Working on your computer

Safety instructions

Prerequisite
Use the following safety guidelines to protect your computer from potential damage and to ensure your personal safety. Unless otherwise noted, each procedure included in this document assumes that the following conditions exist:

- You have read the safety information that shipped with your computer.
- A component can be replaced or, if purchased separately, installed by performing the removal procedure in reverse order.

About this task

⚠️ **WARNING:** Disconnect all power sources before opening the computer cover or panels. After you finish working inside the computer, replace all covers, panels, and screws before connecting to the power source.

⚠️ **WARNING:** Before working inside your computer, read the safety information that shipped with your computer. For additional safety best practices information, see the [Regulatory Compliance Homepage](#).

⚠️ **CAUTION:** Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.

⚠️ **CAUTION:** To avoid electrostatic discharge, ground yourself by using a wrist grounding strap or by periodically touching an unpainted metal surface at the same time as touching a connector on the back of the computer.

⚠️ **CAUTION:** Handle components and cards with care. Do not touch the components or contacts on a card. Hold a card by its edges or by its metal mounting bracket. Hold a component such as a processor by its edges, not by its pins.

⚠️ **CAUTION:** When you disconnect a cable, pull on its connector or on its pull-tab, not on the cable itself. Some cables have connectors with locking tabs; if you are disconnecting this type of cable, press in on the locking tabs before you disconnect the cable. As you pull connectors apart, keep them evenly aligned to avoid bending any connector pins. Also, before you connect a cable, ensure that both connectors are correctly oriented and aligned.

⚠️ **NOTE:** The color of your computer and certain components may appear differently than shown in this document.

⚠️ **CAUTION:** System will shut down if side covers are removed while the system is running. The system will not power on if the side cover is removed.

⚠️ **CAUTION:** System will shut down if side covers are removed while the system is running. The system will not power on if the side cover is removed.

⚠️ **CAUTION:** System will shut down if side covers are removed while the system is running. The system will not power on if the side cover is removed.

Turning off your computer — Windows 10

About this task

⚠️ **CAUTION:** To avoid losing data, save and close all open files and exit all open programs before you turn off your computer or remove the side cover.

Steps

1. Click or tap ![Windows logo](#).
2. Click or tap ![Power icon](#) and then click or tap **Shut down**.
**Before working inside your computer**

**About this task**
To avoid damaging your computer, perform the following steps before you begin working inside the computer.

**Steps**
1. Ensure that you follow the Safety Instruction.
2. Ensure that your work surface is flat and clean to prevent the computer cover from being scratched.
3. Turn off your computer.
4. Disconnect all network cables from the computer.
   - **CAUTION:** To disconnect a network cable, first unplug the cable from your computer and then unplug the cable from the network device.
5. Disconnect your computer and all attached devices from their electrical outlets.
6. Press and hold the power button while the computer is unplugged to ground the system board.
   - **NOTE:** To avoid electrostatic discharge, ground yourself by using a wrist grounding strap or by periodically touching an unpainted metal surface at the same time as touching a connector on the back of the computer.

**After working inside your computer**

**About this task**
After you complete any replacement procedure, ensure that you connect any external devices, cards, and cables before turning on your computer.

**Steps**
1. Connect any telephone or network cables to your computer.
   - **CAUTION:** To connect a network cable, first plug the cable into the network device and then plug it into the computer.
2. Connect your computer and all attached devices to their electrical outlets.
3. Turn on your computer.
4. If required, verify that the computer works correctly by running ePSA diagnostics.
Disassembly and reassembly

Remove SD memory card and SIM card tray

1. Follow the procedure in Before working inside your tablet.

   Ø NOTE: disconnect the power and drain flea power before preforming the steps

2. Lay the tablet on a plane and flat surface, with the kickstand facing upward.

3. Press the SD memory card to release it.

   Ø NOTE: Ensure to turn off or disconnect power, to drain flea power before removing or installing the memory card and/or SIM card.

4. Slide the SD memory card out from the system.

5. To remove the SIM card tray from the system, insert a pin into the release hole to release the SIM card.

6. Remove the SIM card tray from the system.

Display Assembly

Removing the display assembly

1. Follow the procedure described in Before working on your tablet.

2. Open the kickstand by holding the tablet vertically and pressing it down. Place the tablet with the display facing down.

   Ø NOTE: You can also open the kickstand from the speaker recess area.

   Ø NOTE: SIM card slot is available only on tablets shipping with WWAN module.

3. Place the tablet on a flat surface and lift the stand to reveal the base of the tablet.

   Ø NOTE: Ensure to open the kickstand to 145 degrees.
To release the display panel assembly:

a. Loosen the six captive screws securing the display back assembly in place.

b. Close the kickstand [2] and flip the tablet to view the display.
5 Use a plastic scribe [1] to pry the edges [2] of the display panel starting from the bottom side first (near the docking port).

**NOTE:** Flip the tablet so the LCD is upward.
NOTE: Ensure to pry from the docking port and gently moving clockwise to avoid damage to the plastic clips. Use a plastic scribe.

6 Flip the display panel on a plane surface with the LCD panel upwards.
7 Slide the power switch on the system board to **OFF**.

8 Remove the two M2.5 X 3 screws securing the display cable bracket to the system board, and remove the display cable bracket.
9 Disconnect the display cable from the system board and remove the display panel assembly from the system.
Installing the display panel assembly

1. Place the display panel on a plane surface.
2. Connect the display cable to the connector on the system board.

Figure 1. Connect the display cable

3. Connect the battery cable to the connector on the system board.
Figure 2. Connect the battery cable

4 Install the display panel on the tablet and press the edges until they snap in.
Figure 3. Install the display panel

5. Flip the tablet and open the kickstand.
Replace the M1.6 x 3 screws to secure the tablet to the display panel.

**Solid State Drive (SSD)**

**Removing the SSD module**

1. Follow the procedure in before working inside your tablet.
2. Remove the:
   a. Remove the SIM card and display panel.

   **NOTE**: SIM card slot is available only on tablets shipping with WWAN module.

3. To remove the SSD module:
   a. Remove the single M2 x 2.5 screw securing the M.2 2230 SSD shielding cover.
b Lift the M.2 2230 SSD shielding cover from the tablet.
c Slide and lift the SSD module from the slot on the tablet.

⚠️ NOTE: Ensure NOT to lift the SSD card by an angle more than 15°.
Installing SSD module

1. Insert the SSD module into the slot on the system board.
2. Replace the M2 x 2.5 screw to secure SSD shield.

⚠️ NOTE: Align the shield carefully to avoid damage to the clips heads.
WLAN card

Removing the WWAN card

1. Follow the procedure explained in Before working on your tablet.
2. To remove the WWAN card:
   a. Remove the single captive screw securing the WWAN card bracket in place.
   b. Remove the WWAN card bracket.
   c. Disconnect any antennas connected to the WWAN card.
   d. Remove the WWAN card from the system.
Installing the WWAN card

1. Insert the WWAN card into the connector on the system board.
2. Connect the antenna cables to the WWAN card.
3. Insert the WWAN bracket to the WWAN card.
4. Replace the M2 x 3.5 screw to secure WWAN bracket.
5 Install the:
   a Display panel
   b SIM card

6 Follow the procedure in After working inside your tablet.
Battery

Lithium-ion battery precautions

⚠️ CAUTION:

- Exercise caution when handling Lithium-ion batteries.
- Discharge the battery as much as possible before removing it from the system. This can be done by disconnecting the AC adapter from the system to allow the battery to drain.
- Do not crush, drop, mutilate, or penetrate the battery with foreign objects.
- Do not expose the battery to high temperatures, or disassemble battery packs and cells.
- Do not apply pressure to the surface of the battery.
- Do not bend the battery.
- Do not use tools of any kind to pry on or against the battery.
- If a battery gets stuck in a device as a result of swelling, do not try to free it as puncturing, bending, or crushing a Lithium-ion battery can be dangerous. In such an instance, the entire system should be replaced. Contact https://www.dell.com/support for assistance and further instructions.
- Always purchase genuine batteries from https://www.dell.com or authorized Dell partners and re-sellers.

Removing the battery

1. Follow the procedure in Before working inside your tablet.
2. Remove the:
   a. Remove the SIM card
      ☑️| NOTE: Sim card slot is available only on tablets shipping with WWAN module.
   b. Remove the display panel.
3. To remove the battery:
   a. Peel back the tape covering the battery connector.
b Remove the M2 X 4 screws securing the battery in place.

c Gently lift up the battery from its compartment on the display back cover and disconnect the battery cable from the system board.

d Remove the battery from the system.
Installing the battery

1. Insert the battery into the slot on the tablet [1].
2. Replace the M2 x 4 screws to secure the battery to the tablet [2].
3 Connect the battery connector to the system board and fix the adhesive tape that secures the connector.
4 Install the:
   a Display panel.
   b SIM card.
5 Follow the procedure in After working inside your tablet.

Heat Sink

Removing heatsink

1 Follow the procedure in Before working inside your tablet.
2 Remove the:
   a SD memory card and Wireless card
   b Display panel.
3 To remove the heatsink assembly:
   a Using a plastic scribe, gently remove the left and right shielding covers covering the heatsink starting from the edges marked with an arrow.
Figure 5. Remove heatsink shielding cover

b Unthread the wireless antennas from the routing channels next to the fan, and disconnect the fan cable from the system board.
4 Disconnect the fan cable from the system board.
5 Remove the three MXX screws securing the fan in place and loosen the four captive screws (1>2>3>4) securing the heatsink in place.
6 Remove the thermal assembly from the system.

**Installing heat sink**

1 Follow the procedure in Before working inside your tablet.
2 Remove the:
3 To install the heat sink assembly:
   a Place the thermal assembly inside the system.
b Tighten the captive screws securing the heatsink in place and place and tighten the three M2 X 2.5 screws.
c Route and fix the cable to the system board, tighten the wireless antenna in place.
4 Install the SD Memory Card, Display Panel Assembly and Wireless Card.

### Speaker

#### Removing the speaker

1. Follow the procedure in Before working inside your tablet.
2. Remove the:
   a. SIM card.

   ![NOTE: SIM card slot is available only on tablets shipping with WWAN module.]

   b. Display panel.
   c. Docking Connector.

3. To remove the speaker:
   a. Disconnect the speaker cable from the system board [1].
b  Remove the speaker cable from it's routing channels [2].
Using a plastic scribe, peel off and remove both the speakers from the system.
Installing speaker

1. Insert the speaker in the block on the system board.
2 Connect the cables to the system board.
3 Press the speaker and insert it in the slot in the tablet.
4 Install the:
   a Display panel.
   b SIM card.
   c Docking Connector.
5 Follow the procedure in After working inside your tablet.

Front facing camera

Removing front camera

1 Follow the procedure in Before working inside your tablet.
2 Remove the:
   a SD memory card.
   b Display panel
3 To remove the front camera:
   a Using a plastic scribe, gently pry open and remove the left shielding cover from the edge marked with an arrow.
   b Disconnect the front-facing camera cable from the system board.
   c Use a plastic scribe to pry and disconnect the front camera cable.
   d Remove the M1.6 x 3 screws securing the front camera module to the system chassis.
   e Peel off and lift the front camera module from the tablet.

NOTE: Ensure to peel off the adhesive tape that secures the front camera to the rear camera. The front camera cable is glued to the rear camera, ensure to gently peel off, to remove the screw that secures the rear camera to the system board.
Installing the front camera

1. Insert the camera module into the slot on the tablet.
2. Replace the M1.6 x 3 screws to secure the front camera module.
3 Connect the front camera cable to the system board.
4 Place the shielding cover to secure the front camera module.

⚠️ NOTE: Handle the covering shield with care else it may break.

5 Affix the camera module, and shielding cover.
6  Install the:
   a  Display panel.
   b  SD memory card.
7  Follow the procedure in After working inside your tablet.

Rear facing camera

Removing the rear camera

1  Follow the procedure in Before working inside your tablet.
2  Remove the:
   a  SD memory card.
   b  Display panel.
3  To remove the rear camera:
   a  Using a plastic scribe, gently pry open and remove the right shielding cover from the edge marked with an arrow.
   b  Disconnect the rear camera cable from the system board.
   c  Remove the M1.6 x 3 screw securing the rear camera module.
   d  Lift the camera module from the tablet.
Disassembly and reassembly
Installing rear camera

1. Follow the procedure in Before working inside your tablet.
2. To install the rear camera:
   a. Place the camera module on the tablet.
   b. Tighten the M1.6 x 3 screw securing the rear camera module.
   c. Fix the rear camera cable on the system board.
Disassembly and reassembly
3 Install the:
   a  SD memory card.
   b  Display panel

Smart Card Cage

Removing the smart card cage

1 Follow the procedure in Before working inside your tablet.
2 Remove the SD Memory Card, SIM Card Tray or Dummy SIM Card Tray (for models shipped with a WWAN card), Display Panel Assembly, Battery, M.2 2230 SSD, Wireless Card, WWAN card (for models shipped with a WWAN card), Rear-Facing Camera, Thermal Assembly, Dummy WWAN Main Antenna Module, WWAN Main Antenna Module (for models shipped with a WWAN card), and System Board.
3 To remove the smart card cage:
   a Disconnect and peel back the Smartcard cage FFC from the daughter board.
   b Remove the M2.0 x 2.5 screws from the smart card module [1].
   c Lift the smart card cage from the tablet [2].
Disassembly and reassembly
Installing the smart card cage

1. Insert the smart cage into the slot on the tablet.
2. Replace the M2 x 2.5 screws [2] to secure the smart card cage to the tablet [1].
3. Connect the smart cable to the smart card module.
4 Remove the SD Memory Card, SIM Card Tray or Dummy SIM Card Tray (for models shipped with a WWAN card), Display Panel Assembly, Battery, M.2 2230 SSD, Wireless Card, WWAN card (for models shipped with a WWAN card), Rear-Facing Camera, Thermal Assembly, Dummy WWAN Main Antenna Module, WWAN Main Antenna Module (for models shipped with a WWAN card), and System Board.

5 Follow the procedure in After working inside your tablet.

Docking board

Removing the docking connector

1 Follow the procedure in Before working inside your tablet.

2 Remove the:
   a SD memory card.
   b Display panel.

3 To remove the docking connector:
   a Disconnect and peel back the docking connector FPC from the system board.
b  Remove the M2 x 2 screws securing the docking board bracket to the docking board.
c  Remove the docking connector along with its FPC from the system.
Installing the docking board

1. Insert the docking board and docking board bracket into the slot on the tablet.
2 Replace the M2 x 2 screws to secure the docking board to the tablet.
3  Affix the docking board cable on the tablet.
4  Connect the docking board cable to the connector on the system board.
5 Install the:
   a Display panel
   b SD memory card.
6 Follow the procedure in After working inside your tablet.

**Power Button Board**

**Removing the power button daughter board**

1 Follow the procedure in Before working inside your tablet.
2 Remove the SD Memory Card, Display Panel Assembly, Battery, and Thermal Assembly.
3 Unthread any wireless antennas covering the power button daughter board FPC.
4 Disconnect and peel back the power button daughter board FPC from the system board.
5 Disconnect and peel back the fingerprint reader FFC from the power button daughter board.
6 Remove the two M2 X 2.5 screws securing the power button daughter board in place.
Figure 7. Remove the FFC

7. Using a plastic scribe, pry the power button sensor at the top edge of the power button daughter board out of its compartment.
8. Remove the power button daughter board along with its FPC from the display back cover.
9. Disconnect the power button daughter board FPC from the power button daughter board.
Installing the power button board

1. Follow the procedure in Before working inside your tablet.
2. Fix the daughter board along with its FPC from the display back cover.
Figure 9. Fix the daughter board with the FPC

3. Fix the two M2 X 2.5 screws securing the power button daughter board in place.
4. Install the fingerprint reader FFC on the power button daughter board.
Thread any wireless antennas covering the power button daughter board FPC.
6 Fix the SD Memory Card, Display Panel Assembly, Battery, and Thermal Assembly.

System Board

Removing system board

1 Follow the procedure in Before working inside your tablet.
2 Remove the SD Memory Card, SIM Card Tray or Dummy SIM Card Tray (for models shipped with a WWAN card), Display Panel Assembly, Battery, M.2 2230 SSD, Wireless Card, WWAN card (for models shipped with a WWAN card), Front-Facing Camera, Infrared Camera (for models shipped with an Infrared Camera), Rear-Facing Camera, Microphone Module-A, Microphone Module-B, Thermal Assembly, Dummy WWAN Main Antenna Module, and WWAN Main Antenna Module (for models shipped with a WWAN card).
3 Disconnect the following cables from the system board.
a. Push the release latch of on the SIM card cage inward to release the dummy SIM card tray.
b. Remove the dummy SIM card tray.
c. Disconnect the power button daughter board FPC, USB daughter board FPC, USH FFC (that are shipped with a USH module), docking connector FPC, and a speaker cable.

4. Un-route the antenna cables from the routing clips.
Disassembly and reassembly
5 To remove the system board
   a  Remove the two bracket M2 x 2.5 screws securing the Type-C USB bracket in place.
   b  Remove the Type-C USB bracket.
   c  Remove the single M2 x 2.5 screw securing the audio jack in place.
   d  Remove the seven M2 x 2.5 screws securing the system board in place.
Lift the system board from the tablet [2].

**Installing system board**

1. Align the system board with the screw holders on the tablet.
2. Tighten the seven M2 x 2.5 screws to secure the system board to the tablet.

⚠️ **NOTE:** Remember to align the Type-C port and tighten the two screws to secure the port to the system chassis.
3. Tighten the single M2 x 2.5 screw securing the audio jack in place and place the USB Type-C bracket.

4. Tighten the two bracket M2 x 2.5 screws securing the Type-C USB bracket in place.
Remove the SD Memory Card, SIM Card Tray or Dummy SIM Card Tray (for models shipped with a WWAN card), Display Panel Assembly, Battery, M.2 2230 SSD, Wireless Card, WWAN card (for models shipped with a WWAN card), Front-Facing Camera, Infrared Camera (for models shipped with an Infrared Camera), Rear-Facing Camera, Microphone Module-A, Microphone Module-B, Thermal Assembly, Dummy WWAN Main Antenna Module, and WWAN Main Antenna Module (for models shipped with a WWAN card).

Follow the procedure in After working inside your tablet.

System Board

Removing I/O board

1. Follow the procedure in Before working inside your tablet.
2. Remove the SD Memory Card and display panel.
3. Remove the cable from the system board, and peel off the adhesive tape to remove the I/O board.

Figure 12. Removing the cable
Installing I/O board

1. Follow the procedure in Before working inside your tablet.
2. Remove the SD Memory Card and display panel.
3. Fix the adhesive tape and Install the cable with the I/O board to the system board.
Figure 14. Fix the adhesive tape
Antenna

Removing the antenna module

1. Follow the procedure in Before working inside your tablet.
2. Remove:
   a. SD memory card.
   b. Display panel
3. To remove the antenna module:
   a. Unthread the WWAN main antenna from the system board.
   b. Release the clips on the left and right side of the WWAN main antenna module securing it to the system.
   c. Flip over the WWAN main antenna module to release it from the system board.
   d. Remove the WWAN main antenna module from the system.

⚠️ NOTE: The same procedure must be followed to remove the dummy WWAN main antenna module from the system.
Installing the antenna module

1. Insert the antenna module into the slot on the back cover of the tablet.
2. Flip over the WWAN main antenna module to fix it to the system board.
3  Tighten the clips on the left and right side of the WWAN main antenna module securing it to the system.

4  Thread the WWAN main antenna to the system board.

5  Install the:
   a  Display panel
   b  SD memory card.

6  Follow the procedure in After working inside your tablet.

This chapter details the supported operating systems along with instructions on how to install the drivers.

**Downloading Windows drivers**

1. Turn on the tabletdesktopnotebook.
2. Go to Dell.com/support.
3. Click **Product Support**, enter the Service Tag of your tabletdesktopnotebook, and then click **Submit**.
   
   **NOTE:** If you do not have the Service Tag, use the auto detect feature or manually browse for your tabletdesktopnotebook model.

4. Click **Drivers and Downloads**.
5. Select the operating system installed on your tabletdesktopnotebook.
6. Scroll down the page and select the driver to install.
7. Click **Download File** to download the driver for your tabletdesktopnotebook.
8. After the download is complete, navigate to the folder where you saved the driver file.
9. Double-click the driver file icon and follow the instructions on the screen.
System setup

System setup enables you to manage your tablet/desktop/notebook hardware and specify BIOS level options. From the System setup, you can:

- Change the NVRAM settings after you add or remove hardware
- View the system hardware configuration
- Enable or disable integrated devices
- Set performance and power management thresholds
- Manage your computer security

Topics:

- Entering BIOS without keyboard
- System setup options
- System Log
- Updating the BIOS
- Updating your system BIOS using a USB flash drive
- System and setup password

Entering BIOS without keyboard

1. Press the power button to turn on your tablet.
2. Press and hold the **Volume Up** button when the Dell logo appears on the screen.
3. When the **F12** boot selection menu appears, select **BIOS Setup** using the **Volume Up** button.
4. Press the **Volume Down** button to enter BIOS setup program.

System setup options

**NOTE:** Depending on the tablet/computer/laptop and its installed devices, the items listed in this section may or may not appear.

Updating the BIOS

Prerequisite
It is recommended to update your BIOS (System setup) on replacing the system board or if an update is available. Ensure that your tablet/notebook/desktop battery is fully charged and connected to a power outlet.

Steps
1. Restart the tablet/notebook/desktop.
2. Go to Dell.com/support.
3. Enter the Service Tag or Express Service Code and click Submit.
   
   **NOTE:** To locate the Service Tag, click Where is my Service Tag?
   
   **NOTE:** If you cannot find your Service Tag, click Detect My Product. Proceed with the instructions on screen.
4. If you are unable to locate or find the Service Tag, click the Product Category of your tablet/notebook/desktop.
5. Choose the Product Type from the list.
7. Click Get drivers and click View All Drivers.
   
   The Drivers and Downloads page opens.
8. On the Drivers and Downloads screen, under the Operating System drop-down list, select BIOS.
9. Identify the latest BIOS file and click Download File.
   
   You can also analyze which drivers need an update. To do this for your product, click Analyze System for Updates and follow the instructions on the screen.
10. Select your preferred download method in the Please select your download method below window, click Download File.
   
   The File Download window appears.
11. Click Save to save the file on your tablet/notebook/desktop.
12. Click Run to install the updated BIOS settings on your tablet/notebook/desktop.
   
   Follow the instructions on the screen.

Next step

**NOTE:** It is recommended not to update the BIOS version for more than 3 revisions. For example: If you want to update the BIOS from 1.0 to 7.0, then install version 4.0 first and then install version 7.0.

Updating your system BIOS using a USB flash drive

About this task
If the system cannot load into Windows but there is still a need to update the BIOS, download the BIOS file using another system and save it to a bootable USB Flash Drive.

**NOTE:** You will need to use a bootable USB Flash drive. Please refer to the following article for further details: https://www.dell.com/support/article/us/en/19/sln143196/

Steps
1. Download the BIOS update .EXE file to another system.
2. Copy the file e.g. O9010A12.EXE onto the bootable USB Flash drive.
3. Insert the USB Flash drive into the system that requires the BIOS update.
4. Restart the system and press F12 when the Dell Splash logo appears to display the One Time Boot Menu.
5. Using arrow keys, select USB Storage Device and click Return.
6. The system will boot to a Diag C:\> prompt.
7. Run the file by typing the full filename e.g. O9010A12.exe and press Return.
8. The BIOS Update Utility will load, follow the instructions on screen.
You can create a system password and a setup password to secure your computer.

⚠️ **CAUTION:** The password features provide a basic level of security for the data on your computer.

⚠️ **CAUTION:** Anyone can access the data stored on your computer if it is not locked and left unattended.

⚠️ **NOTE:** System and setup password feature is disabled.

### Assigning a system setup password

#### Prerequisite
You can assign a new **System or Admin Password** only when the status is in **Not Set**.

#### About this task
To enter the system setup, press F2 immediately after a power-on or re-boot.

#### Steps
1. In the **System BIOS** or **System Setup** screen, select **Security** and press Enter. The **Security** screen is displayed.
2. Select **System/Admin Password** and create a password in the **Enter the new password** field.
   - Use the following guidelines to assign the system password:
     - A password can have up to 32 characters.
The password can contain the numbers 0 through 9.
- Only lower case letters are valid, upper case letters are not allowed.
- Only the following special characters are allowed: space, ("), (+), (.), (-), (/), (;), ([), (]), (`).

3 Type the system password that you entered earlier in the Confirm new password field and click OK.
4 Press Esc and a message prompts you to save the changes.
5 Press Y to save the changes.
The computer reboots.

Deleting or changing an existing system setup password

Prerequisite
Ensure that the **Password Status** is Unlocked (in the System Setup) before attempting to delete or change the existing System and/or Setup password. You cannot delete or change an existing System or Setup password, if the **Password Status** is Locked.

About this task
To enter the System Setup, press F2 immediately after a power-on or reboot.

Steps
1 In the **System BIOS** or **System Setup** screen, select **System Security** and press Enter.
   The **System Security** screen is displayed.
2 In the **System Security** screen, verify that **Password Status** is **Unlocked**.
3 Select **System Password**, alter or delete the existing system password and press Enter or Tab.
4 Select **Setup Password**, alter or delete the existing setup password and press Enter or Tab.

   **NOTE:** If you change the System and/or Setup password, re-enter the new password when prompted. If you delete the System and/or Setup password, confirm the deletion when prompted.
5 Press Esc and a message prompts you to save the changes.
6 Press Y to save the changes and exit from System Setup.
The computer reboots.
Enhanced Pre-Boot System Assessment (ePSA) diagnostics

The ePSA diagnostics (also known as system diagnostics) performs a complete check of your hardware. The ePSA is embedded with the BIOS and is launched by the BIOS internally. The embedded system diagnostics provides a set of options for particular devices or device groups allowing you to:

- Run tests automatically or in an interactive mode
- Repeat tests
- Display or save test results
- Run thorough tests to introduce additional test options to provide extra information about the failed device(s)
- View status messages that inform you if tests are completed successfully
- View error messages that inform you of problems encountered during testing

**NOTE:** Some tests for specific devices require user interaction. Always ensure that you are present at the computer terminal when the diagnostic tests are performed.

For more information, see Dell EPSA Diagnostic 3.0.

Running the ePSA diagnostics

1. Turn on your computer.
2. As the computer boots, press the F12 key as the Dell logo appears.
3. On the boot menu screen, select the **Diagnostics** option.
4. Click the arrow at the bottom left corner.
   
   Diagnostics front page is displayed.
5. Click the arrow in the lower-right corner to go to the page listing.
   
   The items detected are listed.
6. To run a diagnostic test on a specific device, press Esc and click **Yes** to stop the diagnostic test.
7. Select the device from the left pane and click **Run Tests**.
8. If there are any issues, error codes are displayed.
   
   Note the error code and validation number and contact Dell.

System diagnostic lights

**Battery-status light**

Indicates the power and battery-charge status.

- **Solid white** — Power adapter is connected and the battery has more than 5 percent charge.
- **Amber** — Computer is running on battery and the battery has less than 5 percent charge.
- **Off**
• Power adapter is connected and the battery is fully charged.
• Computer is running on battery and the battery has more than 5 percent charge.
• Computer is in sleep state, hibernation, or turned off.

The power and battery-status light blinks amber along with beep codes indicating failures.

For example, the power and battery-status light blinks amber two times followed by a pause, and then blinks white three times followed by a pause. This 2,3 pattern continues until the computer is turned off indicating no memory or RAM is detected.

The following table shows different power and battery-status light patterns and associated problems.

**Flashing BIOS (USB key)**

1. Follow the procedure from step 1 to step 7 in “Flashing the BIOS” to download the latest BIOS setup program file.
2. Create a bootable USB drive. For more information see the knowledge base article SLN143196 at www.dell.com/support.
3. Copy the BIOS setup program file to the bootable USB drive.
4. Connect the bootable USB drive to the computer that needs the BIOS update.
5. Restart the computer and press **F12** when the Dell logo is displayed on the screen.
6. Boot to the USB drive from the **One Time Boot Menu**.
7. Type the BIOS setup program filename and press **Enter**.
8. The **BIOS Update Utility** appears. Follow the instructions on the screen to complete the BIOS update.
Flashing the BIOS

About this task
You may need to flash (update) the BIOS when an update is available or when you replace the system board. Follow these steps to flash the BIOS:

Steps
1. Turn on your computer.
2. Go to www.dell.com/support.
3. Click Product support, enter the Service Tag of your computer, and then click Submit.
4. Click Drivers & downloads > Find it myself.
5. Select the operating system installed on your computer.
6. Scroll down the page and expand BIOS.
7. Click Download to download the latest version of the BIOS for your computer.
8. After the download is complete, navigate to the folder where you saved the BIOS update file.
9. Double-click the BIOS update file icon and follow the instructions on the screen.

Backup media and recovery options

Dell proposes multiple options for recovering Windows operating system on your Dell PC. For more information, see Dell Windows Backup Media and Recovery Options.

WiFi power cycle

About this task
If your computer is unable to access the internet due to WiFi connectivity issues a WiFi power cycle procedure may be performed. The following procedure provides the instructions on how to conduct a WiFi power cycle:

NOTE: Some ISPs (Internet Service Providers) provide a modem/router combo device.

Steps
1. Turn off your computer.
2. Turn off the modem.
3. Turn off the wireless router.
4. Wait for 30 seconds.
5. Turn on the wireless router.
6. Turn on the modem.
7. Turn on your computer.

Flea power release

About this task
Flea power is the residual static electricity that remains on the computer even after it has been powered off and the battery has been removed. The following procedure provides the instructions on how to conduct flea power release:

Steps
1. Turn off your computer.
2. Disconnect the power adapter from your computer.
3. Press and hold the power button for 15 seconds to drain the flea power.
4. Connect the power adapter to your computer.
5. Turn on your computer.
Getting help

Contacting Dell

Prerequisite

NOTE: If you do not have an active Internet connection, you can find contact information on your purchase invoice, packing slip, bill, or Dell product catalog.

About this task
Dell provides several online and telephone-based support and service options. Availability varies by country and product, and some services may not be available in your area. To contact Dell for sales, technical support, or customer service issues:

Steps
1. Go to Dell.com/support.
2. Select your support category.
3. Verify your country or region in the Choose a Country/Region drop-down list at the bottom of the page.
4. Select the appropriate service or support link based on your need.
