Notes, cautions, and warnings

**NOTE:** A NOTE indicates important information that helps you make better use of your product.

**CAUTION:** A CAUTION indicates either potential damage to hardware or loss of data and tells you how to avoid the problem.

**WARNING:** A WARNING indicates a potential for property damage, personal injury, or death.

Working on your computer

Safety instructions

Use the following safety guidelines to help protect your computer from potential damage and to help to ensure your personal safety. Unless otherwise noted, each procedure included in this document assumes that the following conditions exist:

- You have read the safety information that shipped with your computer.
- A component can be replaced or—if purchased separately—installed by performing the removal procedure in reverse order.

⚠️ WARNING: Disconnect all power sources before opening the computer cover or panels. After you finish working inside the computer, replace all covers, panels, and screws before connecting to the power source.

⚠️ WARNING: Before working inside your computer, read the safety information that shipped with your computer. For additional safety best practices information, see the Regulatory Compliance Homepage at www.dell.com/regulatory_compliance

⚠️ CAUTION: Many repairs may only be done by a certified service technician. You should only perform troubleshooting and simple repairs as authorized in your product documentation, or as directed by the online or telephone service and support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. Read and follow the safety instructions that came with the product.

⚠️ CAUTION: To avoid electrostatic discharge, ground yourself by using a wrist grounding strap or by periodically touching an unpainted metal surface, such as a connector on the back of the computer.

⚠️ CAUTION: Handle components and cards with care. Do not touch the components or contacts on a card. Hold a card by its edges or by its metal mounting bracket. Hold a component such as a processor by its edges, not by its pins.

⚠️ CAUTION: When you disconnect a cable, pull on its connector or on its pull-tab, not on the cable itself. Some cables have connectors with locking tabs; if you are disconnecting this type of cable, press in on the locking tabs before you disconnect the cable. As you pull connectors apart, keep them evenly aligned to avoid bending any connector pins. Also, before you connect a cable, ensure that both connectors are correctly oriented and aligned.

⚠️ NOTE: The color of your computer and certain components may appear differently than shown in this document.

Before working inside your computer

To avoid damaging your computer, perform the following steps before you begin working inside the computer.

1. Ensure that you follow the Safety instructions.
2. Ensure that your work surface is flat and clean to prevent the computer cover from being scratched.
3. Turn off your computer, see Turning off your computer.

⚠️ CAUTION: To disconnect a network cable, first unplug the cable from your computer and then unplug the cable from the network device.

4. Disconnect all the network cables from the computer.
5. Disconnect your computer and all attached devices from the electrical outlets.
6. Press and hold the power button while the computer is unplugged to ground the system board.
7. Remove the cover.

⚠️ CAUTION: Before touching anything inside your computer, ground yourself by touching an unpainted metal surface, such as the metal at the back of the computer. While you work, periodically touch an unpainted metal surface to dissipate static electricity, which could harm internal components.
Turning off your computer

After working inside your computer

After you complete any replacement procedure, ensure you connect any external devices, cards, and cables before turning on your computer.

⚠️ CAUTION: To avoid damage to the computer, use only the battery designed for this particular Dell computer. Do not use batteries designed for other Dell computers.

1. Connect any external devices, such as a port replicator or media base, and replace any cards, such as an ExpressCard.
2. Connect any telephone or network cables to your computer.
   ⚠️ CAUTION: To connect a network cable, first plug the cable into the network device and then plug it into the computer.
3. Replace the battery.
4. Replace the base cover.
5. Connect your computer and all attached devices to their electrical outlets.
6. Turn on your computer.

Removing and installing components

This section provides detailed information on how to remove or install the components from your computer.

Recommended tools

The procedures in this document require the following tools:

- Small flat blade screwdriver
- Phillips #1 screwdriver
- Small plastic scribe
- Hex screwdriver

Base cover

Removing the base cover

1. Follow the procedure in Before working inside your computer.
2. Remove the screws that secure the base cover to the computer.
3 Using a plastic scribe, pry the base cover from the edges and remove it from the computer.
Installing the base cover

1. Align the edges of the base cover with the computer and press until it clicks into place.
2. Tighten the screws to secure the base cover to the computer.
3. Follow the procedure in After working inside your computer.

Battery

Removing the battery

1. Follow the procedure in Before working inside your computer.
2. Remove the base cover.
3. To remove the battery:
   a. Disconnect the battery cable from the connector on the system board [1].
   b. Remove the screws that secure the battery to the computer [2].
   c. Lift the battery away from the computer [3].
Installing the battery

1 Insert the battery into the slot on the computer.
2 Tighten the screws to secure the battery to the computer.
3 Connect the battery cable to the connector on the system board
4 Install the base cover.
5 Follow the procedure in After working inside your computer.

Power and volume control board

Removing the power and volume control board

1 Follow the procedure in Before working inside your computer.
2 Remove the:
   a base cover
   b battery
   c coin cell battery
3 To remove the power and volume control board:
   a Peel the adhesive tape [1].
   b Disconnect the power and volume control board cable from the connector on the system board [2].
   c Release the cables from the placeholders [3].
   d Remove the screw that secures the power and volume control board to the computer [4].
Installing the power and volume control board

1. Place the power and volume control board on the computer.
2. Tighten the screw to secure the power and volume control board to the computer.
3. Route the cables through the cable routing clips.
4. Connect the power and volume control board to the connector on the system board.
5. Affix the adhesive tape to secure it.
6. Install the:
   a. coin cell battery
   b. battery
   c. base cover
7. Follow the procedure in After working inside your computer.

Solid State Drive (SSD)

Removing the solid state drive (SSD) card

1. Follow the procedure in Before working inside your computer.
2. Remove the:
   a. base cover
To remove the SSD card:

- Remove the screw that secures the SSD card to the computer [1].
- Disconnect the SSD card from the connector on the system board [2].

**Installing the solid state drive (SSD) card**

1. Connect the SSD card to the connector on the system board.
2. Tighten the screw to secure the SSD card to the computer.
3. Install the:
   - battery
   - base cover
4. Follow the procedure in *After working inside your computer*. 
Removing the coin cell battery

1. Follow the procedure in Before working inside your computer.
2. Remove the:
   a. base cover
   b. battery
3. To remove the coin cell battery:
   a. Disconnect the coin cell battery from the connector on the system board [1].
   b. Pry the coin cell battery to remove it from the computer [2].

Installing the coin cell battery

1. Place the coin cell battery on the computer.
2. Connect the coin cell battery cable to the connector on the system board.
3. Install the:
   a. battery
   b. base cover
4. Follow the procedure in After working inside your computer.
WLAN card

Removing the WLAN card

1. Follow the procedure in Before working inside your computer.
2. Remove the:
   a. base cover
   b. battery
3. To remove the WLAN card:
   a. Remove the screw that secures the WLAN card to the computer [1].
   b. Remove the metal tab to access the WLAN cables [2].
   c. Disconnect the WLAN cables from the connectors on the WLAN card [3].
   d. Lift the WLAN card away from the connector on the system board [4].

Installing the WLAN

1. Connect the WLAN card to the connector on the system board.
2. Connect the WLAN cables to the connectors on the WLAN card.
3. Place the metal tab to secure the WLAN cables.
4. Tighten the screw to secure the WLAN card to the computer.
5 Install the:
   a  battery
   b  base cover
6 Follow the procedure in After working inside your computer.

Memory module

Removing the memory module

1 Follow the procedure in Before working inside your computer.
2 Remove the:
   a  base cover
   b  battery
3 Peel and hold the label that secures the memory module to the computer.
4 To remove the memory module:
   a  Pull the retention clips away from the memory module until it pops up [1].
   b  Disconnect the memory module from the memory module socket on the system board [2].
Repeat steps 3 and 4 to remove the second memory module (if available).

Installing the memory module

**NOTE:** Install the second memory module with DRAM chips facing downward.

1. Insert the memory module into the memory module socket until the retention clips secure the memory module.
2. Affix the adhesive tape to secure the memory module.
3. Install the:
   a. battery
   b. base cover
4. Follow the procedure in After working inside your computer.

Speaker

Removing the speakers

1. Follow the procedure in Before working inside your computer.
2. Remove the:
   a. base cover
   b. battery
   c. LED board
3. To remove the speakers:
a Disconnect the speaker cable from the connector on the system board [1].
b Release the speaker cables from the placeholders [2].
c Lift the speakers away from the computer [3].

Installing the speakers

1 Insert the speakers into the slot on the computer.
2 Route the speaker cable through the cable routing clips.
3 Connect the speaker cable to the connector on the system board.
4 Install the:
   a LED board
   b battery
   c base cover
5 Follow the procedure in After working inside your computer.
System fan

Removing the system fan

1 Follow the procedure in Before working inside your computer.
2 Remove the:
   a base cover
   b battery
3 To remove the system fan:
   a Disconnect the system fan cable from the connector on the system board [1].
   b Remove the screws that secure the system fan to the computer [2].
   c Lift the system fan away from the computer [3].

Installing the system fan

1 Place the system fan on the computer.
2 Tighten the screws to secure the system fan to the computer.
3 Connect the system fan cable to the connector on the system board.
4 Install the:
Removing the heat sink

1. Follow the procedure in Before working inside your computer.

2. Remove the:
   a. base cover
   b. battery

3. To remove the heat sink:
   a. Loosen the captive screws that secure the heat sink to the computer [1] [2] [3] [4].
   b. Lift the heat sink away from the computer [5].

**NOTE:** Loosen the screws in the order of the callout numbers [1, 2, 3, 4]. These screws are retention screws and cannot be fully removed.

Installing the heat sink

1. Place the heat sink on the system board.
2. Tighten the screws to secure the heat sink to the computer.
3. Install the:
   a. battery
   b. base cover

4. Follow the procedure in After working inside your computer.

LED board

Removing the LED board

1. Follow the procedure in Before working inside your computer.

2. Remove the:
   a. base cover
   b. battery

3. To remove the LED board:
   a. Lift the latch and disconnect the LED board cable [1].

   **NOTE:** Use a sharp tool or a plastic scribe to carefully lift the latch.

   b. Release the LED board cable from the computer [2].
   c. Peel the adhesive tape to access the LED board [3].
   d. Lift the LED board away from the computer [4].
Installing the LED board

1. Insert the LED board into the slot on the computer.
2. Affix the adhesive tape to secure the LED board to the computer.
3. Affix the LED board cable and connect the LED board cable to the connector.
4. Install the:
   a. battery
   b. base cover
5. Follow the procedure in After working inside your computer.

Input/Output (I/O) board

Removing the Input/Output (I/O) board

1. Follow the procedure in Before working inside your computer.
2. Remove the:
   a. base cover
   b. battery
3. To remove the I/O board:
   a. Peel the adhesive tape to access the I/O board cable [1].
   b. Lift the latch and disconnect the I/O board cable from the I/O board [2].
   c. Disconnect the coin cell battery and power and volume button board cables from the I/O board [3].
   d. Remove the screw that secures the I/O board to the computer [4].
   e. Lift the I/O board away from the computer [5].
Installing the Input/Output (I/O) board

1. Place the I/O board on the computer.
2. Tighten the screws to secure the I/O board to the computer.
3. Connect the coin cell battery and power and volume button board cables to the connector on the I/O board.
4. Connect the I/O board cable to the connector on the I/O board.
5. Affix the adhesive tape to secure the I/O board cable.
6. Install the:
   a. battery
   b. base cover
7. Follow the procedure in After working inside your computer.
Power connector port

Removing the power connector port

1. Follow the procedure in Before working inside your computer.
2. Remove the:
   a. base cover
   b. battery
3. To remove the power connector port:
   a. Disconnect the power connector port cable from the connector on the system board [1].
   b. Remove the screw that secures the power connector port to the computer [2].
   c. Lift the power connector port away from the computer [3].

Installing the power connector port

1. Insert the power connector port into the slot on the computer.
2. Tighten the screw to secure the power connector port to the computer.
3. Connect the power connector port cable to the connector on the system board.
4  Install the:
   a  battery
   b  base cover
5  Follow the procedure in After working inside your computer.

Keyboard daughter board

Removing the keyboard daughter board

1  Follow the procedure in Before working inside your computer.
2  Remove the:
   a  base cover
   b  battery
3  Open the latches and disconnect the following cables from the keyboard daughter board:
   a  keyboard [1]
   b  keyboard backlight [2]
   c  touchpad [3]
   d  keyboard daughter board [4]
   e  LED board [5]
4  Using a plastic scribe, lift the keyboard daughter board away from the computer [6] [7].
Installing the keyboard daughter board

1. Place the keyboard daughter board into the slot on the computer.
2. Connect the following cables to the connectors on the keyboard daughter board:
   a. LED board
   b. keyboard daughter board
   c. touchpad
   d. keyboard backlight
   e. keyboard
3. Install the:
   a. battery
   b. base cover
4. Follow the procedure in After working inside your computer.

Touchpad

Removing the touchpad

1. Follow the procedure in Before working inside your computer.
2. Remove the:
   a. base cover
   b. battery
3. Open the latches and disconnect the following cables from the system board:
   a. keyboard daughter board [1] [2]
   b. Remove the keyboard daughter board cable from the computer [3]
   c. touchpad [4] [5]
   d. Remove the touchpad cable from the computer [6]
To release the touchpad:

a. Pull the metal clips away from the touchpad [1].

b. Remove the screws to release the metal tab that secure the touchpad [2].

c. Lift the metal tab to access the touchpad [3].
5  To remove the touchpad:
   a  Remove the screws that secure the touchpad to the computer [1].
   b  Lift the touchpad away from the computer [2].
Installing the touchpad

1. Place the touchpad on the computer.
2. Tighten the screws to secure the touchpad to the computer.
3. Place the metal tab over the touchpad.
4. Tighten the screws to secure the metal tab.
5. Connect the touchpad cable and keyboard daughter board cable to the connectors on the system board.
6. Install the:
   a. battery
   b. base cover
7. Follow the procedure in After working inside your computer.

Display assembly

Removing the display assembly

1. Follow the procedure in Before working inside your computer.
2. Remove the:
   a. base cover
   b. battery
   c. WLAN card
3. To release the display assembly:
4 Turn the computer over and open the display.

5 To remove the display assembly:
   a Remove the screws that secure the display assembly to the computer chassis [1].
   b Lift the display assembly away from the computer chassis [2].
Installing the display assembly

1. Align the display assembly with the screw holders on the computer chassis.
2. Tighten the screw to secure the display assembly to the computer chassis.
3. Close the display and turn the computer over.
4. Connect the display and touch screen board cables to the connectors on the system board.
5. Affix the adhesive tapes to secure the display and touch screen board cables.
6. Install the:
   a. WLAN card
   b. battery
   c. base cover
7. Follow the procedure in After working inside your computer.

Display cover

Removing the display cover

1. Follow the procedure in Before working inside your computer.
2. Remove the:
   a. base cover
   b. battery
   c. display assembly
3. To remove the display cover:
a Using a plastic scribe, pry the display cover from the edges to release it from the display assembly [1].
b Lift the display cover away from the display assembly [2].
c Release the display cable and touch screen board cable from under the display hinge [3].

Installing the display cover

1 Route the display cable and touch screen board cable to the display hinge.
2 Place the display cover on the display assembly and press along the edges to secure it.
3 Install the:
   a display assembly
   b battery
   c base cover
4 Follow the procedure in After working inside your computer.

eDP cable

Removing the display cable

1 Follow the procedure in Before working inside your computer.
2 Remove the:
To remove the display cable:

a. Peel the adhesive tapes [1] [2].
b. Disconnect the sensor board cable from the display panel [3].
c. Open the latch and disconnect the display cable from the display panel [4].
d. Lift the display cable away from the display panel [5].
e. Release the display cable from the routing channels [6].

Installing the display cable

1. Route the display cable through the placeholders on the display panel.
2. Align the display cable along the routing channels on the display panel.
3. Connect the display cable and sensor board cable to the connectors on the display panel.
4. Affix the adhesive tapes to secure the display cable and sensor board cable.
5. Install the:
   a. display cover
   b. display assembly
Removing the sensor board

1. Follow the procedure in Before working inside your computer.
2. Remove the:
   a. base cover
   b. battery
   c. display assembly
   d. display cover
3. To remove the sensor board:
   a. Remove the screw that secures the sensor board to the display panel [1].
   b. Peel the adhesive tape that secures the sensor board cable [2].
   c. Open the latch and disconnect the sensor board from the display panel [3].
   d. Lift the sensor board away from the display panel [5].
Installing the sensor board

1 Insert the sensor board into the slot on the display panel.
2 Connect the sensor board cable to the connector on the sensor board.
3 Affix the adhesive tape to secure the sensor board cable.
4 Tighten the screw to secure the sensor board to the display panel.
5 Install the:
   a display cover
   b display assembly
   c battery
   d base cover
6 Follow the procedure in After working inside your computer.

Display hinges

Removing the display hinges

1 Follow the procedure in Before working inside your computer.
2 Remove the:
   a base cover
   b battery
   c display assembly
   d display cover
   e sensor board
3 To remove the display hinges:
   a Remove the screws that secure the display hinges to the display panel [1].
   b Lift the display hinges away from the display panel [2].
   c Release the display cable that routes under the display hinge [3].
Installing the display hinges

1. Route the display cable to the display hinge.
2. Place the display hinges on both sides of the display panel.
3. Tighten the screws to secure the display hinges to the display panel.
4. Install the:
   a. sensor board
   b. display cover
   c. display assembly
   d. battery
   e. base cover
5. Follow the procedure in After working inside your computer.

Camera

Removing the camera

1. Follow the procedure in Before working inside your computer.
2. Remove the:
   a. base cover
   b. battery
   c. display assembly
   d. display cover
3. To remove the camera:
   a. Using a plastic scribe, release the camera module from the display panel [1] [2].
   b. Disconnect the camera cable from the camera module [3].
Installing the camera

1. Connect the camera cable to the connector on the camera module.
2. Insert the camera module into the slot on the display panel.
3. Install the:
   a. display cover
   b. display assembly
   c. battery
   d. base cover
4. Follow the procedure in After working inside your computer.

System board

Removing the system board

1. Follow the procedure in Before working inside your computer.
2. Remove the:
   a. base cover
   b. battery
   c. SSD card
   d. memory module
3 Peel the adhesive tapes that secure the following cables:
   a I/O board [1]
   b display [2]
   c touch screen

4 Disconnect the following cables from the system board:
   a I/O board [1]
   b keyboard daughter board [2]
   c speaker [3]
   d power connector port [4]
   e touch screen [5]
   f display [6]
To remove the system board:

a. Remove the screws that secure the system board to the computer [1].

b. Lift the system board away from the computer [2].
Installing the system board

1. Place the system board on the computer.
2. Tighten the screws to secure the system board to the computer.
3. Connect the following cables to the connectors on the system board:
   a. display
   b. touch screen
   c. power connector port
   d. speaker
   e. keyboard daughter board
   f. I/O board
4. Affix the adhesive tapes to secure the I/O board, display, and touch screen cables.
5. Install the:
   a. heat sink
   b. system fan
   c. WLAN card
   d. coin cell battery
   e. memory module
   f. SSD card
   g. battery
   h. base cover
6. Follow the procedure in After working inside your computer.
Keyboard

Removing the keyboard

1. Follow the procedure in *Before working inside your computer*.
2. Remove the:
   a. base cover
   b. battery
   c. SSD card
   d. memory module
   e. coin cell battery
   f. WLAN card
   g. system fan
   h. heat sink
   i. I/O board
   j. power connector port
   k. display assembly
   l. system board

3. Disconnect the speaker cable and lift the speaker away from the computer chassis.

4. To release the keyboard:
   a. Remove the screws that secure the keyboard shield to the keyboard.
   b. Lift the keyboard shield away from the keyboard.
5 To remove the keyboard:
   a Open the latches and disconnect the keyboard backlight cable [1] and keyboard cable [2] from the system board.
   b Remove the screws that secure the keyboard to the computer chassis [3].
   c Lift the keyboard away from the computer chassis [4].
Installing the keyboard

1. Place the keyboard on the computer chassis.
2. Tighten the screws to secure the keyboard to the computer chassis.
3. Connect the keyboard backlight cable and keyboard cable to the connectors on the system board.
4. Place the keyboard shield over to secure the keyboard.
5. Tighten the screws to secure the keyboard shield to the keyboard.
6. Connect the speaker cable and replace the speaker to the computer chassis.
7. Install the:
   a. system board
   b. display assembly
   c. power connector port
   d. I/O board
   e. heat sink
   f. system fan
   g. WLAN card
   h. coin cell battery
   i. heat sink
   j. SSD card
   k. battery
   l. base cover
8. Follow the procedure in After working inside your computer.
Palmrest

Removing the palmrest

1. Follow the procedure in *Before working inside your computer*.

2. Remove the:
   - a. base cover
   - b. battery
   - c. WLAN card
   - d. power and volume control board
   - e. memory module
   - f. SSD card
   - g. coin cell battery
   - h. system fan
   - i. touchpad
   - j. heat sink
   - k. I/O board
   - l. LED board
   - m. keyboard daughter board
   - n. power connector port
   - o. display assembly
   - p. speakers
   - q. system board
   - r. keyboard

The palmrest is the remaining component, after removing all the components.
Installing the palmrest

1. **Place the palmrest on a flat surface.**

2. **Install the:**
   - system board
   - keyboard
   - speakers
   - display assembly
   - power connector port
   - keyboard daughter board
   - I/O board
   - LED board
   - heat sink
   - touchpad
   - system fan
   - coin cell battery
   - SSD card
   - WLAN card
   - memory module
   - power and volume control board
   - battery
   - base cover

3. **Follow the procedure in** After working inside your computer.
Technology and components

Power adapter

This laptop is shipped with the 45 W power adapter. This adapter uses an E4 connector.

⚠️ **WARNING:** When you disconnect the power adapter cable from the laptop, grasp the connector, not the cable itself, and then pull firmly but gently to avoid damaging the cable.

⚠️ **WARNING:** The power adapter works with electrical outlets worldwide. However, power connectors and power strips vary among countries. Using an incompatible cable or improperly connecting the cable to the power strip or electrical outlet may cause fire or equipment damage.

Processes

This laptop is shipped with the following processors:

- Intel Pentium-4405U
- Intel Core i3-6100U
- Intel Core i5-6200U
- Intel Core i5-6300U

⚠️ **NOTE:** The clock speed and performance varies depending on the workload and other variables.

Identifying processors in Windows 10

1. Tap **Search the Web and Windows**.
2. Type **Device Manager**.
3. Tap **Processor**.

The basic information of the processor is displayed.

Verifying the processor usage in Task Manager

1. Press and hold the taskbar.
2. Select **Start Task Manager**.
   The **Windows Task Manager** window is displayed.
3. Click the **Performance** tab in the **Windows Task Manager** window.
Verifying the processor usage in Resource Monitor

1. Press and hold the taskbar.
2. Select **Start Task Manager**.
   The **Windows Task Manager** window is displayed.
3. Click the **Performance** tab in the **Windows Task Manager** window.
   The processor performance details are displayed.
4. Click **Open Resource Monitor**.

**Chipsets**

All laptop communicate with the CPU through the chipset. This laptop is shipped with the Intel 100 Series chipset.
Intel chipset drivers

Verify if the Intel chipset drivers are already installed in the laptop.

### Table 1. Intel chipset drivers

<table>
<thead>
<tr>
<th>Before installation</th>
<th>After installation</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**Downloading the chipset driver**

1. Turn on the laptop.
2. Go to [Dell.com/support](https://www.dell.com/support).
3. Click **Product Support**, enter the Service Tag of your laptop, and then click **Submit**.
   
   **NOTE:** If you do not have the Service Tag, use the autodetect feature or manually browse for your laptop model.

4. Click **Drivers and Downloads**.
5. Select the operating system installed on your laptop.
6. Scroll down the page, expand **Chipset**, and select your chipset driver.
7. Click **Download File** to download the latest version of the chipset driver for your laptop.
8. After the download is complete, navigate to the folder where you saved the driver file.
9. Double-click the chipset driver file icon and follow the instructions on the screen.

**Identifying the chipset in Device Manager on Windows 10**

1. Click **Settings** on the Windows 10 Charms Bar.
2. From the **Control Panel**, select **Device Manager**.
3. Expand **System Devices** and search for the chipset.
Graphic options

This laptop is shipped with the following graphics chipset options:

- Intel HD Graphics 510 – Intel Pentium
- Intel HD Graphics 520 – Intel Core i3/i5

Intel HD Graphics drivers

Verify if the Intel HD Graphics drivers are already installed in the laptop.

Table 2. Intel HD Graphics drivers

</tbody>
</table>

Downloading drivers

1. Turn on the laptop.
2. Go to Dell.com/support.
3. Click Product Support, enter the Service Tag of your laptop, and then click Submit.
   - **NOTE:** If you do not have the Service Tag, use the auto detect feature or manually browse for your laptop model.
4. Click Drivers and Downloads.
5. Select the operating system installed on your laptop.
6. Scroll down the page and select the graphic driver to install.
7. Click Download File to download the graphic driver for your laptop.
8. After the download is complete, navigate to the folder where you saved the graphic driver file.
Double-click the graphic driver file icon and follow the instructions on the screen.

**Display options**

This laptop has 13.30-inch FHD with 1920 x 1080 resolution (maximum).

**Identifying the display adapter**

1. Start the **Search Charm** and select **Settings**.
2. Type **Device Manager** in the search box and tap **Device Manager** from the left pane.
3. Expand **Display adapters**.

   The display adapters are displayed.

**Changing the screen resolution**

1. Press and hold the desktop screen and select **Display Settings**.
2. Tap or click **Display settings**.

   The Setting window is displayed.
3. Scroll down and select **Advanced Display Settings**.

   The Advanced Display Setting is displayed.
4. Select the required resolution from the drop-down list and tap **Apply**.

**Rotating the display**

1. Press and hold on the desktop screen.

   A sub menu is displayed.
2. Select **Graphic Options > Rotation** and choose one of the following:
   - Rotate to Normal
   - Rotate to 90 Degrees
   - Rotate to 180 Degrees
   - Rotate to 270 Degrees
NOTE: The Display can also be rotated using the following key combinations:
- Ctrl + Alt + Up arrow key (Rotate to normal)
- Right arrow key (Rotate 90 degrees)
- Down arrow key (Rotate 180 degrees)
- Left arrow key (Rotate 270 degrees)

Adjusting brightness in Windows 10

To enable or disable automatic screen brightness adjustment:

1. Swipe-in from the right edge of the display to access the Action Center.
2. Tap or click All Settings > System > Display.
3. Use the Adjust my screen brightness automatically slider to enable or disable automatic-brightness adjustment.

NOTE: You can also use the Brightness level slider to adjust the brightness manually.

Cleaning the display

1. Check for any smudges or areas that have to be cleaned.
2. Use a microfiber cloth to remove any obvious dust and gently brush off any dirt particles.
3. Proper cleaning kits should be used to clean and keep your display in a crisp clear pristine condition.

NOTE: Never spray any cleaning solutions directly on the screen; spray it to the cleaning cloth.

NOTE: Do not press hard or touch the screen with your fingers or you may leave oily prints and smears.

NOTE: Do not leave any liquid on the screen.
5. Remove all excess moisture as it may damage your screen.
6. Let the display dry thoroughly before you turn it on.
7. For stains that are hard to remove, repeat this procedure till the display is clean.

Using touch screen in Windows 10

Follow these steps to enable or disable the touch screen:

1. Go to the Charms Bar and tap All Settings.
2. Tap Control Panel.
3. Tap Pen and Input Devices in the Control Panel.
4. Tap the Touch tab.
5. Select Use your finger as an input device to enable the touch screen. Clear the box to disable the touch screen.

Connecting to external display devices

Follow these steps to connect your laptop to an external display device:

1. Ensure that the projector is turned on and plug the projector cable into a video port on your laptop.
2. Press the Windows logo+P key.
3. Select one of the following modes:
Realtek ALC3253 Waves MaxxAudio Pro controller

This laptop is shipped with integrated Realtek ALC3253–CG Waves MaxxAudio Pro controller. It is a High Definition audio codec designed for Windows desktop and laptops.

Downloading the audio driver

1. Turn on the laptop.
2. Go to www.Dell.com/support.
3. Click Product Support, enter the Service Tag of your laptop and click Submit.

   NOTE: If you do not have the Service Tag, use the autodetect feature or manually browse for your laptop model.
4. Click Drivers and Downloads.
5. Select the operating system installed on your laptop.
6. Scroll down the page and expand Audio.
7. Select the audio driver.
8. Click Download File to download the latest version of the audio driver for your laptop.
9. After the download is complete, navigate to the folder where you saved the audio driver file.
10. Double-click the audio driver file icon and follow the instructions on the screen.

Identifying the audio controller in Windows 10

1. Swipe from the right edge to access the Search Charm and select All Settings.
2. Type Device Manager in the search box and select Device Manager from the left pane.
3. Expand Sound, video and game controllers. The audio controller is displayed.

<table>

</tbody>
</table>

| Expert Key Management   | Allows you to manipulate the security key databases only if the system is in Custom Mode. The Enable Custom Mode option is disabled by default. The options are: |
|                         | • PK                                                                        |
|                         | • KEK                                                                       |
|                         | • db                                                                        |
|                         | • dbx                                                                       |

If you enable the Custom Mode, the relevant options for PK, KEK, db, and dbx appear. The options are:

• Save to File—Saves the key to a user-selected file
• Replace from File—Replaces the current key with a key from a user-selected file
• Append from File—Adds a key to the current database from a user-selected file
• Delete—Deletes the selected key
• Reset All Keys—Resets to default setting
• Delete All Keys—Deletes all the keys

**NOTE:** If you disable the Custom Mode, all the changes made will be erased and the keys will restore to default settings.

**Hard drive options**

This laptop supports SATA SSD.

**Identifying the hard drive in Windows 10**

1. Tap or click All Settings on the Windows 10 Charms Bar.
2. Tap or click Control Panel, select Device Manager, and expand Disk drives.
   
   The hard drive is listed under Disk drives.
Identifying the hard drive in the BIOS

1. Turn on or restart your laptop.
2. When the Dell logo appears, perform one of the following actions to enter the BIOS setup program:
   - With keyboard — Tap F2 until the Entering BIOS setup message appears. To enter the Boot selection menu, tap F12.
   - Without keyboard — When the **F12 boot selection** menu is displayed, press the Volume Down button to enter BIOS setup. To enter the Boot selection menu, press the Volume Up button.

Hard drive is listed under the **System Information** under the **General** group.

Camera features

This laptop is shipped with front-facing camera with the image resolution of 1280 x 720 (maximum).

**NOTE:** The camera is at the top center of the LCD.

Identifying the camera in Device Manager on Windows 10

1. In the **Search** box, type **device manager**, and tap to start it.
2. Under **Device Manager**, expand **Imaging devices**.

Starting the camera

To start the camera, open an application that uses the camera. For instance, if you tap the Dell webcam central software or the Skype software that is shipped with the laptop, the camera turns on. Similarly, if you are chatting on the internet and the application requests to access the webcam, the webcam turns on.

Starting the camera application

1. Tap or click the **Windows** button and select **All apps**.
2 Select **Camera** from the apps list.

3 If the **Camera** App is not available in the apps list, search for it.

**Memory features**

This laptop supports 4–16 GB DDR4 SODIMM memory, up to 2133 MHz.
Verifying system memory in Windows 10

1. Tap the Windows button and select All Settings > System.

Verifying system memory in system setup (BIOS)

1. Turn on or restart your laptop.
2. Perform one of the following actions after the Dell logo is displayed:
   - With keyboard — Tap F2 until the Entering BIOS setup message appears. To enter the Boot selection menu, tap F12.
   - Without keyboard — When the F12 boot selection menu is displayed, press the Volume Down button to enter BIOS setup. To enter the Boot selection menu, press the Volume Up button.
3. On the left pane, select Settings > General > System Information. The memory information is displayed on the right pane.

Testing memory using ePSA

1. Turn on or restart your laptop.
2. Perform one of the following actions after the Dell logo is displayed:
   - With keyboard — Press F2.
   - Without keyboard — Press and hold the Volume Up button when the Dell logo is displayed on the screen. When the F12 boot selection menu is displayed, select Diagnostics from the boot menu, and press Enter.

   The PreBoot System Assessment (PSA) starts on your laptop.

   **NOTE:** If you wait too long and the operating system logo appears, continue to wait until you see the desktop. Turn off the laptop and try again.

Realtek HD audio drivers

Verify if the Realtek audio drivers are already installed in the laptop.

Boot Sequence

Boot Sequence allows you to bypass the System Setup-defined boot device order and boot directly to a specific device (for example: optical drive or hard drive). During the Power-on Self Test (POST), when the Dell logo appears, you can:

- Access System Setup by pressing F2 key
- Bring up the one-time boot menu by pressing F12 key

The one-time boot menu displays the devices that you can boot from including the diagnostic option. The boot menu options are:

- Removable Drive (if available)
- STXXXX Drive
  - **NOTE:** XXX denotes the SATA drive number.
- Optical Drive
- Diagnostics
  - **NOTE:** Choosing Diagnostics, will display the ePSA diagnostics screen.

The boot sequence screen also displays the option to access the System Setup screen.
Navigation keys

NOTE: For most of the System Setup options, changes that you make are recorded but do not take effect until you restart the system.

<table>

Intel Software Guard Extensions screen options

Option | Description
-------|------------------------
Intel SGX Enable | This field specifies you to provide a secured environment for running code/storing sensitive information in the context of the main OS. The options are:
- Disabled
- Enabled
Default setting: Disabled

Enclave Memory Size | This option sets SGX Enclave Reserve Memory Size. The options are:
- 32 MB
- 64 MB
- 128 MB

Performance screen options

Option | Description
-------|------------------------
Multi Core Support | This field specifies whether the process has one or all cores enabled. The performance of some applications improves with the additional cores. This option is enabled by default. Allows you to enable or disable multi-core support for the processor. The installed processor supports two-four cores. If you enable Multi Core Support, two-four cores are enabled. If you disable Multi Core Support, one core is enabled.
- Enable Multi Core Support
Default setting: The option is enabled.

Intel SpeedStep | Allows you to enable or disable the Intel SpeedStep feature.
- Enable Intel SpeedStep
Default setting: The option is enabled.

C-States Control | Allows you to enable or disable the additional processor sleep states.
- C states
Default setting: The option is enabled.

Intel TurboBoost | Allows you to enable or disable the Intel TurboBoost mode of the processor.
- Enable Intel TurboBoost
### Hyper-Thread Control

Allows you to enable or disable the Hyper-Threading in the processor.

- **Disabled**
- **Enabled**

Default setting: Enabled.

### Power Management screen options

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Auto On Time</strong></td>
<td>Allows you to set the time at which the computer must turn on automatically. The options are:</td>
</tr>
<tr>
<td></td>
<td>• Disabled</td>
</tr>
<tr>
<td></td>
<td>• Every Day</td>
</tr>
<tr>
<td></td>
<td>• Weekdays</td>
</tr>
<tr>
<td></td>
<td>• Select Days</td>
</tr>
<tr>
<td><strong>Default setting:</strong></td>
<td>Disabled</td>
</tr>
</tbody>
</table>

### USB Wake Support

Allows you to enable USB devices to wake the system from Standby.

- Enable USB Wake Support

Default setting: The option is disabled.

### Primary Battery Charge Configuration

Allows you to select the charging mode for the battery. The options are:

- **Adaptive**
- **Standard** — Fully charges your battery at a standard rate.
- **ExpressCharge** — The battery charges over a shorter period of time using Dell’s fast charging technology. This option is enabled by default.
- **Primarily AC use**
- **Custom**

If Custom Charge is selected, you can also configure Custom Charge Start and Custom Charge Stop.

**NOTE:** All charging mode may not be available for all the batteries. To enable this option, disable the Advanced Battery Charge Configuration option.

### POST Behavior screen options

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Adapter Warnings</strong></td>
<td>Allows you to enable or disable the system setup (BIOS) warning messages when you use certain power adapters.</td>
</tr>
<tr>
<td><strong>Default setting:</strong></td>
<td>Enable Adapter Warnings</td>
</tr>
</tbody>
</table>
Option | Description
---|---
Mouse/Touchpad | Allows you to define how the system handles mouse and touchpad input. The options are:
  - Serial Mouse
  - PS2 Mouse
  - Touchpad/PS-2 Mouse: This option is enabled by default.

Fn Lock Options | Allows you to let hot key combinations F1 + Esc toggle the primary behavior of F1–F12, between their standard and secondary functions. If you disable this option, you cannot toggle dynamically the primary behavior of these keys. The available options are:
  - Fn Lock: This option is selected by default.
  - Lock Mode Disable/Standard
  - Lock Mode Enable/Secondary

Fastboot | Allows you to speed up the boot process by bypassing some of the compatibility steps. The options are:
  - Minimal
  - Thorough (default)
  - Auto

Virtualization support screen options

Option | Description
---|---
Virtualization | Allows you to enable or disable the Intel Virtualization Technology.
  Enable Intel Virtualization Technology (default).
VT for Direct I/O | Enables or disables the Virtual Machine Monitor (VMM) from utilizing the additional hardware capabilities provided by Intel® Virtualization technology for direct I/O.
  Enable VT for Direct I/O - enabled by default.
Trusted Execution | This option specifies whether a Measured Virtual Machine Monitor (MVMM) can utilize the additional hardware capabilities provided by Intel Trusted Execution Technology. The TPM Virtualization Technology, and Virtualization technology for direct I/O must be enabled to use this feature.
  Trusted Execution - disabled by default.

Wireless screen options

Option | Description
---|---
Wireless Switch | Allows to set the wireless devices that can be controlled by the wireless switch. The options are:
  - WLAN
  - Bluetooth
  All the options are enabled by default.

Wireless Device Enable | Allows you to enable or disable the internal wireless devices.
  - WLAN
All the options are enabled by default.

Maintenance screen options

<tr>
<td>Power Events</td>
<td>Allows you to view and clear the System Setup (Power) events.</td>
</tr>
</tbody>
</table>

Updating the BIOS

It is recommended to update your BIOS (System Setup), on replacing the system board or if an update is available. For laptops, ensure that your computer battery is fully charged and connected to a power outlet.

1. Restart the computer.
2. Go to Dell.com/support.
3. Enter the Service Tag or Express Service Code and click Submit.

⚠️ NOTE: To locate the Service Tag, click Where is my Service Tag?

⚠️ NOTE: If you cannot find your Service Tag, click Detect My Product. Proceed with the instructions on screen.

4. If you are unable to locate or find the Service Tag, click the Product Category of your computer.
5. Choose the Product Type from the list.
6. Select your computer model and the Product Support page of your computer appears.
7. Click Get drivers and click View All Drivers.
The Drivers and Downloads page opens.

8 On the Drivers and Downloads screen, under the Operating System drop-down list, select BIOS.

9 Identify the latest BIOS file and click Download File.
You can also analyze which drivers need an update. To do this for your product, click Analyze System for Updates and follow the instructions on the screen.

10 Select your preferred download method in the Please select your download method below window, click Download File.
The File Download window appears.

11 Click Save to save the file on your computer.

12 Click Run to install the updated BIOS settings on your computer.
Follow the instructions on the screen.

1 | NOTE: It is recommended not to update the BIOS version for more than 3 revisions. For example: If you want to update the BIOS from 1.0 to 7.0, then install version 4.0 first and then install version 7.0.

System and setup password

You can create a system password and a setup password to secure your computer.

<table>
<thead>
<tr>
<th>Password type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>System password</td>
<td>Password that you must enter to log on to your system.</td>
</tr>
<tr>
<td>Setup password</td>
<td>Password that you must enter to access and make changes to the BIOS settings of your computer.</td>
</tr>
</tbody>
</table>

⚠️ CAUTION: The password features provide a basic level of security for the data on your computer.

⚠️ CAUTION: Anyone can access the data stored on your computer if it is not locked and left unattended.

1 | NOTE: Your computer is shipped with the system and setup password feature disabled.

Assigning a system password and setup password

You can assign a new System Password only when the status is in Not Set.

1 | NOTE: If the password jumper is disabled, the existing System Password and Setup Password are deleted and you need not provide the system password to log on to the computer.

To enter the system setup, press F2 immediately after a power-on or re-boot.

1 In the System BIOS or System Setup screen, select Security and press Enter.
The Security screen is displayed.

2 Select System Password and create a password in the Enter the new password field.
Use the following guidelines to assign the system password:
• A password can have up to 32 characters.
• The password can contain the numbers 0 through 9.
• Only lower case letters are valid, upper case letters are not allowed.
• Only the following special characters are allowed: space, ("), (+), (-), (.), (/), (;), ([), (]), (`).

3 Type the system password that you entered earlier in the Confirm new password field and click OK.

4 Press Esc and a message prompts you to save the changes.

5 Press Y to save the changes.
The computer reboots.
Deleting or changing an existing system and/or setup password

Ensure that the Password Status is Unlocked (in the System Setup) before attempting to delete or change the existing System and/or Setup password. You cannot delete or change an existing System or Setup password, if the Password Status is Locked.

To enter the System Setup, press F2 immediately after a power-on or reboot.

1. In the System BIOS or System Setup screen, select System Security and press Enter.
   The System Security screen is displayed.
2. In the System Security screen, verify that Password Status is Unlocked.
3. Select System Password, alter or delete the existing system password and press Enter or Tab.
4. Select Setup Password, alter or delete the existing setup password and press Enter or Tab.

   **NOTE:** If you change the System and/or Setup password, re-enter the new password when promoted. If you delete the System and/or Setup password, confirm the deletion when promoted.
5. Press Esc and a message prompts you to save the changes.
6. Press Y to save the changes and exit from System Setup.
   The computer reboots.
If you experience a problem with your computer, run the ePSA diagnostics before contacting Dell for technical assistance. The purpose of running diagnostics is to test your computer's hardware without requiring additional equipment or risking data loss. If you are unable to fix the problem yourself, service and support personnel can use the diagnostics results to help you solve the problem.

Topics:
- Enhanced Pre-Boot System Assessment (ePSA) diagnostics
- System diagnostic lights

**Enhanced Pre-Boot System Assessment (ePSA) diagnostics**

The ePSA diagnostics (also known as system diagnostics) performs a complete check of your hardware. The ePSA is embedded with the BIOS and is launched by the BIOS internally. The embedded system diagnostics provides a set of options for particular devices or device groups allowing you to:

- Run tests automatically or in an interactive mode
- Repeat tests
- Display or save test results
- Run thorough tests to introduce additional test options to provide extra information about the failed device(s)
- View status messages that inform you if tests are completed successfully
- View error messages that inform you of problems encountered during testing

⚠️ **CAUTION:** Use the system diagnostics to test only your computer. Using this program with other computers may cause invalid results or error messages.

医科 **NOTE:** Some tests for specific devices require user interaction. Always ensure that you are present at the computer terminal when the diagnostic tests are performed.

**System diagnostic lights**

**Power and battery-status light/ hard-drive activity light:** Indicates the battery-charge status or the hard-drive activity.

医科 **NOTE:** Press Fn+H to toggle this light between power and battery-status light and hard-drive activity light.

**Hard-drive activity light**

Turns on when the computer reads from or writes to the hard drive.

**Power and battery-status light**

Indicates the power and battery-charge status.

- **Solid white** – Power adapter is connected and the battery has more than 5 percent charge.
- **Amber** – Computer is running on battery and the battery has less than 5 percent charge.
Off

- Power adapter is connected and the battery is fully charged.
- Computer is running on battery and the battery has more than 5 percent charge.
- Computer is in sleep state, hibernation, or turned off.

The power and battery-status light blinks amber along with beep codes indicating failures.

For example, the power and battery-status light blinks amber two times followed by a pause, and then blinks white three times followed by a pause. This 2,3 pattern continues until the computer is turned off indicating no memory module or RAM is detected.

The following table shows different light patterns, what they indicate, and the suggested solutions.

<table>
<thead>
<tr>
<th>Light Pattern</th>
<th>Problem description</th>
<th>Suggested solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>2,1</td>
<td>CPU failure</td>
<td>Replace the system board.</td>
</tr>
<tr>

<td>3,4</td>
<td>Recovery image found but invalid</td>
<td>Reimage the system.</td>
</tr>
</tbody>
</table>

The computer may emit a series of beeps during start-up if the errors or problems cannot be displayed. The repetitive beep codes help the user troubleshoot problems with the computer.

**Camera status light:** Indicates whether the camera is in use.

- Solid white – Camera is in use.
- Off – Camera is not in use.

**Caps Lock status light:** Indicates whether Caps Lock is enabled or disabled.

- Solid white – Caps Lock enabled.
- Off – Caps Lock disabled.
NOTE: Offerings may vary by region. For more information regarding the configuration of your computer in:

- Windows 10, click or tap Start > Settings > System > About.

NOTE: If you do not have an active Internet connection, you can find contact information on your purchase invoice, packing slip, bill, or Dell product catalog.

Dell provides several online and telephone-based support and service options. Availability varies by country and product, and some services may not be available in your area. To contact Dell for sales, technical support, or customer service issues:

1. Go to Dell.com/support.
2. Select your support category.
3. Verify your country or region in the Choose a Country/Region drop-down list at the bottom of the page.
4. Select the appropriate service or support link based on your need.
