the selected port.

show vlan private-vlan mapping

Display primary-secondary VLAN mapping.

Syntax

show vlan private-vlan mapping

Defaults

none

Command Modes

• EXEC
• EXEC Privilege

Command History

Version 8.3.16.1 Introduced the on MXL 10/40GbE Switch IO Module.

Usage Information

The output of this command, shown below, displays the community and isolated VLAN IDs that are associated with each primary VLAN.

Example

Dell# show vlan private-vlan mapping
Private Vlan:
Primary : 100
Isolated : 102
Community : 101
Unknown : 200
switchport mode private-vlan

Set PVLAN mode of the selected port.

Syntax

```
[no] switchport mode private-vlan {host | promiscuous | trunk}
```

To remove PVLAN mode from the selected port, use the no switchport mode private-vlan command.

Parameters

- **host**: Enter the keyword host to configure the selected port or port channel as an isolated interface in a PVLAN.
- **promiscuous**: Enter the keyword promiscuous to configure the selected port or port channel as a promiscuous interface.
- **trunk**: Enter the keyword trunk to configure the selected port or port channel as a trunk port in a PVLAN.

Defaults

Disabled.

Command Modes

INTERFACE

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The assignment of the various PVLAN port types to port and port channel (LAG) interfaces is shown in the following example.

Example

```
Dell(conf)#interface GigabitEthernet 2/1
Dell(conf-if-gi-2/1)#switchport mode private-vlan promiscuous

Dell(conf)#interface GigabitEthernet 2/2
Dell(conf-if-gi-2/2)#switchport mode private-vlan host

Dell(conf)#interface GigabitEthernet 2/3
Dell(conf-if-gi-2/3)#switchport mode private-vlan trunk

Dell(conf)#interface port-channel 10
Dell(conf-if-gi-2/3)#switchport mode private-vlan promiscuous
```
Related Commands

**private-vlan mode** — sets the mode of the selected VLAN to community, isolated, or primary.

**private-vlan mapping secondary-vlan** — sets the mode of the selected VLAN to primary and then associates the secondary VLANs to it.

**show interfaces private-vlan** — displays type and status of PVLAN interfaces.

**show vlan private-vlan mapping** — displays the primary-secondary VLAN mapping.
Per-VLAN Spanning Tree Plus (PVST+)

The Dell Networking operating software implementation of per-VLAN spanning tree plus (PVST+) is based on the IEEE 802.1w standard spanning tree protocol, but it creates a separate spanning tree for each VLAN configured.

NOTE: For easier command line entry, the plus (+) sign is not used at the command line.

description

Enter a description of the PVST+.

Syntax

```
description {description}
```

to remove the description, use the `no description {description}` command.

Parameters

```
description
```

Enter a description to identify the spanning tree (80 characters maximum).

Defaults

none

Command Modes

SPANNING TREE PVST+ (The prompt is “config-pvst”)

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Related Commands

```
protocol spanning-tree pvst
```
— enter SPANNING TREE mode on the switch.

disable

Disable PVST+ globally.

Syntax

```
disable
```

to enable PVST+, use the `no disable command`.

Defaults

Disabled.
edge-port bpdufilter default

Enable BPDU Filter globally to filter transmission of BPDUs on port fast enabled interfaces.

Syntax

```
edge-port bpdufilter default
```

To disable global bpdu filter default, use the `no edge-port bpdufilter default` command.

Defaults

Disabled

Command Modes

CONFIGURATION (The prompt is "config-pvst.")

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

extend system-id

To augment the Bridge ID with a VLAN ID so that PVST+ differentiate between BPDUs for each VLAN, use extend system ID. If the VLAN receives a BPDU meant for another VLAN, PVST+ does not detect a loop, and both ports can remain in Forwarding state.

Syntax

```
extend system-id
```

Defaults

Disabled

Command Modes

PROTOCOL PVST

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Example

```
Dell(conf-pvst)#do show spanning-tree pvst vlan 2 brief
VLAN 2
  Executing IEEE compatible Spanning Tree Protocol
  Root ID    Priority 32768, Address 001e.c9f1.00f3
  Root Bridge hello time 2, max age 20, forward delay 15
  Bridge ID  Priority 32768, Address 001e.c9f1.00f3
  We are the root of Vlan 2
  Configured hello time 2, max age 20, forward delay 15
  Bpdu filter disabled globally
```

### Related Commands

- **protocol spanning-tree pvst** — enter SPANNING TREE mode on the switch.

---

**protocol spanning-tree pvst**

To enable PVST+ on a device, enter the PVST+ mode.

**Syntax**

```
protocol spanning-tree pvst
```

To disable PVST+, use the `disable` command.

**Defaults**

- **none**

**Command Modes**

- CONFIGURATION

**Command History**

- **Version 8.3.16.1** — Introduced on the MXL 10/40GbE Switch IO Module.

**Example**

```
Dell#conf
Dell(conf)#protocol spanning-tree pvst
Dell(conf-pvst)#no disable
Dell(conf-pvst)#vlan 2 bridge-priority 4096
Dell(conf-pvst)#vlan 3 bridge-priority 16384
Dell(conf-pvst)#
Dell(conf-pvst)#show config
!
protocol spanning-tree pvst
no disable
   vlan 2 bridge-priority 4096
   vlan 3 bridge-priority 16384
Dell#
```
show spanning-tree pvst

View the Per-VLAN spanning tree configuration.

Syntax

show spanning-tree pvst [vlan vlan-id] [brief] [guard]

Parameters

- **vlan vlan-id**: (OPTIONAL) Enter the keyword `vlan` then the VLAN ID. The range is 1 to 4094.
- **brief**: (OPTIONAL) Enter the keyword `brief` to view a synopsis of the PVST+ configuration information.
- **interface**: (OPTIONAL) Enter one of the interface keywords along with the slot/port information:
  - For a Port Channel interface, enter the keyword `port-channel` then a number: The range is 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
- **guard**: (OPTIONAL) Enter the keyword `guard` to display the type of guard enabled on a PVST interface and the current port state.

Defaults

none

Command Modes

- EXEC
- EXEC Privilege

Command History

Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The following describes the `show spanning-tree pvst` command shown in the following examples.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Interface Name</td>
<td>PVST interface.</td>
</tr>
<tr>
<td>Instance</td>
<td>PVST instance.</td>
</tr>
</tbody>
</table>
Field | Description
--- | ---
**Sts** | Port state: root-inconsistent (INCON Root), forwarding (FWD), listening (LIS), blocking (BLK), or shut down (EDS Shut).
**Guard Type** | Type of STP guard configured (Root, Loop, or BPDU guard).
**Bpdu Filter** | Yes - Bpdu filter Enabled
| No - Bpdu filter Disabled

**Example (Brief)**

```
Dell# show spanning-tree pvst vlan 2 brief
VLAN 2
Executing IEEE compatible Spanning Tree Protocol
Root ID Priority 32768, Address 001e.c9f1.00f3
Root Bridge hello time 2, max age 20, forward delay 15
Bridge ID Priority 32768, Address 001e.c9f1.00f3
We are the root of VLAN 2
Configured hello time 2, max age 20, forward delay 15
Bpdu filter disabled globally

Interface Name PortID  Prio Cost  Sts  Cost Bridge ID
PortID ---------- -------- ---- ------- --- -------
---------------------
Po 23   128.24  128  1600  FWD  0    32768 001e.c9f1.00f3
128.24
Te 5/41 128.450 128  2000  DIS  0    32768 001e.c9f1.00f3
128.450
Te 5/50 128.459 128  2000  FWD  0    32768 001e.c9f1.00f3
128.459

Interface Name Role PortID  Prio Cost  Sts  Cost Link-type Edge
Filter -------------- ------ -------- ---- ------- --- -------- ----
------------
Po 23     Desg  128.24  128  1600  FWD  0    P2P      No    No
Te 5/41   Dis   128.450 128  2000  DIS  0    P2P      No    No
Te 5/50   Desg  128.459 128  2000  FWD  0    P2P      No    No
```

**Example**

```
Dell#show spanning-tree pvst vlan 2
VLAN 2
Root Identifier has priority 32768, Address 001e.c9f1.00f3
Root Bridge hello time 2, max age 20, forward delay 15
Bridge Identifier has priority 32768, Address 001e.c9f1.00f3
Configured hello time 2, max age 20, forward delay 15
Bpdu filter disabled globally
We are the root of VLAN 2
Current root has priority 32768, Address 001e.c9f1.00f3
Number of topology changes 0, last change occurred 3dh ago on
Port 24 (Port-channel 23) is designated Discarding
Port path cost 1600, Port priority 128, Port Identifier 128.24
Designated root has priority 32768, address 001e.c9f1.00.f3
Designated bridge has priority 32768, address 001e.c9f1.00f3
Designated port id is 128.24, designated path cost 0
```
Number of transitions to forwarding state 0
BPDU sent 8, received 0
The port is not in the Edge port mode, bpdu filter is disabled

Port 450 (TenGigabitEthernet 5/41) is disabled Discarding
Port path cost 2000, Port priority 128, Port Identifier 128.450
Designated root has priority 32768, address 001e.c9f1.00:f3
Designated bridge has priority 32768, address 001e.c9f1.00:f3
Designated port id is 128.450, designated path cost 0
Number of transitions to forwarding state 0
BPDU sent 0, received 0
The port is not in the Edge port mode, bpdu filter is disabled

Port 459 (TenGigabitEthernet 5/50) is designated Forwarding
Port path cost 2000, Port priority 128, Port Identifier 128.459
Designated root has priority 32768, address 001e.c9f1.00:f3
Designated bridge has priority 32768, address 001e.c9f1.00:f3
Designated port id is 128.459, designated path cost 0
Number of transitions to forwarding state 1
BPDU sent 16, received 0
The port is not in the Edge port mode, bpdu filter is disabled

---

### Example (EDS/LBK)

```
Dell#show spanning-tree pvst vlan 2 interface gigabitethernet 1/0

GigabitEthernet 1/0 of VLAN 2 is LBK_INC discarding

Edge port:no (default) port guard :none (default)
Link type: point-to-point (auto) bpdu filter: disable (default)
Bpdu guard :disable (default)
Bpdus sent 152, received 27562

Interface Designated
Name    PortID   Prio Cost  Sts Cost Bridge ID       PortID
-------- --------------- --------------- --------------- -------------------- -----------
Gi 1/0 128.1223 128 20000 EDS 0 32768 0001.e800.a12b 128.1223
```

### Example (EDS/PVID)

```
Dell#show spanning-tree pvst vlan 2 interface gigabitethernet 1/0

GigabitEthernet 1/0 of VLAN 2 is PVID_INC discarding

Edge port:no (default) port guard :none (default)
Link type: point-to-point (auto) bpdu filter: disable (default)
Bpdu guard :disable (default)
Bpdus sent 1, received 0

Interface Designated
Name    PortID   Prio Cost  Sts Cost Bridge ID       PortID
-------- --------------- --------------- --------------- -------------------- -----------
Gi 1/0 128.1223 128 20000 EDS 0 32768 0001.e800.a12b 128.1223
```

### Example (Guard)

```
Dell#show spanning-tree pvst vlan 5 guard

Interface
Name       Instance Sts       Guard type Bpdu Filter
----------- -------------- ----------- ----------
TenGig 0/1 0  INCON(Root) Rootguard  No
TenGig 0/2 0  FWD          Loopguard  No
TenGig 0/3 0  EDS(Shut)   Bpduguard  No
```

---

930
spanning-tree pvst

Configure a PVST+ interface with one of these settings: edge port with optional bridge port data unit (BPDU) guard, port disablement if an error condition occurs, port priority or cost for a VLAN range, loop guard, or root guard.

**Syntax**

```
spanning-tree pvst {edge-port [bpduguard [shutdown-on-violation]] | bpdufilter] | err-disable | vlan vlan-range {cost number | priority value} | rootguard}
```

**Parameters**

- `edge-port` Enter the keywords `edge-port` to configure the interface as a PVST+ edge port.

- `bpduguard` Enter the keyword `portfast` to enable Portfast to move the interface into Forwarding mode immediately after the root fails.

  Enter the keyword `bpduguard` to disable the port when it receives a BPDU.

- `shutdown-on-violation` (OPTIONAL) Enter the keywords `shutdown-on-violation` to hardware disable an interface when a BPDU is received and the port is disabled.

- `bpdufilter` (OPTIONAL) Enter the keyword `bpdufilter` to stop sending and receiving BPDUs on port fast enabled ports.

- `err-disable` Enter the keywords `err-disable` to enable the port to be put into the error-disable state (EDS) if an error condition occurs.

- `vlan vlan-range` Enter the keyword `vlan` then the VLAN numbers. The range is from 1 to 4094.

- `cost number` Enter the keyword `cost` then the port cost value. The range is from 1 to 200000.

**Defaults:**

- 10-Gigabit Ethernet interface = 2000.
- 40-Gigabit Ethernet interface = 1400.
- Port Channel interface with one 10 Gigabit Ethernet = 2000.
- Port Channel with two 10 Gigabit Ethernet = 1800.
- Port Channel with four 40 Mbps Ethernet = 600.
Enter the keyword `priority` then the Port priority value in increments of 16. The range is from 0 to 240. The default is 128.

Enter the keyword `rootguard` to enable root guard on a PVST+ port or port-channel interface.

**Defaults**
Not configured.

**Command Modes**
INTERFACE

**Command History**
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

The BPDU guard option prevents the port from participating in an active STP topology in case a BPDU appears on a port unintentionally, or is misconfigured, or is subject to a DOS attack. This option places the port into the Error Disable state if a BPDU appears, and a message is logged so that the administrator can take corrective action. When BPDU guard and BPDU filter is enabled on the port, then BPDU filter takes the highest precedence.

**NOTE:** A port configured as an edge port, on a PVST switch, will immediately transition to the forwarding state. Only ports connected to end-hosts should be configured as an edge port. Consider an edge port similar to a port with a spanning-tree portfast enabled.

**Example**
```
Dell(conf-if-gi-1/1)#spanning-tree pvst vlan 3 cost 18000
Dell(conf-if-gi-1/1)#end
Dell(conf-if-gi-1/1)#show config
!
interface GigabitEthernet 1/1
  no ip address
  switchport
  spanning-tree pvst vlan 3 cost 18000
  no shutdown
Dell(conf-if-gi-1/1)#end

Dell#
```

**Related Commands**
- `show spanning-tree pvst` — views the PVST+ configuration.

**spanning-tree pvst err-disable**

Place ports in an Err-Disabled state if they receive a PVST+ BPDU when they are members an untagged VLAN.

**Syntax**

```
spanning-tree pvst err-disable cause invalid-pvst-bpdu
```

**Defaults**

Enabled; ports are placed in the Err-Disabled state if they receive a PVST+ BPDU when they are members of an untagged VLAN.
**tc-flush-standard**

Enable the MAC address flushing after receiving every topology change notification.

**Syntax**

```
tc-flush-standard
```

To disable, use the `no tc-flush-standard` command.

**Defaults**

Disabled.

**Command Modes**

CONFIGURATION

**Command History**

Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

By default, the system implements an optimized flush mechanism for PVST+. This implementation helps in flushing the MAC addresses only when necessary (and less often) allowing for faster convergence during topology changes. However, if a standards-based flush mechanism is needed, you can turn this knob command on to enable flushing MAC addresses after receiving every topology change notification.

**vlan bridge-priority**

Set the PVST+ bridge-priority for a VLAN or a set of VLANs.

**Syntax**

```
vlan vlan-id bridge-priority value
```

To return to the default value, use the `no vlan bridge-priority` command.
**Parameters**

- **vlan vlan-range**  
  Enter the keyword `vlan` then the VLAN numbers. The range is from 1 to 4094.

- **bridge-priority value**  
  Enter the keywords `bridge-priority` then the bridge priority value in increments of 4096. The range is from 0 to 61440. The default is **32768**.

**Defaults**

- **32768**  
  CONFIGURATION (conf-pvst)

**Command Modes**

- **Version 8.3.16.1**  
  Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**

- **vlan forward-delay** — changes the time interval before the system transitions to the Forwarding state.
- **vlan hello-time** — change the time interval between BPDUs.
- **vlan max-age** — changes the time interval before PVST+ refreshes.
- **show spanning-tree pvst** — displays the PVST+ configuration.

---

**vlan forward-delay**

Set the amount of time the interface waits in the Listening state and the Learning state before transitioning to the Forwarding state.

**Syntax**

```
vlan vlan-id forward-delay seconds
```

To return to the default setting, use the `no vlan forward-delay` command.

**Parameters**

- **vlan vlan-range**  
  Enter the keyword `vlan` then the VLAN numbers. The range is from 1 to 4094.

- **forward-delay seconds**  
  Enter the keywords `forward-delay` then the time interval, in seconds, that the system waits before transitioning PVST+ to the forwarding state. The range is from 4 to 30 seconds. The default is **15 seconds**.

**Defaults**

- **15 seconds**  
  CONFIGURATION (conf-pvst)

**Command Modes**

- **Version 8.3.16.1**  
  Introduced on the MXL 10/40GbE Switch IO Module.

Related Commands

- `vlan bridge-priority` — sets the bridge-priority value.
- `vlan hello-time` — changes the time interval between BPDUs.
- `vlan max-age` — changes the time interval before PVST+ refreshes.
- `show spanning-tree pvst` — displays the PVST+ configuration.

**vlan hello-time**

Set the time interval between generation of PVST+ and BPDUs.

**Syntax**

```plaintext
vlan vlan-id hello-time seconds
```

To return to the default value, use the `no vlan hello-time` command.

**Parameters**

- `vlan vlan-range` Enter the keyword `vlan` then the VLAN numbers. The range is from 1 to 4094.
- `hello-time seconds` Enter the keywords `hello-time` then the time interval, in seconds, between transmission of BPDUs. The range is from 1 to 10 seconds. The default is 2 seconds.

**Defaults**

2 seconds

**Command Modes**

CONFIGURATION (conf-pvst)

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**

- `vlan bridge-priority` — sets the bridge-priority value.
- `vlan forward-delay` — changes the time interval before the system transitions to the forwarding state.
- `vlan max-age` — changes the time interval before PVST+ refreshes.
- `show spanning-tree pvst` — displays the PVST+ configuration.
**vlan max-age**

To maintain configuration information before refreshing that information, set the time interval for the PVST+ bridge.

Syntax

```
vlan vlan-range max-age seconds
```

To return to the default, use the `no vlan max-age` command.

Parameters

- **vlan vlan-range** Enter the keyword `vlan` then the VLAN numbers. The range is from 1 to 4094.
- **max-age** **seconds** Enter the keywords `max-age` then the time interval, in seconds, that the system waits before refreshing configuration information. The range is from 6 to 40 seconds. The default is **20 seconds**.

Defaults

- **20 seconds**

Command Modes

- **CONFIGURATION (conf-pvst)**

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Related Commands

- `vlan bridge-priority` — sets the bridge-priority value.
- `vlan forward-delay` — changes the time interval before the system transitions to the forwarding state.
- `vlan hello-time` — changes the time interval between BPDUs.
- `show spanning-tree pvst` — displays the PVST+ configuration.
Quality of Service (QoS)

The Dell Networking operating software commands for quality of service (QoS) include traffic conditioning and congestion control.

This chapter contains the following sections:

- Global Configuration Commands
- Per-Port QoS Commands
- Policy-Based QoS Commands

Global Configuration Commands

There are only two global configuration QoS commands.

qos-rate-adjust

By default, while rate limiting, policing, and shaping, the system does not include the Preamble, SFD, or the IFG fields. These fields are overhead; only the fields from MAC destination address to the CRC are used for forwarding and are included in these rate metering calculations. You can optionally include overhead fields in rate metering calculations by enabling QoS Rate Adjustment.

Syntax

```
qos-rate-adjustment overhead-bytes
```

Parameters

- `overhead-bytes`: Include a specified number of bytes of packet overhead to include in rate limiting, policing, and shaping calculations. The range is from 1 to 31.

Defaults

QoS rate adjustment is disabled by default, and `no qos-rate-adjust` is listed in the running-configuration.

Command Modes

CONFIGURATION

Command History

- Version 8.3.16.1: Introduced on the MXL 10/40GbE Switch IO Module.
**service-class dot1p-mapping**

This command maps an 802.1p priority to an internal traffic class.

**Syntax**

```
service-class dot1p-mapping user-priority trafficclass
```

**Parameters**

- **user-priority**
  
  The user-priority value ranges from 0 to 7 and traffic class ranges from 0 to 6.

**Command Modes**

CONFIGURATION

**Command History**

Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.

---

**Per-Port QoS Commands**

Per-port QoS (port-based QoS) allows you to define the QoS configuration on a per-physical-port basis.

**dot1p-priority**

Assign a value to the IEEE 802.1p bits on the traffic this interface receives.

**Syntax**

```
dot1p-priority priority-value
```

To delete the IEEE 802.1p configuration on the interface, use the `no dot1p-priority` command.

**Parameters**

- **priority-value**
  
  Enter a value from 0 to 7.

<table>
<thead>
<tr>
<th>dot1p</th>
<th>Queue Number</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>2</td>
</tr>
<tr>
<td>1</td>
<td>0</td>
</tr>
<tr>
<td>2</td>
<td>1</td>
</tr>
<tr>
<td>3</td>
<td>3</td>
</tr>
<tr>
<td>4</td>
<td>4</td>
</tr>
<tr>
<td>5</td>
<td>5</td>
</tr>
<tr>
<td>6</td>
<td>6</td>
</tr>
<tr>
<td>7</td>
<td>7</td>
</tr>
</tbody>
</table>

**Defaults**

none
The **dot1p-priority** command changes the priority of incoming traffic on the interface. The system places traffic marked with a priority in the correct queue and processes that traffic according to its queue.

When you set the priority for a port channel, the physical interfaces assigned to the port channel are configured with the same value. You cannot assign the **dot1p-priority** command to individual interfaces in a port channel.

**rate police**

Police the incoming traffic rate on the selected interface.

**Syntax**

```
rate police [kbps] committed-rate [burst-KB] [peak [kbps] peak-rate [burst-KB]] [vlan vlan-id]
```

**Parameters**

- **kbps**
  - Enter the keyword **kbps** to specify the rate limit in Kilobits per second (Kbps). Make the following value a multiple of 64. The range is from 0 to 40000000. The default granularity is Megabits per second (Mbps).

- **committed-rate**
  - Enter the bandwidth in Mbps. The range is from 0 to 10000.

- **burst-KB**
  - (OPTIONAL) Enter the burst size in KB. The range is from 16 to 200000. The default is **50**.

- **peak peak-rate**
  - (OPTIONAL) Enter the keyword **peak** then a number to specify the peak rate in Mbps. The range is from 0 to 10000.

- **vlan vlan-id**
  - (OPTIONAL) Enter the keyword **vlan** then a VLAN ID to police traffic to those specific VLANs. The range is from 1 to 4094.

**Defaults**

Granularity for **committed-rate** and **peak-rate** is Mbps unless you use the **kbps** option.

**Command Modes**

**INTERFACE**

**Command History**

- **Version 8.3.16.1** Introduced on the MXL 10/40GbE Switch IO Module.
NOTE: Per Port rate limit and rate police is supported for Layer 2 tagged and untagged switched traffic and for Layer 3 traffic. Per VLAN rate limit and rate police is supported on only tagged ports with Layer 2 switched traffic.

On one interface, you can configure the rate police command for a VLAN or you can configure the rate police command for an interface. For each physical interface, you can configure three rate police commands specifying different VLANs.

For each physical interface, you can configure three rate police commands specifying different VLANs.

After configuring VLANs in the rate police command, if this error message appears: %Error: Specified VLANs overlap with existing config. check to see if the same VLANs are used with the rate limit command on other interfaces. To clear the problem, remove the rate limit configurations, and re-configure the rate police command. After the rate police command is configured, return to the other interfaces and re-apply the rate limit configuration.

rate shape

Shape the traffic output on the selected interface.

Syntax

```
rate shape [kbps] rate [burst-KB]
```

Parameters

- **kbps**
  - Enter the keyword kbps to specify the rate limit in Kilobits per second (Kbps). Make the following value a multiple of 64. The range is from 0 to 40000000. The default granularity is Megabits per second (Mbps).
- **rate**
  - Enter the outgoing rate in multiples of 10 Mbps. The range is from 10 to 10000.
- **burst-KB**
  - (OPTIONAL) Enter the burst size in KB. The range is from 0 to 10000. The default is 50.

Defaults

Granularity for rate is Mbps unless you use the kbps option.

Command Modes

INTERFACE

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.
Related Commands

rate-shape — shapes traffic output as part of the designated policy.

service-class dynamic dot1p

Honor all 802.1p markings on incoming switched traffic on an interface (from INTERFACE mode) or on all interfaces (from CONFIGURATION mode). A CONFIGURATION mode entry supersedes an INTERFACE mode entry.

Syntax

```
service-class dynamic dot1p
```

To return to the default setting, use the `no service-class dynamic dot1p` command.

Defaults

All dot1p traffic is mapped to Queue 0 unless you enable the `service-class dynamic dot1p` command. The default mapping is as follows:

<table>
<thead>
<tr>
<th>dot1p</th>
<th>Queue ID</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>0</td>
</tr>
<tr>
<td>1</td>
<td>0</td>
</tr>
<tr>
<td>2</td>
<td>0</td>
</tr>
<tr>
<td>3</td>
<td>1</td>
</tr>
<tr>
<td>4</td>
<td>2</td>
</tr>
<tr>
<td>5</td>
<td>3</td>
</tr>
<tr>
<td>6</td>
<td>3</td>
</tr>
<tr>
<td>7</td>
<td>3</td>
</tr>
</tbody>
</table>

Command Modes

- INTERFACE
- CONFIGURATION

Command History

**Version 8.3.16.1**

Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

To honor all incoming 802.1p markings on incoming switched traffic on the interface, enter this command. By default, this facility is not enabled (that is, the 802.1p markings on incoming traffic are not honored).

You can apply this command on both physical interfaces and port channels. When you set the service-class dynamic for a port channel, the physical interfaces assigned to the port channel are automatically configured; you cannot assign the `service-class dynamic dot1p` command to individual interfaces in a port channel.

- All dot1p traffic is mapped to Queue 0 unless you enable the `service-class dynamic dot1p` command on an interface or globally.
Layer 2 or Layer 3 service policies supersede dot1p service classes.

**service-class bandwidth-percentage**

Specify a minimum bandwidth for queues.

**Syntax**

```
service-class bandwidth-percentage queue0 number queue1 number queue2 number queue3 number
```

**Parameters**

- `number`
  
  Enter the bandwidth-weight, as a percentage. The value must be a power of 2. The range is from 1 to 100.

**Defaults**

none

**Command Modes**

CONFIGURATION

**Command History**

Version 8.3.16.1

Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

Guarantee a minimum bandwidth to different queues globally using the `service-class bandwidth-weight` command from CONFIGURATION mode. The command is applied in the same way as the `bandwidth-weight` command in an output QoS policy. The `bandwidth-weight` command in QOS-POLICY-OUT mode supersedes the `service-class bandwidth-weight` command.

When you enable ETS, the egress QoS features in the output QoS policy-map (such as `service-class bandwidth-percentage` and `bandwidth-percentage`), the default bandwidth allocation ratio for egress queues are superseded by ETS configurations. This is to provide compatibility with DCBX. Therefore, Dell Networking recommends disabling ETS when you wish to apply these features exclusively. After you disable ETS on an interface, the configured parameters are applied.

**strict-priority unicast**

Configure a unicast queue as a strict-priority (SP) queue.

**Syntax**

```
strict-priority unicast queue number
```

**Parameters**

- `unicast number`
  
  Enter the keyword `unicast` then the queue number. The range is from 1 to 3.

**Defaults**

none
After you configure a unicast queue as strict-priority, that particular queue, on the entire chassis, is treated as a strict-priority queue. Traffic for a strict priority is scheduled before any other queues are serviced. For example, if you send 100% line rate traffic over the SP queue, it starves all other queues on the ports on which this traffic is flowing. To assign the strict priority schedule type to egress queues, use the scheduler strict command in QOS-POLICY-OUT mode. The system OS does not support bandwidth configuration on strict priority scheduler queues.

When you enable ETS, the egress QoS features in the output QoS policy-map (such as strict priority unicast <0-3> and scheduler strict), default scheduler for egress queues are superseded by ETS configurations. This is to provide compatibility with DCBX. Therefore, Dell Networking recommends disabling ETS when you wish to apply these features exclusively. After you disable ETS on an interface, the configured parameters are applied.

Policy-Based QoS Commands

Policy-based traffic classification is handled with class maps. These maps classify unicast traffic into one of four classes. The system allows you to match multiple class maps and specify multiple match criteria. Policy-based QoS is not supported on logical interfaces, such as port-channels, VLANs, or Loopbacks.

bandwidth-percentage

Assign a percentage of weight to the class/queue.

Syntax

```
bandwidth-percentage percentage
```

To remove the bandwidth percentage, use the no bandwidth-percentage command.

Parameters

- **percentage**: Enter the percentage assignment of weight to the class/queue. The range is from 0 to 100% (granularity 1%).

Defaults

- none

Command Modes

- CONFIGURATION (conf-qos-policy-out)

Command History

- **Version 8.3.16.1**: Introduced on the MXL 10/40GbE Switch IO Module.
The unit of bandwidth percentage is 1%. A bandwidth percentage of 0 is allowed and disables the scheduling of that class. If the sum of the bandwidth percentages given to all eight classes exceeds 100%, the bandwidth percentage automatically scales down to 100%.

Related Commands

gos-policy-output — creates a QoS output policy.

class-map

Create/access a class map. Class maps differentiate traffic so that you can apply separate quality-of-service policies to each class.

Syntax

class-map \{match-all | match-any\} class-map-name [layer2]

Parameters

match-all
Determines how packets are evaluated when multiple match criteria exist. Enter the keywords match-all to determine that the packets must meet all the match criteria in order to be a member of the class.

match-any
Determines how packets are evaluated when multiple match criteria exist. Enter the keywords match-any to determine that the packets must meet at least one of the match criteria in order to be a member of the class.

class-map-name
Enter a name of the class for the class map in a character format (32 character maximum).

layer2
Enter the keyword layer2 to specify a Layer 2 Class Map. The default is Layer 3.

Defaults

Layer 3

Command Modes

CONFIGURATION

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

Packets arriving at the input interface are checked against the match criteria and configured using this command to determine if the packet belongs to that class. This command accesses CLASS-MAP mode, where the configuration commands include the match ip and match mac options.

Related Commands

ip access-list extended — configures an extended IP ACL.

ip access-list standard — configures a standard IP ACL.
**match ip access-group** — configures the match criteria based on the access control list (ACL).

**match ip precedence** — identifies the IP precedence values as match criteria.

**match ip dscp** — configures the match criteria based on the DSCP value.

**match ip access-group** — configures a match criterion for a class map based on the contents of the designated MAC ACL.

**match mac dot1p** — configures a match criterion for a class map based on a dot1p value.

**match mac vlan** — configures a match criterion for a class map based on VLAN ID.

**service-queue** — assigns a class map and QoS policy to different queues.

**show qos class-map** — views the current class map information.

---

### clear qos statistics

Cleasts Matched Packets, Matched Bytes, and Dropped Packets.

**Syntax**

```
clear qos statistics interface-name
```

**Parameters**

- **interface-name**
  - Enter one of the following keywords:
    - For a 40-Gigabit Ethernet interface, enter the keyword `FortyGigabitEthernet` then the slot/port information.
    - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.

**Defaults**

- none

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

- **Version 8.3.16.1**
  - Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

When you issue this command, statistical information stored regarding QoS clears and resets to 0. You can access these statistics using the `show qos statistics` command in EXEC mode. When the traffic pattern matches the QoS classification criteria flows, the corresponding counters increment.

**Related Commands**

- `show qos statistics` — displays the QoS statistics.
**match ip access-group**

Configure match criteria for a class map, based on the access control list (ACL).

**Syntax**

```
match ip access-group access-group-name [set-ip-dscp value]
```

To remove ACL match criteria from a class map, use the `no match ip access-group access-group-name [set-ip-dscp value]` command.

**Parameters**

- **access-group-name**
  - Enter the ACL name whose contents are used as the match criteria in determining if packets belong to the class the class-map specifies.

- **set-ip-dscp value**
  - (OPTIONAL) Enter the keywords `set-ip-dscp` then the IP DSCP value. The matched traffic is marked with the DSCP value. The range is from 0 to 63.

**Defaults**

none

**Command Modes**

CLASS-MAP CONFIGURATION (config-class-map)

**Command History**

Version 8.3.16.1

Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

To access this command, enter the `class-map` command. After the class map is identified, you can configure the match criteria. For class-map match-any, a maximum of five ACL match criteria are allowed. For class-map match-all, only one ACL match criteria is allowed.

**Related Commands**

- `class-map` — identifies the class map.

---

**description**

Add a description to the selected policy map or QoS policy.

**Syntax**

```
description {description}
```

To remove the description, use the `no description {description}` command.

**Parameters**

- **description**
  - Enter a description to identify the policies (80 characters maximum).

**Defaults**

none

**Command Modes**

CONFIGURATION (policy-map-input and policy-map-output; conf-qos-policy-in and conf-qos-policy-out; wred)
match ip dscp

Use a differentiated services code point (DSCP) value as a match criteria.

Syntax

match ip dscp dscp-list [set-ip-dscp value]

To remove a DSCP value as a match criteria, use the no match ip dscp dscp-list [set-ip-dscp value] command.

Parameters

dscp-list

Enter the IP DSCP values that is to be the match criteria. Separate values by commas — no spaces (1,2,3) or indicate a list of values separated by a hyphen (1-3). The range is from 0 to 63.

set-ip-dscp value

(Optional) Enter the keywords set-ip-dscp then the IP DSCP value. The matched traffic is marked with the DSCP value. The range is from 0 to 63.

Defaults

none

Command Modes

CLASS-MAP CONFIGURATION (config-class-map)

Usage Information

To access this command, enter the class-map command. After the class map is identified, you can configure the match criteria.

The match ip dscp and match ip precedence commands are mutually exclusive.

Up to 64 IP DSCP values can be matched in one match statement. For example, to indicate IP DCSP values 0 1 2 3 4 5 6 7, enter either the match ip dscp 0,1,2,3,4,5,6,7 or match ip dscp 0-7 command.

947
**NOTE:** Only one of the IP DSCP values must be a successful match criterion, not all of the specified IP DSCP values must match.

**Related Commands**
class-map — identifies the class map.

---

**match ip precedence**

Use IP precedence values as a match criteria.

**Syntax**
```
match ip precedence ip-precedence-list [set-ip-dscp value]
```

To remove IP precedence as a match criteria, use the `no match ip precedence ip-precedence-list [set-ip-dscp value]` command.

**Parameters**
- `ip-precedence-list` Enter the IP precedence value(s) as the match criteria. Separate values by commas — no spaces (1,2,3) or indicate a list of values separated by a hyphen (1-3). The range is from 0 to 7.
- `set-ip-dscp value` (OPTIONAL) Enter the keywords `set-ip-dscp` then the IP DSCP value. The matched traffic is marked with the DSCP value. The range is from 0 to 63.

**Defaults**
`none`

**Command Modes**
`CLASS-MAP CONFIGURATION (config-class-map)`

**Command History**

```
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.
```

**Usage Information**
To access this command, enter the `class-map` command. After the class map is identified, you can configure the match criteria.

The `match ip precedence` command and the `match ip dscp` command are mutually exclusive.

Up to eight precedence values can be matched in one match statement. For example, to indicate the IP precedence values 0 1 2 3, enter either the `match ip precedence 0-3` or `match ip precedence 0,1,2,3` command.

**NOTE:** Only one of the IP precedence values must be a successful match criterion, not all of the specified IP precedence values must match.

**Related Commands**
class-map — identifies the class map.
**match mac access-group**

Configure a match criterion for a class map, based on the contents of the designated MAC ACL.

**Syntax**

```
match mac access-group {mac-acl-name}
```

**Parameters**

- `mac-acl-name` Enter a MAC ACL name. Its contents is used as the match criteria in the class map.

**Defaults**

none

**Command Modes**

CLASS-MAP

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

To access this command, enter the `class-map` command. After the class map is identified, you can configure the match criteria.

**Related Commands**

- `class-map` — identifies the class map.

---

**match mac dot1p**

Configure a match criterion for a class map based on a dot1p value.

**Syntax**

```
match mac dot1p {dot1p-list}
```

**Parameters**

- `dot1p-list` Enter a dot1p value. The range is from 0 to 7.

**Defaults**

none

**Command Modes**

CLASS-MAP

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

To access this command, enter the `class-map` command. After the class map is identified, you can configure the match criteria.

**Related Commands**

- `class-map` — identifies the class map.
**match mac vlan**

Configure a match criterion for a class map based on VLAN ID.

**Syntax**

```
match mac vlan number
```

**Parameters**

- `number` Enter the VLAN ID. The range is from 1 to 4094.

**Defaults**

none

**Command Modes**

CLASS-MAP

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

To access this command, enter the `class-map` command. You can match against only one VLAN ID.

**Related Commands**

- `class-map` — identifies the class map.

---

**policy-aggregate**

Allow an aggregate method of configuring per-port QoS via policy maps. An aggregate QoS policy is part of the policy map (input/output) applied on an interface.

**Syntax**

```
policy-aggregate qos-policy-name
```

To remove a policy aggregate configuration, use the `no policy-aggregate qos-policy-name` command.

**Parameters**

- `qos-policy-name` Enter the name of the policy map in character format (32 characters maximum).

**Defaults**

none

**Command Modes**

CONFIGURATION (policy-map-input and policy-map-output)

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

Aggregate input/output QoS policy applies to all the port ingoing/outgoing traffic. Aggregate input/output QoS policy can coexist with per queue input/output QoS policies.

1. If only aggregate input QoS policy exists, input traffic conditioning configurations (rate-police) apply. Any marking configurations in aggregate input QoS policy are ignored.
2. If aggregate input QoS policy and per class input QoS policy coexist, aggregate input QoS policy preempts per class input QoS policy on input traffic conditioning (rate-police). In other words, if rate police configuration exists in the aggregate QoS policy, the rate police configurations in per class QoS are ignored. Marking configurations in per class input QoS policy still apply to each queue.

Related Commands

- policy-map-input — creates an input policy map.
- policy-map-output — creates an output policy map.

**policy-map-input**

Create an input policy map.

**Syntax**

```
policy-map-input policy-map-name [layer2]
```

To remove an input policy map, use the no policy-map-input policy-map-name [layer2] command.

**Parameters**

- **policy-map-name**
  
Enter the name of the policy map in character format (32 characters maximum).

- **layer2**
  
(Optional) Enter the keyword layer2 to specify a Layer 2 Class Map. The default is Layer 3.

**Defaults**

Layer 3

**Command Modes**

CONFIGURATION

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

The input policy map is used to classify incoming traffic to different flows using class-map, QoS policy, or incoming packets DSCP. This command enables Policy-Map-Input Configuration mode (conf-policy-map-in).

**Related Commands**

- service-queue — assigns a class map and QoS policy to different queues.
- policy-aggregate — allows an aggregate method of configuring per-port QoS using policy maps.
- service-policy input — applies an input policy map to the selected interface.
**policy-map-output**

Create an output policy map.

**Syntax**

```
policy-map-output policy-map-name
```

To remove a policy map, use the `no policy-map-output policy-map-name` command.

**Parameters**

- `policy-map-name` Enter the name for the policy map in character format (16 characters maximum).

**Defaults**

none

**Command Modes**

CONFIGURATION

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

To assign traffic to different flows using QoS policy, use the Output Policy map. This command enables Policy-Map-Output Configuration mode (conf-policy-map-out).

**Related Commands**

- `service-queue` — assigns a class map and QoS policy to different queues.
- `policy-aggregate` — allows an aggregate method of configuring per-port QoS using policy maps.
- `service-policy output` — applies an output policy map to the selected interface.

---

**qos-policy-input**

Create a QoS input policy on the router.

**Syntax**

```
qos-policy-input qos-policy-name [layer2]
```

To remove an existing input QoS policy from the router, use the `no qos-policy-input qos-policy-name [layer2]` command.

**Parameters**

- `qos-policy-name` Enter the name for the policy map in character format (32 characters maximum).
- `layer2` (OPTIONAL) Enter the keyword `layer2` to specify a Layer 2 Class Map. The default is **Layer 3**.

**Defaults**

Layer 3
qos-policy-output

Create a QoS output policy.

Syntax

```
qos-policy-output qos-policy-name
```

To remove an existing output QoS policy, use the `no qos-policy-output qos-policy-name` command.

Parameters

- `qos-policy-name` Enter your output QoS policy name in character format (32 characters maximum).

Defaults

none

Command Modes

CONFIGURATION

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

To specify the name of the output QoS policy, use this command. After the output policy is specified, rate-limit, bandwidth-percentage, and WRED can be defined. This command enables Qos-Policy-Output Configuration mode — (conf-qos-policy-out).

When changing a service-queue configuration in a QoS policy map, all QoS rules are deleted and re-added automatically to ensure that the order of the rules is maintained. As a result, the Matched Packets value shown in the `show qos statistics` command is reset.
**Related Commands**

- `bandwidth-percentage` — assigns weight to the class/queue percentage.
- `wred` — assigns yellow or green drop precedence.

---

**rate police**

Police the incoming traffic rate on the selected interface.

**Syntax**

```
rate police [kbps] committed-rate [burst-KB] [peak [kbps] peak-rate [burst-KB]]
```

**Parameters**

- **kbps**
  
  Enter the keyword `kbps` to specify the rate limit in Kilobits per second (Kbps). Make the following value a multiple of 64. The range is from 0 to 40000000. The default granularity is Megabits per second (Mbps).

- **committed-rate**
  
  Enter the bandwidth in Mbps. The range is from 0 to 10000.

- **burst-KB**
  
  (OPTIONAL) Enter the burst size in KB. The range is from 16 to 200000. The default is 100.

- **peak peak-rate**
  
  (OPTIONAL) Enter the keyword `peak` then a number to specify the peak rate in Mbps. The range is from 0 to 10000. The default is the same as designated for `committed-rate`.

**Defaults**

Burst size is 100 KB. `peak-rate` is the same as `committed-rate`. Granularity for `committed-rate` and `peak-rate` is Mbps unless you use the `kbps` option.

**Command Modes**

- INTERFACE

**Command History**

```
Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.
```

**Related Commands**

- `rate police` — specifies traffic policing on the selected interface.
- `qos-policy-input` — creates a QoS output policy.

---

**rate shape**

Shape the traffic output on the selected interface.

**Syntax**

```
rate shape [kbps] rate [burst-KB]
```

**Related Commands**

- `rate police` — specifies traffic policing on the selected interface.
### Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>kbps</strong></td>
<td>Enter the keyword kbps to specify the rate limit in Kilobits per second (Kbps). Make the following value a multiple of 64. The range is from 0 to 40000000. The default granularity is Megabits per second (Mbps).</td>
</tr>
<tr>
<td><strong>rate</strong></td>
<td>Enter the outgoing rate in multiples of 10 Mbps. The range is from 10 to 10000.</td>
</tr>
<tr>
<td><strong>burst-KB</strong></td>
<td>(OPTIONAL) Enter the burst size in KB. The range is from 0 to 10000. The default is 50.</td>
</tr>
</tbody>
</table>

### Defaults

Granularity for rate is **Mbps** unless you use the **kbps** option.

### Command Modes

QOS-POLICY-OUT

### Command History

Version 8.3.16.1  
Introduced on the MXL 10/40GbE Switch IO Module.

### Usage Information

When you apply `rate-shape` in QoS policy both on the Queue Level and in Aggregate mode, the queue-based shaping occurs first then aggregate rate shaping.

### Related Commands

- `rate shape` — shapes traffic output as part of the designated policy.

---

### service-policy input

Apply an input policy map to the selected interface.

**Syntax**

```
service-policy input policy-map-name [layer2]
```

To remove the input policy map from the interface, use the `no service-policy input policy-map-name [layer2]` command.

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>policy-map-name</strong></td>
<td>Enter the name for the policy map in character format (16 characters maximum). You can identify an existing policy map or name one that does not yet exist.</td>
</tr>
<tr>
<td><strong>layer2</strong></td>
<td>(OPTIONAL) Enter the keyword <code>layer2</code> to specify a Layer 2 Class Map. The default is <strong>Layer 3</strong>.</td>
</tr>
</tbody>
</table>

**Defaults**

Layer 3

**Command Modes**

INTERFACE

**Command History**

Version 8.3.16.1  
Introduced on the MXL 10/40GbE Switch IO Module.
Usage Information
You can attach a single policy-map to one or more interfaces to specify the service-policy for those interfaces. A policy map attached to an interface can be modified.

NOTE: The service-policy commands are not allowed on a port channel. The service-policy input policy-map-name command and the service-class dynamic dot1p command are not allowed simultaneously on an interface.

Related Commands
policy-map-input — creates an input policy map.

service-policy output
Apply an output policy map to the selected interface.

Syntax
service-policy output policy-map-name

To remove the output policy map from the interface, use the no service-policy output policy-map-name command.

Parameters
policy-map-name

Enter the name for the policy map in character format (16 characters maximum). You can identify an existing policy map or name one that does not yet exist.

Defaults
none

Command Modes
INTERFACE

Command History
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
A single policy-map can be attached to one or more interfaces to specify the service-policy for those interfaces. A policy map attached to an interface can be modified.

Related Commands
policy-map-output — creates an output policy map.

service-queue
Assign a class map and QoS policy to different queues.

Syntax
service-queue queue-id [class-map class-map-name] [qos-policy qos-policy-name]
To remove the queue assignment, use the `no service-queue queue-id` command.

**Parameters**

- **queue-id**
  Enter the value used to identify a queue. The range is from 0 to 3 (four queues per interface; four queues are reserved for control traffic).

- **class-map class-map-name**
  (OPTIONAL) Enter the keyword `class-map` then the class map name assigned to the queue in character format (32 character maximum).
  
  NOTE: This option is available under `policy-map-input` only.

- **qos-policy qos-policy-name**
  (OPTIONAL) Enter the keywords `qos-policy` then the QoS policy name assigned to the queue in text format (32 characters maximum). This specifies the input QoS policy assigned to the queue under `policy-map-input` and output QoS policy under `policy-map-output` context.

**Defaults**

none

**Command Modes**

CONFIGURATION (conf-policy-map-in and conf-policy-map-out)

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

There are four queues per interface on the MXL switch. This command assigns a class map or QoS policy to different queues.

**Related Commands**

- `class-map` — identifies the class map.
- `service-policy input` — applies an input policy map to the selected interface.
- `service-policy output` — applies an output policy map to the selected interface.

---

**set**

Mark outgoing traffic with a differentiated service code point (DSCP) or dot1p value.

**Syntax**

```
set {ip-dscp value | mac-dot1p value}
```
show qos class-map

View the current class map information.

Syntax

show qos class-map [class-name]

Parameters

- **class-name** (Optional) Enter the name of a configured class map.

Defaults

- none

Command Modes

- EXEC
- EXEC Privilege

Command History

- **Version 8.3.16.1** Introduced on the MXL 10/40GbE Switch IO Module.

Example

Dell#show qos class-map

Class-map match-any CM
  Match ip access-group ACL

Related Commands

- **class-map** — identifies the class map.

show qos policy-map

View the QoS policy map information.

Syntax

show qos policy-map {summary [interface] | detail [interface]}

Parameters

- **summary**
- **interface** To view a policy map interface summary, enter the keyword summary and optionally one of the following keywords and slot/port or number information:
  - For a 40 Gigabit Ethernet interface, enter the keyword FortyGigabitEthernet then the slot/port information.
For a 10 Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.

detail interface

To view a policy map interface in detail, enter the keyword detail and optionally one of the following keywords and slot/port or number information:

- For a 40 Gigabit Ethernet interface, enter the keyword FortyGigabitEthernet then the slot/port information.
- For a 10 Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.

**Defaults**

none

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Example (IPv4)**

Dell#show qos policy-map detail gigabitethernet 0/0

Interface GigabitEthernet 4/1
Policy-map-input policy
Trust diffserv
Queue# Class-map-name Qos-policy-name
  0   -             q0
  1   CM1           q1
  2   CM2           q2
  3   CM3           q3
  4   CM4           q4
  5   CM5           q5
  6   CM6           q6
  7   CM7           q7
Dell#

**Example (Summary IPv4)**

Dell#sho qos policy-map summary

Interface policy-map-input policy-map-output
Gi 4/1   PM1        -
Gi 4/2   PM2        PMOut
Dell#

**show qos policy-map-input**

View the input QoS policy map details.

**Syntax**

show qos policy-map-input [policy-map-name] [class class-map-name] [qos-policy-input qos-policy-name]
show qos policy-map-input

View the output QoS policy map details.

Syntax

show qos policy-map-input [policy-map-name] [qos-policy-output qos-policy-name]

Parameters

- **policy-map-name**
  
Enter the policy map name.

- **qos-policy-output qos-policy-name**
  
Enter the keyword qos-policy-output then the QoS policy name.

Defaults

- none

Command Modes

- EXEC
- EXEC Privilege

Command History

- Introduced on the MXL 10/40GbE Switch IO Module.

Example

Dell#show qos policy-map-input

Policy-map-input PolicyMapInput
Aggregate Qos-policy-name AggPolicyIn
Queue# Class-map-name Qos-policy-name
0  ClassMap1 qosPolicyOutput
Dell#
Dell#show qos policy-map-output
Policy-map-output PolicyMapOutput
Aggregate Qos-policy-name AggPolicyOut
Queue# Qos-policy-name
  0 qosPolicyOutput
Dell#

show qos qos-policy-input

View the input QoS policy details.

Syntax
show qos qos-policy-input [qos-policy-name]

Parameters
qos-policy-name

Enter the QoS policy name.

Defaults
none

Command Modes
• EXEC
• EXEC Privilege

Command History
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Example
Dell#show qos qos-policy-input
Qos-policy-input QosInput
  Rate-police 100 50 peak 100 50
  Dscp 32
Dell#

show qos qos-policy-output

View the output QoS policy details.

Syntax
show qos qos-policy-output [qos-policy-name]

Parameters
qos-policy-name

Enter the QoS policy name.

Defaults
none

Command Modes
• EXEC
• EXEC Privilege
show qos statistics

View QoS statistics.

Syntax
show qos statistics {wred-profile [interface]} | [interface]

Parameters

wred-profile
Enter the keywords wred-profile and optionally one of the following keywords and slot/port or number information:

- For a 40–Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
- For a 10–Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.

interface
Enter one of the following keywords and slot/port or number information:

- For a 40–Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.

Defaults
none

Command Modes
- EXEC
- EXEC Privilege

Command History
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Example
Dell#show qos statistics
Interface Te 0/20
Queue# Matched Pkts
0    0
1    0
Usage Information

The following describes the show qos statistics command in the following example.

<table>
<thead>
<tr>
<th>Field (ED and EE)</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Queue #</td>
<td>Queue Number</td>
</tr>
<tr>
<td>Matched Pkts</td>
<td>The number of packets that matched the class-map criteria.</td>
</tr>
</tbody>
</table>

NOTE: When you configure trust, matched packet counters are not incremented in this field.

Example

Dell#show qos statistics wred-profile
Interface Te 0/20
Drop-statistic Dropped Pkts
  Green 0
  Yellow 0
  Out of Profile 0
Dell#

Usage Information

The following describes the show qos statistics command in the following example.

<table>
<thead>
<tr>
<th>Field (EF)</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Queue #</td>
<td>Queue Number</td>
</tr>
<tr>
<td>Drop-statistic</td>
<td>Drop statistics for green, yellow, and out-of-profile packets.</td>
</tr>
<tr>
<td>Dropped Pkts</td>
<td>The total of the number of packets dropped for green, yellow and out-of-profile.</td>
</tr>
</tbody>
</table>

Related Commands

- **clear qos statistics** — clears counters shown in show qos statistics.

**show qos wred-profile**

View the WRED profile details.

**Syntax**

```
show qos wred-profile wred-profile-name
```

**Parameters**

- `wred-profile-name` 
  Enter the WRED profile name to view the profile details.

**Defaults** 

- none
test cam-usage

Check the Input Policy Map configuration for the CAM usage.

Syntax

test cam-usage service-policy input policy-map stack-unit {number | [all]}

Parameters

- **policy-map**: Enter the policy map name.
- **stack-unit number**: (OPTIONAL) Enter the keywords stack-unit then the stack-unit number.
- **stack-unit all**: (OPTIONAL) Enter the keywords stack-unit all all to indicate all the stack-units.

Defaults

none

Command Modes

EXEC

Command History

- **Version 8.3.16.1**: Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

This feature allows you to determine if the CAM has enough space available before applying the configuration on an interface.

An input policy map with both Trust and Class-map configuration, the Class-map rules are ignored and only the Trust rule is programmed in the CAM. In such an instance, the Estimated CAM output column contains the size of the CAM space required for the Trust rule and not the Class-map rule.

The following describes the test cam-usage service-policy input policy-map linecard command shown in the following example.
**Field** | **Description**
---|---
Linecard | Indicates the line card slot number.
Portpipe | Indicates the portpipe number.
CAM Partition | The CAM space where the rules are added.
Available CAM | Indicates the free CAM space, in the partition, for the classification rules.

**NOTE:** The CAM entries reserved for the default rules are not included in the Available CAM column; free entries, from the default rules space, cannot be used as a policy map for the classification rules.

**Estimated CAM per Port**
Indicates the number of free CAM entries required (for the classification rules) to apply the input policy map on a single interface.

**NOTE:** The CAM entries for the default rule are not included in this column; a CAM entry for the default rule is always dedicated to a port and is always available for that interface.

**Status (Allowed ports)**
Indicates if the input policy map configuration on an interface belonging to a linecard/port-pipe is successful — Allowed (n) — or not successful — Exception. The allowed number (n) indicates the number of ports in that port-pipe on which the Policy Map can be applied successfully.

**NOTE:** In a Layer 2 Policy Map, IPv4/IPv6 rules are not allowed; therefore, the output contains only L2ACL CAM partition entries.

**Example**
Dell# test cam-usage service-policy input pmap_l2 linecard all

For a L2 Input Policy Map pmap_l2, the output must be as follows,

<table>
<thead>
<tr>
<th>Linecard</th>
<th>Portpipe</th>
<th>CAM Partition</th>
<th>Available CAM</th>
<th>Estimated CAM per Port</th>
</tr>
</thead>
<tbody>
<tr>
<td>(Allowed ports)</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>0</td>
<td>0</td>
<td>L2ACL</td>
<td>500</td>
<td>200</td>
</tr>
<tr>
<td>Allowed (2)</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>0</td>
<td>1</td>
<td>L2ACL</td>
<td>100</td>
<td>200</td>
</tr>
<tr>

</table>
Dell#
trust

Specify dynamic classification (DSCP) or dot1p to trust.

Syntax

trust {diffserv [fallback] | dot1p [fallback]}

Parameters

diffserv
Enter the keyword diffserv to specify trust of DSCP markings.
dot1p
Enter the keyword dot1p to specify trust dot1p configuration.

fallback
Enter the keyword fallback to classify packets according to their DSCP value as a secondary option in case no match occurs against the configured class maps.

Defaults

none

Command Modes

CONFIGURATION (conf-policy-map-in)

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

When you configure trust, matched bytes/packets counters are not incremented in the show qos statistics command.

Dynamic mapping honors packets marked according to the standard definitions of DSCP. The following lists the default mapping.

<table>
<thead>
<tr>
<th>DSCP/CP hex Range (XXX)</th>
<th>DSCP Definition</th>
<th>Traditional IP Precedence</th>
<th>MXL Switch Internal Queue ID</th>
<th>DSCP/CP Decimal</th>
</tr>
</thead>
<tbody>
<tr>
<td>111XXX</td>
<td>Network Control</td>
<td>3</td>
<td>48–63</td>

</tr>
<tr>
<td>000XXX</td>
<td>BE (Best Effort)</td>
<td>Best Effort</td>
<td>0</td>
<td>0–15</td>
</tr>
</tbody>
</table>
wred

Designate the WRED profile to yellow or green traffic.

Syntax

```
wred [{yellow | green} profile-name] ecn
```

To remove the WRED drop precedence, use the `no wred {yellow | green} [profile-name]` command.

Parameters

- **yellow | green**
  - Enter the keyword `yellow` for yellow traffic. A DSCP value of `xxx110` and `xxx100` maps to yellow.
  - Enter the keyword `green` for green traffic. A DSCP value of `xxx010` maps to green.

- **profile-name**
  - Enter your WRED profile name in character format (16 character maximum). Or use one of the five pre-defined WRED profile names.
  - Pre-defined Profiles: `wred_drop`, `wred_ge_y`, `wred_ge_g`, `wred_teng_y`, `wred_teng_`.

- **ecn**
  - When you configure `wred ecn <cr>` command, instead of dropping the packets exponentially, Explicit Congestion Notification (ECN) marking is made on the packets.

Defaults

none

Command Modes

CONFIGURATION (conf-qos-policy-out)

Command History

Version 8.3.16.1
Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

To assign drop precedence to green or yellow traffic, use this command. If there is no honoring enabled on the input, all the traffic defaults to green drop precedence.

Related Commands

- `wred-profile` — creates a WRED profile and name that profile.
- `trust` — defines the dynamic classification to trust DSCP.

wred-profile

Create a WRED profile and name the profile.

Syntax

```
wred-profile wred-profile-name
```

To remove an existing WRED profile, use the `no wred-profile command`.
Parameters

**wred-profile-name**

Enter your WRED profile name in character format (16 character maximum). Or use one of the pre-defined WRED profile names. You can configure up to 26 WRED profiles plus the five pre-defined profiles, for a total of 31 WRED profiles.

Pre-defined Profiles: wred_drop, wred_ge_y, wred_ge_g, wred_teng_y, wred_teng_g.

**Defaults**

The five pre-defined WRED profiles. When you configure a new profile, the minimum and maximum threshold defaults to predefined wred_ge_g values.

**Command Modes**

CONFIGURATION

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

Use the default pre-defined profiles or configure your own profile. You cannot delete the pre-defined profiles or their default values. This command enables WRED configuration mode — (conf-wred).
Routing Information Protocol (RIP)

Routing information protocol (RIP) is a distance vector routing protocol. The Dell Networking operating software supports both RIP version 1 (RIPv1) and RIP version 2 (RIPv2).

The implementation of RIP is based on IETF RFCs 2453 and RFC 1058. For more information about configuring RIP, refer to the Dell Networking OS Configuration Guide.

auto-summary

Restore the default behavior of automatic summarization of subnet routes into network routes. This command applies only to RIP version 2.

Syntax

auto-summary

To send sub-prefix routing information, use the no auto-summary command.

Defaults

Enabled.

Command Modes

ROUTER RIP

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

clear ip rip

Update all the RIP routes in the routing table.

Syntax

clear ip rip

Command Modes

EXEC Privilege

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

This command triggers updates of the main RIP routing tables.
**debug ip rip**

Examine RIP routing information for troubleshooting.

**Syntax**

default-information originate [always] [metric metric-value] [route-map map-name]

To return to the default values, use the no default-information originate command.

**Parameters**

- **always** (OPTIONAL) Enter the keyword always to enable the switch software to always advertise the default route.

**Command Modes**

EXEC Privilege

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.
metric metric-value
(OPTIONAL) Enter the keyword metric then a number as the metric value. The range is from 1 to 16. The default is 1.

route-map map-name
(OPTIONAL) Enter the keywords route-map then the name of a configured route-map.

Defaults

Command Modes
ROUTER RIP

Command History
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
The default route must be present in the switch routing table for the default-information originate command to take effect.

default-metric

Change the default metric for routes. To ensure that all redistributed routes use the same metric value, use this command with the redistribute command.

Syntax
default-metric number

To return the default metric to the original values, use the no default-metric command.

Parameters
number Specify a number. The range is from 1 to 16. The default is 1.

Defaults
1

Command Modes
ROUTER RIP

Command History
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
This command ensures that route information being redistributed is converted to the same metric value.

Related Commands
redistribute — allows you to redistribute routes learned by other methods.

description

Enter a description of the RIP routing protocol.

Syntax
description {description}
To remove the description, use the `no description {description}` command.

**Parameters**

`description` Enter a description to identify the RIP protocol (80 characters maximum).

**Defaults**

none

**Command Modes**

ROUTER RIP

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**

`router rip` — enters ROUTER mode on the switch.

---

**distance**

Assign a weight (for prioritization) to all routes in the RIP routing table or to a specific route. Lower weights ('administrative distance') are preferred.

**Syntax**

```
distance weight [ip-address mask [prefix-name]]
```

To return to the default values, use the `no distance weight [ip-address mask]` command.

**Parameters**

`weight` Enter a number from 1 to 255 for the weight (for prioritization). The default is 120.

`ip-address` (OPTIONAL) Enter the IP address, in dotted decimal format (A.B.C.D), of the host or network to receive the new distance metric.

`mask` If you enter an IP address, also enter a mask for that IP address, in either dotted decimal format or /prefix format (/x).

`prefix-name` (OPTIONAL) Enter a configured prefix list name.

**Defaults**

weight = 120

**Command Modes**

ROUTER RIP

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**

`default-metric` — assigns one distance metric to all routes learned using the `redistribute` command.
**distribute-list in**

Configure a filter for incoming routing updates.

Syntax  
distribute-list prefix-list-name in [interface]

To delete the filter, use the no distribute-list prefix-list-name in command.

Parameters  

<table>
<thead>
<tr>
<th>prefix-list-name</th>
<th>Enter the name of a configured prefix list.</th>
</tr>
</thead>
<tbody>
<tr>
<td>interface</td>
<td>(OPTIONAL) Identifies the interface type slot/port as one of the following:</td>
</tr>
<tr>
<td></td>
<td>• For a Port Channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.</td>
</tr>
<tr>
<td></td>
<td>• For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.</td>
</tr>
<tr>
<td></td>
<td>• For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.</td>
</tr>
<tr>
<td></td>
<td>• For a VLAN, enter the keyword vlan then a number from 1 to 4094.</td>
</tr>
</tbody>
</table>

Defaults  
Not configured.

Command Modes  
ROUTER RIP

Command History  
Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.

Related Commands  
ip prefix-list — enters PREFIX-LIST mode and configures a prefix list.

**distribute-list out**

Configure a filter for outgoing routing updates.

Syntax  
distribute-list prefix-list-name out [interface | bgp | connected | ospf | static]

To delete the filter, use the no distribute-list prefix-list-name out command.

Parameters  

<table>
<thead>
<tr>
<th>prefix-list-name</th>
<th>Enter the name of a configured prefix list.</th>
</tr>
</thead>
<tbody>
<tr>
<td>interface</td>
<td>(OPTIONAL) Identifies the interface type slot/port as one of the following:</td>
</tr>
</tbody>
</table>
- For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
- For a VLAN, enter the keyword `vlan` then a number from 1 to 4094.

`connected` (OPTIONAL) Enter the keyword `connected` to filter only directly connected routes.
`ospf` (OPTIONAL) Enter the keyword `ospf` to filter all OSPF routes.
`static` (OPTIONAL) Enter the keyword `static` to filter manually configured routes.

Defaults
Not configured.

Command Modes
`ROUTER RIP`

Command History
`Version 8.3.16.1` Introduced on the MXL 10/40GbE Switch IO Module.

Related Commands
- `ip prefix-list` — enters PREFIX-LIST mode and configures a prefix list.
- `ip prefix-list` — enters PREFIX-LIST mode and configures a prefix list.

**ip poison-reverse**

Set the prefix of the RIP routing updates to the RIP infinity value.

**Syntax**

```
ip poison-reverse
```

To disable poison reverse, use the `no ip poison-reverse` command.

**Defaults**

Disabled.

**Command Modes**

`INTERFACE`

**Command History**

`Version 8.3.16.1` Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**

- `ip split-horizon` — sets the RIP routing updates to exclude routing prefixes.
ip rip receive version

To receive specific versions of RIP, set the interface. The RIP version you set on the interface overrides the version command in ROUTER RIP mode.

**Syntax**

```plaintext
ip rip receive version [1] [2]
```

To return to the default, use the `no ip rip receive version` command.

**Parameters**

- **1** (OPTIONAL) Enter the number 1 for RIP version 1.
- **2** (OPTIONAL) Enter the number 2 for RIP version 2.

**Defaults**

RIPv1 and RIPv2

**Command Modes**

INTERFACE

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

If you want the interface to receive both versions of RIP, use the `ip rip receive version 1 2` command.

**Related Commands**

- `ip rip send version` — sets the RIP version for sending RIP traffic on an interface.
- `version` — sets the RIP version the switch software uses.

ip rip send version

To send a specific version of RIP, set the interface. The version you set on the interface overrides the version command in ROUTER RIP mode.

**Syntax**

```plaintext
ip rip send version [1] [2]
```

To return to the default value, use the `no ip rip send version` command.

**Parameters**

- **1** (OPTIONAL) Enter the number 1 for RIP version 1. The default is RIPv1.
- **2** (OPTIONAL) Enter the number 2 for RIP version 2.

**Defaults**

RIPv1

**Command Modes**

INTERFACE

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.
Usage
To enable the interface to send both version of RIP packets, use the `ip rip send version 1 2` command.

Related
Commands
- `ip rip receive version` — sets the RIP version for the interface to receive traffic.
- `version` — sets the RIP version for the switch software.

ip split-horizon
Enable split-horizon for RIP data on the interface. As described in RFC 2453, the split-horizon scheme prevents any routes learned over a specific interface to be sent back out that interface.

Syntax
```
ip split-horizon
```
To disable split-horizon, use the `no ip split-horizon` command.

Defaults
Enabled

Command Modes
INTERFACE

Command History
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Related
Commands
- `ip poison-reverse` — sets the prefix for RIP routing updates.

maximum-paths
Set RIP to forward packets over multiple paths.

Syntax
```
maximum-paths number
```
To return to the default values, use the `no maximum-paths` commands.

Parameters
- `number` Enter the number of paths. The range is from 1 to 16. The default is 4 paths.

Defaults
4

Command Modes
ROUTER RIP

Command History
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.
Usage Information
RIP supports a maximum of 16 ECMP paths.

**neighbor**
Define a neighbor router with which to exchange RIP information.

**Syntax**
neighbor ip-address
To delete a neighbor setting, use the no neighbor ip-address command.

**Parameters**

- **ip-address**
  Enter the IP address, in dotted decimal format, of a router with which to exchange information.

**Defaults**
Not configured.

**Command Modes**
ROUTER RIP

**Command History**
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**
When a neighbor router is identified, unicast data exchanges occur. Multiple neighbor routers are possible.

To ensure that only specific interfaces are receiving and sending data, use the passive-interface command with the neighbor command.

**Related Commands**

- passive-interface — sets the interface to only listen to RIP broadcasts.

**network**
Enable RIP for a specified network. To enable RIP on all networks connected to the switch, use this command.

**Syntax**
network ip-address
To disable RIP for a network, use the no network ip-address command.

**Parameters**

- **ip-address**
  Specify an IP network address in dotted decimal format. You cannot specify a subnet.

**Defaults**
No RIP network is configured.
offset-list

Specify a number to add to the incoming or outgoing route metrics learned using RIP.

Syntax

```
offset-list prefix-list-name {in | out} offset [interface]
```

To delete an offset list, use the `no offset-list prefix-list-name {in | out} offset [interface]` command.

Parameters

- **prefix-list-name**: Enter the name of an established Prefix list to determine which incoming routes are modified.
- **offset**: Enter a number from zero (0) to 16 to be applied to the incoming route metric matching the access list specified. If you set an offset value to zero (0), no action is taken.
- **interface** (OPTIONAL) Enter the following keywords and slot/port or number information:
  - For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
  - For a VLAN, enter the keyword `vlan` then a number from 1 to 4094.

Defaults

Not configured.

Command Modes

ROUTER RIP

Command History

Version 8.3.16.1 (Introduced on the MXL 10/40GbE Switch IO Module.)

Usage Information

When the offset metric is applied to an interface, that value takes precedence over an offset value that is not extended to an interface.
Related Commands

- `ip prefix-list` — enters PREFIX-LIST mode and configure a prefix list.

output-delay

Set the interpacket delay of successive packets to the same neighbor.

**Syntax**

```
output-delay delay
```

To return to the switch software defaults for interpacket delay, use the `no output-delay` command.

**Parameters**

- `delay`  
  Specify a number of milliseconds as the delay interval. The range is from 8 to 50.

**Defaults**

Not configured.

**Command Modes**

ROUTER RIP

**Command History**

- **Version 8.3.16.1**  
  Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

This command is intended for low-speed interfaces.

passive-interface

Suppress routing updates on a specified interface.

**Syntax**

```
passive-interface interface
```

To delete a passive interface, use the `no passive-interface interface` command.

**Parameters**

- `interface`  
  Enter the following information:
  
  - For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
  - For a VLAN, enter the keyword `vlan` then a number from 1 to 4094.
Defaults
Not configured.

Command Modes
ROUTER RIP

Command History
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
Although the passive interface does not send or receive routing updates, the network on that interface still includes in RIP updates sent using other interfaces.

Related Commands
neighbor — enables RIP for a specified network.

network — defines a neighbor.

redistribute

Redistribute information from other routing instances.

Syntax
redistribute {connected | static}

To disable redistribution, use the no redistribute {connected | static} command.

Parameters
connected Enter the keyword connected to specify that information from active routes on interfaces is redistributed.

static Enter the keyword static to specify that information from static routes is redistributed.

Defaults
Not configured.

Command Modes
ROUTER RIP

Command History
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
To redistribute the default route (0.0.0.0/0), configure the default-information originate command.

Related Commands
default-information originate — generates a default route for RIP traffic.
**redistribute ospf**

Redistribute routing information from an OSPF process.

**Syntax**

redistribute ospf process-id [match external {1 | 2} | match internal | metric metric-value] [route-map map-name]

To disable redistribution, use the no redistribute ospf process-id [match external {1 | 2} | match internal | metric metric-value] [route-map map-name] command.

**Parameters**

- **process-id**
  - Enter a number that corresponds to the OSPF process ID to redistribute. The range is from 1 to 65535.
- **match external**
  - (OPTIONAL) Enter the keywords match external then the numbers 1 or 2 to indicated that external 1 routes or external 2 routes should be redistributed.
- **match internal**
  - (OPTIONAL) Enter the keywords match internal to indicate that internal routes should be redistributed.
- **metric metric-value**
  - (OPTIONAL) Enter the keyword metric then a number as the metric value. The range is from 0 to 16.
- **route-map map-name**
  - (OPTIONAL) Enter the keywords route-map then the name of a configured route map.

**Defaults**

Not configured.

**Command Modes**

ROUTER RIP

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

---

**router rip**

To configure and enable RIP, enter ROUTER RIP mode.

**Syntax**

router rip

To disable RIP, use the no router rip command.

**Defaults**

Disabled.

**Command Modes**

CONFIGURATION

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.
### show config

Display the changes you made to the RIP configuration. The default values are not shown.

**Syntax**

`show config`

**Command Modes**

ROUTER RIP

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Example**

Dell(conf-router_rip)#show config

```
!
router rip
   network 172.31.0.0
   passive-interface GigabitEthernet 0/1
```

### show ip rip database

Display the routes that RIP learns. If the switch learned no RIP routes, no output is generated.

**Syntax**

`show ip rip database [ip-address mask]`

**Parameters**

- **ip-address** (OPTIONAL) Specify an IP address in dotted decimal format to view RIP information on that network only. If you enter an IP address, also enter a mask for that IP address.
- **mask** (OPTIONAL) Specify a mask, in /network format, for the IP address.

**Command Modes**

EXEC Privilege

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.
Usage Information

The following describes the `show ip rip database` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Total number of routes in RIP database</td>
<td>Displays the number of RIP routes stored in the RIP database.</td>
</tr>
<tr>
<td>100.10.10.0/24 directly connected</td>
<td>Lists the routes directly connected.</td>
</tr>
<tr>
<td>150.100.0.0 redistributed</td>
<td>Lists the routes learned through redistribution.</td>
</tr>
<tr>
<td>209.9.16.0/24...</td>
<td>Lists the routes and the sources advertising those routes.</td>
</tr>
</tbody>
</table>

Example

Dell#show ip rip database
Total number of routes in RIP database: 1624
204.250.54.0/24
    [50/1] via 192.14.1.3, 00:00:12, GigabitEthernet 9/15
204.250.54.0/24 auto-summary
203.250.49.0/24
    [50/2] via 1.1.18.2, 00:00:14, Vlan 18
    [50/2] via 1.1.130.2, 00:00:12, Port-channel 30
210.250.40.0/24 auto-summary
210.250.40.0/24
    [50/2] via 1.1.118.2, 00:00:14, Vlan 18
    [50/2] via 1.1.130.2, 00:00:12, Port-channel 30
207.250.53.0/24 auto-summary
207.250.53.0/24
    [50/2] via 1.1.120.2, 00:00:55, Port-channel 20
    [50/2] via 1.1.130.2, 00:00:12, Port-channel 30
    [50/2] via 1.1.10.2, 00:00:18, Vlan 10
207.250.53.0/24 auto-summary

show running-config rip

Display the current RIP configuration.

Syntax

```
show running-config rip
```

Defaults

none

Command Modes

EXEC Privilege

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.
Example

```plaintext
show running-config rip
!
router rip
distribute-list Test1 in
distribute-list Test21 out
network 10.0.0.0
passive-interface GigabitEthernet 2/0
neighbor 20.20.20.20
redistribute ospf 999
version 2
```

timers basic

Manipulate the RIP timers for routing updates, invalid, holddown times, and flush time.

**Syntax**

`timers basic update invalid holddown flush`

To return to the default settings, use the no `timers basic` command.

**Parameters**

- `update` Enter the number of seconds to specify the rate at which RIP routing updates are sent. The range is from zero (0) to 4294967295. The default is 30 seconds.
- `invalid` Enter the number of seconds to specify the time interval before routing updates are declared invalid or expired. The invalid value should be at least three times the update timer value. The range is from zero (0) to 4294967295. The default is 180 seconds.
- `holddown` Enter the number of seconds to specify a time interval during which the route is marked as unreachable but still sending RIP packets. The holddown value should be at least three times the update timer value. The range is from zero (0) to 4294967295. The default is 180 seconds.
- `flush` Enter the number of seconds to specify the time interval during which the route is advertised as unreachable. When this interval expires, the route is flushed from the routing table. The flush value should be greater than the update value. The range is from zero (0) to 4294967295. The default is 240 seconds.

**Defaults**

- `update = 30 seconds`
- `invalid = 180 seconds`
- `holddown = 180 seconds`
- `flush = 240 seconds`
version

Specify either RIP version 1 or RIP version 2.

Syntax

```
version {1 | 2}
```

To return to the default version setting, use the `no version` command.

Parameters

- **1**: Enter the keyword 1 to specify RIP version 1.
- **2**: Enter the keyword 2 to specify RIP version 2.

Defaults

The system sends RIPv1 and receives RIPv1 and RIPv2.

Command Modes

ROUTER RIP

Command History

- **Version 8.3.16.1**: Introduced on the MXL 10/40GbE Switch IO Module.

Related Commands

- `ip rip receive version`: sets the RIP version the interface receives.
- `ip rip send version`: sets the RIP version the interface sends.
Remote Monitoring (RMON)

The Dell Networking operating software remote monitoring (RMON) is based on IEEE standards, providing both 32-bit and 64-bit monitoring and long-term statistics collection. RMON supports the following RMON groups, as defined in RFC-2819, RFC-3273, and RFC-3434:

- Ethernet Statistics Table; RFC-2819
- Ethernet Statistics High-Capacity Table; RFC-3273, 64bits
- Ethernet History Control Table; RFC-2819
- Ethernet History Table; RFC-2819
- Ethernet History High-Capacity Table; RFC-3273, 64bits
- Alarm Table; RFC-2819
- High-Capacity Alarm Table (64bits); RFC-3434, 64bits
- Event Table; RFC-2819
- Log Table; RFC-2819

RMON does not support the following statistics:

- etherStatsCollisions
- etherHistoryCollisions
- etherHistoryUtilization

**NOTE:** Only simple network management protocol (SNMP) GET/GETNEXT access is supported. Configure RMON using the RMON commands. Collected data is lost during a chassis reboot.

`rmon alarm`

Set an alarm on any MIB object.

**Syntax**

```
  rmon alarm number variable interval {delta | absolute} rising-threshold value event-number falling-threshold value event-number [owner string]
```

To disable the alarm, use the `no rmon alarm number` command.

**Parameters**

- `number` Enter the alarm integer number from 1 to 65535. The value must be unique in the RMON alarm table.
- `variable` Enter the MIB object to monitor. The variable must be in the SNMP OID format; for example, 1.3.6.1.2.1.1.3. The object type must be a 32-bit integer.
**interval**

Time, in seconds, the alarm monitors the MIB variables; this is the alarmSampleType in the RMON alarm table. The range is from 5 to 3600 seconds.

**delta**

Enter the keyword `delta` to test the change between MIB variables. This is the alarmSampleType in the RMON alarm table.

**absolute**

Enter the keyword `absolute` to test each MIB variable directly. This is the alarmSampleType in the RMON alarm table.

**rising-threshold value event-number**

Enter the keywords `rising-threshold` then the value (32 bit) the rising-threshold alarm is either triggered or reset. Then enter the event-number to trigger when the rising threshold exceeds its limit. This value is the same as the alarmRisingEventIndex or alarmTable of the RMON MIB. If there is no corresponding rising-threshold event, the value is zero.

**falling-threshold value event-number**

Enter the keywords `falling-threshold` then the value (32 bit) the falling-threshold alarm is either triggered or reset. Then enter the event-number to trigger when the falling threshold exceeds its limit. This value is the same as the alarmFallingEventIndex or the alarmTable of the RMON MIB. If there is no corresponding falling-threshold event, the value is zero.

**owner string**

(Optional) Enter the keyword `owner` then the owner name to specify an owner for the alarm. This is the alarmOwner object in the alarmTable of the RMON MIB.

**Defaults**

**owner**

**Command Modes**

CONFIGURATION

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

---

**rmon collection history**

Enable the RMON MIB history group of statistics collection on an interface.

**Syntax**

```
rmon collection history {controlEntry integer} [owner name] [buckets number] [interval seconds]
```

To remove a specified RMON history group of statistics collection, use the `no rmon collection history {controlEntry integer} command.`
### Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>controlEntry</td>
<td>Enter the keyword controlEntry to specify the RMON group of statistics using a value. Then enter an integer value from 1 to 65535 that identifies the RMON group of statistics. The integer value must be a unique index in the RMON history table.</td>
</tr>
<tr>
<td>integer</td>
<td></td>
</tr>
<tr>
<td>owner name</td>
<td>(OPTIONAL) Enter the keyword owner then the owner name to record the owner of the RMON group of statistics.</td>
</tr>
<tr>
<td>buckets number</td>
<td>(OPTIONAL) Enter the keyword buckets then the number of buckets for the RMON collection history group of statistics. The bucket range is from 1 to 1000. The default is 50.</td>
</tr>
<tr>
<td>interval seconds</td>
<td>(OPTIONAL) Enter the keyword interval then the number of seconds in each polling cycle. The range is from 5 to 3600 seconds. The default is 1800 seconds.</td>
</tr>
</tbody>
</table>

### Defaults

none

### Command Modes

CONFIGURATION INTERFACE (config-if)

### Command History

Version 8.3.16.1  
Introduced on the MXL 10/40GbE Switch IO Module.

---

**rmon collection statistics**

Enable RMON MIB statistics collection on an interface.

**Syntax**

```
rmon collection statistics {controlEntry integer} [owner name]
```

To remove RMON MIB statistics collection on an interface, use the **no rmon collection statistics {controlEntry integer}** command.

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>controlEntry</td>
<td>Enter the keyword controlEntry to specify the RMON group of statistics using a value. Then enter an integer value from 1 to 65535 that identifies the RMON Statistic Table. The integer value must be a unique in the RMON statistic table.</td>
</tr>
<tr>
<td>integer</td>
<td></td>
</tr>
<tr>
<td>owner name</td>
<td>(OPTIONAL) Enter the keyword owner then the owner name to record the owner of the RMON group of statistics.</td>
</tr>
</tbody>
</table>

### Defaults

none

### Command Modes

CONFIGURATION INTERFACE (config-if)

### Command History

Version 8.3.16.1  
Introduced on the MXL 10/40GbE Switch IO Module.
rmon event

Add an event in the RMON event table.

Syntax

rmon event number [log] [trap community] [description string] [owner name]

To disable RMON on an interface, use the no rmon event number [log] [trap community] [description string] command.

Parameters

- **number**: Assign an event number in integer format from 1 to 65535. The number value must be unique in the RMON event table.
- **log** (OPTIONAL): Enter the keyword log to generate an RMON log entry. The log entry is triggered and sets the eventType in the RMON MIB to log or log-and-trap. The default is No log.
- **trap community** (OPTIONAL): Enter the keyword trap then an SNMP community string to configure the eventType setting in the RMON MIB. This keyword sets either snmp-trap or log-and-trap. The default is public.
- **description string** (OPTIONAL): Enter the keyword description then a string describing the event.
- **owner name** (OPTIONAL): Enter the keyword owner then the name of the owner of this event.

Defaults

As noted in the Parameters section.

Command Modes

CONFIGURATION

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

rmon hc-alarm

Set an alarm on any MIB object.

Syntax

rmon hc-alarm number variable interval {delta | absolute} rising-threshold value event-number falling-threshold value event-number [owner string]

To disable the alarm, use the no rmon hc-alarm number command.

Parameters

- **number**: Enter the alarm integer number from 1 to 65535. The value must be unique in the RMON alarm table.
- **variable**: The MIB object to monitor. The variable must be in the SNMP OID format; for example, 1.3.6.1.2.1.1.3 The object type must be a 64-bit integer.
**interval**
Time, in seconds, the alarm monitors the MIB variables; this is the alarmSampleType in the RMON alarm table. The range is from 5 to 3600 seconds.

**delta**
Enter the keyword `delta` to test the change between MIB variables. This is the alarmSampleType in the RMON alarm table.

**absolute**
Enter the keyword `absolute` to test each MIB variable directly. This is the alarmSampleType in the RMON alarm table.

**rising-threshold value event-number**
Enter the keywords `rising-threshold` then the value (64 bit) the rising-threshold alarm is either triggered or reset. Then enter the event-number to trigger when the rising threshold exceeds its limit. This value is the same as the alarmRisingEventIndex or alarmTable of the RMON MIB. If there is no corresponding rising-threshold event, the value is zero.

**falling-threshold value event-number**
Enter the keywords `falling-threshold` then the value (64 bit) the falling-threshold alarm is either triggered or reset. Then enter the event-number to trigger when the falling threshold exceeds its limit. This value is the same as the alarmFallingEventIndex or the alarmTable of the RMON MIB. If there is no corresponding falling-threshold event, the value is zero.

**owner string**
(Optional) Enter the keyword `owner` then the owner name to specify an owner for the alarm. This is the alarmOwner object in the alarmTable of the RMON MIB.

**show rmon**
Display the RMON running status including the memory usage.

**Syntax**
```
show rmon
```

**Defaults**
none

**Command Modes**
EXEC

**Command History**
Introduced on the MXL 10/40GbE Switch IO Module.
show rmon alarms

Display the contents of the RMON alarm table.

Syntax
show rmon alarms [index] [brief]

Parameters
index  (OPTIONAL) Enter the table index number to display just that entry.
brief  (OPTIONAL) Enter the keyword brief to display the RMON alarm table in an easy-to-read format.

Defaults
none

Command Modes
EXEC

Command History
Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.

Example
Dell# show rmon alarm 1
RMON alarm entry 1
sample Interval: 5
object: 1.3.6.1.2.1.1.3
sample type: absolute value.
value: 255161
alarm type: rising or falling alarm.
rising threshold: 1, RMON event index: 1
falling threshold: 501, RMON event index: 501
alarm owner: 1
alarm status: OK
Dell#

Example (Brief)
Dell# show rmon alarm br
index  SNMP OID
-----------------------
1  1.3.6.1.2.1.1.3
2  1.3.6.1.2.1.1.3
3  1.3.6.1.2.1.1.3
4  1.3.6.1.2.1.1.3
5  1.3.6.1.2.1.1.3
show rmon events

Display the contents of the RMON event table.

**Syntax**

```
show rmon events [index] [brief]
```

**Parameters**

- **index** (OPTIONAL) Enter the table index number to display just that entry.
- **brief** (OPTIONAL) Enter the keyword `brief` to display the RMON event table in an easy-to-read format.

**Defaults**

none

**Command Modes**

EXEC

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Example (Index)**

Dell#show rmon event 1
RMON event entry 1
  description: 1
  event type: LOG and SNMP TRAP.
  event community: public
  event last time sent: none
  event owner: 1
  event status: OK
Dell#

**Example (Brief)**

Dell#show rmon event br

```
index    description
---------------------
  1        1
  2        2
  3        3
  4        4
```
show rmon hc-alarm

Display the contents of RMON High-Capacity alarm table.

Syntax

```
show rmon hc-alarm [index] [brief]
```

Parameters

- **index** (OPTIONAL) Enter the table index number to display just that entry.
- **brief** (OPTIONAL) Enter the keyword brief to display the RMON High-Capacity alarm table in an easy-to-read format.

Defaults

none

Command Modes

EXEC

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Example

```
Dell\# show rmon hc-alarm 1
RMON high-capacity alarm entry 1
  object: 1.3.6.1.2.1.1.3
  sample interval: 5
  sample type: absolute value.
  value: 185638
  alarm type: rising or falling alarm.
  alarm rising threshold value: positive.
  rising threshold: 1001, RMON event index: 1
  alarm falling threshold value: positive.
  falling threshold: 999, RMON event index: 6
  alarm sampling failed 0 times.
  alarm owner: 1
  alarm storage type: non-volatile.
  alarm status: OK
Dell\#
```
Example (Brief)

Dell#show rmon hc-alarm brief
index SNMP OID
----------------------------------
1 1.3.6.1.2.1.1.3
2 1.3.6.1.2.1.1.3
3 1.3.6.1.2.1.1.3
4 1.3.6.1.2.1.1.3
5 1.3.6.1.2.1.1.3
Dell#

show rmon history

Display the contents of the RMON Ethernet history table.

Syntax

show rmon history [index] [brief]

Parameters

index (OPTIONAL) Enter the table index number to display just that entry.

brief (OPTIONAL) Enter the keyword brief to display the RMON Ethernet history table in an easy-to-read format

Defaults

none

Command Modes

EXEC

Command History

Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.

Example (Index)

Dell#show rmon history 6001
RMON history control entry 6001
 interface: ifIndex.100974631 GigabitEthernet 2/0
 bucket requested: 1
 bucket granted: 1
 sampling interval: 5 sec
 owner: 1
 status: OK
 Dell#

Example (Brief)

Dell#show rmon history brief
index ifIndex interface
----------------------------------
6001 100974631 GigabitEthernet 2/0
6002 100974631 GigabitEthernet 2/0
6003 101236775 GigabitEthernet 2/1
6004 101236775 GigabitEthernet 2/1
9001 134529054 GigabitEthernet 3/0
9002 134529054 GigabitEthernet 3/0
9003 134791198 GigabitEthernet 3/1
9004 134791198 GigabitEthernet 3/1
Dell#
show rmon log

Display the contents of the RMON log table.

Syntax

```
show rmon log [index] [brief]
```

Parameters

- `index` (OPTIONAL) Enter the table index number to display just that entry.
- `brief` (OPTIONAL) Enter the keyword `brief` to display the RMON log table in an easy-to-read format.

Defaults

none

Command Modes

EXEC

Command History

- Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The log table has a maximum of 500 entries. If the log exceeds that maximum, the oldest log entry is purged to allow room for the new entry.

Example

```
Dell# show rmon log 2
RMON log entry, alarm table index 2, log index 1
  log time: 14638 (THU AUG 12 22:10:40 2004)
  description: 2
Dell#
```

```
Dell# show rmon log br
  eventIndex     description
  ----------------------------
    2              2
    4              4
Dell#
```

show rmon statistics

Display the contents of RMON Ethernet statistics table.

Syntax

```
show rmon statistics [index] [brief]
```

Parameters

- `index` (OPTIONAL) Enter the table index number to display just that entry.
- `brief` (OPTIONAL) Enter the keyword `brief` to display the RMON Ethernet statistics table in an easy-to-read format.

Defaults

none
Example

Dell#show rmon statistics 6001
RMON statistics entry 6001
    interface: ifIndex.100974631 GigabitEthernet 2/0
    packets dropped: 0
    bytes received: 0
    packets received: 0
    broadcast packets: 0
    multicast packets: 0
    CRC error: 0
    under-size packets: 0
    over-size packets: 0
    fragment errors: 0
    jabber errors: 0
    collision: 0
    64bytes packets: 0
    65-127 bytes packets: 0
    128-255 bytes packets: 0
    256-511 bytes packets: 0
    512-1023 bytes packets: 0
    1024-1518 bytes packets: 0
    owner: 1
    status: OK
    <high-capacity data>
    HC packets received overflow: 0
    HC packets received: 0
    HC bytes received overflow: 0
    HC bytes received: 0
    HC 64bytes packets overflow: 0
    HC 64bytes packets: 0
    HC 65-127 bytes packets overflow: 0
    HC 65-127 bytes packets: 0
    HC 128-255 bytes packets overflow: 0
    HC 128-255 bytes packets: 0
    HC 256-511 bytes packets overflow: 0
    HC 256-511 bytes packets: 0
    HC 512-1023 bytes packets overflow: 0
    HC 512-1023 bytes packets: 0
    HC 1024-1518 bytes packets overflow: 0
    HC 1024-1518 bytes packets: 0
Dell#

Example (Brief)

Dell#show rmon statistics br
index   ifIndex   interface  
--------  -----------  -------------  
6001     100974631   GigabitEthernet 2/0
6002     100974631   GigabitEthernet 2/0
6003     101236775   GigabitEthernet 2/1
6004     101236775   GigabitEthernet 2/1
9001     134529054   GigabitEthernet 3/0
9002     134529054   GigabitEthernet 3/0
9003     134791198   GigabitEthernet 3/1
9004     134791198   GigabitEthernet 3/1
Dell#
Rapid Spanning Tree Protocol (RSTP)

The Dell Networking operating software implementation of rapid spanning tree protocol (RSTP) is based on the IEEE 802.1w standard spanning-tree protocol. The RSTP algorithm configures connectivity throughout a bridged local area network (LAN) that is comprised of LANs interconnected by bridges.

**bridge-priority**

Set the bridge priority for RSTP.

**Syntax**

```
bridge-priority priority-value
```

To return to the default value, use the `no bridge-priority` command.

**Parameters**

- `priority-value`: Enter a number as the bridge priority value in increments of 4096. The range is from 0 to 61440. The default is 32768.

**Defaults**

32768

**Command Modes**

CONFIGURATION RSTP (conf-rstp)

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**

- `protocol spanning-tree rstp` — enters rapid spanning tree mode.

debug spanning-tree rstp

Enable debugging of RSTP and view information on the protocol.

**Syntax**

```
debug spanning-tree rstp [all | bpdu interface {in | out} | events]
```

To disable debugging, use the `no debug spanning-tree rstp` command.

**Parameters**

- `all` (OPTIONAL) Enter the keyword all to debug all spanning tree operations.
**bpdu interface**

(Optional) Enter the keyword `bpdu` to debug the bridge protocol data units.

(Optional) Enter the keyword `interface` along with the type slot/port of the interface you want displayed. Type slot/port options are the following:

- For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.

Optionally, enter an in or out parameter with the optional interface:

- For Receive, enter `in`.
- For Transmit, enter `out`.

**events**

(Optional) Enter the keyword `events` to debug RSTP events.

**Command Modes**

- EXEC Privilege

**Command History**

- **Version 8.3.16.1**
  Introduced on the MXL 10/40GbE Switch IO Module.

**Example**

```sh
Dell#debug spanning-tree rstp bpdu gigabitethernet 2/0 ?
in Receive (in)
out Transmit (out)
```

---

**description**

Enter a description of the rapid spanning tree.

**Syntax**

```
description {description}
```

To remove the description, use the `no description {description}` command.

**Parameters**

- `description` Enter a description to identify the rapid spanning tree (80 characters maximum).

**Defaults**

- `none`
**Command Modes**

SPANNING TREE (The prompt is “config-rstp”.)

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**

protocol spanning-tree rstp — enters SPANNING TREE mode on the switch.

---

### disable

Disable RSTP globally on the system.

**Syntax**

```
disable
```

To enable Rapid Spanning Tree Protocol, use the `no disable` command.

**Defaults**

RSTP is disabled.

**Command Modes**

CONFIGURATION RSTP (conf-rstp)

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**

protocol spanning-tree rstp — enters SPANNING TREE mode on the switch.

---

### forward-delay

Configure the amount of time the interface waits in the Listening State and the Learning State before transitioning to the Forwarding State.

**Syntax**

```
forward-delay seconds
```

To return to the default setting, use the `no forward-delay` command.

**Parameters**

- **seconds**

  Enter the number of seconds that the system waits before transitioning RSTP to the forwarding state. The range is from 4 to 30. The default is 15 seconds.

**Defaults**

15 seconds

**Command Modes**

CONFIGURATION RSTP (conf-rstp)

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.
Related Commands

- **hello-time** — changes the time interval between BPDUs.
- **max-age** — changes the wait time before RSTP refreshes the protocol configuration information.

### hello-time

Set the time interval between the generation of the RSTP bridge protocol data units (BPDUs).

**Syntax**

```
hello-time [milli-second] seconds
```
To return to the default value, use the `no hello-time` command.

**Parameters**

- **seconds**
  - Enter a number as the time interval between transmission of BPDUs. The range is from 1 to 10 seconds. The default is 2 seconds.
- **milli-second**
  - Enter the keywords `milli-second` to configure a hello time on the order of milliseconds. The range is from 50 to 950 milliseconds.

**Defaults**

2 seconds

**Command Modes**

CONFIGURATION RSTP (conf-rstp)

**Command History**

Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

The hello time is encoded in BPDUs in increments of 1/256ths of a second. The standard minimum hello time in seconds is 1 second, which is encoded as 256. Millisecond hello times are encoded using values less than 256; the millisecond hello time equals \((x/1000)^*256.\)

When you configure millisecond hellos, the default hello interval of 2 seconds is still used for edge ports; the millisecond hello interval is not used.

**Related Commands**

- **forward-delay** — changes the wait time before RSTP transitions to the Forwarding state.
- **max-age** — changes the wait time before RSTP refreshes the protocol configuration information.
max-age
To maintain configuration information before refreshing that information, set the time interval for the
RSTP bridge.

Syntax
max-age seconds
To return to the default values, use the no max-age command.

Parameters
max-age Enter a number of seconds that the waits before refreshing
configuration information. The range is from 6 to 40
seconds. The default is 20 seconds.

Defaults
20 seconds

Command Modes
CONFIGURATION RSTP (conf-rstp)

Command History
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Related Commands
forward-delay — changes the wait time before RSTP transitions to the Forwarding
state.

hello-time — changes the time interval between BPDUs.

edge-port bpdufilter default
To filter transmission of BPDU on port fast enabled interfaces, enable BPDU Filter globally.

Syntax
edge-port bpdufilter default
To disable global bpdu filter default, use the no edge-port bpdufilter
default command.

Parameters
priority-value Enter a number as the bridge priority value in increments of
4096. The range is from 0 to 61440. The default is 32768.

Defaults
Disabled

Command Modes
CONFIGURATION (conf-rstp)

Command History
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.
**protocol spanning-tree rstp**

To configure RSTP, enter RSTP mode.

**Syntax**

```
protocol spanning-tree rstp
```

To exit RSTP mode, use the `exit` command.

**Defaults**

Not configured

**Command Modes**

CONFIGURATION

**Command History**

- **Version 8.3.16.1**
  - Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

RSTP is not enabled when you enter RSTP mode. To enable RSTP globally on the system, use the `no disable` command from RSTP mode.

**Example**

```
Dell(conf)#protocol spanning-tree rstp
Dell(config-rstp)#no disable
```

**Related Commands**

- `disable` — disables RSTP globally on the system.

---

**show config**

View the current configuration for the mode. Only non-default values are displayed.

**Syntax**

```
show config
```

**Command Modes**

- CONFIGURATION RSTP (conf-rstp)

**Command History**

- **Version 8.3.16.1**
  - Introduced on the MXL 10/40GbE Switch IO Module.

**Example**

```
Dell(conf-rstp)#show config
!
protocol spanning-tree rstp
    no disable
    bridge-priority 16384
```
spanning-tree rstp

Configure an RSTP interface with one of these settings: port cost, edge port with optional bridge port data unit (BPDU) guard, port priority, loop guard, or root guard.

Syntax

```
spanning-tree rstp {cost port-cost | edge-port [bpduguard [shutdown-on-violation]] | bpdufilter | priority priority | {rootguard}}
```

Parameters

- **cost port-cost**: Enter the keyword `cost` then the port cost value. The range is from 1 to 200000. The defaults are:
  - 10-Gigabit Ethernet interface = **2000**
  - 40-Gigabit Ethernet interface = **1400**
  - Port Channel interface with one 10 Gigabit Ethernet = **2000**
  - Port Channel interface with one 40 Gigabit Ethernet = **1400**
  - Port Channel with two 10 Gigabit Ethernet = **1800**
  - Port Channel with two 40 Gigabit Ethernet = **600**

- **edge-port**: Enter the keywords `edge-port` to configure the interface as a rapid spanning tree edge port.

- **bpduguard** (OPTIONAL) Enter the keyword `portfast` to enable Portfast to move the interface into Forwarding mode immediately after the root fails.

  Enter the keyword `bpduguard` to disable the port when it receives a BPDU.

- **shutdown-on-violation** (OPTIONAL) Enter the keywords `shutdown-on-violation` to hardware disable an interface when a BPDU is received and the port is disabled.

- **bpdufilter** (OPTIONAL) Enter the keyword `bpdufilter` to enable BPDU Filter to stop sending and receiving BPDUs on port enabled interfaces.

- **priority priority**: Enter keyword `priority` then a value in increments of 16 as the priority. The range is from 0 to 240. The default is **128**.

- **rootguard**: Enter the keyword `rootguard` to enable root guard on an RSTP port or port-channel interface.

Defaults

Not configured.

Command Modes

- INTERFACE

Command History

- **Version 8.3.16.1** Introduced on the MXL 10/40GbE Switch IO Module.
The **BPDU guard** option prevents the port from participating in an active STP topology in case a BPDU appears on a port unintentionally, or is misconfigured, or is subject to a DOS attack. This option places the port into an Error Disable state if a BPDU appears and a message is logged so that the administrator can take corrective action.

**NOTE:** A port configured as an edge port, on an RSTP switch, immediately transitions to the Forwarding state. Only configure ports connected to end-hosts as edge ports. Consider an edge port similar to a port with a spanning-tree portfast enabled.

If you do not enable **shutdown-on-violation**, BPDUs are still sent to the RPM CPU.

You cannot enable STP root guard and loop guard at the same time on a port. For example, if you configure loop guard on a port on which root guard is already configured, the following error message displays: % Error: RootGuard is configured. Cannot configure LoopGuard.

Enabling Portfast BPDU guard and loop guard at the same time on a port results in a port that remains in a Blocking state and prevents traffic from flowing through it. For example, when Portfast BPDU guard and loop guard are both configured:

- If a BPDU is received from a remote device, BPDU guard places the port in an Err-Disabled Blocking state and no traffic is forwarded on the port.
- If no BPDU is received from a remote device, loop guard places the port in a Loop-Inconsistent Blocking state and no traffic is forwarded on the port.

**Example**

```bash
Dell(config)#interface gigabitethernet 4/0
Dell(config-if-gi-4/0)#spanning-tree rstp edge-port
Dell(config-if-gi-4/0)#show config
!
interface GigabitEthernet 4/0
  no ip address
  switchport
  spanning-tree rstp edge-port
  no shutdown
Dell#
```

### spanning-tree rstp

Configure an RSTP interface with one of these settings: port cost, edge port with optional bridge port data unit (BPDU) guard, port priority, loop guard, or root guard.

**Syntax**

```
spanning-tree rstp {cost port-cost | edge-port [bpduguard [shutdown-on-violation]] | bpdufilter | priority priority | {rootguard}}
```

**Parameters**

- **cost port-cost** Enter the keyword **cost** then the port cost value. The range is from 1 to 200000. The defaults are:
- 10-Gigabit Ethernet interface = 2000
- 40-Gigabit Ethernet interface = 1400
- Port Channel interface with one 10 Gigabit Ethernet = 2000
- Port Channel interface with one 40 Gigabit Ethernet = 1400
- Port Channel with two 10 Gigabit Ethernet = 1800
- Port Channel with two 40 Gigabit Ethernet = 600

**edge-port**
Enter the keywords **edge-port** to configure the interface as a rapid spanning tree edge port.

**bpduguard**
(Optional) Enter the keyword **portfast** to enable Portfast to move the interface into Forwarding mode immediately after the root fails.

Enter the keyword **bpduguard** to disable the port when it receives a BPDU.

**shutdown-on-violation**
(Optional) Enter the keywords **shutdown-on-violation** to hardware disable an interface when a BPDU is received and the port is disabled.

**bpdufilter**
(Optional) Enter the keyword **bpdufilter** to enable BPDU Filter to stop sending and receiving BPDUs on port enabled interfaces.

**priority priority**
Enter keyword **priority** then a value in increments of 16 as the priority. The range is from 0 to 240. The default is **128**.

**rootguard**
Enter the keyword **rootguard** to enable root guard on an RSTP port or port-channel interface.

**Defaults**
Not configured.

**Command Modes**
INTERFACE

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

The BPDU guard option prevents the port from participating in an active STP topology in case a BPDU appears on a port unintentionally, or is misconfigured, or is subject to a DOS attack. This option places the port into an Error Disable state if a BPDU appears and a message is logged so that the administrator can take corrective action.

**NOTE:** A port configured as an edge port, on an RSTP switch, immediately transitions to the Forwarding state. Only configure ports connected to end-hosts as edge ports. Consider an edge port similar to a port with a spanning-tree portfast enabled.
If you do not enable `shutdown-on-violation`, BPDUs are still sent to the RPM CPU.

You cannot enable STP root guard and loop guard at the same time on a port. For example, if you configure loop guard on a port on which root guard is already configured, the following error message displays: % Error: RootGuard is configured. Cannot configure LoopGuard.

Enabling Portfast BPDU guard and loop guard at the same time on a port results in a port that remains in a Blocking state and prevents traffic from flowing through it. For example, when Portfast BPDU guard and loop guard are both configured:

- If a BPDU is received from a remote device, BPDU guard places the port in an Err-Disabled Blocking state and no traffic is forwarded on the port.
- If no BPDU is received from a remote device, loop guard places the port in a Loop-Inconsistent Blocking state and no traffic is forwarded on the port.

```
Example
Dell(conf)#interface gigabitethernet 4/0
Dell(conf-if-gi-4/0)#spanning-tree rstp edge-port
Dell(conf-if-gi-4/0)#show config
!
interface GigabitEthernet 4/0
  no ip address
  switchport
  spanning-tree rstp edge-port
  no shutdown
Dell#
```

**tc-flush-standard**

Enable the MAC address flushing after receiving every topology change notification.

**Syntax**

```
tc-flush-standard
```

To disable, use the no `tc-flush-standard` command.

**Defaults**

Disabled

**Command Modes**

CONFIGURATION (conf-rstp)

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

By default, the system implements an optimized flush mechanism for RSTP. This implementation helps in flushing MAC addresses only when necessary (and less often), allowing for faster convergence during topology changes. However, if a standards-based flush mechanism is needed, you can turn on this knob command to enable flushing MAC addresses after receiving every topology change notification.
Security

This chapter contains various types of security commands offered in the Dell Networking operating software. The commands are listed in the following sections:

- AAA Accounting Commands
- Authorization and Privilege Commands
- Authentication and Password Commands
- RADIUS Commands
- TACACS+ Commands
- SSH Server and SCP Commands
- Secure DHCP Commands

For configuration details, refer to the Security chapter in the Dell Networking OS Configuration Guide.

**NOTE:** Starting with the Dell Networking OS version 7.2.1.0, LEAP with MSCHAP v2 supplicant is implemented.

### AAA Accounting Commands

AAA Accounting enables tracking of services that users are accessing and the amount of network resources being consumed by those services. When you enable AAA Accounting, the network server reports user activity to the TACACS+ security server in the form of accounting records. Each accounting record is comprised of accounting AV pairs and is stored on the access control server.

As with authentication and authorization, you must configure AAA Accounting by defining a named list of accounting methods, and then applying that list to various interfaces.

**aaa accounting**

Enable AAA Accounting and create a record for monitoring the accounting function.

**Syntax**

```plaintext
aaa accounting {system | exec | commands level} {name | default}{start-stop | wait-start | stop-only} {tacacs+} 
```

To disable AAA Accounting, use the `no aaa accounting {system | exec | command level} {name | default}{start-stop | wait-start | stop-only} {tacacs+}` command.
### Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>system</td>
<td>Enter the keyword system to send accounting information of any other AAA configuration.</td>
</tr>
<tr>
<td>exec</td>
<td>Enter the keyword exec to send accounting information when a user has logged in to EXEC mode.</td>
</tr>
<tr>
<td>commands</td>
<td>Enter the keyword command then a privilege level for accounting of commands executed at that privilege level.</td>
</tr>
</tbody>
</table>
| level       | Enter one of the following: 
- For name, enter a user-defined name of a list of accounting methods. 
- For default, the default accounting methods used. |
| name | default | start-stop | Enter the keywords start-stop to send a "start accounting" notice at the beginning of the requested event and a "stop accounting" notice at the end of the event. |
| wait-start  | Enter the keywords wait-start to ensure that the TACACS + security server acknowledges the start notice before granting the user's process request. |
| stop-only   | Enter the keywords stop-only to instruct the TACACS+ security server to send a "stop record accounting" notice at the end of the requested user process. |
| tacacs+     | Enter the keyword tacacs+ to use TACACS+ data for accounting. The system currently only supports TACACS+ accounting. |

### Defaults

| Command Modes | none |

### Command History

| Version     | Introduced on the MXL 10/40GbE Switch IO Module. |

### Usage Information

In the example above, TACACS+ accounting is used to track all usage of EXEC command and commands on privilege level 15.

Privilege level 15 is the default. If you want to track usage at privilege level 1 for example, use the `aaa accounting command 1` command.

### Example

```
Dell(conf)# aaa accounting exec default start-stop tacacs+
Dell(conf)# aaa accounting command 15 default start-stop tacacs+
Dell(config)#
```

### Related Commands

- `enable password` — changes the password for the `enable` command.
- `login authentication` — enables AAA login authentication on the terminal lines.
- `password` — creates a password.
aaa accounting suppress

Prevent the generation of accounting records of users with the user name value of NULL.

Syntax

```
aaa accounting suppress null-username
```

To permit accounting records to users with user name value of NULL, use the `no aaa accounting suppress null-username` command.

Defaults

Accounting records are recorded for all users.

Command Modes

CONFIGURATION

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The system issues accounting records for all users on the system, including users whose username string, due to protocol translation, is NULL. For example, a user who comes on line with the `aaa authentication login method-list none` command is applied. To prevent the accounting records from being generated for sessions that do not have user names associated to them, use the `aaa accounting suppress null-username` command.

accounting

Apply an accounting method list to terminal lines.

Syntax

```
accounting {exec | commands level} method-list
```

Parameters

- `exec`
  - Enter the keyword `exec` to apply an EXEC level accounting method list.
- `commands level`
  - Enter the keywords `commands level` to apply an EXEC and CONFIGURATION level accounting method list.
- `method-list`
  - Enter a method list that you defined using the `aaa accounting exec` or `aaa accounting commands` command.

Defaults

none

Command Modes

LINE
show accounting

Display the active accounting sessions for each online user.

Syntax

show accounting

Defaults

none

Command Modes

EXEC

Command History

Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

This command steps through all active sessions and then displays the accounting records for the active account functions.

Example

Dell#show accounting
Active accounted actions on tty2, User admin Priv 1
    Task ID 1, EXEC Accounting record, 00:00:39 Elapsed, service=shell
Active accounted actions on tty3, User admin Priv 1
    Task ID 2, EXEC Accounting record, 00:00:26 Elapsed, service=shell
Dell#

Related Commands

- **aaa accounting** — enables AAA Accounting and creates a record for monitoring the accounting function.

Authorization and Privilege Commands

To set command line authorization and privilege levels, use the following commands.

authorization

Apply an authorization method list to terminal lines.

Syntax

authorization {exec | commands level} method-list
Parameters

- **exec**: Enter the keyword `exec` to apply an EXEC level accounting method list.
- **commands level**: Enter the keywords `commands level` to apply an EXEC and CONFIGURATION level accounting method list.
- **method-list**: Enter a method list that you defined using the `aaa accounting exec` or `aaa accounting commands`.

**Defaults**

- **none**

**Command Modes**

- **LINE**

**Command History**

- **Version 8.3.16.1**: Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**

- `aaa authorization commands` — sets the parameters that restrict (or permit) a user’s access to EXEC and CONFIGURATION level commands
- `aaa authorization exec` — sets the parameters that restrict (or permit) a user’s access to EXEC level commands.

### aaa authorization commands

Set parameters that restrict (or permit) a user’s access to EXEC and CONFIGURATION level commands.

**Syntax**

```
aaa authorization commands level {name | default} {local || tacacs+ || none}
```

**Parameters**

- **commands level**: Enter the keyword `commands` then the command privilege level for command level authorization.
- **name**: Define a name for the list of authorization methods.
- **default**: Define the default list of authorization methods.
- **local**: Use the authorization parameters on the system to perform authorization.
- **tacacs+**: Use the TACACS+ protocol to perform authorization.
- **none**: Enter the keyword `none` to apply no authorization.

**Defaults**

- **none**

---

1013
aaa authorization config-commands

Set parameters that restrict (or permit) a user’s access to EXEC level commands.

Syntax

```
aaa authorization config-commands
```

Disable authorization checking for CONFIGURATION level commands using the `no aaa authorization config-commands` command.

Defaults

Enabled when you configure `aaa authorization commands` command.

Command Modes

CONFIGURATION

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

By default, the `aaa authorization commands` command configures the system to check both EXEC level and CONFIGURATION level commands. To enable only EXEC-level command checking, use the command `no aaa authorization config-commands`.

aaa authorization exec

Set parameters that restrict (or permit) a user’s access to EXEC-level commands.

Syntax

```
aaa authorization exec {name | default} {local || tacacs+ || if-authenticated || none}
```

To disable authorization checking for EXEC level commands, use the `no aaa authorization exec` command.

Parameters

- **name**: Define a name for the list of authorization methods.
- **default**: Define the default list of authorization methods.
- **local**: Use the authorization parameters on the system to perform authorization.
- **tacacs+**: Use the TACACS+ protocol to perform authorization.
- **none**: Enter the keyword `none` to apply no authorization.
privilege level (CONFIGURATION mode)

Change the access or privilege level of one or more commands.

Syntax

```
privilege mode (level level command | reset command)
```

To delete access to a level and command, use the `no privilege mode level command` command.

Parameters

- **mode**: Enter one of the following keywords as the mode for which you are controlling access:
  - `configure` for CONFIGURATION mode
  - `exec` for EXEC mode
  - `interface` for INTERFACE modes
  - `line` for LINE mode
  - `route-map` for ROUTE-MAP mode
  - `router` for ROUTER OSPF, ROUTER RIP, ROUTER ISIS and ROUTER BGP modes

- **level level**: Enter the keyword `level` then a number for the access level. The range is from 0 to 15. Level 1 is EXEC mode and Level 15 allows access to all CLI modes and commands.

- **reset**: Enter the keyword `reset` to return the security level to the default setting.

- **command**: Enter the command’s keywords to assign the command to a certain access level. You can enter one or all of the keywords.

Defaults

- Not configured.

Command Modes

- CONFIGURATION

Command History

- **Version 8.3.16.1**: Introduced on the M3L 10/40GbE Switch IO Module.
Usage Information
To define a password for the level to which you are assigning privilege or access, use the `enable password` command.

**privilege level (LINE mode)**

Change the access level for users on the terminal lines.

**Syntax**

```plaintext
privilege level level
```

To delete access to a terminal line, use the `no privilege level level` command.

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>level level</td>
<td>Enter the keyword <code>level</code> then a number for the access level. The range is from 0 to 15. Level 1 is EXEC mode and Level 15 allows access to all CLI modes.</td>
</tr>
</tbody>
</table>

**Defaults**

`level = 15`

**Command Modes**

LINE

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Authentication and Password Commands**

To manage access to the system, use the following the commands.

**aaa authentication enable**

Configure AAA Authentication method lists for user access to EXEC privilege mode (the “Enable” access).

**Syntax**

```plaintext
aaa authentication enable {default | method-list-name} method [... method2]
```

To return to the default setting, use the `no aaa authentication enable {default | method-list-name} method [... method2]` command.

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>default</td>
<td>Enter the keyword <code>default</code> then the authentication methods to use as the default sequence of methods for the Enable login. The default is <code>default enable</code>.</td>
</tr>
</tbody>
</table>
method-list-name

Enter a text string (up to 16 characters long) to name the list of enabled authentication methods activated at login.

method

Enter one of the following methods:

- enable: use the password the enable password command defines in CONFIGURATION mode.
- line: use the password the password command defines in LINE mode.
- none: no authentication.
- radius: use the RADIUS servers configured with the radius-server host command.
- tacacs+: use the TACACS+ server(s) configured with the tacacs-server host command.

... method2

(Optional) In the event of a “no response” from the first method, the system applies the next configured method.

Defaults

Use the enable password.

Command Modes

CONFFIGURATION

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

By default, the Enable password is used. If you configure aaa authentication enable default, the system uses the methods defined for Enable access instead.

Methods configured with the aaa authentication enable command are evaluated in the order they are configured. If authentication fails using the primary method, the system employs the second method (or third method, if necessary) automatically. For example, if the TACACS+ server is reachable, but the server key is invalid, the system proceeds to the next authentication method. The TACACS+ is incorrect, but the user is still authenticated by the secondary method.

Related Commands

enable password — changes the password for the enable command.

login authentication — enables AAA login authentication on the terminal lines.

password — creates a password.

radius-server host — specifies a RADIUS server host.

tacacs-server host — specifies a TACACS+ server host.
aaa authentication login

Configure AAA Authentication method lists for user access to EXEC mode (Enable log-in).

**Syntax**

aaa authentication login \{method-list-name | default\} \[... method4\]

To return to the default setting, use the no aaa authentication login \{method-list-name | default\} command.

**Parameters**

- **method-list-name**
  Enter a text string (up to 16 characters long) as the name of a user-configured method list that can be applied to different lines.

- **default**
  Enter the keyword default to specify that the method list specified is the default method for all terminal lines.

- **method**
  Enter one of the following methods:
  - **enable**: use the password the enable password command defines in CONFIGURATION mode.
  - **line**: use the password the password command defines in LINE mode.
  - **none**: no authentication.
  - **radius**: use the RADIUS servers configured with the radius-server host command.
  - **tacacs+**: use the TACACS+ servers configured with the tacacs-server host command.

- **... method4**
  (OPTIONAL) Enter up to four additional methods. In the event of a "no response" from the first method, the system applies the next configured method (up to four configured methods).

**Defaults**

Not configured (that is, no authentication is performed).

**Command Modes**

CONFIGURATION

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

By default, the locally configured username password is used. If you configure aaa authentication login default, the system uses the methods this command defines for login instead.

Methods configured with the aaa authentication login command are evaluated in the order they are configured. If users encounter an error with the first method listed, the system applies the next method configured. If users fail the first method listed, no other methods are applied. The only exception is the local method. If the user’s name is not listed in the local database, the next method is
applied. If the correct user name/password combination is not entered, the user is not allowed access to the switch.

**NOTE:** If authentication fails using the primary method, the system employs the second method (or third method, if necessary) automatically. For example, if the TACACS+ server is reachable, but the server key is invalid, the system proceeds to the next authentication method. The TACACS+ is incorrect, but the user is still authenticated by the secondary method.

After configuring the `aaa authentication login` command, configure the `login authentication` command to enable the authentication scheme on terminal lines.

Connections to the SSH server work with the following login mechanisms: local, radius, and tacacs.

### Related Commands
- `login authentication` — enables AAA login authentication on the terminal lines.
- `password` — creates a password.
- `radius-server host` — specifies a RADIUS server host.
- `tacacs-server host` — specifies a TACACS+ server host.

---

**access-class**

Restrict incoming connections to a particular IP address in a defined IP access control list (ACL).

**Syntax**

```
access-class access-list-name
```

To delete a setting, use the `no access-class` command.

**Parameters**

- `access-list-name` Enter the name of an established IP Standard ACL.

**Defaults**

Not configured.

**Command Modes**

LINE

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**

- `line` — applies an authentication method list to the designated terminal lines.
- `ip access-list standard` — names (or selects) a standard access list to filter based on the IP address.
**ip access-list extended** — names (or selects) an extended access list based on the IP addresses or protocols.

---

**enable password**

Change the password for the enable command.

**Syntax**

```
enable password [level level] [encryption-type] password
To delete a password, use the no enable password [encryption-type] password [level level] command.
```

**Parameters**

- **level level**  
  (OPTIONAL) Enter the keyword level then a number as the level of access. The range is from 1 to 15.

- **encryption-type**  
  (OPTIONAL) Enter the number 7 or 0 as the encryption type.

  Enter a 7 then a text string as the hidden password. The text string must be a password that was already encrypted by a Dell Networking router.

  Use this parameter only with a password that you copied from the show running-config file of another Dell Networking router.

- **password**  
  Enter a text string, up to 32 characters long, as the clear text password.

**Defaults**

No password is configured. **level = 15**.

**Command Modes**

CONFIGURATION

**Command History**

Version 8.3.16.1  
Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

To control access to command modes, use this command to define a password for a level and use the **privilege level (CONFIGURATION mode)** command.

Passwords must meet the following criteria:

- Start with a letter, not a number.
- Passwords can have a regular expression as the password. To create a password with a regular expression in it, use CNTL + v prior to entering regular expression. For example, to create the password **abcd\je**, you type \"abcd CNTL v je\". When the password is created, you do not use the CNTL + v key combination and enter \"abcd\je\".

  **NOTE:** The question mark (?) and the tilde (~) are not supported characters.
Related Commands

- `show running-config` — views the current configuration.
- `privilege level (CONFIGURATION mode)` — controls access to the command modes within the switch.

enable restricted

Allows Dell Networking technical support to access restricted commands.

Syntax

```
enable restricted [encryption-type] password
```

To disallow access to restricted commands, use the `no enable restricted` command.

Parameters

- `encryption-type` (OPTIONAL) Enter the number `7` as the encryption type.
  
  Enter `7` followed a text string as the hidden password. The text string must be a password that was already encrypted by a Dell Networking router.

  Use this parameter only with a password that you copied from the `show running-config` file of another Dell Networking router.

- `password` Enter a text string, up to 32 characters long, as the clear text password.

Defaults

Not configured.

Command History

- `Version 8.3.16.1` Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

Only Dell Networking Technical Support staff use this command.

enable secret

Change the password for the `enable` command.

Syntax

```
enable secret [level level] [encryption-type] password
```

To delete a password, use the `no enable secret [encryption-type] password [level level]` command.
Parameters

- **level level** (OPTIONAL) Enter the keyword `level` then a number as the level of access. The range is from 1 to 15.
- **encryption-type** (OPTIONAL) Enter the number `5` or `0` as the encryption type.

Enter a `5` then a text string as the hidden password. The text string must be a password that was already encrypted by a Dell Networking router.

Use this parameter only with a password that you copied from the `show running-config` file of another Dell Networking router.

**password** Enter a text string, up to 32 characters long, as the clear text password.

Defaults

No password is configured. `level = 15`.

Command Modes

- **CONFIGURATION**

Command History

- **Version 8.3.16.1** Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

To control access to command modes, use this command to define a password for a level and use the `privilege level` (CONFIGURATION mode) command.

Passwords must meet the following criteria:

- Start with a letter, not a number.
- Passwords can have a regular expression as the password. To create a password with a regular expression in it, use CNTL + v prior to entering regular expression. For example, to create the password `abcd\]e`, you type “abcd CNTL v \]e”. When the password is created, you do not use the CNTL + v key combination and enter “abcd\]e”.

**NOTE:** The question mark (?) and the tilde (~) are not supported characters.

Related Commands

- `show running-config` — views the current configuration.
- `privilege level` (CONFIGURATION mode) — controls access to the command modes within the switch.

---

**login authentication**

To designate the terminal lines, apply an authentication method list.

**Syntax**

```
login authentication {method-list-name | default}
```
To use the local user/password database for login authentication, use the no login authentication command.

**Parameters**

- **method-list-name**
  
Enter the keywords method-list-name to specify that method list, created in the aaa authentication login command, to be applied to the designated terminal line.

- **default**
  
Enter the keyword default to specify that the default method list, created in the aaa authentication login command, is applied to the terminal line.

**Defaults**

No authentication is performed on the console lines. Local authentication is performed on the virtual terminal and auxiliary lines.

**Command Modes**

LINE

**Command History**

Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

If you configure the aaa authentication login default command, the login authentication default command automatically is applied to all terminal lines.

**Related Commands**

- aaa authentication login — selects the login authentication methods.

---

**password**

Specify a password for users on terminal lines.

**Syntax**

password [encryption-type] password

To delete a password, use the no password password command.

**Parameters**

- **encryption-type**
  
  (OPTIONAL) Enter either zero (0) or 7 as the encryption type for the password entered. The options are
  
  - 0 is the default and means the password is not encrypted and stored as clear text.
  
  - 7 means that the password is encrypted and hidden.

- **password**
  
Enter a text string up to 32 characters long. The first character of the password must be a letter. You cannot use spaces in the password.

**Defaults**

No password is configured.
Command Modes
- **LINE**

Command History
- **Version 8.3.16.1** Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
The system prompts users for these passwords when the method for authentication or authorization used is “line”.

Related Commands
- **enable password** — sets the password for the enable command.
- **login authentication** — configures an authentication method to log in to the switch.
- **service password-encryption** — encrypts all passwords configured in the system.
- **radius-server key** — configures a key for all RADIUS communications between the switch and the RADIUS host server.
- **tacacs-server key** — configures a key for communication between a TACACS+ server and client.
- **username** — establishes an authentication system based on user names.

password-attributes

Configure the password attributes (strong password).

**Syntax**
```
password-attributes [min-length number] [max-retry number]
[character-restriction [upper number] [lower number] [numeric number] [special-char number]]
```

To return to the default, use the no password-attributes [min-length number] [max-retry number] [character-restriction [upper number] [lower number] [numeric number] [special-char number]] command.

**Parameters**
- **min-length number**  
  (OPTIONAL) Enter the keywords min-length then the number of characters. The range is from 0 to 32 characters.
- **max-retry number**  
  (OPTIONAL) Enter the keywords max-retry then the number of maximum password retries. The range is from 0 to 16.
- **character-restriction**  
  (OPTIONAL) Enter the keywords character-restriction to indicate a character restriction for the password.
- **upper number**  
  (OPTIONAL) Enter the keyword upper then the upper number. The range is from 0 to 31.
lower number  (OPTIONAL) Enter the keyword lower then the lower number. The range is from 0 to 31.
numeric number  (OPTIONAL) Enter the keyword numeric then the numeric number. The range is from 0 to 31.
special-char number  (OPTIONAL) Enter the keywords special-char then the number of special characters permitted. The range is from 0 to 31.

Defaults
none

Command Modes
CONFIGURATION

Command History
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Related Commands
password — specifies a password for users on terminal lines.

service password-encryption
Encrypt all passwords configured in the system.

Syntax
service password-encryption
To store new passwords as clear text, use the no service password-encryption command.

Defaults
Enabled.

Command Modes
CONFIGURATION

Command History
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
CAUTION: Encrypting passwords with this command does not provide a high level of security. When the passwords are encrypted, you cannot return them to plain text unless you re-configure them. To remove an encrypted password, use the no password password command.

To keep unauthorized people from viewing passwords in the switch configuration file, use the service password-encryption command. This command encrypts the clear-text passwords created for user name passwords, authentication key passwords, the privileged command password, and console and virtual terminal line access passwords.

To view passwords, use the show running-config command.
show privilege

View your access level.

**Syntax**

```
show privilege
```

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

*Version 8.3.16.1*  
Introduced on the MXL 10/40GbE Switch IO Module.

**Example**

```
Dell#show privilege
Current privilege level is 15
Dell#
```

**Related Commands**

- `privilege level (CONFIGURATION mode)` — assigns access control to different command modes.

---

show users

Allows you to view information on all users logged in to the switch.

**Syntax**

```
show users [all]
```

**Parameters**

- all  
  (OPTIONAL) Enter the keyword `all` to view all terminal lines in the switch.

**Command Modes**

EXEC Privilege

**Command History**

*Version 8.3.16.1*  
Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

The following describes the `show user` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>(untitled)</td>
<td>Indicates with an asterisk (*) which terminal line you are using.</td>
</tr>
<tr>
<td>Line</td>
<td>Displays the terminal lines currently in use.</td>
</tr>
<tr>
<td>User</td>
<td>Displays the user name of all users logged in.</td>
</tr>
<tr>
<td>Host(s)</td>
<td>Displays the terminal line status.</td>
</tr>
<tr>
<td>Location</td>
<td>Displays the IP address of the user.</td>
</tr>
</tbody>
</table>

**Example**

```
Dell#show user
Line User Host(s) Location
```
Related Commands

username — enables a user.

timeout login response

Specify how long the software waits for the login input (for example, the user name and password) before timing out.

Syntax

```
timeout login response seconds
```

To return to the default values, use the `no timeout login response` command.

Parameters

- **seconds**: Enter a number of seconds the software waits before logging you out. The range is:
  - VTY: the range is from 1 to 30 seconds, the default is 30 seconds.
  - Console: the range is from 1 to 300 seconds, the default is 0 seconds (no timeout).
  - AUX: the range is from 1 to 300 seconds, the default is 0 seconds (no timeout).

Defaults

See the defaults settings shown in Parameters.

Command Modes

LINE

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The software measures the period of inactivity defined in this command as the period between consecutive keystrokes. For example, if your password is "password" you can enter "p" and wait 29 seconds to enter the next letter.

username

Establish an authentication system based on user names.

Syntax

```
username name [access-class access-list-name] [nopassword | 
{password | secret} [encryption-type] password] [privilege 
level]
```
If you do not want a specific user to enter a password, use the `nopassword` option.

To delete authentication for a user, use the `no username name` command.

**Parameters**

- **name**
  - Enter a text string for the name of the user up to 63 characters.

- **access-class**
  - Enter the keywords `access-class` then the name of a configured access control list (either an IP access control list or MAC access control list).

- **nopassword**
  - Enter the keyword `nopassword` to specify that the user should not enter a password.

- **password**
  - Enter the keyword `password` then the encryption-type or the password.

- **secret**
  - Enter the keyword `secret` then the encryption-type or the password.

- **encryption-type**
  - Enter an encryption type for the `password` that you enter.
    - 0 directs the system to store the password as clear text. It is the default encryption type when using the `password` option.
    - 7 to indicate that a password encrypted using a DES hashing algorithm follows. This encryption type is available with the `password` option only.
    - 5 to indicate that a password encrypted using an MD5 hashing algorithm follows. This encryption type is available with the `secret` option only, and is the default encryption type for this option.

- **password**
  - Enter a string up to 32 characters long.

- **privilege level**
  - Enter the keyword `privilege` then a number from zero (0) to 15.

- **secret**
  - Enter the keyword `secret` then the encryption type.

**Defaults**

- The default encryption type for the `password` option is 0. The default encryption type for the `secret` option is 0.

**Command Modes**

- CONFIGURATION

**Command History**

- **Version 8.3.16.1** Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

- To view the defined user names, use the `show running-config user` command.

**Related Commands**

- `password` — specifies a password for users on terminal lines.
show running-config — views the current configuration.

RADIUS Commands
The following RADIUS commands are supported by Dell Networking operating system.

debug radius
View RADIUS transactions to assist with troubleshooting.

Syntax
debug radius
To disable debugging of RADIUS, use the no debug radius command.

Defaults Disabled.

Command Modes EXEC Privilege

Command History
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

ip radius source-interface
Specify an interface's IP address as the source IP address for RADIUS connections.

Syntax
ip radius source-interface interface
To delete a source interface, use the no ip radius source-interface command.

Parameters
interface
Enter the following keywords and slot/port or number information:

- For Loopback interfaces, enter the keyword loopback then a number from zero (0) to 16838.
- For the Null interface, enter the keywords null 0.
- For a Port Channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.
- For a ten-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
For VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

Defaults
Not configured.

Command Modes
CONFIGURATION

Command History
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

radius-server deadtime
Configure a time interval during which non-responsive RADIUS servers to authentication requests are skipped.

Syntax
```
radius-server deadtime seconds
```

To disable this function or return to the default value, use the `no radius-server deadtime` command.

Parameters
- `seconds` Enter a number of seconds during which non-responsive RADIUS servers are skipped. The range is from 0 to 2147483647 seconds. The default is 0 seconds.

Defaults
0 seconds

Command Modes
CONFIGURATION

Command History
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

radius-server host
Configure a RADIUS server host.

Syntax
```
radius-server host {hostname | ipv4-address} [auth-port port-number] [retransmit retries] [timeout seconds] [key [encryption-type] key]
```

Parameters
- `hostname` Enter the name of the RADIUS server host.
- `ipv4-address` Enter the IPv4 address (A.B.C.D) of the RADIUS server host.
- `auth-port port-number` (OPTIONAL) Enter the keywords `auth-port` then a number as the port number. The range is from zero (0) to 65535. The default port-number is 1812.
**retransmit retries**

(Optional) Enter the keyword `retransmit` then a number as the number of attempts. This parameter overwrites the `radius-server retransmit` command. The range is from zero (0) to 100. The default is **3 attempts**.

**timeout seconds**

(Optional) Enter the keyword `timeout` then the seconds the time interval the switch waits for a reply from the RADIUS server. This parameter overwrites the `radius-server timeout` command. The range is from 0 to 1000. The default is **5 seconds**.

**key [encryption-type] key**

(Optional) Enter the keyword `key` then an optional encryption-type and a string up to 42 characters long as the authentication key. The RADIUS host server uses this authentication key and the RADIUS daemon operating on this switch.

For the encryption-type, enter either zero (0) or 7 as the encryption type for the key entered. The options are:

- 0 is the default and means the password is not encrypted and stored as clear text.
- 7 means that the password is encrypted and hidden.

Configure this parameter last because leading spaces are ignored.

---

**Defaults**

Not configured.

**Command Modes**

CONFIGURATION

**Command History**

**Version 8.3.16.1**

Introduced on the MXL 10/40GbE Switch IO Module.

---

**Usage Information**

To configure any number of RADIUS server hosts for each server host that is configured, use this command. The system searches for the RADIUS hosts in the order they are configured in the software.

The global default values for the `timeout`, `retransmit`, and `key` optional parameters are applied, unless those values are specified in the `radius-server host` or other commands. To return to the global default values, if you configure the `timeout`, `retransmit`, or `key` values, include those keywords when using the no `radius-server host` command syntax.

**Related Commands**

- `login authentication` — sets the database to be checked when a user logs in.
- `radius-server key` — sets an authentication key for RADIUS communications.
- `radius-server retransmit` — sets the number of times the RADIUS server attempts to send information.
radius-server key

Configure a key for all RADIUS communications between the switch and the RADIUS host server.

**Syntax**

```
radius-server key [encryption-type] key
```

To delete a password, use the `no radius-server key` command.

**Parameters**

- `encryption-type`
  
  (OPTIONAL) Enter either zero (`0`) or `7` as the encryption type for the key entered. The options are:
  
  - `0` is the default and means the key is not encrypted and stored as clear text.
  - `7` means that the key is encrypted and hidden.

- `key`
  
  Enter a string that is the key to be exchanged between the switch and RADIUS servers. It can be up to 42 characters long.

**Defaults**

Not configured.

**Command Modes**

CONFIGURATION

**Command History**

Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

The key configured on the switch must match the key configured on the RADIUS server daemon.

If you configure the `key` parameter in the `radius-server host` command, the key configured with the `radius-server key` command is the default key for all RADIUS communications.

**Related Commands**

- `radius-server host` — configures a RADIUS host.

radius-server retransmit

Configure the number of times the switch attempts to connect with the configured RADIUS host server before declaring the RADIUS host server unreachable.

**Syntax**

```
radius-server retransmit retries
```

radius-server timeout — sets the time interval before the RADIUS server times out.
To configure zero retransmit attempts, use the `no radius-server retransmit` command.

To return to the default setting, use the `radius-server retransmit 3` command.

**Parameters**

- `retries`: Enter a number of attempts that the system tries to locate a RADIUS server. The range is from zero (0) to 100. The default is 3 retries.

**Defaults**

- 3 retries

**Command Modes**

- CONFIGURATION

**Command History**

- Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**

- `radius-server host` — configures a RADIUS host.

---

**radius-server timeout**

To reply to a request, configure the amount of time the RADIUS client (the switch) waits for a RADIUS host server.

**Syntax**

```
radius-server timeout seconds
```

To return to the default value, use the `no radius-server timeout` command.

**Parameters**

- `seconds`: Enter the number of seconds between an unsuccessful attempt and the system times out. The range is from zero (0) to 1000 seconds. The default is 5 seconds.

**Defaults**

- 5 seconds

**Command Modes**

- CONFIGURATION

**Command History**

- Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**

- `radius-server host` — configures a RADIUS host.
TACACS+ Commands

The Dell Networking OS supports TACACS+ as an alternate method for login authentication.

debug tacacs+

To assist with troubleshooting, view TACACS+ transactions.

Syntax
debug tacacs+

To disable debugging of TACACS+, use the no debug tacacs+ command.

Defaults Disabled.

Command Modes EXEC Privilege

Command History Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

ip tacacs source-interface

Specify an interface’s IP address as the source IP address for TACACS+ connections.

Syntax
ip tacacs source-interface interface

To delete a source interface, use the no ip tacacs source-interface command.

Parameters

interface Enter the following keywords and slot/port or number information:

- For Loopback interfaces, enter the keyword loopback then a number from zero (0) to 16838.
- For the Null interface, enter the keywords null 0.
- For a Port Channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.
- For a ten-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
- For VLAN interface, enter the keyword vlan then a number from 1 to 4094.

Defaults Not configured.
tacacs-server host

Specify a TACACS+ host.

Syntax

```text
tacacs-server host {hostname | ipv4-address} [port number]
[timeout seconds] [key key]
```

Parameters

- **hostname**: Enter the name of the TACACS+ server host.
- **ipv4-address**: Enter the IPv4 address (A.B.C.D) of the TACACS+ server host.
- **port number**: (OPTIONAL) Enter the keyword `port` then a number as the port to be used by the TACACS+ server. The range is from zero (0) to 65535. The default is 49.
- **timeout seconds**: (OPTIONAL) Enter the keyword `timeout` then the number of seconds the switch waits for a reply from the TACACS+ server. The range is from 0 to 1000. The default is 10 seconds.
- **key key**: (OPTIONAL) Enter the keyword `key` then a string up to 42 characters long as the authentication key. This authentication key must match the key specified in the `tacacs-server key` for the TACACS+ daemon.

Defaults

Not configured.

Command Modes

CONFIGURATION

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

To list multiple TACACS+ servers to be used by the `aaa authentication login` command, configure this command multiple times.

If you are not configuring the switch as a TACACS+ server, you do not need to configure the `port`, `timeout` and `key` optional parameters. If you do not configure a key, the key assigned in the `tacacs-server key` command is used.

Related Commands

- `aaa authentication login` — specifies the login authentication method.
**tacacs-server key** — configures a TACACS+ key for the TACACS server.

**tacacs-server key**

Configure a key for communication between a TACACS+ server and a client.

**Syntax**

tacacs-server key [encryption-type] key

To delete a key, use the `no tacacs-server key` command.

**Parameters**

- **encryption-type** (OPTIONAL) Enter either zero (0) or 7 as the encryption type for the key entered. The options are:
  - 0 is the default and means the key is not encrypted and stored as clear text.
  - 7 means that the key is encrypted and hidden.

- **key** Enter a text string, up to 42 characters long, as the clear text password. Leading spaces are ignored.

**Defaults**

Not configured.

**Command Modes**

CONFIGURATION

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

The key configured with this command must match the key configured on the TACACS+ daemon.

### SSH Server and SCP Commands

The Dell Networking OS supports secure shell (SSH) protocol versions 1.5 and 2.0. SSH is a protocol for secure remote login over an insecure network. SSH sessions are encrypted and use authentication.

**crypto key generate**

Generate keys for the SSH server.

**Syntax**

crypto key generate {rsa | rsa1}

**Parameters**

- **rsa** Enter the keyword `rsa` then the key size to generate a SSHv2 RSA host keys. The range is from 1024 to 2048 if you did not
enable FIPS mode; if you enabled FIPS mode, you can only generate a 2048-bit key. The default is 1024.

rsa1

Enter the keyword rsa1 then the key size to generate a SSHv1 RSA host keys. The range is from 1024 to 2048. The default is 1024.

**Defaults**

Key size 1024; if you enable FIPS mode, the key size is 2048.

**Command Modes**

CONFIGURATION

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

The host keys are required for key-exchange by the SSH server. If the keys are not found when you enable the server (ip ssh server enable), the keys are automatically generated.

This command requires user interaction and generates a prompt prior to overwriting any existing host keys.

**NOTE:** Only a user with superuser permissions should generate host-keys.

**Example**

```
Dell#conf
Dell(conf)#crypto key generate rsa1
Enter key size <1024-2048>. Default<1024>: 1024
Host key already exists. Do you want to replace. [y/n] :y
```

**Related Commands**

- `ip ssh server` — enables the SSH server.
- `show crypto` — displays the SSH host public keys.

---

**debug ip ssh**

Enables collecting SSH debug information.

**Syntax**

```
debug ip ssh {client | server}
```

To disable debugging, use the `no debug ip ssh {client | server}` command.

**Parameters**

- `client` Enter the keyword client to enable collecting debug information on the client.
- `server` Enter the keyword server to enable collecting debug information on the server.
Defaults
Disabled on both client and server.

Command Modes
EXEC

Command History
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
Debug information includes details for key-exchange, authentication, and established session for each connection.

**ip scp topdir**

Identify a location for files used in secure copy transfer.

**Syntax**
```
ip scp topdir directory
```

To return to the default setting, use the `no ip scp topdir` command.

**Parameters**
- `directory` Enter a directory name.

**Defaults**
The internal flash (`flash:`) is the default directory.

**Command Modes**
CONFIGURATION

**Command History**
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**
To configure the switch as an SCP server, use the `ip ssh server` command.

**Related Commands**
- `ip ssh server` — enables the SSH and SCP server on the switch.

**ip ssh authentication-retries**

Configure the maximum number of attempts that should be used to authenticate a user.

**Syntax**
```
ip ssh authentication-retries 1-10
```

**Parameters**
- `1-10` Enter the number of maximum retries to authenticate a user.
  The range is from 1 to 10. The default is 3.

**Defaults**
3

**Command Modes**
CONFIGURATION

1038
This command specifies the maximum number of attempts to authenticate a user on an SSH connection with the remote host for password authentication. SSH disconnects when the number of password failures exceeds authentication-retries.

**ip ssh connection-rate-limit**

Configure the maximum number of incoming SSH connections per minute.

**Syntax**

```
ip ssh connection-rate-limit 1-10
```

**Parameters**

- `1-10` Enter the number of maximum numbers of incoming SSH connections allowed per minute. The range is from 1 to 10 per minute. The default is 10 per minute.

**Defaults**

10 per minute

**Command Modes**

CONFIGURATION

**Command History**

Version 8.3.16.1 Introduced on the MUXL 10/40GbE Switch IO Module.

**ip ssh hostbased-authentication**

Enable hostbased-authentication for the SSHv2 server.

**Syntax**

```
ip ssh hostbased-authentication enable
```

To disable hostbased-authentication for SSHv2 server, use the `no ip ssh hostbased-authentication enable` command.

**Parameters**

- `enable` Enter the keyword `enable` to enable hostbased-authentication for SSHv2 server.

**Defaults**

Disabled.

**Command Modes**

CONFIGURATION

**Command History**

Version 8.3.16.1 Introduced on the MUXL 10/40GbE Switch IO Module.
Usage Information

If you enable this command, clients can log in without a password prompt. This command provides two levels of authentication:

- rhost-authentication is done with the file specified in the `ip ssh rhostfile` command.
- checking client host-keys is done with the file specified in the `ip ssh pub-key-file` command.

**NOTE:** Administrators must specify the two files (`rhosts` and `pub-key-file`) to configure host-based authentication.

Related Commands

- `ip ssh pub-key-file` — public keys of trusted hosts from a file.
- `ip ssh rhostsfile` — trusted hosts and users for rhost authentication.

### ip ssh key-size

Configure the size of the server-generated RSA SSHv1 key.

**Syntax**

```
ip ssh key-size 512-869
```

**Parameters**

`512-869`  
Enter the key-size number for the server-generated RSA SSHv1 key. The range is from 512 to 869. The default is 768.

**Defaults**  
Key size 768

**Command Modes**  
CONFIGURATION

**Command History**

- **Version 8.3.16.1**  
  Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

The server-generated key is used for SSHv1 key-exchange.

### ip ssh password-authentication

Enable password authentication for the SSH server.

**Syntax**

```
ip ssh password-authentication enable
```

To disable password-authentication, use the `no ip ssh password-authentication enable` command.

**Parameters**

`enable`  
Enter the keyword `enable` to enable password-authentication for the SSH server.
### ip ssh pub-key-file

Specify the file used for host-based authentication.

**Syntax**

```plaintext
ip ssh pub-key-file {WORD}
```

**Parameters**

- **WORD**: Enter the file name for the host-based authentication.

**Defaults**

none

**Command Modes**

CONFIGURATION

**Command History**

*Version 8.3.16.1* Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

This command specifies the file used for the host-based authentication. The `creates/` file overwrites the `flash://ADMIN_DIR/ssh/knownhosts` file and deletes the user-specified file. Even though this command is a global configuration command, it does not appear in the running configuration because you only need to run this command once.

The file contains the OpenSSH-compatible public keys of the host for which host-based authentication is allowed. An example known host file format:

```plaintext
poclab4,123.12.1.123 ssh-rsa AAAAB3NzaC1yc2EAAAABIAwAAAIEAox/QQp8xYhz0xn07yh4VGPAbOuRgReIOTho9G4sNV+ui+
+DWe3c+YAc5U5ail1MU20DrzhCwDnp05tKBU3t
ReGlo8Axl6+S4hyEMqHzkzBFNFvQhpQc+
+Rs4p2urzV0F4pRKnaXdhF3Lk4D460H2RhhVrxqeNpDpEn WIMPJi0ds=
ashwani@poclab4
```

**NOTE:** For `rhostfile` and `pub-key-file`, the administrator must FTP the file to the chassis.

**Example**

```plaintext
Dell#conf
Dell(conf)# ip ssh pub-key-file flash://knownhosts
Dell(conf)#
```

1041
Related Commands

show ip ssh client-pub-keys — displays the client-public keys used for the host-based authentication.

ip ssh rhostsfile

Specify the rhost file used for host-based authorization.

Syntax

ip ssh rhostsfile {WORD}

Parameters

WORD Enter the rhost file name for the host-based authentication.

Defaults

none

Command Modes

CONFIGURATION

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Example

Dell#conf
Dell(conf)# ip ssh rhostsfile flash://shosts
Dell(conf)#

Usage Information

This command specifies the rhost file used for host-based authentication. This creates/ file overwrites the flash:/ADMIN_DIR/ssh/shosts file and deletes the user-specified file. Even though this command is a global configuration command, it does not appear in the running configuration because you only need to run this command once.

This file contains hostnames and usernames, for which hosts and users, rhost-authentication can be allowed.

NOTE: For rhostfile and pub-key-file, the administrator must FTP the file to the switch.

ip ssh rsa-authentication (Config)

Enable RSA authentication for the SSHv2 server.

Syntax

ip ssh rsa-authentication enable

To disable RSA authentication, use the no ip ssh rsa-authentication enable command.

Parameters

enable Enter the keyword enable to enable RSA authentication for the SSHv2 server.
Defaults
Disabled.

Command Modes
CONFIGURATION

Command History
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
Enabling RSA authentication allows the user to log in without being prompted for a password. In addition, the OpenSSH compatible SSHv2 RSA public key must be added to the list of authorized keys (ip ssh rsa-authentication my-authorized-keys device://filename command).

Related Commands
ip ssh rsa-authentication (EXEC) — adds keys for RSA authentication.

ip ssh rsa-authentication (EXEC)
Add keys for the RSA authentication.

Syntax
ip ssh rsa-authentication {my-authorized-keys WORD}

Parameters

my-authorized-keys
Enter the keywords my-authorized-keys then the filename of the RSA authorized-keys.

Defaults
none

Command Modes
EXEC

Command History
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
If you want to log in without being prompted for a password, log in through RSA authentication. To do that, first add the SSHv2 RSA public keys to the list of authorized keys. This command adds the specified RSA keys to the following file: flash://ADMIN_DIR/ssh/authorized-keys-username (where username is the user associated with this terminal).

NOTE: The no form of this command deletes the file flash://ADMIN_DIR/ssh/authorized-keys-username file.

Related Commands
show ip ssh rsa-authentication — displays the RSA authorized keys.
ip ssh rsa-authentication (Config) — enables RSA authentication.

**ip ssh server**

Configure an SSH server.

**Syntax**

```
ip ssh server {enable | port port-number} [version {1 | 2}]
```

To disable SSH server functions, use the `no ip ssh server enable` command.

**Parameters**

- **enable**
  - Enter the key word `enable` to start the SSH server.

- **port port-number**
  - (OPTIONAL) Enter the keyword `port` then the port number of the listening port of the SSH server. The range is from 1 to 65535. The default is 22.

- **[version {1 | 2}]**
  - (OPTIONAL) Enter the keyword `version` then the SSH version 1 or 2 to specify only SSHv1 or SSHv2.

**Defaults**

Default listening port is **22**.

**Command Modes**

CONFIGURATION

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

This command enables the SSH server and begins listening on a port. If a port is not specified, listening is on SSH default port 22.

**Example**

```
Dell# conf
Dell(conf)# ip ssh server port 45
Dell(conf)# ip ssh server enable
Dell#
```

**Related Commands**

- `show ip ssh` — displays the ssh information.

**show crypto**

Display the public part of the SSH host-keys.

**Syntax**

```
show crypto key mypubkey {rsa | rsa1}
```

**Parameters**

- **Key**
  - Enter the keyword `key` to display the host public key.

- **mypubkey**
  - Enter the keyword `mypubkey` to display the host public key.
rsa Enter the keyword rsa to display the host SSHv2 RSA public key.

rsa1 Enter the keyword rsa1 to display the host SSHv1 RSA public key.

Defaults none

Command Modes EXEC

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

This command is useful if the remote SSH client implements Strict Host Key Checking. You can copy the host key to your list of known hosts.

Example

Dell#show crypto key mypubkey rsa
ssh-rsa AAAAB3NzaC1yc2EAAAABIwAAAIEAtzkZME/e8V8smnXR22EJGQhCMKEdkuisa+OILvoMYU1ZKGfjK5W5FCSvF/x51fqYFjxJNocsjK7vj5SmnHhzhFzYsvXlVzt96h71FjAQ10sgd0ycpocSf+DNLKfJnX7SAj hakFQMwG

Related
Commands

Xip ssh rsa-authentication (Config) — configures the RSA authorized keys.

ssh

Open an SSH connection specifying the host name, username, port number and version of the SSH client.

Syntax

ssh {hostname | ipv4 address} [-l username | -p port-number | -v {1 | 2}]

Parameters

hostname

(Optional) Enter the IP address or the host name of the remote device.

ipv4 address

(Optional) Enter the IP address in dotted decimal format A.B.C.D.

-l username

(Optional) Enter the keyword -l then the user name used in this SSH session. The default is the user name of the user associated with the terminal.

-p port-number

(Optional) Enter the keyword -p then the port number. The range is from 1 to 65536. The default is 22.

-v (1 | 2)

(Optional) Enter the keyword -v then the SSH version 1 or 2. The default is the version from the protocol negotiation.

Defaults

As shown in the Parameters section.

Command
Modes

EXEC Privilege
Secure DHCP Commands

The dynamic host configuration protocol (DHCP) as defined by RFC 2131 provides no authentication or security mechanisms. Secure DHCP is a suite of features that protects networks that use dynamic address allocation from spoofing and attacks.

clear ip dhcp snooping

Clear the DHCP binding table.

Syntax

```
clear ip dhcp snooping binding
```

Defaults

none

Command Modes

EXEC Privilege

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Related Commands

```
show ip dhcp snooping — displays the contents of the DHCP binding table.
```

ip dhcp relay

Enable Option 82.

Syntax

```
ip dhcp relay information-option [trust-downstream]
```

Parameters

```
trust-downstream
```

Configure the system to trust Option 82 when it is received from the previous-hop router.

Defaults

Disabled.

Command Modes

CONFIGURATION
ip dhcp snooping

Enable DHCP Snooping globally.

Syntax

[no] ip dhcp snooping

Defaults

Disabled.

Command Modes

CONFIGURATION

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

When enabled, no learning takes place until you enable snooping on a VLAN. After disabling DHCP Snooping, the binding table is deleted and Option 82, IP Source Guard, and Dynamic ARP Inspection are disabled.

Related Commands

ip dhcp snooping vlan — enables DHCP Snooping on one or more VLANs.

ip dhcp snooping database

Delay writing the binding table for a specified time.

Syntax

ip dhcp snooping database write-delay minutes

Parameters

minutes The range is from 5 to 21600.

Defaults

none

Command Modes

CONFIGURATION

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.
ip dhcp snooping binding

Create a static entry in the DHCP binding table.

Syntax

```plaintext
[no] ip dhcp snooping binding mac address vlan-id vlan-id ip ip-address interface type slot/port lease number
```

Parameters

- **mac address**: Enter the keyword `mac` then the MAC address of the host to which the server is leasing the IP address.
- **vlan-id vlan-id**: Enter the keywords `vlan-id` then the VLAN to which the host belongs. The range is from 2 to 4094.
- **ip ip-address**: Enter the keyword `ip` then the IP address that the server is leasing.
- **interface type**: Enter the keyword `interface` then the type of interface to which the host is connected.
  - For a ten-Gigabit Ethernet interface, enter the keyword `tengigabitethernet`.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE`.
- **slot/port**: Enter the slot and port number of the interface.
- **lease time**: Enter the keyword `lease` then the amount of time the IP address is leased. The range is from 1 to 4294967295.

Defaults

- `none`

Command Modes

- EXEC
- EXEC Privilege

Command History

- **Version 8.3.16.1**: Introduced on the MXL 10/40GbE Switch IO Module.

Related Commands

- `show ip dhcp snooping` — displays the contents of the DHCP binding table.

ip dhcp snooping database renew

Renew the binding table.

Syntax

```plaintext
ip dhcp snooping database renew
```

Defaults

- `none`

Command Modes

- EXEC
- EXEC Privilege
ip dhcp snooping trust

Configure an interface as trusted.

Syntax  
[no] ip dhcp snooping trust

Defaults  Untrusted

Command Modes  INTERFACE

Command History  
Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.

ip dhcp source-address-validation

Enable IP source guard.

Syntax  
[no] ip dhcp source-address-validation

Defaults  Disabled.

Command Modes  INTERFACE

Command History  
Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.

ip dhcp snooping vlan

Enable DHCP Snooping on one or more VLANs.

Syntax  
[no] ip dhcp snooping vlan name

Parameters  
name  Enter the name of a VLAN on which to enable DHCP Snooping.

Defaults  Disabled.

Command Modes  CONFIGURATION
Command History
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
When enabled, the system begins creating entries in the binding table for the specified VLANs.

NOTE: Learning only happens if there is a trusted port in the VLAN.

Related Commands
ip dhcp snooping trust — configures an interface as trusted.

show ip dhcp snooping
Display the contents of the DHCP binding table.

Syntax
show ip dhcp snooping binding

Defaults
none

Command Modes
• EXEC
• EXEC Privilege

Command History
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Related Commands
clear ip dhcp snooping — clears the contents of the DHCP binding table.
sFlow

sFlow monitoring system includes an sFlow Agent and an sFlow Collector.

- The sFlow Agent combines the flow samples and interface counters into sFlow datagrams and forwards them to the sFlow Collector.
- The sFlow Collector analyses the sFlow Datagrams received from the different devices and produces a network-wide view of traffic flows.

Important Points to Remember

- Dell Networking recommends that the sFlow Collector be connected to the Dell Networking chassis through a line card port rather than the route processor module (RPM) Management Ethernet port.
- The system exports all sFlow packets to the sFlow Collector. A small sampling rate can equate to many exported packets. A backoff mechanism is automatically applied to reduce this amount. Some sampled packets may be dropped when the exported packet rate is high and the backoff mechanism is about to or is starting to take effect. The dropEvent counter, in the sFlow packet, is always zero.
- sFlow sampling is done on a per-port basis.
- Community list and local preference fields are not filled up in the extended gateway element in the sFlow datagram.
- The 802.1P source priority field is not filled up in the extended switch element in the sFlow datagram.
- Only Destination and Destination Peer AS numbers are packed in the dst-as-path field in the extended gateway element.
- If the packet being sampled is redirected using policy-based routing (PBR), the sFlow datagram may contain incorrect extended gateway/router information.
- The source virtual local area network (VLAN) field in the extended switch element is not packed if there is a routed packet.
- The destination VLAN field in the extended switch element is not packed if there is a multicast packet.
- The maximum number of packets that can be sampled and processed per second is:
  - 7500 packets when no extended information packing is enabled.
  - 7500 packets when only extended-switch information packing is enabled (refer to `sflow extended-switch enable`).
  - 1600 packets when you enable extended-router and/or extended-gateway information packing.

sflow collector

Configure a collector device to which sFlow datagrams are forwarded.

Syntax

```
sflow collector {ip-address} agent-addr {ip-address} [number [max-datagram-size number]] | [max-datagram-size number]
```
To delete a configured collector, use the `no sflow collector {ip-address} agent-addr {ipv4-address} [number [max-datagram-size number]] | [max-datagram-size number]` command.

**Parameters**

- `sflow collector ip-address`
  Enter the IPv4 (A.B.C.D) of the sFlow collector device.

- `agent-addr ipv4-address`
  Enter the IPv4 (A.B.C.D) of the sFlow agent in the router.

- `number` (OPTIONAL) Enter the user datagram protocol (UDP) port number. The range is from 0 to 65535. The default is 6343.

- `max-datagram-size number` (OPTIONAL) Enter the keyword max-datagram-size then the size number in bytes. The range is from 400 to 1500. The default is 1400.

**Defaults**

Not configured.

**Command Modes**

CONFIGURATION

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

You can configure up to two sFlow collectors (IPv4 or IPv6). If two collectors are configured, traffic samples are sent to both.

The sFlow agent address is carried in a field in SFlow packets and is used by the collector to identify the sFlow agent.

In sFlow, the agent address is a single invariant IPv4 or IPv6 address used to identify the agent to the collector. It is usually assigned the address of a loopback interface on the agent, which provides invariance. The agent address is carried as a field in the payload of the sFlow packets.

As part of the sFlow-MIB, if the SNMP request originates from a configured collector, the system returns the corresponding configured agent IP in the MIB requests. The system checks to ensure that two entries are not configured for the same collector IP with a different agent IP. Should that happen, the system generates the following error: %Error: Different agent-addr attempted for an existing collector.

### sflow enable (Global)

Enable sFlow globally.

**Syntax**

```
sflow enable
```

To disable sFlow, use the `no sflow enable` command.
Defaults   Disabled.
Command Modes   CONFIGURATION

Command History   Version 8.3.16.1   Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information   sFlow is disabled by default. In addition to this command, you must enable sFlow on individual interfaces where you want sFlow sampling.

Related Commands   sflow enable (Global) — enables sFlow on interfaces.

sflow enable (Interface)

Enable sFlow on interfaces.

Syntax   sflow enable
To disable sFlow, use the no sflow enable command.

Defaults   Disabled.
Command Modes   INTERFACE

Command History   Version 8.3.16.1   Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information   When you enable sFlow on an interface, flow sampling is done on any traffic going out of the interface.

NOTE: After a physical port is a member of a LAG, it inherits the sFlow configuration from the LAG port.

Related Commands   sflow enable (Global) — turns sFlow on globally.

sflow extended-switch enable

Enable packing information on a switch only.

Syntax   sflow extended-switch enable
To disable packing information, use the no sflow extended-switch [enable] command.

Parameters

- **enable**   Enter the keyword enable to enable global extended information.
sflow polling-interval (Global)

Set the sFlow polling interval at a global level.

Syntax

```
sflow polling-interval interval value
```

To return to the default, use the `no sflow polling-interval interval` command.

Parameters

- `interval value` Enter the interval value in seconds. The range is from 15 to 86400 seconds. The default is **20 seconds**.

Defaults

**20 seconds**

Command Modes

**CONFIGURATION**

Command History

- **Version 8.3.16.1** Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The polling interval for an interface is the maximum number of seconds between successive samples of counters sent to the collector. This command changes the global default counter polling (20 seconds) interval. You can configure an interface to use a different polling interval.
sflow sample-rate (Global)

Change the global default sampling rate.

Syntax

```
sflow sample-rate value
```

To return to the default sampling rate, use the `no sflow sample-rate` command.

Parameters

<table>
<thead>
<tr>
<th>value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Enter the sampling rate value. The range is from 256 to 8388608 packets. Enter values in powers of 2 only; for example, 4096, 8192, 16384, and so on. The default is 32768 packets.</td>
</tr>
</tbody>
</table>

Defaults

| 32768 packets |

Command Modes

| CONFIGURATION |

Command History

| Version 8.3.16.1 |
| Introduced on the MXL 10/40GbE Switch IO Module. |

Usage Information

Sample-rate is the average number of packets skipped before the sample is taken. This command changes the global default sampling rate. You can configure an interface to use a different sampling rate than the global sampling rate. If the value entered is not a correct power of 2, the command generates an error message with the previous and next power of 2 value. Select one of these two packet numbers and re-enter the command.

Related Commands

| sflow sample-rate (Interface) — changes the interface sampling rate. |
sflow sample-rate (Interface)

Change the interface default sampling rate.

Syntax

```plaintext
sflow sample-rate value

To return to the default sampling rate, use the no sflow sample-rate command.
```

Parameters

- **value**: Enter the sampling rate value. The range is from 256 to 8388608 packets. Enter values in powers of 2 only; for example, 4096, 8192, 16384, and so forth. The default is the Global default sampling.

Defaults

The Global default sampling.

Command Modes

- CONFIGURATION

Command History

- **Version 8.3.16.1**: Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

This command changes the sampling rate for an interface. By default, the sampling rate of an interface is set to the same value as the current global default sampling rate. If the value you enter is not a correct power of 2, the command generates an error message with the previous and next power-of-2 value. Select one of these two number and re-enter the command.

Related Commands

- **sflow sample-rate (Global)** — changes the sampling rate globally.

show sflow

Display the current sFlow configuration.

Syntax

```plaintext
show sflow [interface]
```

Parameters

- **interface**: (OPTIONAL) Enter the following keywords and slot/port or number information:
  
  - For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
  
  - For a Loopback interface, enter the keyword loopback then a number from 0 to 16383.
  
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.

Command Modes

- EXEC
show sflow stack-unit

Display the sFlow information on a stack unit.

Syntax

show sflow stack-unit {unit number}

Parameters

unit number (OPTIONAL) Enter a unit number to view information on the stack unit in that slot. The range is from 0 to 5.

Command Modes

• EXEC
• EXEC Privilege

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The dropEvent counter (sFlow samples dropped due to sub-sampling) shown in the following example always displays a value of zero.

Example

Dell#show sflow stack-unit
Stack-Unit 1

0 sFlow samples dropped due to sub-sampling

Linecard 1 Port set 0 H/W sampling rate 8192
  Gi 1/16: configured rate 8192, actual rate 8192, sub-sampling rate 1
  Gi 1/17: configured rate 16384, actual rate 16384, sub-sampling rate 2
Linecard 3 Port set 1 H/W sampling rate 16384
  Gi 3/40: configured rate 16384, actual rate 16384, sub-sampling rate 1
Dell#
Samples rcvd from h/w : 0
Total UDP packets exported : 0
UDP packets dropped : 0
Dell#
Service Provider Bridging

Service provider bridging is composed of virtual local area network (VLAN) Stacking, Layer 2 Protocol Tunneling, and Provider Backbone Bridging as described in the Dell Networking OS Configuration Guide. This chapter includes commands for the Dell Networking operating software Layer 2 Protocol Tunneling (L2PT). L2PT enables protocols to tunnel through an 802.1q tunnel.

For more information, refer to VLAN Stacking, Spanning Tree Protocol (STP), and GARP VLAN Registration (GVRP).

Important Points to Remember

- L2PT is enabled at the interface VLAN-Stack VLAN level. For more information about Stackable VLAN (VLAN-Stacking) commands, refer to VLAN Stacking.
- The default behavior is to disable protocol packet tunneling through the 802.1q tunnel.
- Rate-limiting is required to protect against bridge protocol data units (BPDU) attacks.
- A port channel (including through link aggregation control protocol [LACP]) can be configured as a VLAN-Stack access or trunk port.
- Address resolution protocol (ARP) packets work as expected across the tunnel.
- Far-end failure detection (FEFD) works the same as with Layer 2 links.
- Protocols that use Multicast MAC addresses (for example, open shortest path first [OSPF]) work as expected and carry over to the other end of the VLAN-Stack VLAN.

debug protocol-tunnel

Enable debugging to ensure incoming packets are received and rewritten to a new MAC address.

Syntax

```
debug protocol-tunnel interface {in | out | both} [vlan vlan-id] [count value]
```

To disable debugging, use the no debug protocol-tunnel interface {in | out | both} [vlan vlan-id] [count value] command.

Parameters

- **interface**
  - Enter one of the following interfaces and slot/port information:
    - For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
    - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.

- **in | out | both**: Enter the keyword in, out, or both to debug incoming interfaces, outgoing interfaces, or both incoming and outgoing interfaces.

- **vlan vlan-id**: Enter the keyword vlan then the VLAN ID. The range is from 1 to 4094.

- **count value**: Enter the keyword count then the number of debug outputs. The range is from 1 to 100.

**Defaults**
Debug disabled.

**Command Modes**
EXEC Privilege

**Command History**
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

---

**protocol-tunnel**

Enable protocol tunneling on a stacked (Q-in-Q) VLAN for specified protocol packets.

**Syntax**
protocol-tunnel {rate-limit rate| stp}

To disable protocol tunneling for a Layer 2 protocol, use the no protocol-tunnel command.

**Parameters**
- **rate-limit rate**: Enter the keyword rate-limit then a number for the rate-limit for tunneled packets on the VMAN. The range is from 64 to 320.

- **stp**: Enter the keyword stp to enable protocol tunneling on a spanning tree, including STP, MSTP, RSTP, and PVST.

**Defaults**
none

**Command Modes**
CONF-IF-VLAN

**Command History**
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Example**
Dell#conf
Dell(conf)#interface vlan 2
Dell(conf-if-vl-2)#vlan-stack compatible
Dell(conf-if-vl-2)#member Gi1/2-3
Dell(conf-if-vl-2)#protocol-tunnel stp
Dell(conf-if-vl-2)#protocol-tunnel enable
Related Command

- `show protocol-tunnel` — displays tunneling information for all VLANs.

---

### protocol-tunnel destination-mac

Overwrite the BPDU destination MAC address with a specific value.

**Syntax**

```plaintext
protocol-tunnel destination-mac xstp address
```

**Parameters**

- `stp` Change the default destination MAC address used for L2PT to another value.

**Defaults**

The default destination MAC is 01:01:e8:00:00:00.

**Command Modes**

CONFIGURATION

**Command History**

- **Version 9.2(0.0)** Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

When you enable VLAN-Stacking, no protocol packets are tunneled.

**Related Command**

- `show protocol-tunnel` — displays tunneling information for all VLANs.

---

### protocol-tunnel enable

Enable protocol tunneling globally on the system.

**Syntax**

```plaintext
protocol-tunnel enable
```

To disable protocol tunneling, use the `no protocol-tunnel enable` command.

**Defaults**

Disabled.

**Command Modes**

CONFIGURATION

**Command History**

- **Version 9.2(0.0)** Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

The system must have the default CAM profile with the default microcode before you enable L2PT.
**protocol-tunnel rate-limit**

Enable traffic rate limiting per box.

**Syntax**

```
protocol-tunnel rate-limit rate
```

To reset the rate limit to the default, use the `no protocol-tunnel rate-limit rate` command.

**Parameters**

- `rate` Enter the rate in frames per second. The range is from 75 to 3000. The default is 75.

**Defaults**

75 frames per second.

**Command Modes**

CONFIGURATION

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Example**

```
Dell#
Dell#conf
Dell(conf)#protocol-tunnel rate-limit 1000
Dell(conf)#
```

**Related Commands**

- `show protocol-tunnel` — displays tunneling information for all VLANs.
- `show running-config` — displays the current configuration.

**show protocol-tunnel**

Display protocol tunnel information for all or a specified VLAN-Stack VLAN.

**Syntax**

```
show protocol-tunnel [vlan vlan-id]
```

**Parameters**

- `vlan vlan-id` (OPTIONAL) Enter the keyword `vlan` then the VLAN ID to display information for the one VLAN. The range is from 1 to 4094.

**Defaults**

none

**Command Modes**

EXEC

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Example**

```
Dell#show protocol-tunnel
System Rate-Limit: 75 frames/second
VLAN Protocols Interface
1000  STP,PVST   Gi 5/7,Gi 5/6
```
<table>
<thead>
<tr>
<th></th>
<th>Protocol(s)</th>
<th>Interfaces</th>
</tr>
</thead>
<tbody>
<tr>
<td>1001</td>
<td>LLDP, GVRP</td>
<td>Gi 5/7, Gi 5/6</td>
</tr>
<tr>
<td>1002</td>
<td>MMRP, MVRP</td>
<td>Gi 5/7, Gi 5/6</td>
</tr>
<tr>
<td>1003</td>
<td>LACP, DOT1X</td>
<td>Gi 5/7, Gi 5/6</td>
</tr>
<tr>
<td>1004</td>
<td>OAM, PAUSE</td>
<td>Gi 5/7, Gi 5/6</td>
</tr>
<tr>
<td>1005</td>
<td>E-LMI</td>
<td>Gi 5/7, Gi 5/6</td>
</tr>
</tbody>
</table>

**Example (Specific VLAN)**

Dell#show protocol-tunnel vlan 2
System Rate-Limit: 1000 Frames/second
Interface  Vlan  Protocol(s)
Gi1/2      2     STP, PVST
Dell#

**Related Commands**

- `show running-config` — displays the current configuration.
Simple Network Management Protocol (SNMP) and Syslog

This chapter contains commands to configure and monitor the simple network management protocol (SNMP) v1/v2/v3 and Syslog.

The chapter contains the following sections:

- SNMP Commands
- Syslog Commands

SNMP Commands

The following SNMP commands are available in the Dell Networking operating software.

The simple network management protocol (SNMP) is used to communicate management information between the network management stations and the agents in the network elements. The system supports SNMP versions 1, 2c, and 3, supporting both read-only and read-write modes. The system sends SNMP traps, which are messages informing an SNMP management system about the network. The system supports up to 16 SNMP trap receivers.

Important Points to Remember

- Typically, 5-second timeout and 3-second retry values on an SNMP server are sufficient for both local area network (LAN) and wide area network (WAN) applications. If you experience a timeout with these values, the recommended best practice on Dell Networking switches (to accommodate their high port density) is to increase the timeout and retry values on your SNMP server to the following:
  - SNMP Timeout — greater than 3 seconds.
  - SNMP Retry count — greater than 2 seconds.
- If you are using access control lists (ACLs) in an SNMP v3 configuration, group ACL overrides user ACL if the user is part of that group.
- SNMP operations are not supported on a virtual local area network (VLAN).

show snmp

Display the status of SNMP network elements.

Syntax

```
show snmp
```

Command Modes

- EXEC
- EXEC Privilege
**show snmp engineID**

Display the identification of the local SNMP engine and all remote engines that are configured on the router.

**Syntax**

```
show snmp engineID
```

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

**Version 8.3.16.1**

Introduced on the MXL 10/40GbE Switch IO Module.

**Example**

```
Dell#show snmp engineID
Local SNMP engineID: 0000178B02000001E80214A8
Remote Engine ID      IP-addr      Port
80001F88043132333435  172.31.1.3    5009
80001F88043938373635  172.31.1.3    5008
Dell#
```

**Related Commands**

- `snmp-server engineID` — configures local and remote SNMP engines on the router.
**show snmp group**

Display the group name, security model, status, and storage type of each group.

**Syntax**

```
show snmp group
```

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

Version 8.3.16.1  
Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

The following Example displays a group named *ngroup*. The *ngroup* has a security model of version 3 (v3) with authentication (auth), the read and notify name is *nview* with no write view name specified, and finally the row status is active.

**Example**

```
Dell#show snmp group

  groupname: ngroup  security model: v3 auth
  readview : nview           writeview: no write view specified
  notifyview: nview
  row status: active

Dell#
```

**Related Commands**

- `snmp-server group` — configures an SNMP server group.

**show snmp user**

Display the information configured on each SNMP user name.

**Syntax**

```
show snmp user
```

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

Version 8.3.16.1  
Introduced on the MXL 10/40GbE Switch IO Module.

**Example**

```
Dell#show snmp user

  User name: v1v2creadu
  Engine ID: 0000178B02000001E80214A8
  storage-type: nonvolatile active
  Authentication Protocol: None
  Privacy Protocol: None

Dell#
```
snmp ifmib ifalias long

Display the entire description string through the Interface MIB, which would be truncated otherwise to 63 characters.

Syntax

```
snmp ifmib ifalias long
```

Defaults

Interface description truncated beyond 63 characters.

Command Modes

```
CONFIGURATION
```

Command History

```
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.
```

Example

```
!----command run on host connected to switch:-------!
> snmpwalk -c public 10.10.10.130 .1.3.6.1.2.1.31 | grep -i alias | more
IF-MIB::ifAlias.134530304 = STRING: This is a port connected to Router2. This is a port connected to
IF-MIB::ifAlias.134792448 = STRING:

!----command run on Force10 switch:-----------!
Dell#snmp ifmib ifalias long

!----command run on server connected to switch:-------!
> snmpwalk -c public 10.10.10.130 .1.3.6.1.2.1.31 | grep -i alias | more
IF-MIB::ifAlias.134530304 = STRING: This is a port connected to Router2. This is a port connected to Router2. This is a port connected to Router2. This is a port connected to Router2. This is a port connected to Router2. This is a port connected to Router2.
IF-MIB::ifAlias.134792448 = STRING:
```

snmp-server community

Configure a new community string access for SNMPv1 v2 and v3.

Syntax

```
snmp-server community community-name {ro | rw} [security-name name][access-list-name]
```

To remove access to a community, use the `no snmp-server community community-string {ro | rw} [security-name name [access-list-name]]` command.

Parameters

- **community-name**: Enter a text string (up to 20 characters long) to act as a password for SNMP.
- **ro**: Enter the keyword `ro` to specify read-only permission.
- **rw**: Enter the keyword `rw` to specify read-write permission.
security-name

(Optional) Enter the keywords security-name then the security name as defined by the community MIB.

access-list-name

(Optional) Enter a standard IPv4 access list name (a string up to 16 characters long).

Defaults

none

Command Modes

CONFIGURATION

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The following example configures a community named public that is mapped to the security named guestuser with Read Only (ro) permissions.

The security-name parameter maps the community string to an SNMPv3 user/security name as defined by the community MIB.

If a community string is configured without a security-name (for example, snmp-server community public ro), the community is mapped to a default security-name/group:

- v1v2creadu / v1v2creadg — maps to a community with ro (read-only) permissions.
- v1v2cwriteu / v1v2cwriteg — maps to a community with rw (read-write) permissions.

The community-name parameter indexes this command.

If you do not configure the snmp-server community command, you cannot query SNMP data. Only Standard IPv4 ACL and IPv6 ACL is supported in the optional access-list-name.

The command options ipv6, security-name, and access-list-name are recursive. In other words, each option can, in turn, accept any of the three options as a sub-option, and each of those sub-options can accept any of the three sub-options as a sub-option, and so forth. The second Example shows the creation of a standard IPv4 ACL called snmp-ro-acl and then assigning it to the SNMP community guest.

NOTE: For IPv6 ACLs, only IPv6 and UDP types are valid for SNMP; TCP and ICMP rules are not valid for SNMP. In IPv6 ACLs, port rules are not valid for SNMP.

Example

Dell#config
Dell(conf)# snmp-server community public ro
Dell(conf)# snmp-server community guest ro security-name guestuser
Dell(conf)#

Example

Dell(conf)# ip access-list standard snmp-ro-acl
Dell(config-std-nacl)#seq 5 permit host 10.10.10.224
Dell(config-std-nacl)#seq 10 deny any count
Dell (conf)# snmp-server community guest ro snmp-ro-acl
Dell (conf)#

Related Commands
- `ip access-list standard` — names (or selects) a standard access list to filter based on IP address.
- `show running-config` — displays the current SNMP configuration and defaults.

### snmp-server contact

Configure contact information for troubleshooting this SNMP node.

**Syntax**

```
snmp-server contact text
```

To delete the SNMP server contact information, use the `no snmp-server contact` command.

**Parameters**

- `text` Enter an alphanumeric text string, up to 55 characters long.

**Defaults**

- `text` none

**Command Modes**

- CONFIGURATION

**Command History**

- `Version 8.3.16.1` Introduced on the MXL 10/40GbE Switch IO Module.

### snmp-server enable traps

Enable SNMP traps.

**Syntax**

```
snmp-server enable traps [notification-type] [notification-option]
```

To disable traps, use the `no snmp-server enable traps [notification-type] [notification-option]` command.

**Parameters**

- `notification-type` Enter the type of notification from the following list:
  - `ecfm` — Notification of changes to ECFM.
  - `entity` — Notification of changes to entity.
  - `envmon` — For Dell Networking device notifications when an environmental threshold is exceeded.
  - `eoam` — Notification of changes to the EOAM state.
ets — Notification of changes to the ets traps.
• fips — Notification of changes to the FIP snooping state.
• lacp — Notification of changes.
• pfc — Notification of changes to pfc traps.
• snmp — Notification of RFC 1157 traps.
• stp — Notification of a state change in the spanning tree protocol (RFC 1493).
• vrrp — Notification of a state change in a VRRP group.
• xstp — Notification of a state change in MSTP (802.1s), RSTP (802.1w), and PVST+

For the envmon notification-type, enter one of the following optional parameters:
• temperature

For the snmp notification-type, enter one of the following optional parameters:
• authentication
• coldstart
• linkdown
• linkup

Defaults Not enabled.
Command Modes CONFIGURATION

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The system supports up to 16 SNMP trap receivers.

If you do not configure this command, no traps controlled by this command are sent. If you do not specify a notification-type and notification-option, all traps are enabled.

Related Commands

snmp-server community — enables SNMP and sets the community string.

snmp-server engineID

Configure the name for both the local and remote SNMP engines on the router.

Syntax

snmp-server engineID [local engineID] [remote ip-address udp-port port-number engineID]
To return to the default, use the `no snmp-server engineID [local engineID] [remote ip-address udp-port port-number engineID]` command.

### Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>local engineID</code></td>
<td>Enter the keyword <code>local</code> then the engine ID number that identifies the copy of the SNMP on the local device. Format (as specified in RFC 3411): 12 octets. *- The first four octets are set to the private enterprise number. *- The remaining eight octets are the MAC address of the chassis.</td>
</tr>
<tr>
<td><code>remote ip-address</code></td>
<td>Enter the keyword <code>remote</code> then the IP address that identifies the copy of the SNMP on the remote device.</td>
</tr>
<tr>
<td><code>udp-port port-number</code></td>
<td>Enter the keywords <code>udp-port</code> then the user datagram protocol (UDP) port number on the remote device. The range is from 0 to 65535. The default is 162.</td>
</tr>
</tbody>
</table>

### Defaults

As above.

### Command Modes

CONFIGURATION

### Command History

**Version 8.3.16.1** Introduced on the MXL 10/40GbE Switch IO Module.

### Usage Information

Changing the value of the SNMP Engine ID has important side effects. A user's password (entered on the command line) is converted to a message digest algorithm (MD5) or secure hash algorithm (SHA) security digest. This digest is based on both the password and the local Engine ID. The command line password is then destroyed, as required by RFC 2274. Because of this deletion, if the local value of the Engine ID changes, the security digests of SNMPv3 users is invalid and you must reconfigure the users.

For the remote Engine ID, the host IP and UDP port are the indexes to the command that are matched to either overwrite or remove the configuration.

### Related Commands

- `show snmp engineID` — displays the SNMP engine and all the remote engines that are configured on the router.
- `show running-config` — displays the SNMP running configuration.
snmp-server group

Configure a new SNMP group or a table that maps SNMP users to SNMP views.

Syntax

```
snmp-server group [group_name {1 | 2c | 3 {auth | noauth | priv}}] [read name] [write name] [notify name] [ access-list-name | access-list-name]
```

To remove a specified group, use the `no snmp-server group [group_name {v1 | v2c | v3 {auth | noauth | priv}}] [read name] [write name] [notify name] [access-list-name | access-list-name]` command.

Parameters

- **group_name**: Enter a text string (up to 20 characters long) as the name of the group. The following groups are created for mapping to read/write community/security-names (defaults):
  - `v1v2creadg` — maps to a community/security-name with `ro` permissions.
  - `v1v2cwriteg` — maps to a community/security-name `rw` permissions.

- **1 | 2c | 3**: (OPTIONAL) Enter the security model version number (1, 2c, or 3):
  - 1 is the least secure version.
  - 3 is the most secure of the security modes.
  - 2c allows transmission of informs and counter 64, which allows for integers twice the width of what is normally allowed.

  The default is **1**.

- **auth**: (OPTIONAL) Enter the keyword `auth` to specify authentication of a packet without encryption.

- **noauth**: (OPTIONAL) Enter the keyword `noauth` to specify no authentication of a packet.

- **priv**: (OPTIONAL) Enter the keyword `priv` to specify both authentication and then scrambling of the packet.

- **read name**: (OPTIONAL) Enter the keyword `read` then a name (a string of up to 20 characters long) as the read view name. The default is **GlobalView** and is assumed to be every object belonging to the internet (1.3.6.1) OID space.

- **write name**: (OPTIONAL) Enter the keyword `write` then a name (a string of up to 20 characters long) as the write view name.

- **notify name**: (OPTIONAL) Enter the keyword `notify` then a name (a string of up to 20 characters long) as the notify view name.
**access-list-name**

(Optional) Enter the standard IPv4 access list name (a string up to 16 characters long).

**Defaults**

As above.

**Command Modes**

CONFIGURATION

**Command History**

**Version 8.3.16.1**

Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

The following Example specifies the group named *harig* as a version 3 user requiring both authentication and encryption and read access limited to the read named *rview*.

> **NOTE:** The number of configurable groups is limited to 16 groups.

**Example**

```plaintext
Dell#conf
Dell(conf)# snmp-server group harig 3 priv read rview
Dell#
```

**Related Commands**

- `show snmp group` — displays the group name, security model, view status, and storage type of each group.
- `show running-config` — displays the SNMP running configuration.

---

**snmp-server host**

Configure the recipient of an SNMP trap operation.

**Syntax**

```
snmp-server host ip-address [traps | informs] [version 1 | 2c | 3] [auth | no auth | priv] [community-string] [udp-port port-number] [notification-type]
```

To remove the SNMP host, use the `no snmp-server host ip-address [traps | informs] [version 1 | 2c | 3] [auth | noauth | priv] [community-string] [udp-port number] [notification-type]` command.

**Parameters**

- `ip-address`:
  
  Enter the keyword *host* then the IP address of the host (configurable hosts is limited to 16).

- `traps`:
  
  (OPTIONAL) Enter the keyword *traps* to send trap notifications to the specified host. The default is *traps*.

- `informs`:
  
  (OPTIONAL) Enter the keyword *informs* to send inform notifications to the specified host. The default is *traps*.
version 1 | 2c | 3

(OPTIONAL) Enter the keyword version to specify the security model then the security model version number 1, 2c, or 3:

- Version 1 is the least secure version.
- Version 3 is the most secure of the security modes.
- Version 2c allows transmission of informs and counter 64, which allows for integers twice the width of what is normally allowed.

The default is version 1.

auth

(OPTIONAL) Enter the keyword auth to specify authentication of a packet without encryption.

noauth

(OPTIONAL) Enter the keyword noauth to specify no authentication of a packet.

priv

(OPTIONAL) Enter the keyword priv to specify both authentication and then scrambling of the packet.

community-string

Enter a text string (up to 20 characters long) as the name of the SNMP community.

NOTE: For version 1 and version 2c security models, this string represents the name of the SNMP community. The string can be set using this command; however, Dell Networking recommends setting the community string using the snmp-server community command before executing this command. For version 3 security model, this string is the USM user security name.

udp-port port-number

(OPTIONAL) Enter the keywords udp-port then the port number of the remote host to use. The range is from 0 to 65535. The default is 162.

notification-type

(OPTIONAL) Enter one of the following keywords for the type of trap to send to the host:

- ecfm — Notification of ECFM state changes.
- entity — Notification of entity changes.
- envmon — Environment monitor trap.
- eoam — Notification of EOAM state changes.
- ets — Notification of ets trap changes.
- fips — Notification of FIP snooping state changes.
- lacp — Notification of LACP state changes.
- snmp — SNMP notification (RFC 1157).
- stp — Spanning tree protocol notification (RFC 1493).
- vrrp — State change in a VRRP group.
- xstp — State change in MSTP (802.1s), RSTP (802.1w), and PVST+.
The default is all trap types are sent to host.

Defaults
As above.

Command Modes
CONFIGURATION

Command History

Version 8.3.16.1 Introduced on the M6/40GbE Switch IO Module.

Usage Information
In order to configure the router to send SNMP notifications, enter at least one
snmp-server host command. If you enter the command with no keywords, all
trap types are enabled for the host. If you do not enter an snmp-server host
command, no notifications are sent.

In order to enable multiple hosts, issue a separate snmp-server host command
for each host. You can specify multiple notification types in the command for each
host.

When multiple snmp-server host commands are given for the same host and
type of notification (trap or inform), each succeeding command overwrites the
previous command. Only the last snmp-server host command is in effect. For
example, if you enter an snmp-server host inform command for a host and
then enter another snmp-server host inform command for the same host, the
second command replaces the first command.

The snmp-server host command is used with the snmp-server enable
command. Use the snmp-server enable command to specify which SNMP
notifications are sent globally. For a host to receive most notifications, at least one
snmp-server enable command and the snmp-server host command for that
host must be enabled.

NOTE: For v1 / v2c trap configuration, if the community-string is not defined
using the snmp-server community command prior to using this command,
the default form of the snmp-server community command automatically is
configured with the community-name the same as specified in the snmp-
server host command.

Configuring Informs

To send an inform, use the following steps:

1. Configure a remote engine ID.
2. Configure a remote user.
3. Configure a group for this user with access rights.
4. Enable traps.
5. Configure a host to receive informs.

Related Commands

snmp-server enable traps — enables SNMP traps.
snmp-server community — configures a new community SNMPv1 or SNMPv2c.

**snmp-server location**

Configure the location of the SNMP server.

**Syntax**

```
snmp-server location text
```

To delete the SNMP location, use the **no snmp-server location** command.

**Parameters**

- **text**
  
  Enter an alpha-numeric text string, up to 55 characters long.

**Defaults**

Not configured.

**Command Modes**

CONFIGURATION

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**snmp-server packetsize**

Set the largest SNMP packet size permitted. When the SNMP server is receiving a request or generating a reply, use the **snmp-server packetsize** global configuration command.

**Syntax**

```
snmp-server packetsize byte-count
```

**Parameters**

- **byte-count**
  
  Enter one of the following values 8, 16, 24 or 32. Packet sizes are 8000 bytes, 16000 bytes, 32000 bytes, and 64000 bytes.

**Defaults**

8

**Command Modes**

CONFIGURATION

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**snmp-server trap-source**

Configure a specific interface as the source for SNMP traffic.

**Syntax**

```
snmp-server trap-source interface
```
To disable sending traps out a specific interface, use the no snmp trap-source command.

### Parameters

- **interface**
  
  Enter the following keywords and slot/port or number information:
  
  - For a Loopback interface, enter the keyword `loopback` then a number from 0 to 16383.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.

### Defaults

The IP address assigned to the management interface is the default.

### Command Modes

- **CONFIGURATION**

### Command History

- **Version 8.3.16.1**
  
  Introduced on the MXL 10/40GbE Switch IO Module.

### Usage Information

To enable this `snmp-server trap-source` command, configure an IP address on the interface and enable the interface configured as an SNMP trap source.

### Related Commands

- `snmp-server community` — sets the community string.

---

**snmp-server user**

Configure a new user to an SNMP group.

### Syntax

```
snmp-server user name {group_name remote ip-address udp-port port-number} [1 | 2c | 3] [encrypted] [auth {md5 | sha} auth-password] [priv des56 priv password] [access-list-name]
```

To remove a user from the SNMP group, use the `no snmp-server user name {group_name remote ip-address udp-port port-number} [1 | 2c | 3] [encrypted] [auth {md5 | sha} auth-password] [priv des56 priv password] [access-list-name] command.

### Parameters

- **name**
  
  Enter the name of the user (not to exceed 20 characters), on the host that connects to the agent.

- **group_name**
  
  Enter a text string (up to 20 characters long) as the name of the group. The following groups are created for mapping to read/write community/security-names (defaults):
  
  - `v1v2creadu` — maps to a community with ro permissions.
- `lv2cwriteu` — maps to a community `rw` permissions.

**remote ip-address**
Enter the keywords `udp-port` then the user datagram protocol (UDP) port number on the remote device. The range is from 0 to 65535. The default is `162`.

**udp-port port-number**
Enter the keywords `udp-port` then the UDP (User Datagram Protocol) port number on the remote device. The range is from 0 to 65535. The default is `162`.

**1 | 2c | 3**
(Optional) Enter the security model version number (1, 2c, or 3):
- 1 is the least secure version.
- 3 is the most secure of the security modes.
- 2c allows transmission of informs and counter 64, which allows for integers twice the width of what is normally allowed.

The default is 1.

**encrypted**
(Optional) Enter the keyword `encrypted` to specify that the password appear in encrypted format (a series of digits, masking the true characters of the string).

**auth**
(Optional) Enter the keyword `auth` to specify authentication of a packet without encryption.

**md5 | sha**
(Optional) Enter the keyword `md5` or `sha` to designate the authentication level.
- `md5` — Message Digest Algorithm
- `sha` — Secure Hash Algorithm

**auth-password**
(Optional) Enter a text string (up to 20 characters long) password that enables the agent to receive packets from the host. Minimum: eight characters long.

**priv des56**
(Optional) Enter the keywords `priv des56` to initiate a privacy authentication level setting using the CBC-DES privacy authentication algorithm (des56).

**priv password**
(Optional) Enter a text string (up to 20 characters long) password that enables the host to encrypt the contents of the message it sends to the agent. Minimum: eight characters long.

**access-list-name**
(Optional) Enter the standard IPv4 access list name (a string up to 16 characters long).

**Defaults**
As above.

**Command Modes**
CONFIGURATION
Command History

Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

No default values exist for authentication or privacy algorithms and no default password exists. If you forget a password, you cannot recover it; the user must be reconfigured. You can specify either a plain-text password or an encrypted cypher-text password. In either case, the password is stored in the configuration in an encrypted form and displayed as encrypted in the `show running-config` command.

If you have an encrypted password, you can specify the encrypted string instead of the plain-text password. The following command is an Example of how to specify the command with an encrypted string.

```
Dell# snmp-server user privuser v3group v3 encrypted auth md5 9fc53d9d908118b2804fe80e3ba8763d priv des56 d0452401a8c3ce42804fe80e3ba8763d
```

**NOTE:** The number of configurable users is limited to 16.

**Example**

```
Dell# snmp-server user privuser v3group v3 encrypted auth md5 9fc53d9d908118b2804fe80e3ba8763d priv des56 d0452401a8c3ce42804fe80e3ba8763d
```

**Example**

```
Dell(conf)# snmp-server user authuser v3group v3 auth md5 authpasswd
```

**Example**

```
Dell(conf)# snmp-server user n3user ngroup remote 172.31.1.3 udp-port 5009 3 auth md5 authpasswd
```

**Related Commands**

- `show snmp user` — displays the information configured on each SNMP user name.

```
snmp-server view
```

Configure an SNMPv3 view.

**Syntax**

```
snmp-server view view-name oid-tree {included | excluded}
```

To remove an SNMPv3 view, use the `no snmp-server view view-name oid-tree {included | excluded}` command.

**Parameters**

- `view-name` Enter the name of the view (not to exceed 20 characters).
- `oid-tree` Enter the OID sub tree for the view (not to exceed 20 characters).
included (OPTIONAL) Enter the keyword included to include the MIB family in the view.

excluded (OPTIONAL) Enter the keyword excluded to exclude the MIB family in the view.

Defaults none

Command Modes CONFIGURATION

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The oid-tree variable is a full sub-tree starting from 1.3.6 and cannot specify the name of a sub-tree or a MIB. The following Example configures a view named rview that allows access to all objects under 1.3.6.1.

Example

Dell#(conf) snmp-server view rview 1.3.6.1 included

</tbody>
</table>

**snmp trap link-status**

Enable the interface to send SNMP link traps, which indicate whether the interface is up or down.

**Syntax**

```
snmp trap link-status
```

To disable sending link trap messages, use the **no snmp trap link-status** command.

**Defaults**
Enabled.

**Command Modes**
INTERFACE

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

If the interface is expected to flap during normal usage, you could disable this command.

**Syslog Commands**

The following commands allow you to configure logging functions on all Dell Networking switches.
clear logging

Clear the messages in the logging buffer.

Syntax

```
clear logging
```

Defaults

none

Command Modes

EXEC Privilege

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Related Commands

```
show logging — displays logging settings and system messages in the internal buffer.
```

default logging buffered

Return to the default setting for messages logged to the internal buffer.

Syntax

```
default logging buffered
```

Defaults

```
size = 40960; level = 7 or debugging
```

Command Modes

CONFIGURATION

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Related Commands

```
default logging buffered — sets the logging buffered parameters.
```

default logging console

Return the default settings for messages logged to the console.

Syntax

```
default logging console
```

Defaults

```
level = 7 or debugging
```

Command Modes

CONFIGURATION

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Related Commands

```
logging console — sets the logging console parameters.
```
**default logging monitor**

Return to the default settings for messages logged to the terminal.

**Syntax**

```
default logging monitor
```

**Defaults**

```
level = 7 or debugging
```

**Command Modes**

```
CONFIGURATION
```

**Command History**

```
Version 8.3.16.1   Introduced on the MXL 10/40GbE Switch IO Module.
```

**Related Commands**

- `logging monitor` — sets the logging monitor parameters.
- `terminal monitor` — sends system messages to the terminal/monitor.

**default logging trap**

Return to the default settings for logging messages to the Syslog servers.

**Syntax**

```
default logging trap
```

**Defaults**

```
level = 6 or informational
```

**Command Modes**

```
CONFIGURATION
```

**Command History**

```
Version 8.3.16.1   Introduced on the MXL 10/40GbE Switch IO Module.
```

**Related Commands**

- `logging trap` — limit messages logged to the Syslog servers based on severity.

**logging**

Configure an IP address or host name of a Syslog server where logging messages are sent. You can configure multiple logging servers of IPv4.

**Syntax**

```
logging {ip-address | hostname}
```

To disable logging, use the no logging command.

**Parameters**

- `ip-address` Enter the IPv4 address in dotted decimal format.
- `hostname` Enter the name of a host already configured and recognized by the switch.
logging buffered

Enable logging and specify which messages are logged to an internal buffer. By default, all messages are logged to the internal buffer.

**Syntax**

```
logging buffered [level] [size]
```

To return to the default values, use the `default logging buffered` command.

To disable logging stored to an internal buffer, use the `no logging buffered` command.

**Parameters**

- `level` (OPTIONAL) Indicate a value from 0 to 7 or enter one of the following equivalent words: emergencies, alerts, critical, errors, warnings, notifications, informational, or debugging. The default is 7 or debugging.
- `size` (OPTIONAL) Indicate the size, in bytes, of the logging buffer. The number of messages buffered depends on the size of each message. The range is from 40960 to 524288. The default is 40960 bytes.

**Defaults**

```
level = 7; size = 40960 bytes
```

**Command Modes**

CONFIGURATION

**Command History**

- **Version 8.3.16.1** Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

When you decrease the buffer size, all messages stored in the buffer are lost. Increasing the buffer size does not affect messages stored in the buffer.
**default logging buffered** — returns the logging buffered parameters to the default setting.

**show logging** — displays the logging setting and system messages in the internal buffer.

---

### logging console

Specify which messages are logged to the console.

**Syntax**

```
logging console [level]
```

To return to the default values, use the `default logging console` command.

To disable logging to the console, use the `no logging console` command.

**Parameters**

- **level** (OPTIONAL) Indicate a value from 0 to 7 or enter one of the following parameters: `emergencies`, `alerts`, `critical`, `errors`, `warnings`, `notifications`, `informational`, or `debugging`. The default is **7 or debugging**.

**Defaults**

- level = **7**; size = **debugging**

**Command Modes**

CONFIGURATION

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**

- **clear logging** — clears the logging buffer.
- **default logging console** — returns the logging console parameters to the default setting.
- **show logging** — displays the logging setting and system messages in the internal buffer.

---

### logging facility

Configure the Syslog facility used for error messages sent to Syslog servers.

**Syntax**

```
logging facility [facility-type]
```

To return to the default values, use the `no logging facility` command.
Parameters

**facility-type**

(Optional) Enter one of the following parameters:

- auth (authorization system)
- cron (Cron/at facility)
- deamon (system daemons)
- kern (kernel)
- local0 (local use)
- local1 (local use)
- local2 (local use)
- local3 (local use)
- local4 (local use)
- local5 (local use)
- local6 (local use)
- local7 (local use)
- lpr (line printer system)
- mail (mail system)
- news (USENET news)
- sys9 (system use)
- sys10 (system use)
- sys11 (system use)
- sys12 (system use)
- sys13 (system use)
- sys14 (system use)
- syslog (Syslog process)
- user (user process)
- uucp (Unix to Unix copy process)

The default is **local7**.

**Defaults**

**local7**

**Command Modes**

CONFIGURATION

**Command History**

**Version 8.3.16.1**

Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**

- **logging** — enables logging to a Syslog server.
- **logging on** — enables logging.
logging history

Specify which messages are logged to the history table of the switch and the SNMP network management station (if configured).

Syntax

logging history level

To return to the default values, use the no logging history command.

Parameters

level

Indicate a value from 0 to 7 or enter one of the following equivalent words: emergencies, alerts, critical, errors, warnings, notifications, informational, or debugging. The default is 4 or warnings.

Defaults

warnings or 4

Command Modes

CONFIGURATION

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

When you configure the snmp-server trap-source command, the system messages logged to the history table are also sent to the SNMP network management station.

Related Commands

show logging — displays information logged to the history buffer.

logging history size

Specify the number of messages stored in the system logging history table.

Syntax

logging history size size

To return to the default values, use the no logging history size command.

Parameters

size

Indicate a value as the number of messages to be stored. The range is from 0 to 500. The default is 1 message.

Defaults

1 message

Command Modes

CONFIGURATION

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

When the number of messages reach the limit you set with the logging history size command, older messages are deleted as newer ones are added to the table.
logging monitor

Specify which messages are logged to Telnet applications.

Syntax

logging monitor [level]

To disable logging to terminal connections, use the no logging monitor command.

Parameters

level

Indicate a value from 0 to 7 or enter one of the following parameters: emergencies, alerts, critical, errors, warnings, notifications, informational, or debugging. The default is 7 or debugging.

Defaults

7 or debugging

Command Modes

CONFIGURATION

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Related Commands

default logging monitor — returns the logging monitor parameters to the default setting.

logging on

Specify that debug or error messages are asynchronously logged to multiple destinations, such as the logging buffer, Syslog server, or terminal lines.

Syntax

logging on

To disable logging to logging buffer, Syslog server and terminal lines, use the no logging on command.

Defaults

Enabled.

Command Modes

CONFIGURATION

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.
### Usage Information
When you use the `no logging on` command, messages are logged only to the console.

### Related Commands
- **logging** — enables logging to the Syslog server.
- **logging buffered** — sets the logging buffered parameters.
- **logging console** — sets the logging console parameters.
- **logging monitor** — sets the logging parameters for the terminal connections.

---

## logging source-interface

Specify that the IP address of an interface is the source IP address of Syslog packets sent to the Syslog server.

### Syntax
```
logging source-interface interface
```

To disable this command and return to the default setting, use the `no logging source-interface` command.

### Parameters
- **interface**
  - Enter the following keywords and slot/port or number information:
    - For Loopback interfaces, enter the keyword `loopback` then a number from zero (0) to 16383.
    - For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
    - For a ten-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
    - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
    - For VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

### Defaults
- Not configured.

### Command Modes
- **CONFIGURATION**

### Command History
- **Version 8.3.16.1**
  - Introduced on the MXL 10/40GbE Switch IO Module.

### Usage Information
Syslog messages contain the IP address of the interface used to egress the router. By configuring the `logging source-interface` command, the Syslog packets contain the IP address of the interface configured.
Related Commands

- **logging** — enables logging to the Syslog server.

---

### logging synchronous

#### Description
Synchronize unsolicited messages and output.

#### Syntax
```
logging synchronous [level level | all] [limit number-of-buffers]
```

To disable message synchronization, use the `no logging synchronous [level level | all] [limit number-of-buffers]` command.

#### Parameters
- **all**
  - Enter the keyword `all` to ensure that all levels are printed asynchronously.
- **level level**
  - Enter the keyword `level` then a number as the severity level. A high number indicates a low severity level and vice versa. The range is from 0 to 7. The default is 2.
- **all**
  - Enter the keyword `all` to turn off all.
- **limit number-of-buffers**
  - Enter the keyword `limit` then the number of buffers to be queued for the terminal after which new messages are dropped. The range is from 20 to 300. The default is 20.

#### Defaults
- Disabled. If enabled without the `level` or `number-of-buffers` options specified, `level = 2` and `number-of-buffers = 20` are the defaults.

#### Command Modes
- **LINE**

#### Command History
- **Version 8.3.16.1**
  - Introduced on the MXL 10/40GbE Switch IO Module.

#### Usage Information
- When you enable `logging synchronous`, unsolicited messages appear between software prompts and outputs. Only the messages with a severity at or below the set level are sent to the console.

- If the message queue limit is reached on a terminal line and messages are discarded, a system message appears on that terminal line. Messages may continue to appear on other terminal lines.

#### Related Commands
- **logging on** — enables logging.
logging trap

Specify which messages are logged to the Syslog server based on message severity.

**Syntax**

```plaintext
logging trap [level]
```

To return to the default values, use the `default logging trap` command.

To disable logging, use the `no logging trap` command.

**Parameters**

- **level**: Indicate a value from 0 to 7 or enter one of the following parameters: `emergencies`, `alerts`, `critical`, `errors`, `warnings`, `notifications`, `informational`, or `debugging`. The default is 6 or informational.

**Defaults**

6 or informational

**Command Modes**

- CONFIGURATION

**Command History**

- **Version 8.3.16.1**: Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**

- `logging` — enables the logging to another device.
- `logging on` — enables logging.

show logging

Display the logging settings and system messages logged to the internal buffer of the switch.

**Syntax**

```plaintext
show logging [number | history [reverse][number] | reverse [number] | summary]
```

**Parameters**

- **number** (OPTIONAL) Enter the number of messages displayed in the output. The range is from 1 to 65535.
- **history** (OPTIONAL) Enter the keyword `history` to view only information in the Syslog history table.
- **reverse** (OPTIONAL) Enter the keyword `reverse` to view the Syslog messages in FIFO (first in, first out) order.
- **summary** (OPTIONAL) Enter the keyword `summary` to view a table showing the number of messages per type and per slot. Slots *7* and *8* represent RPMs.

**Command Modes**

- EXEC
- EXEC Privilege

May 19 10:23:59: %STKUNIT0-M:CP %SYS-5-CONFIG_I: Configured from vty0 ( 10.11.68.22 ) by admin

Example

Dell#show logging history
Syslog History Table: 1 maximum table entries, saving level warnings or higher
  SNMP notifications not Enabled
May 22 08:53:09: %STKUNIT0-M:CP %SEC-3-AUTHENTICATION_ENABLE_SUCCESS: Enable password authentication success on vty0 ( 10.11.68.22 )
Dell#
show logging driverlog stack-unit

Display the driver log for the specified stack member.

Syntax

show logging driverlog stack-unit unit#

Parameters

stack-unit unit#
Enter the keywords stack-unit then the stack member ID of the switch for which you want to display the driver log. The range is from 0 to 1.

defaults

none

Command Modes

• EXEC
• EXEC Privilege

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

This command displays internal software driver information, which may be useful during troubleshooting switch initialization errors, such as a downed Port-Pipe.

terminal monitor

Configure the system to display messages on the monitor/terminal.

Syntax

terminal monitor

To return to default settings, use the terminal no monitor command.

defaults

Disabled.

Command Modes

• EXEC
• EXEC Privilege

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Related Commands

logging monitor — sets the logging parameters on the monitor/terminal.
Stacking

For more information about using the MXL 10/40GbE Switch stacking feature, refer to the Stacking MXL 10/40GbE Switches chapter in the Dell Networking OS Configuration Guide.

redundancy disable-auto-reboot

Prevent the MXL 10/40GbE switch stack management unit from rebooting if it fail.

Syntax

redundancy disable-auto-reboot stack-unit [0-5 | members]

To return to the default, use the no redundancy disable-auto-reboot stack-unit [0-5 | members] command.

Defaults

Disabled (the failed switch is automatically rebooted).

Command Modes

CONFIGURATION

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

When the command is given as redundancy disable-auto-reboot stack-unit, it prevents the MXL 10/40GbE switch stack management unit and standby unit from rebooting if they fail.

When a particular unit number in the range from 0 to 5 is issued as part of the CLI, it prevents that particular unit from rebooting after failure.

When members are issued as part of the CLI, all the units part of the stack are prevented from rebooting after failure.

The unit does not reboot until it is manually rebooted.

Related Commands

show redundancy — displays the current redundancy status.
**redundancy force-failover stack-unit**

Force the standby unit in the stack to become the management unit.

**Syntax**
```
redundancy force-failover stack-unit
```

**Defaults**
Not enabled.

**Command Modes**
EXEC Privilege

**Command History**
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**reset stack-unit**

Reset any designated stack member except the management unit (master unit).

**Syntax**
```
reset stack-unit 0–5 hard
```

**Parameters**
- `0–5` Enter the stack member unit identifier of the stack member to reset.
- `hard` Reset the stack unit if the unit is in a problem state.

**Defaults**
none

**Command Modes**
EXEC

**Command History**
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**
Resetting the management unit is not allowed, and an error message displays if you try to do so. Resetting is a soft reboot, including flushing the forwarding tables.

Starting with the Dell Networking OS version 7.8.1.0, you can run this command directly on the stack standby unit (standby master) to reset the standby. You cannot reset any other unit from the standby unit.

The first two bold lines in the following example show the output of a not allowed reset action. The third bold line shows the output of a successful reset action.

**Example**
```
Dell# show system brief
  Stack MAC : 00:1e:c9:f1:00:7b
  Reload Type : jump-start [Next boot : normal-reload]
-- Stack Info --
Unit  UnitType  Status  ReqTyp  CurTyp  Version

Dell#

Related Commands
redundancy disable-auto-reboot — prevents the system from auto-rebooting if it fails.

show system stack-ports
Display information about the stacking ports on all switches in the MXL 10/40GbE stack.

Syntax
show system stack-ports [status | topology]

Parameters
status (OPTIONAL) Enter the keyword status to display the command output without the Connection field.
topology (OPTIONAL) Enter the keyword topology to limit the table to just the Interface and Connection fields.

Defaults
none

Command Modes
• EXEC
• EXEC Privilege

Command History
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
The following describes the show interfaces command shown in the following example.
### Field Description

**Topology** Lists the topology of stack ports connected: Ring, Daisy chain, or Standalone.

**Interface** The unit/port ID of the connected stack port on this unit.

**Link Speed** Link Speed of the stack port (10 or 40) in Gb/s.

**Admin Status** The only currently listed status is Up.

**Connection** The stack port ID to which this unit's stack port is connected.

#### Example

```plaintext
Dell# show system stack-ports
Topology: Ring

```

1101
show system stack-unit stack-group

Display the stack-groups present/configured for a MXL 10/40GbE switch stack unit.

**Syntax**

```
show system stack-unit unit-number stack-group [configured]
```

**Parameters**

- **unit number**
  - `<0–5>`
  - Number of the member stack unit. The valid values are from 0 to 5. The default is 0.

**Command Modes**

EXEC Privilege

**Command History**

Version 8.3.16.1

Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**

- **reload** — reboots the system.
- **show system** — displays the current status of all stack members or a specific member.

---

stack-unit stack-group

Configure a 40GbE port for stacking mode.

**Syntax**

```
stack-unit unit number stack-group group number
```

**Parameters**

- **unit number**
  - `<0–5>`
  - Number of the member stack unit. The valid values are from 0 to 5.

- **group number**
  - `<0–5>`
  - Number of the stacked port on the unit. The valid values are from 0 to 5.
stack-unit priority

Configure the ability of an MXL 10/40GbE switch to become the management unit of a stack.

Syntax

```
stack-unit 0–5 priority 1-14
```

Parameters

- **0–5**: Enter the stack member unit identifier, from 0 to 5, of the switch on which you want to set the management priority.
- **1–14**: This preference parameter allows you to specify the management priority of one backup switch over another, with 1 the lowest priority and 14 the highest. The switch with the highest priority value will be chosen to become the management unit.

Defaults

0

Command Modes

CONFIGURATION

Command History

- **Version 8.3.16.1**: Introduced on the MXL 10/40GbE Switch IO Module.

Related Commands

- **reload** — reboots the system.
- **show system** — displays the current status of all stack members or a specific member.
- **show system stack-unit stack-group** displays the stack-groups present/configured for a MXL 10/40GbE switch stack unit.
stack-unit provision

Preconfigure a logical stacking ID of a switch that joins the stack. This is an optional command that is executed on the management unit.

Syntax

```
stack-unit 0–5 provision {MXL-10/40GbE}
```

Parameters

- **0–5**: Enter a stack member identifier, from 0 to 5, of the switch that you want to add to the stack.
- **MXL-10/40GbE**: Enter the model identifier of the switch to be added as a stack member. This identifier is also referred to as the provision type.

Command Modes

CONFIGURATION

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Related Commands

- **reload**: reboots the system.
- **show system**: displays the status of all stack members or a specific member.

stack-unit renumber

Change the stack member ID of any stack member or a stand-alone unit.

Syntax

```
stack-unit 0–5 renumber 0–11
```

Parameters

- **0–5**: The first instance of this value is the stack member unit identifier, from 0 to 5, of the switch that you want to add to the stack.
  
  The second instance of this value is the desired new unit identifier number.

Defaults

none

Command Modes

EXEC Privilege

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

You can renumber any switch, including the management unit or a stand-alone unit.

You cannot renumber a unit to a number of an active member in the stack.
When executing this command on the master, the stack reloads. When the members are renumbered, only that specific unit is reset and comes up with the new unit number.

**Example**

Dell#stack-unit 0 renumber 2

Renumbering master unit will reload the stack. Proceed to renumber [confirm yes/no]:

**Related Commands**

- **reload** — reboots the system.
- **redundancy disable-auto-reboot** — resets the designated stack member.
- **show system** — displays the current status of all stack members or a specific member.
Storm Control

The Dell Networking operating software storm control feature allows you to limit or suppress traffic during a traffic storm.

Storm control is supported on the Dell Networking platforms.

Important Points to Remember

- Interface commands can only be applied on physical interfaces (virtual local area networks [VLANs] and link aggregation group [LAG] interfaces are not supported).
- An INTERFACE-level command only supports storm control configuration on ingress.
- An INTERFACE-level command overrides any CONFIGURATION-level ingress command for that physical interface, if both are configured.
- Do not apply per-VLAN quality of service (QoS) on an interface that has storm control enabled (either on an interface or globally).

show storm-control broadcast

Display the storm control broadcast configuration.

Syntax

show storm-control broadcast [interface]

Parameters

interface (OPTIONAL) Enter one of the following interfaces to display the interface-specific storm control configuration:

- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.

Defaults

none

Command Modes

- EXEC
- EXEC Privilege

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.
show storm-control broadcast
dell#show storm-control broadcast tengigabitethernet 3/24

Broadcast storm control configuration

<table>
<thead>
<tr>
<th>Interface</th>
<th>Direction</th>
<th>Packets/Second</th>
</tr>
</thead>
<tbody>
<tr>
<td>TenGig 3/24</td>
<td>Ingress</td>
<td>1000</td>
</tr>
</tbody>
</table>

Dell#

show storm-control multicast

Display the storm control multicast configuration.

Syntax

show storm-control multicast [interface]

Parameters

interface (OPTIONAL) Enter one of the following interfaces to display the interface specific storm control configuration:

- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.

Defaults

none

Command Modes

- EXEC
- EXEC Privilege

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Example

dell#show storm-control multicast gigabitethernet 1/0

Multicast storm control configuration

<table>
<thead>
<tr>
<th>Interface</th>
<th>Direction</th>
<th>Packets/Second</th>
</tr>
</thead>
<tbody>
<tr>
<td>Gi 1/0</td>
<td>Ingress</td>
<td>5</td>
</tr>
</tbody>
</table>

Dell#

show storm-control unknown-unicast

Display the storm control unknown-unicast configuration.

Syntax

show storm-control unknown-unicast [interface]
Parameters

**interface**

(Optional) Enter one of the following interfaces to display the interface specific storm control configuration:

- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.

Defaults

`none`

Command Modes

- **EXEC**
- **EXEC Privilege**

Command History

**Version 8.3.16.1**

Introduced on MXL 10/40GbE Switch IO Module

Example

```
Dell#show storm-control unknown-unicast tengigabitethernet 3/0

Unknown-unicast storm control configuration

<table>
<thead>
<tr>
<th>Interface</th>
<th>Direction</th>
<th>Packets/Second</th>
</tr>
</thead>
<tbody>
<tr>
<td>TenGig 3/0</td>
<td>Ingress</td>
<td>1000</td>
</tr>
</tbody>
</table>

Dell#
```

**storm-control broadcast (Configuration)**

Configure the percentage of broadcast traffic allowed in the network.

**Syntax**

```
storm-control broadcast [packets_per_second in]
```

To disable broadcast rate-limiting, use the `no storm-control broadcast [packets_per_second in]` command.

**Parameters**

- `packets_per_second`

  Enter the packets per second of broadcast traffic allowed into the network. The range is from 0 to 33554368.

**Defaults**

`none`

**Command Modes**

`CONFIGURATION (conf)`

**Command History**

**Version 8.3.16.1**

Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

Broadcast storm control is valid on Layer 2/Layer 3 interfaces only. Layer 2 broadcast traffic is treated as unknown-unicast traffic.
storm-control broadcast (Interface)

Configure the percentage of broadcast traffic allowed on an interface.

Syntax

```
storm-control broadcast [packets_per_second in]
```

To disable broadcast storm control on the interface, use the `no storm-control broadcast [packets_per_second in]` command.

Parameters

- `packets_per_second`
  - Enter the packets per second of broadcast traffic allowed into the network. The range is from 0 to 33554368.

Defaults

- `none`

Command Modes

- `INTERFACE (conf-if-interface-slot/port)`

Command History

- `Version 8.3.16.1` Introduced on the MxL 10/40GbE Switch IO Module.

storm-control multicast (Configuration)

Configure the packets per second (pps) of multicast traffic.

Syntax

```
storm-control multicast packets_per_second in
```

To disable storm-control for multicast traffic into the network, use the `no storm-control multicast packets_per_second in` command.

Parameters

- `packets_per_second`
  - Enter the packets per second of multicast traffic allowed into the network. The range is from 0 to 33554368.

Defaults

- `none`

Command Modes

- `CONFIGURATION (conf)`

Command History

- `Version 8.3.16.1` Introduced on the MxL 10/40GbE Switch IO Module.

Usage Information

Broadcast traffic (all 0xFs) should be counted against the broadcast storm control meter, not against the multicast storm control meter. It is possible, however, that some multicast control traffic may get dropped when storm control thresholds are exceeded.
**storm-control multicast (Interface)**

Configure the percentage of multicast traffic allowed on an MXL switch interface (ingress only).

**Syntax**

```
storm-control multicast packets_per_second in
```

To disable multicast storm control on the interface, use the `no storm-control multicast packets_per_second in` command.

**Parameters**

- `packets_per_second`
  
Enter the packets per second of broadcast traffic allowed into the network. The range is from 0 to 33554368.

**Defaults**

- none

**Command Modes**

- INTERFACE (conf-if-interface-slot/port)

**Command History**

- Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**storm-control unknown-unicast (Configuration)**

Configure the percentage of unknown-unicast traffic allowed on an MXL switch (ingress rate only).

**Syntax**

```
storm-control unknown-unicast [packets_per_second in]
```

To disable storm control for unknown-unicast traffic, use the `no storm-control unknown-unicast [packets_per_second in]` command.

**Parameters**

- `packets_per_second`
  
Enter the packets per second of broadcast traffic allowed into the network. The range is from 0 to 33554368.

**Defaults**

- none

**Command Modes**

- CONFIGURATION

**Command History**

- Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

Unknown Unicast Storm-Control is valid for Layer 2 and Layer 2/Layer 3 interfaces.
storm-control unknown-unicast (Interface)

Configure percentage of unknown-unicast traffic allowed on an MXL switch interface (ingress only).

Syntax

storm-control unknown-unicast \[packets_per_second in\]

To disable unknown-unicast storm control on the interface, use the no storm-control unknown-unicast \[packets_per_second in\] command.

Parameters

packets_per_second

Enter the packets per second of broadcast traffic allowed into the network. The range is from 0 to 33554431.

Defaults

none

Command Modes

INTERFACE (conf-if-interface-slot/port)

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.
Spanning Tree Protocol (STP)

The commands in this chapter configure and monitor the IEEE 802.1d spanning tree protocol (STP).

**bridge-priority**

Set the bridge priority of the switch in an IEEE 802.1D spanning tree.

**Syntax**

```
bridge-priority {priority-value | primary | secondary}
```

To return to the default value, use the `no bridge-priority` command.

**Parameters**

- **priority-value**: Enter a number as the bridge priority value. The range is from 0 to 65535. The default is `32768`.
- **primary**: Enter the keyword `primary` to designate the bridge as the root bridge.
- **secondary**: Enter the keyword `secondary` to designate the bridge as a secondary root bridge.

**Defaults**

priority-value = `32768`

**Command Modes**

SPANNING TREE (The prompt is "config-stp").

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**debug spanning-tree**

Enable debugging of the spanning tree protocol and view information on the protocol.

**Syntax**

```
debug spanning-tree {stp-id [all | bpdu | events | exceptions] | protocol}
```

To disable debugging, use the `no debug spanning-tree` command.

**Parameters**

- **stp-id**: Enter zero (0). The switch supports one spanning tree group with a group ID of 0.
**protocol**  
Enter the keyword for the type of STP to debug, either mstp, pvst, or rstp.

**all**  
(OPTIONAL) Enter the keyword all to debug all spanning tree operations.

**bpdu**  
(OPTIONAL) Enter the keyword bpdu to debug bridge protocol data units.

**events**  
(OPTIONAL) Enter the keyword events to debug STP events.

**Command Modes**  
EXEC Privilege

**Command History**  
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**  
When you enable debug spanning-tree bpdu for multiple interfaces, the software only sends information on BPDUs for the last interface specified.

**Related Commands**  
portfast bpdufilter default — enters SPANNING TREE mode on the switch.

---

**description**

Enter a description of the spanning tree.

**Syntax**

description \{description\}

To remove the description from the spanning tree, use the no description \{description\} command.

**Parameters**

description  
Enter a description to identify the spanning tree (80 characters maximum).

**Defaults**  
none

**Command Modes**  
SPANNING TREE (The prompt is “config-stp”)

**Command History**  
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**  
portfast bpdufilter default — enters SPANNING TREE mode on the switch.
**disable**

Disable the spanning tree protocol globally on the switch.

**Syntax**

```plaintext
disable
```

To enable Spanning Tree Protocol, use the `no disable` command.

**Defaults**

Enabled (that is, the spanning tree protocol is disabled.)

**Command Modes**

SPANNING TREE

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**

`portfast bpdupfilter default` — enters SPANNING TREE mode.

---

**forward-delay**

The amount of time the interface waits in the Listening state and the Learning state before transitioning to the Forwarding state.

**Syntax**

```plaintext
forward-delay seconds
```

To return to the default setting, use the `no forward-delay` command.

**Parameters**

`seconds` Enter the number of seconds that the system waits before transitioning STP to the Forwarding state. The range is from 4 to 30. The default is 15 seconds.

**Defaults**

15 seconds

**Command Modes**

SPANNING TREE

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**

`max-age` — changes the wait time before STP refreshes protocol configuration information.

`hello-time` — changes the time interval between BPDUs.
**hello-time**

Set the time interval between generation of the spanning tree bridge protocol data units (BPDUs).

**Syntax**

```
hello-time seconds
```

To return to the default value, use the `no hello-time` command.

**Parameters**

- `seconds` Enter a number as the time interval between transmission of BPDUs. The range is from 1 to 10. The default is `2 seconds`.

**Defaults**

`2 seconds`

**Command Modes**

SPANNING TREE

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**

- `forward-delay` — changes the wait time before STP transitions to the Forwarding state.
- `max-age` — changes the wait time before STP refreshes protocol configuration information.

---

**max-age**

To maintain configuration information before refreshing that information, set the time interval for the spanning tree bridge.

**Syntax**

```
max-age seconds
```

To return to the default values, use the `no max-age` command.

**Parameters**

- `seconds` Enter a number of seconds the system waits before refreshing configuration information. The range is from 6 to 40. The default is `20 seconds`.

**Defaults**

`20 seconds`

**Command Modes**

SPANNING TREE

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**

- `forward-delay` — changes the wait time before STP transitions to the Forwarding state.
hello-time — changes the time interval between BPDUs.

**portfast bpdufilter default**

Enable BPU Filter globally to filter transmission of BPDU on port fast enabled interfaces.

**Syntax**

```
portfast bpdufilter default
```

To disable global bpdu filter default, use the `no edge-port bpdufilter default` command.

**Defaults**

Disabled

**Command Modes**

SPANNING TREE

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**protocol spanning-tree**

To enable and configure the spanning tree group, enter SPANNING TREE mode.

**Syntax**

```
protocol spanning-tree stp-id
```

To disable the Spanning Tree group, use the `no protocol spanning-tree stp-id` command.

**Parameters**

- **stp-id**
  
Enter zero (0). The system supports one spanning tree group, group 0.

**Defaults**

Not configured.

**Command Modes**

CONFIGURATION

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

STP is not enabled when you enter SPANNING TREE mode. To enable STP globally on the switch, use the `no disable` command from SPANNING TREE mode.

**Example**

```
Dell(conf)#protocol spanning-tree 0
Dell(config-stp)#
```

**Related Commands**

- disable — disables spanning tree group 0. To enable spanning tree group 0, use the `no disable` command.
show config

Display the current configuration for the mode. Only non-default values display.

Syntax

```
show config
```

Command Modes

SPANNING TREE

Command History

Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.

Example

```
Dell(config-stp)#show config
protocol spanning-tree 0
no disable
Dell(config-stp)#
```

show spanning-tree 0

Display the spanning tree group configuration and status of interfaces in the spanning tree group.

Syntax

```
show spanning-tree 0 [active | brief | guard | interface interface | root | summary]
```

Parameters

- **0**: Enter 0 (zero) to display information about that specific spanning tree group.
- **active**: (OPTIONAL) Enter the keyword active to display only active interfaces in spanning tree group 0.
- **brief**: (OPTIONAL) Enter the keyword brief to display a synopsis of the spanning tree group configuration information.
- **guard**: (OPTIONAL) Enter the keyword guard to display the type of guard enabled on an STP interface and the current port state.
- **interface interface**: (OPTIONAL) Enter the keyword interface and the type slot/port of the interface you want displayed. Type slot/port options are the following:
  - For a Port Channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
- **root**: (OPTIONAL) Enter the keyword root to display configuration information on the spanning tree group root.
- **summary**: (OPTIONAL) Enter the keyword summary to only the number of ports in the spanning tree group and their state.
Enable spanning tree group 0 prior to using this command.

The following describes the `show spanning-tree 0` command shown in the example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&quot;Bridge Identifier...&quot;</td>
<td>Lists the bridge priority and the MAC address for this STP bridge.</td>
</tr>
<tr>
<td>&quot;Configured hello...&quot;</td>
<td>Displays the settings for hello time, max age, and forward delay.</td>
</tr>
<tr>
<td>&quot;We are...&quot;</td>
<td>States whether this bridge is the root bridge for the STG.</td>
</tr>
<tr>
<td>&quot;Current root...&quot;</td>
<td>Lists the bridge priority and MAC address for the root bridge.</td>
</tr>
<tr>
<td>&quot;Topology flag...&quot;</td>
<td>States whether the topology flag and the detected flag were set.</td>
</tr>
<tr>
<td>&quot;Number of...&quot;</td>
<td>Displays the number of topology changes, the time of the last topology change, and on what interface the topology change occurred.</td>
</tr>
<tr>
<td>&quot;Timers&quot;</td>
<td>Lists the values for the following bridge timers: hold time, topology change, hello time, max age, and forward delay.</td>
</tr>
<tr>
<td>&quot;Times&quot;</td>
<td>List the number of seconds since the last:</td>
</tr>
<tr>
<td></td>
<td>• hello time</td>

<tr>
<td>&quot;Port path...&quot;</td>
<td>Displays the path cost, priority, and identifier for the interface.</td>
</tr>
<tr>
<td>&quot;Designated root...&quot;</td>
<td>Displays the priority and MAC address of the root bridge of the STG that the interface belongs.</td>
</tr>
<tr>
<td>&quot;Designated port...&quot;</td>
<td>Displays the designated port ID.</td>
</tr>
</tbody>
</table>

Example

```
Dell#show spann 0

 Executing IEEE compatible Spanning Tree Protocol
Bridge Identifier has priority 32768, Address 0001.e800.0a56
Configured hello time 2, max age 20, forward delay 15
We are the root of the spanning tree
```
Current root has priority 32768 address 0001.e800.0a56
Toplogy change flag set, detected flag set
Number of topology changes 1 last change occurred 0:00:05 ago
from GigabitEthernet 1/3
Timers: hold 1, topology change 35
  hello 2, max age 20, forward delay 15
Times: hello 1, topology change 1, notification 0, aging 2

Port 26 (GigabitEthernet 1/1) is Forwarding
Port path cost 4, Port priority 8, Port Identifier 8.26
Designated root has priority 32768, address 0001.e800.0a56
Designated bridge has priority 32768, address 0001.e800.0a56
Designated port id is 8.26, designated path cost 0
Timers: message age 0, forward_delay 0, hold 0
Number of transitions to forwarding state 1
BPDU: sent:18, received 0
The port is not in the portfast mode

Port 27 (GigabitEthernet 1/2) is Forwarding
Port path cost 4, Port priority 8, Port Identifier 8.27
Designated root has priority 32768, address 0001.e800.0a56
Designated bridge has priority 32768, address 0001.e800.0a56
Designated port id is 8.27, designated path cost 0
Timers: message age 0, forward_delay 0, hold 0
Number of transitions to forwarding state 1
BPDU: sent:18, received 0
The port is not in the portfast mode

Port 28 (GigabitEthernet 1/3) is Forwarding
Port path cost 4, Port priority 8, Port Identifier 8.28
Designated root has priority 32768, address 0001.e800.0a56
Designated bridge has priority 32768, address 0001.e800.0a56
Designated port id is 8.28, designated path cost 0
Timers: message age 0, forward_delay 0, hold 0
Number of transitions to forwarding state 1
BPDU: sent:31, received 0
The port is not in the portfast mode

Dell#

Example (Brief)

Dell#show span 0 brief
Executing IEEE compatible Spanning Tree Protocol
  Root ID Priority 32768
  Address 0001.e800.0a56
  Root Bridge hello time 2, max age 20, forward delay 15
  Bridge ID Priority 32768,
  Address 0001.e800.0a56
  Configured hello time 2, max age 20, forward delay 15

Dell#

Usage Information

The following describes the show spanning-tree 0 guard command shown in the example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Interface Name</td>
<td>STP interface.</td>
</tr>
</tbody>
</table>
### Field

<table>
<thead>
<tr>
<th>Instance</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>STP 0 instance.</td>
<td></td>
</tr>
</tbody>
</table>

| Sts | Port state: root-inconsistent (INCON Root), forwarding (FWD), listening (LIS), blocking (BLK), or shut down (EDS Shut). |

| Guard Type | Type of STP guard configured (Root, Loop, or BPDU guard). |

| Bpdu Filter | BPDU Filter enabled - Yes, BPDU Filter disabled - No |

#### Example

```
Dell#show spanning-tree 0 guard

Interface          Name   Instance Sts          Guard type          
---------          ------   ------ ---------          -----------          
Gi 0/1            0        INCON(Root)  Rootguard          
Gi 0/2            0        LIS           Loopguard          
Gi 0/3            0        EDS (Shut)   Bpduguard          
```

### spanning-tree 0

Assigns a Layer 2 interface to STP instance 0 and configures a port cost or port priority, or enables loop guard, root guard, or the Portfast feature on the interface.

#### Syntax

```
spanning-tree stp-id {cost cost | {rootguard} | portfast [bpdufilter [shutdown-on-violation]] | priority priority}
```

To disable Spanning Tree group on an interface, use the `no spanning-tree stp-id {cost cost | {rootguard} | portfast [bpdufilter [shutdown-on-violation]] | priority priority}` command.

#### Parameters

- **stp-id**
  - Enter the STP instance ID. The range is 0.

- **cost cost**
  - Enter the keyword `cost` then a number as the cost. The range is 1 to 65535. The defaults are:
    - 40-Gigabit Ethernet interface = 1.
    - 10-Gigabit Ethernet interface = 2.
    - Port Channel interface with 40-Gigabit Ethernet = 1.
    - Port Channel interface with 10-Gigabit Ethernet = 1.

- **rootguard**
  - Enter the keyword `rootguard` to enable STP root guard on a port or port-channel interface.
Enter the keyword `portfast` to enable Portfast to move the interface into Forwarding mode immediately after the root fails.

Enter the optional keyword `bpduguard` to disable the port when it receives a BPDU.

Enter the optional keywords `shutdown-on-violation` to hardware disable an interface when a BPDU is received and the port is disabled.

Enter the keyword `bpdufilter` to enable on an interface; it should stop sending and receiving BPDUs on the port fast enabled ports.

Enter keyword `priority` then a number as the priority. The range is zero (0) to 15. The default is 8.

---

**Defaults**

`cost = depends on the interface type; priority = 8`

**Command Modes**

`INTERFACE`

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module..

If you enable `portfast bpduguard` on an interface and the interface receives a BPDU, the software disables the interface and sends a message stating that fact. The port is in ERR_DISABLE mode, yet appears in the `show interface` commands as enabled. If you do not enable `shutdown-on-violation`, BPDUs still are sent to the RPM CPU.

STP root guard is supported on a port or port-channel enabled in any Spanning Tree mode: Spanning Tree Protocol (STP), Rapid Spanning Tree Protocol (RSTP), Multiple Spanning Tree Protocol (MSTP), and Per-VLAN Spanning Tree Plus (PVST +).

Root guard is supported on any STP-enabled port or port-channel except when used as a stacking port. When enabled on a port, root guard applies to all VLANs configured on the port.
System Time and Date

The commands in this chapter configure time values on the system, either using the Dell Networking operating software, or the hardware, or using the network time protocol (NTP). With NTP, the switch can act only as a client to an NTP clock host.

For more information, refer to the “Network Time Protocol” section of the Management chapter in the Dell Networking OS Configuration Guide.

calendar set

Set the time and date for the switch hardware clock.

Syntax

```
calendar set time month day year
```

Parameters

- **time**: Enter the time in hours:minutes:seconds. For the hour variable, use the 24-hour format; for example, 17:15:00 is 5:15 pm.
- **month**: Enter the name of one of the 12 months in English. You can enter the name of a day to change the order of the display to time day month year.
- **day**: Enter the number of the day. The range is from 1 to 31. You can enter the name of a month to change the order of the display to time day month year.
- **year**: Enter a four-digit number as the year. The range is from 1993 to 2035.

Command Modes

EXEC Privilege

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

You can change the order of the month and day parameters to enter the time and date as time day month year.

In the switch, the hardware clock is separate from the software and is called the calendar. This hardware clock runs continuously. After the hardware clock (the calendar) is set, the system automatically updates the software clock after system bootup. You cannot delete the hardware clock (calendar).
To manually update the software with the hardware clock, use the `clock read-calendar` command.

**Example**

```
Dell#calendar set 12:11:00 21 may 2012
Dell#
```

**Related Commands**

- `clock read-calendar` — sets the software clock based on the hardware clock.
- `clock set` — sets the software clock.
- `clock update-calendar` — sets the hardware clock based on the software clock.
- `show clock` — displays the clock settings.

### clock read-calendar

Set the software clock on the switch from the information set in hardware clock (calendar).

**Syntax**

```
clock read-calendar
```

**Defaults**

Not configured.

**Command Modes**

EXEC Privilege

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

In the switch, the hardware clock is separate from the software and is called the calendar. This hardware clock runs continuously. After the hardware clock (the calendar) is set, the system automatically updates the software clock after system bootup.

You cannot delete this command (there is not a `no` version of this command).

### clock set

Set the software clock in the switch.

**Syntax**

```
clock set time month day year
```

**Parameters**

- `time`
  Enter the time in hours:minutes:seconds. For the hour variable, use the 24-hour format; example, 17:15:00 is 5:15 pm.
Enter the name of one of the 12 months, in English. You can enter the number of a day and change the order of the display to time day month year.

**day**
Enter the number of the day. The range is from 1 to 31. You can enter the name of a month to change the order of the display to time month day year.

**year**
Enter a four-digit number as the year. The range is from 1993 to 2035.

**Defaults**
Not configured.

**Command Modes**
EXEC Privilege

**Command History**

**Version 8.3.16.1**
Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**
You can change the order of the **month** and **day** parameters to enter the time and date as time day month year. You cannot delete the software clock.

The software clock runs only when the software is up. The clock restarts, based on the hardware clock, when the switch reboots.

Dell Networking recommends using an outside time source, such as NTP, to ensure accurate time on the switch.

**Example**

```
Dell#clock set 12:11:00 21 may 2012
Dell#
```

**Related Commands**
- `ntp update-calendar` — sets the switch using the NTP settings.

### clock summer-time date

Set a date (and time zone) on which to convert the switch to daylight saving time on a one-time basis.

**Syntax**
```
clock summer-time time-zone date start-month start-day start-year start-time end-month end-day end-year end-time [offset]
```

To delete a daylight saving time zone configuration, use the `no clock summer-time` command.

**Parameters**

- **time-zone**
Enter the three-letter name for the time zone. This name is displayed in the show clock output.

- **start-month**
Enter the name of one of the 12 months in English. You can enter the name of a day to change the order of the display to time day month year.
**clock summer-time recurring**

Set the software clock to convert to daylight saving time on a specific day each year.

**Syntax**

```
clock summer-time time-zone recurring [start-week start-day
start-month start-time end-week end-day end-month end-time
[offset]]
```

To delete a daylight saving time zone configuration, use the `no clock summer-time` command.
Parameters

- **time-zone**: Enter the three-letter name for the time zone. This name is displayed in the show clock output. You can enter up to eight characters.

- **start-week** (OPTIONAL) Enter one of the following as the week that daylight saving begins and then enter values for start-day through end-time:
  - **week-number**: Enter a number from 1 to 4 as the number of the week in the month to start daylight saving time.
  - **first**: Enter this keyword to start daylight saving time in the first week of the month.
  - **last**: Enter this keyword to start daylight saving time in the last week of the month.

- **start-day**: Enter the name of the day that you want daylight saving time to begin. Use English three letter abbreviations; for example, Sun, Sat, Mon, and so on. The range is from Sun to Sat.

- **start-month**: Enter the name of one of the 12 months in English.

- **start-time**: Enter the time in hours:minutes. For the hour variable, use the 24-hour format; example, 17:15 is 5:15 pm.

- **end-week**: Enter the one of the following as the week that daylight saving ends:
  - **week-number**: enter a number from 1 to 4 as the number of the week to end daylight saving time.
  - **first**: enter the keyword first to end daylight saving time in the first week of the month.
  - **last**: enter the keyword last to end daylight saving time in the last week of the month.

- **end-day**: Enter the weekday name that you want daylight saving time to end. Enter the weekdays using the three letter abbreviations; for example Sun, Sat, Mon, and so on. The range is from Sun to Sat.

- **end-month**: Enter the name of one of the 12 months in English.

- **end-time**: Enter the time in hours:minutes:seconds. For the hour variable, use the 24-hour format; example, 17:15:00 is 5:15 pm.

- **offset** (OPTIONAL) Enter the number of minutes to add during the summer-time period. The range is from 1 to 1440. The default is 60 minutes.

**Defaults**

- Not configured.

**Command Modes**

- CONFIGURATION
clock timezone

Configure a timezone for the switch.

**Syntax**

```
clock timezone timezone-name offset
```

To delete a timezone configuration, use the `no clock timezone` command.

**Parameters**

- **timezone-name**
  - Enter the name of the timezone. You cannot use spaces.

- **offset**
  - Enter one of the following:
    - a number from 1 to 23 as the number of hours in addition to universal time coordinated (UTC) for the timezone.
    - a minus sign (-) then a number from 1 to 23 as the number of hours.

**Defaults**

Not configured.

**Command Modes**

CONFIGURATION

**Command History**

- **Version 8.3.16.1**
  - Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

Coordinated universal time (UTC) is the time standard based on the International Atomic Time standard, commonly known as Greenwich Mean time. When determining system time, include the differentiator between UTC and your local timezone. For example, San Jose, CA is the Pacific Timezone with a UTC offset of -8.
**clock update-calendar**

Set the switch hardware clock based on the software clock.

**Syntax**

clock update-calendar

**Defaults**

Not configured.

**Command Modes**

EXEC Privilege

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

Use this command only if you are sure that the hardware clock is inaccurate and the software clock is correct. You cannot delete this command (there is not a no form of this command).

**Related Commands**

- `calendar set` — sets the hardware clock.

**debug ntp**

Display network time protocol (NTP) transactions and protocol messages for troubleshooting.

**Syntax**

db ug ntp {adjust | all | authentication | events | loopfilter | packets | select | sync}

To disable debugging of NTP transactions, use the `no debug ntp {adjust | all | authentication | events | loopfilter | packets | select | sync}` command.

**Parameters**

- `adjust` Enter the keyword `adjust` to display information on NTP clock adjustments.
- `all` Enter the keyword `all` to display information on all NTP transactions.
- `authentication` Enter the keyword `authentication` to display information on NTP authentication transactions.
- `events` Enter the keyword `events` to display information on NTP events.
- `loopfilter` Enter the keyword `loopfilter` to display information on NTP local clock frequency.
- `packets` Enter the keyword `packets` to display information on NTP packets.
- `select` Enter the keyword `select` to display information on the NTP clock selection.
**ntp authenticate**

Enable authentication of NTP traffic between the switch and the NTP time serving hosts.

**Syntax**

```
ntp authenticate
```

To disable NTP authentication, use the `no ntp authentication` command.

**Defaults**

Not enabled.

**Command Modes**

CONFIGURATION

**Command History**

Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

You also must configure an authentication key for NTP traffic using the `ntp authentication-key` command.

**Related Commands**

- `ntp authentication-key` — configures the authentication key for NTP traffic.
- `ntp trusted-key` — configures a key to authenticate.

---

**ntp authentication-key**

Specify a key for authenticating the NTP server.

**Syntax**

```
ntp authentication-key number md5 [0 | 7] key
```

**Parameters**

- `number`  Specify a number for the authentication key. The range is from 1 to 4294967295.
  This number must be the same as the `number` parameter configured in the `ntp trusted-key` command.

- `md5`  Specify that the authentication key is encrypted using MD5 encryption algorithm.

1130
Specify that authentication key is entered in an unencrypted format (default).

7 Specify that the authentication key is entered in DES encrypted format.

key Enter the authentication key in the previously specified format.

Defaults
NTP authentication is not configured by default. If you do not specify the option [0 | 7], 0 is selected by default.

Command Modes
CONFIGURATION

Command History
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
After configuring the ntp authentication-key command, configure the ntp trusted-key command to complete NTP authentication.

The Dell Networking OS versions 8.2.1.0 and later use an encryption algorithm to store the authentication key that is different from previous versions; beginning in version 8.2.1.0, the system uses DES encryption to store the key in the startup-config when you enter the ntp authentication-key command. Therefore, if your system boots with a startup-configuration from an versions prior to 8.2.1.0 in which you have configured ntp authentication-key, the system cannot correctly decrypt the key, and cannot authenticate NTP packets. In this case you must re-enter this command and save the running-config to the startup-config.

Related Commands
ntp authenticate — enables NTP authentication.
ntp trusted-key — configures a trusted key.

ntp broadcast client
Set up the interface to receive NTP broadcasts from an NTP server.

Syntax
ntp broadcast client
To disable broadcast, use the no ntp broadcast client command.

Defaults
Disabled.

Command Modes
INTERFACE

Command History
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.
**ntp disable**

Prevent an interface from receiving NTP packets.

**Syntax**

```
ntp disable
```

To re-enable NTP on an interface, use the `no ntp disable` command.

**Defaults**

Disabled (that is, if you configure an NTP host, all interfaces receive NTP packets)

**Command Modes**

INTERFACE

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**ntp multicast client**

To receive NTP information from the network via multicast, configure the switch.

**Syntax**

```
ntp multicast client [multicast-address]
```

To disable multicast reception, use the `no ntp multicast client [multicast-address]` command.

**Parameters**

- `multicast-address` (OPTIONAL) Enter a multicast address. Enter either an IPv4 address in dotted decimal format. If you do not enter a multicast address, the address 224.0.1.1 is configured if the interface address is IPv4.

**Defaults**

Not configured.

**Command Modes**

INTERFACE

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**ntp server**

Configure an NTP time-serving host.

**Syntax**

```
ntp server {hostname | ipv4-address} [key keyid] [prefer] [version number]
```

**Parameters**

- `ipv4-address` Enter an IPv4 address (A.B.C.D).
hostname

Enter the hostname of the server.

key keyid

(OPTIONAL) Enter the keyword key and a number as the NTP peer key. The range is from 1 to 4294967295.

prefer

(OPTIONAL) Enter the keyword prefer to indicate that this peer has priority over other servers.

version number

(OPTIONAL) Enter the keyword version and a number to correspond to the NTP version used on the server. The range is from 1 to 3.

Defaults

Not configured.

Command Modes

CONFIGURATION

Command History

Version 8.3.11.1

Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

You can configure multiple time-serving hosts (up to 250). From these time-serving hosts, the system chooses one NTP host with which to synchronize. To determine which server was selected, use the show ntp associations command.

Because many polls to NTP hosts can impact network performance, Dell Networking recommends limiting the number of hosts configured.

Related Commands

show ntp associations — displays the NTP servers configured and their status.

ntp source

Specify an interface’s IP address to be included in the NTP packets.

Syntax

ntp source interface

To delete the configuration, use the no ntp source command.

Parameters

interface

Enter the following keywords and slot/port or number information:

- For Loopback interfaces, enter the keyword loopback then a number from zero (0) to 16383.
- For a Port Channel interface, enter the keyword lag then a number. The range is from 1 to 128.
- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
• For VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

<table>
<thead>
<tr>

<th>Not configured.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Command Modes</td>
<td>CONFIGURATION</td>
</tr>
<tr>
<td>Command History</td>
<td>Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**ntp trusted-key**

Set a key to authenticate the system to which NTP synchronizes.

**Syntax**

```
ntp trusted-key number
```

To delete the key, use the `no ntp trusted-key number` command.

**Parameters**

- `number` Enter a number as the trusted key ID. The range is from 1 to 4294967295.

<table>
<thead>
<tr>
<th>Defaults</th>
<th>Not configured.</th>

<td>Command Modes</td>
<td>CONFIGURATION</td>
</tr>
<tr>
<td>Command History</td>
<td>Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

The `number` parameter in the `ntp trusted-key` command must be the same number as the `number` parameter in the `ntp authentication-key` command. If you change the `ntp authentication-key` command, you must also change the `ntp trusted-key` command.

**Related Commands**

- `ntp authentication-key` — sets an authentication key for NTP.
- `ntp authenticate` — enables the NTP authentication parameters you set.

**ntp update-calendar**

Configure the system to update the calendar (the hardware clock) with the NTP-derived time.

**Syntax**

```
ntp update-calendar [minutes]
```

To return to default setting, use the `no ntp update-calendar command`.

```
### Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>minutes</td>
<td>(OPTIONAL) Enter the number of minutes between updates from NTP to the hardware clock. The range is from 1 to 1440. The default is <strong>60 minutes</strong>.</td>
</tr>
</tbody>
</table>

### Defaults

Not enabled.

### Command Modes

CONFIGURATION

### Command History

**Version 8.3.16.1**

Introduced on the MXL 10/40GbE Switch IO Module.

---

### show calendar

Display the current date and time based on the switch hardware clock.

**Syntax**

```
show calendar
```

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

**Version 8.3.16.1**

Introduced on the MXL 10/40GbE Switch IO Module.

**Example**

```
Dell#show calendar
12:29:34 pacific Tue May 22 2012
Dell#
```

**Related Commands**

- **show clock** — displays the time and date from the switch software clock.

---

### show clock

Display the current clock settings.

**Syntax**

```
show clock [detail]
```

**Parameters**

- **detail** (OPTIONAL) Enter the keyword `detail` to view the source information of the clock.

**Command Modes**

- EXEC
- EXEC Privilege
show ntp associations

Display the NTP master and peers.

Syntax

show ntp associations

Command Modes

• EXEC
• EXEC Privilege

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The following describes the show ntp associations command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>(none)</td>
<td>One or more of the following symbols could be displayed:</td>
</tr>
<tr>
<td>remote</td>
<td>Displays the remote IP address of the NTP peer.</td>
</tr>
<tr>
<td>ref clock</td>
<td>Displays the IP address of the remote peer’s reference clock.</td>
</tr>
<tr>
<td>remote</td>
<td>Displays the remote IP address of the NTP peer.</td>
</tr>
<tr>
<td>ref clock</td>
<td>Displays the IP address of the remote peer’s reference clock.</td>
</tr>
</tbody>
</table>

Example

Dell# show ntp associations
remote 192.0.2.1, # precision is 10000000, stratum 2
          ref clock 192.0.2.1, type stratum 2, stdev 2, clock <0.5215452530s>
Dell#
### Field Description

- **st**: Displays the peer’s stratum, that is, the number of hops away from the external time source. A 16 in this column means the NTP peer cannot reach the time source.

- **when**: Displays the last time the switch received an NTP packet.

- **poll**: Displays the polling interval (in seconds).

- **reach**: Displays the reachability to the peer (in octal bitstream).

- **delay**: Displays the time interval or delay for a packet to complete a round-trip to the NTP time source (in milliseconds).

- **offset**: Displays the relative time of the NTP peer’s clock to the switch clock (in milliseconds).

- **disp**: Displays the dispersion.

### Example

```
Dell#show ntp associations
remote          ref clock  st when poll reach delay  offset disp
=============================================================================
10.10.120.5     0.0.0.0       16   -   256    0 0.00 0.000 16000.0
*172.16.1.33     127.127.1.0 11   6   16     377   -0.08 -1499.9 104.16
172.31.1.33      0.0.0.0       16   -   256    0 0.00 0.000 16000.0
192.200.0.2      0.0.0.0       16   -   256    0 0.00 0.000 16000.0
* master (synced), # master (unsynced), + selected, - candidate
Dell#
```

### Related Commands

- **show ntp status** — displays the current NTP status.
Field | Description
---|---
"Clock is..." | States whether the switch clock is synchronized, which NTP stratum the system is assigned and the IP address of the NTP peer.
"frequency is..." | Displays the frequency (in ppm), stability (in ppm) and precision (in Hertz) of the clock in this system.
"reference time is..." | Displays the reference time stamp.
"clock offset is..." | Displays the system offset to the synchronized peer and the time delay on the path to the NTP root clock.
"root dispersion is..." | Displays the root and path dispersion.
"peer mode is..." | State what NTP mode the switch is. This should be Client mode.

Example

Dell#show ntp status
Clock is unsynchronized, stratum 16, no reference clock
frequency is 0.000 ppm, stability is 0.000 ppm, precision is 4294967279
reference time is 00000000.00000000 (6:28:16.000 UTC Thu Feb 7 2036)
clock offset is 0.000000 msec, root delay is 0.00000 sec
root dispersion is 0.00000 sec, peer dispersion is 0.000 msec
peer mode is unspec
Dell#

Related Commands

- `show ntp associations` — displays information on the NTP master and peer configurations.
Tunneling

The following commands support the Tunneling feature.

**tunnel destination**

Set a destination endpoint for the tunnel.

**Syntax**

```
tunnel destination {ip-address | ipv6-address}
```

To delete a tunnel destination address, use the `no tunnel destination {ip-address | ipv6-address}` command.

**Parameters**

- `ip-address`: Enter the destination IPv4 address for the tunnel.
- `ipv6-address`: Enter the destination IPv6 address for the tunnel.

**Defaults**

none

**Command Modes**

INTERFACE TUNNEL (conf-if-tu)

**Command History**

- Version 9.2(0.0): Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

The tunnel interface is inoperable without a valid tunnel destination address for the configured Tunnel mode.

To establish a logical tunnel to the particular destination address, use the destination address of the outer tunnel header. If you configure a tunnel interface or source address, the tunnel destination must be compatible.

**tunnel dscp**

Configure the method to set the DSCP in the outer tunnel header.

**Syntax**

```
tunnel dscp {mapped | <value>}
```

To use the default tunnel mapping behavior, use the `no tunnel dscp value` command.
Parameters

mapped Enter the keyword `mapped` to map the original packet DSCP (IPv4)/Traffic Class (IPv6) to the tunnel header DSCP (IPv4)/Traffic Class (IPv6) depending on the mode of tunnel.

value Enter a value to set the DSCP value in the tunnel header. The range is from 0 to 63. The default value of 0 denotes mapping of original packet DSCP (IPv4)/Traffic Class (IPv6) to the tunnel header DSCP (IPv4)/Traffic Class (IPv6) depending on the mode of tunnel.

Defaults 0 (Mapped)

Command Modes INTERFACE TUNNEL (conf-if-tu)

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

This command configures the method used to set the high 6 bits (the differentiated services codepoint) of the IPv4 TOS or the IPv6 traffic class in the outer IP header.

A value of 0 copies original packet DSCP (IPv4)/Traffic Class (IPv6) to the tunnel header DSCP (IPv4)/Traffic Class (IPv6) depending on the mode of tunnel.

tunnel flow-label

Configure the method to set the IPv6 flow label value in the outer tunnel header.

Syntax

tunnel flow-label value

To return to the default value of 0, use the `no tunnel flow-label value` command.

Parameters

value Enter a value to set the IPv6 flow label value in the tunnel header. The range is from 0 to 1048575. The default value is 0.

Defaults 0 (Mapped original packet flow-label value to tunnel header flow-label value)

Command Modes INTERFACE TUNNEL (conf-if-tu)

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

This command is only valid for tunnel interfaces with an IPv6 outer header.
**tunnel hop-limit**

Configure the method to set the IPv4 time-to-live or the IPv6 hop limit value in the outer tunnel header.

**Syntax**

```
tunnel hop-limit value
```

To restore the default tunnel hop-limit, use the `no tunnel hop-limit` command.

**Parameters**

`value`

Enter the hop limit (ipv6) or time-to-live (ipv4) value to include in the tunnel header. The range is from 0 to 255. The default is 64.

**Defaults**

64 (Time-to-live for IPv4 outer tunnel header or hop limit for IPv6 outer tunnel header)

**Command Modes**

INTERFACE TUNNEL (conf-if-tu)

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

A value of 0 copies the inner packet hop limit (ipv6) or time-to-live (ipv4) in the encapsulated packet to the tunnel header hop limit (ipv6) or time-to-live (ipv4) value.

---

**tunnel mode**

Enable a tunnel interface.

**Syntax**

```
tunnel mode {ipip | ipv6 | ipv6ip}
```

To disable an active tunnel interface, use the `no tunnel mode` command.

**Parameters**

- `ipip`
  
  Enable tunnel in RFC 2003 mode and encapsulate IPv4 and/or IPv6 datagrams inside an IPv4 tunnel.

- `ipv6`
  
  Enable tunnel in RFC 2473 mode and encapsulate IPv4 and/or IPv6 datagrams inside an IPv6 tunnel.

- `ipv6ip`
  
  Enable tunnel in RFC 4213 mode and encapsulate IPv6 datagrams inside an IPv4 tunnel.

**Defaults**

none

**Command Modes**

INTERFACE TUNNEL (conf-if-tu)
tunnel source

Set a source address for the tunnel.

Syntax
tunnel source {ip-address | ipv6-address | interface-type-number}

To delete the current tunnel source address, use the no tunnel source command.

Parameters

- **ip-address**: Enter the source IPv4 address in A.B.C.D format.
- **ipv6-address**: Enter the source IPv6 address in X:X:X::X format.
- **interface-type-number**:
  - For a 100/1000 Ethernet interface, enter the keyword GigabitEthernet then the slot/port information.
  - For a 1–Gigabit Ethernet interface, enter the keyword GigabitEthernet then the slot/port information.
  - For a Port Channel interface, enter the keywords port-channel then a number from 1 to 128.
  - For a 10–Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  - For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.

Defaults
none

Command Modes
INTERFACE TUNNEL (conf-if-tu)

Command History
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
If you configure a tunnel interface or destination address, the tunnel source must be compatible.

If you configure a tunnel source address as an interface, the tunnel does not function until the compatible address is present on the particular interface.
u-Boot

All commands in this chapter are in u-Boot mode. These commands are supported on the Dell Networking MXL 10/40GbE Switch Module platform.
To access this mode, press any key when the following line appears on the console during a system boot.
Hit any key to stop autoboot:

Enter u-Boot immediately, as the BOOT_USER# prompt.

> NOTE: This chapter describes only a few commands available in u-Boot mode.

> NOTE: You cannot use the Tab key to complete commands in this mode.

boot change

Change the operating system boot parameters.

Syntax

```
boot change [primary | secondary | default]
```

Command Modes

uBoot

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

boot selection

Change the ROM bootstrap bootflash partition.

Syntax

```
boot selection [a | b]
```

Command Modes

uBoot

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.
**boot show net config retries**

Show the number of retries for network boot configuration failure.

**Syntax**

`boot show net config retries`

**Command Modes**

uBoot

**Command History**

Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.

**Example**

```
BOOT_USER# boot show net config retries
Number of Network Boot Config Retries is : 0
BOOT_USER #
```

**boot write net config retries**

Set the number of retries for network boot configuration failure.

**Syntax**

`boot write net config retries <int>`

**Command Modes**

uBoot

**Command History**

Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.

**Example**

```
BOOT_USER # boot write net config retries 2
Updated number of Network Boot Config retries to 2.
BOOT_USER #
```

**boot zero**

Clears the primary, secondary, or default boot parameters.

**Syntax**

`boot zero [primary | secondary | default]`

**Command Modes**

uBoot

**Command History**

Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.
**default gateway**

Set the default gateway IP address.

**Syntax**

```
default-gateway <ip-address>
```

**Command Modes**

uBoot

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**enable**

Change the access privilege level.

**Syntax**

```
enable [user | admin]
```

**Command Modes**

uBoot

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**help**

Display the help menu.

**Syntax**

```
help
```

**Command Modes**

uBoot

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Example**

```
BOOT_USER # help
***** Dell Force10 Boot Interface Help Information *****
Current access level: USER LEVEL

BOOT_USER #

ignore enable password
Ignore the enabled password.

Syntax  ignore enable-password
Command Modes  uBoot

Command History  Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.

ignore startup-config
Ignore the system startup configuration.

Syntax  ignore startup-config
Command Modes  uBoot

Command History  Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.

interface management ethernet ip address
Set the management port IP address and mask.

Syntax  interface management ethernet ip address <ip/mask>
Command Modes  uBoot

Command History  Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.
**no default-gateway**

Clear the default gateway IP address.

**Syntax**

```plaintext
no default-gateway
```

**Command Modes**

`uBoot`

**Command History**

*Version 8.3.16.1* Introduced on the MXL 10/40GbE Switch IO Module.

**no interface management ethernet ip address**

Clear the management port IP address and mask.

**Syntax**

```plaintext
no interface management ethernet ip address
```

**Command Modes**

`uBoot`

**Command History**

*Version 8.3.16.1* Introduced on the MXL 10/40GbE Switch IO Module.

**reload**

Reload the MXL switch.

**Syntax**

```plaintext
reload
```

**Command Modes**

`uBoot`

**Command History**

*Version 8.3.16.1* Introduced on the MXL 10/40GbE Switch IO Module.

**show boot blc**

Show the boot loop counter value.

**Syntax**

```plaintext
show boot blc
```

**Command Modes**

`uBoot`
show boot selection

Display the ROM bootstrap bootflash partition.

**Syntax**

```
show boot selection
```

**Command Modes**

uBoot

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Example**

```
BOOT_USER # show boot selection
ROM BOOTSTRAP SELECTOR PARMETERS:
================================
Next ROM bootstrap set to occur from Bootflash partition A.
Last ROM bootstrap occurred from Bootflash partition B.
BOOT_USER #
```

show bootflash

Show summary of boot flash information.

**Syntax**

```
show bootflash
```

**Command Modes**

uBoot

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Example**

```
BOOT_USER # show bootflash
GENERAL BOOTFLASH INFO
=================================
```

1148
show bootvar

Show summary of operating system boot parameters.

Syntax
show bootvar

Command Modes
uBoot

Command History
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Example
BOOT_USER # show bootvar

PRIMARY OPERATING SYSTEM BOOT PARAMETERS:
===========================================
boot device : tftp
file name : premnath
Management Ethernet IP address : 10.16.130.134/16
Server IP address : 10.16.127.35
Default Gateway IP address : 15.0.0.1
Management Ethernet MAC address : 00:01:E8:43:DE:DF

Server IP address : 10.16.127.53
Default Gateway IP address : 15.0.0.1
Management Ethernet MAC address : 00:01:E8:43:DE:DF

BOOT_USER #
show default-gateway

Display the default gateway IP address.

Syntax
show default-gateway

Command Modes
uBoot

Command History
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Example
BOOT_USER # show default-gateway
Gateway IP address: 15.0.0.1

show interface management Ethernet

Show the management port IP address and mask.

Syntax
show interface management ethernet

Command Modes
uBoot

Command History
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Example
BOOT_USER # show interface management ethernet
Management ethernet IP address: 10.16.130.134/16

show interface management port config

Show the management port boot characteristics.

Syntax
show interface management port config

Command Modes
uBoot

Command History
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Example
BOOT_USER # show interface management port config
Management ethernet Port Configuration: no Auto Negotiate
Management ethernet Port Configuration: 100M
Management ethernet Port Configuration: full duplex

BOOT_USER #

```
Uplink Failure Detection (UFD)

Uplink failure detection (UFD) provides detection of the loss of upstream connectivity and, if you use this with network interface controller (NIC) teaming, automatic recovery from a failed link.

**clear ufd-disable**

Re-enable one or more downstream interfaces on the switch/router that are in a UFD-Disabled Error state so that an interface can send and receive traffic.

**Syntax**

```
clear ufd-disable {interface interface | uplink-state-group group-id}
```

**Parameters**

- **interface**
  - **interface** Specify one or more downstream interfaces. For `interface`, enter one of the following interface types:
    - Fast Ethernet: `fastethernet {slot/port | slot/port-range}`
    - 10 Gigabit Ethernet: `tengigabitethernet {slot/port | slot/port-range}
    - 40 Gigabit Ethernet: `fortygigabitethernet {slot/port | slot/port-range}`
    - Port channel: `port-channel {1-512 | port-channel-range}

Where `port-range` and `port-channel-range` specify a range of ports separated by a dash (-) and/or individual ports/port channels in any order; for example: `gigabitethernet 1/1-2,5,9,11-12 port-channel 1-3,5`. A comma is required to separate each port and port-range entry.

- **uplink-state-group group-id**
  - **uplink-state-group group-id** Re-enables all UFD-disabled downstream interfaces in the group. The valid group-id values are from 1 to 16.

**Command Modes**

EXEC Mode

**Command History**

- **Version 8.3.16.1** Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**

- `downstream` — assigns a port or port-channel to the uplink-state group as a downstream interface.
• **upstream** — assigns a port or port-channel to the uplink-state group as an upstream interface.

• **uplink-state-group** — creates an uplink-state group and enables the tracking of upstream links.

## debug uplink-state-group

Enable debug messages for events related to a specified uplink-state group or all groups.

**Syntax**

debug uplink-state-group [group-id]

To turn off debugging event messages, enter the no debug uplink-state-group [group-id] command.

**Parameters**

- **group-id** Enables debugging on the specified uplink-state group. The valid group-id values are from 1 to 16.

**Defaults**

none

**Command Modes**

EXEC Privilege

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**

- clear ufd-disable — re-enables downstream interfaces that are in a UFD-Disabled Error state.

## description

Enter a text description of an uplink-state group.

**Syntax**

description text

**Parameters**

- **text** Text description of the uplink-state group. The maximum length is 80 alphanumeric characters.

**Defaults**

none

**Command Modes**

UPLINK-STATE-GROUP

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Example**

Dell(conf-uplink-state-group-3)#description Testing UFD feature
Dell(conf-uplink-state-group-3)#show config
uplink-state-group 3
description Testing UFD feature

Related Commands

- **uplink-state-group** — creates an uplink-state group and enables the tracking of upstream links.

## downstream

Assign a port or port-channel to the uplink-state group as a downstream interface.

**Syntax**

downstream interface
downstream interface

To delete an uplink-state group, enter the no downstream interface command.

**Parameters**

- **interface**

  Enter one of the following interface types:
  
  - 10 Gigabit Ethernet: tengigabitethernet {slot/port | slot/port-range}
  - 40 Gigabit Ethernet: fortygigabitethernet {slot/port | slot/port-range}
  - Port channel: port-channel {1-512 | port-channel-range}

  Where port-range and port-channel-range specify a range of ports separated by a dash (-) and/or individual ports/port channels in any order; for example:
  
gigabitethernet 1/1-2,5,9,11-12 port-channel 1-3,5. A comma is required to separate each port and port-range entry.

**Defaults**

none

**Command Modes**

UPLINK-STATE-GROUP

**Command History**

- **Version 8.3.16.1** Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

You can assign physical port or port-channel interfaces to an uplink-state group.

You can assign an interface to only one uplink-state group. Configure each interface assigned to an uplink-state group as either an upstream or downstream interface, but not both.

You can assign individual member ports of a port channel to the group. An uplink-state group can contain either the member ports of a port channel or the port channel itself, but not both.
downstream auto-recover

Enable auto-recovery so that UFD-disabled downstream ports in an uplink-state group automatically come up when a disabled upstream port in the group comes back up.

Syntax
downstream auto-recover
To disable auto-recovery on downstream links, use the no downstream auto-recover command.

Defaults
The auto-recovery of UFD-disabled downstream ports is enabled.

Command Modes
UPLINK-STATE-GROUP

Command History
Version 8.3.16.1 Introduced on the MXL 10/40Gbe Switch IO Module.

Related Commands
• downstream — assigns a port or port-channel to the uplink-state group as a downstream interface.
• upstream — assigns a port or port-channel to the uplink-state group as an upstream interface.
• uplink-state-group — creates an uplink-state group and enables the tracking of upstream links.

downstream disable links

Configure the number of downstream links in the uplink-state group that are disabled if one upstream link in an uplink-state group goes down.

Syntax
downstream disable links {number | all}
To revert to the default setting, use the no downstream disable links command.

Parameters

number Enter the number of downstream links to be brought down by UFD. The range is from 1 to 1024.
all

Brings down all downstream links in the group.

Defaults

All

Command Modes

UPLINK-STATE-GROUP

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

A user-configurable number of downstream interfaces in an uplink-state group are put into a link-down state with an UFD-Disabled error message when one upstream interface in an uplink-state group goes down.

If all upstream interfaces in an uplink-state group go down, all downstream interfaces in the same uplink-state group are put into a link-down state.

Related Commands

- downstream — assigns a port or port-channel to the uplink-state group as a downstream interface.
- upstream — assigns a port or port-channel to the uplink-state group as an upstream interface.
- uplink-state-group — creates an uplink-state group and enables the tracking of upstream links.

enable

Re-enable upstream-link tracking for an uplink-state group after it has been disabled.

Syntax

enable

To disable upstream-link tracking without deleting the uplink-state group, use the no enable command.

Parameters

- group-id Enables debugging on the specified uplink-state group. The valid group-id values are from 1 to 16.

Defaults

Upstream-link tracking is automatically enabled in an uplink-state group.

Command Modes

UPLINK-STATE-GROUP

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Related Commands

- uplink-state-group — creates an uplink-state group and enables the tracking of upstream links.
show running-config uplink-state-group

Display the current configuration of one or more uplink-state groups.

Syntax
show running-config uplink-state-group [group-id]

Parameters
- **group-id**: Displays the current configuration of all uplink-state groups or a specified group. The valid group-id values are from 1 to 16.

Defaults
none

Command Modes
- EXEC
- EXEC Privilege

Command History
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Example
Dell#show running-config uplink-state-group
! uplink-state-group 3
  no enable
description Testing UFD feature
downstream disable links 2
downstream TenGigabitEthernet 0/1-2,5,9,11-12
upstream TenGigabitEthernet 0/3-4

Related Commands
- **show uplink-state-group** — displays the status information on a specified uplink-state group or all groups.
- **uplink-state-group** — creates an uplink-state group and enables the tracking of upstream links.

show uplink-state-group

Display status information on a specified uplink-state group or all groups.

Syntax
show uplink-state-group [group-id] [detail]

Parameters
- **group-id**: Displays status information on a specified uplink-state group or all groups. The valid group-id values are from 1 to 16.
- **detail**: Displays additional status information on the upstream and downstream interfaces in each group

Defaults
none

Command Modes
- EXEC
- EXEC Privilege
Command History

Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.

Example

Dell# show uplink-state-group

Related Commands

- show running-config uplink-state-group — displays the current configuration of one or more uplink-state groups.
- uplink-state-group — create an uplink-state group and enables the tracking of upstream links.

uplink-state-group

Create an uplink-state group and enable the tracking of upstream links on a switch/router.

Syntax

uplink-state-group group-id
To delete an uplink-state group, enter the `no uplink-state-group group-id` command.

To disable upstream-link tracking without deleting the uplink-state group, use the `no enable` command in Uplink-State-Group Configuration mode.

**Parameters**

`group-id` Enter the ID number of an uplink-state group. The range is from 1 to 16.

**Defaults**

none

**Command Modes**

CONFIGURATION

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

After you enter the command, to assign upstream and downstream interfaces to the group, enter Uplink-State-Group Configuration mode.

An uplink-state group is considered to be operationally up if at least one upstream interface in the group is in the Link-Up state.

An uplink-state group is considered to be operationally down if no upstream interfaces in the group are in the Link-Up state. No uplink-state tracking is performed when a group is disabled or in an operationally down state.

**Example**

```plaintext
Dell(conf)#uplink-state-group 16
Dell(conf)#
02:23:17: %STKUNIT0-M:CP %IFMGR-5-ASTATE_UP: Changed uplink state group Admin state to up: Group 16
```

**Related Commands**

- `show running-config uplink-state-group` — displays the current configuration of one or more uplink-state groups.
- `show uplink-state-group` — displays the status information on a specified uplink-state group or all groups.

**upstream**

Assign a port or port-channel to the uplink-state group as an upstream interface.

**Syntax**

```
upstream interface
```

To delete an uplink-state group, use the `no upstream interface` command.

**Parameters**

`interface` Enter one of the following interface types:
- 10 Gigabit Ethernet: `tengigabitethernet {slot/port | slot/port-range}`
- 40 Gigabit Ethernet: `fortygigabitethernet {slot/port | slot/port-range}`
- Port channel: `port-channel {1-512 | port-channel-range}`

Where `port-range` and `port-channel-range` specify a range of ports separated by a dash (-) and/or individual ports/port channels in any order; for example: `gigabitethernet 1/1-2,5,9,11-12 port-channel 1-3,5`. A comma is required to separate each port and port-range entry.

**Defaults**

none

**Command Modes**

UPLINK-STATE-GROUP

**Command History**

*Version 8.3.16.1* Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

You can assign physical port or port-channel interfaces to an uplink-state group.

You can assign an interface to only one uplink-state group. Configure each interface assigned to an uplink-state group as either an upstream or downstream interface, but not both.

You can assign individual member ports of a port channel to the group. An uplink-state group can contain either the member ports of a port channel or the port channel itself, but not both.

**Example**

Dell(conf-uplink-state-group-16)# upstream gigabitethernet 1/10-15
Dell(conf-uplink-state-group-16)#

**Related Commands**

- `downstream` — assigns a port or port-channel to the uplink-state group as a downstream interface.
- `upstream` — assigns a port or port-channel to the uplink-state group as an upstream interface.
- `uplink-state-group` — creates an uplink-state group and enables the tracking of upstream links.
VLAN Stacking

With the virtual local area network (VLAN)-stacking feature (also called stackable VLANs and QinQ), you can “stack” VLANs into one tunnel and switch them through the network transparently.
For more information about basic VLAN commands, refer to the Virtual LAN (VLAN) Commands section in the Layer 2 chapter.

Important Points to Remember

- If you do not enable the spanning tree protocol (STP) across the stackable VLAN network, STP bridge protocol data units (BPDUs) from the customer’s networks are tunneled across the stackable VLAN network.
- If you do enable STP across the stackable VLAN network, STP BPDUs from the customer’s networks are consumed and not tunneled across the stackable VLAN network unless you enable protocol tunneling.
- Layer 3 protocols are not supported on a stackable VLAN network.
- Assigning an IP address to a stackable VLAN is supported when all the members are only stackable VLAN trunk ports. IP addresses on a stackable VLAN-enabled VLAN are not supported if the VLAN contains stackable VLAN access ports. This facility is provided for the simple network management protocol (SNMP) management over a stackable VLAN-enabled VLAN containing only stackable VLAN trunk interfaces. Layer 3 routing protocols on such a VLAN are not supported.
- Dell Networking recommends that you do not use the same MAC address, on different customer VLANs, on the same stackable VLAN.
- Interfaces configured using stackable VLAN access or stackable VLAN trunk commands do not switch traffic for the default VLAN. These interfaces are switch traffic only when they are added to a non-default VLAN.

dei enable

Make packets eligible for dropping based on their drop eligible indicator (DEI) value.

Syntax
dei enable

Defaults
Packets are colored green; no packets are dropped.

Command Modes
CONFIGURATION

Command History
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.
**dei honor**

Honor the incoming DEI value by mapping it to a system drop precedence. Enter the command once for 0 and once for 1.

**Syntax**

dei honor {0 | 1} {green | red | yellow}

**Parameters**

0 | 1

Enter the bit value you want to map to a color.

green | red | yellow

Choose a color:

- **Green**: High priority packets that are the least preferred to be dropped.
- **Yellow**: Lower priority packets that are treated as best-effort.
- **Red**: Lowest priority packets that are always dropped (regardless of congestion status).

**Defaults**

Disabled; Packets with an unmapped DEI value are colored green.

**Command Modes**

INTERFACE

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

You must first enable DEI for this configuration to take effect.

**Related Commands**

- `dei enable` — enables DEI.

---

**dei mark**

Set the DEI value on egress according to the color currently assigned to the packet.

**Syntax**

dei mark {green | yellow} {0 | 1}

**Parameters**

0 | 1

Enter the bit value you want to map to a color.

green | yellow

Choose a color:

- **Green**: High priority packets that are the least preferred to be dropped.
- **Yellow**: Lower priority packets that are treated as best-effort.

**Defaults**

All the packets on egress are marked with DEI 0.
**member**

Assign a stackable VLAN access or trunk port to a VLAN. The VLAN must contain the `vlan-stack compatible` command in its configuration.

**Syntax**

```
member interface
```

To remove an interface from a Stackable VLAN, use the `no member interface` command.

**Parameters**

- `interface` (Enter the following keywords and slot/port or number information:
  
  - For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
  
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  
  - For a 40-Gigabyte Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.)

**Defaults**

Not configured.

**Command Modes**

`conf-if-vl-<vlan-id>-stack`

**Command History**

- **Version 8.3.16.1** Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

You must enable the stackable VLAN (using the `vlan-stack compatible` command) on the VLAN prior to adding a member to the VLAN.

**Related Commands**

- `vlan-stack compatible` — enables stackable VLAN on a VLAN.
show interface dei-honor

Display the dei honor configuration.

**Syntax**

```
show interface dei-honor [interface slot/port]
```

**Parameters**

- `interface slot/port`: Enter the interface type then the line card slot and port number.

**Command Modes**

- EXEC Privilege

**Command History**

- **Version 8.3.16.1**: Introduced on the MXL 10/40GbE Switch IO Module.

**Example**

```
Dell#show interface dei-honor

Default Drop precedence: Green
Interface          CFI/DEI          Drop precedence
-----------------------------------------------------
Gi 0/1             0                Green
Gi 0/1             1                Yellow
Gi 8/9             1                Red
Gi 8/40            0                Yellow
```

**Related Commands**

- `dei honor` — honors the incoming DEI value.

---

show interface dei-mark

Display the dei mark configuration.

**Syntax**

```
show interface dei-mark [interface slot/port]
```

**Parameters**

- `interface slot/port`: Enter the interface type then the line card slot and port number.

**Command Modes**

- EXEC Privilege

**Command History**

- **Version 8.3.16.1**: Introduced on the MXL 10/40GbE Switch IO Module.

**Example**

```
Dell#show interface dei-mark

Default CFI/DEI Marking: 0
Interface      Drop precedence      CFI/DEI
-------------------------           ----------
Gi 0/1          Green               0
Gi 0/1          Yellow              1
Gi 8/9          Yellow              0
Gi 8/40         Yellow              0
```
Related Commands

dei mark — sets the DEI value on egress.

vlan-stack access

Specify a Layer 2 port or port channel as an access port to the stackable VLAN network.

Syntax

vlan-stack access

To remove access port designation, use the no vlan-stack access command.

Defaults

Not configured.

Command Modes

INTERFACE

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

Prior to enabling this command, to place the interface in Layer 2 mode, enter the switchport command.

To remove the access port designation, remove the port (using the no member interface command) from all stackable VLAN enabled VLANs.

vlan-stack compatible

Enable the stackable VLAN feature on a VLAN.

Syntax

vlan-stack compatible

To disable the Stackable VLAN feature on a VLAN, use the no vlan-stack compatible command.

Defaults

Not configured.

Command Modes

CONF-IF-VLAN

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

Prior to disabling the stackable VLAN feature, remove the members.

To view the stackable VLANs, use the show vlan command in EXEC Privilege mode. Stackable VLANs contain members, designated by the M in the Q column of the command output.
Example

Dell#show vlan

Codes: * - Default VLAN, G - GVRP VLANs

<table>
<thead>
<tr>
<th>NUM</th>
<th>Status</th>
<th>Q Ports</th>

</table>

Dell#

**vlan-stack dot1p-mapping**

Map C-Tag dot1p values to a S-Tag dot1p value. You can separate the C-Tag values by commas and dashed ranges are permitted. Dynamic mode CoS overrides any Layer 2 QoS configuration in case of conflicts.

**Syntax**

```
vlan-stack dot1p-mapping c-tag-dot1p values sp-tag-dot1p value
```

**Parameters**

- **c-tag-dot1p value**
  - Enter the keyword `c-tag-dot1p` then the customer dot1p value that is mapped to a service provider dot1p value. The range is from 0 to 5.

- **sp-tag-dot1p value**
  - Enter the keyword `sp-tag-dot1p` then the service provider dot1p value. The range is from 0 to 5.

**Defaults**

none

**Command Modes**

INTERFACE

**Command History**

Version 8.3.16.1
- Introduced on the MXL 10/40GbE Switch IO Module.

---

**vlan-stack protocol-type**

Define the stackable VLAN tag protocol identifier (TPID) for the outer VLAN tag (also called the VMAN tag). If you do not configure this command, the system assigns the value 0x9100.

**Syntax**

```
vlan-stack protocol-type number
```

1168
Enter the hexadecimal number as the stackable VLAN tag. You may specify both bytes of the 2-byte S-Tag TPID. The range is from 0 to FFFF. The default is 9100.

Defaults
0x9100

Command Modes
CONFIGURATION

Command History
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
For specific interoperability limitations regarding the S-Tag TPID, refer to the Dell Networking OS Configuration Guide.

Related Commands
portmode hybrid — sets a port (physical ports only) to accept both tagged and untagged frames. A port configured this way is identified as a hybrid port in report displays.

vlan-stack trunk — specifies a Layer 2 port or port channel as a trunk port to the Stackable VLAN network.

## vlan-stack trunk

Specify a Layer 2 port or port channel as a trunk port to the Stackable VLAN network.

Syntax
```text
vlan-stack trunk
```

To remove a trunk port designation from the selected interface, use the `no vlan-stack trunk` command.

Defaults
Not configured.

Command Modes
INTERFACE

Command History
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
Prior to using this command, to place the interface in Layer 2 mode, execute the `switchport` command.

To remove the trunk port designation, first remove the port (using the `no member` `interface` command) from all stackable VLAN-enabled VLANs.

Starting with the Dell Networking OS version 7.8.1.0, a VLAN-Stack trunk port is also allowed to be configured as a tagged port and as an untagged port for single-
tagged VLANs. When the VLAN-Stack trunk port is also a member of an untagged VLAN, the port must be in Hybrid mode. Refer to `portmode hybrid`.

In the first example, a VLAN-Stack trunk port is configured and then also made part of a single-tagged VLAN.

In the second example, the tag protocol identifier (TPID) is set to 88A8. The “Gi 3/10” port is configured to act as a VLAN-Stack access port, while the “TenGi 8/0” port acts as a VLAN-Stack trunk port, switching stackable VLAN traffic for VLAN 10, while also switching untagged traffic for VLAN 30 and tagged traffic for VLAN 40. (To allow VLAN 30 traffic, the native VLAN feature is required, by executing the `portmode hybrid` command. Refer to `portmode hybrid` in the Interfaces chapter.

Example

```
Dell(conf-if-gi-0/42)#switchport
Dell(conf-if-gi-0/42)#vlan-stack trunk
Dell(conf-if-gi-0/42)#show config
!
interface GigabitEthernet 0/42
  no ip address
  switchport
  vlan-stack trunk
  no shutdown
Dell(conf-if-gi-0/42)#interface vlan 100
Dell(conf-if-vl-100)#vlan-stack compatible
Dell(conf-if-vl-100-stack)#member gigabitethernet 0/42
Dell(conf-if-vl-100-stack)#show config

Dell(config)#

Dell(config)#interface vlan 40
Dell(conf-if-vlan)#tagged TenGi 8/0
Dell(conf-if-vlan)#exit
Dell(config)#
Virtual Link Trunking (VLT)

VLT allows physical links between two chassis to appear as a single virtual link to the network core. VLT eliminates the requirement for Spanning Tree protocols by allowing link aggregation group (LAG) terminations on two separate distribution or core switches, and by supporting a loop-free topology. VLT provides Layer 2 multipathing, creating redundancy through increased bandwidth and enabling multiple parallel paths between nodes and load-balancing traffic where alternative paths exist.

Prerequisites: Before you configure VLT, ensure both VLT peer switches are running the same Dell Networking operating system (OS) version and are configured for rapid spanning tree protocol (RSTP) as described in the Virtual Link Trunking (VLT) chapter in the Dell Networking OS Configuration Guide.

back-up destination

Configure the IP address of the management interface on the remote VLT peer to be used as the endpoint of the VLT backup link for sending out-of-band hello messages.

Syntax

back-up destination ip-address [interval seconds]

Parameters

ip-address

Enter the IPv4 or IPv6 address of the backup destination.

interval

Enter the keyword interval to specify the time interval to send hello messages. The range is from 1 to 5 seconds. The default is 1 second.

Defaults

Not configured.

Command Modes

VLT DOMAIN

Usage Information

You can only enable either IPv4 or IPv6.

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.
clear ip mroute

Clear learned multicast routes on the multicast forwarding table. To clear the protocol-independent multicast (PIM) tree information base, use the clear ip pim tib command.

Syntax

```
clear ip mroute {group-address [source-address] | * | snooping}
```

Parameters

- **group-address** [source-address]
  - Enter the multicast group address and source address (if desired), in dotted decimal format, to clear information on a specific group.
- *****
  - Enter * to clear all multicast routes.
- **snooping**
  - Enter the keyword snooping to delete multicast snooping route table entries.

Command Modes

EXEC Privilege

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

---

clear ip pim tib

Clear PIM tree information from the PIM database.

Syntax

```
clear ip pim tib [group]
```

Parameters

- **group**
  - (OPTIONAL) Enter the multicast group address in dotted decimal format (A.B.C.D).

Command Modes

EXEC Privilege

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

If you use this command on a local VLT node, all multicast routes from the local PIM TIB, the entire multicast route table, and all the entries in the data plane are deleted. The entries in Peer PIM TIB (Sync) are not deleted but are marked for re-download. Both local and synced routes are removed from the multicast route table. The peer VLT node clears synced routes from the node.

If you use this command on a peer VLT node, only the synced routes are deleted from the multicast route table.
lacp ungroup member-independent vlt

Prevent possible loop during the bootup of a VLT peer switch or a device that accesses the VLT domain.

Syntax
lacp ungroup member-independent vlt

Defaults
Not configured.

Command Modes
CONFIGURATION

Command History
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
LACP on the VLT ports (on a VLT switch or access device), which are members of the virtual link trunk, is not brought up until the VLT domain is recognized on the access device.

multicast peer-routing timeout

Configure the time for a VLT node to retain synced multicast routes or synced multicast outgoing interface (OIF) after a VLT peer node failure.

Syntax
multicast peer-routing timeout value

To restore the default value, use the no multicast peer-routing timeout command.

Parameters
value
Enter the timeout value in seconds. The range is from 1 to 1200. The default is 150.

Default
Not configured.

Command Modes
VLT DOMAIN (conf-vlt-domain)

Command History
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

peer-link port-channel

Configure the specified port channel as the chassis interconnect trunk between VLT peers in the domain.

Syntax
peer-link port-channel id-number

Parameters
id-number
Enter the port-channel number that acts as the interconnect trunk. The range is from 1 to 128.
Defaults  Not configured.

Command Modes  VLT DOMAIN

Command History  Version 9.2(0.0)  Introduced on the MXL 10/40GbE Switch IO Module.

**peer-routing**

Enable L3 VLT peer-routing.

Syntax  peer-routing

To disable L3 VLT peer-routing, use the no peer-routing command.

Defaults  Disabled.

Command Modes  VLT DOMAIN (conf-vlt-domain)

Command History  Version 9.2(0.0)  Introduced on the MXL 10/40GbE Switch IO Module.

**peer-routing-timeout**

Configure the timeout for the software to wait before connecting to a VLT peer with a Down status.

Syntax  peer-routing-timeout value

To restore the default value, use the no peer-routing-timeout command.

Parameters  value  Enter the timeout value in seconds. The range is from 1 to 65535. The default value is 0 (no timeout).

Command Modes  VLT DOMAIN (conf-vlt-domain)

Command History  Version 9.2(0.0)  Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information  When the timer expires, the software checks to see if the VLT peer is now available. If the VLT peer is not available, peer-routing is disabled on that peer.
primary-priority

Reconfigure the primary role of VLT peer switches.

**Syntax**

```
primary-priority value
```

**Parameters**

*value*

To configure the primary role on a VLT peer, enter a lower value than the priority value of the remote peer. The range is from 1 to 65535.

**Default**

32768

**Command Modes**

VLT DOMAIN

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

After you configure the VLT domain on each peer switch on both sides of the interconnect trunk, by default, the software elects a primary and secondary VLT peer device. To reconfigure the primary role of VLT peer switches, use the `priority` command.

---

show ip mroute

View the multicast routing table.

**Syntax**

```
show ip mroute [static | group-address [source-address] | count | snooping [vlan vlan-id] [group-address [source-address]] | summary | vlt [group-address | count]
```

**Parameters**

*Static*

(Optional) Enter the keyword `static` to view static multicast routes.

*group-address*

(Optional) Enter the multicast group-address to view only routes associated with that group.

[source-address]

Enter the source-address to view routes with that group-address and source-address.

*count*

(Optional) Enter the keyword `count` to view the number of multicast routes and packets.

*snooping [vlan vlan-id] [group-address [source-address]]*

(Optional)

Enter the keyword `snooping` to display information on the multicast routes PIM-SM snooping discovers.

Enter a VLAN ID to limit the information displayed to the multicast routes PIM-SM snooping discovers on a specified VLAN. The VLAN ID range is from 1 to 4094.
Enter a multicast group address and, optionally, a source multicast address in dotted decimal format (A.B.C.D) to limit the information displayed to the multicast routes PIM-SM snooping discovers for a specified multicast group and source.

summary

(Optional) Enter the keyword summary to view routes in a tabular format.

dev

(Optional) Enter the keyword dev to view multicast routes with a spanned incoming interface. Enter a multicast group address in dotted decimal format (A.B.C.D) to limit the information displayed to the multicast routes for a specified multicast group.

count

Enter the keyword count to display VLT route and packet data.

Command Modes

- EXEC
- EXEC Privilege

Command History

Version 9.2(0.0)

Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The following describes the show ip mroute command shown in the examples.

Field | Description
--- | ---
(S, G) | Displays the forwarding entry in the multicast route table.
uptime | Displays the amount of time the entry has been in the multicast forwarding table.
Incoming interface | Displays the reverse path forwarding (RPF) information towards the source for (S,G) entries and the RP for (*,G) entries.
Outgoing interface list: | Lists the interfaces that meet one of the following:
- a directly connected member of the Group
- statically configured member of the Group
- received a (*,G) or (S,G) Join message

Example (static)

Dell#show ip mroute static
Mroute: 23.23.23.0/24, interface: Lo 2
Protocol: static, distance: 0, route-map: none, last change: 00:00:23

Example (snooping)

Dell#show ip mroute snooping
IPv4 Multicast Snooping Table (*, 224.0.0.0), uptime 17:46:23
Incoming vlan: Vlan 2
Outgoing interface list:
GigabitEthernet 4/13
(*) 225.1.2.1), uptime 00:04:16
Incoming vlan: Vlan 2
Outgoing interface list:
  GigabitEthernet 4/11
  GigabitEthernet 4/13

(165.87.1.7, 225.1.2.1), uptime 00:03:17
Incoming vlan: Vlan 2
Outgoing interface list:
  GigabitEthernet 4/11
  GigabitEthernet 4/13
  GigabitEthernet 4/20

Example
(Detail)

Dell#show ip mroute
IP Multicast Routing Table

(*) 224.10.10.1), uptime 00:05:12
Incoming interface: GigabitEthernet 3/12
Outgoing interface list:
  GigabitEthernet 3/13

(1.13.1.100, 224.10.10.1), uptime 00:04:03
Incoming interface: GigabitEthernet 3/4
Outgoing interface list:
  GigabitEthernet 3/12
  GigabitEthernet 3/13
  GigabitEthernet 3/4

(*) 224.20.20.1), uptime 00:05:12
Incoming interface: GigabitEthernet 3/12
Outgoing interface list:
  GigabitEthernet 3/4
  outgoing interface 1
  GigabitEthernet 3/4

show vlt backup-link

Displays information on the backup link operation.

Syntax

```
show vlt backup-link
```

Default
Not configured.

Command Modes
EXEC

Command History

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Example

Dell# show vlt backup-link

VLT Backup Link
------------------------
Destination: 10.11.198.130
Peer HeartBeat status: Up
HeartBeat Timer Interval: 1
HeartBeat Timeout: 3
show vlt brief

Displays summarized status information about VLT domains currently configured on the switch.

**Syntax**

```
show vlt brief
```

**Default**

Not configured.

**Command Modes**

EXEC

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Example (Brief)**

```
Dell# show vlt brief
VLT Domain Brief
------------------
Domain ID:                      1000
Role:                           Primary
Role Priority:                  700
ICL Link Status:                Up
HeartBeat Status:               Up
VLT Peer Status:                Up
Local Unit Id:                  0
Version:                        6(1)
Local System MAC address:       00:01:e8:d7:3f:bd
Remote System MAC address:      00:01:e8:d7:3f:cf
Configured System MAC address:  00:00:00:0a:0a:0a
Remote system version:          6(1)
Delay-Restore timer:            90 seconds
Peer-Routing :                  Disabled
Peer-Routing-timeout timer:     0 seconds
Multicast peer-routing timeout: 150 seconds
Dell#
```

show vlt detail

Displays detailed status information about VLT domains currently configured on the switch.

**Syntax**

```
show vlt detail
```

**Default**

Not configured.

**Command Modes**

EXEC

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.
show vlt inconsistency

Display deviations in VLT multicast traffic.

Syntax
show vlt inconsistency ip mroute

Command Modes
EXEC

Command History
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Example
Dell# show vlt inconsistency ip mroute
Spanned Multicast Routing IIF Inconsistency

Multicast Route LocalIIF PeerIIF
--------------- ---------- ---------
(22.22.22.200, 225.1.1.2) VLAN 5 VLAN 6
(*, 225.1.1.2) VLAN 15 te 0/5
Dell#

show vlt mismatch

Configure the time for a VLT node to retain synced multicast routes or synced multicast OIF after VLT peer node failure.

Syntax
show vlt mismatch

Command Modes
EXEC

Command History
Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Example
Dell# show vlt mismatch
Domain

Parameters Local Peer
--------- ---------
System-Mac 00:00:00:0a:0a:0a 00:00:00:00:00:00

Vlan-config

Vlan-ID Local Mode Peer Mode
--------- ---------
2000 -- L2
**show vlt role**

Displays the VLT peer status, role of the local VLT switch, VLT system MAC address and system priority, and the MAC address and priority of the local VLT device.

**Syntax**

show vlt role

**Default**

Not configured.

**Command Modes**

EXEC

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Example**

Dell#show vlt role
VLT Role
--------
VLT Role: Primary
System MAC address: 00:00:00:0a:0a:0a
Primary Role Priority: 700
Local System MAC address: 00:01:e8:d7:3f:bd
Local System Role Priority: 700
Local Unit Id: 0
Dell#

**show vlt statistics**

Displays statistics on VLT operations.

**Syntax**

show vlt statistics

**Default**

Not configured.

**Command Modes**

EXEC

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Example**

Dell#show vlt statistics
VLT Domain Statistics
-----------------------
HeartBeat Messages Sent: 646
HeartBeat Messages Received: 484
ICL Hello’s Sent: 162
ICL Hello’s Received: 162
Domain Mismatch Errors: 0
Version Mismatch Errors: 0
Config Mismatch Errors: 14
system-mac
Reconfigure the default MAC address for the domain.

Syntax

```
system-mac mac-address
```

Parameters

- **mac-address**: Enter the system MAC address for the VLT domain.

Defaults

- Automatically assigned based on the primary priority and MAC address of each VLT peer.
When you create a VLT domain on a switch, the system automatically creates a VLT-system MAC address used for internal system operations.

To explicitly define the MAC address for the domain, use the `system-mac` command.

You must also reconfigure the same MAC address on the VLT peer switch.

Use this command to minimize the time required for the VLT system to synchronize the default MAC address of the VLT domain on both peer switches when one peer switch reboots.

**unit-id**

Explicitly configure the default unit ID of a VLT peer switch.

**Syntax**

```
unit-id id
```

**Parameters**

- `id` Enter the system unit ID for VLT. The range is from 0 to 1.

**Defaults**

Automatically assigned based on the MAC address of each VLT peer. The peer with the lower MAC address is assigned unit 0; the peer with the higher MAC address is assigned unit 1.

**Command Modes**

VLT DOMAIN

**Command History**

Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

When you create a VLT domain on a switch, the system automatically assigns a unique unit ID (0 or 1) to each peer switch. The unit IDs are used for internal system operations. To explicitly configure the unit ID of a VLT peer, use the `unit-id` command. Configure a different unit ID (0 or 1) on each peer switch.

To minimize the time required for the VLT system to determine the unit ID assigned to each peer switch when one peer reboots, use this command.
**vlt domain**

Enable VLT on a switch, configure a VLT domain, and enter VLT-domain configuration mode.

```plaintext
Syntax
vlt domain domain-id

Parameters
  domain-id
    Enter the Domain ID number. Configure the same domain ID on the peer switch. VLT uses the domain ID to automatically create a VLT MAC address for the domain. The range of domain IDs is from 1 to 1000.

Command Modes
CONFIGURATION

Command History
Version 9.2(0.0)  Introduced on the MXL 10/40GbE Switch IO Module.
```

**vlt-peer-lag port-channel**

Associate the port channel to the corresponding port channel in the VLT peer for the VLT connection to an attached device.

```plaintext
Syntax
vlt-peer-lag port-channel id-number

Parameters
  id-number
    Enter the port-channel number that connects to another port channel in the VLT peer. The range is from 1 to 128.

Defaults
Not configured.

Command Modes
INTERFACE PORT-CHANNEL

Command History
Version 9.2(0.0)  Introduced on the MXL 10/40GbE Switch IO Module.
```
Virtual Router Redundancy Protocol (VRRP)

Virtual router redundancy protocol (VRRP) is supported by the Dell Networking operating system for IPv4 and IPv6. The following commands apply to both VRRP IPv4 and IPv6:

- advertise-interval
- description
- disable
- hold-time
- preempt
- priority
- show config
- track
- virtual-address

VRRP IPv6 are in the VRRP for IPv6 Commands section.

advertise-interval

Set the time interval between VRRP advertisements.

Syntax

advertise-interval seconds

To return to the default settings, use the no advertise-interval command.

Parameters

seconds

Enter a number of seconds. The range is from 1 to 255. The default is 1 second.

Defaults

1 second

Command Modes

INTERFACE-VRRP

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

Dell Networking recommends keeping the default setting for this command. If you do change the time interval between VRRP advertisements on one router, change it on all routers.
authentication-type

Enable authentication of VRRP data exchanges.

Syntax

authentication-type simple [encryption-type] password

To delete an authentication type and password, use the no authentication-type command.

Parameters

- **simple**: Enter the keyword simple to specify simple authentication.
- **encryption-type**: (OPTIONAL) Enter one of the following numbers:
  - 0 (zero) specifies an un-encrypted authentication data follows.
  - 7 (seven) specifies a hidden authentication data follows.
- **password**: Enter a character string up to eight characters long as a password. If you do not enter an encryption-type, the password is stored as clear text.

Defaults

Not configured.

Command Modes

VRRP

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The given password is encrypted by the system and the show config displays an encrypted text string for any of the encrypted typed used.

clear counters vrrp

Clear the counters maintained on VRRP operations.

Syntax

clear counters vrrp [vrrp-id]

Parameters

- **vrrp-id**: (OPTIONAL) Enter the number of the VRRP group ID. The range is from 1 to 255.

Command Modes

EXEC Privilege

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.
**debug vrrp**

Allows you to enable debugging of VRRP.

**Syntax**
```
devug vrrp interface [vrrp-id] {all | packets | state | timer}
```

To disable debugging, use the `no debug vrrp interface [vrrp-id] {all | packets | state | timer}` command.

**Parameters**
- `interface` Enter the following keywords and slot/port or number information
  - For Port Channel interface types, enter the keywords `port-channel` then the number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a VLAN interface, enter the keyword `vlan` then the VLAN ID. The VLAN ID range is from 1 to 4094.
- `vrrp-id` (OPTIONAL) Enter a number from 1 to 255 as the VRRP group ID.
- `all` Enter the keyword `all` to enable debugging of all VRRP groups.
- `packets` Enter the keyword `packets` to enable debugging of VRRP control packets.
- `state` Enter the keyword `state` to enable debugging of VRRP state changes.
- `timer` Enter the keyword `timer` to enable debugging of the VRRP timer.

**Command Modes**
EXEC Privilege

**Command History**
- **Version 8.3.16.1** Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**
If you do not specify options, debug is active on all interfaces and all VRRP groups.

---

**description**

Configure a short text string describing the VRRP group.

**Syntax**
```
description text
```

To delete a VRRP group description, use the `no description` command.
**Parameters**

<table>
<thead>
<tr>
<th>Parameters</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>text</td>
<td>Enter a text string up to 80 characters long.</td>
</tr>
</tbody>
</table>

**Defaults**

Not enabled.

**Command Modes**

VRRP

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

---

**disable**

Disable a VRRP group.

**Syntax**

```
disable
```

To re-enable a disabled VRRP group, use the `no disable` command.

**Defaults**

Enabled.

**Command Modes**

VRRP

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

To enable VRRP traffic, assign an IP address to the VRRP group using the `virtual-address` command and enter `no disable`.

**Related Commands**

`virtual-address` — specifies the IP address of the virtual router.

---

**hold-time**

Specify a delay (in seconds) before a switch becomes the MASTER virtual router. By delaying the initialization of the VRRP MASTER, the new switch can stabilize its routing tables.

**Syntax**

```
hold-time seconds
```

To return to the default value, use the `no hold-time` command.

**Parameters**

<table>
<thead>
<tr>
<th>Parameters</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>seconds</td>
<td>Enter a number of seconds. The range is from 0 to 65535. The default is zero (0) seconds.</td>
</tr>
</tbody>
</table>

**Defaults**

zero (0) seconds
preempt

To preempt or become the MASTER router, permit a BACKUP router with a higher priority value.

Syntax  preempt
       To prohibit preemption, use the no preempt command.

Defaults  Enabled (that is, a BACKUP router can preempt the MASTER router).

Command Modes  VRRP

Command History  Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.

priority

Specify a VRRP priority value for the VRRP group. The VRRP protocol uses this value during the MASTER election process.

Syntax  priority priority
       To return to the default value, use the no priority command.

Parameters  priority  Enter a number as the priority. Enter 255 only if the router’s virtual address is the same as the interface’s primary IP address (that is, the router is the OWNER). The range is from 1 to 255. The default is 100.

Defaults  100

Command Modes  VRRP

Command History  Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.
Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

To guarantee that a VRRP group becomes MASTER, configure the VRRP group’s virtual address with same IP address as the interface’s primary IP address and change the priority of the VRRP group to 255.

If you set the priority command to 255 and the virtual-address is not equal to the interface’s primary IP address, an error message appears.

NOTE: Configuring VRRP priority 255 on an interface on which DHCP Client is enabled is not supported.

show config

View the non-default VRRP configuration.

Syntax

show config [verbose]

Parameters

verbose (OPTIONAL) Enter the keyword verbose to view all VRRP group configuration information, including defaults.

Command Modes

VRRP

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Example

Dell(conf-if-vrid-4)#show config
vrrp-group 4
    virtual-address 119.192.182.124
!

show vrrp

View the VRRP groups that are active. If no VRRP groups are active, the system returns No Active VRRP group.

Syntax

show vrrp [vrrp-id] [interface] [brief]

Parameters

vrrp-id (OPTIONAL) Enter the Virtual Router Identifier for the VRRP group to view only that group. The range is from 1 to 255.

interface (OPTIONAL) Enter the following keywords and slot/port or number information:
For Port Channel interface types, enter the keywords `port-channel` then the number. The range is from 1 to 128.

For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.

For a VLAN interface, enter the keyword `vlan` then the VLAN ID. The VLAN ID range is from 1 to 4094.

brief

(Optional) Enter the keyword `brief` to view a table of information on the VRRP groups.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

*Version 8.3.16.1* Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

The following describes the `show vrrp brief` command shown in the following example.

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Interface</td>
<td>Lists the interface type, slot and port on which the VRRP group is configured.</td>
</tr>
<tr>
<td>Grp</td>
<td>Displays the VRRP group ID.</td>
</tr>
<tr>
<td>Pri</td>
<td>Displays the priority value assigned to the interface. If the <code>track</code> command is configured to track that interface and the interface is disabled, the cost is subtracted from the priority value assigned to the interface.</td>
</tr>
<tr>
<td>Pre</td>
<td>States whether preempt is enabled on the interface.</td>
</tr>
<tr>
<td></td>
<td>• Y = Preempt is enabled.</td>
</tr>
<tr>
<td></td>
<td>• N = Preempt is not enabled.</td>
</tr>
<tr>
<td>State</td>
<td>Displays the operational state of the interface by using one of the following:</td>
</tr>
<tr>
<td></td>
<td>• NA/IF (the interface is not available).</td>
</tr>
<tr>
<td></td>
<td>• MASTER (the interface associated with the MASTER router).</td>
</tr>
<tr>
<td></td>
<td>• BACKUP (the interface associated with the BACKUP router).</td>
</tr>
<tr>
<td>Master addr</td>
<td>Displays the IP address of the MASTER router.</td>
</tr>
<tr>
<td>Virtual addr(s)</td>
<td>Displays the virtual IP addresses of the VRRP routers associated with the interface.</td>
</tr>
</tbody>
</table>

**Example (Brief)**

```
Dell>Interface Grp Pri Pre State Master addr Virtual addr(s) Description-----------------------------
```
TenGig 10/37  1  100  Y Master 200.200.200.200 200.200.200.201
200.200.200.203
Description
TenGig10/37  3  100  Y Master 1.1.1.1 1.1.1.2
200.200.200.207 ... short
desc

Dell>

Usage Information

The following describes the show vrrp command shown in the following example.

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>GigabitEthernet 12/3...</td>
<td>Displays the Interface, the VRRP group ID, and the network address. If the interface is not sending VRRP packets, 0.0.0.0 appears as the network address.</td>
</tr>
<tr>
<td>State: master...</td>
<td>Displays the interface's state:</td>
</tr>
<tr>
<td></td>
<td>• Na/If (not available)</td>
</tr>
<tr>
<td></td>
<td>• master (MASTER virtual router)</td>
</tr>
<tr>
<td></td>
<td>• backup (BACKUP virtual router)</td>
</tr>
<tr>
<td></td>
<td>the interface's priority and the IP address of the MASTER.</td>
</tr>
<tr>
<td>Hold Down:...</td>
<td>This line displays additional VRRP configuration information:</td>
</tr>
<tr>
<td></td>
<td>• Hold Down displays the hold down timer interval in seconds.</td>
</tr>
<tr>
<td></td>
<td>• Preempt displays TRUE if preempt is configured and FALSE if preempt is not configured.</td>
</tr>
<tr>
<td></td>
<td>• AdvInt displays the Advertise Interval in seconds.</td>
</tr>
<tr>
<td>Adv rcvd:...</td>
<td>This line displays counters for the following:</td>
</tr>
<tr>
<td></td>
<td>• Adv rcvd displays the number of VRRP advertisements received on the interface.</td>
</tr>
<tr>
<td></td>
<td>• Adv sent displays the number of VRRP advertisements sent on the interface.</td>
</tr>
<tr>
<td></td>
<td>• Gratuitous ARP sent displays the number of gratuitous ARPs sent.</td>
</tr>
<tr>
<td>Virtual MAC address</td>
<td>Displays the virtual MAC address of the VRRP group.</td>
</tr>
<tr>
<td>Virtual IP address</td>
<td>Displays the virtual IP address of the VRRP router to which the interface is connected.</td>
</tr>
<tr>
<td>Authentication:...</td>
<td>States whether authentication is configured for the VRRP group. If it is, the authentication type and the password are listed.</td>
</tr>
</tbody>
</table>
### track

Monitor an interface and lower the priority value of the VRRP group on that interface if it is disabled.

**Syntax**
```
track interface [priority-cost cost]
```

To disable monitoring, use the `no track interface` command.

**Parameters**

- `interface` (OPTIONAL) Enter the following keywords and slot/port or number information:
  - For a Loopback interface, enter the keyword `loopback` then a number from 0 to 16383.
  - For Port Channel interface types, enter the keywords `port-channel` then the number. The range is 1 to 128.

---

**Example**

Dell>show vrrp
------------------
GigabitEthernet 12/3, VRID: 1, Net: 10.1.1.253
State: Master, Priority: 105, Master: 10.1.1.253 (local)
Hold Down: 0 sec, Preempt: TRUE, AdvInt: 1 sec
Adv rcvd: 0, Adv sent: 1862, Gratuitous ARP sent: 0
Virtual MAC address:
  00:00:5e:00:01:01
Virtual IP address:
  10.1.1.252
Authentication: (none)
Tracking states for 1 interfaces:
  Up GigabitEthernet 12/17 priority-cost 10
------------------
GigabitEthernet 12/4, VRID: 2, Net: 10.1.2.253
State: Master, Priority: 110, Master: 10.1.2.253 (local)
Hold Down: 10 sec, Preempt: TRUE, AdvInt: 1 sec
Adv rcvd: 0, Adv sent: 1862, Gratuitous ARP sent: 0
Virtual MAC address:
  00:00:5e:00:01:02
Virtual IP address:

  Up GigabitEthernet 12/17 priority-cost 10
Dell>

---

**Item** | **Description**
--- | ---
**Tracking states** | This line is displayed if the `track` command is configured on an interface. Below this line, the following information on the tracked interface is displayed:
- Dn or Up states whether the interface is down or up.
- the interface type slot/port information.
• For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
• For a VLAN interface, enter the keyword vlan then the VLAN ID. The VLAN ID range is from 1 to 4094.

**cost** (OPTIONAL) Enter a number as the amount to be subtracted from the priority value. The range is 1 to 254. The default is 10.

**Defaults**
cost = 10

**Command Modes**
VRRP

**Command History**
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**
If the interface is disabled, the cost value is subtracted from the priority value and forces a new MASTER election if the priority value is lower than the priority value in the BACKUP virtual routers.

---

**virtual-address**

Configure up to 12 IP addresses of virtual routers in the VRRP group. To start sending VRRP packets, set at least one virtual address for the VRRP group.

**Syntax**

```
virtual-address ip-address1 [... ip-address12]
```

To delete one or more virtual IP addresses, use the `no virtual-address ip-address1 [... ip-address12]` command.

**Parameters**

- **ip-address1**
  - Enter an IP address of the virtual router in dotted decimal format. The IP address must be on the same subnet as the interface’s primary IP address.

- **... ip-address12** (OPTIONAL) Enter up to 11 additional IP addresses of virtual routers in dotted decimal format. Separate the IP addresses with a space. The IP addresses must be on the same subnet as the interface’s primary IP address.

**Defaults**

Not configured.

**Command Modes**
VRRP

**Command History**
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.
The VRRP group only becomes active and sends VRRP packets when a virtual IP address is configured. When you delete the virtual address, the VRRP group stops sending VRRP packets.

A system message appears after you enter or delete the `virtual-address` command.

To guarantee that a VRRP group becomes MASTER, configure the VRRP group’s virtual address with the same IP address as the interface’s primary IP address and change the priority of the VRRP group to 255.

You can ping the virtual addresses configured in all VRRP groups.

**vrrp delay minimum**

Set the delay time for VRRP initialization after an interface comes up.

**Syntax**

```
vrrp delay minimum seconds
```

**Parameters**

- `seconds` Enter the number of seconds for the delay for VRRP initialization after an interface becomes operational. The range is from 0 to 900 (0 indicates no delay).

**Defaults**

0

**Command Modes**

INTERFACE

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

This command applies to a single interface. When used with the `vrrp delay reload` CLI, the later timer rules the VRRP enabling. For example, if `vrrp delay reload` is 600 and the `vrrp delay minimum` is 300:

- When the system reloads, VRRP waits 600 seconds (10 minutes) to bring up VRRP on all interfaces that are up and configured for VRRP.
- When an interface comes up, whether as part of a system reload or an interface reload, the system waits 300 seconds (5 minutes) to bring up VRRP on that interface.

**Related Command**

- `vrrp delay reload` — sets the delay time for VRRP initialization after a system reboot.
vrrp delay reload

Set the delay time for VRRP initialization after a system reboot.

Syntax

vrrp delay reload seconds

Parameters

seconds

Enter the number of seconds for the delay. The range is from 0 to 900 (0 indicates no delay).

Defaults

0

Command Modes

INTERFACE

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

This command applies to all the VRRP configured interfaces on a system. When used with the vrrp delay minimum CLI, the later timer rules the VRRP enabling. For example, if vrrp delay reload is 600 and the vrrp delay minimum is 300:

- When the system reloads, VRRP waits 600 seconds (10 minutes) to bring up VRRP on all interfaces that are up and configured for VRRP.
- When an interface comes up, whether as part of a system reload or an interface reload, the system waits 300 seconds (5 minutes) to bring up VRRP on that interface.

Save the configuration and reload the system for the delay timers to take effect.

Related Command

vrrp delay minimum — sets the delay time for VRRP initialization after a line card reboot.

vrrp-group

Assign a VRRP ID to an interface. You can configure up to 12 VRRP groups per interface.

Syntax

vrrp-group vrrp-id

Parameters

vrrp-id

Enter a number as the group ID. The range is from 1 to 255.

Defaults

Not configured.

Command Modes

INTERFACE

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.
Usage Information

The VRRP group only becomes active and sends VRRP packets when a virtual IP address is configured. When you delete the virtual address, the VRRP group stops sending VRRP packets.

Related Command

virtual-address — assigns up to 12 virtual IP addresses per VRRP group.

VRRP for IPv6 Commands

The following commands apply to IPv6.

clear counters vrrp ipv6

Clear the counters recorded for IPv6 VRRP groups.

Syntax

clear counters vrrp ipv6 [vrid | vrf instance]

Parameters

vrid  
(OPTIONAL) Enter the number of an IPv6 VRRP group. The range is from 1 to 255.

vrf instance  
(OPTIONAL) Enter the name of a VRF instance (32 characters maximum) to clear the counters of all IPv6 VRRP groups in the specified VRF.

Defaults

Not configured

Command Modes

INTERFACE

Command History

Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.

debug vrrp ipv6

Allows you to enable debugging of VRRP.

Syntax

debug vrrp ipv6 interface [vrid] {all | packets | state | timer}

Parameters

interface  
Enter the following keywords and slot/port or number information:

- For a Port Channel interface, enter the keywords port-channel then a number.
- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
For a VLAN interface, enter the keyword `vlan` then the VLAN ID. The VLAN ID range is from 1 to 4094.

**vrid** (OPTIONAL) Enter a number from 1 to 255 as the VRRP group ID.

**all** Enter the keyword `all` to enable debugging of all VRRP groups.

**packets** Enter the keyword `packets` to enable debugging of VRRP control packets.

**state** Enter the keyword `state` to enable debugging of VRRP state changes.

**timer** Enter the keyword `timer` to enable debugging of the VRRP timer.

**Command Modes**

EXEC Privilege

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

If no options are specified, debug is active on all interfaces and all VRRP groups.

---

### show vrrp ipv6

View the IPv6 VRRP groups that are active. If no VRRP groups are active, the system returns **No Active VRRP group**.

**Syntax**

```
show vrrp ipv6 [vrid] [interface] [brief]
```

**Parameters**

**vrid** (OPTIONAL) Enter the virtual router identifier for the VRRP group to view only that group. The range is from 1 to 255.

**interface** Enter the following keywords and slot/port or number information:

- For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
- For SONET interfaces, enter the keyword `sonet` then the slot/port information.
- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a VLAN interface, enter the keyword `vlan` then the VLAN ID. The VLAN ID range is from 1 to 4094.

**brief** (OPTIONAL) Enter the keyword `brief` to view a table of information on the VRRP groups.
Command Modes

- EXEC
- EXEC Privilege

Command History

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The following describes the show vrrp ipv6 command shown in the following example.

<table>
<thead>
<tr>
<th>Line Beginning with</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>GigabitEthernet...</td>
<td>Displays the Interface, the VRRP group ID, and the network address. If the interface is no sending VRRP packets, 0.0.0.0 appears as the network address.</td>
</tr>
<tr>
<td>VRF</td>
<td>VRF instance to which the interface (on which the VRRP group is configured) belongs.</td>

<tr>
<td>Tracking states...</td>
<td>Displays information on the tracked interfaces or objects configured for a VRRP group (track command), including:</td>
</tr>
</tbody>
</table>
**Line Beginning with** | **Description**
--- | ---
• | UP or DOWN state of the tracked interface or object (Up or Dn).
• | Interface type and slot/port or object number, description, and time since the last change in the state of the tracked object.
• | Cost to be subtracted from the VRRP group priority if the state of the tracked interface/object goes DOWN.

**Example**

Dell#show vrrp ipv6
------------------
VRF: 0 default-vrf
State: Master, Priority: 101, Master: fe80::201:e8ff:fe7a:6bb9 (local)
Hold Down: 0 centisec, Preempt: TRUE, AdvInt: 100 centisec
Accept Mode: FALSE, Master AdvInt: 100 centisec
Adv rcvd: 0, Bad pkts rcvd: 0, Adv sent: 64
Virtual MAC address: 00:00:5e:00:02:ff
Virtual IP address: 1::255 fe80::255

**vrrp-ipv6-group**

Assign an interface to a VRRP group.

**Syntax**

```
vrrp-ipv6-group vrid
```

**Parameters**

| vrid | Enter the virtual-router ID number of the VRRP group. The VRID range is from 1 to 255. |

**Defaults**

Not configured.

**Command Modes**

INTERFACE

**Command History**

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

The VRRP group only becomes active and sends VRRP packets when a link-local virtual IP address is configured. When you delete the virtual address, the VRRP group stops sending VRRP packets.

- When VRF microcode is not loaded in CAM, the VRID for a VRRP group is the same as the VRID number configured with the vrrp-group or vrrp-ipv6-group command.
- When VRF microcode is loaded in CAM, the VRID for a VRRP group is equal to 16 times the vrrp-group or vrrp-ipv6-group vrid number plus the ip.
vrf vrf-id number. For example, if VRF microcode is loaded and VRRP group 10 is configured in VRF 2, the VRID used for the VRRP group is (16 x 10) + 2, or 162. This VRID value is used in the lowest byte of the virtual MAC address of the VRRP group and is also used for VRF routing.

NOTE: Configure the same VRID on neighboring routers (Dell Networking or non-Dell Networking) in the same VRRP group in order for all routers to interoperate.
ICMP Message Types

This chapter lists and describes the possible ICMP message type resulting from a ping. The first three columns list the possible symbol or type/code. For example, you would receive a ! or 03 as an echo reply from your ping.

## SNMP Traps

This chapter lists the traps sent by the Dell Networking operating software. Each trap is listed by the fields Message ID, Trap Type, and Trap Option.
