Notes, cautions, and warnings

**NOTE:** A NOTE indicates important information that helps you make better use of your product.

**CAUTION:** A CAUTION indicates either potential damage to hardware or loss of data and tells you how to avoid the problem.

**WARNING:** A WARNING indicates a potential for property damage, personal injury, or death.

Dell Power Manager software provides simplified and efficient power management capabilities for the Dell notebooks and tablets running on Windows 10 operating systems.

Topics:
- Key Features
- Access Dell Power Manager

Key Features
- **Battery Information** – Display health information for up to six installed batteries, depending on system capabilities, and edit battery settings or create a custom battery setting.
- **Advanced Charge** – Control battery charging to prolong battery life.
- **Peak Shift** – Reduce power consumption by automatically switching the system to battery power during certain times of the day, even when the system is plugged into a direct power source.
- **Thermal Management** – Control processor and cooling fan settings to manage performance, system surface temperature, and fan noise.
- **Battery Extender** – Conserve battery charge by affecting CPU power level, screen brightness and keyboard illumination levels, and by muting audio.
- **Alert Settings** – Allows you to restore the default alert settings.

Access Dell Power Manager
To open the Dell Power Manager application, click the Windows Start button, and then do one of the following:
- Click **All Apps > Dell Power Manager**.
- Type **Dell Power Manager** in the **Search programs and files** box. In the search results, click the application to start it.

**NOTE:** This software is available only on Windows 10 Operating System.
NOTE: If a non-Dell battery is attached to your system, the battery graphic is displayed as orange color.

Dell Power Manager provides detailed information about your system’s batteries, including:

- Whether your system is plugged in or using battery power
- Percentage of your system’s total battery power remaining
- Peak shift and battery extender status, if applicable
- Battery health
- Battery charge status
- Battery settings
- Battery type (Standard, Extended Warranty, or Enhanced)
- Connection (Primary, Battery Slice, or Modular Bay)
- Manufacturer
- Dell battery (Yes or No)
- Serial number
- PPID (Piece Part ID)

NOTE: PPID may not always display.

The software supports a maximum of six batteries. To see the details of a particular battery, click the battery number (for example, Battery #1, Battery #2) and scroll down to see any additional batteries your system may contain.

You can also order a replacement battery.

To order a replacement battery, click at the top of the left pane.

Topics:
- Battery health
- Battery settings
- Battery charge status

Battery health

Battery health indicates the amount of charge that is available to a system. In general, a battery’s health decreases over time at a rate that depends on how often the battery is used and the conditions under which it is used.

Battery health is indicated using the heart icon followed by a set of four circular icons. The number of circular icons that are filled indicates the battery health.

Table 1. Battery health indicator codes

<table>
<thead>
<tr>
<th>Code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>![HeartIconFull]</td>
<td>Excellent — Battery is operating at maximum capacity.</td>
</tr>
<tr>
<td>![HeartIconHalf]</td>
<td>Good — Battery can charge normally; however, you may notice reduced operating time because long-term battery life is decreasing.</td>
</tr>
<tr>
<td>![HeartIconEmpty]</td>
<td>Fair — Battery can charge normally; however, it is near the end of its usable life. It is recommended that you purchase a new battery soon.</td>
</tr>
<tr>
<td>![HeartIconEmptyEmpty]</td>
<td>Poor — Battery no longer provides sufficient power. It is recommended that you replace this battery.</td>
</tr>
</tbody>
</table>
Battery settings

Dell Power Manager enables users to select a Battery Setting that is optimized for specific system usage patterns. For example, some settings focus on extending battery life, while others provide fast charge times.

NOTE: Battery settings can be modified only if Dell batteries are attached to your system.

Available settings may be limited depending on the battery. Possible battery settings include:

- **Standard** — Fully charges the battery at a moderate rate. This setting provides a balanced approach to extending battery life while still providing a reasonably fast charging time. Recommended for users who frequently switch between battery and external power sources.
- **ExpressCharge™** — Quickly charges the battery using Dell fast-charge technology. Recommended for users who need the battery to charge quickly. If the system is powered off, then the battery typically charges to 80 percent within one hour and 100 percent in two hours. Charge time may be longer if the system is powered on.  
  
  NOTE: The ExpressCharge™ setting may cause battery health to diminish more quickly than other settings.
- **Primarily AC** — Extends battery life by lowering the charge threshold, so that the battery never charges to 100 percent capacity. Recommended for users who primarily operate the system while plugged into an external power source.
- **Adaptive** — Automatically optimizes battery settings based on the user’s typical patterns. Recommended for users who want to “set it and forget it.”
- **Custom** — User selects when the battery starts and stops charging. Recommended for advanced users.

Select battery setting

1. On the Battery Information page, click the battery that you want to change (such as Battery #1 or Battery #2).

   NOTE: If Advanced charge is enabled, you can only access battery setting through the advanced charge screen.

2. Click Settings.

3. Select a pre-configured battery setting, or select Custom to define your own settings.

   NOTE: Available settings may be limited depending on the battery.

4. Click OK to save your changes, or click CANCEL to discard them.

Create custom battery setting

The Custom battery setting enables users to define when a battery starts and stops charging. This setting is recommended for advanced users who are familiar with battery charging cycles.

NOTE: There should be a minimum difference between the Start Charging and Stop Charging values specified in your system’s BIOS.

1. Go to the Battery Setting page, and then click Custom.

2. Under Start Charging, move the slider to the percentage threshold at which the battery begins charging, or enter a number in the text box.

   For example, entering 60 causes the battery to start charging when it depletes to 60 percent of the total available charge.

3. Under Stop Charging, move the slider to the percentage threshold at which the battery stops charging, or enter a number in the text box.

   For example, entering 90 causes the battery to stop charging when it reaches 90 percent of the total available charge.

4. Click OK to apply your settings, or click CANCEL to discard your changes and return to the Battery Information page.
Battery charge status

View a battery’s charge status quickly by referring to the battery charge status indicator codes displayed beside the battery number on the Battery Information screen. For precise information on the percentage charged as well as the battery’s charging and AC connection status, see the Charge Status information displayed below the battery number and directly below the battery graphic.

Table 2. Battery charge status indicator codes

<table>
<thead>
<tr>
<th>Code</th>
<th>Power Remaining</th>
</tr>
</thead>
<tbody>
<tr>
<td>⬜⬜⬜⬜</td>
<td>80–100 percent</td>
</tr>
<tr>
<td>⬜⬜⬜⬜</td>
<td>60–79 percent</td>
</tr>
<tr>
<td>⬜⬜⬜⬜</td>
<td>40–59 percent</td>
</tr>
<tr>
<td>⬜⬜⬜⬜</td>
<td>20–39 percent</td>
</tr>
<tr>
<td>⬜⬜⬜⬜</td>
<td>0–19 percent</td>
</tr>
</tbody>
</table>

**NOTE:** Charge Status is available only if Dell batteries are attached to your system.
Advanced charge

Advanced charge is an optional feature that prolongs the usable life of a system’s batteries by charging them to full capacity only once per day, prior to the Start of day you establish when you Enable advanced charge. For the remainder of the day, advanced charge keeps batteries in a lower charge state that is better for storage, even when the system is plugged into a direct power source.

1. **NOTE:** If the hours assigned to Peak Shift and Advanced Charge overlap, then Peak Shift takes priority. Batteries will not charge during Peak Shift hours.

Topics:

- Enable advanced charge

Enable advanced charge

Advanced charge is not enabled by default. When advanced charge is enabled, the feature applies to all batteries in the system, and individual battery configuration is disabled.

1. Click the **Advanced Charge** tab in the left pane.

   **NOTE:** Hover your cursor over the icon if you want to see further information on advanced charge.

2. To enable advanced charge, click the toggle at the top of the page to the **On** position.

3. Click the toggle for each day of the week to enable or disable advanced charge for each day.

   If you enable the advanced charge feature, you must configure the feature for at least one day.

4. To set the times of day when advanced charge is active and inactive, click **Settings**.

   **NOTE:** If you have not enabled advanced charge for a particular day, that day will not display on the Time Settings page, and you will not be able to set the advanced charge schedule for that day. Go back to the main Advanced Charge page and enable advanced charge for that particular day.

5. In the **Time Settings** screen, click a day of the week. In the main portion of the page, you can use either the circular slider or the drop-down menus to set the time.

   **NOTE:** You can select times in 15-minute increments—for example, you can enter **11:15 AM** or **9:30 PM**.

   The circular slider represents a 24-hour period. To use the circular slider:
   a) Slide the **Start of day** thumb control to the start time of a typical workday.
   b) Slide the **End of day** thumb control to the end time of a typical workday.

   **NOTE:** The segment of time displayed in blue represents the work period, or when the system is active.

   Alternatively, you can use the drop-down menus to set the times:
   a) Select a time for **Start of day**.
   b) Select a time for **End of day**.

6. Select the **Copy the same settings to multiple days** check box. In the left pane, select the days to which these settings apply.

7. Click **OK** to save your settings, or click **CANCEL** to discard them.
Peak shift is an optional feature that reduces power consumption by automatically switching the system to battery power during certain times of the day, even if the system is plugged into a direct power source. After peak shift begins, the system will run on battery power until the combined charge level of all batteries reaches a minimum threshold. See Enabling peak shift for instructions on how to change these settings. Then, if the system is plugged in, it is powered by the direct power source; however, the battery will not charge until the peak shift ends.

Users can program the start and end times at which the peak shift feature is active and inactive each day.

Topics:

- Enable peak shift

Enable peak shift

1. Click the Peak Shift tab in the left pane.

2. To enable peak shift, click the toggle at the top of the page to the On position.

3. To select the percentage at which the system will Restore AC power if available system charge falls below, move the slider. For example, selecting 15 percent causes the system to switch from battery to AC power during peak shift if the power remaining falls below 15 percent.

4. To enable or disable peak shift for a specific day, click the toggle next to each day of the week.

5. To set the time of day when peak shift is active, click Settings.

6. On the Time Settings screen, click a day of the week. Using either the circular slider or the drop-down menus:

7. Select Copy the same settings to multiple days. Then, in the left pane, select the days to which these settings apply.

8. To save your changes, click OK, or to discard them, click CANCEL.
Thermal management

**NOTE:** If your system does not support thermal settings, then the thermal management feature is not available.

Dell Power Manager allows you to manage your system’s processor and cooling fan settings so that you can manage performance, system surface temperature, and fan noise. Each option represents a different balance of these three elements. Choose the configuration that best suits the way you use your system.

**CAUTION:** If a fan has failed, the Thermal Management feature is disabled.

**Table 3. Thermal setting options**

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Optimized</td>
<td>Balances performance, noise, and temperature.</td>
</tr>
<tr>

</tr>
<tr>
<td>Quiet</td>
<td>Cooling fan and processor speeds are lowered to reduce fan noise. This</td>
</tr>
<tr>
<td></td>
<td>configuration may also reduce system performance and raise system surface</td>
</tr>
<tr>
<td></td>
<td>temperature.</td>
</tr>
<tr>
<td>Ultra performance</td>
<td>Both processor and cooling fan speeds are increased to produce higher</td>
</tr>
<tr>
<td></td>
<td>system performance. This configuration may also produce more noise and</td>
</tr>
<tr>
<td></td>
<td>higher system surface temperature.</td>
</tr>
</tbody>
</table>

Press Fn+T to enable or disable Ultra performance mode.

**NOTE:** Enabling or disabling the Ultra performance mode, displays a notification on your system.

Additional thermal setting options may be available through your operating system. Click Control Panel in the Operating System Power Plan box in the upper right of the Thermal Management page.

See Changing Thermal Management Settings for instructions on changing the thermal settings on your system using Dell Power Manager.

**Topics:**

- Changing thermal management settings

**Changing thermal management settings**

Perform the following to change the thermal management setting:

1. Click the Thermal Management tab in the left pane.
2. Click the radio button beside the thermal management setting you want to select.
Dell Power Manager’s Battery extender feature allows you to conserve battery charge.

**NOTE:** If your system does not support Reduce CPU Power (Quiet Thermal Setting), then the battery extender feature is not available.

**NOTE:** Battery extender only reports setting changes you make within the battery extender feature. Changes you make within the BIOS and operating system settings that affect battery charge consumption are not reflected within battery extender.

**NOTE:** Battery extender cannot be turned on when you have plugged the system into an electrical outlet.

- Reduce CPU power level
- Screen brightness level
- Keyboard illumination level
- Mute audio

Use battery extender to affect the following: From the Battery Extender tab you can:
  - Turn On or Off Battery Extender
  - Access the Battery Extender Setting screen
  - View your battery settings summary

**Topics:**
  - Extend battery charge
  - Turn off battery extender

### Extend battery charge

Dell Power Manager’s Battery extender feature allows you to change the settings of some system functions that affect your system’s battery consumption. To access Battery Extender:

1. Click the **Battery Extender** tab in the left pane.
2. Click the **Settings** button.
3. Click in the box beside the feature you want to affect, and where available, slide the slider or enter a percentage number to adjust the level of change you want to apply.
4. Click **OK** to apply your changes, or click **CANCEL** to discard your changes.
5. Click the toggle to the **On** position.

To restore any settings you have changed using Battery Extender, click **Restore Defaults**.

### Turn off battery extender

To turn off the battery extender feature:

**NOTE:** Turning off battery extender causes any setting changes you made to revert to those in effect at the time you turned on battery extender.

1. Click the **Battery Extender** tab in the left pane.
2. Slide the control to the **Off** position.
The alert settings feature in Dell Power Manager allows you to restore the default alert settings. Dell Power Manager supports the following types of alerts:

- Adapter alerts
- Battery alerts
- Docking station alerts
- Other alerts
- Thermal alerts

NOTE: The alert settings function only if the service is installed.

NOTE: To enable or disable the display of specific alerts, click Continue to display this message or Do not display this message again options respectively.

**Topics:**
- Restore alert defaults

**Restore alert defaults**

Perform the following steps to restore the alert defaults:

1. Click the **Alerts Settings** tab in the left pane.
2. Click **Restore Alert Settings**. This feature restores the display of an alert if you previously clicked the **Do not display this message again** option.
   - A confirmation dialog window displays the message **Are you sure you want to restore all alert settings?**
3. Click **Yes** to continue or **Cancel** to abort.
Install, uninstall, and upgrade Dell Power Manager

Dell Power Manager is factory-installed on supported systems. If you do not have Dell Power Manager installed on your system, you can install it from the Dell support site or from the Microsoft Store.

Dell Power Manager Service Installer is released as a Dell Update Package (DUP) available at Dell.com/support and Dell Update Catalog. You can install, uninstall, and upgrade Dell Power Manager using the Dell Update Package.

**NOTE:** This service installer supports only 64-bit operating systems and is available only for the Windows 10 operating system.

**Topics:**
- Install Dell Power Manager from the Microsoft Store
- Install Dell Power Manager from the Dell support site
- Uninstall Dell Power Manager using the command prompt
- Uninstall Dell Power Manager
- Install Dell Power Manager using the command prompt

### Install Dell Power Manager from the Microsoft Store

Perform the following to install Dell Power Manager:

1. Open **Microsoft Store** from the **Windows Start** menu, and sign in to the Store.
2. Select **Search**, and find **Dell Power Manager**.
3. On the **Dell Power Manager** page, select **Install**. The Dell Power Manager application is installed in your system.
4. Click **Launch**. A message is displayed to confirm whether you want to install the service.
5. Select **Download**. Dell Power Manager is launched and the service is installed in your system. You can now configure the power management capabilities of your system.

**NOTE:** If you select **Skip**, instead of all the supported features of the application, only the battery information of your system is displayed in the application.

### Install Dell Power Manager from the Dell support site

To install Dell Power Manager, you have to download and extract the Dell Update Package (DUP) from Dell.com/support.

Perform the following steps to install Dell Power Manager from support site:

1. Go to Dell.com/support.
2. Download the DUP.EXE file.
3. Double-click the *.EXE file to start the installation wizard.
4. Follow the steps in the wizard until you complete the installation or upgrade.
Uninstall Dell Power Manager using the command prompt

To uninstall Dell Power Manager using the setup.exe file, run the following command:

```
DPM_Setup<os_arch>_3_3_0.exe /x
```

For example:

```
DPM_Setup64_3_3_0.exe /x
```

## Uninstall Dell Power Manager

Perform the following steps to uninstall Dell Power Manager:

1. Open the Windows Start menu, and search for Apps and Features. The list of applications and features available on the system appears.
2. Search for Dell Power Manager Service and select Uninstall. Dell Power Manager is uninstalled from your system.

   **NOTE:** Uninstalling the Dell Power Manager Service also uninstalls the application from your system.

   **NOTE:** In Windows 7, uninstall the application using the Windows Programs and Features option available in the Control Panel. However, in Windows 10, uninstall the application using the Apps and Features option available in Settings.

## Install Dell Power Manager using the command prompt

**NOTE:** Ensure that you extract the Dell Update Package (DUP), and then navigate to the setup.exe file.

**NOTE:** Variables are italicized and enclosed in angle brackets. For example, for `<os arch>` enter 64 to indicate that you are installing on a 64–bit operating system.

To install Dell Power Manager, run the following commands:

- **Silent install**
  
  `DUP.exe /s`

- **Extract the DUP**
  
  `DUP.exe /s /e=C:\extractedDir`

- **Change the default log file location to a user-specified path**
  
  `DUP.exe /l="<C:\log_path\log.txt>"`

- **Standard install with verbose logging**
  
  `DPM_Setup<os_arch>_3_3_0.exe /v"/l*vx <log_file_path>"

  For example:
  
  `DPM_Setup64_3_3_0.exe /v"/l*vx C:\Users\Administrator\Desktop\installlog.txt"

- **Silent install**
  
  `DPM_Setup<os_arch>_3_3_0.exe /s /v"/qn"`
For example:

```
DPM_Setup64_3_3_0.exe /s /v"/qn"
```

- Silent install with verbose logging

```
DPM_Setup<os_arch>_3_3_0.exe /s /v"/l*vx <log_file_path> /qn"
```

For example:

```
DPM_Setup64_3_3_0.exe /s /v"/l*vx C:\Users\Administrator\Desktop\installlog.txt /qn"
```
This chapter provides details about Dell Power Manager administrative features, including enabling and customizing Group Policies.

⚠️ CAUTION: The tasks in this chapter should be performed only by a System Administrator.

Topics:
- Group Policy template
- Customize Group Policy settings

**Group Policy template**

Administrators can apply the Dell Power Manager settings across multiple systems using the Group Policy feature in Windows Server. For more information about Windows Group Policies, see the Group Policy Overview article at [www.docs.microsoft.com](http://www.docs.microsoft.com).

After you apply a Group Policy Template to a system, end users cannot change the settings that are associated with that template.

To use Group Policy Templates:

1. Install the Group Policy Management Console. See, Installing the Group Policy Management Console.
2. Install the Group Policy Templates. See, Installing the Group Policy Templates.
3. Optionally, customize one or more policies. See, Customizing a Group Policy.
4. Apply policies to specific systems, groups, or users. See Applying a Group Policy.

**NOTE:** If the administrator restricts all the available settings, the user cannot change any configuration components. However, if the administrator stipulates only some of the settings, the remaining settings are available for the user to configure.

**Installing the Group Policy Management Console**

Dell Power Manager uses the Group Policy Management Console (GPMC) in Windows Server to administer Group Policies. The GPMC feature is in Windows Server 2008 and newer. However, it is not automatically installed with the operating system. An administrator must install GPMC on the domain server using Server Manager or Windows PowerShell.

An administrator must set Active Directory as a server role. In Server Manager, right-click Roles, and then click Add Roles. On the Server Roles screen, select Active Directory Domain Services, and complete the wizard.

For detailed instructions on installing GPMC, see the Group Policy Management Console article at [www.docs.microsoft.com](http://www.docs.microsoft.com).

**Install Group Policy templates**

Before you create, apply, or change Group Policy Templates, an administrator must first make the templates available in the Group Policy Management Console (GPMC).

1. Obtain and extract the Dell Power Manager DUP.
   - You can download the Dell Power Manager DUP for your system from [www.dell.com/support](http://www.dell.com/support).
   - Once you have downloaded the package, run it and select the Extract option to extract the files.
2. On the domain server, go to the directory where you have extracted Dell Power Manager.
3. Open the PolicyDefinitions folder.
4. Copy the .admx files in the PolicyDefinitions folder to the default Windows PolicyDefinitions folder—typically, the default path is C:\Windows\PolicyDefinitions\.
5. Copy the .adml files in the PolicyDefinitions\<language>\ folder (for example, PolicyDefinitions\En\) to C:\Windows\PolicyDefinitions\<language>\.

The Group Policies is available in GPMC under Administrative Templates.
Customize a Group Policy

Dell Power Manager includes several Group Policy settings that administrators can customize based on their domain and environment requirements. To configure Dell Power Manager Group Policy settings:

1. Open the Group Policy Management Editor.
   a) Click **Server Manager > Features > Group Policy Management > Forest:<DomainName> > Domains > <DomainName>**.
   b) Right-click the **Default Domain Policy**, and select **Edit**.
2. In the left pane, expand **Computer Configuration > Policies > Administrative Templates > System > Dell > Command Power Manager**.
3. In the left pane, select one of the categories to configure the settings you want to apply to the domain.

For a complete list of available group policy settings and their values, see the Group Policy Management Editor on your domain server.

Apply a Group Policy

Administrators can apply a Group Policy to specific systems, groups, or users by associating the Group Policy Object (GPO) with an Active Directory Organizational Unit (OU) in the Group Policy Management Editor.

1. Create a Group Policy Object (GPO).
   a) In Group Policy Management for your domain, expand **Group Policy Objects**.
   b) Right-click the **Group Policy Objects** group and create a GPO.
   c) Enter a **Name** for the GPO, and click **OK**.
2. Add a policy to the new GPO.
   a) In Group Policy Management for your domain, right-click the new GPO you created in previous step and select **Edit**.
   b) In the left pane, select **Computer Configuration > Policies > Administrative Templates > System > Dell Power Manager**.
   c) Set the wanted policy.
3. Create an Active Directory OU, if it does not exist.
   a) In Active Directory, right-click the domain, and select **New > Organizational Unit**.
   b) Enter a **Name** for the organizational unit, and click **OK**.
   c) In the right pane, right-click the new OU, and select **New**.
   d) Select the system, group, or users to which this policy applies.
4. Link the GPO to the OU.
   a) Close Active Directory and the Group Policy Management Editor, if they are open.
   b) Reopen the Group Policy Management Editor.
   c) Select **Group Policy Management > Domains > <DomainName>**
   d) Right-click the OU, and select **Link an existing GPO**.
   e) Select the GPO created in a previous step, and click **OK**.

Apply Group Policy template changes to client systems

Changes to Group Policy Templates do not immediately apply to systems, because they must first replicate to the domain controller. Also, client systems can take up to 90 minutes to refresh Group Policy Objects. For detailed information, see the **Determining When Group Policy Changes are Applied** article at [www.docs.microsoft.com](http://www.docs.microsoft.com).

Administrators can manually force updates to take effect immediately:

1. On the client system, open the command window.
2. Enter the following command.

   ```
   GPUpdate /force
   ```
3. Press Enter.

In Windows Server 2012, administrators can also force client updates from the Group Policy Management Console (GPMC). For detailed information, see the **Force a Remote Group Policy Refresh** article at [www.docs.microsoft.com](http://www.docs.microsoft.com).
Customize Group Policy settings

This section provides additional information regarding group policies and any special notes you must consider as you customize the settings.

Each policy contains settings and values for options which are honored by the application GUI. If the value for a setting is User Controlled, then the administrator has given the end-user full access to that setting in the GUI. It has the same effect as having no policy for that specific setting.

The following group policies are available in Dell Power Manager:

- Battery Information
- Peak Shift
- Advanced Charge
- Battery Extender
- Alerts Management
- Thermal Management
- Product Feedback Link

Battery information Group Policies

Two policies are available within this group:

- Battery Settings
- Order Battery Link

Battery settings Group Policies

You can customize Battery Settings using this policy group. Select a battery setting, and select any one of the following options from the drop-down list:

- User Controlled
- Standard
- ExpressCharge
- Adaptive
- Custom
- Primarily AC Use

If the Charge Mode setting is set to Custom, you can set the start or stop values. Values may vary between different systems. When a specified value is not within the minimum or maximum capabilities, the minimum or maximum value of the client system is used. When specifying minimum and maximum values, use the following guidelines:

- Minimum start value is 50%.
- Maximum stop value is 95%.
- Start and stop values must differ by more than 5%.

**NOTE:** Invalid settings are ignored, and not honored.

**NOTE:** When Custom is selected, both the Start Charging and Stop Charging values must be set.

**NOTE:** When Lock current BIOS setting is selected, the UI displays the current BIOS battery setting as read-only.

**NOTE:** If you restrict the settings using the group policy, the battery settings in the Dell Power Manager user interface or system BIOS does not change.

The system administrator can configure the Battery Settings policy to display or hide the available battery settings on the UI.

Order battery link Group Policies

This policy customizes the order battery link. The default is a URL link to www.dell.com/batteryhealthmeter.

You can enter a URL or a mailto: address (for example, mailto:your@email.address). Install an email client on the client system to access mailto: address.
Peak shift Group Policies

Three Group Policies are available for this group:

- **Feature Enablement**
  
  The system administrator can select any one of the following options, available in the left pane:
  
  - On—Turn on the feature, and apply the individual day and time settings to the system (default).
  - Off—Turn off the feature
  - Hide Feature—Remove the feature tab from the GUI.

- **Day of the week** (Sunday, Monday, Tuesday, Wednesday, Thursday, Friday, Saturday)
  
  To disable a specific day, set all the hour and minute fields in that template to 0 (zero).

To set time to operate on battery power only:

  - Set Hours: 0–23
  - Set Minutes: 0, 15, 30, 45

  **NOTE:** To disable this setting, set the Hours and Minutes the same as Set the time to resume normal power/charge operation Hours and Minutes.

To lock the time to operate on AC power without charging the battery:

  - Set Hours: 0–23
  - Set Minutes: 0, 15, 30, 45

  **NOTE:** This setting is disabled if the time is not set within the Operate on battery power only and Resume normal power/charge operation period.

To lock the time to resume normal power or charge operation:

  - Set Hours: 0–23
  - Set Minutes: 0, 15, 30, 45

- **Restore AC Power Threshold**
  
  To set a range for the threshold limits, enter the Minimum (1-100) and Maximum (Minimum - 100) values. If a minimum or maximum limit is not within the minimum or maximum capabilities, the minimum or maximum limit of the client system is used.

  **NOTE:** If invalid values are set, the system uses default values.

  **NOTE:** If selected minimum or maximum limits are not within the minimum or maximum capabilities, the minimum or maximum limit of the client system is used.

Typical uses for these settings are:

  - Set the minimum and maximum threshold limits, and leave the Threshold value field blank. The sets a limit for the range, but allows the threshold value to be modified in the UI.

  - Set Threshold value and leave the Minimum threshold limit and Maximum threshold limit blank. This value is locked and cannot be modified in the UI.

Advanced charge Group Policies

Two Group Policies are available for this group:

- **Feature Enablement**
  
  The system administrator can select any one of the following options, available in the left pane:
  
  - On—Turn on the feature, and apply the individual day and time settings to the system (default).
  - Off—Turn off the feature
  - Hide Feature—Remove the feature tab from the GUI.

- **Day of the week** (Sunday, Monday, Tuesday, Wednesday, Thursday, Friday, Saturday)
  
  To disable a specific day, set all the hour and minute fields in that template to 0 (zero).

To configure Start Time for the day:

  - Set Hours: 0–23
• Set Minutes: 0, 15, 30, 45
To configure End Time for the day:
• Set Hours: 0-23
• Set Minutes: 0, 15, 30, 45

Battery extender Group Policies

The system administrator can choose to hide the Battery Extender feature from the user.

NOTE: If you enable this policy, the policy can only be enforced on systems where the BIOS supports the Battery Extender feature.

Alerts management Group Policies

A Group Policy is available for each of the following alert categories:
• Adapter Alerts
• Battery Alerts
• Docking Station Alerts
• Other Alerts
• Thermal Alerts

Setting options available for each specific alert that is in the alert policy category are:
• Off—This alert must be suppressed if its condition is detected.
• On—This alert must be displayed if its condition is detected.
• User Controlled—Allow the system user to select whether this alert is displayed or suppressed (default).

NOTE: Adapter alerts apply to both single and dual adapter messages. A single adapter is an adapter plugged into either the laptop or docking station, while a dual adapter is an adapter plugged directly into the laptop together with an adapter plugged into the docking station while the laptop is docked.

Thermal management Group Policies

Thermal Management Group Policies include:
• Feature Enablement
• Thermal Settings
  Using this policy a system administrator can display, hide, or lock in place any of the following settings:
  • Optimized
  • Cool
  • Quiet
  • Ultra Performance

Product feedback link of Group Policy

You can hide or show the Product Feedback link on the GUI using this policy.
View event log

Dell Power Manager logs errors and events in the Windows event log.

1. Click the Windows Start button.
2. Click Control Panel > Administrative Tools.
3. Double-click the Event Viewer to open the application in a new window.
4. In the left pane, expand Windows Logs, and then click Application.
5. In the right pane, click Filter Current Log.
   The Filter Current Log window displays.
6. In the Event sources drop-down menu, select DellCommandPowerManager.
7. Optionally, select one or more Event level options.
8. Click OK to display the errors and events of the specified levels.
