OptiPlex 7480 All-In-One
Service Manual
**Notes, cautions, and warnings**

**NOTE:** A NOTE indicates important information that helps you make better use of your product.

**CAUTION:** A CAUTION indicates either potential damage to hardware or loss of data and tells you how to avoid the problem.

**WARNING:** A WARNING indicates a potential for property damage, personal injury, or death.

Safety instructions

Use the following safety guidelines to protect your computer from potential damage and to ensure your personal safety. Unless otherwise noted, each procedure included in this document assumes that you have read the safety information that shipped with your computer.

**NOTE:** Before working inside your computer, read the safety information that shipped with your computer. For more safety best practices, see the Regulatory Compliance home page at [www.dell.com/regulatory_compliance](http://www.dell.com/regulatory_compliance).

**NOTE:** Disconnect all power sources before opening the computer cover or panels. After you finish working inside the computer, replace all covers, panels, and screws before connecting to the electrical outlet.

**CAUTION:** To avoid damaging the computer, ensure that the work surface is flat and clean.

**CAUTION:** Handle components and cards with care. Do not touch the components or contacts on a card. Hold a card by its edges or by its metal mounting bracket. Hold a component such as a processor by its edges, not by its pins.

**CAUTION:** You should only perform troubleshooting and repairs as authorized or directed by the Dell technical assistance team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. See the safety instructions that shipped with the product or at [www.dell.com/regulatory_compliance](http://www.dell.com/regulatory_compliance).

**CAUTION:** Before touching anything inside your computer, ground yourself by using a wrist grounding strap or by periodically touching an unpainted metal surface, such as the metal at the back of the computer. While you work, periodically touch an unpainted metal surface to dissipate static electricity, which could harm internal components.

**CAUTION:** When you disconnect a cable, pull on its connector or on its pull tab, not on the cable itself. Some cables have connectors with locking tabs or thumb-screws that you must disengage before disconnecting the cable. When disconnecting cables, keep them evenly aligned to avoid bending any connector pins. When connecting cables, ensure that the ports and connectors are correctly oriented and aligned.

**CAUTION:** Press and eject any installed card from the media-card reader.

**NOTE:** The color of your computer and certain components may appear differently than shown in this document.

Topics:
- Before working inside your computer
- Electrostatic discharge—ESD protection
- ESD field service kit
- Transporting sensitive components
- After working inside your computer

Before working inside your computer

**NOTE:** The images in this document may differ from your computer depending on the configuration you ordered.

Before you begin

**Steps**
1. Save and close all open files and exit all open applications.
2. Shut down your computer. Click **Start > Power > Shut down**.
3. Disconnect your computer and all attached devices from their electrical outlets.
4. Disconnect all attached network devices and peripherals, such as keyboard, mouse, and monitor from your computer.
5. Remove any media card and optical disc from your computer, if applicable.
6. After the computer is unplugged, press and hold the power button for 5 seconds to ground the system board.

**CAUTION:** Place the computer on a flat, soft, and clean surface to avoid scratches on the display.

7. Place the computer face down.

## Electrostatic discharge—ESD protection

ESD is a major concern when you handle electronic components, especially sensitive components such as expansion cards, processors, memory DIMMs, and system boards. Very slight charges can damage circuits in ways that may not be obvious, such as intermittent problems or a shortened product life span. As the industry pushes for lower power requirements and increased density, ESD protection is an increasing concern.

Due to the increased density of semiconductors used in recent Dell products, the sensitivity to static damage is now higher than in previous Dell products. For this reason, some previously approved methods of handling parts are no longer applicable.

Two recognized types of ESD damage are catastrophic and intermittent failures.

- **Catastrophic** – Catastrophic failures represent approximately 20 percent of ESD-related failures. The damage causes an immediate and complete loss of device functionality. An example of catastrophic failure is a memory DIMM that has received a static shock and immediately generates a "No POST/No Video" symptom with a beep code emitted for missing or nonfunctional memory.

- **Intermittent** – Intermittent failures represent approximately 80 percent of ESD-related failures. The high rate of intermittent failures means that most of the time when damage occurs, it is not immediately recognizable. The DIMM receives a static shock, but the tracing is merely weakened and does not immediately produce outward symptoms related to the damage. The weakened trace may take weeks or months to melt, and in the meantime may cause degradation of memory integrity, intermittent memory errors, etc.

The more difficult type of damage to recognize and troubleshoot is the intermittent (also called latent or "walking wounded") failure.

Perform the following steps to prevent ESD damage:

- Use a wired ESD wrist strap that is properly grounded. The use of wireless anti-static straps is no longer allowed; they do not provide adequate protection. Touching the chassis before handling parts does not ensure adequate ESD protection on parts with increased sensitivity to ESD damage.

- Handle all static-sensitive components in a static-safe area. If possible, use anti-static floor pads and workbench pads.

- When unpacking a static-sensitive component from its shipping carton, do not remove the component from the anti-static packing material until you are ready to install the component. Before unwrapping the anti-static packaging, ensure that you discharge static electricity from your body.

- Before transporting a static-sensitive component, place it in an anti-static container or packaging.

## ESD field service kit

The unmonitored Field Service kit is the most commonly used service kit. Each Field Service kit includes three main components: anti-static mat, wrist strap, and bonding wire.

## Components of an ESD field service kit

The components of an ESD field service kit are:

- **Anti-Static Mat** – The anti-static mat is dissipative and parts can be placed on it during service procedures. When using an anti-static mat, your wrist strap should be snug and the bonding wire should be connected to the mat and to any bare metal on the system being worked on. Once deployed properly, service parts can be removed from the ESD bag and placed directly on the mat. ESD-sensitive items are safe in your hand, on the ESD mat, in the system, or inside a bag.

- **Wrist Strap and Bonding Wire** – The wrist strap and bonding wire can be either directly connected between your wrist and bare metal on the hardware if the ESD mat is not required, or connected to the anti-static mat to protect hardware that is temporarily placed on the mat. The physical connection of the wrist strap and bonding wire between your skin, the ESD mat, and the hardware is known as bonding. Use only Field Service kits with a wrist strap, mat, and bonding wire. Never use wireless wrist straps. Always be aware that the internal wires of a wrist strap are prone to damage from normal wear and tear, and must be checked regularly with a...
wrist strap tester in order to avoid accidental ESD hardware damage. It is recommended to test the wrist strap and bonding wire at least once per week.

- **ESD Wrist Strap Tester** – The wires inside of an ESD strap are prone to damage over time. When using an unmonitored kit, it is a best practice to regularly test the strap prior to each service call, and at a minimum, test once per week. A wrist strap tester is the best method for doing this test. If you do not have your own wrist strap tester, check with your regional office to find out if they have one. To perform the test, plug the wrist-strap’s bonding-wire into the tester while it is strapped to your wrist and push the button to test. A green LED is lit if the test is successful; a red LED is lit and an alarm sounds if the test fails.

- **Insulator Elements** – It is critical to keep ESD sensitive devices, such as plastic heat sink casings, away from internal parts that are insulators and often highly charged.

- **Working Environment** – Before deploying the ESD Field Service kit, assess the situation at the customer location. For example, deploying the kit for a server environment is different than for a desktop or portable environment. Servers are typically installed in a rack within a data center; desktops or portables are typically placed on office desks or cubicles. Always look for a large open flat work area that is free of clutter and large enough to deploy the ESD kit with additional space to accommodate the type of system that is being repaired. The workspace should also be free of insulators that can cause an ESD event. On the work area, insulators such as Styrofoam and other plastics should always be moved at least 12 inches or 30 centimeters away from sensitive parts before physically handling any hardware components.

- **ESD Packaging** – All ESD-sensitive devices must be shipped and received in static-safe packaging. Metal, static-shielded bags are preferred. However, you should always return the damaged part using the same ESD bag and packaging that the new part arrived in. The ESD bag should be folded over and taped shut and all the same foam packing material should be used in the original box that the new part arrived in. ESD-sensitive devices should be removed from packaging only at an ESD-protected work surface, and parts should never be placed on top of the ESD bag because only the inside of the bag is shielded. Always place parts in your hand, on the ESD mat, in the system, or inside an anti-static bag.

- **Transporting Sensitive Components** – When transporting ESD sensitive components such as replacement parts or parts to be returned to Dell, it is critical to place these parts in anti-static bags for safe transport.

## ESD protection summary

It is recommended that all field service technicians use the traditional wired ESD grounding wrist strap and protective anti-static mat at all times when servicing Dell products. In addition, it is critical that technicians keep sensitive parts separate from all insulator parts while performing service and that they use anti-static bags for transporting sensitive components.

## Transporting sensitive components

When transporting ESD sensitive components such as replacement parts or parts to be returned to Dell, it is critical to place these parts in anti-static bags for safe transport.

## Lifting equipment

Adhere to the following guidelines when lifting heavy weight equipment:

⚠️ **CAUTION:** Do not lift greater than 50 pounds. Always obtain additional resources or use a mechanical lifting device.

1. Get a firm balanced footing. Keep your feet apart for a stable base, and point your toes out.
2. Tighten stomach muscles. Abdominal muscles support your spine when you lift, offsetting the force of the load.
3. Lift with your legs, not your back.
4. Keep the load close. The closer it is to your spine, the less force it exerts on your back.
5. Keep your back upright, whether lifting or setting down the load. Do not add the weight of your body to the load. Avoid twisting your body and back.
6. Follow the same techniques in reverse to set the load down.

## After working inside your computer

**About this task**

⚠️ **CAUTION:** Leaving stray or loose screws inside your computer may severely damage your computer.

**Steps**

1. Replace all screws and ensure that no stray screws remain inside your computer.
2. Connect any external devices, peripherals, or cables you removed before working on your computer.
3. Replace any media cards, discs, or any other parts that you removed before working on your computer.
4. Connect your computer and all attached devices to their electrical outlets.
5. Turn on your computer.
Removing and installing components

Recommended tools

The procedures in this document may require the following tools:

- Phillips screwdriver #1
- Plastic scribe

Screw list

**NOTE:** When removing screws from a component, it is recommended to note the screw type, the quantity of screws, and then place them in a screw storage box. This is to ensure that the correct number of screws and correct screw type is restored when the component is replaced.

**NOTE:** Some systems have magnetic surfaces. Ensure that the screws are not left attached to such surface when replacing a component.

**NOTE:** Screw color may vary with the configuration ordered.

Stand

Removing the fixed stand

Prerequisites
1. Follow the procedure in Before working inside your computer.

NOTE: When servicing the system, place it on an elevated, clean, and flat surface. Dell recommends removing the stand to avoid accidental damage to the system display during servicing.

About this task
The following image provides a visual representation of the fixed stand removal procedure.

Steps
1. Press and slide the release button up.
2. Hold the button in the release position and lift the stand upward.
3. Slide the stand downward, to lift the stand off the back cover.

Installing the fixed stand

Prerequisites
If you are replacing a component, remove the existing component before performing the installation procedure.
About this task
The following image provides a visual representation of the fixed stand installation procedure.

Steps
1. Align the tabs on the stand with the slots on the back cover.
2. Snap the stand until it clicks into place.

Next steps
1. Follow the procedure in After working inside your computer.

Removing the articulating stand

Prerequisites
1. Follow the procedure in Before working inside your computer.

⚠️ CAUTION: When servicing the system, place it on an elevated, clean, and flat surface. It is recommended to remove the stand to avoid accidental damage to the system display during servicing.

About this task
The following image provides a visual representation of the articulating stand removal procedure.
Steps

1. Press and slide the release button up.
2. Hold the button in the release position, and lift the stand upward.
3. Slide the stand downward, to lift the stand off the back cover.
4. Pry the rubber feet from the bottom cover and pull it out.

Installing the articulating stand

Prerequisites
If you are replacing a component, remove the existing component before performing the installation procedure.

About this task
The following image provides a visual representation of the articulating stand installation procedure.
Steps
1. Align the rubber feet with the slots on the bottom cover and push it firmly in place.
2. Align the tabs on the stand with the slots on the back cover.
3. Snap the stand until it clicks into place.

Next steps
1. Follow the procedure in After working inside your computer.

Removing the height adjustable stand

Prerequisites

1. Follow the procedure in Before working inside your computer.

CAUTION: When servicing the system, place it on an elevated, clean, and flat surface. Dell recommends removing the stand to avoid accidental damage to the system display during servicing.

About this task
The following image provides a visual representation of the height adjustable stand removal procedure.
Steps
1. Press and slide the release button up.
2. Hold the button in the release position, and lift the stand upward.
3. Slide the stand downward, to lift the stand off the back cover.

Installing the height adjustable stand

Prerequisites
If you are replacing a component, remove the existing component before performing the installation procedure.

NOTE: Follow the same procedure to install the Height Adjustable Stand with Optical Disk Drive.

About this task
The following image provides a visual representation of the height adjustable stand installation procedure.
Steps
1. Align the tabs on the stand with the slots on the back cover.
2. Snap the stand until it clicks into place.

Next steps
1. Follow the procedure in After working inside your computer.

Cable cover—optional

Removing the cable cover

Prerequisites
1. Follow the procedure in Before working inside your computer.
   CAUTION: When servicing the system, place it on an elevated, clean, and flat surface. It is recommended to remove the stand to avoid accidental damage to the system display during servicing.
2. Remove the stand.

About this task
The following image provides a visual representation of the cable cover removal procedure.
Steps

1. Unroute the power cable from the slots on the cable cover.
2. Remove the screw (M3x9) that secures the cable cover to the bottom cover.
3. Lift the cable cover from the bottom cover.
Installing the cable cover

Prerequisites
If you are replacing a component, remove the existing component before performing the installation procedure.

About this task
The following image provides a visual representation of the cable cover installation procedure.

1x
M3x9
Steps
1. Route the power cable through the slots on the cable cover.
2. Align the screw hole on the cable cover with the screw hole on the bottom cover.
3. Replace the screw (M3x9) to secure the cable cover to the bottom cover.

Next steps
1. Install the stand.
2. Follow the procedure in After working inside your computer.

Back cover

Removing the back cover

Prerequisites
1. Follow the procedure in Before working inside your computer.
   ⚠️ CAUTION: When servicing the system, place it on an elevated, clean, and flat surface. It is recommended to remove the stand to avoid accidental damage to the system display during servicing.
2. Remove the stand.
3. Remove the cable cover (optional).

About this task
The following image provides a visual representation of the back cover removal procedure.
Steps

1. Press and hold the release tab on the back cover to release it from the latch on the system-board shield.
2. Slide the back cover up to release the tabs on the cover from the slots on the middle frame.
3. Lift the back cover and remove it from the system.
Installing the back cover

Prerequisites
If you are replacing a component, remove the existing component before performing the installation procedure.

About this task
The following image provides a visual representation of the back cover installation procedure.
Steps
1. Place the back cover on the middle frame and system-board shield and align the tabs on the back cover with the slots on the middle frame.
2. Slide the back cover to lock the release tab under the latch on the system-board shield.

Next steps
1. Install the cable cover (optional).
2. Install the stand.
3. Follow the procedure in After working inside your computer.

Hard drive

Removing the hard drive

Prerequisites
1. Follow the procedure in Before working inside your computer.
2. Remove the stand.
3. Remove the cable cover (optional).
4. Remove the back cover.

About this task
The following image indicates the location of the hard drive and provides a visual representation of the removal procedure.
Steps
1. Press down the tab securing the hard-drive assembly to the system-board shield.
2. Slide and lift the hard-drive assembly from the slot on the display-assembly base.
3. Pry the tabs on hard-drive bracket from its slots on the hard drive.
4. Remove the hard drive from the hard-drive bracket.

Installing the hard drive

Prerequisites
If you are replacing a component, remove the existing component before performing the installation procedure.

About this task
The following image indicates the location of the hard drive and provides a visual representation of the installation procedure.
Steps
1. Align the tabs on the hard-drive bracket with the slots on the hard drive.
2. Flex the hard-drive bracket and replace the remaining tabs on the hard-drive bracket with the slots on the hard drive.
3. Place the hard-drive assembly into the slot and slide it to lock the hard-drive assembly on the display-assembly base.

Next steps
1. Install the back cover.
2. Install the cable cover (optional).
3. Install the stand.
4. Follow the procedure in After working inside your computer.

Memory modules

Removing the memory modules

Prerequisites
1. Follow the procedure in Before working inside your computer.
2. Remove the stand.
3. Remove the cable cover (optional).
4. Remove the back cover.

About this task
The following image indicates the location of the memory modules and provides a visual representation of the removal procedure.
Steps
1. Pry and remove the DIMM door from the system-board shield.
2. Using your fingertips, spread apart the securing clips on the memory-module slot until the memory module pops up.
3. Slide and remove the memory module from the memory-module slot.
   
   **NOTE:** Repeat step 2 and 3 if there are two memory modules.

Installing the memory modules

Prerequisites
If you are replacing a component, remove the existing component before performing the installation procedure.

About this task
The following image indicates the location of the memory module and provides a visual representation of the installation procedure.
Steps

1. Align the notch on the memory module with the tab on the memory-module slot.
2. Slide the memory module firmly into the slot at an angle and press the memory module down until it clicks into place.

   **NOTE:** If you do not hear the click, remove the memory module and reinstall it.

   **NOTE:** Repeat step 1 and 2 if there are two memory modules.

3. Align the tabs on the DIMM door with the slots on the system-board shield and snap into place.

Next steps

1. Install the back cover.
2. Install the cable cover (optional).
3. Install the stand.
4. Follow the procedure in After working inside your computer.

System-board shield

Removing the system-board shield

Prerequisites

1. Follow the procedure in Before working inside your computer.
2. Remove the stand.
3. Remove the cable cover (optional).
4. Remove the back cover.

About this task

The following image indicates the location of the system-board shield and provides a visual representation of the removal procedure.
Steps
1. Remove the five screws (M3x5) that secure the system-board shield to the display-assembly base.
2. Lift the system-board shield off the display-assembly base.

Installing the system-board shield

Prerequisites
If you are replacing a component, remove the existing component before performing the installation procedure.

About this task
The following image indicates the location of the system-board shield and provides a visual representation of the installation procedure.
Steps
1. Align the screw holes on the system-board shield with the screw holes on the display-assembly base.
2. Replace the five screws (M3x5) to secure the system-board shield to the display-assembly base.

Next steps
1. Install the back cover.
2. Install the cable cover (optional).
3. Install the stand.
4. Follow the procedure in After working inside your computer.

Solid-state drive

Removing the M.2 2230 solid-state drive

Prerequisites
1. Follow the procedure in Before working inside your computer.
2. Remove the stand.
3. Remove the cable cover (optional).
4. Remove the back cover.
5. Remove the system-board shield.
About this task
The following image indicates the location of the M.2 2230 solid-state drive and provides a visual representation of the removal procedure.

Steps
1. Remove the screw (M2x2.5) that secures the solid-state drive to the system board.
2. Slide and remove the solid-state drive from the M.2 card slot on the system board.

Installing the M.2 2230 solid-state drive

Prerequisites

⚠️ CAUTION: Solid-state drives are fragile. Exercise care when handling the solid-state drive.

If you are replacing a component, remove the existing component before performing the installation procedure.

About this task
The following image indicates the location of the M.2 2230 solid-state drive and provides a visual representation of the installation procedure.
Steps
1. Align the notch on the solid-state drive with the tab on the M.2 card slot.
2. Slide the solid-state drive into the M.2 card slot on the system board.
3. Replace the screw (M2x2.5) to secure the solid-state drive to the system board.

Next steps
1. Install the system-board shield.
2. Install the back cover.
3. Install the cable cover (optional).
4. Install the stand.
5. Follow the procedure in After working inside your computer.

Removing the M.2 2280 solid-state drive/Intel Optane memory module

Prerequisites
1. Follow the procedure in Before working inside your computer.
2. Remove the stand.
3. Remove the cable cover (optional).
4. Remove the back cover.
5. Remove the system-board shield.

About this task
The following image indicates the location of the M.2 2280 solid-state drive/Intel Optane memory module and provides a visual representation of the removal procedure.
Steps
1. Remove the screw (M2x2.5) that secures the solid-state drive to the system board.
2. Slide and remove the solid-state drive from the M.2 card slot on the system board.

Installing the M.2 2280 solid-state drive/Intel Optane memory module

Prerequisites
⚠️ **CAUTION:** Solid-state drives are fragile. Exercise care when handling the solid-state drive.

If you are replacing a component, remove the existing component before performing the installation procedure.

About this task
The following image indicates the location of the M.2 2280 solid-state drive/Intel Optane memory module and provides a visual representation of the installation procedure.
Steps
1. Align the notch on the solid-state drive with the tab on the M.2 card slot.
2. Slide the solid-state drive into the M.2 card slot on the system board.
3. Replace the screw (M2x2.5) to secure the solid-state drive to the system board.

Next steps
1. Install the system-board shield.
2. Install the back cover.
3. Install the cable cover (optional).
4. Install the stand.
5. Follow the procedure in After working inside your computer.

System fan

Removing the system fan

Prerequisites
1. Follow the procedure in Before working inside your computer.
2. Remove the stand.
3. Remove the cable cover (optional).
4. Remove the back cover.
5. Remove the system-board shield.

About this task
The following image indicates the location of the system fan and provides a visual representation of the removal procedure.
Steps
1. Disconnect the system-fan cable from the system board.
2. Remove the three screws (M3x5) that secure the system fan to the display-assembly base.
3. Lift the system fan, along with its cable, off the display-assembly base.

Installing the system fan

Prerequisites
If you are replacing a component, remove the existing component before performing the installation procedure.

About this task
The following image indicates the location of the system fan and provides a visual representation of the installation procedure.
Steps
1. Align the screw holes on the system fan with the screw holes on the display-assembly base.
2. Replace the three screws (M3x5) to secure the system fan to the display-assembly base.
3. Connect the system-fan cable to the connector on the system board.

Next steps
1. Install the system-board shield.
2. Install the back cover.
3. Install the cable cover (optional).
4. Install the stand.
5. Follow the procedure in After working inside your computer.

Coin-cell battery

Removing the coin-cell battery

Prerequisites
1. Follow the procedure in Before working inside your computer.
2. Remove the stand.
3. Remove the cable cover (optional).
4. Remove the back cover.
5. Remove the system-board shield.

NOTE: Removing the coin-cell battery resets the CMOS and BIOS settings to default and results in data lose. It is recommended that you note the CMOS and BIOS settings before removing the coin-cell battery.

About this task
The following image indicates the location of the coin-cell battery and provides a visual representation of the removal procedure.
Steps
1. Using the plastic scribe, press on the metal clip to release the coin-cell battery from the coin-cell battery holder.
2. Lift the coin-cell battery from the coin-cell battery holder.

Installing the coin-cell battery

Prerequisites
If you are replacing a component, remove the existing component before performing the installation procedure.

About this task
The following image indicates the location of the coin-cell battery and provides a visual representation of the installation procedure.
Steps
With the positive-side facing up, insert the coin-cell battery into the battery holder on the system board and gently press the battery until it snaps into place.

Next steps
1. Install the system-board shield.
2. Install the back cover.
3. Install the cable cover (optional).
4. Install the stand.
5. Follow the procedure in After working inside your computer.

Wireless card

Removing the wireless card

Prerequisites
1. Follow the procedure in Before working inside your computer.
2. Remove the stand.
3. Remove the cable cover (optional).
4. Remove the back cover.
5. Remove the system-board shield.

About this task
The following image indicates the location of the wireless card and provides a visual representation of the removal procedure.
Steps
1. Remove the two screws (M2x2.5) that secure the wireless-card shield to the system board.
2. Unroute the antenna cables from the routing guides on the wireless-card shield.
3. Lift the wireless-card shield out of the system.
4. Remove the screw (M2x2.5) that secures the wireless-card bracket to the wireless card.
5. Slide and remove the wireless-card bracket off the wireless card.
6. Disconnect the antenna cables from the wireless card.
7. Slide and remove the wireless card from the wireless-card slot.

Installing the wireless card

Prerequisites
If you are replacing a component, remove the existing component before performing the installation procedure.

⚠️ CAUTION: To avoid damage to the wireless card, route the antenna cables accurately.

About this task
The following image indicates the location of the wireless card and provides a visual representation of the installation procedure.
Steps

1. Connect the antenna cables to the wireless card.
   The following table provides the antenna-cable color scheme:

   **Table 2. Antenna-cable color scheme**

<table>
<thead>
<tr>
<th>Connectors on the wireless card</th>
<th>Antenna-cable color</th>
</tr>
</thead>
<tbody>
<tr>
<td>Main (white triangle)</td>
<td>White</td>
</tr>
<tr>
<td>Auxiliary (black triangle)</td>
<td>Black</td>
</tr>
</tbody>
</table>

2. Place the wireless-card bracket on the wireless card.
3. Align the notch on the wireless card with the tab on the wireless-card slot.
4. Slide the wireless card at an angle into the wireless-card slot.
5. Replace the screw (M2x2.5) to secure the wireless-card bracket to the wireless card.
6. Align and place the wireless-card shield on the system board and wireless card.
7. Replace the two screws (M2x2.5) to secure the wireless-card shield to the system board.
8. Route the antenna cables through the routing guides on the wireless-card shield.

Next steps

1. Install the system-board shield.
2. Install the back cover.
3. Install the cable cover (optional).
4. Install the stand.
5. Follow the procedure in After working inside your computer.
Camera assembly

Removing the camera assembly

Prerequisites

1. Follow the procedure in Before working inside your computer.
2. Remove the stand.
3. Remove the cable cover (optional).
4. Remove the back cover.
5. Remove the system-board shield.

About this task

The following image indicates the location of the camera assembly and provides a visual representation of the removal procedure.

Steps

1. Remove the two screws (M3x5) that secure the camera-assembly door to the display-assembly base.
2. Disconnect the camera cable from the connector on the system board.
3. Unroute the camera cable from the routing guides on the display-assembly base.
4. Remove the two screws (M3x5) that secure the camera assembly to the middle frame.
5. Slide and remove the camera assembly from the middle frame.

Installing the camera assembly

Prerequisites
If you are replacing a component, remove the existing component before performing the installation procedure.

About this task
The following image indicates the location of the camera assembly and provides a visual representation of the installation procedure.

Steps
1. Slide the camera assembly on the middle frame, and align the screw holes on the camera assembly with the screw holes on the middle frame.
2. Replace the two screws (M3x5) to secure the camera assembly to the middle frame.
3. Route the camera cable through the routing guides on the display-assembly base.
4. Connect the camera cable to the system board.
5. Align the screw holes on the camera door with the screw holes on the display-assembly base.
6. Replace the two screws (M3x5) to secure the camera door to the display-assembly base.

Next steps
1. Install the system-board shield.
2. Install the back cover.
3. Install the cable cover (optional).
4. Install the stand.
5. Follow the procedure in After working inside your computer.

Bottom cover

Removing the bottom cover

Prerequisites
1. Follow the procedure in Before working inside your computer.
2. Remove the stand.
3. Remove the cable cover (optional).
4. Remove the back cover.
5. Remove the system-board shield.

About this task
The following image indicates the location of the bottom cover and provides a visual representation of the removal procedure.

Steps
1. Remove the four screws (M3x5) that secure the bottom cover to the display-assembly base.
2. Lift the bottom cover off the display-assembly base.

# Installing the bottom cover

## Prerequisites

If you are replacing a component, remove the existing component before performing the installation procedure.

## About this task

The following image indicates the location of the bottom cover and provides a visual representation of the installation procedure.

### Steps

1. Align the screw holes on the bottom cover with the screw holes on the display-assembly base.
2. Replace the four screws (M3x5) to secure the bottom cover to the display-assembly base.

## Next steps

1. Install the system-board shield.
2. Install the back cover.
3. Install the cable cover (optional).
4. Install the stand.
5. Follow the procedure in After working inside your computer.
Power-supply unit

Removing the power-supply unit (PSU)

Prerequisites
1. Follow the procedure in Before working inside your computer.
2. Remove the stand.
3. Remove the cable cover (optional).
4. Remove the back cover.
5. Remove the system-board shield.
6. Remove the bottom cover.

About this task
The following image provides a visual representation of the PSU removal procedure.
Steps
1. Remove the screw (M3x5) that secures the power-supply socket to the rear-I/O bracket.
2. Slide the power-supply socket out of the rear-I/O bracket.
3. Remove the power-supply cable from the routing guides on the rear-I/O bracket and PSU fan.
4. Disconnect the power-supply cable from the connector on the system board.
5. Remove the screw (M3x5) that secures the PSU to the display-assembly base.
6. Lift the PSU out of the system.

Installing the power-supply unit (PSU)

Prerequisites
If you are replacing a component, remove the existing component before performing the installation procedure.

About this task
The following image provides a visual representation of the PSU installation procedure.
Removing and installing components

1

2

2x M3x5
Steps
1. Align and place the PSU in the slot on the display-assembly base.
2. Replace the screw (M3x5) to secure the PSU to the display-assembly base.
3. Connect the power-supply cable to the connector on the system board.
4. Route the power-supply cable through the routing guides on the rear-I/O bracket and PSU fan.
5. Align the screw hole on the power-supply socket with the screw hole on the rear-I/O bracket, and place it in the slot on the rear-I/O bracket.
6. Replace the screw (M3x5) to secure the power-supply socket to the rear-I/O bracket.

Next steps
1. Install the bottom cover.
2. Install the system-board shield.
3. Install the back cover.
4. Install the cable cover (optional).
5. Install the stand.
6. Follow the procedure in After working inside your computer.

Power-supply fan

Removing the PSU fan

Prerequisites
1. Follow the procedure in Before working inside your computer.
2. Remove the stand.
3. Remove the cable cover (optional).
4. Remove the back cover.
5. Remove the system-board shield.
6. Remove the bottom cover.

About this task
The following image indicates the location of the PSU fan and provides a visual representation of the removal procedure.
Steps
1. Remove the power-supply cable from the routing guides on the PSU fan.
2. Disconnect the PSU-fan cable from the system board.
3. Remove the two screws (M3x5) that secure the PSU fan to the display-assembly base.
4. Lift the PSU fan from the display-assembly base.

Installing the PSU fan

Prerequisites
If you are replacing a component, remove the existing component before performing the installation procedure.

About this task
The following image indicates the location of the PSU fan and provides a visual representation of the installation procedure.
**Steps**

1. Align the screw holes on the PSU fan with the screw holes on the display-assembly base.
2. Replace the two screws (M3x5) to secure the PSU fan to the display-assembly base.
3. Connect the PSU-fan cable to the connector on the system board.
4. Route the power-supply cable through the routing guides on the PSU fan.

**Next steps**

1. Install the bottom cover.
2. Install the system-board shield.
3. Install the back cover.
4. Install the cable cover (optional).
5. Install the stand.
6. Follow the procedure in After working inside your computer.

---

**Heat sink**

**Removing the heat sink—UMA**

**Prerequisites**

1. Follow the procedure in Before working inside your computer.
2. Remove the stand.
3. Remove the cable cover (optional).
4. Remove the back cover.
5. Remove the system-board shield.
6. Remove the system fan.

**About this task**

The following image indicates the location of the heat sink and provides a visual representation of the removal procedure.
Steps
1. In reverse sequential order (as indicated on the heat sink), loosen the five captive screws that secure the heat sink to the system board and the display-assembly base.
2. Slide and lift the heat sink off the system board and display-assembly base.

Installing the heat sink—UMA

Prerequisites
If you are replacing a component, remove the existing component before performing the installation procedure.

NOTE: If either the system board or the heat sink is replaced, use the thermal pad/paste provided in the kit to ensure that thermal conductivity is achieved.

About this task
The following image indicates the location of the heat sink and provides a visual representation of the installation procedure.
Steps
1. Align the screw holes on the heat sink with the screw holes on the system board and the display-assembly base.
2. In sequential order (as indicated on the heat sink), tighten the five captive screws that secure the heat sink to the system board and display-assembly base.

Next steps
1. Install the system fan.
2. Install the system-board shield.
3. Install the back cover.
4. Install the cable cover (optional).
5. Install the stand.
6. Follow the procedure in After working inside your computer.

Removing the heat sink—discrete

Prerequisites
1. Follow the procedure in Before working inside your computer.
2. Remove the stand.
3. Remove the cable cover (optional).
4. Remove the back cover.
5. Remove the system-board shield.
6. Remove the system fan.
About this task
The following image provides a visual representation of the heat sink removal procedure.

Steps
1. In reverse sequential order (as indicated on the heat sink), loosen the nine captive screws that secure the heat sink to the system board and the display-assembly base.
2. Slide and lift the heat sink off the system board and display-assembly base.

Installing the heat sink—discrete

Prerequisites
If you are replacing a component, remove the existing component before performing the installation procedure.

**NOTE:** If either the system board or the heat sink is replaced, use the thermal pad/paste provided in the kit to ensure that thermal conductivity is achieved.

About this task
The following image provides a visual representation of the heat sink installation procedure.
Steps
1. Align the screw holes on the heat sink with the screw holes on the system board and the display-assembly base.
2. In sequential order (as indicated on the heat sink), tighten the nine captive screws to secure the heat sink to the system board and display-assembly base.

Next steps
1. Install the system fan.
2. Install the system-board shield.
3. Install the back cover.
4. Install the cable cover (optional).
5. Install the stand.
6. Follow the procedure in After working inside your computer.

Processor

Removing the processor

Prerequisites
1. Follow the procedure in Before working inside your computer.
2. Remove the stand.
3. Remove the cable cover (optional).
4. Remove the back cover.
5. Remove the system-board shield.
6. Remove the heat sink.

About this task
The following image indicates the location of the processor and provides a visual representation of the removal procedure.

Steps
1. Press the release lever down and then push it away from the processor to release it from the securing tab.
2. Extend the release lever completely, and open the processor cover.
   
   CAUTION: When removing the processor, do not touch any of the pins inside the socket or allow any objects to fall on the pins in the socket.
3. Gently lift the processor from the processor socket.

Installing the processor

Prerequisites
If you are replacing a component, remove the existing component before performing the installation procedure.

About this task
The following image indicates the location of the processor and provides a visual representation of the installation procedure.
Steps

1. Ensure that the release lever on the processor socket is fully extended in the open position.

   **NOTE:** The pin-1 corner of the processor has a triangle that aligns with the triangle on the pin-1 corner on the processor socket. When the processor is properly seated, all four corners are aligned at the same height. If one or more corners of the processor are higher than the others, the processor is not seated properly.

2. Align the notches on the processor with the tabs on the processor socket and place the processor in the processor socket.

   **CAUTION:** Ensure that the processor-cover notch is positioned underneath the alignment post.

3. When the processor is fully seated in the socket, pivot the release-lever down and place it under the tab on the processor cover.

Next steps

1. Install the heat sink.
2. Install the system-board shield.
3. Install the back cover.
4. Install the cable cover (optional).
5. Install the stand.
6. Follow the procedure in After working inside your computer.
Rear-I/O bracket

Removing the rear-I/O bracket

Prerequisites
1. Follow the procedure in Before working inside your computer.
2. Remove the stand.
3. Remove the cable cover (optional).
4. Remove the back cover.
5. Remove the system-board shield.
6. Remove the bottom cover.

About this task
The following image indicates the location of the rear-I/O bracket and provides a visual representation of the removal procedure.
Steps
1. Remove the screw (M3x5) that secures the power-supply socket to the rear-I/O bracket.
2. Remove the power-supply cable from the routing guide on the rear-I/O bracket.
3. Slide and remove the power-supply socket away from the rear-I/O bracket.
4. Remove the three screws (M3x5) that secure the rear-I/O bracket to the display-assembly base.
5. Lift the rear-I/O bracket off the display-assembly base.

Installing the rear-I/O bracket

Prerequisites
If you are replacing a component, remove the existing component before performing the installation procedure.

About this task
The following image indicates the location of the rear-I/O bracket and provides a visual representation of the installation procedure.
Steps

1. Align the screw holes on the rear-I/O bracket with the screw holes on the display-assembly base.
2. Replace the three screws (M3x5) to secure the rear-I/O bracket to the display-assembly base.
3. Route the power-supply cables through the routing guide on the rear-I/O bracket.
4. Align the screw hole on the power-supply socket with the screw hole on the rear-I/O bracket, and place it in the slot on the rear-I/O bracket.
5. Replace the screw (M3x5) to secure the power-supply socket to the rear-I/O bracket.

Next steps

1. Install the bottom cover.
2. Install the system-board shield.
3. Install the back cover.
4. Install the cable cover (optional).
5. Install the stand.
6. Follow the procedure in After working inside your computer.

System board

Removing the system board

Prerequisites

1. Follow the procedure in Before working inside your computer.

**NOTE:** Your computer’s Service Tag is stored in the system board. You must enter the Service Tag in the BIOS setup program after you replace the system board.
NOTE: Replacing the system board removes any changes you have made to the BIOS using the BIOS setup program. You must make the appropriate changes again after you replace the system board.

2. Remove the stand.
3. Remove the cable cover (optional).
4. Remove the back cover.
5. Remove the hard drive.
6. Remove the system-board shield.
7. Remove the memory modules.
8. Remove the wireless card.
9. Remove the M.2 2230 solid-state drive.
10. Remove the M.2 2280 solid-state drive/Intel Optane memory.
11. Remove the heat sink.
12. Remove the processor.
13. Remove the coin-cell battery.
14. Remove the bottom cover.
15. Remove the rear-I/O bracket.

About this task
The following image indicates the connectors on your system board.
11. SIO-power cable connector  
12. Audio-board cable connector  
13. Microphone-module cable connector  
14. Speaker cable connector  
15. Coin-cell battery  
16. Power-button cable connector  
17. Display cable connector  
18. M.2 WLAN connector  
19. PSU-fan cable connector  
20. Touchscreen cable connector  
21. Processor

The following image indicates the location of the system board and provides a visual representation of the removal procedure.
Steps

1. Disconnect the display back-light cable from the connector on the system board.
2. Disconnect the display cable from the connector on the system board.
3. Disconnect the PSU cable from the connector on the system board.
4. Disconnect the PSU fan cable from the connector on the system board.
5. Open the latch and disconnect the power-button board cable from the connector on the system board.
6. Disconnect the speaker cable from the connector on the system board.
7. Disconnect the microphone-module cable from the connector on the system board.
8. Disconnect the SIO–signal cable from the connector on the system board.
9. Disconnect the SIO–power cable from the connector on the system board.
10. Disconnect the audio-board cable from the connector on the system board.
11. Disconnect the system-fan cable from the connector on the system board.
12. Disconnect the touchscreen cable from the connector on the system board.
13. Disconnect the camera cable from the connector on the system board.
14. Remove the nine screws (M3x5) that secure the system board to the display-assembly base.
15. Lift and remove the system board from the display-assembly base.

Installing the system board

Prerequisites
If you are replacing a component, remove the existing component before performing the installation procedure.

About this task
The following image indicates the connectors on your system board.
9. M.2 2230/2280 solid-state drive PCIe connector
10. SIO-signal cable connector
11. SIO-power cable connector
12. Audio-board cable connector
13. Microphone-module cable connector
14. Speaker cable connector
15. Coin-cell battery
16. Power-button cable connector
17. Display cable connector
18. M.2 WLAN connector
19. PSU-fan cable connector
20. Touchscreen cable connector
21. Processor

The following image indicates the location of the system board and provides a visual representation of the installation procedure.
Steps
1. Align the screw holes on the system board with the screw holes on the display-assembly base.
2. Replace the nine screws (M3x5) to secure the system board to the display-assembly base.
3. Connect the camera cable to the connector system board.
4. Connect the touchscreen cable to the system board.
5. Connect the system fan cable to the system board.
6. Connect the audio-board cable to the system board.
7. Connect the SIO-power cable to the system board.
8. Connect the SIO-signal cable to the system board.
9. Connect the microphone-module cable to the system board.
10. Connect the speaker cable to the system board.
11. Connect the power-button board cable to the system board and close the latch to secure the cable.
12. Connect the PSU-fan cable to the system board.
13. Connect the PSU cable to the system board.
14. Connect the display cable to the system board.
15. Connect the display back-light cable to the system board.

Next steps
1. Install the rear-I/O bracket.
2. Install the bottom cover.
3. Install the coin-cell battery.
4. Install the processor.
5. Install the heat sink.
6. Install the M.2 2280 solid-state drive/Intel Optane memory.
7. Install the M.2 2230 solid-state drive.
8. Install the wireless card.
9. Install the memory modules.
10. Install the system-board shield.
11. Install the hard drive.
12. Install the back cover.
13. Install the cable cover (optional).
14. Install the stand.
15. Follow the procedure in After working inside your computer.
NOTE: Your computer’s Service Tag is stored in the system board. You must enter the Service Tag in the BIOS setup program after you replace the system board.

NOTE: Replacing the system board removes any changes you have made to the BIOS using the BIOS setup program. You must make the appropriate changes again after you replace the system board.

Speakers

Removing the speakers

Prerequisites

1. Follow the procedure in Before working inside your computer.
2. Remove the stand.
3. Remove the cable cover (optional).
4. Remove the back cover.
5. Remove the system-board shield.
6. Remove the bottom cover.
7. Remove the rear-I/O bracket.

About this task

The following image indicates the location of the speakers and provides a visual representation of the removal procedure.
Installing the speakers

Prerequisites
If you are replacing a component, remove the existing component before performing the installation procedure.

About this task
The following image indicates the location of the speakers and provides a visual representation of the installation procedure.

Steps
1. Align the screw holes on the speakers with the screw holes on the display-assembly base.
2. Replace the six screws (M3 4+7.1xZN) to secure the speakers to the display-assembly base.
3. Route the speaker cable through the routing guide on display-assembly base and connect the speaker cable to the system board.

Next steps
1. Install the rear-I/O bracket.
2. Install the bottom cover.
3. Install the system-board shield.
4. Install the back cover.
5. Install the cable cover (optional).
6. Install the stand.
7. Follow the procedure in After working inside your computer.

**Power-button board**

**Removing the power-button board**

**Prerequisites**
1. Follow the procedure in Before working inside your computer.
2. Remove the stand.
3. Remove the cable cover (optional).
4. Remove the back cover.
5. Remove the system-board shield.
6. Remove the bottom cover.
7. Remove the rear-I/O bracket.
8. Remove the speakers.

**About this task**
The following image provides a visual representation of the power-button board removal procedure.

**Steps**
1. Open the latch and disconnect the power-button board cable from the connector on the system board.
2. Unroute the power-button board cable from the display-assembly base, then slide the power-button board cable out from under the antenna cables.
3. Remove the screw (M3x5) that secures the power-button board to the middle frame.
4. Lift the power-button board, along with its cable, off the middle frame.
Installing the power-button board

Prerequisites
If you are replacing a component, remove the existing component before performing the installation procedure.

About this task
The following image provides a visual representation of the power-button board installation procedure.

Steps
1. Align and place the power-button board in the slot on the middle frame.
2. Replace the screw (M3x5) to secure the power-button board to the middle frame.
3. Slide the power-button board cable under the antenna cables, then route the power-button board cable to the display-assembly base.
4. Slide the power-button board cable into the connector on the system board and close the latch to secure the cable.

Next steps
1. Install the speakers.
2. Install the rear-I/O bracket.
3. Install the bottom cover.
4. Install the system-board shield.
5. Install the back cover.
6. Install the cable cover (optional).
7. Install the stand.
8. Follow the procedure in After working inside your computer.
Microphones

Removing the microphones

Prerequisites
1. Follow the procedure in Before working inside your computer.
2. Remove the stand.
3. Remove the cable cover (optional).
4. Remove the back cover.
5. Remove the system-board shield.
6. Remove the bottom cover.
7. Remove the rear-I/O bracket.
8. Remove the speakers.

About this task
The following image indicates the location of the microphones and provides a visual representation of the removal procedure.

Steps
1. Disconnect the microphone cable from the system board, and unroute it from the routing guides on the display-assembly base.
2. Remove the four screws (M2x2.5) that secure the microphone modules to the middle frame.
3. Lift the microphone modules off the slots on the middle frame.
Installing the microphones

Prerequisites
If you are replacing a component, remove the existing component before performing the installation procedure.

About this task
The following image indicates the location of the microphones and provides a visual representation of the installation procedure.

Steps
1. Align the screw holes on the microphone modules with the screw holes on the middle frame.
2. Replace the four screws (M2x2.5) to secure the microphone modules to the middle frame.
3. Route the microphone cable through the routing guides on the display-assembly base and connect the microphone cable to the system board.

Next steps
1. Install the speakers.
2. Install the rear-I/O bracket.
3. Install the bottom cover.
4. Install the system-board shield.
5. Install the back cover.
6. Install the cable cover (optional).
7. Install the stand.
8. Follow the procedure in After working inside your computer.
Side I/O-board

Removing the side-I/O board

Prerequisites
1. Follow the procedure in Before working inside your computer.
2. Remove the stand.
3. Remove the cable cover (optional).
4. Remove the back cover.
5. Remove the hard drive.
6. Remove the system-board shield.
7. Remove the bottom cover.
8. Remove the rear-I/O bracket.

About this task
The following image indicates the location of the side-I/O board and provides a visual representation of the removal procedure.
Steps
1. Remove the two screws (M3x5) that secure the side I/O-board shield to the display-assembly base.
2. Lift and remove the side I/O-board shield off the side-I/O board.
3. Disconnect the SIO-signal cable, SIO-power cable, and audio-board cable from the system board.
4. Remove the SIO-signal cable, SIO-power cable, and audio-board cable from the routing guides on the display-assembly base.
5. Remove the two screws (M2.5x3.5) that secure the side-I/O board to the display-assembly base.
6. Lift and remove the side-I/O board with cables off the display-assembly base.

Installing the side-I/O board

Prerequisites
If you are replacing a component, remove the existing component before performing the installation procedure.

About this task
The following image indicates the location of the side-I/O board and provides a visual representation of the installation procedure.

Steps
1. Align the screw holes on the side-I/O board with the screw holes on the display-assembly base.
2. Replace the two screws (M2.5x3.5) to secure the side-I/O board to the display-assembly base.
3. Route the SIO-signal cable, SIO-power cable, and audio-board cable through the routing guides on the display-assembly base.
4. Connect the SIO-signal cable, SIO-power cable, and audio-board cable to the connectors on the system board.
5. Align the screw holes on the side I/O-board shield with the screw holes on the display-assembly base.
6. Replace the two screws (M3x5) to secure the side I/O-board shield to the display-assembly base.

Next steps
1. Install the speakers.
2. Install the rear-I/O bracket.
3. Install the bottom cover.
4. Install the system-board shield.
5. Install the hard drive.
6. Install the back cover.
7. Install the cable cover (optional).
8. Install the stand.
9. Follow the procedure in After working inside your computer.

Audio board

Removing the audio board

Prerequisites
1. Follow the procedure in Before working inside your computer.
2. Remove the stand.
3. Remove the cable cover (optional).
4. Remove the back cover.
5. Remove the system-board shield.
6. Remove the wireless card.
7. Remove the bottom cover.
8. Remove the rear-I/O bracket.
9. Remove the speakers.
10. Remove the side-I/O board.

About this task
The following image indicates the location of the audio board and provides a visual representation of the installation procedure.
Steps
1. Disconnect the audio-board cable from the connector on the system board.
2. Remove the screw (M3x5) that secure the audio board to the display-assembly base.
3. Lift and remove the audio board with the cable off the display-assembly base.

Installing the audio board

Prerequisites
If you are replacing a component, remove the existing component before performing the installation procedure.

About this task
The following image indicates the location of the audio board and provides a visual representation of the removal procedure.
Steps

1. Align the screw hole on the audio board with the screw hole on the display-assembly base.
2. Replace the screw (M3x5) to secure the audio board to the display-assembly base.
3. Connect the audio-board cable to the system board.

Next steps

1. Install the side-I/O board.
2. Install the speakers.
3. Install the rear-I/O bracket.
4. Install the bottom cover.
5. Install the wireless card.
6. Install the system-board shield.
7. Install the back cover.
8. Install the cable cover (optional).
9. Install the stand.
10. Follow the procedure in After working inside your computer.

Antennas

Removing the antenna modules

Prerequisites

1. Follow the procedure in Before working inside your computer.
2. Remove the stand.
3. Remove the cable cover (optional).
4. Remove the back cover.
5. Remove the system-board shield.
6. Remove the wireless card.
7. Remove the bottom cover.
8. Remove the rear-I/O bracket.
9. Remove the speakers.

About this task
The following image provides a visual representation of the antenna modules removal procedure.

Steps
1. Remove the antenna cables from the routing guides on the display-assembly base.
2. Remove the two screws (M2x2.5) that secure the antenna modules to the middle frame.
3. Carefully peel the copper foil that secures the antenna cables to the middle frame.
4. Lift the antenna modules off the middle frame.

Installing the antenna modules

Prerequisites
If you are replacing a component, remove the existing component before performing the installation procedure.

About this task
The following image provides a visual representation of the antenna modules installation procedure.
Steps
1. Align and place the antenna modules in the slots on the middle frame.
2. Adhere the copper foil that secures the antenna cables to the middle frame.
3. Replace the two screws (M2x2.5) to secure the antenna modules to the middle frame.
4. Route the antenna cables through the routing guides on the display-assembly base.

Next steps
1. Install the speakers.
2. Install the rear-I/O bracket.
3. Install the bottom cover.
4. Install the wireless card.
5. Install the system-board shield.
6. Install the back cover.
7. Install the cable cover (optional).
8. Install the stand.
9. Follow the procedure in After working inside your computer.

Display panel

Removing the display panel

Prerequisites
1. Follow the procedure in Before working inside your computer.
2. Remove the stand.
3. Remove the cable cover (optional).
4. Remove the back cover.
5. Remove the system-board shield.
6. Remove the hard drive.
7. Remove the bottom cover.
8. Remove the rear-I/O bracket.
9. Remove the speakers.
10. Remove the camera assembly.
11. Remove the system board.
12. Remove the PSU.
13. Remove the PSU fan.

About this task
The following image provides a visual representation of the display panel removal procedure.
Steps

1. Remove the 11 screws (M3x5) that secure the display panel to the middle frame and display-assembly base.
2. Place the system in an upright position.
3. Holding the top corner, release the display panel away from the middle frame and display-assembly base.
4. Route the display back-light, touch screen, and display cable through the slots on the display-assembly base.
5. Lift the display panel up from the middle frame and display-assembly base.

Installing the display panel

Prerequisites

If you are replacing a component, remove the existing component before performing the installation procedure.

About this task

The following image provides a visual representation of the display panel installation procedure.
Steps
1. Place the system in an upright position, and slide the display panel on the slots of the display-assembly base.
2. Route the display-backlight, touch screen, and display cable through the slots on the display-assembly base.
3. Place the display-assembly base on a clean and flat surface with the display panel facing down.
4. Replace the 10 screws (M3x5) to secure the display panel to the middle frame and display-assembly base.
5. Remove the jig screw from the display panel.
6. Replace the screw (M3x5) to secure the display panel to the middle frame and display-assembly base.
7. Route the display cable in the routing guides on the display-assembly base.

Next steps
1. Install the PSU fan.
2. Install the PSU.
3. Install the system board.
4. Install the camera assembly.
5. Install the speakers.
6. Install the rear-I/O bracket.
7. Install the bottom cover.
8. Install the hard drive.
9. Install the system-board shield.
10. Install the back cover.
11. Install the cable cover (optional).
12. Install the stand.
13. Follow the procedure in After working inside your computer.

Middle frame

Removing the middle frame

Prerequisites
1. Follow the procedure in Before working inside your computer.
2. Remove the stand.
3. Remove the cable cover (optional).
4. Remove the back cover.
5. Remove the system-board shield.
6. Remove the hard drive.
7. Remove the wireless card.
8. Remove the bottom cover.
9. Remove the rear-I/O bracket.
10. Remove the speakers.
11. Remove the camera assembly.
12. Remove the system board.
13. Remove the power-button board.
14. Remove the microphones.
15. Remove the PSU.
16. Remove the PSU fan.
17. Remove the side-I/O board.
18. Remove the antenna modules.
19. Remove the display panel.

About this task
The following image provides a visual representation of the middle frame removal procedure.
Steps
1. Remove the 17 screws (M3x5) that secure the middle frame to the display-assembly base.
2. Remove the middle frame and lift the middle frame off the display-assembly base.
Installing the middle frame

Prerequisites
If you are replacing a component, remove the existing component before performing the installation procedure.

About this task
The following image provides a visual representation of the middle frame installation procedure.
Steps
1. Slide and align the middle frame to the slots on the display-assembly base, then snap the middle frame into place on the display-assembly base.
2. Replace the 17 screws (M3x5) to secure the middle frame to the display-assembly base.

Next steps
1. Install the display panel.
2. Install the antenna modules.
3. Install the side-I/O board.
4. Install the PSU fan.
5. Install the PSU.
6. Install the microphones.
7. Install the power-button board.
8. Install the system board.
9. Install the camera assembly.
10. Install the speakers.
11. Install the rear-I/O bracket.
12. Install the bottom cover.
13. Install the wireless card.
15. Install the system-board shield.
16. Install the back cover.
17. Install the cable cover (optional).
18. Install the stand.
19. Follow the procedure in After working inside your computer.
This chapter details the supported operating systems along with instructions on how to install the drivers.

Topics:

- Operating system
- Downloading the drivers

Operating system

- Windows 10 Home (64-bit)
- Windows 10 IoT Enterprise 2019 LTSC (OEM Only)
- Windows 10 Professional (64-bit)
- Windows 10 Pro Education (64-bit)
- NeoKylin 7.0 (China only)
- Ubuntu 18.04 (64-bit)

Downloading the drivers

Steps

1. Turn on your computer.
2. Go to www.dell.com/support.
3. Enter the Service Tag of your computer, and then click Submit.
   
   !WARNING: If you do not have the Service Tag, use the auto-detect feature or manually browse for your computer model.

4. Click Drivers & downloads.
5. Click the Detect Drivers button.
6. Review and agree to the Terms and Conditions to use SupportAssist, then click Continue.
7. If necessary, your computer starts to download and install SupportAssist.

   !WARNING: Review on-screen instructions for browser-specific instructions.

8. Click View Drivers for My System.
9. Click Download and Install to download and install all driver updates detected for your computer.
10. Select a location to save the files.
11. If prompted, approve requests from User Account Control to make changes on the system.
12. The application installs all drivers and updates identified.

   !WARNING: Not all files can be installed automatically. Review the installation summary to identify if manual installation is necessary.

13. For manual download and installation, click Category.
14. From the drop-down list, select the preferred driver.
15. Click Download to download the driver for your computer.
16. After the download is complete, navigate to the folder where you saved the driver file.
17. Double-click the driver file icon and follow the instructions on the screen to install the driver.
Topics:

- BIOS overview
- Entering BIOS setup program
- Navigation keys
- Boot Sequence
- System setup options
- System and setup password

**BIOS overview**

The BIOS manages data flow between the computer's operating system and attached devices such as hard disk, video adapter, keyboard, mouse, and printer.

**Entering BIOS setup program**

**About this task**

Turn on (or restart) your computer and press F2 immediately.

**Navigation keys**

**NOTE:** For most of the System Setup options, changes that you make are recorded but do not take effect until you restart the system.

<table>
<thead>
<tr>
<th>Keys</th>
<th>Navigation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Up arrow</td>
<td>Moves to the previous field.</td>
</tr>
<tr>
<td>Down arrow</td>
<td>Moves to the next field.</td>
</tr>
<tr>
<td>Enter</td>
<td>Selects a value in the selected field (if applicable) or follow the link in the field.</td>
</tr>
<tr>
<td>Spacebar</td>
<td>Expands or collapses a drop-down list, if applicable.</td>
</tr>
<tr>
<td>Tab</td>
<td>Moves to the next focus area.</td>
</tr>
<tr>
<td>Esc</td>
<td>Moves to the previous page until you view the main screen. Pressing Esc in the main screen displays a message that prompts you to save any unsaved changes and restarts the system.</td>
</tr>
</tbody>
</table>

**Boot Sequence**

Boot Sequence allows you to bypass the System Setup–defined boot device order and boot directly to a specific device (for example: optical drive or hard drive). During the Power-on Self-Test (POST), when the Dell logo appears, you can:

- Access System Setup by pressing F2 key
- Bring up the one-time boot menu by pressing F12 key.

The one-time boot menu displays the devices that you can boot from including the diagnostic option. The boot menu options are:

- UEFI BOOT
System setup options

NOTE: Depending on this computer and its installed devices, the items listed in this section may or may not appear.

You can create a system password and a setup password to secure your computer.

⚠️ **CAUTION:** The password features provide a basic level of security for the data on your computer.

⚠️ **CAUTION:** Anyone can access the data stored on your computer if it is not locked and left unattended.

ℹ️ **NOTE:** System and setup password feature is disabled.
Assigning a system setup password

Prerequisites
You can assign a new System or Admin Password only when the status is in Not Set.

About this task
To enter the system setup, press F2 immediately after a power-on or reboot.

Steps
1. In the System BIOS or System Setup screen, select Security and press Enter.
   The Security screen is displayed.
2. Select System/Admin Password and create a password in the Enter the new password field.
   Use the following guidelines to assign the system password:
   • A password can have up to 32 characters.
   • The password can contain the numbers 0 through 9.
   • Only lower case letters are valid, upper case letters are not allowed.
   • Only the following special characters are allowed: space, ("), (+), (,), (-), (.), (/), (;), ([), (]), (\), (`).
3. Type the system password that you entered earlier in the Confirm new password field and click OK.
4. Press Esc and a message prompts you to save the changes.
5. Press Y to save the changes.
The computer reboots.

Deleting or changing an existing system setup password

Prerequisites
Ensure that the Password Status is Unlocked (in the System Setup) before attempting to delete or change the existing System and Setup password. You cannot delete or change an existing System or Setup password, if the Password Status is Locked.

About this task
To enter the System Setup, press F2 immediately after a power-on or reboot.

Steps
1. In the System BIOS or System Setup screen, select System Security and press Enter.
   The System Security screen is displayed.
2. In the System Security screen, verify that Password Status is Unlocked.
3. Select System Password, alter or delete the existing system password and press Enter or Tab.
4. Select Setup Password, alter or delete the existing setup password and press Enter or Tab.
   NOTE: If you change the System and/or Setup password, re enter the new password when prompted. If you delete the System and Setup password, confirm the deletion when prompted.
5. Press Esc and a message prompts you to save the changes.
6. Press Y to save the changes and exit from System Setup.
The computer restarts.
Troubleshooting

Dell SupportAssist Pre-boot System Performance Check diagnostics

About this task

The SupportAssist diagnostics (also known as system diagnostics) performs a complete check of your hardware. The Dell SupportAssist Pre-boot System Performance Check diagnostics is embedded with the BIOS and is launched by the BIOS internally. The embedded system diagnostics provides a set of options for particular devices or device groups allowing you to:

- Run tests automatically or in an interactive mode
- Repeat tests
- Display or save test results
- Run thorough tests to introduce additional test options to provide extra information about the failed device(s)
- View status messages that inform you if tests are completed successfully
- View error messages that inform you of problems encountered during testing

**NOTE:** Some tests for specific devices require user interaction. Always ensure that you are present at the computer terminal when the diagnostic tests are performed.

For more information, see Resolve Hardware Issues With Built-in and Online Diagnostics (SupportAssist ePSA, ePSA or PSA Error Codes).

Running the SupportAssist Pre-Boot System Performance Check

Steps

1. Turn on your computer.
2. As the computer boots, press the F12 key as the Dell logo appears.
3. On the boot menu screen, select the **Diagnostics** option.
4. Click the arrow at the bottom left corner. Diagnostics front page is displayed.
5. Click the arrow in the lower-right corner to go to the page listing. The items detected are listed.
6. To run a diagnostic test on a specific device, press Esc and click **Yes** to stop the diagnostic test.
7. Select the device from the left pane and click **Run Tests**.
8. If there are any issues, error codes are displayed. Note the error code and validation number and contact Dell.

Display built-in self test

About this task

The following procedure provides the instructions on how to run the built-in self test for the display:

Steps

1. Turn off your computer.
2. Press and hold the display built-in self test button.
3. Press and hold the power button.
4. Release the power button.
5. Hold the display built-in self test button until the test starts.

**Diagnostics**

**Power status indicator light:** Indicates the power status.

**Solid amber** — The system is unable to boot to the operating system. This indicates that the power supply or another device in the system is failing.

**Blinking white** — The system is unable to boot to the operating system. This indicates that the power supply is normal but another device in the system is failing or not installed properly.

**NOTE:** See the light patterns to determine if the device that is failing.

**Off** — System is in hibernation or turned off.

The power status indicator blinks amber along with beep codes indicating failures.

For example, the power status indicator blinks amber two times followed by a pause, and then blinks white three times followed by a pause. This 2,3 pattern continues until the system is turned off indicating the Recovery image is not found.

The following table shows different light patterns and what they indicate:

**Table 19. Diagnostic LED behavior**

Recovering the operating system

When your computer is unable to boot to the operating system even after repeated attempts, it automatically starts Dell SupportAssist OS Recovery.

Dell SupportAssist OS Recovery is a standalone tool that is preinstalled in all Dell computers installed with Windows 10 operating system. It consists of tools to diagnose and troubleshoot issues that may occur before your computer boots to the operating system. It enables you to diagnose hardware issues, repair your computer, back up your files, or restore your computer to its factory state.

You can also download it from the Dell Support website to troubleshoot and fix your computer when it fails to boot into their primary operating system due to software or hardware failures.

For more information about the Dell SupportAssist OS Recovery, see Dell SupportAssist OS Recovery User’s Guide at www.dell.com/support.

Flashing BIOS (USB key)

Steps

1. Follow the procedure from step 1 to step 7 in "Flashing the BIOS" to download the latest BIOS setup program file.
2. Create a bootable USB drive. For more information see the knowledge base article SLN143196 at www.dell.com/support.
3. Copy the BIOS setup program file to the bootable USB drive.
4. Connect the bootable USB drive to the computer that needs the BIOS update.
5. Restart the computer and press F12 when the Dell logo is displayed on the screen.
6. Boot to the USB drive from the One Time Boot Menu.
7. Type the BIOS setup program filename and press Enter.
8. The BIOS Update Utility appears. Follow the instructions on the screen to complete the BIOS update.

Flashing the BIOS

About this task

You may need to flash (update) the BIOS when an update is available or when you replace the system board.
Follow these steps to flash the BIOS:

**Steps**

1. Turn on your computer.
2. Go to www.dell.com/support.
3. Click **Product support**, enter the Service Tag of your computer, and then click **Submit**.
   
   ![NOTE:](image) If you do not have the Service Tag, use the auto-detect feature or manually browse for your computer model.

4. Click **Drivers & downloads > Find it myself**.
5. Select the operating system installed on your computer.
6. Scroll down the page and expand **BIOS**.
7. Click **Download** to download the latest version of the BIOS for your computer.
8. After the download is complete, navigate to the folder where you saved the BIOS update file.
9. Double-click the BIOS update file icon and follow the instructions on the screen.

**WiFi power cycle**

**About this task**

If your computer is unable to access the internet due to WiFi connectivity issues a WiFi power cycle procedure may be performed. The following procedure provides the instructions on how to conduct a WiFi power cycle:

![NOTE:](image) Some ISPs (Internet Service Providers) provide a modem/router combo device.

**Steps**

1. Turn off your computer.
2. Turn off the modem.
3. Turn off the wireless router.
4. Wait for 30 seconds.
5. Turn on the wireless router.
6. Turn on the modem.
7. Turn on your computer.

**Flea power release**

**About this task**

Flea power is the residual static electricity that remains on the computer even after it has been powered off and the battery has been removed. The following procedure provides the instructions on how to conduct flea power release:

**Steps**

1. Turn off your computer.
2. Disconnect the power adapter from your computer.
3. Press and hold the power button for 15 seconds to drain the flea power.
4. Connect the power adapter to your computer.
5. Turn on your computer.
