Notes, cautions, and warnings

**NOTE:** A NOTE indicates important information that helps you make better use of your product.

**CAUTION:** A CAUTION indicates either potential damage to hardware or loss of data and tells you how to avoid the problem.

**WARNING:** A WARNING indicates a potential for property damage, personal injury, or death.

40 Getting help and contacting Dell................................................................................................81
Working inside your computer

Safety instructions

Use the following safety guidelines to protect your computer from potential damage and to ensure your personal safety. Unless otherwise noted, each procedure included in this document assumes that you have read the safety information that shipped with your computer.

**NOTE:** Before working inside your computer, read the safety information that shipped with your computer. For more safety best practices, see the Regulatory Compliance home page at [www.dell.com/regulatory_compliance](http://www.dell.com/regulatory_compliance).

**NOTE:** Disconnect all power sources before opening the computer cover or panels. After you finish working inside the computer, replace all covers, panels, and screws before connecting to the electrical outlet.

**CAUTION:** To avoid damaging the computer, ensure that the work surface is flat and clean.

**CAUTION:** Handle components and cards with care. Do not touch the components or contacts on a card. Hold a card by its edges or by its metal mounting bracket. Hold a component such as a processor by its edges, not by its pins.

**CAUTION:** You should only perform troubleshooting and repairs as authorized or directed by the Dell technical assistance team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. See the safety instructions that shipped with the product or at [www.dell.com/regulatory_compliance](http://www.dell.com/regulatory_compliance).

**CAUTION:** Before touching anything inside your computer, ground yourself by using a wrist grounding strap or by periodically touching an unpainted metal surface, such as the metal at the back of the computer. While you work, periodically touch an unpainted metal surface to dissipate static electricity, which could harm internal components.

**CAUTION:** When you disconnect a cable, pull on its connector or on its pull tab, not on the cable itself. Some cables have connectors with locking tabs or thumb-screws that you must disengage before disconnecting the cable. When disconnecting cables, keep them evenly aligned to avoid bending any connector pins. When connecting cables, ensure that the ports and connectors are correctly oriented and aligned.

**CAUTION:** Press and eject any installed card from the media-card reader.

**NOTE:** The color of your computer and certain components may appear differently than shown in this document.

Before working inside your computer

**NOTE:** The images in this document may differ from your computer depending on the configuration you ordered.

Before you begin

1. Save and close all open files and exit all open applications.
2. Shut down your computer. Click **Start** > **Power** > **Shut down**.
   **NOTE:** If you are using a different operating system, see the documentation of your operating system for shut-down instructions.
3. Disconnect your computer and all attached devices from their electrical outlets.
4. Disconnect all attached network devices and peripherals, such as keyboard, mouse, and monitor from your computer.
5. Remove any media card and optical disc from your computer, if applicable.
6. After the computer is unplugged, press and hold the power button for 5 seconds to ground the system board.
Electrostatic discharge—ESD protection

ESD is a major concern when you handle electronic components, especially sensitive components such as expansion cards, processors, memory DIMMs, and system boards. Very slight charges can damage circuits in ways that may not be obvious, such as intermittent problems or a shortened product life span. As the industry pushes for lower power requirements and increased density, ESD protection is an increasing concern.

Due to the increased density of semiconductors used in recent Dell products, the sensitivity to static damage is now higher than in previous Dell products. For this reason, some previously approved methods of handling parts are no longer applicable.

Two recognized types of ESD damage are catastrophic and intermittent failures.

- **Catastrophic** – Catastrophic failures represent approximately 20 percent of ESD-related failures. The damage causes an immediate and complete loss of device functionality. An example of catastrophic failure is a memory DIMM that has received a static shock and immediately generates a "No POST/No Video" symptom with a beep code emitted for missing or nonfunctional memory.

- **Intermittent** – Intermittent failures represent approximately 80 percent of ESD-related failures. The high rate of intermittent failures means that most of the time when damage occurs, it is not immediately recognizable. The DIMM receives a static shock, but the tracing is merely weakened and does not immediately produce outward symptoms related to the damage. The weakened trace may take weeks or months to melt, and in the meantime may cause degradation of memory integrity, intermittent memory errors, etc.

The more difficult type of damage to recognize and troubleshoot is the intermittent (also called latent or "walking wounded") failure.

Perform the following steps to prevent ESD damage:

- Use a wired ESD wrist strap that is properly grounded. The use of wireless anti-static straps is no longer allowed; they do not provide adequate protection. Touching the chassis before handling parts does not ensure adequate ESD protection on parts with increased sensitivity to ESD damage.

- Handle all static-sensitive components in a static-safe area. If possible, use anti-static floor pads and workbench pads.

- When unpacking a static-sensitive component from its shipping carton, do not remove the component from the anti-static packing material until you are ready to install the component. Before unwrapping the anti-static packaging, ensure that you discharge static electricity from your body.

- Before transporting a static-sensitive component, place it in an anti-static container or packaging.

ESD field service kit

The unmonitored Field Service kit is the most commonly used service kit. Each Field Service kit includes three main components: anti-static mat, wrist strap, and bonding wire.

Components of an ESD field service kit

The components of an ESD field service kit are:

- **Anti-Static Mat** – The anti-static mat is dissipative and parts can be placed on it during service procedures. When using an anti-static mat, your wrist strap should be snug and the bonding wire should be connected to the mat and to any bare metal on the system being worked on. Once deployed properly, service parts can be removed from the ESD bag and placed directly on the mat. ESD-sensitive items are safe in your hand, on the ESD mat, in the system, or inside a bag.

- **Wrist Strap and Bonding Wire** – The wrist strap and bonding wire can be either directly connected between your wrist and bare metal on the hardware if the ESD mat is not required, or connected to the anti-static mat to protect hardware that is temporarily placed on the mat. The physical connection of the wrist strap and bonding wire between your skin, the ESD mat, and the hardware is known as bonding. Use only Field Service kits with a wrist strap, mat, and bonding wire. Never use wireless wrist straps. Always be aware that the internal wires of a wrist strap are prone to damage from normal wear and tear, and must be checked regularly with a wrist strap tester in order to avoid accidental ESD hardware damage. It is recommended to test the wrist strap and bonding wire at least once per week.

- **ESD Wrist Strap Tester** – The wires inside of an ESD strap are prone to damage over time. When using an unmonitored kit, it is a best practice to regularly test the strap prior to each service call, and at a minimum, test once per week. A wrist strap tester is the best method for doing this test. If you do not have your own wrist strap tester, check with your regional office to find out if they have one. To perform the test, plug the wrist-strap's bonding-wire into the tester while it is strapped to your wrist and push the button to test. A green LED is lit if the test is successful; a red LED is lit and an alarm sounds if the test fails.

- **Insulator Elements** – It is critical to keep ESD sensitive devices, such as plastic heat sink casings, away from internal parts that are insulators and often highly charged.

- **Working Environment** – Before deploying the ESD Field Service kit, assess the situation at the customer location. For example, deploying the kit for a server environment is different than for a desktop or portable environment. Servers are typically installed in a rack within a data center; desktops or portables are typically placed on office desks or cubicles. Always look for a large open flat work area that is free of clutter and large enough to deploy the ESD kit with additional space to accommodate the type of system that is
being repaired. The workspace should also be free of insulators that can cause an ESD event. On the work area, insulators such as Styrofoam and other plastics should always be moved at least 12 inches or 30 centimeters away from sensitive parts before physically handling any hardware components.

- **ESD Packaging** – All ESD-sensitive devices must be shipped and received in static-safe packaging. Metal, static-shielded bags are preferred. However, you should always return the damaged part using the same ESD bag and packaging that the new part arrived in. The ESD bag should be folded over and taped shut and all the same foam packing material should be used in the original box that the new part arrived in. ESD-sensitive devices should be removed from packaging only at an ESD-protected work surface, and parts should never be placed on top of the ESD bag because only the inside of the bag is shielded. Always place parts in your hand, on the ESD mat, in the system, or inside an anti-static bag.

- **Transporting Sensitive Components** – When transporting ESD sensitive components such as replacement parts or parts to be returned to Dell, it is critical to place these parts in anti-static bags for safe transport.

## ESD protection summary

It is recommended that all field service technicians use the traditional wired ESD grounding wrist strap and protective anti-static mat at all times when servicing Dell products. In addition, it is critical that technicians keep sensitive parts separate from all insulator parts while performing service and that they use anti-static bags for transporting sensitive components.

## Transporting sensitive components

When transporting ESD sensitive components such as replacement parts or parts to be returned to Dell, it is critical to place these parts in anti-static bags for safe transport.

## Lifting equipment

Adhere to the following guidelines when lifting heavy weight equipment:

> **CAUTION:** Do not lift greater than 50 pounds. Always obtain additional resources or use a mechanical lifting device.

1. Get a firm balanced footing. Keep your feet apart for a stable base, and point your toes out.
2. Tighten stomach muscles. Abdominal muscles support your spine when you lift, offsetting the force of the load.
3. Lift with your legs, not your back.
4. Keep the load close. The closer it is to your spine, the less force it exerts on your back.
5. Keep your back upright, whether lifting or setting down the load. Do not add the weight of your body to the load. Avoid twisting your body and back.
6. Follow the same techniques in reverse to set the load down.

## After working inside your computer

> **CAUTION:** Leaving stray or loose screws inside your computer may severely damage your computer.

1. Replace all screws and ensure that no stray screws remain inside your computer.
2. Connect any external devices, peripherals, or cables you removed before working on your computer.
3. Replace any media cards, discs, or any other parts that you removed before working on your computer.
4. Connect your computer and all attached devices to their electrical outlets.
5. Turn on your computer.
The procedures in this document may require the following tools:

- Phillips screwdriver #1
- Flat-head screwdriver
- Plastic scribe
NOTE: When removing screws from a component, it is recommended to note the screw type, the quantity of screws, and then place them in a screw storage box. This is to ensure that the correct number of screws and correct screw type is restored when the component is replaced.

NOTE: Some computers have magnetic surfaces. Ensure that the screws are not left attached to such surface when replacing a component.

NOTE: Screw color may vary with the configuration ordered.

15. hard-drive data cable connector (SATA3)
16. hard-drive data cable connector (SATA0)
17. hard drive and optical-drive power cable connector
Procedure

1. Place the computer on its side.
2. Remove the two screws (#6-32x6.35) that secure the computer cover to the chassis.
3. Slide the computer cover towards the back of the computer and lift the cover off the chassis.
NOTE: Before working inside your computer, read the safety information that shipped with your computer and follow the steps in Before working inside your computer. After working inside your computer, follow the instructions in After working inside your computer. For more safety best practices, see the Regulatory Compliance home page at www.dell.com/regulatory_compliance.

Procedure

1. Align the tabs on the computer cover with the slots on the chassis and slide it towards the front of the computer until it snaps into place.

2. Replace the two screws (#6-32x6.35) that secure the computer cover to the chassis.

3. Place the computer in an upright position.
Removing the front bezel

**Procedure**

1. Place the computer in an upright position.
2. Gently pry and release the front-bezel tabs sequentially from the top.
3. Move the front bezel outward from the chassis.
Prerequisites

Remove the computer cover.
Replacing the front bezel

Procedure

1. Align the front-bezel tabs with the front-panel slots on the chassis.
2. Rotate the front bezel towards the chassis until it snaps into place.
Post-requisites

Replace the computer cover.
Prerequisites

Remove the computer cover.

Procedure

1. Pry and release the tabs on the fan shroud sequentially from the bottom, away from the thermal-cooling assembly.
2. Lift the fan shroud off the thermal-cooling assembly.
Replacing the fan shroud

Procedure

Align the tabs on the fan shroud with the slots on the thermal-cooling assembly and snap it into place.

Post-requisites

Replace the computer cover.
NOTE: Before working inside your computer, read the safety information that shipped with your computer and follow the steps in Before working inside your computer. After working inside your computer, follow the instructions in After working inside your computer. For more safety best practices, see the Regulatory Compliance home page at www.dell.com/regulatory_compliance.

Procedure

1. Disconnect the power cables and the data cables from the hard drive.

2. Remove the screw (#6-32x3.6) that secures the hard-drive assembly to the drive cage.

3. Slide and lift the hard-drive assembly out of the slot on the drive cage.
4. Remove the four screws (M3x3.5) that secure the top hard drive to the hard-drive bracket.

5. Lift the top hard drive off the hard-drive bracket.

**NOTE:** Note the orientation of the hard drive so that you can replace it correctly.

6. Remove the four screws (M3x3.5) that secure the bottom hard drive to the hard-drive bracket.

7. Slide the bottom hard drive out of the hard-drive bracket.

**NOTE:** Note the orientation of the hard drive so that you can replace it correctly.
Prerequisites

Remove the computer cover.
Replacing the 2.5-inch hard drive

Procedure

1. Slide the bottom hard drive into the hard-drive bracket.
2. Align the screw holes on the bottom hard drive with the screw holes on the hard-drive bracket.
3. Replace the four screws (M3x3.5) that secure the bottom hard-drive to the hard-drive bracket.
4. Align the screw holes on the top hard drive with the screw holes on the hard-drive bracket.
5. Replace the four screws (M3x3.5) that secure the top hard drive to the hard-drive bracket.
6. Slide the hard drive into the slot on the drive cage until it snaps into place.
7. Replace the screw (#6-32x3.6) that secures the hard-drive assembly to the drive cage.
8. Connect the data cables and power cables to the hard drive.

Post-requisites

Replace the computer cover.
Removing the 3.5-inch hard drive

NOTE: Before working inside your computer, read the safety information that shipped with your computer and follow the steps in Before working inside your computer. After working inside your computer, follow the instructions in After working inside your computer. For more safety best practices, see the Regulatory Compliance home page at www.dell.com/regulatory_compliance.

Prerequisites

1. Remove the computer cover.
2. Remove the front bezel.

Procedure

1. Place the computer on its side to access the parts inside the chassis.
2. Disconnect the power cable and the data cable from the hard drive.
3. Remove the two screws (#6-32x6.35) that secure the hard-drive assembly to the drive cage.
4. Slide the hard-drive assembly toward the inside of the computer and lift it off the drive cage.
5. Turn the hard-drive assembly over.
6. Remove the two screws (#6-32x3.6) that secure the hard-drive bracket to the hard-drive assembly.
7. Slide the hard drive out of the hard-drive bracket.
Replacing the 3.5-inch hard drive

1. Slide the hard drive into the hard-drive bracket.

2. Align the screw holes on the hard drive with the screw holes on the hard-drive bracket.

3. Replace the two screws (#6-32x3.6) that secure the hard-drive bracket to the hard drive.

4. Turn the hard-drive assembly over.

5. Slide and place the hard-drive assembly into the drive cage.

6. Replace the two screws (#6-32x6.35) that secure the hard-drive assembly to the drive cage.

7. Connect the power cable and data cable to the hard-drive assembly.
Post-requisites

1. Replace the front bezel.
2. Replace the computer cover.
Removing the optical drive

Prerequisites

1. Remove the computer cover.
2. Remove the front bezel.

Procedure

1. Place the computer on its side to access the parts inside the chassis.
2. Remove the two screws (#6-32x6.35) that secure the drive cage to the chassis.
3. Push the release tab on the chassis and slide the drive cage to release it from the chassis.
4. Disconnect the data cable and power cable from the optical drive.
5. Disconnect the data cables and power cables from the hard drives.
6. Lift the drive cage out of the chassis.

NOTE: Before working inside your computer, read the safety information that shipped with your computer and follow the steps in Before working inside your computer. After working inside your computer, follow the instructions in After working inside your computer. For more safety best practices, see the Regulatory Compliance home page at www.dell.com/regulatory_compliance.
7. Turn the drive cage over and remove the three screws (M2x2) that secure the optical drive to the optical-drive bracket.

8. Slide the optical drive out of the optical-drive bracket.

9. Insert a pin into the optical-drive emergency eject pinhole to release the optical drive.

10. Using a plastic scribe, gently push the tabs to release the optical-drive bezel from the optical drive.

11. Gently pull and disconnect the optical-drive bezel from the optical drive.
Removing the optical drive
NOTE: Before working inside your computer, read the safety information that shipped with your computer and follow the steps in Before working inside your computer. After working inside your computer, follow the instructions in After working inside your computer. For more safety best practices, see the Regulatory Compliance home page at www.dell.com/regulatory_compliance.

Procedure

1. Align and replace the optical-drive bezel to the optical drive.

2. Slide the optical drive into the optical-drive cage

3. Align the screw holes on the optical drive with the screw holes on the drive cage and replace the three screws (M2x2) that secure the optical drive to the drive cage.

4. Place the drive cage on the chassis.

5. Connect the data cable and power cable to the optical drive.

6. Connect the data cables and power cables to the hard drives.
7. Slide the drive cage into the slot on the chassis and snap it into place.
8. Align the screw hole on the drive cage with the screw hole on the chassis and replace the two screws (#6-32x6.35) that secure the drive cage to the chassis.

**Post-requisites**

1. Replace the front bezel.
2. Replace the computer cover.
Removing the memory modules

**NOTE:** Before working inside your computer, read the safety information that shipped with your computer and follow the steps in Before working inside your computer. After working inside your computer, follow the instructions in After working inside your computer. For more safety best practices, see the Regulatory Compliance home page at www.dell.com/regulatory_compliance.

**Prerequisites**

1. Remove the computer cover.
2. Remove the front bezel.
3. Remove the fan shroud.
4. Follow the procedure from step 1 to step 6 in “Removing the optical drive.”

**Procedure**

1. Using the fingertips, spread apart the securing clip at each end of the memory-module slot until the memory module pops up.
2. Lift the memory module out of the memory-module slot.

**NOTE:** If the memory module is difficult to remove, gently ease the memory module back and forth alongside the memory-module slot to remove it.
Replacing the memory modules

**Procedure**

1. Align the notch on the memory module with the tab on the memory-module slot.
2. Insert the memory module into the memory-module slot and press the memory module down until the securing clips lock in place.

**Post-requisites**

1. Follow the procedure from step 5 to step 8 in “Replacing the optical drive”.
2. Replace the fan shroud.
3. Replace the front bezel.
4. Replace the computer cover.
Removing the coin-cell battery

NOTE: Before working inside your computer, read the safety information that shipped with your computer and follow the steps in Before working inside your computer. After working inside your computer, follow the instructions in After working inside your computer. For more safety best practices, see the Regulatory Compliance home page at www.dell.com/regulatory_compliance.

CAUTION: Removing the coin-cell battery resets the BIOS setup program’s settings to default. It is recommended that you note the BIOS setup program’s settings before removing the coin-cell battery.

Prerequisites

1. Remove the computer cover.
2. Remove the front bezel.
3. Follow the procedure from step 1 to step 6 in “Removing the optical drive”.

Procedure

1. Press on the edge of the coin-cell battery until the coin-cell battery pops up.
2. Lift the coin-cell battery out of its socket on the system board.
Replacing the coin-cell battery

Procedure

Insert a new coin-cell battery (CR2032) into the battery socket with the positive side facing up, and snap the battery into place.

Post-requisites

1. Follow the procedure from step 5 to step 8 in “Replacing the optical drive”.
2. Replace the front bezel.
3. Replace the computer cover.
NOTE: Before working inside your computer, read the safety information that shipped with your computer and follow the steps in Before working inside your computer. After working inside your computer, follow the instructions in After working inside your computer. For more safety best practices, see the Regulatory Compliance home page at www.dell.com/regulatory_compliance.

Prerequisites

1. Remove the computer cover.
2. Remove the front bezel.
3. Follow the procedure from step 1 to step 6 in “Removing the optical drive”.

Procedure

1. Locate the wireless card on the system board.
2. Remove the screw (M2x3.5) that secures the wireless card to the system board.
3. Slide and lift the wireless-card bracket off the wireless card.
4. Slide and remove the wireless card from the wireless-card slot.
5. Disconnect the antenna cables from the wireless card.
Removing the wireless card
Replacing the wireless card

NOTE: Before working inside your computer, read the safety information that shipped with your computer and follow the steps in Before working inside your computer. After working inside your computer, follow the instructions in After working inside your computer. For more safety best practices, see the Regulatory Compliance home page at www.dell.com/regulatory_compliance.

Procedure

1. Connect the antenna cables to the wireless card.
   The following table provides the antenna-cable color scheme for the wireless card supported by your computer.

<table>
<thead>
<tr>
<th>Connectors on the wireless card</th>
<th>Antenna-cable color</th>
</tr>
</thead>
<tbody>
<tr>
<td>Main (white triangle)</td>
<td>White</td>
</tr>
<tr>
<td>Auxiliary (black triangle)</td>
<td>Black</td>
</tr>
</tbody>
</table>

2. Align and place the wireless-card bracket on to the wireless card.
3. Align the notch on the wireless card with the tab on the wireless-card slot and slide the wireless card at an angle into the wireless-card slot.
4. Replace the screw (M2x3.5) that secures the wireless card to the system board.

Post-requisites

1. Follow the procedure from step 5 to step 8 in “Replacing the optical drive”.
2. Replace the front bezel.
3. Replace the computer cover.
Removing the solid-state drive

NOTE: Before working inside your computer, read the safety information that shipped with your computer and follow the steps in Before working inside your computer. After working inside your computer, follow the instructions in After working inside your computer. For more safety best practices, see the Regulatory Compliance home page at www.dell.com/regulatory_compliance.

CAUTION: Solid-state drives are fragile. Exercise care when handling the solid-state drive.

CAUTION: To avoid data loss, do not remove the solid-state drive while the computer is in sleep or on state.

Prerequisites

Remove the computer cover.

Procedure

1. Locate the solid-state drive on the system board.

2. Lift the spacer that secures the solid-state drive to the system board.

3. Slide and remove the solid-state drive from the solid-state drive slot.
Removing the solid-state drive
Replacing the solid-state drive

NOTE: Before working inside your computer, read the safety information that shipped with your computer and follow the steps in Before working inside your computer. After working inside your computer, follow the instructions in After working inside your computer. For more safety best practices, see the Regulatory Compliance home page at www.dell.com/regulatory_compliance.

CAUTION: Solid-state drives are fragile. Exercise care when handling the solid-state drive.

Procedure

1. Align the notch on the solid-state drive with the tab on the solid-state drive slot.
2. Slide the solid-state drive into the solid-state drive slot and press down the solid-state drive.
3. Press the spacer that secures the solid-state drive to the system board.

Post-requisites

Replace the computer cover.
Removing the antenna modules

Prerequisites

1. Remove the computer cover.
2. Remove the front bezel.
3. Follow the procedure from step 1 to step 6 in “Removing the optical drive”.
4. Remove the wireless card.

Procedure

1. Note the antenna-cable routing and remove the antenna cables from the routing guide on the chassis.
2. Using a plastic scribe, gently pry the antenna modules off the side-chassis.
3. Remove the antenna modules, along with its cables, off the chassis.
Replacing the antenna modules

NOTE: Before working inside your computer, read the safety information that shipped with your computer and follow the steps in Before working inside your computer. After working inside your computer, follow the instructions in After working inside your computer. For more safety best practices, see the Regulatory Compliance home page at www.dell.com/regulatory_compliance.

Procedure

1. Align and adhere the antenna modules to the chassis.
2. Route the antenna cables through the routing guides on the chassis.

Post-requisites

1. Replace the wireless card.
2. Follow the procedure from step 5 to step 8 in “Replacing the optical drive”.
3. Replace the front bezel.
4. Replace the computer cover.
Removing the power-button module

NOTE: Before working inside your computer, read the safety information that shipped with your computer and follow the steps in Before working inside your computer. After working inside your computer, follow the instructions in After working inside your computer. For more safety best practices, see the Regulatory Compliance home page at www.dell.com/regulatory_compliance.

Prerequisites

1. Remove the computer cover.
2. Remove the front bezel.
3. Follow the procedure from step 1 to step 6 in "Removing the optical drive".

Procedure

1. Remove the screw (#6-32x6.35) that secures the front-I/O bracket to the chassis.
2. Gently release the ports on the front-I/O bracket from the slots on the chassis and move the front-I/O bracket away from the chassis.
3. Disconnect the power-button cable from the system board.
4. Press the tabs on the power-button module to release the module from the front panel.
Removing the power-button module
NOTE: Before working inside your computer, read the safety information that shipped with your computer and follow the steps in Before working inside your computer. After working inside your computer, follow the instructions in After working inside your computer. For more safety best practices, see the Regulatory Compliance home page at www.dell.com/regulatory_compliance.

Procedure

1. Route the power-button board cable through the slot on the front panel.
2. Connect the power-button board cable to the system board.
3. Slide the front-I/O bracket into the slots on the chassis and align the screw holes on the front-I/O panel with the screw holes on the chassis.
4. Replace the screw (#6-32x6.35) that secures the front-I/O bracket to the chassis.
Post-requisites

1. Follow the procedure from step 5 to step 8 in "Replacing the optical drive".
2. Replace the front bezel.
3. Replace the computer cover.
NOTE: Before working inside your computer, read the safety information that shipped with your computer and follow the steps in Before working inside your computer. After working inside your computer, follow the instructions in After working inside your computer. For more safety best practices, see the Regulatory Compliance home page at www.dell.com/regulatory_compliance.

Prerequisites

1. Remove the computer cover.
2. Remove the front bezel.
3. Follow the procedure from step 1 to step 6 in “Removing the optical drive”.

Procedure

1. Press the securing clip and disconnect the power-supply unit cable (ATX_CPU) from the system board.
2. Press the securing clip and disconnect the power-supply unit cable (ATX_SYS) from the system board.
3. Note the power-supply unit cable routing and remove the power-supply unit cable from the routing guides on the chassis.
4. Remove the three screws (#6-32x6.35) that secure the power-supply unit to the chassis.
5. Press the clamp and slide the power-supply unit towards the front of the chassis to release it from the chassis.
6. Lift the power-supply unit, along with the cables, off the chassis.
Removing the power-supply unit
Replacing the power-supply unit

Procedure

1. Place the power-supply unit on the chassis.
2. Slide the power-supply unit towards the back of the chassis until it snaps into place.
3. Align the screw holes on the power-supply unit with the screw holes on the chassis.
4. Replace the three screws (#6-32x6.35) that secure the power-supply unit to the chassis.
5. Route the power-supply unit cable through the routing guides inside the chassis.
6. Connect the power-supply unit cables (ATX_CPU and ATX_SYS) to the system board.
Post-requisites

1. Follow the procedure from step 5 to step 8 in “Replacing the optical drive”.
2. Replace the front bezel.
3. Replace the computer cover.
Removing the thermal-cooling assembly

Prerequisites

1. Remove the computer cover.
2. Remove the fan shroud.

Procedure

1. Disconnect the processor-fan cable from the system board.
2. Loosen the captive screws that secure the thermal-cooling assembly to the system board.
3. Lift the thermal-cooling assembly off the system board.
Replacing the thermal-cooling assembly

Procedure

1. Align the captive screws on the thermal-cooling assembly with the screw holes on the system board.
2. Tighten the captive screws that secure the thermal-cooling to the system board.
3. Connect the processor-fan cable to the system board.

Post-requisites

1. Replace the fan shroud.
2. Replace the computer cover.
NOTE: Before working inside your computer, read the safety information that shipped with your computer and follow the steps in Before working inside your computer. After working inside your computer, follow the instructions in After working inside your computer. For more safety best practices, see the Regulatory Compliance home page at www.dell.com/regulatory_compliance.

Prerequisites

1. Remove the computer cover.
2. Remove the front bezel.
3. Follow the procedure from step 1 to step 6 in “Removing the optical drive”.
4. Remove the memory modules.
5. Remove the fan shroud.
6. Remove the thermal-cooling assembly.

Procedure

1. Locate the processor on the system board.
2. Press the release-lever down and then pull it outwards to release it from the securing tab.
3. Pull up the release-lever completely to unlock the processor.
4. Gently lift the processor and remove it from the processor socket.
Replacing the processor

NOTE: Before working inside your computer, read the safety information that shipped with your computer and follow the steps in Before working inside your computer. After working inside your computer, follow the instructions in After working inside your computer. For more safety best practices, see the Regulatory Compliance home page at www.dell.com/regulatory_compliance.

CAUTION: If either the processor or the heat sink is replaced, use the thermal grease provided in the kit to ensure that thermal conductivity is achieved.

NOTE: A new processor ships with a thermal pad in the package. In some cases, the processor may ship with the thermal pad attached to it.

Procedure

1. Ensure that the release lever on the processor socket is fully extended in the open position. Then align the notches on the processor with the tabs on the processor socket and place the processor in the processor socket.

   CAUTION: The pin-1 corner of the processor has a triangle that aligns with the triangle on the pin-1 corner on the processor socket. When the processor is properly seated, all four corners are aligned at the same height. If one or more corners of the processor are higher than the others, the processor is not seated properly.

   CAUTION: Ensure that the processor-cover notch is positioned underneath the alignment post.

2. When the processor is fully seated in the socket, close the processor cover.

3. Pivot the release-lever down and place it under the tab on the processor cover.

Post-requisites

1. Replace the thermal-cooling assembly.
2. Replace the fan shroud.
3. Replace the memory modules.
4. Follow the procedure from step 5 to step 8 in “Replacing the optical drive”.
5. Replace the front bezel.
6. Replace the computer cover.
Removing the system board

NOTE: Before working inside your computer, read the safety information that shipped with your computer and follow the steps in Before working inside your computer. After working inside your computer, follow the instructions in After working inside your computer. For more safety best practices, see the Regulatory Compliance home page at www.dell.com/regulatory_compliance.

NOTE: Your computer’s Service Tag is stored in the system board. You must enter the Service Tag in the BIOS setup program after you replace the system board.

NOTE: Replacing the system board removes any changes you have made to the BIOS using the BIOS setup program. You must make the appropriate changes again after you replace the system board.

NOTE: Before disconnecting the cables from the system board, note the location of the connectors so that you can reconnect the cables correctly after you replace the system board.

Prerequisites

1. Remove the computer cover.
2. Remove the front bezel.
3. Follow the procedure from step 1 to step 6 in “Removing the optical drive”.
4. Remove the memory modules.
5. Remove the wireless card.
6. Remove the thermal-cooling assembly.
7. Remove the processor.

Procedure

NOTE: Note the routing of all cables as you remove them so that you can reroute them correctly after you replace the system board. For information on system board connectors, see “System-board components”.

1. Remove the screw (#6-32x6.35) that secures the front-I/O bracket to the chassis.
2. Swivel open the front-I/O bracket away from the chassis.
3. Disconnect the optical-drive data cable from the system board.
4. Disconnect the power-supply unit cable from the system board.
5. Disconnect the hard-drive data cable from the system board.
6. Disconnect the hard drive and optical-drive power cable from the system board.
7. Disconnect the power-button module from the system board.
8. Disconnect the processor power-cable from the system board and remove the processor power-cable from the routing guides on the chassis.
9. Remove the six screws (#6-32x6.35) that secure the system board to the chassis.
10. Slide and lift the system board at an angle to remove it from the chassis.
Removing the system board
Replacing the system board

NOTE: Before working inside your computer, read the safety information that shipped with your computer and follow the steps in Before working inside your computer. After working inside your computer, follow the instructions in After working inside your computer. For more safety best practices, see the Regulatory Compliance home page at www.dell.com/regulatory_compliance.

NOTE: Your computer’s Service Tag is stored in the system board. You must enter the Service Tag in the BIOS setup program after you replace the system board.

NOTE: Replacing the system board removes any changes you have made to the BIOS using the BIOS setup program. You must make the appropriate changes again after you replace the system board.

Procedure

1. Align the system board with the slots on the chassis and place the system board in position.
2. Replace the six screws (#6-32x6.35) that secure the system board to the chassis.
3. Connect the optical-drive data cable to the system board.
4. Connect the power-supply unit cable to the system board.
5. Connect the hard-drive data cable to the system board.
6. Connect the hard drive and optical-drive power cable to the system board.
7. Connect the power-button module cable to the system board.
8. Route the processor power-cable through the routing guides on the chassis and connect the cable to the system board.
9. Align and place the front-I/O bracket on the chassis.
10. Replace the screw (#6-32x6.35) that secure the front-I/O bracket to the chassis.

Post-requisites

1. Replace the processor.
2. Replace the thermal-cooling assembly.
3. Replace the wireless card.
4. Replace the memory modules.
5. Follow the procedure from step 5 to step 8 in “Replacing the optical drive”.
6. Replace the front bezel.
7. Replace the computer cover.
CAUTION: Unless you are an expert computer user, do not change the settings in the BIOS Setup program. Certain changes can make your computer work incorrectly.

NOTE: Before you change BIOS Setup program, it is recommended that you write down the BIOS Setup program screen information for future reference.

Use the BIOS Setup program for the following purposes:

- Get information about the hardware installed in your computer, such as the amount of RAM and the size of the hard drive.
- Change the system configuration information.
- Set or change a user-selectable option, such as the user password, type of hard drive installed, and enabling or disabling base devices.

BIOS overview

The BIOS manages data flow between the computer's operating system and attached devices such as hard disk, video adapter, keyboard, mouse, and printer.

Entering BIOS setup program

Turn on (or restart) your computer and press F2 immediately.

Navigation keys

NOTE: For most of the System Setup options, changes that you make are recorded but do not take effect until you restart the system.

<table>
<thead>
<tr>
<th>Keys</th>
<th>Navigation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Up arrow</td>
<td>Moves to the previous field.</td>
</tr>
<tr>
<td>Down arrow</td>
<td>Moves to the next field.</td>

<tr>
<td>Spacebar</td>
<td>Expands or collapses a drop-down list, if applicable.</td>
</tr>
<tr>
<td>Tab</td>
<td>Moves to the next focus area.</td>
</tr>
<tr>
<td>Esc</td>
<td>Moves to the previous page until you view the main screen. Pressing Esc in the main screen displays a message that prompts you to save any unsaved changes and restarts the system.</td>
</tr>
</tbody>
</table>

Boot Sequence

Boot Sequence allows you to bypass the System Setup–defined boot device order and boot directly to a specific device (for example: optical drive or hard drive). During the Power-on Self Test (POST), when the Dell logo appears, you can:

- Access System Setup by pressing F2 key
- Bring up the one-time boot menu by pressing F12 key

The one-time boot menu displays the devices that you can boot from including the diagnostic option. The boot menu options are:

- Removable Drive (if available)
- STXXXX Drive (if available)
  NOTE: XXX denotes the SATA drive number.
- Optical Drive (if available)
The boot sequence screen also displays the option to access the System Setup screen.

Boot Sequence

- **Boot Sequence**
  - Displays the boot sequence.
  - Allows you to change the order in which the computer attempts to find an operating system. The options are:
    - Windows Boot Manager
    - PEBOOT
  - By default, all the check boxes are selected. You can clear the check boxes or change the boot order.

- **Boot List Option**
  - Displays the available boot options.
  - Allows you to change the boot list option:
    - Legacy
    - UEFI (default)
  - You can also add or delete a boot option.

Advanced Boot Options

- **Enable Legacy Option ROMs** (default)
- **Enable Attempt Legacy Boot**

UEFi Boot Path Security

- **UEFi Boot Path Security**
  - These options control whether the computer will prompt the user to enter the Admin password (if set) when booting a UEFI boot path from the F12 Boot Menu.
    - Always Except Internal HDD (default)
    - Always, Except Internal HDD&PXE
    - Always
    - Never

Date/Time

- **Date/Time**
  - Displays the current date in MM/DD/YY format and current time in HH:MM:SS AM/PM format.

Table 4. System setup options—System Configuration menu

**System Configuration**

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>

</tbody>
</table>
System Configuration

- **RAID On** (default)

**Drives**
Enable or disable various drives on board.
- SATA-0
- SATA-1
- SATA-2
- SATA-3
- M.2 PCIe SSD-0

By default, all the check boxes are selected.

**SMART Reporting**
Enable or disable Self-Monitoring, Analysis, and Reporting Technology (SMART) during system startup. This option is disabled by default.

**USB Configuration**
Configures the integrated USB controller. If Boot Support is enabled, the computer is allowed to boot any type of USB Mass Storage Devices (HDD, memory key, floppy).

If USB port is enabled, the device attached to this port is enabled and available for OS.

If USB port is disabled, the OS cannot detect any device attached to this port.
- Enable USB Boot Support
- Enable Front USB Ports
- Enable Rear USB Ports

By default, all the check boxes are selected.

**NOTE:** USB keyboard and mouse always work in the BIOS setup irrespective of these settings.

**Front USB Configuration**
Enable or disable the front USB ports.
- Front Port 1
- Front Port 2

By default, all the check boxes are selected.

**Rear USB Configuration**
Enable or disable the rear USB ports.
- Rear Port 1
- Rear Port 2
- Rear Port 3
- Rear Port 4

By default, all the check boxes are selected.

**Audio**
Enable or disable the integrated audio controller.

By default, **Enable Audio** is selected.

**Miscellaneous Devices**
Enable or disable the Secure Digital (SD) card reader.

By default, **Enable Secure Digital (SD) Card** is selected.

<table>
<thead>
<tr>
<th>Security</th>
<th>Description</th>
</tr>
</thead>
</table>
| Admin Password| Set, change, or delete the administrator password.  
|               | **NOTE:** You must set the admin password before you set the computer or hard drive password. Deleting the admin password automatically deletes the computer password and the hard drive password. |
| System Password| Set, change, or delete the system password.  
|               | **NOTE:** Successful password changes take effect immediately. |
| Internal HDD-0 Password| Set, change, or delete the internal hard-disk drive password.  
|               | **NOTE:** Successful password changes take effect immediately. |
| Internal HDD-1 Password| Set, change, or delete the internal hard-disk drive password.  
|               | **NOTE:** Successful password changes take effect immediately. |
| Password Configuration| Control the minimum and maximum number of characters allowed for the Admin and System passwords.  
|               | By default, Allow Non-Admin Password Changes is selected. |
| Password Change| Enable or disable changes to the System and Hard Disk passwords when an administrator password is set.  
|               | By default, **Enable UEFI Capsule Firmware Updates** is selected. |
| UEFI Capsule Firmware Updates| Enable or disable BIOS updates through UEFI capsule update packages.  
|               | By default, **Enable UEFI Capsule Firmware Updates** is selected. |
| PTT Security| Enable or disable Platform Trust Technology (PTT) visibility to the operating system.  
|               | By default, **PTT On** is not selected. |
| Computrace| Activate, deactivate or disable the optional Computrace software. The options are:  
|               | • **Deactivate** (default)  
|               | • **Disable**  
|               | • **Activate**  
|               | **NOTE:** The Activate and Disable options will permanently activate and disable (respectively) the feature and no further changes are allowed. |
| Master Password Lockout| When enabled, this option disables the master password support.  
|               | By default, **Enable Master Password Lockout** is not selected. |
| SIMM Security Mitigation| Allows you to enable or disable the additional UEFI SIMM Security Mitigation protections.  
|               | By default, **SMM Security Mitigation** is not selected. |

</table>
| Secure Boot Enable| Enable or disable the secure boot feature.  
|                   | By default, **Secure Boot Enable** is not selected. |
| Secure Boot Mode  | Set the Secure Boot Mode to allow evaluation or enforcement of UEFI driver signatures.  
|                   | • **Deployed Mode** (default)  
|                   | • **Audit Mode** |
| Expert Key Management| Allows you to manipulate the security key databases only if the computer is in Custom Mode. |
Secure Boot

By default, **Enable Custom Mode** is selected.

If **Enable Custom Mode** is selected, the options are:

- **PK** (default)
- **KEK**
- **db**
- **dbx**

After selecting an option, the subsequent actions are:

- **Save to File**—Saves the key to a user-selected file.
- **Replace from File**—Replaces the current key with a key from a user-selected file.
- **Append from File**—Adds a key to the current database from a user-selected file
- **Delete**—Deletes the selected key

Clearing forgotten passwords

**NOTE:** Before working inside your computer, read the safety information that shipped with your computer and follow the steps in Before working inside your computer. After working inside your computer, follow the instructions in After working inside your computer. For more safety best practices, see the Regulatory Compliance home page at www.dell.com/regulatory_compliance.

Prerequisites

Remove the computer cover.

Procedure

1. Locate the password jumper (PSWD) on the system board and remove the jumper plug from the password jumper-pins. **NOTE:** For more information on the location of the jumper, see “System-board components”.
2. Wait for five seconds.
3. Replace the jumper plug in its original location.
Post-requisites

Replace the computer cover.

Clearing CMOS settings

NOTE: Before working inside your computer, read the safety information that shipped with your computer and follow the steps in Before working inside your computer. After working inside your computer, follow the instructions in After working inside your computer. For more safety best practices, see the Regulatory Compliance home page at www.dell.com/regulatory_compliance.

Prerequisites

Remove the computer cover.

Procedure

1. Locate the CMOS jumper (CMCL R2) on the system board. Remove the jumper plug from the password jumper-pins (PSWD) and connect it to the CMOS jumper-pins.

   NOTE: For more information on the location of the jumper, see “System-board components”.

2. Wait for five seconds.

3. Replace the jumper plug to its original location.
Post-requisites

Replace the computer cover.
Enhanced Pre-Boot System Assessment (ePSA) diagnostics

The ePSA diagnostics (also known as system diagnostics) performs a complete check of your hardware. The ePSA is embedded with the BIOS and is launched by the BIOS internally. The embedded system diagnostics provides a set of options for particular devices or device groups allowing you to:

- Run tests automatically or in an interactive mode
- Repeat tests
- Display or save test results
- Run thorough tests to introduce additional test options to provide extra information about the failed device(s)
- View status messages that inform you if tests are completed successfully
- View error messages that inform you of problems encountered during testing

**NOTE:** Some tests for specific devices require user interaction. Always ensure that you are present at the computer terminal when the diagnostic tests are performed.

Running the ePSA diagnostics

1. Turn on your computer.
2. As the computer boots, press the F12 key as the Dell logo appears.
3. On the boot menu screen, select the Diagnostics option.
4. Click the arrow at the bottom left corner. Diagnostics front page is displayed.
5. Click the arrow in the lower-right corner to go to the page listing. The items detected are listed.
6. To run a diagnostic test on a specific device, press Esc and click Yes to stop the diagnostic test.
7. Select the device from the left pane and click Run Tests.
8. If there are any issues, error codes are displayed.
   - Note the error code and validation number and contact Dell.

Diagnostics

The computer POST (Power On Self Test) ensures that it meets the basic computer requirements and the hardware is working appropriately before the boot process begins. If the computer passes the POST, the computer continues to start in a normal mode. However, if the computer fails the POST, the computer emits a series of LED codes during the start-up. The system LED is integrated on the Power button.

The following table shows different light patterns and what they indicate.

<table>
<thead>
<tr>
<th>Number of amber LED flashes</th>

**Recovering the operating system**

When your computer is unable to boot to the operating system even after repeated attempts, it automatically starts Dell SupportAssist OS Recovery.

Dell SupportAssist OS Recovery is a standalone tool that is preinstalled in all Dell computers installed with Windows 10 operating system. It consists of tools to diagnose and troubleshoot issues that may occur before your computer boots to the operating system. It enables you to diagnose hardware issues, repair your computer, back up your files, or restore your computer to its factory state.

You can also download it from the Dell Support website to troubleshoot and fix your computer when it fails to boot into its primary operating system due to software or hardware failures.

For more information about the Dell SupportAssist OS Recovery, see Dell SupportAssist OS Recovery User’s Guide at www.dell.com/support.

**Flashing BIOS (USB key)**

1. Follow the procedure from step 1 to step 7 in "Flashing the BIOS" to download the latest BIOS setup program file.
2. Create a bootable USB drive. For more information see the knowledge base article SLN143196 at www.dell.com/support.
3. Copy the BIOS setup program file to the bootable USB drive.
4. Connect the bootable USB drive to the computer that needs the BIOS update.
5. Restart the computer and press F12 when the Dell logo is displayed on the screen.
6. Boot to the USB drive from the One Time Boot Menu.
7. Type the BIOS setup program filename and press Enter.
8. The BIOS Update Utility appears. Follow the instructions on the screen to complete the BIOS update.

**Flashing the BIOS**

You may need to flash (update) the BIOS when an update is available or when you replace the system board.

Follow these steps to flash the BIOS:

1. Turn on your computer.
2. Go to www.dell.com/support.
3. Click Product support, enter the Service Tag of your computer, and then click Submit.
   
   **NOTE:** If you do not have the Service Tag, use the auto-detect feature or manually browse for your computer model.
4. Click Drivers & downloads > Find it myself.
5. Select the operating system installed on your computer.
6. Scroll down the page and expand BIOS.
7. Click Download to download the latest version of the BIOS for your computer.
8. After the download is complete, navigate to the folder where you saved the BIOS update file.
9. Double-click the BIOS update file icon and follow the instructions on the screen.

WiFi power cycle

If your computer is unable to access the internet due to WiFi connectivity issues a WiFi power cycle procedure may be performed. The following procedure provides the instructions on how to conduct a WiFi power cycle:

NOTE: Some ISPs (Internet Service Providers) provide a modem/router combo device.

1. Turn off your computer.
2. Turn off the modem.
3. Turn off the wireless router.
4. Wait for 30 seconds.
5. Turn on the wireless router.
6. Turn on the modem.
7. Turn on your computer.

Flea power release

Flea power is the residual static electricity that remains on the computer even after it has been powered off. The following procedure provides the steps to conduct a flea power release for the computer.

1. Turn off your computer.
2. Disconnect the power cable.
3. Press and hold down the power button for 15 seconds to drain the flea power.
4. Connect the power cable.
5. Turn on your computer.
Self-help resources

You can get information and help on Dell products and services using these self-help resources:

<table>
<thead>
<tr>

Tips

Contact Support

Online help for operating system

Troubleshooting information, user manuals, setup instructions, product specifications, technical help blogs, drivers, software updates, and so on.

Dell knowledge base articles for a variety of computer concerns.

Learn and know the following information about your product:

- Product specifications
- Operating system
- Setting up and using your product
- Data backup
- Troubleshooting and diagnostics
- Factory and system restore
- BIOS information

See Me and My Dell at www.dell.com/support/manuals.

To locate the Me and My Dell relevant to your product, identify your product through one of the following:

- Select Detect Product.
- Locate your product through the drop-down menu under View Products.
- Enter the Service Tag number or Product ID in the search bar.

Contacting Dell

To contact Dell for sales, technical support, or customer service issues, see www.dell.com/contactdell.

NOTE: Availability varies by country/region and product, and some services may not be available in your country/region.

NOTE: If you do not have an active internet connection, you can find contact information on your purchase invoice, packing slip, bill, or Dell product catalog.
