Notes, cautions, and warnings

NOTE: A NOTE indicates important information that helps you make better use of your computer.

CAUTION: A CAUTION indicates either potential damage to hardware or loss of data and tells you how to avoid the problem.

WARNING: A WARNING indicates a potential for property damage, personal injury, or death.

A Internet Control Message Protocol (ICMP) Message Types .......................................................... 359
About this Guide

This book provides information about the Dell Networking OS command line interface (CLI) on the Dell PowerEdge FN I/O Aggregator.

This book also includes information about the protocols and features found in the Dell Networking OS and on the Dell Networking systems supported by the Dell Networking OS.

References

For more information about your system, refer to the following documents:

- Dell PowerEdge FN I/O Aggregator Configuration Guide
- Dell PowerEdge FN I/O Aggregator Getting Started Guide
- Release Notes for the Dell PowerEdge FN I/O Aggregator

Objectives

This book is intended as a reference guide for the Aggregator CLI commands, with detailed syntax statements, along with usage information and sample output.

This guide contains an Appendix with a list of the request for comment (RFCs) and management information base files (MIBs) supported.

NOTE: For more information about when to use the CLI commands, refer to the Dell PowerEdge FN I/O Aggregator Configuration Guide for your system.

Audience

This book is intended for system administrators who are responsible for configuring or maintaining networks. This guide assumes that you are knowledgeable in Layer 2 and Layer 3 networking technologies.

Conventions

This book uses the following conventions to describe command syntax.

<table>
<thead>
<tr>
<th>Keyword</th>
<th>Keywords are in Courier font and must be entered in the CLI as listed.</th>
</tr>
</thead>
<tbody>
<tr>
<td>parameter</td>
<td>Parameters are in italics and require a number or word to be entered in the CLI.</td>
</tr>
<tr>
<td>(X)</td>
<td>Keywords and parameters within braces must be entered in the CLI.</td>
</tr>
</tbody>
</table>

1
Keywords and parameters within brackets are optional.

x|y  Keywords and parameters separated by a bar require you to choose one option.

x||y Keywords and parameters separated by a double bar allows you to choose any or all of the options.

**Information Icons**

This book uses the following information symbols:

- **NOTE**: The Note icon signals important operational information.
- **CAUTION**: The Caution icon signals information about situations that could result in equipment damage or loss of data.
- **WARNING**: The Warning icon signals information about hardware handling that could result in injury.
Before You Start

By following the instructions in the *Dell PowerEdge FN I/O Aggregator Getting Started Guide* that is shipped with the product, you install the Aggregator in a Dell PowerEdge FX2 server chassis.

The Aggregator installs with zero-touch configuration. After you power it on, an Aggregator boots up with default settings and auto-configures with software features enabled. This chapter describes the default settings and software features that are automatically configured at startup. Use the tasks described in the other chapters to reconfigure the Aggregator for customized network operation.

Operational Modes

The I/O Aggregator supports four operational modes. Select the operational mode that meets your deployment needs. To enable a new operational mode, reload the switch.

- **Standalone mode** — stack-unit unit iom-mode standalone. This is the default mode for IOA. It is fully automated zero-touch mode that allows you to configure VLAN memberships. (Supported in CMC)
- **Programmable MUX mode (PMUX)** — stack-unit unit iom-mode programmable-mux. Select this mode to configure PMUX mode CLI commands.
- **Stacking mode** — stack-unit unit iom-mode stacking. Select this mode to stack up to 6 IOA stack units as a single logical switch. The stack units can be in the same or on different chassis. This is a low-touch mode where all configuration except VLAN membership is automated. To enable VLAN, you must configure it. In this operational mode, base module links are dedicated to stacking.
- **Virtual Link Trunking mode (VLT)** — stack-unit unit iom-mode vlt. Select this mode to multi-home server interfaces to different IOA modules. This is a low-touch mode where all configuration except VLAN membership is automated. To enable VLAN, you must configure it. In this mode, base module links are dedicated to VLT interconnect.

For more information, refer to the *Dell PowerEdge M I/O Aggregator Configuration Guide*.

Default Settings

The I/O Aggregator provides zero-touch configuration with the following default configuration settings:

- Default user name (**root**)
- Password (**calvin**)
- VLAN (**vlan1**) and IP address for in-band management (**DHCP-assigned**)
- IP address for out-of-band (OOB) management (**DHCP-assigned**)
- Read-only SNMP community name (**public**)
- Broadcast storm control (**enabled**)
- Unregistered Multicast Packets flooding (**enabled**)
- IGMP snooping in all VLANs except the default VLAN (**enabled**)
- VLAN configuration (**all ports belong to all VLANs**)

You can change any of these default settings using the CLI. Refer to the appropriate chapter for details.
**NOTE:** You can also change many of the default settings using the chassis management controller (CMC) interface. For information about how to access the CMC to configure an Aggregator, refer to the *Dell PowerEdge M1000e Enclosure Hardware Owner’s Manual* or *Dell Chassis Management Controller (CMC) User’s Guide* on the Dell Support website at [http://support.dell.com/support/edocs/systems/pem/en/index.htm](http://support.dell.com/support/edocs/systems/pem/en/index.htm).

### Other Auto-Configured Settings

After the Aggregator powers on, it auto-configures and is operational with software features enabled, including:

- **VLANs:** All ports are configured as members of all (4094) VLANs. All VLANs are up and can send or receive layer 2 traffic. For more information, refer to [VLANs](#).
- **Data Center Bridging Capability Exchange Protocol (DCBX)**
- **Fibre Channel over Ethernet (FCoE) connectivity**
- **FCoE Initiation Protocol (FIP) snooping**
- **Hybrid ports:** Ports are administratively up and auto-configured to operate as hybrid ports to transmit tagged and untagged VLAN traffic.
- **iSCSI optimization**
- **IGMP snooping**
- **Jumbo frames:** Ports are set to a maximum MTU of 12,000 bytes by default.
- **Link aggregation:** All uplink ports are configured in a single LAG (LAG 128).
- **Link Layer Discovery Protocol (LLDP):** Enabled on all ports.
- **Link tracking:** Enables server-facing links to be brought up only if the uplink port-channel (LAG 128) is up.
- **Stacking:** Stacking is supported only on the 40GbE ports on the base module. A single stack is limited to six Aggregators in the same chassis. Up to three stacks are supported in an M1000e chassis. To configure a switch stack, you must use the CLI. For more information, refer to **Stacking Commands**.

### DCB Support

DCB enhancements for data center networks are supported to eliminate packet loss and provision links with required bandwidth. The Aggregator provides zero-touch configuration for DCB. The Aggregator auto-configures DCBX port roles to match the DCBX configuration in the ToR switches to which it connects through its uplink ports.

The Aggregator supports DCB only in standalone mode and not in the stacking mode.

### FCoE Connectivity

Many data centers use Fibre Channel (FC) in storage area networks (SANs). Fibre Channel over Ethernet (FCoE) encapsulates Fibre Channel frames over Ethernet networks.

On an Aggregator, the internal ports support FCoE connectivity and connect to the converged network adapter (CNA) in blade servers. FCoE allows Fibre Channel to use 10-Gigabit Ethernet networks while preserving the Fibre Channel protocol.

The Aggregator also provides zero-touch configuration for FCoE configuration. The Aggregator auto-configures to match the FCoE settings used in the ToR switches to which it connects through its uplink ports.
iSCSI Operation

Support for iSCSI traffic is turned on by default when the Aggregator powers up. No configuration is required.

When the Aggregator powers up, it monitors known TCP ports for iSCSI storage devices on all interfaces. When a session is detected, an entry is created and monitored as long as the session is active.

The Aggregator also detects iSCSI storage devices on all interfaces and auto-configures to optimize performance. Performance optimization operations, such as Jumbo frame size support, and disabling storm control on interfaces connected to an iSCSI equallogic (EQL) storage device, are applied automatically.

CLI configuration is necessary only when the configuration includes iSCSI storage devices that cannot be automatically detected and when non-default GoS handling is required.

Link Aggregation

In Standalone, and VLT modes, all uplink ports (except port 9 in VLT mode) are configured in a single LAG (LAG 128). There can be multiple uplink LAGs in programmable-mux mode. Server-facing ports are auto-configured as part of link aggregation groups if the corresponding server is configured for LACP-based NIC teaming. Static LAGs are supported in PMUX mode.

**NOTE:** The recommended LACP timeout is Long-Timeout mode.

Link Tracking

By default, all server-facing ports are tracked by the operational status of the uplink LAG. If the uplink LAG goes down, the Aggregator loses its connectivity and is no longer operational; all server-facing ports are brought down.

**NOTE:** If installed servers do not have connectivity to a ToR switch, check the Link Status LED of uplink ports on the Aggregator. If all LEDs are ON, check the LACP configuration on the ToR switch that is connected to the Aggregator to ensure the LACP is correctly configured.

VLANs

By default, all Aggregator ports belong to all 4094 VLANs and are members of untagged VLAN 1. You can use the CLI or CMC interface to configure only the required VLANs on a port.

When you configure VLANs on server-facing interfaces (ports 1 to 8), you can assign VLANs to a port or a range of ports by entering the vlan tagged or vlan untagged commands in interface configuration mode; for example:

Dell(conf)# interface tengigabitethernet 0/2 - 4
Dell(conf-if-range-te-0/2-4)# vlan tagged 5,7,10-12
Dell(conf-if-range-te-0/2-4)# vlan untagged 3

**NOTE:** You can also use the CMC interface to configure VLANs.

Uplink LAG

The tagged VLAN membership of the uplink LAG is automatically configured based on the tagged and untagged VLAN configuration of all server-facing ports (ports 1 to 8).

The untagged VLAN used for the uplink LAG is always the default VLAN.
Server-Facing LAGs

The tagged VLAN membership of a server-facing LAG is automatically configured based on the server-facing ports that are members of the LAG.

The untagged VLAN of a server-facing LAG is configured based on the untagged VLAN to which the lowest numbered server-facing port in the LAG belongs.

NOTE: Dell Networking recommends that you configure the same VLAN membership on all LAG member ports.

Stacking Mode

When you configure an Aggregator to operate in stacking mode (See “Configuring and Bringing Up a Stack” in the Dell Networking Configuration Guide for the M I/O Aggregator), VLANs are reconfigured as follows:

If an Aggregator port belonged to all 4094 VLANs in standalone mode (default), all VLAN membership is removed and the port is assigned only to default VLAN 1. You must configure additional VLAN membership as necessary.

If you had manually configured an Aggregator port to belong to one or more VLANs (non-default) in standalone mode, the VLAN configuration is retained in stacking mode only on the master switch.

When you reconfigure an Aggregator from stacking to standalone mode:

Aggregator ports that you manually configured for VLAN membership in stacking mode retain their VLAN configuration in standalone mode.

To restore the default auto-VLAN mode of operation (in which all ports are members of all 4094 VLANs) on a port, enter the auto vlan command:

Dell(conf)# interface tengigabitethernet 0/2
Dell(conf-if-te-0/2)# auto vlan

The auto vlan command is applicable only in Standalone mode.

To get the default standalone mode configurations:

1. Delete the startup-config file and reboot the system.
2. Restore to factory default settings.

Where to Go From Here

You can customize the Aggregator for use in your data center network as necessary. To perform additional switch configuration, do one of the following:

- For remote out-of-band management, enter the OOB management interface IP address into a Telnet or SSH client and log in to the switch using the user ID and password to access the CLI.
- For local management using the CLI, use the attached console connection.
- For remote in-band management from a network management station, enter the VLAN IP address of the management port and log in to the switch to access the CLI.

If you installed the Aggregator in a stack, you can configure additional settings for switch stacking

In case of a Dell Networking OS upgrade, you can check to see that an Aggregator is running the latest Dell Networking OS version by entering the show version command. To download a Dell Networking OS version, go to http://support.dell.com.

Refer to the appropriate chapter for detailed information on how to configure specific software settings.
CLI Basics

This chapter describes the command line interface (CLI) structure and command modes. The Dell operating system commands are in a text-based interface that allows you to use the launch commands, change command modes, and configure interfaces and protocols.

Accessing the Command Line

When the system boots successfully, you are positioned on the command line in EXEC mode and not prompted to log in. You can access the commands through a serial console port or a Telnet session. When you Telnet into the switch, you are prompted to enter a login name and password.

Example
telnet 172.31.1.53
Trying 172.31.1.53...
Connected to 172.31.1.53.
Escape character is '^]'.
Login: username
Password:
Dell>

After you log in to the switch, the prompt provides you with the current command-level information. For example:

Prompt CLI Command Mode
Dell> EXEC
Dell# EXEC Privilege
Dell(conf)# CONFIGURATION

NOTE: For a list of all the command mode prompts, refer to the Command Modes Modes section.

Multiple Configuration Users

When a user enters CONFIGURATION mode and another user is already in CONFIGURATION mode, the Dell operating system generates an alert warning message similar to the following:

Dell#conf
% Warning: The following users are currently configuring the system:
User "" on line console0
User "admin" on line vty0 ( 123.12.1.123 )
User "admin" on line vty1 ( 123.12.1.123 )
User "Irene" on line vty3 ( 123.12.1.321 )
Dell#conf

When another user enters CONFIGURATION mode, the Dell Networking OS sends a message similar to the following:

% Warning: User "admin" on line vty2 "172.16.1.210" is in configuration
In this case, the user is “admin” on vty2.

Navigating the CLI

The Dell Networking OS displays a CLI prompt comprised of the host name and CLI mode.

- Host name is the initial part of the prompt and is “Dell” by default. You can change the host name with the `hostname` command.
- CLI mode is the second part of the prompt and reflects the current CLI mode. For a list of the Dell Networking OS command modes, refer to the command mode list in the Accessing the Command Line section.

The CLI prompt changes as you move up and down the levels of the command structure. Starting with CONFIGURATION mode, the command prompt adds modifiers to further identify the mode. For more information about command modes, refer to the Command Modes section.

<table>
<thead>
<tr>
<th>Prompt</th>
<th>CLI Command Mode</th>
</tr>
</thead>
<tbody>
<tr>

</tr>
</tbody>
</table>

Obtaining Help

As soon as you are in a command mode there are several ways to access help.

- **To obtain a list of keywords at any command mode:** Type a ? at the prompt or after a keyword. There must always be a space before the ?.
- **To obtain a list of keywords with a brief functional description:** Type help at the prompt.
- **To obtain a list of available options:** Type a keyword and then type a space and a ?.
- **To obtain a list of partial keywords using a partial keyword:** Type a partial keyword and then type a ?.
The following is an example of typing `ip ?` at the prompt:

```
Dell(conf)#ip ?
igmp     Internet Group Management Protocol
route    Establish static routes
telnet   Specify telnet options
```

When entering commands, you can take advantage of the following timesaving features:

- The commands are not case-sensitive.
- You can enter partial (truncated) command keywords. For example, you can enter `int tengig int` for the `interface tengigabitethernet` command.
- To complete keywords in commands, use the TAB key.
- To display the last enabled command, use the up Arrow key.
- To erase the previous character, use either the Backspace key or Delete key.
- To navigate left or right in the Dell Networking OS command line, use the left and right Arrow keys.

The shortcut key combinations at the Dell Networking OS command line are as follows:

<table>
<thead>
<tr>
<th>Key Combination</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>CNTL-A</td>
<td>Moves the cursor to the beginning of the command line.</td>
</tr>
<tr>
<td>CNTL-B</td>
<td>Moves the cursor back one character.</td>
</tr>
<tr>
<td>CNTL-D</td>
<td>Deletes the character at the cursor.</td>
</tr>
<tr>
<td>CNTL-E</td>
<td>Moves the cursor to the end of the line.</td>
</tr>
<tr>
<td>CNTL-F</td>
<td>Moves the cursor forward one character.</td>
</tr>
<tr>
<td>CNTL-I</td>
<td>Completes a keyword.</td>
</tr>
<tr>
<td>CNTL-K</td>
<td>Deletes all the characters from the cursor to the end of the command line.</td>
</tr>
<tr>
<td>CNTL-L</td>
<td>Re-enters the previous command.</td>
</tr>
<tr>
<td>CNTL-N</td>
<td>Returns to the more recent commands in the history buffer after recalling commands with Ctrl-P or the up Arrow key.</td>
</tr>
<tr>
<td>CNTL-P</td>
<td>Recalls commands, beginning with the last command.</td>
</tr>
<tr>
<td>CNTL-U</td>
<td>Deletes the line.</td>
</tr>
<tr>
<td>CNTL-W</td>
<td>Deletes the previous word.</td>
</tr>
<tr>
<td>CNTL-X</td>
<td>Deletes the line.</td>
</tr>
<tr>
<td>CNTL-Z</td>
<td>Comes back to EXEC mode from any CONFIGURATION mode.</td>
</tr>
<tr>
<td>Esc B</td>
<td>Moves the cursor back one word.</td>
</tr>
<tr>
<td>Esc F</td>
<td>Moves the cursor forward one word.</td>
</tr>
<tr>
<td>Esc D</td>
<td>Deletes all the characters from the cursor to the end of the word.</td>
</tr>
</tbody>
</table>
Using the Keyword no Command

To disable, delete or return to default values, use the no form of the commands.

For most commands, if you type the keyword no in front of the command, you disable that command or delete it from the running configuration. In this guide, the no form of the command is described in the Syntax portion of the command description. For example:

```
Syntax

no {boot | default | enable | ftp-server | hardware | hostname | ip | line
| logging | monitor | service | io-aggregator broadcast storm-control | snmp-server | username}
```

 Defaults

None

</tr>
</tbody>
</table>

Filtering show Commands

To find specific information, display certain information only or begin the command output at the first instance of a regular expression or phrase, you can filter the display output of a show command.

When you execute a show command, and then enter a pipe ( | ), one of the following parameters, and a regular expression, the resulting output either excludes or includes those parameters.

**NOTE:** The Dell Networking OS accepts a space before or after the pipe, no space before or after the pipe, or any combination. For example:

```
Dell#command | grep TenGig|except regular-expression | find regular-expression.
```

- **except** displays only the text that does not match the pattern (or regular expression)
- **find** searches for the first occurrence of a pattern
- **grep** displays text that matches a pattern.
- **no-more** does not paginate the display output
- **save** copies the output to a file for future use

The grep command option has an ignore-case sub-option that makes the search case-insensitive. For example, the commands:

- `show run | grep Ethernet` returns a search result with instances containing a capitalized “Ethernet,” such as interface TenGigabitEthernet 0/1.
- `show run | grep ethernet` does not return the search result above because it only searches for instances containing a non-capitalized “ethernet”.
- `show run | grep Ethernet ignore-case returns instances containing both “Ethernet” and “ethernet”.

Displaying All Output

To display the output all at once (not one screen at a time), use the no-more option after the pipe. This operation is similar to the terminal length screen-length command except that the no-more option affects the output of just the specified command. For example:

Dell# show running-config | no-more

Filtering the Command Output Multiple Times

You can filter a single command output multiple times. To filter a command output multiple times, place the save option as the last filter. For example:

Dell# command | grep regular-expression | except regular-expression | grep other-regular-expression | find regular-expression | no-more | save

Command Modes

To navigate and launch various CLI modes, use specific commands. Navigation to these modes is described in the following sections.

EXEC Mode

When you initially log in to the switch, by default, you are logged in to EXEC mode. This mode allows you to view settings and enter EXEC Privilege mode, which is used to configure the device.

When you are in EXEC mode, the > prompt is displayed following the host name prompt, which is “Dell” by default. You can change the host name prompt using the hostname command.

NOTE: Each mode prompt is preceded by the host name.

EXEC Privilege Mode

The enable command accesses EXEC Privilege mode. If an administrator has configured an “Enable” password, you are prompted to enter it.

EXEC Privilege mode allows you to access all the commands accessible in EXEC mode, plus other commands, such as to clear address resolution protocol (ARP) entries and IP addresses. In addition, you can access CONFIGURATION mode to configure interfaces, routes and protocols on the switch. While you are logged in to EXEC Privilege mode, the # prompt displays.

CONFIGURATION Mode

In EXEC Privilege mode, use the configure command to enter CONFIGURATION mode and configure routing protocols and access interfaces.

To enter CONFIGURATION mode:

1. Verify that you are logged in to EXEC Privilege mode.
2. Enter the configure command. The prompt changes to include (conf).

From this mode, you can enter INTERFACE mode by using the interface command.

INTERFACE Mode

To configure interfaces or IP services on those interfaces, use INTERFACE mode. An interface can be physical (for example, a TenGigabit Ethernet port) or virtual (for example, the VLAN interface).
To enter INTERFACE mode:

1. Verify that you are logged in to CONFIGURATION mode.
2. Enter the `interface` command and then enter an interface type and interface number that is available on the switch.

The prompt changes to include the designated interface and slot/port number. For example:

<table>
<thead>
<tr>
<th>Prompt</th>
<th>Interface Type</th>
</tr>
</thead>
<tbody>
<tr>
<td>Dell(conf-if-te-0/1)#</td>
<td>Ten-Gigabit Ethernet interface then slot/port information</td>
</tr>
<tr>
<td>Dell(conf-if-vl-1)#</td>
<td>VLAN Interface then VLAN number (range 1–4094)</td>
</tr>
<tr>
<td>Dell(conf-if-ma-0/1)#</td>
<td>Management Ethernet interface then slot/port information</td>
</tr>
<tr>
<td>Dell(conf-if-range)#</td>
<td>Designated interface range (used for bulk configuration)</td>
</tr>
</tbody>
</table>

**LINE Mode**

To configure the console or virtual terminal parameters, use LINE mode.

To enter LINE mode:

1. Verify that you are logged in to CONFIGURATION mode.
2. Enter the `line` command. Include the keywords `console` or `vty` and their line number available on the switch. The prompt changes to include `(config-line-console)` or `(config-line-vty)`.

You can exit this mode by using the `exit` command.

**MONITOR SESSION Mode**

In CONFIGURATION mode, use the `monitor session` command to enter MONITOR SESSION mode and configure port monitoring.

To enter MONITOR SESSION mode:

1. Verify that you are logged in to CONFIGURATION mode.
2. Use the `monitor session` command. Include the monitor session ID. The prompt changes to include `(conf-mon-sess)`.

You can return to CONFIGURATION mode by using the `exit` command.

**PROTOCOL LLDP Mode**

In CONFIGURATION mode, use the `protocol lldp` command to enter PROTOCOL LLDP mode and configure the LLDP protocol.

To enter PROTOCOL LLDP mode:

1. Verify that you are logged in to CONFIGURATION mode.
2. Enter the `protocol lldp` command. The prompt changes to include `Dell(config-lldp)`.

You can return to CONFIGURATION mode by using the `exit` command.
Track Login Activity

Dell Networking OS enables you to track the login activity of users and view the successful and unsuccessful login events. When you log in using the console or VTY line, the system displays the last successful login details of the current user and the number of unsuccessful login attempts since your last successful login to the system. The system stores the number of unsuccessful login attempts that have occurred in the last 30 days by default. You can change the default value to any number of days from 1 to 30. By default, login activity tracking is disabled. You can enable it using the login statistics enable command from the configuration mode.

Restrictions for Tracking Login Activity

These restrictions apply for tracking login activity:

- Only the system and security administrators can configure login activity tracking and view the login activity details of other users.
- Login statistics is not applicable for login sessions that do not use user names for authentication. For example, the system does not report login activity for a telnet session that prompts only a password.

Configuring Login Activity Tracking

To enable and configure login activity tracking, follow these steps:

1. Enable login activity tracking.
   
   CONFIGURATION mode
   
   login statistics enable
   
   After enabling login statistics, the system stores the login activity details for the last 30 days.

2. (Optional) Configure the number of days for which the system stores the user login statistics. The range is from 1 to 30.
   
   CONFIGURATION mode
   
   login statistics time-period days

Example of Configuring Login Activity Tracking

The following example enables login activity tracking. The system stores the login activity details for the last 30 days.

Dell(config)#login statistics enable

The following example enables login activity tracking and configures the system to store the login activity details for 12 days.

Dell(config)#login statistics enable
Dell(config)#login statistics time-period 12

Display Login Statistics

To view the login statistics, use the show login statistics command.

Example of the show login statistics Command

The show login statistics command displays the successful and failed login details of the current user in the last 30 days or the custom defined time period.

Dell#show login statistics

User: admin
Last login time: Mon Feb 16 04:40:00 2015
Last login location: Line vty0 ( 10.14.1.97 )
Unsuccessful login attempt(s) since the last successful login: 0
Unsuccessful login attempt(s) in last 30 day(s): 3

Example of the `show login statistics all` command

The `show login statistics all` command displays the successful and failed login details of all users in the last 30 days or the custom defined time period.

Dell#show login statistics all

User: admin
Last login time: Mon Feb 16 04:40:00 2015
Last login location: Line vty0 (10.14.1.97)
Unsuccessful login attempt(s) since the last successful login: 0
Unsuccessful login attempt(s) in last 7 day(s): 3

Example of the `show login statistics user user-id` command

The `show login statistics user user-id` command displays the successful and failed login details of a specific user in the last 30 days or the custom defined time period.

Dell#show login statistics user admin

User: admin
Last login time: Mon Feb 16 04:40:00 2015
Last login location: Line vty0 (10.14.1.97)
Unsuccessful login attempt(s) since the last successful login: 0
Unsuccessful login attempt(s) in last 7 day(s): 3

Limit Concurrent Login Sessions

Dell Networking OS enables you to limit the number of concurrent login sessions of users on VTY, Aux, and console lines. You can also clear any of your existing sessions when you reach the maximum permitted number of concurrent sessions.

By default, you can use all 10 VTY lines, one console line, and one Aux line. You can limit the number of available sessions using the `login concurrent-session limit` command and so restrict users to that specific number of sessions. You can optionally configure the system to provide an option to the users to clear any of their existing sessions.

Restrictions for Limiting the Number of Concurrent Sessions

These restrictions apply for limiting the number of concurrent sessions:

- Only the system and security administrators can limit the number of concurrent sessions and enable the clear-line option.
- Users can clear their existing sessions only if the system is configured with the `login concurrent-session clear-line enable` command.

Configuring Concurrent Session Limit

To configure concurrent session limit, follow this procedure:

- Limit the number of concurrent sessions for all users.
  CONFIGURATION mode
login concurrent-session limit number-of-sessions

Example of Configuring Concurrent Session Limit
The following example limits the permitted number of concurrent login sessions to 4.

Dell(config)#login concurrent-session limit 4

Enabling the System to Clear Existing Sessions
To enable the system to clear existing login sessions, follow this procedure:

• Use the following command.

  CONFIGURATION mode

  login concurrent-session clear-line enable

Example of Enabling the System to Clear Existing Sessions
The following example enables you to clear your existing login sessions.

Dell(config)#login concurrent-session clear-line enable

Example of Clearing Existing Sessions
When you try to login, the following message appears with all your existing concurrent sessions, providing an option to close any one of the existing sessions:

$ telnet 10.11.178.14
Trying 10.11.178.14...
Connected to 10.11.178.14.
Escape character is '^]'.
Login: admin
Password:
Current sessions for user admin:
Line  Location
2  vty 0  10.14.1.97
3  vty 1  10.14.1.97
Clear existing session? [line number/Enter to cancel]:

When you try to create more than the permitted number of sessions, the following message appears, prompting you to close one of the existing sessions. If you close any of the existing sessions, you are allowed to login. :

$ telnet 10.11.178.17
Trying 10.11.178.17...
Connected to 10.11.178.17.
Escape character is '^]'.
Login: admin
Password:
Maximum concurrent sessions for the user reached.
Current VTY sessions for user admin:
Line  Location
2  vty 0  10.14.1.97
3  vty 1  10.14.1.97
4  vty 2  10.14.1.97
5  vty 3  10.14.1.97
Kill existing session? [line number/Enter to cancel]:

File Management

This chapter contains commands needed to manage the configuration files and includes other file management commands. The commands in this chapter are supported by the Dell Networking OS.

boot system gateway

Specify the IP address of the default next-hop gateway for the management subnet.

**Syntax**

```plaintext
boot system gateway ip-address
```

**Parameters**

- `ip-address`: Enter an IP address in dotted decimal format.

**Command Modes**

- CONFIGURATION

**Supported Modes**

- All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

Saving the address to the startup configuration file preserves the address in NVRAM in case the startup configuration file is deleted.

boot system stack-unit

Specify the location of the Dell Networking OS image to be used to boot the system.

**Syntax**

```plaintext
boot system stack-unit <0-5 | all> {default | primary | secondary}
```

**Parameters**

- `0-5`: Enter the stack member unit identifier of the stack member.
- `all`: Enter the keyword all to set the primary, secondary, and default images for the system.
- `default`: Enter the keyword default to set the default image path for the system.
- `primary`: Enter the keyword primary to set the primary image path for the system.
- `secondary`: Enter the keyword secondary to set the secondary image path for the system.
**cd**

Change to a different working directory.

**Syntax**

```plaintext
cd directory
```

**Parameters**

- `directory` (OPTIONAL) Enter one of the following:
  - `flash`: (internal Flash) or any sub-directory
  - `usbflash`: (external Flash) or any sub-directory

**Command Modes**

- EXEC Privilege

**Supported Modes**

- All Modes

**Command History**

- **Version**
  - **9.4(0.0)**: Supported on the FN I/O Aggregator.
  - **8.3.17.0**: Supported on the M I/O Aggregator.

**Usage Information**

The system first attempts to load the image from the primary path. If it fails to boot, the system tries to load the image from the secondary path and if that also fails, the system loads the default image.

**copy**

Copy one file to another location. The Dell Networking OS supports IPv4 addressing for FTP, TFTP, and SCP (in the hostip field).

**Syntax**

```plaintext
copy source-file-url destination-file-url
```

**Parameters**

- `file-url` Enter the following location keywords and information:
  - To copy a file from the internal FLASH, enter `flash://` then the filename.
  - To copy the running configuration, enter the keywords `running-config`.
  - To copy the startup configuration, enter the keywords `startup-config`.
  - To copy a file on the external FLASH, enter `usbflash://` then the filename.

<tr>
<td>8.3.17.0</td>
<td>Supported on the MI/O Aggregator.</td>
</tr>
</tbody>
</table>

Usage Information

The Dell Networking OS supports a maximum of 100 files, at the root directory level, on both the internal and external Flash.

The *usbflash* commands are supported. For a list of approved USB vendors, refer to the *Dell Networking OS Release Notes*.

When copying a file to a remote location (for example, using Secure Copy [SCP]), enter only the keywords and Dell Networking OS prompts you for the rest of the information.

**NOTE:** Dell Networking OS imposes a length limit on the password you create for performing the secure copy operation. Your password can be no longer than 32 characters.

For example, when using SCP, you can enter the `copy running-config scp:` command. The `running-config` is the source and the target is specified in the ensuing prompts. Dell Networking OS prompts you to enter any required information, as needed for the named destination — remote destination, destination filename, user ID and password, and so forth.

When you use the `copy running-config startup-config` command to copy the running configuration (the startup configuration file amended by any configuration changes made because the system was started) to the startup configuration file, Dell Networking OS creates a backup file on the internal flash of the startup configuration.

The Dell Networking OS supports copying the running-configuration to a TFTP server or to an FTP server:

- `copy running-config tftp:
- `copy running-config ftp:

**NOTE:** Dell Networking OS imposes a length limit on the password you create for accessing the FTP server. Your password can be no longer than 32 characters.

In the `copy scp: flash:` example, specifying SCP in the first position indicates that the target to specify in the ensuing prompts. Entering `flash:` in the second position means that the target is the internal Flash. In this example, the source is on a secure server running SSH, so you are prompted for the UDP port of the SSH server on the remote host.

**Example (running-config scp):**

```
Dell#copy running-config scp:
Address or name of remote host [10.10.10.1]:
Port number of the server [22]: 99
Destination file name [startup-config]: old_running
User name to login remote host: sburgess
Password to login remote host:
Password to login remote host? dilling
```

**Example (copy scp):**

```
Dell#copy scp: flash:
Address or name of remote host [10.11.199.134]:
Port number of the server [22]: 99
Source file name []: test.cfg
User name to login remote host: admin
```
Password to login remote host:
Destination file name [test.cfg]: test1.cfg

Related Commands
cd — Changes the working directory.

copy running-config startup-config

Copy running configuration to the startup configuration.

Syntax
copy running-config startup-config {duplicate}

Command History

Version Description
9.4(0.0) Supported on the FN I/O Aggregator.
8.3.17.0 Supported on the M I/O Aggregator.

Usage Information
This command is useful for quickly making a change configuration on one chassis available on external flash to move it to another chassis.

delete

Delete a file from the flash. After deletion, files cannot be restored.

Syntax
delete flash: ([flash://]filepath) usbflash ([usbflash://]filepath)

Parameters
flash-url
(no-confirm) (OPTIONAL) Enter the keywords no-confirm to specify that the Dell Networking OS does not require user input for each file prior to deletion.

Command Modes
EXEC Privilege

Version Description
9.4(0.0) Supported on the FN I/O Aggregator.
8.3.17.0 Supported on the M I/O Aggregator.

**dir**

Displays the files in a file system. The default is the current directory.

**Syntax**

```
dir [filename | directory name:]
```

**Parameters**

- `filename | directory name:`
  
  (OPTIONAL) Enter one of the following:
  
  - For a file or directory on the internal Flash, enter `flash://` then the filename or directory name.
  - For a file or directory on an external USB drive, enter `usbflash://` then the filename or directory name.

<td>Supported on the FN I/O Aggregator.</td>
</tr>
</tbody>
</table>
**Version** | **Description**
--- | ---
8.3.17.0 | Supported on the M I/O Aggregator.

**Usage Information**
You must include the colon (:) when entering this command.

⚠️ **CAUTION:** This command deletes all files, including the startup configuration file. So, after executing this command, consider saving the running config as the startup config (use the `write memory` command or `copy run start` command).

**Related Commands**
- `copy` – copies the current configuration to either the startup-configuration file or the terminal.
- `show file` – displays the contents of a text file in the local filesystem.
- `show file-systems` – displays information about the file systems on the system.

---

**HTTP Copy via CLI**

Copy one file to another location. Dell Networking OS supports IPv4 and IPv6 addressing for FTP, TFTP, and SCP (in the `hostip` field).

**Syntax**

```
```

You can copy from the server to the switch and vice-versa.

**Parameters**

- `copy http:`
  - Address or name of remote host [\]: 10.16.206.77
  - Port number of the server [80]:
- `flash:`
  - Source file name [\]: sample_file
  - User name to login remote host: x
  - Password to login remote host:
  - Destination file name [sample_file]:

**Defaults**
None.

</tbody>
</table>

**Example**

```
copy http://admin:admin123@10.16.206.77/sample_file flash://sample_file
```

**Related Commands**
- `copy ftp:flash`
logging coredump stack-unit

Enable the coredump.

**Syntax**
logging coredump stack-unit all

**Command Modes**
CONFIGURATION

**Supported Modes**
All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**
The Kernel core dump can be large and may take up to five to 30 minutes to upload. The Dell Networking OS does not overwrite application core dumps so delete them as necessary to conserve space on the flash; if the flash is out of memory, the coredump is aborted. The Dell Networking OS completes the coredump process and waits until the upload is complete before rebooting the system.

pwd

Display the current working directory.

**Syntax**
pwd

**Command Modes**
EXEC Privilege

restore factory-defaults

Restore factory defaults.

Syntax

restore factory-defaults stack-unit id {clear-all | nvram}

Parameters

factory-defaults Return the system to its factory default mode.

id Enter the stack member unit identifier to restore the mentioned stack-unit. The range is from 0 to 6. Enter the keyword all to restore all units in the stack.

clear-all Enter the keywords clear-all to reset the NvRAM and the system startup configuration.

nvram Enter the keyword nvram to reset the NvRAM only.

Command Modes

EXEC Privilege

Supported Modes

All Modes

Command History

Version Description

9.4(0.0) Supported on the FN I/O Aggregator.

8.3.17.0 Supported on the M I/O Aggregator.

Usage Information

Restoring factory defaults deletes the existing startup configuration and all persistent settings (stacking, fanout, and so forth).

When restoring all units in a stack, all the units in the stack are placed into stand-alone mode.

When restoring a single unit in a stack, that unit placed in stand-alone mode. No other units in the stack are affected.

When restoring units in stand-alone mode, the units remain in stand-alone mode after the restoration. After the restore is complete, the units power cycle immediately.

⚠️ CAUTION: There is no undo for this command.
Example

```
Dell#restore factory-defaults stack-unit 0 clear-all
************************************************************
* Warning - Restoring factory defaults will delete the existing *
* startup-config and all persistent settings (stacking, fanout, etc.)*
* After restoration the unit(s) will be powercycled immediately. *
* Proceed with caution ! *
******************************************************************************

**upgrade boot**

Upgrade the bootflash image or bootselector image.

**Syntax**

```
upgrade boot {all | bootflash-image | bootselector-image} stack-unit {0-5 | all} {booted | flash: | ftp: | tftp: | usbflash:} (A: | B:)
```

**Parameters**

- **all**
  - Enter the keyword `all` to change both the bootflash and bootselector images.

- **bootflash-image**
  - Enter the keywords `bootflash-image` to change the bootflash image.

- **bootselector-image**
  - Enter the keywords `bootselector-image` to change the bootselector image.

- **0–5**
  - Enter the keyword `0–5` to upgrade only the mentioned stack-unit.

- **all**
  - Enter the keyword `all` to upgrade all the member stack-units.

- **booted**
  - Enter the keyword `booted` to upgrade from the current image in the M I/O Aggregator.

- **ftp:**
  - After entering the keyword `ftp:` you can either follow it with the location of the source file in this form: `//userid:password@hostip/filepath` or press Enter to launch a prompt sequence.

- **tftp:**
  - After entering the keyword `tftp:` you can either follow it with the location of the source file in this form: `//hostlocation/filepath` or press Enter to launch a prompt sequence.

Usage Information

You must reload the Dell Networking OS after executing this command.

Example

Dell#upgrade boot ?
all Upgrade both boot flash image and selector image
bootflash-image Upgrade boot flash image
bootselector-image Upgrade boot selector image
Dell#

upgrade system

Upgrade the bootflash image or system image.

Syntax

```
upgrade system {flash: | ftp: | scp: | tftp: | usbflash: | stack-unit {0-5 | all} {A: | B:}
```

Parameters

- **0–5**
  - Enter the keyword 0–5 to upgrade only the mentioned stack-unit.
- **all**
  - Enter the keyword all to upgrade all the member units of the stack.
- **ftp**
  - After entering the keyword ftp you can either follow it with the location of the source file in this form://userid:password@hostip/filepath, or press Enter to launch a prompt sequence.
- **scp**
  - After entering the keyword scp you can either follow it with the location of the source file in this form://userid:password@hostip/filepath, or press Enter to launch a prompt sequence.
- **tftp**
  - After entering the keyword tftp you can either follow it with the location of the source file in this form://hostlocation/filepath, or press Enter to launch a prompt sequence.
- **flash**
  - After entering the keyword flash you can either follow it with the location of the source file in this form://filepath, or press Enter to launch a prompt sequence.
- **usbflash**
  - After entering the keyword usbflash you can either follow it with the location of the source file in this form://filepath, or press Enter to launch a prompt sequence.
- **A:**
  - Enter this keyword to upgrade the bootflash partition A.
- **B:**
  - Enter this keyword to upgrade the bootflash partition B.

Defaults

none

</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

Usage Information

You must reload Dell Networking OS after executing this command. Use the command `upgrade system stack-unit` to copy Dell Networking OS from the management unit to one or more stack members.

Example

```
Dell#upgrade system ?
flash: Copy from flash file system (flash://filepath)
ftp: Copy from remote file system, IPv4 or IPv6, (ftp://userid:password@hostip/filepath)
scp: Copy from remote file system, IPv4 or IPv6, (scp://userid:password@hostip/filepath)
stack-unit Sync image to the stack-unit
stftp: Copy from remote file system, IPv4 or IPv6, (tftp://hostip/filepath)
usbflash: Copy from usbflash file system (usbflash://filepath)
Dell#
```
Control and Monitoring

This chapter describes control and monitoring for the I/O Aggregator.

asset-tag

Assign and store a unique asset-tag to the stack member.

Syntax

```
asset-tag stack-unit unit-id Asset-tag ID
```

To remove the asset tag, use the `no stack-unit unit-id Asset-tag ID` command.

Parameters

- **stack-unit unit-id**
  
  Enter the keywords `stack-unit` then the `unit-id` to assign a tag to the
  specific member. The range is from 0 to 5.

- **Asset-tag ID**
  
  Enter a unique asset-tag ID to assign to the stack member. This option accepts a
  maximum of 10 characters, including all special characters except double quotes. To
  include a space in the asset-tag, enter a space within double quotes.

Defaults

No asset-tag is assigned.

Command Modes

</tbody>
</table>

**Example**

Dell#configure
Dell(conf)#
debug cpu-traffic-stats

Enable the collection of computer processor unit (CPU) traffic statistics.

Syntax
debug cpu-traffic-stats

Defaults
Disabled

Command Modes
EXEC Privilege

Supported Modes
All Modes

Command History

Version Description
9.4(0.0) Supported on the FN I/O Aggregator.
8.3.17.0 Supported on the M I/O Aggregator.

Usage Information
This command enables (and disables) the collection of CPU traffic statistics from the time this command is executed (not from system boot). However, excessive traffic a CPU receives automatically triggers (turn on) the collection of CPU traffic statics.

To view the traffic statistics, use the show cpu-traffic-stats command.

If the CPU receives excessive traffic, traffic is rate controlled.

NOTE: You must enable this command before the show cpu-traffic-stats command displays traffic statistics. Dell Networking recommends disabling debugging (no debug cpu-traffic-stats) after troubleshooting is complete.

Related Commands
show cpu-traffic-stats — displays the cpu traffic statistics.

debug ifm trace-flags

Turn on the IFM internal trace-flags.

Syntax
debug ifm trace-flags trace-flags

To disable this command, use the no debug ifm trace-flags command.

Parameters

trace-flags Enter a hexadecimal number representing the trace-flag.

Defaults
None

Command Modes
EXEC Privilege

Supported Modes
All Modes

Command History

Version Description
9.4(0.0) Supported on the FN I/O Aggregator.
8.3.17.0 Supported on the M I/O Aggregator.

NOTE: Use this command only when you are working directly with a technical support representative to troubleshoot a problem. Do not use this command unless a technical support representative instructs you to do so.
disable

Return to EXEC mode.

Syntax

disable [level]

Parameters

level

(OPTIONAL) Enter a number for a privilege level of the Dell Networking OS. The range is from 0 to 15. The default is 1.

Defaults

1

Command Modes

EXEC Privilege

Supported Modes

All Modes

Command History

Version Description
9.4(0.0) Supported on the FN I/O Aggregator.
8.3.17.0 Supported on the M I/O Aggregator.

enable

Enter EXEC Privilege mode or any other privilege level configured. After entering this command, you may need to enter a password.

Syntax

enable [level]

Parameters

level

(OPTIONAL) Enter a number for a privilege level of the Dell Networking OS. The range is from 0 to 15. The default is 15.

Defaults

15

Command Modes

EXEC

Supported Modes

All Modes

Command History

Version Description
9.4(0.0) Supported on the FN I/O Aggregator.
8.3.17.0 Supported on the M I/O Aggregator.

Usage Information

Users entering EXEC Privilege mode or any other configured privilege level can access configuration commands. To protect against unauthorized access, use the enable password command to configure a password for the enable command at a specific privilege level. If no privilege level is specified, the default is privilege level 15.

Related Commands

enable password—configures a password for the enable command and to access a privilege level.
**end**

Return to EXEC Privilege mode from other command modes (for example, CONFIGURATION mode).

**Syntax**

```
end
```

**Command Modes**

- CONFIGURATION
- LINE
- INTERFACE
- MONITOR SESSION
- PROTOCOL LLDP

```

Related Commands:
- `ftp-server topdir` — sets the directory to be used for incoming FTP connections.
- `ftp-server username` — sets a username and password for incoming FTP connections.

### ftp-server topdir

Specify the top-level directory to be accessed when an incoming FTP connection request is made.

Syntax:

```
ftp-server topdir directory
```  

Parameters:
- `directory` Enter the directory path.

Defaults: The internal flash is the default directory.

Command Modes: CONFIGURATION

Supported Modes: All Modes

Command History:

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>
Usage Information
After you enable FTP server functions with the `ftp-server enable` command, Dell Networking recommends specifying a top-level directory path. Without a top-level directory path specified, the Dell Networking OS directs users to the flash directory when logging in to the FTP server.

Related Commands
- `ftp-server enable` — enables FTP server functions on the M I/O Aggregator.
- `ftp-server username` — sets a username and password for incoming FTP connections to the M I/O Aggregator.

**ftp-server username**

Create a user name and associated password for incoming FTP server sessions.

**Syntax**
```
ftp-server username username password [encryption-type] password
```

**Parameters**
- `username` Enter a text string up to 40 characters long as the user name.
- `password` Enter the keyword `password` then a string up to 40 characters long as the password. Without specifying an encryption type, the password is unencrypted.
- `encryption-type` (OPTIONAL) After the keyword `password`, enter one of the following numbers:
  - 0 (zero) for an unencrypted (clear text) password
  - 7 (seven) for a hidden text password

**Defaults**
Not enabled.

**Command Modes**

Command History

**Version** | **Description**
---|---
9.4(0.0) | Supported on the FN I/O Aggregator.
8.3.17.0 | Supported on the M I/O Aggregator.

ip telnet source-interface

Set an interface's IP address as the source address in outgoing packets for Telnet sessions.

Syntax

```
ip telnet source-interface interface
```

Parameters

`interface` | Enter the following keyword and slot/port or number information:
---|---
- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` followed by the slot/port information.
- For VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

Defaults

The IP address on the system that is closest to the Telnet address is used in the outgoing packets.

Command Modes

9.4(0.0) | Supported on the FN I/O Aggregator.
8.3.17.0 | Supported on the M I/O Aggregator.
Related Commands  
**telnet** — telnets to another device.

## line

Enable and configure console and virtual terminal lines to the system. This command accesses LINE mode, where you can set the access conditions for the designated line.

### Syntax

```
line {console 0 | vty number [end-number]}
```

### Parameters

- **console 0**
  - Enter the keyword `console 0` to configure the console port.
  - The console option is `<0-0>`.

- **vty number**
  - Enter the keyword `vty` followed by a number from 0 to 9 to configure a virtual terminal line for Telnet sessions.
  - The system supports 10 Telnet sessions.

- **end-number**
  - (OPTIONAL) Enter a number from 1 to 9 as the last virtual terminal line to configure.
  - You can configure multiple lines at one time.

### Defaults

Not configured

### Command Modes

### Command History

- **Version**  
  - **9.4(0.0)** — Supported on the FN I/O Aggregator.
  - **8.3.17.0** — Supported on the M I/O Aggregator.

### Usage Information

- You cannot delete a terminal connection.

### Related Commands

- **show memory** — View current memory usage on the M I/O Aggregator.

## ping

Test connectivity between the system and another device by sending echo requests and waiting for replies.

### Syntax

```
ping host
```

### Parameters

- **host**
  - Enter the host name or the destination IP address of the device to which you are testing connectivity.

### Command Modes

- EXEC
- EXEC Privilege
**ping**

When you enter the `ping` command without specifying an IP address (Extended Ping), you are prompted for a target IP address, a repeat count, a datagram size (up to 1500 bytes), a timeout (in seconds), and for Extended Commands. For information on the ICMP message codes that return from a `ping` command, refer to [Internet Control Message Protocol (ICMP) Message Types](#).

**Example (IPv4)**

```
Dell# ping 172.31.1.255
Type Ctrl-C to abort.
Sending 5, 100-byte ICMP Echos to 172.31.1.255, timeout is 2 seconds:
Reply to request 1 from 172.31.1.208 0 ms
Reply to request 1 from 172.31.1.216 0 ms
Reply to request 1 from 172.31.1.205 16 ms
::
Reply to request 5 from 172.31.1.209 0 ms
Reply to request 5 from 172.31.1.66 0 ms
Reply to request 5 from 172.31.1.87 0 ms
Dell#
```

**reload**

Reboot the Dell Networking OS.

**Syntax**

```
reload
```

**Command Modes**

EXEC Privilege

**Supported Modes**

All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>

<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

If there is a change in the configuration, the Dell Networking OS prompts you to save the new configuration. Or you can save your running configuration with the `copy running-config` command.

**Related Commands**

- `reset stack-unit` — resets any designated stack member except the management unit.

**service timestamps**

Add time stamps to debug and log messages. This command adds either the uptime or the current time and date.

**Syntax**

```
service timestamps [debug | log] [datetime [localtime] [msec] [show-timezone] | uptime]
```

**Parameters**

- `debug` 
  (OPTIONAL) Enter the keyword `debug` to add timestamps to debug messages.
log  (OPTIONAL) Enter the keyword log to add timestamps to log messages with severity from 0 to 6.

datetime  (OPTIONAL) Enter the keyword datetime to have the current time and date added to the message.

localtime  (OPTIONAL) Enter the keyword localtime to include the localtime in the timestamp.

msec  (OPTIONAL) Enter the keyword msec to include milliseconds in the timestamp.

show-timezone  (OPTIONAL) Enter the keyword show-timezone to include the time zone information in the timestamp.

uptime  (OPTIONAL) Enter the keyword uptime to have the timestamp based on time elapsed since system reboot.

Defaults Not configured.

show configuration lock

Display the configuration lock status.

Syntax

show configuration lock

Defaults
None

Command Modes
EXEC Privilege

Supported Modes
All Modes

Command History

Version Description
9.4(0.0) Supported on the FN I/O Aggregator.
8.3.17.0 Supported on the M I/O Aggregator.

Usage Information

The type may be auto, manual, or rollback. When set to auto, Dell Networking OS automatically denies access to CONFIGURATION mode to all other users every time the user on the listed VTY line enters CONFIGURATION mode. When set to manual, the user on the listed VTY line must explicitly set the lock each time before entering CONFIGURATION mode. Rollback indicates that Dell Networking OS is in a rollback process. The line number shown in the output can be used to send the messages to that session or release a lock on a VTY line.

Example

Dell#show configuration lock
Configure exclusively locked by the following line:
Line : vty 0
Line number : 2
User : admin
Type : AUTO
State : LOCKED
Ip address : 10.11.9.97
Dell#
show cpu-traffic-stats

Display the CPU traffic statistics.

Syntax

```
show cpu-traffic-stats [port number | all]
```

Parameters

- **port number** (OPTIONAL) Enter the port number to display traffic statistics on that port only. The range is from 1 to 1568.
- **all** (OPTIONAL) Enter the keyword all to display traffic statistics on all the interfaces receiving traffic, sorted based on the traffic.

Defaults

**all**

Command Modes

**EXEC**

Supported Modes

All Modes

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

Usage Information

Traffic statistics are sorted on a per-interface basis; the interface receiving the most traffic is displayed first. All CPU and port information is displayed unless a specific port or CPU is specified. Traffic information is displayed for router ports only; not for management interfaces. The traffic statistics are collected only after the debug cpu-traffic-stats command is executed; not from the system bootup.

⚠️ **NOTE:** After debugging is complete, use the no debug cpu-traffic-stats command to shut off traffic statistics collection.

Example

```
Dell#show cpu-traffic-stats
Processor : CP
-----------
Received 100% traffic on TenGigabitEthernet 8/2 Total packets:100
   LLC:0, SNAP:0, IP:100, ARP:0, other:0
   Unicast:100, Multicast:0, Broadcast:0
Dell#
```

Related Commands

- **debug cpu-traffic-stats** — enables CPU traffic statistics for debugging.

show debugging

View a list of all enabled debugging processes.

Syntax

```
show debugging
```

Example (all)

Dell#show environment all

```
-- Unit Environment Status --
Unit Status  Temp  Voltage TempStatus
---------------------------------------------------------------------------
* 1   online   66C    ok       2
* Management Unit
-- Thermal Sensor Readings (deg C) --
Unit Sensor0 Sensor1 Sensor2 Sensor3 Sensor4 Sensor5 Sensor6 Sensor7 Sensor8 Sensor9
---------------------------------------------------------------------------
1      51      51       63     61      61       61      67     61
64     66
```

Example (stack-unit)

Dell#show environment stack-unit

```
-- Unit Environment Status --
Unit Status  Temp  Voltage TempStatus
---------------------------------------------------------------------------
* 1   online   66C    ok       2
* Management Unit
```

Example (thermal-sensor)

Dell#show environment thermal-sensor

```
-- Thermal Sensor Readings (deg C) --
Unit Sensor0 Sensor1 Sensor2 Sensor3 Sensor4 Sensor5 Sensor6 Sensor7 Sensor8 Sensor9
---------------------------------------------------------------------------
1      51      51       64      61       61      61      67     61
64     66
```

show inventory

Display the switch type, components (including media), and Dell Networking OS version including hardware identification numbers and configured protocols.

Syntax

```
show inventory [media slot]
```
Parameters

**media slot**

(Optional) Enter the keyword `media` then the stack ID of the stack member you want to display pluggable media inventory.

Defaults

none

Command Modes

EXEC

Supported Modes

All Modes

Command History

**Version**

9.4(0.0)

Supported on the FN I/O Aggregator.

Usage Information

If there are no fiber ports in the unit, just the header under `show inventory media` displays. If there are fiber ports but no optics inserted, the output displays "Media not present or accessible".

Example

```bash
Dell#show inventory
System Type            : PE-FN-410S-IOA
System Mode            : 1.0
Software Version       : 1-0(0-1859)

Unit Type                      Serial Number  Part Number  Rev  Piece Part ID            Rev  Svc Tag  Exprs Svc Code
---------------------------------------------------------------------------------------------------------------------
* 0  PowerEdge-FN-410S-IOA     TW000000000020 07NVPVX01    X01  TW-07NVPV-00000-000-0020 X01  N/A      N/A
  - Management Unit

Software Protocol Configured

DCBX
FIP Snooping
IGMP
iSCSI
LLDP
SNMP
Dell#
```

Example (media)

```bash
Dell#show inventory media ?
<0-5>                   Slot number
|                       Pipe through a command

Dell#show inventory media
```

```bash
Dell#show inventory media
Slot   Port     Type        Media               Serial Number        F10Qualified
------------------------------------------------------------------------------
 0      9     SFP+        10GBASE-SR          AHJ0BU3                  Yes
 0     10     SFP+        10GBASE-CU5M        APF125100446U1           Yes
 0     11     SFP+        10GBASE-SR          CD23FM12H                Yes
 0     12     SFP+        10GBASE-SR          CD23FM0XT                Yes

Dell#
```

Related Commands

`show config (from INTERFACE VLAN mode)` — displays information on a specific physical interface or virtual interface.

### show memory

Display current memory usage on the M I/O Aggregator.

**Syntax**

```
show memory [stack-unit 0-5]
```
**Parameters**

stack-unit 0–5  
(Optional) Enter the keywords stack-unit then the stack unit ID of the stack member to display memory information on the designated stack member.

**Command Modes**

- EXEC
- EXEC Privilege

**Supported Modes**  
All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

The output for `show memory` command displays the memory usage of LP part (sysdlp) of the system. The sysdlp is an aggregate task that handles all the tasks running on the CPU.

**Example**

```
Dell#show memory
   Statistics On Unit 0 Processor
   ===========================
   Total(b)   Used(b)  Free(b)   Lowest(b)   Largest(b)
   268435456  4010354  264425102  264375410   264425102
```

**show processes cpu**

Display CPU usage information based on processes running.

**Syntax**

```
show processes cpu [management-unit 1-99 [details] | stack-unit 0-5 | summary ]
```

**Parameters**

- management-unit 1-99 [details]  
  (OPTIONAL) Display processes running in the control processor. The 1–99 variable sets the number of tasks to display in order of the highest CPU usage in the past five (5) seconds. Add the keyword details to display all running processes (except sysdlp). Refer to Example (management-unit).

- stack-unit 0–5  
  (OPTIONAL) Enter the keywords stack-unit then the stack member ID. The range is from 0 to 5.

  As an option of the `show processes cpu` command, this option displays CPU usage for the designated stack member. Or, as an option of `memory`, this option limits the output of memory statistics to the designated stack member. Refer to Example (stack-unit).

- summary  
  (OPTIONAL) Enter the keyword summary to view a summary view CPU utilization of processes related to line card processing. Refer to Example (summary).

**Command Modes**

- EXEC
- EXEC Privilege

<td>Number of messages acknowledged</td>
</tr>
<tr>
<td>Retr /Available Retra</td>
<td>Number of retries left</td>
</tr>
<tr>
<td>Total/ Max Retra</td>
<td>Number of retries allowed</td>
</tr>
</tbody>
</table>

**Important Points:**

- The SWP provides flow control-based reliable communication between the sending and receiving software tasks.
- A sending task enqueues messages into the SWP queue for a receiving task and waits for an acknowledgement.
- If no response is received within a defined period of time, the SWP timeout mechanism resubmits the message at the head of the FIFO queue.
- After retrying a defined number of times, the SWP-2-NOMORETIMEOUT timeout message is generated.
• In the example, a retry (Retries) value of zero indicates that the SWP mechanism reached the maximum number of retransmissions without an acknowledgement.

Example

Dell#show processes ipc flow-control

Dell#

show processes memory

Display memory usage information based on processes running in the system.

Syntax

show processes memory {management-unit | stack {0–5 | all | summary}}

Parameters

management-unit  Enter the keywords management-unit for CPU memory usage of the stack management unit.

stack unit 0–5    Enter the keywords stack unit then a stack unit ID of the member unit for which to display memory usage on the forwarding processor.

all               Enter the keyword all for detailed memory usage on all stack members.

summary           Enter the keyword summary for a brief summary of memory availability and usage on all stack members.

Command Modes

• EXEC
• EXEC Privilege
Supported Modes
All Modes

Command History

Version          Description
9.4(0.0)        Supported on the FN I/O Aggregator.
8.3.17.0        Supported on the M I/O Aggregator.

Usage Information

show processes memory output

Field          Description
Total:         Total system memory available
MaxUsed:       Total maximum memory used ever (history indicated with time stamp)
CurrentUsed:   Total memory currently in use
CurrentFree:   Total system memory available
SharedUsed:    Total used shared memory
SharedFree:    Total free shared memory
PID            Process ID
Process        Process Name
ResSize        Actual resident size of the process in memory
Size           Process test, stack, and data size
Allocs         Total dynamic memory allocated
Frees          Total dynamic memory freed
Max            Maximum dynamic memory allocated
Current        Current dynamic memory in use

The output for the show processes memory command displays the memory usage statistics running on CP part (sysd) of the system. The sysd is an aggregate task that handles all the tasks running on the M I/O Aggregator’s CP.

The output of the show memory command and this command differ based on which the Dell Networking OS processes are counted.

- In the show memory output, the memory size is equal to the size of the application processes.
- In the output of this command, the memory size is equal to the size of the application processes plus the size of the system processes.

Example

Dell#show processes memory stack-unit 1

  0 Multicasts, 0 Broadcasts
  0 runts, 0 giants, 0 throttles
  0 CRC, 0 overrun, 0 discarded
Output Statistics:
  0 packets, 0 bytes, 0 underruns
  0 64-byte pkts, 0 over 64-byte pkts, 0 over 127-byte pkts
show system

Displays the current status of all stack members or a specific stack member.

Syntax

```
show system [brief | stack-unit unit-id]
```

Parameters

- **brief** *(OPTIONAL)* Enter the keyword `brief` to view an abbreviated list of system information.
- **stack unit unit-id** *(OPTIONAL)* Enter the keywords `stack unit` then the stack member ID for information on the stack member. The range is from 0 to 5.

Command Modes

- EXEC
- EXEC Privilege

Related Commands
asset-tag — Assign and store unique asset-tag to the stack member.
show version — Displays the Dell version.
show processes memory — Displays the memory usage based on the running processes.
show system stack-ports — Displays information about the stack ports on all switches in the stack.
show diag — Displays the data plane and management plane input and output statistics of a particular stack member.

show tech-support

Displays a collection of data from other show commands, necessary for Dell Networking technical support to perform troubleshooting on Aggregators.

Syntax

    show tech-support [stack-unit unit-id | page]
Parameters

stack-unit  (OPTIONAL) Enter the keyword stack-unit to view CPU memory usage for the stack member designated by unit-id. The range is 0 to 5.

page  (OPTIONAL) Enter the keyword page to view 24 lines of text at a time. Press the SPACE BAR to view the next 24 lines. Press the ENTER key to view the next line of text.

When using the pipe command ( | ), enter one of these keywords to filter command output. Refer to CLI Basics for details on filtering commands.

save  Enter the keyword save to save the command output.

flash:  Save to local flash drive (flash://filename (max 20 chars))

Command Modes

- EXEC Privilege

Supported Modes

All Modes

Command History

Version | Description
--------|-----------------'
9.4(0.0) | Supported on the FN I/O Aggregator.
8.3.17.0 | Supported on the M I/O Aggregator.

Usage Information

Without the page or stack-unit option, the command output is continuous, use Ctrl-z to interrupt the command output.

The save option works with other filtering commands. This allows you to save specific information of a show command. The save entry must always be the last option.

For example: Dell#show tech-support | grep regular-expression | except regular-expression | find regular-expression | save flash://result

This display output is an accumulation of the same information that is displayed when you execute one of the following show commands:

- show cam
- show clock
- show environment
- show file
- show interfaces
- show inventory
- show processes cpu
- show processes memory
- show running-conf
- show version

Example (save)

Dell#show tech-support ?
page       Page through output
stack-unit Unit Number
|           Pipe through a command
<cr>
Dell#show tech-support stack-unit 1 ?
page       Page through output
Pipe through a command
<cr>
Dell#show tech-support stack-unit 1 | ?
except S how only text that does not match a pattern
find Search for the first occurrence of a pattern
grep Show only text that matches a pattern
no-more Don't paginate output
save Save output to a file
Dell#show tech-support stack-unit 1 | save ?
flash: Save to local file system (flash://filename (max 20 chars))
usbflash: Save to local file system (usbflash://filename (max 20 chars))
Dell#show tech-support stack-unit 1 | save flash://LauraSave
Start saving show command report .......

### telnet

Connect through Telnet to a server. The Telnet client and server in Dell Networking OS support IPv4 connections. You can establish a Telnet session directly to the router or a connection can be initiated from the router.

**Syntax**

```
telnet {host | ip-address} [/source-interface]
```

**Parameters**

- `host`  
  - Enter the name of a server.

- `ip-address`  
  - Enter the IPv4 address in dotted decimal format of the server.

- `source-interface`  
  - (OPTIONAL) Enter the keywords `/source-interface` then the interface information to include the source interface. Enter the following keywords and slot/port or number information:
    - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

**Defaults**
Not configured.

**Command Modes**
- EXEC
- EXEC Privilege

**Supported Modes**
All Modes

</tbody>
</table>

terminal length

Configure the number of lines displayed on the terminal screen.

**Syntax**

```
terminal length screen-length
```

To return to the default values, use the `no terminal length` command.

**Parameters**

- `screen-length`
  
Enter a number of lines. Entering zero will cause the terminal to display without pausing. The range is from 0 to 512.

  Default: 24 lines
terminal monitor

Configure the Dell Networking OS to display messages on the monitor/terminal.

Syntax

```
terminal monitor
```

To return to default settings, use the `no terminal monitor` command.

Defaults

Disabled

Command Modes

- EXEC
- EXEC Privilege

Supported Modes

All Modes

Command History

<table>
<thead>
<tr>

Command Modes

- EXEC
- EXEC Privilege

Supported Modes

All Modes
trace route

View the packet path to a specific device.

Syntax
 traceroute {host | ip-address}

Parameters
 host
 Enter the name of device.

ip-address
 Enter the IP address of the device in dotted decimal format.

Defaults
 Timeout = 5 seconds; Probe count = 3; 30 hops max; 40 byte packet size; UDP port = 33434

Command Modes
 • EXEC
 • EXEC Privilege

Supported Modes
 All Modes

Command History
 Version Description
 9.4(0.0) Supported on the FN I/O Aggregator.
 8.3.17.0 Supported on the M I/O Aggregator.

Usage Information
 When you enter the traceroute command without specifying an IP address (Extended Traceroute), you are prompted for a target and source IP address, timeout in seconds (default is 5), a probe count (default is 3), minimum TTL (default is 1), maximum TTL (default is 30), and port number (default is 33434). To keep the default setting for those parameters, press the ENTER key.

Example (IPv4)

Dell#traceroute www.force10networks.com
Translating "www.force10networks.com"...domain server (10.11.0.1) [OK]
Type Ctrl-C to abort.

---------
Tracing the route to www.force10networks.com (10.11.84.18), 30 hops max, 40 byte packets
---------
TTL Hostname Probel Probe2 Probe3
1 10.11.199.190 001.000 ms 001.000 ms 002.000 ms
2 gwegress-sjc-02.force10networks.com (10.11.30.126) 005.000 ms 001.000 ms 001.000 ms
3 fw-sjc-01.force10networks.com (10.11.127.254) 000.000 ms 000.000 ms 000.000 ms
4 www.force10networks.com (10.11.84.18) 000.000 ms 000.000 ms 000.000 ms
Dell#
Related Commands

ping — Tests the connectivity to a device.

**undebug all**

Disable all debug operations on the system.

**Syntax**

```
undebug all
```

**Defaults**

none

**Command Modes**

- EXEC Privilege

**Supported Modes**

All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**write**

Copy the current configuration to either the startup-configuration file or the terminal.

**Syntax**

```
write {memory | terminal}
```

**Parameters**

- **memory**
  
  Enter the keyword `memory` to copy the current running configuration to the startup configuration file. This command is similar to the `copy running-config startup-config` command.

- **terminal**
  
  Enter the keyword `terminal` to copy the current running configuration to the terminal. This command is similar to the `show running-config` command.

**Command Modes**

- EXEC Privilege

**Supported Modes**

All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

The `write memory` command saves the running-configuration to the file labeled startup-configuration. When using a LOCAL CONFIG FILE other than the startup-config not named “startup-configuration”, the running-config is not saved to that file; use the `copy` command to save any running-configuration changes to that local file.
u-Boot

All commands in this chapter are in u-Boot mode. These commands are supported on the Dell Networking Aggregator only. To access this mode, hit any key when the following line appears on the console during a system boot: Hit any key to stop autoboot:

You enter u-Boot immediately, as indicated by the BOOT_USER# prompt.

NOTE: Only the most frequently used commands available in uBoot mode are described in this chapter. In uBoot mode, you cannot use the Tab key for command completion.

boot change

Change the operating system boot parameters.

Syntax

boot change [primary | secondary | default]

Command Modes

Data Center Bridging (DCB)

Data center bridging (DCB) refers to a set of IEEE Ethernet enhancements that provide data centers with a single, robust, converged network to support multiple traffic types, including local area network (LAN), server, and storage traffic. DCB features are auto-configured in standalone mode.

The Dell Networking OS commands for DCB features include 802.1Qbb priority-based flow control (PFC), 802.1Qaz enhanced transmission selection (ETS), and the data center bridging exchange (DCBX) protocol.

CLI commands for individual DCB features are as follows:

**DCB command**
- `dcb enable auto-detect on-next-reload`
- `show qos dcb-map`

**PFC Commands**
- `clear pfc counters`
- `show interface pfc`
- `show interface pfc statistics`

**ETS Commands**
- `clear ets counters`
- `show interface ets`

**DCBX Commands**
- `dcbx version`
- `clear dcbx counters`
- `show dcb`
- `show interface dcbx detail`

**advertise dcbx-appln-tlv**

On a DCBX port with a manual role, configure the application priority TLVs advertised on the interface to DCBX peers.

**Syntax**
```
advertise dcbx-appln-tlv {fcoe | iscsi}
```

To remove the application priority TLVs, use the `no advertise dcbx-appln-tlv {fcoe | iscsi}` command.

**Parameters**
- `{fcoe | iscsi}`
  - Enter the application priority TLVs, where:
    - `fcoe`: enables the advertisement of FCoE in application priority TLVs.
iscsi: Enables the advertisement of iSCSI in application priority TLVs.

Defaults
Application priority TLVs are enabled to advertise FCoE and iSCSI.

Command Modes
PROTOCOL LLDP

Supported Modes
Programmable-Mux (PMUX)

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information
To disable TLV transmission, use the no form of the command; for example, no advertise dcbx-appln-tlv iscsi.

advertise dcbx-tlv

On a DCBX port with a manual role, configure the PFC and ETS TLVs advertised to DCBX peers.

Syntax
advertise dcbx-tlv {ets-conf | ets-reco | pfc} [ets-conf | ets-reco | pfc]

Parameters
(ets-conf | ets-reco | pfc)

Enter the PFC and ETS TLVs advertised, where:

- ets-conf: Enables the advertisement of ETS configuration TLVs.
- ets-reco: Enables the advertisement of ETS recommend TLVs.
- pfc: Enables the advertisement of PFC TLVs.

Defaults
All PFC and ETS TLVs are advertised.

Command Modes
PROTOCOL LLDP

Supported Modes
Programmable-Mux (PMUX)

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information
You can configure the transmission of more than one TLV type at a time; for example: advertise dcbx-tlv ets-conf ets-reco.

You can enable ETS recommend TLVs (ets-reco) only if you enable ETS configuration TLVs (ets-conf). To disable TLV transmission, use the no form of the command; for example, no advertise dcbx-tlv pfc ets-reco.
DCBX requires that you enable LLDP to advertise DCBX TLVs to peers.

Configure DCBX operation at the INTERFACE level on a switch or globally on the switch. To verify the DCBX configuration on a port, use the `show interface dcbx detail` command.

**bandwidth-percentage**

Assign a percentage of weight to the class/queue.

**Syntax**

`bandwidth-percentage percentage`

To remove the bandwidth percentage, use the `no bandwidth-percentage` command.

**Parameters**

- `percentage`: Enter the percentage assignment of weight to the class/queue. The range is from 1 to 100% (granularity 1%).

**Defaults**

- `none`

**Command Modes**

- `CONFIGURATION (conf-qos-policy-out)`

**Supported Modes**

- Programmable-Mux (PMUX)

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
<tr>
<td>8.3(16.1)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

The unit of bandwidth percentage is 1%. A bandwidth percentage of 0 is allowed and disables the scheduling of that class. If the sum of the bandwidth percentages given to all eight classes exceeds 100%, the bandwidth percentage automatically scales down to 100%.

**Related Commands**

- `qos-policy-output` — creates a QoS output policy.

**clear dcbx counters**

Clear all DCBX TLV counters on an interface.

**Syntax**

`clear dcbx counters tengigabitethernet slot/port`

**Defaults**

- `none`

**Command Modes**

- `EXEC Privilege`

**Supported Modes**

- All Modes

**Command History**

</tr>
</tbody>
</table>

clear pfc counters
Clear the PFC TLV counters and PFC statistics on an interface or stack unit.
Syntax
```
clear pfc counters [port-type slot/port [statistics]]| [stack-unit {unit-number | all} stack-ports all]
```
Parameters
- `port-type` Enter the keywords `port-type` then the slot/port information.
- `stack-unit unit number` Enter the keywords `stack-unit` then the stack-unit number to clear. The range is from 0 to 5.
- `all stack-ports all` Enter the keywords `all stack-ports all` to clear the counters on all interfaces.
- `statistics` Enter the keyword `statistics` to clear only the hardware PFC counters.

Defaults
None

Command Modes
- EXEC Privilege

<td>Introduced on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

DCB is not supported if you enable link-level flow control on one or more interfaces.

**dcb enable pfc-queues**

Configure the number of PFC queues.

**Syntax**

dcb enable pfc-queues value

**Parameters**

- **value**: Enter the number of PFC queues. The range is from 1 to 4. The number of ports supported based on lossless queues configured will depend on the buffer.

**Default**

2

**Command Modes**

CONFIGURATION mode

**Supported Modes**

Programmable-Mux (PMUX)

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.6(0.0)</td>
<td>Supported on the FN 2210S Aggregator.</td>
</tr>
<tr>
<td>9.3(0.0)</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
<tr>
<td>9.3(0.0)</td>
<td>Supported on the MXL 10/40GbE Switch IO Module platform.</td>
</tr>
</tbody>
</table>

**Usage Information**

You can configure up to a maximum of four lossless (PFC) queues. By configuring four lossless queues, you can configure four different priorities and assign a particular priority to each application that your network is used to process. For example, you can assign a higher priority for time-sensitive applications and a lower
priority for other services, such as file transfers. You can configure the amount of buffer space to be allocated for each priority and the pause or resume thresholds for the buffer. This method of configuration enables you to effectively manage and administer the behavior of lossless queues.

Example

Dell(conf)#dcb pfc-queues 4

dcb enable auto-detect on-next-reload

Enables or disables global DCB on a subsequent reload. This command also internally configures PFC buffers based on DCB enable/disable. Save and reload is mandatory for the configurations to take effect. Auto-detect keyword can be used to re-enable IOA with port wise DCB auto detect feature.

Syntax

dcb enable [auto-detect | on-next-reload]

To disable global DCB on a subsequent reload, use the no dcb enable on-next-reload command.

Parameters

auto-detect Enter the keywords auto-detect to re-enable the Aggregator with port wise DCB auto detect feature.

on-next-reload Enter the keywords on-next-reload to apply DCB configurations on subsequent reload.

Defaults

DCB is globally enabled with auto-detect feature.

</tr>
</tbody>
</table>

**Usage Information**  
The `dcb-map stack-unit all stack-ports all` command overwrites any previous DCB maps applied to stack ports.

---

**dcbx-port role**

Configure the DCBX port role the interface uses to exchange DCB information.

**Syntax**

dcbx port-role {config-source | auto-downstream | auto-upstream | manual}

To remove DCBX port role, use the no dcbx port-role {config-source | auto-downstream | auto-upstream | manual} command.

**Parameters**

- **config-source**
- **auto-downstream**
- **auto-upstream**
- **manual**

Enter the DCBX port role, where:

- **config-source**: configures the port to serve as the configuration source on the switch.
- **auto-upstream**: configures the port to receive a peer configuration. The configuration source is elected from auto-upstream ports.
- **auto-downstream**: configures the port to accept the internally propagated DCB configuration from a configuration source.
- **manual**: configures the port to operate only on administer-configured DCB parameters. The port does not accept a DCB configuration received from a peer or a local configuration source.

**Defaults**  
Manual

**Command Modes**  
INTERFACE PROTOCOL LLDP

**Supported Modes**  
Programmable-Mux (PMUX)

**Command History**

<table>
<thead>
<tr>
<th>Version</th>

<tr>
<td>9.3(0.0)</td>
<td>Introduced on the FC Flex IO module installed in the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**  
DCBX requires that you enable LLDP to advertise DCBX TLVs to peers.

Configure DCBX operation at the INTERFACE level on a switch or globally on the switch. To verify the DCBX configuration on a port, use the `show interface dcbx detail` command.
**dcbx version**

Configure the DCBX version used on the interface.

**Syntax**

```
dcbx version {auto | cee | cin | ieee-v2.5}
```

To remove the DCBX version, use the `no dcbx version {auto | cee | cin | ieee-v2.5}` command.

**Parameters**

```
auto | cee | cin | ieee-v2.5
```

Enter the DCBX version type used on the interface, where:

- **auto**: configures the port to operate using the DCBX version received from a peer.
- **cee**: configures the port to use CEE (Intel 1.01).
- **cin**: configures the port to use Cisco-Intel-Nuova (DCBX 1.0).
- **ieee-v2.5**: configures the port to use IEEE 802.1az (Draft 2.5).

**Defaults**

Auto

</tbody>
</table>

**Usage Information**

DCBX requires that you enable LLDP to advertise DCBX TLVs to peers.

Configure DCBX operation at the INTERFACE level on a switch or globally on the switch. To verify the DCBX configuration on a port, use the `show interface dcbx detail` command.

---

**debug dcbx**

Enable DCBX debugging.

**Syntax**

```
debug dcbx {all | auto-detect-timer | config-exchng | fail | mgmt | resource | sem | tlv}
```

To disable DCBX debugging, use the `no debug dcbx` command.

**Parameters**

```
(all | auto-detect-timer | config-exchng | fail | mgmt | resource | sem | tlv)
```

Enter the type of debugging, where:

- **all**: enables all DCBX debugging operations.
- **auto-detect-timer**: enables traces for DCBX auto-detect timers.
- **config-exchng**: enables traces for DCBX configuration exchanges.
- **fail**: enables traces for DCBX failures.
- **mgmt**: enables traces for DCBX management frames.
- **resource**: enables traces for DCBX system resource frames.
sem: enables traces for the DCBX state machine.

- tlv: enables traces for DCBX TLVs.

## Defaults

- none

## Command Modes

## fc-map

In an FCoE map, configure the FCoE mapped address prefix (FC-MAP) value which is used to identify FCoE traffic transmitted on the FCoE VLAN for the specified fabric.

### Syntax

```plaintext
fc-map fc-map-value
```

### Parameters

- **fc-map-value**: Enter the unique MAC address prefix used by a SAN fabric.
  
  The range of FC-MAP values is from 0EFC00 to 0EFCFF.

### Defaults

- None

### Command Modes

- FCoE MAP

### Supported Modes

- Programmable-Mux (PMUX)

### Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.6(0.0)</td>
<td>Supported on the FN 2210S Aggregator.</td>
</tr>
<tr>
<td>9.3(0.0)</td>
<td>Introduced on the M I/O Aggregator and MXL 10/40GbE Switch with the FC Flex IO module.</td>
</tr>
</tbody>
</table>

### Usage Information

The FC-MAP value you enter must match the FC-MAP value used by an FC switch or FCoE forwarder (FCF) in the fabric. An FCF switch accepts only FCoE traffic that uses the correct FC-MAP value.

The FC-MAP value is used to generate the fabric-provided MAC address (FP-MAC). The FPMA is used by servers to transmit FCoE traffic to the fabric. An FC-MAP can be associated with only one FCoE VLAN and vice versa.

In an FCoE map, the FC-MAP value, fabric ID, and FCoE VLAN parameters must be unique.

To remove a configured FC-MAP value from an FCoE map, enter the `no fc-map` command.

### Related Commands

- `fcoe-map` — creates an FCoE map which contains the parameters used in the communication between servers and a SAN fabric.
fcoe-map

Create an FCoE map which contains the parameters used to configure the links between server CNAs and a SAN fabric. Apply the FCoE map on a server-facing Ethernet port.

Syntax

```
fcoe-map map-name
```

Parameters

- `map-name` Maximum: 32 alphanumeric characters.

Defaults

On the FN2210S Aggregator with PMUX modules, the following parameters are applied on all the PMUX module interfaces:

- Description: SAN_FABRIC
- Fabric-id: 1002
- Fcoe-vlan: 1002
- Fc-map: 0x0efc00
- Fcf-priority: 128
- Fka-adv-period: 8000mSec
- Keepalive: enable
- Vlan priority: 3

<td>Supported on the FN2210S Aggregator.</td>
</tr>
<tr>
<td>9.3(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

Usage Information

An FCoE map is a template used to map FCoE and FC parameters in a converged fabric. An FCoE map is used to virtualize upstream FC ports on an FN2210S Aggregator with the PMUX module NPIV proxy gateway so that they appear to downstream server CNA ports as FCoE forwarder (FCF) ports on an FCoE network. When applied to FC and Ethernet ports on an NPIV proxy gateway, an FCoE map allows the switch to operate as an FCoE-FC bridge between an FC SAN and an FCoE network by providing FCoE-enabled servers and switches with the necessary parameters to log in to a SAN fabric.

On an FN2210S Aggregator a with the PMUX module NPIV proxy gateway, you cannot apply an FCoE map applied on fabric-facing FC ports and server-facing 10–Gigabit Ethernet ports.

An FCoE map consists of the following parameters: the dedicated FCoE VLAN used for storage traffic, the destination SAN fabric (FC-MAP value), FCF priority used by a server, and the FIP keepalive (FKA) advertisement timeout.

In each FCoE map, the fabric ID, FC-MAP value, and FCoE VLAN parameters must be unique. Use one FCoE map to access one SAN fabric. You cannot use the same FCoE map to access different fabrics.

To remove an FCoE map from an Ethernet interface, enter the `no fcoe-map map-name` command in Interface configuration mode.
**fcoe priority-bits**

Configure the FCoE priority advertised for the FCoE protocol in application priority TLVs.

**Syntax**

```
fcoe priority-bits priority-bitmap
```

To remove the configured FCoE priority, use the `no fcoe priority-bits` command.

**Parameters**

- `priority-bitmap`
  
Enter the priority-bitmap range. The range is from 1 to FF.

**Defaults**

0x8

**Command Modes**

- PROTOCOL LLDP

**Supported Modes**

Programmable-Mux (PMUX)

**Command History**

<table>
<thead>

<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.3(0.0)</td>
<td>Introduced on the FC Flex IO module installed in the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

This command is available at the global level only.

---

**iscsi priority-bits**

Configure the iSCSI priority advertised for the iSCSI protocol in application priority TLVs.

**Syntax**

```
iscsi priority-bits priority-bitmap
```

To remove the configured iSCSI priority, use the `no iscsi priority-bits` command.

**Parameters**

- `priority-bitmap`
  
Enter the priority-bitmap range. The range is from 1 to FF.

**Defaults**

0x10

**Command Modes**

- PROTOCOL LLDP

**Supported Modes**

Programmable-Mux (PMUX)

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>

<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.3(0.0)</td>
<td>Introduced on the FC Flex IO module installed in the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

This command is available at the global level only.

---

**keepalive**

Send keepalive packets periodically to keep an interface alive when it is not transmitting data.

**Syntax**

```
keepalive [seconds]
```
To stop sending keepalive packets, use the no keepalive command.

**Parameters**

- **seconds**  
  (OPTIONAL) For interfaces with PPP encapsulation enabled, enter the number of seconds between keepalive packets. The range is from 0 to 23767. The default is 10 seconds.

**Defaults**

Enabled.

**Command Modes**

INTERFACE

**Supported Modes**

Programmable-Mux (PMUX)

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

When you configure keepalive, the system sends a self-addressed packet out of the configured interface to verify that the far end of a WAN link is up. When you configure no keepalive, the system does not send keepalive packets and so the local end of a WAN link remains up even if the remote end is down.

---

### interface vlan (NPIV proxy gateway)

Create a dedicated VLAN to be used to send and receive Fibre Channel traffic over FCoE links between servers and a fabric over an Aggregator with the PMUX module of NPIV proxy gateway.

**Syntax**

```
interface vlan vlan-id
```

**Parameters**

- **vlan-id**  
  Enter a number as the VLAN Identifier. The range is 1 to 4094.

**Defaults**

Not configured.

**Command Modes**

CONFIGURATION

**Supported Modes**

Programmable-Mux (PMUX)

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Introduced on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.3(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

FCoE storage traffic received from servers on an M I/O Aggregator with the PMUX module NPIV proxy gateway is de-capsulated into Fibre Channel packets and forwarded over FC links to SAN switches in a specified fabric. You must configure a separate FCoE VLAN for each fabric to which FCoE traffic is forwarded. Any non-FCoE traffic sent on a dedicated FCoE VLAN will be dropped.

You configure the association between a dedicated VLAN, which carries FCoE traffic from server CNAs over the NPIV proxy gateway to a SAN fabric in which destination storage arrays are installed, in an FCoE map by using the fabric id vlan command.

When you apply an FCoE map to a server-facing Ethernet port, the port is automatically configured as a tagged member of the FCoE VLAN.
For more information about VLANs and the commands to configure them, refer to the Virtual LAN (VLAN) Commands section.

Example (Single Range)

Dell(conf)#interface vlan 10
Dell(conf-if-vl-3)#

**pfc mode on**

Enable the PFC configuration on the port so that the priorities are included in DCBX negotiation with peer PFC devices.

**Syntax**

```
pfc mode on
```

To disable the PFC configuration, use the `no pfc mode on` command.

**Defaults**

PFC mode is on.

**Command Modes**

DCB MAP

**Supported Modes**

Programmable-Mux (PMUX)

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Introduced on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

By applying a DCB input policy with PFC enabled, you enable PFC operation on ingress port traffic. To achieve complete lossless handling of traffic, also enable PFC on all DCB egress ports or configure the dot1p priority-queue assignment of PFC priorities to lossless queues (refer to `pfc no-drop queues`).

To disable PFC operation on an interface, enter the `no pfc mode on` command in DCB Input Policy Configuration mode. PFC is enabled and disabled as global DCB operation is enabled (`dcb-enable`) or disabled (`no dcb-enable`).

You cannot enable PFC and link-level flow control at the same time on an interface.

**pfc no-drop queues**

Configure the port queues that still function as no-drop queues for lossless traffic.

**Syntax**

```
pfc no-drop queues queue-range
```

To remove the no-drop port queues, use the `no pfc no-drop queues` command.

**Parameters**

`queue-range` Enter the queue range. Separate the queue values with a comma; specify a priority range with a dash; for example, `pfc no-drop queues 1,3` or `pfc no-drop queues 2-3`. The range is from 0 to 3.

**Defaults**

No lossless queues are configured.
**Command Modes**

**priority-group bandwidth pfc**

Configure the ETS bandwidth allocation and PFC mode used to manage port traffic in an 802.1p priority group.

**Syntax**

`priority-group group-num {bandwidth percentage| strict-priority} pfc {on | off}`

**Parameters**

- **priority-group**
  - Enter the keyword `priority-group` followed by the number of an 802.1p priority group. Use the `priority-pgid` command to create the priority groups in a DCB map.

- **group-num**
  - Enter the number of an 802.1p priority group.

- **bandwidth percentage**
  - Enter the keyword `bandwidth` followed by a bandwidth percentage allocated to the priority group. The range of valid values is 1 to 100. The sum of all allocated bandwidth percentages in priority groups in a DCB map must be 100%.

- **strict-priority**
  - Configure the priority-group traffic to be handled with strict priority scheduling. Strict-priority traffic is serviced first, before bandwidth allocated to other priority groups is made available.

- **pfc {on | off}**
  - Configure whether priority-based flow control is enabled (on) or disabled (off) for port traffic in the priority group.
Defaults
None

Command Modes
DCB MAP

Supported Modes
Programmable-Mux (PMUX)

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.3(0.0)</td>
<td>Introduced on the FC Flex IO module installed in the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

Usage Information

Use the `dcb-map` command to configure priority groups with PFC and/or ETS settings and apply them to Ethernet interfaces.

Use the `priority-pgid` command to map 802.1p priorities to a priority group. You can assign each 802.1p priority to only one priority group. A priority group consists of 802.1p priority values that are grouped together for similar bandwidth allocation and scheduling, and that share latency and loss requirements. All 802.1p priorities mapped to the same queue must be in the same priority group.

Repeat the `priority-group bandwidth pfc` command to configure PFC and ETS traffic handling for each priority group in a DCB map.

You can enable PFC on a maximum of two priority queues.

If you configure more than one priority group as strict priority, the higher numbered priority queue is given preference when scheduling data traffic.

If a priority group does not use its allocated bandwidth, the unused bandwidth is made available to other priority groups.

To remove a priority-group configuration in a DCB map, enter the `no priority-group bandwidth pfc` command.

By default, equal bandwidth is assigned to each dot1p priority in a priority group. Use the `bandwidth` parameter to configure the bandwidth percentage assigned to a priority group. The sum of the bandwidth allocated to all priority groups in a DCB map must be 100% of the bandwidth on the link. You must allocate at least 1% of the total port bandwidth to each priority group.

Related Commands
`priority-pgid` — Configures the 802.1p priority traffic in a priority group for a DCB map.

priority-pgid

Assign 802.1p priority traffic to a priority group in a DCB map.

Syntax

```
priority-pgid dot1p0_group-num dot1p1_group-num dot1p2_group-num
dot1p3_group-num dot1p4_group-num dot1p5_group-num dot1p6_group-num
dot1p7_group-num
```

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>dot1p0_group-num</td>
<td>Enter the priority group number for each 802.1p class of traffic in a DCB map.</td>

</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.3(0.0)</td>
<td>Introduced on the FC Flex IO module installed in the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**  
PFC and ETS settings are not pre-configured on Ethernet ports. You must use the `dcb-map` command to configure different groups of 802.1p priorities with PFC and ETS settings.

Using the `priority-pgid` command, you assign each 802.1p priority to one priority group. A priority group consists of 802.1p priority values that are grouped together for similar bandwidth allocation and scheduling, and that share latency and loss requirements. All 802.1p priorities mapped to the same queue must be in the same priority group. For example, the `priority-pgid 0 0 0 1 2 4 4 4` command creates the following groups of 802.1p priority traffic:

- Priority group 0 contains traffic with dot1p priorities 0, 1, and 2.
- Priority group 1 contains traffic with dot1p priority 3.
- Priority group 2 contains traffic with dot1p priority 4.
- Priority group 4 contains traffic with dot1p priority 5, 6, and 7.

To remove a priority-pgid configuration from a DCB map, enter the `no priority-pgid` command.

**Related Commands**  
- `priority-group bandwidth pfc` — Configures the ETS bandwidth allocation and the PFC setting used to manage the port traffic in an 802.1p priority group.

**qos-policy-output ets**

To configure the ETS bandwidth allocation and scheduling for priority traffic, create a QoS output policy.

**Syntax**  

```
qos-policy-output policy-name ets
```

To remove the QoS output policy, use the `no qos-policy-output ets` command.

**Parameters**  

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>policy-name</td>
<td>Enter the policy name. The maximum is 32 characters.</td>
</tr>
</tbody>
</table>

<td>Introduced on the M I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

If an error occurs in an ETS output-policy configuration, the configuration is ignored and the scheduler and bandwidth allocation settings are reset to the ETS default values (all priorities are in the same ETS priority group and bandwidth is allocated equally to each priority).

If an error occurs when a port receives a peer's ETS configuration, the port's configuration is reset to the previously configured ETS output policy. If no ETS output policy was previously applied, the port is reset to the default ETS parameters.

Related Commands

- scheduler — schedules the priority traffic in port queues.
- bandwidth-percentage — bandwidth percentage allocated to the priority traffic in port queues.

scheduler

Configure the method used to schedule priority traffic in port queues.

Syntax

scheduler value

To remove the configured priority schedule, use the no scheduler command.

Parameters

value | Enter schedule priority value. The valid values are:

- strict: strict-priority traffic is serviced before any other queued traffic.
- werr: weighted elastic round robin (werr) provides low-latency scheduling for priority traffic on port queues.

Defaults

Weighted elastic round robin (WERR) scheduling is used to queue priority traffic.

Command Modes

POLICY-MAP-OUT-ETS

Supported Modes

Programmable-Mux (PMUX)

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>

<td>Introduced on the M I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

dot1p priority traffic on the switch is scheduled to the current queue mapping. dot1p priorities within the same queue must have the same traffic properties and scheduling method.
ETS-assigned scheduling applies only to data queues, not to control queues.

The configuration of bandwidth allocation and strict-queue scheduling is not supported at the same time for a priority group. If you configure both, the configured bandwidth allocation is ignored for priority-group traffic when you apply the output policy on an interface.

Related Commands

- `bandwidth-percentage` — bandwidth percentage allocated to priority traffic in port queues.

**show dcb**

Displays the data center bridging status, the number of PFC-enabled ports, and the number of PFC-enabled queues.

**Syntax**

```
show dcb [stack-unit unit-number]
```

**Parameters**

- `unit number` Enter the DCB unit number. The range is from 0 to 5.

**Command History**

- **Version**
  - 9.4(0.0) Supported on the FN I/O Aggregator.
  - 9.2(0.0) Introduced on the M I/O Aggregator.
  - 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

Specify a stack-unit number on the Master switch in a stack.

**Example**

```
Dell#show dcb
stack-unit 0 port-set 0
DCB Status : Enabled
PFC Queue Count : 2
Total Buffer[lossy + lossless] (in KB) : 3822
PFC Total Buffer (in KB) : 1912
PFC Shared Buffer (in KB) : 832
PFC Available Buffer (in KB) : 1080
```

**show interface dcbx detail**

Displays the DCBX configuration on an interface.

**Syntax**

```
show interface port-type slot/port dcbx detail
```

**Parameters**

- `port-type` Enter the port type.
- `slot/port` Enter the slot/port number.

**Command Modes**

<td>Peer DCBX Status: DCBX Operational Version</td>
<td>DCBX version advertised in Control TLVs received from the peer device.</td>
</tr>
</tbody>
</table>
### Field Description

**Peer DCBX Status:**
- *DCBX Max Version Supported*
  - Highest DCBX version supported in Control TLVs received from the peer device.

**Peer DCBX Status:**
- *Sequence Number*
  - Sequence number transmitted in Control TLVs received from the peer device.

**Peer DCBX Status:**
- *Acknowledgment Number*
  - Acknowledgement number transmitted in Control TLVs received from the peer device.

**Total DCBX Frames transmitted**
- Number of DCBX frames sent from the local port.

**Total DCBX Frames received**
- Number of DCBX frames received from the remote peer port.

**Total DCBX Frame errors**
- Number of DCBX frames with errors received.

**Total DCBX Frames unrecognized**
- Number of unrecognizable DCBX frames received.

### Example

Dell(conf)# show interface tengigabitethernet 0/49 dcbx detail
Dell#show interface te 0/49 dcbx detail

E-ETS Configuration TLV enabled
e-ETS Configuration TLV disabled
R-ETS Recommendation TLV enabled
r-ETS Recommendation TLV disabled
P-PFC Configuration TLV enabled
p-PFC Configuration TLV disabled
F-Application priority for FCOE enabled
f-Application Priority for FCOE disabled
I-Application priority for iSCSI enabled
i-Application Priority for iSCSI disabled

-------------------------------------------

Interface TenGigabitEthernet 0/49
  Remote Mac Address 00:00:00:00:00:11
  Port Role is Auto-Upstream
  DCBX Operational Status is Enabled
  Is Configuration Source? TRUE

Local DCBX Compatibility mode is CEE
  Local DCBX Configured mode is CEE
  Peer Operating version is CEE
  Local DCBX TLVs Transmitted: ErPfi

Local DCBX Status
----------------
  DCBX Operational Version is 0
  DCBX Max Version Supported is 0
  Sequence Number: 2
  Acknowledgment Number: 2
  Protocol State: In-Sync

Peer DCBX Status:
-----------------
  DCBX Operational Version is 0
  DCBX Max Version Supported is 255
  Sequence Number: 2
  Acknowledgment Number: 2
  Total DCBX Frames transmitted 27
show interface ets

Displays the ETS configuration applied to egress traffic on an interface, including priority groups with priorities and bandwidth allocation.

Syntax

```
show interface port-type slot/port ets {summary | detail}
```

Parameters

- `port-type slot/port ets` Enter the port-type slot and port ETS information.
- `(summary | detail)` Enter the keyword `summary` for a summary list of results or enter the keyword `detail` for a full list of results.

Command Modes

- `CONFIGURATION`

Supported Modes

- `All Modes`

Command History

- `Version 9.4(0.0)` Supported on the FN I/O Aggregator.
- `Version 9.2(0.0)` Introduced on the M I/O Aggregator.
- `Version 8.3.16.1` Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

To clear ETS TLV counters, use the `clear ets counters interface port-type slot/port` command.

The following describes the `show interface summary` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Interface</td>
<td>Interface type with stack-unit and port number.</td>
</tr>
<tr>
<td>Max Supported TC Group</td>
<td>Maximum number of priority groups supported.</td>
</tr>
<tr>
<td>Number of Traffic Classes</td>
<td>Number of 802.1p priorities currently configured.</td>
</tr>
<tr>
<td>Admin mode</td>
<td>ETS mode: on or off. When on, the scheduling and bandwidth allocation configured in an ETS output policy or received in a DCBX TLV from a peer can take effect on an interface.</td>
</tr>
<tr>
<td>Admin Parameters</td>
<td>ETS configuration on local port, including priority groups, assigned dot1p priorities, and bandwidth allocation.</td>
</tr>
<tr>
<td>Remote Parameters</td>
<td>ETS configuration on remote peer port, including admin mode (enabled if a valid TLV was received or disabled), priority groups, assigned dot1p priorities, and bandwidth allocation. If ETS admin mode is enabled on the remote port for DCBX exchange, the Willing bit received in ETS TLVs from the remote peer is included.</td>
</tr>
</tbody>
</table>
### Field | Description
--- | ---
**Local Parameters** | ETS configuration on local port, including admin mode (enabled when a valid TLV is received from a peer), priority groups, assigned dot1p priorities, and bandwidth allocation.

**Operational status** (local port) | Port state for current operational ETS configuration:

- **Init**: Local ETS configuration parameters were exchanged with the peer.
- **Recommend**: Remote ETS configuration parameters were received from the peer.
- **Internally propagated**: ETS configuration parameters were received from the configuration source.

**ETS DCBX Oper status** | Operational status of the ETS configuration on the local port: match or mismatch.

**Reason** | Reason displayed when the DCBx operational status for ETS on a port is down.

**State Machine Type** | Type of state machine used for DCBX exchanges of ETS parameters: Feature — for legacy DCBX versions; Asymmetric — for an IEEE version.

**Conf TLV Tx Status** | Status of ETS Configuration TLV advertisements: enabled or disabled.

**ETS TLV Statistic:**
- **Input Conf TLV pkts** | Number of ETS Configuration TLVs received.
- **Output Conf TLV pkts** | Number of ETS Configuration TLVs transmitted.
- **ETS TLV Statistic:**
  - **Error Conf TLV pkts** | Number of ETS Error Configuration TLVs received.

### Example (Summary)

**show interface pfc**

Displays the PFC configuration applied to ingress traffic on an interface, including priorities and link delay.

**Syntax**

```
show interface port-type slot/port pfc {summary | detail}
```

**Parameters**

- `port-type slot/port pfc`
  
  Enter the port-type slot and port PFC information.

- `{summary | detail}`
  
  Enter the keyword `summary` for a summary list of results or enter the keyword `detail` for a full list of results.

**Command Modes**

**Usage Information**

To clear the PFC TLV counters, use the `clear pfc counters interface port-type slot/port` command.

The following describes the `show interface pfc summary` command shown in the following example.

**Field**

- **Interface**
  
  Interface type with stack-unit and port number.

- **Admin mode is on Admin is enabled**
  
  PFC admin mode is on or off with a list of the configured PFC priorities. When the PFC admin mode is on, PFC advertisements are enabled to be sent and received from peers; received PFC configuration take effect. The admin operational status for a DCBX exchange of PFC configuration is enabled or disabled.
<table>

```

### show interface pfc statistics

Displays counters for the PFC frames received and transmitted (by dot1p priority class) on an interface.

**Syntax**

`show interface port-type slot/port pfc statistics`

**Parameters**

- `port-type` Enter the port type.
**show qos dcb-map**

Display the DCB parameters configured in a specified DCB map.

**Syntax**

```
show qos dcb-map map-name
```

**Parameters**

- `map-name` Displays the PFC and ETS parameters configured in the specified map.

**Command Modes**

- EXEC
- EXEC Privilege

**Supported Modes**

All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.6(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

Use the `show qos dcb-map` command to display the enhanced transmission selection (ETS) and priority-based flow control (PFC) parameters used to configure server-facing Ethernet ports.

The following table describes the `show qos dcb-map` output shown in the example below.
<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>State</td>
<td>Complete: All mandatory DCB parameters are correctly configured. In progress: The DCB map configuration is not complete. Some mandatory parameters are not configured.</td>
</tr>
<tr>
<td>PFC Mode</td>
<td>PFC configuration in DCB map: On (enabled) or Off.</td>
</tr>
<tr>
<td>PG</td>
<td>Priority group configured in the DCB map.</td>
</tr>
<tr>
<td>TSA</td>
<td>Transmission scheduling algorithm used by the priority group: Enhanced Transmission Selection (ETS).</td>
</tr>
<tr>
<td>BW</td>
<td>Percentage of bandwidth allocated to the priority group.</td>
</tr>
<tr>
<td>PFC</td>
<td>PFC setting for the priority group: On (enabled) or Off.</td>
</tr>
<tr>
<td>Priorities</td>
<td>802.1p priorities configured in the priority group.</td>
</tr>
</tbody>
</table>

**Example**

```
Dell# show qos dcb-map dcbmap2
State :Complete
PfcMode:ON
------------------
PG:0 TSA:ETS  BW:50  PFC:OFF
Priorities:0 1 2 4 5 6 7

PG:1 TSA:ETS  BW:50  PFC:ON
Priorities:3
```

**show stack-unit stack-ports ets details**

Displays the ETS configuration applied to egress traffic on stacked ports, including ETS Operational mode on each unit and the configured priority groups with dot1p priorities, bandwidth allocation, and scheduler type.

**Syntax**

```
show stack-unit {all | stack-unit} stack-ports {all | port-number} ets details
```

**Parameters**

- `stack-unit` Enter the stack unit identification.
- `port-number` Enter the port number.

Dynamic Host Configuration Protocol

Dynamic host configuration protocol (DHCP) is an application layer protocol that dynamically assigns IP addresses and other configuration parameters to network end-stations (hosts) based on configuration policies determined by network administrators.

An Aggregator can operate as a DHCP client. As a DHCP client, the Aggregator requests an IP address from a DHCP server.

The following types of DHCP commands are described in this chapter:

- DHCP Client Commands
- Other Commands supported by DHCP Client

**DHCP Client Commands**

- `clear ip dhcp client statistics`
- `ip address dhcp`
- `release dhcp interface`
- `renew dhcp interface`
- `show ip dhcp client statistics`
- `show ip dhcp lease`

**Other Commands supported by DHCP Client**

- `debug ip dhcp client events`
- `debug ip dhcp client packets`

### clear ip dhcp client statistics

Displays DHCP client statistics, including the number of DHCP messages sent and received on an interface.

**Syntax**

```
clear ip dhcp client statistics interface type slot/port
```

**Parameters**

- `interface type slot/port` - Clear DHCP client statistics on the specified interface.
  - For the management interface on the stack-unit, enter the keyword `managementethernet` followed by slot/port information. The slot and port range is 0.
  - For a VLAN, enter the keyword `vlan` followed by a number from 1 to 4094.

**Command Modes**

- EXEC Privilege

**Supported Modes**

- All Modes

**Default**

- None
debug ip dhcp client events

Enable the display of log messages for the following events on DHCP client interfaces:

- IP address acquisition
- IP address release
- Renewal of IP address and lease time
- Release of an IP address

**Syntax**

```
debug ip dhcp client events [interface type slot/port]
```

**Parameters**

- **interface type slot/port**
  - Display log messages for DHCP packets sent and received on the specified interface.
  - For the management interface on the stack-unit, enter the keyword `managementethernet` followed by slot/port information. The slot and port range is 0.
  - For a VLAN, enter the keyword `vlan` followed by a number from 1 to 4094.

**Command Modes**

- EXEC Privilege

**Supported Modes**

- All Modes

**Default**

- None

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

debug ip dhcp client packets

Enable the display of log messages for all DHCP packets sent and received on DHCP client interfaces.

**Syntax**

```
debug ip dhcp client packets [interface type slot/port]
```

**Parameters**

- **interface type slot/port**
  - Display log messages for DHCP packets sent and received on the specified interface.
  - For the management interface on the stack-unit, enter the keyword `managementethernet` followed by slot/port information. The slot and port range is 0.
For a VLAN, enter the keyword `vlan` followed by a number from 1 to 4094.

**Command Modes**
- EXEC Privilege

**Supported Modes**
- All Modes

**Default**
- None

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

---

### ip address dhcp

Acquire an IP address dynamically on an interface from the DHCP server.

**Syntax**

```
ip address dhcp [relay | vendor-class-identifier]
```

To disable DHCP Client on an interface, use the `no ip address dhcp` command.

**Command Modes**
- INTERFACE

**Supported Modes**
- All Modes

**Default**
- Enabled

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

In the I/O Aggregator, the DHCP client is enabled only on the default VLAN and management interface 0/0. Use the `ip address` command to assign a static IP address that overwrites the dynamically assigned IP address.

---

### release dhcp interface

Release the dynamically-acquired IP address on an Ethernet interface while retaining the DHCP client configuration on the interface.

**Syntax**

```
release dhcp interface type slot/port
```

**Parameters**

- **interface type slot/ port**
  - `interface type slot/port`
  - For the management interface on the stack-unit, enter the keyword `management ethernet` followed by slot/port information. The slot and port range is 0.
  - For a VLAN, enter the keyword `vlan` followed by a number from 1 to 4094.

**Command Modes**
- EXEC Privilege
### Supported Modes

<table>
<thead>
<tr>
<th>Default</th>
</tr>
</thead>
<tbody>
<tr>
<td>None</td>
</tr>
</tbody>
</table>

### Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

### Usage Information

When you enter the `release dhcp` command, although the IP address that was dynamically-acquired from a DHCP server is released from an interface, the ability to acquire a new DHCP server-assigned address remains in the running configuration for the interface. To acquire a new IP address, enter either the `renew dhcp` command at the EXEC privilege level or the `ip address dhcp` command at the interface configuration level.

### renew dhcp interface

Re-acquire a dynamic IP address on an Ethernet interface enabled as a DHCP client.

**Syntax**

```
renew dhcp interface type slot/port
```

**Parameters**

- `interface type slot/port`

  Enter any of the following keywords and slot/port or number to clear counters from a specified interface:

  - For the management interface on the stack-unit, enter the keyword `managementethernet` followed by slot/port information. The slot and port range is 0.
  - For a VLAN, enter the keyword `vlan` followed by a number from 1 to 4094.

**Command Modes**

- EXEC Privilege

**Supported Modes**

All Modes

**Default**

None.

### Command History

<table>
<thead>
<tr>
<th>Version</th>

<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

### Usage Information

The `renew dhcp` command is used to renew the lease of IP address obtained through dhcp.

To display the currently configure dynamic IP address and lease time, enter the `show ip dhcp lease` command.
show ip dhcp client statistics
Displays DHCP client statistics, including the number of DHCP messages sent and received on an interface.

**Syntax**
```
show ip dhcp client statistics interface type slot/port
```

**Parameters**
- `interface type slot/port`
  - Display DHCP client statistics on the specified interface.
  - For the management interface on the stack-unit, enter the keyword `managementethernet` followed by slot/port information. The slot and port range is 0.
  - For a VLAN, enter the keyword `vlan` followed by a number from 1 to 4094.

**Command Modes**
- EXEC Privilege

**Supported Modes**
- All Modes

**Default**
- None.

<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

show ip dhcp lease
Displays lease information about the dynamic IP address currently assigned to a DHCP client-enabled interface.

**Syntax**
```
show ip dhcp lease [interface type slot/port]
```

**Parameters**
- `interface type slot/port`
  - Display DHCP client statistics on the specified interface.
  - For the management interface on the stack-unit, enter the keyword `managementethernet` followed by slot/port information. The slot and port range is 0.
  - For a VLAN, enter the keyword `vlan` followed by a number from 1 to 4094.

**Command Modes**
- EXEC Privilege

**Supported Modes**
- All Modes

**Default**
- Display DHCP lease information on all DHCP client-enabled interfaces on the switch.

**Command History**

</table>
FIP Snooping

In a converged Ethernet network, an Aggregator can operate as an intermediate Ethernet bridge to snoop on Fibre Channel over Ethernet Initialization Protocol (FIP) packets during the login process on Fibre Channel over Ethernet (FCoE) forwarders (FCFs). Acting as a transit FIP snooping bridge, the switch uses dynamically-created ACLs to permit only authorized FCoE traffic to be transmitted between an FCoE end-device and an FCF.

This chapter describes the FIP snooping commands.

clear fip-snooping database interface vlan

Clear FIP snooping information on a VLAN for a specified FCoE MAC address, ENode MAC address, or FCF MAC address, and remove the corresponding ACLs FIP snooping generates.

Syntax

clear fip-snooping database interface vlan vlan-id {fcoe-mac-address | enode-mac-address | fcf-mac-address}

Parameters

- **fcoe-mac-address**: Enter the FCoE MAC address to be cleared of FIP snooping information.
- **enode-mac-address**: Enter the ENode MAC address to be cleared of FIP snooping information.
- **fcf-mac-address**: Enter the FCF MAC address to be cleared of FIP snooping information.

Command Modes

- EXEC Privilege

Supported Modes

Programmable-Mux (PMUX)

Command History

</tr>
</tbody>
</table>

clear fip-snooping statistics

Clear the statistics on the FIP packets snooped on all VLANs, a specified VLAN, or a specified port interface.

Syntax

clear fip-snooping statistics [interface vlanVlan-id | interface port-type port/slot | interface port-channel port-channel-number]

Parameters

- **vlan-id**: Enter the VLAN ID of the FIP packet statistics to be cleared.
- **port type port/slot**: Enter the port-type and slot number of the FIP packet statistics to be cleared.
port-channel-number

Enter the port channel number of the FIP packet statistics to be cleared.

**fip-snooping enable**

Enable FIP snooping on all VLANs or on a specified VLAN.

Syntax
fip-snooping enable

To disable the FIP snooping feature on all or a specified VLAN, use the no fip-snooping enable command.

Defaults
FIP snooping is disabled on all VLANs.

</tbody>
</table>
fip-snooping fc-map

Configure the FC-MAP value FIP snooping uses on all VLANs.

**Syntax**

```plaintext
fip-snooping fc-map fc-map-value
```

To return the configured FM-MAP value to the default value, use the `no fip-snooping fc-map` command.

**Parameters**

- `fc-map-value`: Enter the FC-MAP value FIP snooping uses. The range is from 0EFC00 to 0EFCFF.

**Defaults**

0x0EFC00

**Command Modes**

- CONFIGURATION

</tr>
</tbody>
</table>

**Usage Information**

The maximum number of FCFs supported per FIP snooping-enabled VLAN is four.
show fip-snooping statistics

Displays statistics on the FIP packets snooped on all interfaces, including VLANs, physical ports, and port channels.

Syntax

```
show fip-snooping statistics [interface vlan vlan-id | interface port-type port/slot | interface port-channel port-channel-number]
```

Parameters

- **vlan-id**: Enter the VLAN ID of the FIP packet statistics to be displayed.
- **port-type port/slot**: Enter the port-type and slot number of the FIP packet statistics to be displayed.
- **port-channel-number**: Enter the port channel number of the FIP packet statistics to be displayed.

</tr>
</tbody>
</table>
## Field Description
- **Number of Multicast Discovery Advertisements**: Number of FIP-snooped multicast discovery advertisements received on the interface.
- **Number of Unicast Discovery Advertisements**: Number of FIP-snooped unicast discovery advertisements received on the interface.
- **Number of FLOGI Accepts**: Number of FIP FLOGI accept frames received on the interface.
- **Number of FLOGI Rejects**: Number of FIP FLOGI reject frames received on the interface.
- **Number of FDISC Accepts**: Number of FIP FDISC accept frames received on the interface.
- **Number of FDISC Rejects**: Number of FIP FDISC reject frames received on the interface.
- **Number of FLOGO Accepts**: Number of FIP FLOGO accept frames received on the interface.
- **Number of FLOGO Rejects**: Number of FIP FLOGO reject frames received on the interface.
- **Number of CVLs**: Number of FIP clear virtual link frames received on the interface.
- **Number of FCF Discovery**: Number of FCF discovery timeouts that occurred on the interface.
- **Number of VN Port Session**: Number of VN port session timeouts that occurred on the interface.
- **Number of Session failures due to Hardware Config**: Number of session failures due to hardware configuration that occurred on the interface.

### Example
```
Dell# show fip-snooping statistics interface vlan 100
Number of Vlan Requests : 0
Number of Vlan Notifications : 0
Number of Multicast Discovery Solicits : 2
Number of Unicast Discovery Solicits : 0
Number of FLOGI : 2
Number of FDISC : 16
Number of FLOGO : 0
Number of Enode Keep Alive : 9021
Number of VN Port Keep Alive : 3349
Number of Multicast Discovery Advertisement : 4437
Number of Unicast Discovery Advertisement : 2
Number of FLOGI Accepts : 2
Number of FLOGI Rejects : 0
Number of FDISC Accepts : 16
Number of FDISC Rejects : 0
Number of FLOGO Accepts : 0
Number of FLOGO Rejects : 0
Number of CVL : 0
Number of FCF Discovery Timeouts : 0
Number of VN Port Session Timeouts : 0
Number of Session failures due to Hardware Config : 0
Dell(conf)#
```
Example (port channel)

Dell# show fip-snooping statistics interface port-channel 22
Number of Vlan Requests :0
Number of Vlan Notifications :2
Number of Multicast Discovery Solicits :0
Number of Unicast Discovery Solicits :0
Number of FLOGI :0
Number of FDISC :0
Number of FLOGO :0
Number of Enode Keep Alive :0
Number of VN Port Keep Alive :0
Number of Multicast Discovery Advertisement :4451
Number of Unicast Discovery Advertisement :2
Number of FLOGI Accepts :0
Number of FLOGI Rejects :0
Number of FDISC Accepts :0
Number of FDISC Rejects :0
Number of FLOGO Accepts :0
Number of FLOGO Rejects :0
Number of CVL :0
Number of FCF Discovery Timeouts :0
Number of VN Port Session Timeouts :0
Number of Session failures due to Hardware Config :0

**debug fip-snooping**

Enable the debug FIP protocol specific messages.

**Syntax**

```
debug fip-snooping [all | acl | error | ifm | info | ipc | rx { packet-type
{ all | discovery | virtual-link-instantiation | virtual-link-maintenance |
vlan-discovery } | port-channel | tengigabitethernet } ] | tx ]
```

**Parameters**

- **all**
  
  Enable all the debug options.

- **acl**

  Enable for ACL specific debugging.

- **error**

  Enable for Error specific debugging.

- **ifm**

  Enable for IFM specific debugging.
**info**
Enable for Information specific debugs.

**ipc**
Enable for IPC specific debugs.

**rx**
Enable for packet receive specific debugs.

**packet-type**
Specify the packet type. Options are:

- all
- discovery
- virtual-link-instantiation
- virtual-link-maintenance
- vlan-discovery

**all**
Enable for all the packet types.

**discovery**
Enable for FIP discovery solicits (enodes) and adverts (fcf).

**virtual-link-instantiation**
Enable for flogi, fdisc and flogo packets.

**virtual-link-maintenance**
Enable for clear virtual link and keepalive packets.

**vlan-discovery**
Enable for FIP VLAN requests and notifications.

**port-channel**
Port-channel interface.

**tengigabitethernet**
TenGigabit Ethernet interface.

**tx**
Enable for packet transmit specific debugs.

show fip-snooping sessions

Displays information on FIP-snooped sessions on all VLANs or a specified VLAN, including the ENode interface and MAC address, the FCF interface and MAC address, VLAN ID, FCoE MAC address and FCoE session ID number (FC-ID), worldwide node name (WWNN) and the worldwide port name (WWPN).

Syntax
show fip-snooping sessions [interface vlan vlan-id]

Parameters
- vlan-id: Enter the vlan-id of the specified VLAN to be displayed.
show fip-snooping statistics

Displays statistics on the FIP packets snooped on all interfaces, including VLANs, physical ports, and port channels.

Syntax

```
show fip-snooping statistics [interface vlan vlan-id | interface port-type port/slot | interface port-channel port-channel-number]
```

Parameters

- **vlan-id**
  - Enter the VLAN ID of the FIP packet statistics to be displayed.
- **port-type port/slot**
  - Enter the port-type and slot number of the FIP packet statistics to be displayed.
- **port-channel-number**
  - Enter the port channel number of the FIP packet statistics to be displayed.

<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

Example

```
Dell# show fip-snooping system
Global Mode                          : Enabled
FCOE VLAN List (Operational)         : 1, 100
FCFs                                 : 1
ENodes                               : 2
Sessions                             : 17
```
show fip-snooping vlan

Display information on the FIP snooping operational VLANs.

Syntax

    show fip-snooping vlan

Command Modes

    • EXEC
    • EXEC Privilege

Supported Modes

    All Modes

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>

Internet Group Management Protocol (IGMP)

The Dell Networking OS supports IGMP snooping version 2 and 3 on all Dell Networking systems.

IGMP Commands

The Dell Networking OS supports the following IGMP commands:

- `clear ip igmp groups`
- `debug ip igmp`
- `ip igmp group-join-limit`
- `ip igmp querier-timeout`
- `ip igmp query-interval`
- `ip igmp query-max-resp-time`
- `ip igmp snooping enable`
- `ip igmp snooping fast-leave`
- `ip igmp snooping flood`
- `ip igmp snooping last-member-query-interval`
- `ip igmp snooping mrouter`
- `ip igmp snooping querier`
- `ip igmp version`
- `show ip igmp groups`
- `show ip igmp interface`
- `show ip igmp snooping mrouter`

Important Points to Remember

- Dell Networking OS supports version 1, version 2, and version 3 hosts.
- Dell Networking OS IGMP snooping implementation is based on IP multicast address (not based on Layer 2 multicast mac-address) and the IGMP snooping entries are in Layer 3 flow table not in Layer 2 forwarding information base (FIB).
- Dell Networking OS IGMP snooping implementation is based on draft-ietf-magma-snoop-10.
- IGMP snooping is enabled by default on the switch.
- A maximum of 2k groups and 4k virtual local area networks (VLAN) are supported.
- IGMP snooping is not supported on default VLAN interface.
- Flooding of unregistered multicast traffic is enabled by default.
- Queries are not accepted from the server side ports and are only accepted from the uplink LAG.
- Reports and Leaves are flooded by default to the uplink LAG irrespective of whether it is an mrouter port or not.
IGMP Snooping Commands

Dell Networking OS supports IGMP Snooping version 2 and 3 on all Dell Networking systems.

Important Points to Remember for IGMP Snooping

- Dell Networking OS supports version 1, version 2, and version 3 hosts.
- Dell Networking OS IGMP snooping implementation is based on IP multicast address (not based on Layer 2 multicast mac address) and the IGMP snooping entries are in Layer 3 flow table not in Layer 2 forwarding information base (FIB).
- Dell Networking OS IGMP snooping implementation is based on draft-ietf-magma-snoop-10.
- Dell Networking OS supports IGMP snooping on JUMBO-enabled cards.
- IGMP snooping is not enabled by default on the switch.
- A maximum of 1800 groups and 600 VLAN are supported.
- IGMP snooping is not supported on a default VLAN interface.
- IGMP snooping is not supported over VLAN-Stack-enabled VLAN interfaces (you must disable IGMP snooping on a VLAN interface before configuring VLAN-Stack-related commands).

clear ip igmp groups

Clear entries from the group cache table.

Syntax

```
clear ip igmp groups [group-address | interface]
```

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>group-address</td>
<td>(OPTIONAL) Enter the IP multicast group address in dotted decimal format.</td>
</tr>
<tr>
<td>interface</td>
<td>(OPTIONAL) Enter the interface type and slot/port information: For a VLAN interface enter the keyword vlan followed by a number from 1 to 4094.</td>
</tr>
</tbody>
</table>

Command Modes

- EXEC Privilege

Supported Modes

- All Modes

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

debug ip igmp

Enable debugging of IGMP packets.

Syntax

```
debug ip igmp [group address | interface]
```

Defaults

Disabled

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>group-address</td>
<td>(OPTIONAL) Enter the IP multicast group address in dotted decimal format.</td>
</tr>
</tbody>
</table>
(OPTIONAL) Enter the interface type and slot/port information:
For a VLAN interface enter the keyword vlan followed by a number from 1 to 4094.

Command Modes
- EXEC Privilege
- All Modes

Command History

</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3(17.0)</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**ip igmp group-join-limit**

To limit the number of IGMP groups that can be joined in a second, use this feature.

**Syntax**

```
ip igmp group-join-limit number
```

**Parameters**

- `number` Enter the number of IGMP groups permitted to join in a second. The range is from 1 to 10000.

**Defaults**

none

**Command Modes**

- CONFIGURATION (conf-if-interface-slot/port)
- Programmable-Mux (PMUX)

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**ip igmp querier-timeout**

Change the interval that must pass before a multicast router decides that there is no longer another multicast router that should be the querier.

**Syntax**

```
ip igmp querier-timeout seconds
```

To return to the default value, use the `no ip igmp querier-timeout` command.

**Parameters**

- `seconds` Enter the number of seconds the router must wait to become the new querier. The range is from 60 to 300. The default is 125 seconds.

**Defaults**

125 seconds

**Command Modes**

- INTERFACE
- Programmable-Mux (PMUX)
ip igmp query-interval

Change the transmission frequency of IGMP general queries the Querier sends.

Syntax:
```
ip igmp query-interval seconds
```

Parameters:
- **seconds**: Enter the number of seconds between queries sent out. The range is from 1 to 18000. The default is **60 seconds**.

Defaults:
- **60 seconds**

Command Modes:
- INTERFACE

Supported Modes:
- Programmable-Mux (PMUX)

Command History:
<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

ip igmp query-max-resp-time

Set the maximum query response time advertised in general queries.

Syntax:
```
ip igmp query-max-resp-time seconds
```

Parameters:
- **seconds**: Enter the number of seconds for the maximum response time. The range is from 1 to 25. The default is **10 seconds**.

Defaults:
- **10 seconds**

Command Modes:
- INTERFACE

Supported Modes:
- Programmable-Mux (PMUX)

Command History:
<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>
**ip igmp snooping enable**

Enable IGMP snooping on all or a single VLAN. This command is the master on/off switch to enable IGMP snooping.

**Syntax**

```
ip igmp snooping enable
```

To disable IGMP snooping, use the `no ip igmp snooping enable` command.

**Defaults**

Disabled.

**Command Modes**

- CONFIGURATION
- INTERFACE VLAN

**Supported Modes**

Programmable-Mux (PMUX)

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

To enable IGMP snooping, enter this command. When you enable this command from CONFIGURATION mode, IGMP snooping enables on all VLAN interfaces (except the default VLAN).

NOTE: Execute the `no shutdown` command on the VLAN interface for IGMP Snooping to function.

---

**ip igmp snooping fast-leave**

Enable IGMP snooping fast-leave for this VLAN.

**Syntax**

```
ip igmp snooping fast-leave
```

To disable IGMP snooping fast leave, use the `no igmp snooping fast-leave` command.

**Defaults**

Not configured.

**Command Modes**

INTERFACE VLAN — (conf-if-vl-n)

**Supported Modes**

Programmable-Mux (PMUX)

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

Queriers normally send some queries when a leave message is received prior to deleting a group from the membership database. There may be situations when you require a fast deletion of a group. When you enable IGMP fast leave processing, the switch removes an interface from the multicast group as soon as it detects an IGMP version 2 leave message on the interface.
**ip igmp snooping flood**

This command controls the flooding behavior of unregistered multicast data packets. When flooding is disabled, unregistered multicast data traffic is forwarded to only multicast router ports in a VLAN. If there is no multicast router port in a VLAN, unregistered multicast data traffic is dropped.

**Syntax**

```
ip igmp snooping flood
```

To disable the flooding, use the `no ip igmp snooping flood` command.

**Parameters**

- **Enabled**

**Command Modes**

CONFIGURATION

**Supported Modes**

All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

---

**ip igmp snooping last-member-query-interval**

The last member query interval is the maximum response time inserted into Group-Specific queries sent in response to Group-Leave messages.

**Syntax**

```
ip igmp snooping last-member-query-interval milliseconds
```

To return to the default value, use the `no ip igmp snooping last-member-query-interval` command.

**Parameters**

- **milliseconds**

**Defaults**

1000 milliseconds

**Command Modes**

INTERFACE VLAN

**Supported Modes**

Programmable-Mux (PMUX)

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

This last-member-query-interval is also the interval between successive Group-Specific Query messages. To change the last-member-query interval, use this command.
**ip igmp snooping mrouter**

Statically configure a VLAN member port as a multicast router interface.

**Syntax**

```
ip igmp snooping mrouter interface interface
```

to delete a specific multicast router interface, use the `no ip igmp snooping mrouter interface interface` command.

**Parameters**

- `interface interface` Enter the following keywords and slot/port or number information:
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.

**Defaults**

Not configured.

**Command Modes**

- `INTERFACE VLAN — (conf-if-vl-n)`

**Supported Modes**

Programmable-Mux (PMUX)

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

Dell Networking OS provides the capability of statically configuring the interface to which a multicast router is attached. To configure a static connection to the multicast router, enter the `ip igmp snooping mrouter interface interface` command in the VLAN context. The interface to the router must be a part of the VLAN where you are entering the command.

---

**ip igmp snooping querier**

Enable IGMP querier processing for the VLAN interface.

**Syntax**

```
ip igmp snooping querier
```

to disable IGMP querier processing for the VLAN interface, use the `no ip igmp snooping querier` command.

**Defaults**

Not configured.

**Command Modes**

- `INTERFACE VLAN — (conf-if-vl-n)`

**Supported Modes**

Programmable-Mux (PMUX)

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

This command enables the IGMP switch to send General Queries periodically. This behavior is useful when there is no multicast router present in the VLAN because the multicast traffic is not routed. Assign an IP address to the VLAN interface for the switch to act as a querier for this VLAN.
ip igmp version

Manually set the version of the router to IGMPv2 or IGMPv3.

Syntax

```
ip igmp version \{2 | 3\}
```

Parameters

- **2**: Enter the number 2 to set the IGMP version number to IGMPv2.
- **3**: Enter the number 3 to set the IGMP version number to IGMPv3.

Defaults

- **2** (that is, IGMPv2)

Command Modes

- INTERFACE

Supported Modes

- Programmable-Mux (PMUX)

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

show ip igmp groups

View the IGMP groups.

Syntax

```
show ip igmp groups [group-address [detail] | detail | interface [group-address [detail]]]
```

Parameters

- **group-address**: (OPTIONAL) Enter the group address in dotted decimal format to view information on that group only.
- **interface**: (OPTIONAL) Enter the interface type and slot/port information:
  For a VLAN interface enter the keyword vlan followed by a number from 1 to 4094.
- **detail**: (OPTIONAL) Enter the keyword detail to display the IGMPv3 source information.

Command Modes

- EXEC
- EXEC Privilege

Supported Modes

- All Modes

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

Example

```
Dell#show ip igmp groups
Total Number of Groups: 5
IGMP Connected Group Membership
Group Address Interface Mode Uptime
Expires Last Reporter
225.0.0.0 Vlan 100 IGMPv2 00:00:05
```
show ip igmp interface

View information on the interfaces participating in IGMP.

**Syntax**

```
show ip igmp interface [interface]
```

**Parameters**

- **interface**
  
  (OPTIONAL) Enter any of the following keywords and slot/port or number to clear counters from a specified interface:
  
  - For a Port Channel interface, enter the keyword port-channel followed by a number. Range: 1-128
  
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet followed by the slot/port information.
  
  - For a VLAN, enter the keyword vlan followed by a number from 1 to 4094.

**Command Modes**

- EXEC
- EXEC Privilege

**Supported Modes**

- All Modes

<table>
<thead>
<tr>
<th>Field</th>

</tbody>
</table>
### Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

### Example

Dell#show ip igmp interface
Vlan 2 is up, line protocol is down
Inbound IGMP access group is not set
Interface IGMP group join rate limit is not set
IGMP snooping is enabled on interface
IGMP Snooping query interval is 60 seconds
IGMP Snooping querier timeout is 125 seconds
IGMP Snooping last member query response interval is 1000 ms
IGMP snooping fast-leave is disabled on this interface
IGMP snooping querier is disabled on this interface
Vlan 3 is up, line protocol is down
Inbound IGMP access group is not set
Interface IGMP group join rate limit is not set
IGMP snooping is enabled on interface
IGMP Snooping query interval is 60 seconds
IGMP Snooping querier timeout is 125 seconds
IGMP Snooping last member query response interval is 1000 ms
IGMP snooping fast-leave is disabled on this interface
IGMP snooping querier is disabled on this interface
--More--

### show ip igmp snooping mrouter

Displays multicast router interfaces.

**Syntax**

```
show ip igmp snooping mrouter [vlan number]
```

**Parameters**

- **vlan number**
  
  Enter the keyword vlan followed by the vlan number. Range: 1 to 4094

**Command Modes**

- EXEC
- EXEC Privilege

**Supported Modes**

All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Example**

Dell#show ip igmp snooping mrouter vlan 2
Interface Router Ports
Vlan 2 Po 128
Dell#

**Related Commands**

- `show ip igmp groups` — Use this IGMP command to view groups.
Interfaces

This chapter defines the interface commands on the Aggregator switch.

Port Interface Commands

The following commands are for physical, loopback, and null interfaces:

- clear counters
- clear mac-address-table dynamic
- interface range
- interface vlan
- keepalive
- monitor interface
- name
- show config (INTERFACE mode)
- show config (from INTERFACE RANGE mode)
- show config (from INTERFACE VLAN mode)
- show interfaces configured
- show interfaces description
- show interfaces stack-unit
- show interfaces port-channel
- show interfaces status
- show interfaces switchport
- show vlan
- shutdown
- speed (for 1000/10000 interfaces)

Port Channel Commands

A Link Aggregation Group (LAG) is a group of links that appear to a MAC client as if they were a single link according to IEEE 802.3ad. In Dell Networking OS, a LAG is referred to as a Port Channel.

- For the Aggregator, the maximum port channel ID is 128 and the maximum members per port channel is 4.

Because each port can be assigned to only one Port Channel, and each Port Channel must have at least one port, some of those nominally available Port Channels might have no function because they could have no members if there are not enough ports installed.

NOTE: For information about Dell Networking OS link aggregation control protocol (LACP) for dynamic LAGs, refer to the Link Aggregation Control Protocol (LACP) chapter. For more information about configuring and using Port Channels, refer to the Dell PowerEdge FN I/O Aggregator Configuration Guide
Time Domain Reflectometer (TDR) Commands

TDR is useful for troubleshooting an interface that is not establishing a link; either it is flapping or not coming up at all. TDR detects open or short conditions of copper cables on 100/1000/10G Base-T modules.

- tdr-cable-test
- show tdr

Important Points to Remember

- The interface and port must be enabled (configured—see the interface command) before running TDR. An error message is generated if you have not enabled the interface.
- The interface on the far-end device must be shut down before running TDR.
- Because TDR is an intrusive test on an interface that is not establishing a link, do not run TDR on an interface that is passing traffic.
- When testing between two devices, do not run the test on both ends of the cable.

Virtual LAN (VLAN) Commands

The following commands configure and monitor virtual local area networks (VLANs). VLANs are a virtual interface and use many of the same commands as physical interfaces.

You can configure an IP address only on the default VLAN. FTP, TFTP, ACLs, and SNMP are not supported on a VLAN.

Occasionally, while sending broadcast traffic over multiple VLANs, state of a VLAN interface may continually switch between Master and Backup.

- auto vlan
- default vlan-id
- name
- show config (from INTERFACE VLAN mode)
- show vlan
- vlan tagged
- vlan untagged

auto vlan

Change the port to auto or admin vlan mode (enable or disable all auto VLANs).

Syntax

auto vlan

To remove membership from 4K VLAN, use the no auto vlan command.

Defaults

none

Parameters
description

Enter a text string description to identify the VLAN (80 characters maximum).

Command Modes

INTERFACE

Supported Modes

Standalone Mode

Usage Information

The auto vlan command adds the port as untagged to default vlan and tagged to all other 4094 VLAN.
channel-member

Add an interface to the Port Channel, while in INTERFACE PORTCHANNEL mode.

Syntax
channel-member interface

To delete an interface from a Port Channel, use the no channel-member interface command.

Parameters
interface (OPTIONAL) Enter the following keywords and slot/port or number information:
  • For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.

Defaults Not configured.

Command Modes INTERFACE PORTCHANNEL

Supported Modes Programmable-Mux (PMUX)

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

Usage Information

Use the interface port-channel command to access this command.

You cannot add an interface to a Port Channel if the interface contains an IP address in its configuration.

Link MTU and IP MTU considerations for Port Channels are:

- All members must have the same link MTU value and the same IP MTU value.
- The Port Channel link MTU and IP MTU must be less than or equal to the link MTU and IP MTU values configured on the channel members. For example, if the members have a link MTU of 2100 and an IP MTU 2000, the Port Channel’s MTU values cannot be higher than 2100 for link MTU or 2000 bytes for IP MTU.

When an interface is removed from a Port Channel with the no channel-member command, the interface reverts to its configuration prior to joining the Port Channel.

An interface can belong to only one Port Channel.

You can add up to 16 interfaces to a Port Channel on the MXL switch. The interfaces can be located on different line cards but must be the same physical type and speed (for example, all 10-Gigabit Ethernet interfaces). However, you can combine 100/1000 interfaces and GE interfaces in the same Port Channel.

If the Port Channel contains a mix of interfaces with 100 Mb/s speed and 1000 Mb/s speed, the software disables those interfaces whose speed does not match the speed of the first interface configured and enabled in the Port Channel. If that first interface goes down, the Port Channel does not change its designated speed; disable and re-enable the Port Channel or change the order of the channel members.
configuration to change the designated speed. If the Port Channel contains a mix of interfaces with 100 Mb/s speed and 1000 Mb/s speed, the software disables those interfaces whose speed does not match the speed of the first interface configured and enabled in the Port Channel. If that first interface goes down, the Port Channel does not change its designated speed; disable and re-enable the Port Channel or change the order of the channel members configuration to change the designated speed. For more information about Port Channels, refer to the Dell Networking OS Configuration Guide.

**Related Commands**

interface port-channel — creates a Port Channel interface.

### clear counters

Clear the counters used in the `show interfaces` commands for VLANs, and physical interfaces, or selected ones.

**Syntax**

clear counters interface

**Defaults**

Without a specific interface specified, the command clears all interface counters.

**Parameters**

- **interface** (OPTIONAL) Enter any of the following keywords and slot/port or number to clear counters from a specified interface:
  - For the management interface on the stack-unit, enter the keyword `managementethernet` followed by slot/port information. The slot and port range is 0.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` followed by the slot/port information.
  - For a Port Channel interface, enter the keyword `port-channel` followed by a number. Range: 1-128

**Command Modes**

- EXEC Privilege

**Supported Modes**

- All Modes

**Command History**

- **Version**
  - **9.4(0.0)** Supported on the FN I/O Aggregator.
  - **8.3.17.0** Supported on the M I/O Aggregator.

**Example**

```
Dell#clear counters
Clear counters on all interfaces [confirm]
```

### clear mac-address-table dynamic

Clear the MAC address table of all MAC addresses learned dynamically.

**Syntax**

clear mac-address-table dynamic {interface tengigabitethernet slot/port-id}

**Parameters**

- **interface** Enter the keyword `interface` range and one of the interfaces — slot/port, port-channel or VLAN number. Select the range of interfaces for bulk
configuration. You can enter up to six comma separated ranges-spaces are not required between the commas. Comma-separated ranges can include VLANs, port-channels and physical interfaces.
Slot/Port information must contain a space before and after the dash. For example, interface range tengigabitethernet 0/1 - 5 is valid; interface range tengigabitethernet 0/1-5 is not valid.

- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet followed by the slot/port information.

</tr>
</tbody>
</table>

Usage Information
- Spaces between characters are not preserved after entering this command unless you enclose the entire description in quotation marks ("desc_text").
- Entering a text string after the default vlan-id command overwrites any previous text string configured as the description.
- The show tdr and default vlan-id commands are the only commands that you can configure on an interface that is a member of a port-channel.
- Use the show interfaces description command to display descriptions configured for each interface.

Related commands
- show interfaces description — Displays the description field of interfaces.

**feature fc**

Enables the Fibre channel communication via the NPG functionality.

Syntax
feature fc

**flowcontrol**

Control how the system responds to and generates 802.3x pause frames on 10G and 40Gig stack units.

Syntax
flowcontrol rx {off | on} tx {off | on} threshold

Parameters
- **rx on**
  - Enter the keywords rx on to process the received flow control frames on this port. This is the default value for the receive side.
- **rx off**
  - Enter the keywords rx off to ignore the received flow control frames on this port.
Enter the keywords `tx on` to send control frames from this port to the connected device when a higher rate of traffic is received. This is the default value on the send side.

Enter the keywords `tx off` so that flow control frames are not sent from this port to the connected device when a higher rate of traffic is received.

**Defaults**
- `rx off`
- `tx off`

**Command Modes**

</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

The globally assigned 48-bit Multicast address 01-80-C2-00-00-01 is used to send and receive pause frames. To allow full-duplex flow control, stations implementing the pause operation instruct the MAC to enable the reception of frames with a destination address equal to this multicast address.

The pause:

- Starts when either the packet pointer or the buffer threshold is met (whichever is met first). When the discard threshold is met, packets are dropped.
- Ends when both the packet pointer and the buffer threshold fall below 50% of the threshold settings.

The discard threshold defines when the interface starts dropping the packet on the interface. This may be necessary when the connected device does not honor the flow control frame sent by the switch. The discard threshold should be larger than the buffer threshold so that the buffer holds at least hold at least three packets.

**Important Points to Remember**

- Do not enable `tx pause` when buffer carving is enabled. For information and assistance, consult Dell Networking TAC.
- Asymmetric flow control (`rx on tx off`, or `rx off tx on`) setting for the interface port less than 100 Mb/s speed is not permitted. The following error is returned:
  
  Can't configure Asymmetric flowcontrol when speed <1G, config ignored

- The only configuration applicable to half duplex ports is `rx off tx off`. The following error is returned:
  
  Cannot configure Asymmetric flowcontrol when speed <1G, config ignored

- You cannot configure half duplex when the flow control configuration is on (default is `rx on tx on`). The following error is returned: Cannot configure half duplex when flowcontrol is on, config ignored

**NOTE:** The flow control must be off (`rx off tx off`) before configuring the half duplex.

**Example (partial)**

```console
Dell(conf-if-tengig-0/1)#show config
!
interface TenGigabitEthernet 0/1
no ip address
switchport
no negotiation auto
flowcontrol rx off tx on
```
no shutdown
...

Example (Values)  This Example shows how the Dell Networking OS negotiates the flow control values between two Dell Networking chassis connected back-to-back using 1G copper ports.

Related Commands

show running-config — displays the flow configuration parameters (non-default values only).

show interfaces — displays the interface configuration.

interface

Configure a physical interface on the switch.

Syntax

interface interface

Parameters

interface  Enter one of the following keywords and slot/port or number information:
For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.

Defaults
Not configured.

Command Modes
CONFIGURATION

Supported Modes
All Modes

Command History

<table>
<thead>
<tr>
<th>Version</th>

<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

Usage Information
You cannot delete a physical interface.

By default, physical interfaces are disabled (shutdown) and are in Layer 3 mode. To place an interface in
mode, ensure that the interface's configuration does not contain an IP address and enter the Port
Channel Commands command.

The tunnel interface operates as an ECMP (equal cost multi path) only when the next hop to the tunnel
destination is over a physical interface. If you select any other interface as the next hop to the tunnel
destination, the tunnel interface does not operate as an ECMP.

Example
Dell(conf)#interface tengig 0/1
Dell(conf-if-te-0/1)#exit#

Related Commands
interface port-channel | configures a port channel.
interface vlan | configures a VLAN.
show interfaces | displays the interface configuration.

interface ManagementEthernet

Configure the Management port on the system.

Syntax
interface ManagementEthernet slot/port

Parameters
slot/port
Enter the keyword ManagementEthernet, then the slot number (0) and port number zero (0).

Defaults
Not configured.

Command Modes
CONFIGURATION

All Modes

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator and M I/O Aggregator.</td>
</tr>
</tbody>
</table>
Usage Information

You cannot delete a Management port.

The Management port is enabled by default (no shutdown). To assign an IP address to the Management port, use the ip address command.

Example

Dell(conf)#interface managementethernet 0/0
Dell(conf-if-ma-0/0)#

interface port-channel

Create a Port Channel interface, which is a link aggregation group (LAG) containing physical interfaces on the Aggregator.

Syntax

interface port-channel channel-number

To delete a Port Channel, use the no interface port-channel channel-number command.

Parameters

channel-number For a Port Channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.

Defaults

Not configured.

Command Modes

CONFIGURATION

Supported Modes

Programmable-Mux (PMUX)

Command History

Version Description

9.4(0.0) Supported on the FN I/O Aggregator.

9.2(0.0) Introduced on the M I/O Aggregator.

8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

Port Channel interfaces are logical interfaces and can be either in Layer 2 mode (by using the switchport command) or Layer 3 mode (by configuring an IP address). You can add a Port Channel in Layer 2 mode to a VLAN.

A Port Channel can contain both 100/1000 interfaces and GE interfaces. Based on the first interface configured in the Port Channel and enabled, the Dell Networking OS determines if the Port Channel uses 100 Mb/s or 1000 Mb/s as the common speed. For more information, refer to channel-member.

If the line card is in a Jumbo mode chassis, you can also configure the mtu and ip mtu commands. The Link MTU and IP MTU values configured on the channel members must be greater than the Link MTU and IP MTU values configured on the Port Channel interface.

NOTE: In a Jumbo-enabled system, you must configure all members of a Port Channel with the same link MTU values and the same IP MTU values.

Example

Dell(conf)#int port-channel 2
Dell(conf-if-po-2)#

Related Commands

channel-member — adds a physical interface to the LAG.
interface — configures a physical interface.
interface vlan — configures a VLAN.

interface range

This command permits configuration of a range of interfaces to which subsequent commands are applied (bulk configuration). Using the interface range command, you can enter identical commands for a range of interface.

Syntax

```
interface range interface, interface,...
```

To delete a description, enter the `no description` command.

Parameters

`interface, interface,...`

Enter the keyword interface range and one of the interfaces — slot/port, port-channel or VLAN number. Select the range of interfaces for bulk configuration. You can enter up to six comma separated ranges—spaces are not required between the commas. Comma-separated ranges can include VLANs, port-channels and physical interfaces.

Slot/Port information must contain a space before and after the dash. For example, `interface range tengigabitethernet 0/1 - 5` is valid; `interface range tengigabitethernet 0/1-5` is not valid.

- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` followed by the slot/port information.
- For a VLAN, enter the keyword `vlan` followed by a number from 1 to 4094.

Defaults

`none`

Command Modes

`CONFIGURATION`

Supported Modes

All Modes

Command History

```
Version Description
9.4(0.0) Supported on the FN I/O Aggregator.
```

Usage Information

When creating an interface range, interfaces appear in the order they are entered; they are not sorted. The command verifies that interfaces are present (physical) or configured (logical). Important things to remember:

- Bulk configuration is created if at least one interface is valid.
- Non-existing interfaces are excluded from the bulk configuration with a warning message.
- The interface range prompt includes interface types with slot/port information for valid interfaces. The prompt allows for a maximum of 32 characters. If the bulk configuration exceeds 32 characters, it is represented by an ellipsis ( ... ).
- When the interface range prompt has multiple port ranges, the smaller port range is excluded from the prompt.
- If overlapping port ranges are specified, the port range is extended to the smallest start port and the biggest end port.
Example-Bulk Configuration Warning Message

Dell(conf)#interface range tengig 0/1 - 2, tengig 0/4, tengig 0/7, fa 0/0
% Warning: Non-existing ports (not configured) are ignored by interface-range

Example-Interface Range prompt with Multiple Ports

Dell(conf)#interface range tengig 0/1 - 2, tengig 0/3 - 5
Dell(conf-if-range-te-0/1-5)#

Example-Interface Range prompt Overlapping Port Ranges

Dell(conf)#interface range tengig 0/1 - 2, tengig 0/1 - 5
Dell(conf-if-range-te-0/1-5)#

Only VLAN and port-channel interfaces created using the interface vlan and vlan tagged commands can be used in the interface range command.

Use the show running-config command to display the VLAN and port-channel interfaces. VLAN or port-channel interfaces that are not displayed in the show running-config command cannot be used with the bulk configuration feature of the interface range command. You cannot create virtual interfaces (VLAN, Port-channel) using the interface range command.

NOTE: If a range has VLAN, physical, and port-channel interfaces, only commands related to physical interfaces can be bulk configured. To configure commands specific to VLAN or port-channel, only those respective interfaces should be configured in a particular range.

Example-Single Range Bulk Configuration

Dell(conf)#interface range tengigabitethernet 0/1 - 5
Dell(conf-if-range-te-0/1-5)# no shutdown
Dell(conf-if-range-te-0/1-5)#

Example-Multiple Range Bulk Configuration with VLAN and port channel

The following example shows how to use commas to add VLAN and port-channel interfaces to the range.

Dell(conf-if)# interface range tengigabitethernet 0/1 - 5, vlan 2 - 10, port-channel 1 - 25
Dell(conf-if-range-te-0/1-5,vl-2-10,po-1-25)# no shutdown
Dell(conf-if-range-te-0/1-5,vl-2-10,po-1-25)#

Related commands
show config (from INTERFACE RANGE mode) — Shows the bulk configuration interfaces.
show interfaces status — Displays a summary of interface information.

interface vlan

Configure a VLAN. Configure the default VLAN to enable Static or DCHP IP configuration. You can configure up to 4094 VLANs.

Syntax

interface vlan vlan-id

To delete a VLAN, use the no interface vlan vlan-id command.

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>vlan-id</td>
<td>Enter 1 for the default VLAN. Enter a number as the VLAN identifier. The range is from 1 to 4096.</td>
</tr>
</tbody>
</table>

Defaults

Not configured, except for the default VLAN, which is configured as VLAN 1.

Command Modes

</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

### Usage Information

For more information about VLANs and the commands to configure them, refer to the Virtual LAN (VLAN) Commands.

FTP, TFTP, and SNMP operations are not supported on a VLAN. MAC/IP ACLs are not supported.

### Examples

Dell(conf)#int vlan 1
Dell(conf-if-vl-1)#

Dell(conf)#int vlan 3
Dell(conf-if-vl-3)#

### Related commands

- `show vlan` — Displays the current VLAN configuration on the switch.
- `vlan tagged` — Adds a Layer 2 interface to a VLAN as a tagged interface.
- `vlan untagged` — Adds a Layer 2 interface to a VLAN as an untagged interface.

---

### intf-type cr4 autoneg

Set the interface type as CR4 with auto-negotiation enabled.

#### Syntax

```
intf-type cr4 autoneg
```

If you configure `intf-type cr4 autoneg`, use the no `intf-type cr4 autoneg` command to set the interface type as cr4 with autonegotiation disabled.

#### Defaults

Not configured

#### Command Modes

CONFIGURATION

<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

#### Usage Information

If you configure interface type as CR4 with auto-negotiation enabled, also configure CR4 with auto-negotiation. Many DAC cable link issues are resolved by setting the interface type as CR4.

#### Related Commands

- `interface` — configures a physical interface.
- `interface port-channel` — configures a port channel group.
keepalive

Send keepalive packets periodically to keep an interface alive when it is not transmitting data.

Syntax
keepalive [seconds]

To stop sending keepalive packets, use the no keepalive command.

Parameters
seconds (OPTIONAL) For interfaces with PPP encapsulation enabled, enter the number of seconds between keepalive packets. The range is from 0 to 23767. The default is 10 seconds.

Defaults
Enabled.

Command Modes
INTERFACE

Supported Modes
All Modes

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information
When you configure keepalive, the system sends a self-addressed packet out of the configured interface to verify that the far end of a WAN link is up. When you configure no keepalive, the system does not send keepalive packets and so the local end of a WAN link remains up even if the remote end is down.

minimum-links

Configure the minimum number of links in a LAG (Port Channel) that must be in “oper up” status for the LAG to be also in “oper up” status.

Syntax
minimum-links number

Parameters
number Enter the number of links in a LAG that must be in “oper up” status. The range is from 1 to 16. The default is 1.

Defaults
1

Command Modes

</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

164
Usage Information

If you use this command to configure the minimum number of links in a LAG that must be in “oper up” status, the LAG must have at least that number of “oper up” links before it can be declared as up. For example, if the required minimum is four, and only three are up, the LAG is considered down.

monitor interface

Monitor counters on a single interface or all interfaces on a stack unit. The screen is refreshed every five seconds and the CLI prompt disappears.

Syntax

monitor interface [interface]

To disable monitoring and return to the CLI prompt, press the q key.

Parameters

interface

(OPTIONAL) Enter the following keywords and slot/port or number information:

- For the management port, enter the keyword managementethernet followed by the slot (0) and the port (0).
- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet followed by the slot/port information.
- For a Port Channel interface, enter the keyword port-channel followed by a number. The range is from 1 to 128.

Command Modes

</tr>
</tbody>
</table>
mtu

Set the link maximum transmission unit (MTU) (frame size) for an Ethernet interface.

Syntax

mtu value

To return to the default MTU value, use the no mtu command.

Parameters

value
Enter a maximum frame size in bytes. The range is from 594 to 9252. MXL Switch Range is from 594 to 12000. The default is 1554.

Defaults

1554

Command Modes

INTERFACE

Supported Modes

Programmable-Mux (PMUX)

Command History

Version Description
9.4(0.0) Supported on the FN I/O Aggregator.
9.2(0.0) Introduced on the M I/O Aggregator.
8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

If the packet includes a Layer 2 header, the difference between the link MTU and IP MTU (ip mtu command) must be enough bytes to include the Layer 2 header.

- The IP MTU is adjusted automatically when you configure the Layer 2 MTU with the mtu command.

When you enter the no mtu command, The Dell Networking OS reduces the IP MTU value to 1536 bytes.

Link MTU and IP MTU considerations for port channels and VLANs are as follows.

port channels:

- All members must have the same link MTU value and the same IP MTU value.
- The port channel link MTU and IP MTU must be less than or equal to the link MTU and IP MTU values configured on the channel members. For example, if the members have a link MTU of 2100 and an IP MTU 2000, the port channel’s MTU values cannot be higher than 2100 for link MTU or 2000 bytes for IP MTU.

VLANs:

- All members of a VLAN must have same IP MTU value.
• Members can have different Link MTU values. Tagged members must have a link MTU 4 bytes higher than untagged members to account for the packet tag.
• The VLAN link MTU and IP MTU must be less than or equal to the link MTU and IP MTU values configured on the VLAN members. For example, the VLAN contains tagged members with Link MTU of 1522 and IP MTU of 1500 and untagged members with Link MTU of 1518 and IP MTU of 1500. The VLAN's Link MTU cannot be higher than 1518 bytes and its IP MTU cannot be higher than 1500 bytes.

The following shows the difference between Link MTU and IP MTU.

<table>
<thead>
<tr>
<th>Layer 2 Overhead</th>
<th>Link MTU and IP MTU Delta</th>
</tr>
</thead>
<tbody>
<tr>
<td>Ethernet (untagged)</td>
<td>18 bytes</td>
</tr>
<tr>
<td>VLAN Tag</td>
<td>22 bytes</td>
</tr>
<tr>
<td>Untagged Packet with VLAN-Stack Header</td>
<td>22 bytes</td>
</tr>
<tr>
<td>Tagged Packet with VLAN-Stack Header</td>
<td>26 bytes</td>
</tr>
</tbody>
</table>

**name**

Assign a name to the Default VLAN.

**Syntax**

```
name vlan-name
```

To remove the name from the VLAN, use the `no name` command.

**Parameters**

- `vlan-name` Enter up to 32 characters as the name of the VLAN.

**Defaults**

Not configured.

**Command Modes**

INTERFACE VLAN

**Supported Modes**

All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

This CLI applies only to the Default VLAN. To display information about a named VLAN, enter the `show vlan command with the name parameter` or the `show interfaces description command`.

**Related commands**

- `default vlan-id` — Assigns a descriptive text string to the interface.
- `interface vlan` — Configures a VLAN.
show vlan — Displays the current VLAN configurations on the switch.

negotiation auto

Enable auto-negotiation on an interface.

Syntax

negotiation auto

To disable auto-negotiation, enter no negotiation auto command.

Defaults

Enabled.

Command Modes

INTERFACE

Supported Modes

All Modes

Command History

Version Description

9.4(0.0) Supported on the FN I/O Aggregator.

Usage Information

The no negotiation auto command is only available if you first manually set the speed of a port to
10Mbits or 100Mbits.

Example

(Dell) show interfaces configured
TenGigabitEthernet 0/1 is up, line protocol is up
Hardware is DellEth, address is 00:1e:c9:de:04:9c
Current address is 00:1e:c9:de:04:9c
Server Port AdminState is N/A
Pluggable media not present
Interface index is 33886978
Internet address is not set
Mode of IPv4 Address Assignment : NONE
DHCP Client-ID :001ec9de049c
MTU 12000 bytes, IP MTU 11982 bytes
LineSpeed 10000 Mbit
Flowcontrol rx on tx off
ARP type: ARPA, ARP Timeout 04:00:00
Last clearing of "show interface" counters 03:56:48
Queueing strategy: fifo
Input Statistics:

User Information

Both sides of the link must have auto-negotiation enabled or disabled for the link to come up.

The following details the possible speed and auto-negotiation combinations for a line between two
10/100/1000 Base-T Ethernet interfaces.

Port 0

- auto-negotiation enabled* speed 1000 or auto
- auto-negotiation enabled speed 100
- auto-negotiation disabled speed 100
- auto-negotiation disabled speed 100
- auto-negotiation enabled* speed 1000 or auto

Port 1
- auto-negotiation enabled* speed 1000 or auto
- auto-negotiation enabled speed 100
- auto-negotiation disabled speed 100
- auto-negotiation enabled speed 100
- auto-negotiation disabled speed 100

**Link Status Between Port 1 and Port 2**
- Up at 1000 Mb/s
- Up at 100 Mb/s
- Up at 100 Mb/s
- Down
- Down

* You cannot disable auto-negotiation when the speed is set to 1000 or auto.

**Related Commands**

speed (for 1000/10000 interfaces) — sets the link speed to 10, 100, 1000 or auto-negotiate the speed.

### show config (INTERFACE mode)

Displays the interface configuration.

**Syntax**

`show config`

**Command Modes**

INTERFACE

**Supported Modes**

All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>

</table>

**Example**

```
Dell(conf-if-vl-1)#show config
!
interface Vlan 1
  description a
  no ip address
  mtu 2500
  shutdown
Dell(conf-if-vl-1)#
```

show config (from PROTOCOL LLDP mode)

Displays the LLDP configuration.

**Syntax**

```
show config
```

**Command Modes**

PROTOCOL LLDP

**Supported Modes**

All Modes

**Example**

```
Dell(conf-if-range-te-0/1-2)#show config
!
interface TenGigabitEthernet 0/1
  no ip address
  switchport
  no shutdown
!
interface TenGigabitEthernet 0/2
  no ip address
  switchport
  no shutdown
Dell(conf-if-range-te-0/1-2)#
```
show interfaces

Displays information on a specific physical interface or virtual interface.

Syntax

show interfaces interface

Parameters

interface

Enter one of the following keywords and slot/port or number information:

- For the management interface on the stack-unit, enter the keyword managementethernet followed by slot/port information. The slot and port range is 0.
- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- For a VLAN interface, enter the keyword vlan followed by a number from 1 to 4094.
- For a Port Channel interface, enter the keyword port-channel followed by a number. The range is from 1 to 128.

Command Modes

- EXEC
- EXEC Privilege

Supported Modes

All Modes

Command History

Version Description

9.4(0.0) Supported on the FN I/O Aggregator.

8.3.17.0 Supported on the M I/O Aggregator.

Usage Information

Use this show interfaces command for details on a specific interface. Use the show interfaces stack-unit command for details on all interfaces on the designated stack unit.

On the I/O Aggregator, the show interface output displays incorrect rate information details over time for link monitoring when the rate-interval is configured for 5 seconds. Dell Networking recommends using higher rate-intervals such as 15 to 299 seconds to minimize the errors seen.

- **NOTE:** In the CLI output, the power value will be rounded to a 3-digit value. For receive/transmit power that is less than 0.000, an snmp query will return the corresponding dbm value even though the CLI displays as 0.000.

- **NOTE:** After the counters are cleared, the line-rate continues to increase until it reaches the maximum line rate. When the maximum line rate is reached, there will be no change in the line-rate.
The following describes the `show interfaces` command shown in the 10G example below.

<table>
<thead>
<tr>
<th>Line</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>TenGigabitEthernet 0/0...</td>
<td>Displays the interface’s type, slot/port, and administrative and line protocol status.</td>
</tr>
<tr>
<td>Hardware is...</td>
<td>Displays the interface hardware information and its assigned MAC address.</td>
</tr>
<tr>
<td>Interface index...</td>
<td>Displays the interface index number used by SNMP to identify the interface.</td>
</tr>
<tr>
<td>Internet address...</td>
<td>States whether an IP address is assigned to the interface. If an IP address is assigned, that address is displayed.</td>
</tr>
<tr>
<td>MTU 1554...</td>
<td>Displays link and IP MTU information. If the chassis is in Jumbo mode, this number can range from 576 to 12000.</td>
</tr>
<tr>
<td>LineSpeed</td>
<td>Displays the interface’s line speed.</td>
</tr>
<tr>
<td>ARP type...</td>
<td>Displays the ARP type and the ARP timeout value for the interface.</td>
</tr>
<tr>
<td>Last clearing...</td>
<td>Displays the time when the <code>show interfaces</code> counters where cleared.</td>
</tr>
<tr>
<td>Queuing strategy...</td>
<td>States the packet queuing strategy. FIFO means first in first out.</td>
</tr>
</tbody>
</table>

**Input Statistics:**
- Displays all the input statistics including:
  - Number of packets and bytes into the interface
  - Number of packets with IP headers and VLAN tagged headers.
  - Packet size and the number of those packets inbound to the interface
  - Number of symbol errors, runts, giants, and throttles packets:
    - symbol errors = number packets containing bad data. That is, the port MAC detected a physical coding error in the packet.
    - runts = number of packets that are less than 64B
    - giants = packets that are greater than the MTU size
    - throttles = packets containing PAUSE frames
  - Number of CRC, IP Checksum, overrun, and discarded packets:
    - CRC = packets with CRC/FCS errors
    - IP Checksum = packets with IP Checksum errors
    - overrun = number of packets discarded due to FIFO overrun conditions
    - discarded = the sum of runts, giants, CRC, IP Checksum, and overrun packets discarded without any processing

**Output Statistics:**
- Displays output statistics sent out of the interface including:
  - Number of packets, bytes, and underruns out of the interface
    - packets = total number of packets
    - bytes = total number of bytes
    - underruns = number of packets with FIFO underrun conditions
  - Number of Multicast, Broadcast, and Unicast packets:
    - Multicasts = number of MAC multicast packets
    - Broadcasts = number of MAC broadcast packets
Line | Description
--- | ---
Unicasts | number of MAC unicast packets
Number of throttles and discards packets:
| throttles | packets containing PAUSE frames
| discarded | number of packets discarded without any processing

Rate information... | Estimate of the input and output traffic rate over a designated interval (30 to 299 seconds). Traffic rate is displayed in bits, packets per second, and percent of line rate.

Time since... | Elapsed time since the last interface status change (hh:mm:ss format).

Usage Information
The interface counter “over 1023-byte pkts” does not increment for packets in the range 9216 > x <1023.
The Management port is enabled by default (no shutdown). If necessary, use the ip address command to assign an IP address to the Management port.

Example (ManagementEthernet)
Dell#show interface managementethernet ?
0/0 Management Ethernet interface number
Dell#show interface managementethernet 0/0
ManagementEthernet 0/0 is up, line protocol is up
Hardware is DellForce10Eth, address is 00:1e:c9:f1:00:05
Current address is 00:1e:c9:f1:00:05
Pluggable media not present
Interface index is 235159752
Internet address is 10.11.209.87/16
Mode of IP Address Assignment : MANUAL
DHCP Client-ID: mgmt001ec9f10005
Virtual-IP is not set
Virtual-IP IPv6 address is not set
MTU 1554 bytes, IP MTU 1500 bytes
LineSpeed 100 Mbit, Mode full duplex
ARP type: ARPA, ARP Timeout 04:00:00
Last clearing of "show interface" counters 5d4h57m
Queueing strategy: fifo
Input 3448753 packets, 950008323 bytes, 3442163 multicast
Received 0 errors, 0 discarded
Output 4627 packets, 814226 bytes, 0 multicast
Output 0 errors, 0 invalid protocol

Related Commands
show interfaces configured — Displays any interface with a non-default configuration.
show interfaces port-channel — Displays information on all interfaces on a specific stack unit.
show interfaces switchport — Displays Layer 2 information about the interfaces.
show inventory — Displays the I/O Aggregator type, components (including media), Dell Networking OS version including hardware identification numbers and configured protocols.
show ip interface — Displays Layer 3 information about the interfaces.
show memory — Displays the stack unit(s) status.
show interfaces status — Displays all interfaces configured using the interface range command.
show interfaces configured

Displays any interface with a non-default configuration.

**Syntax**

```
show interfaces configured
```

  0 Multicasts, 0 Broadcasts, 0 Unicasts
  0 throttles, 0 discarded, 0 collisions, 0 wred drops
Rate info (interval 299 seconds):
  Input 00.00 Mbits/sec, 0 packets/sec, 0.00% of line-rate
  Output 00.00 Mbits/sec, 0 packets/sec, 0.00% of line-rate
Time since last interface status change: 05:14:12
TenGigabitEthernet 0/2 is up, line protocol is down(error-disabled[UFD])
Dell#
```

show interfaces description

Display the descriptions configured on the interface.

**Syntax**

```
show interfaces [interface] description
```
Parameters

**interface**
Enter one of the following keywords and slot/port or number information:

- For the management interface on the stack unit enter the keyword **ManagementEthernet** followed by the slot/port information. The slot range is 0-0 and the port range is 0.
- For a 10-Gigabit Ethernet interface, enter the keyword **TenGigabitEthernet** followed by the slot/port information.
- For VLAN interfaces, enter the keyword **vlan** followed by a number from 1 to 4094.

TenGigabitEthernet 0/8 YES up            up
```

**show interfaces port-channel**

Display information on configured Port Channel groups.

Syntax

```
show interfaces port-channel [channel-number] [brief| description]
```

Parameters

- **channel-number**
  - For a Port Channel interface, enter the keyword **port-channel** followed by a number. The range is from 1 to 128.
brief 
(Optionalal) Enter the keyword brief to display only the port channel number, the state of the port channel, and the number of interfaces in the port channel.

description 
(Optionalal) Enter the keyword description to display interface information with description.

<td>Introduced on the M I/O Aggregator.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
</tbody>
</table>

Usage Information
The following describes the show interfaces port-channel command shown in the following example.

Field -------------------------- Description
Port-Channel 1... Displays the status of LAG. In the Example, the status of the LAG, LAG fate-sharing group ("Failover-group") is listed.
Hardware is... Displays the interface’s hardware information and its assigned MAC address.
Port-channel is part... Indicates whether the LAG is part of a LAG fate-sharing group ("Failover-group").
Internet address... States whether an IP address is assigned to the interface. If an IP address is assigned, that address is displayed.
MTU 1554... Displays link and IP MTU.
LineSpeed Displays the interface’s line speed. For a port channel interface, it is the line speed of the interfaces in the port channel.
Members in this... Displays the interfaces belonging to this port channel.
ARP type... Displays the ARP type and the ARP timeout value for the interface.
Last clearing... Displays the time when the show interfaces counters were cleared.
Queueing strategy... States the packet queueing strategy. FIFO means first in first out.
packets input... Displays the number of packets and bytes into the interface.
Input 0 IP packets... Displays the number of packets with IP headers, VLAN tagged headers, and MPLS headers. The number of packets may not add correctly because a VLAN tagged IP packet counts as both a VLAN packet and an IP packet.
0 64-byte... Displays the size of packets and the number of those packets entering that interface. This information is displayed over two lines.
Received 0... Displays the type and number of errors or other specific packets received. This information is displayed over three lines.
Output 0... Displays the type and number of packets sent out the interface. This information is displayed over three lines.
Rate information... Displays the traffic rate information into and out of the interface. Traffic rate is displayed in bits and packets per second.
Field | Description
--- | ---
Time since... | Displays the time since the last change in the configuration of this interface.

Example
Dell#show interfaces port-channel
Port-channel 1 is down, line protocol is down
Hardware address is 00:1e:c9:f1:00:05, Current address is 00:1e:c9:f1:00:05
Interface index is 1107755009
Minimum number of links to bring Port-channel up is 1
Internet address is not set
Mode of IP Address Assignment : NONE
DHCP Client-ID : lag1001ec9f10005
MTU 12000 bytes, IP MTU 1500 bytes
LineSpeed auto
Members in this channel:
ARP type: ARPA, ARP Timeout 04:00:00
Last clearing of "show interface" counters 03:28:00
Queueing strategy: fifo
Input Statistics:
0 packets, 0 bytes
0 64-byte pkts, 0 over 64-byte pkts, 0 over 127-byte pkts
0 over 255-byte pkts, 0 over 511-byte pkts, 0 over 1023-byte pkts
0 Multicasts, 0 Broadcasts
0 runts, 0 giants, 0 throttles
0 CRC, 0 overrun, 0 discarded
Output Statistics:
0 packets, 0 bytes, 0 underruns
0 64-byte pkts, 0 over 64-byte pkts, 0 over 127-byte pkts
0 over 255-byte pkts, 0 over 511-byte pkts, 0 over 1023-byte pkts
0 Multicasts, 0 Broadcasts, 0 Unicasts
0 throttles, 0 discarded, 0 collisions

User Information
The following describes the show interfaces port-channel brief command shown in the following example.

Field | Description
--- | ---
LAG | Lists the port channel number.
Mode | Lists the mode:
• L3 — for Layer 3
• L2 — for Layer 2
Status | Displays the status of the port channel.
• down — if the port channel is disabled (shutdown)
• up — if the port channel is enabled (no shutdown)
Uptime | Displays the age of the port channel in hours:minutes:seconds.
Ports | Lists the interfaces assigned to this port channel.
(untitled) | Displays the status of the physical interfaces (up or down).
• In Layer 2 port channels, an * (asterisk) indicates which interface is the primary port of the port channel. The primary port sends out interface PDU.
• In Layer 3 port channels, the primary port is not indicated.

Example
Dell#show int po bri
Codes: L - LACP Port-channel
O - OpenFlow Controller Port-channel
A - Auto Port-channel
I - Internally Lagged

<table>
<thead>
<tr>
<th>LAG Mode</th>
<th>Status</th>
<th>Uptime</th>
<th>Ports</th>
</tr>
</thead>
<tbody>
<tr>
<td>L</td>
<td>128</td>
<td>L3</td>
<td>down 00:00:00</td>
</tr>
</tbody>
</table>

Dell#

To indicate the LACP fallback, Internally lagged is added to the list. When the LAG auto-configures itself, the LAG status describes as ‘I’.

Related Commands

**show lacp** — displays the LACP matrix.

---

**show interfaces stack-unit**

Display information on all interfaces on a specific Aggregator stack member.

**Syntax**

`show interfaces stack-unit unit-number`

**Parameters**

*unit-number*  
Enter the stack member number (0 to 5).

**Command Modes**

- EXEC
- EXEC Privilege

!----------------output truncated ----------------!

Related Commands

show diag — Displays data plane and management plane input/output statistics.

show interfaces status

Displays a summary of interface information or specify a stack unit and interface to display status information for that specific interface only.

Syntax

show interfaces [interface | stack-unit unit-number] status

Parameters

interface (OPTIONAL) Enter one of the following keywords and slot/port or number information:

- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet followed by the slot/port information.

linecard slot-number (OPTIONAL) Enter the keyword linecard then the slot number.

Defaults

none

Command Modes

- EXEC
- EXEC Privilege

Supported Modes

All Modes

Command History

Version Description

9.4(0.0) Supported on the FN I/O Aggregator.
8.3.17.0 Supported on the M I/O Aggregator.

Example

Dell#show interface status
Port Description Status Speed Duplex Vlan
Te 0/1 Up 10000 Mbit Full 1-4094
Te 0/2 Up 10000 Mbit Full 1-4094

Te 0/11 Up 10000 Mbit Full --
Te 0/12 Up 10000 Mbit Full --
Dell#
show interfaces switchport

Display only virtual and physical interfaces in Layer 2 mode. This command displays the Layer 2 mode interfaces’ IEEE 802.1Q tag status and VLAN membership.

**Syntax**

```
show interfaces switchport [interface | stack-unit unit-id ]
```

**Parameters**

- **interface** (OPTIONAL) Enter one of the following keywords and slot/port or number information:
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet followed by the slot/port information.
  - Enter the keyword backup to view the backup interface for this interface.

- **stack-unit unit-id** (OPTIONAL) Enter the keywords stack-unit followed by the stack member number. The range is from 0 to 5.

**Command Modes**

- EXEC
- EXEC Privilege

**Supported Modes**

All Modes

**Command History**

- **Version**
  - **9.4(0.0)** Supported on the FN I/O Aggregator.
  - **8.3.17.0** Supported on the M I/O Aggregator.

**Usage Information**

The following describes the `show interfaces switchport` command for the following example.

<table>
<thead>
<tr>
<th>Items</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Name</strong></td>
<td>Displays the interface’s type, slot, and port number.</td>
</tr>
<tr>
<td><strong>802.1QTagged</strong></td>
<td>Displays whether the VLAN tagged (“True”), untagged (“False”), or hybrid (“Hybrid”), which supports both untagged and tagged VLANs by port 13/0.</td>
</tr>
<tr>
<td><strong>Vlan membership</strong></td>
<td>Lists the VLANs to which the interface is a member. Starting with Dell Networking OS version 7.6.1, this field can display native VLAN membership by port 13/0.</td>
</tr>
</tbody>
</table>

**Example**

```
Dell#show interfaces switchport
Codes: U - Untagged, T - Tagged
 x - Dot1x untagged, X - Dot1x tagged
 G - GVRP tagged, M - Trunk, H - VSN tagged
 i - Internal untagged, I - Internal tagged, v - VLT untagged, V - VLT tagged
Name: TenGigabitEthernet 0/1
802.1QTagged: Hybrid
IO-AGG port mode: Auto VLANs enabled
Vlan membership:
 Q Vlans
 U 1
 T 2-4094
Native VlanId: 1.
Name: TenGigabitEthernet 0/2
802.1QTagged: Hybrid
IO-AGG port mode: Auto VLANs enabled
Vlan membership:
 Q Vlans
 U 1
```
show tdr

Displays the TDR test results.

Syntax

show tdr interface

Parameters

- **interface**
  - Enter the keyword TenGigabitEthernet followed by the slot/port information for the 100/1000/10 GbaseT Ethernet interface.

Defaults

none

Command Modes

EXEC

Supported Modes

All Modes

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>

<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

Usage Information

If the TDR test has not been run, an error message is generated:

```
%Error: Please run the TDR test first
```

The following describes the TDR test status.

<table>
<thead>
<tr>
<th>Status</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>OK Status: Terminated</td>
<td>TDR test is complete, no fault is detected on the cable, and the test is terminated.</td>
</tr>
<tr>
<td>Length: 92 (+/- 1) meters, Status: Shorted</td>
<td>A short is detected on the cable. The location, in this Example is 92 meters. The short is accurate to plus or minus one meter.</td>
</tr>
<tr>
<td>Length: 93 (+/- 1) meters, Status: Open</td>
<td>An opening is detected on the cable. The location, in this Example is 93 meters. The open is accurate to plus or minus one meter.</td>
</tr>
<tr>
<td>Status: Impedance Mismatch</td>
<td>There is an impedance mismatch in the cables.</td>
</tr>
</tbody>
</table>

Example

```
Dell#show tdr tengigabitethernet 0/1
Time since last test: 00:00:02
Pair A, Length: OK Status: Terminated
Pair B, Length: 92 (+/- 1) meters, Status: Short
Pair C, Length: 93 (+/- 1) meters, Status: Open
Pair D, Length: 0 (+/- 1) meters, Status: Impedance Mismatch
```

Related Commands

- **tdr-cable-test** — Runs the TDR test.
**show vlan**

Displays the current VLAN configurations on the switch.

**Syntax**
show vlan [brief | id vlan-id | name vlan-name]

**Parameters**
- **brief** (OPTIONAL) Enter the keyword brief to display the following information:
  - VLAN ID
  - VLAN name (left blank if none is configured.)
  - Spanning Tree Group ID
  - MAC address aging time
  - IP address
- **id vlan-id** (OPTIONAL) Enter the keyword id followed by a number from 1 to 4094. Only information on the VLAN specified is displayed
- **name vlan-name** (OPTIONAL) Enter the keyword name followed by the name configured for the VLAN. Only information on the VLAN named is displayed.

**Command Modes**
- EXEC
- EXEC Privilege

**Supported Modes**
All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

The following describes the `show vlan` command information given in the following example:

**Column Heading**

(Column 1 — no heading)

<table>
<thead>
<tr>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>asterisk symbol (*) = Default VLAN</td>
</tr>
<tr>
<td>G = GVRP VLAN</td>
</tr>
<tr>
<td>P = primary VLAN</td>
</tr>
<tr>
<td>C = community VLAN</td>
</tr>
<tr>
<td>I = isolated VLAN</td>
</tr>
</tbody>
</table>

**NUM** Displays existing VLAN IDs.

**Status** Displays the word Inactive for inactive VLANs and the word Active for active VLANs.

**Q** Displays G for GVRP tagged, M for member of a VLAN-Stack VLAN, T for tagged interface, U (for untagged interface), x (uncapitalized x) for Dot1x untagged, or X (capitalized X) for Dot1x tagged.

**Ports** Displays the type, slot, and port information. For the type, Po = port channel and Te = ten gigabit ethernet.
Example

Dell# show vlan id 40
Codes: * - Default VLAN, G - GVRP VLANs, R - Remote Port Mirroring
VLANs, P - Primary, C - Community, I - Isolated
Q: U - Untagged, T - Tagged
x - Dot1x untagged, X - Dot1x tagged

Related Commands

interface vlan — Configures a VLAN.

shutdown

Disable an interface.

Syntax

shutdown

To activate an interface, use the no shutdown command.

Defaults

The interface is disabled.

Command Modes

INTERFACE

Supported Modes

All Modes

Command History

Version Description

9.4(0.0) Supported on the FN I/O Aggregator.
8.3.17.0 Supported on the M I/O Aggregator.

Usage Information

The shutdown command marks a physical interface as unavailable for traffic. To discover if an interface is
disabled, use the show ip interface command. Disabled interfaces are listed as down.
Disabling a VLAN or a port channel causes different behavior. When a VLAN is disabled, the Layer 3 functions within that VLAN are disabled. Layer 2 traffic continues to flow. Entering the `shutdown` command on a port channel disables all traffic on the port channel and the individual interfaces within the port channel. To enable a port channel, you must enter `no shutdown` on the port channel interface and at least one interface within that port channel.

The `shutdown` and `description` commands are the only commands that you can configure on an interface that is a member of a port channel.

**Related Commands**
- `vlan tagged` — Test the condition of copper cables on 100/1000/10G Base-T modules.
- `interface vlan` — Creates a VLAN.
- `show ip interface` — Displays the interface routing status. Add the keyword `brief` to display a table of interfaces and their status.

### speed (for 1000/10000 interfaces)

Set the speed for 1000/10000 Base-T Ethernet interfaces. Both sides of a link must be set to the same speed (1000/10000) or to `auto` or the link may not come up.

**Syntax**
```
speed {1000 | 10000 | auto}
```

To return to the default setting, use the `no speed {1000 | 10000 |auto}` command.

**Parameters**
- **1000**
  - Enter the keyword 1000 to set the interface's speed to 1000 Mb/s.
- **10000**
  - Enter the keyword 10000 to set the interface's speed to 10000 Mb/s. Auto-negotiation is enabled. For more information, refer to `name`.
- **auto**
  - Enter the keyword `auto` to set the interface to auto-negotiate its speed. Auto-negotiation is enabled. For more information, refer to `name`.

**Defaults**
- `auto`

**Command Modes**
- `INTERFACE`

**Supported Modes**
- All Modes

**Command History**

<table>
<thead>
<tr>

<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the MI O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**
This command is found on the 1000/10000 Base-T Ethernet interfaces.

When you enable `auto`, the system performs and automatic discovery to determine the optics installed and configure the appropriate speed.
When you configure a speed for the 1000/10000 interface, confirm the `negotiation auto` command setting. Both sides of the link must should have auto-negotiation either enabled or disabled. For speed settings of 1000 or auto, the software sets the link to auto-negotiation and you cannot change that setting.

**Related Commands**  
`negotiation auto` — enables or disables auto-negotiation on an interface.

### stack-unit port-group port mode ethernet

Converts the interfaces 9 and 10 from Fibre Channel mode to Ethernet.

**Syntax**

```
stack-unit unit number port-group 0 portmode ethernet
```

To convert the interfaces 9 and 10 from Ethernet to Fibre Channel mode, use the `no stack-unit unit number port-group 0 portmode ethernet`.

**Parameters**

- `stack-unit` Enter the keyword `stack-unit` followed by a stack member number to select the stack unit. The range is 0 to 5.
- `port-group` Enter the keyword `port-group` followed by 0.
- `portmode ethernet` Enter the keyword `portmode ethernet` to convert the interfaces from Fibre Channel mode to Ethernet.

8.3.17.0 | Supported on the M I/O Aggregator.

Usage Information
The interface must be enabled to run the test or an error message is generated:
Dell#tdr-cable-test tengigabitethernet 0/2
%Error: Interface is disabled TenGIG 0/2

Related Commands
show tdr — Displays the results of the TDR test.

**vlan tagged (CMC)**

Add a Layer 2 interface to a VLAN as a tagged interface.

**Syntax**

```
vlan tagged [vlan-id]
```

To remove a tagged interface from a VLAN, use the `no vlan tagged vlan-id` command.

**Parameters**

- `vlan-id` Enter the VLAN ID. The range is from 1 to 4094.

**Defaults**

All interfaces in Layer 2 mode are untagged.

**Command Modes**

- INTERFACE

**Supported Modes**

All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

If the interface belongs to several VLANs, you must remove it from all VLANs to change it to an untagged interface.

Tagged interfaces can belong to multiple VLANs, while untagged interfaces can only belong to one VLAN at a time.

When two or more ports configured for VLANs form a LAG, the resulting LAG is a tagged member of all the configured VLANs and an untagged member of the VLAN to which the port with the lowest port ID belongs.

For example, if port 0/1-32 is an untagged member of VLAN 2 and port 0/41 is an untagged member of VLAN 3, the resulting LAG consisting of the two ports is an untagged member of VLAN 2 and a tagged member of VLAN3.

**Example**

```
Dell(conf-if-te-0/2)#vlan tagged ?
VLAN-RANGE Comma/Hyphen separated VLAN ID set
Dell(conf-if-te-0/2)#vlan tagged 2,3-4
Dell(conf-if-te-0/2)#show config
!
interface TenGigabitEthernet 0/2
mtu 12000
vlan tagged 2-4
```
port-channel-protocol LACP
port-channel 1 mode active
!
protocol lldp
advertise management-tlv system-name
dcbx port-role auto-downstream
no shutdown

Dell(conf-if-te-0/2)#

Related Commands

interface vlan — Configures a VLAN.

vlan untagged — Specifies which interfaces in a VLAN are untagged.

vlan untagged (CMC)

Add a Layer 2 interface to a VLAN as an untagged interface.

Syntax

vlan untagged [vlan-id]

To remove a untagged interface from a VLAN, use the no vlan untagged [vlan-id] command.

Parameters

vlan-id

Enter the VLAN ID. The range is from 1 to 4094.

Defaults

All interfaces in Layer 2 mode are untagged.

Command Modes

INTERFACE

Supported Modes

All Modes

Command History

Version Description

9.4(0.0) Supported on the FN I/O Aggregator.

8.3.17.0 Supported on the M I/O Aggregator.

Usage Information

Untagged interfaces can only belong to one VLAN.

In the default VLAN, you cannot use the no untagged interface command. To remove an untagged interface from all VLANs, including the default VLAN, enter INTERFACE mode and use the no vlan tagged command.

Tagged interfaces can belong to multiple VLANs, while untagged interfaces can only belong to one VLAN at a time.

When two or more ports configured for VLANs form a LAG, the resulting LAG is a tagged member of all the configured VLANs and an untagged member of the VLAN to which the port with the lowest port ID belongs.

For example, if port 0/33 is an untagged member of VLAN 2 and port 0/41 is an untagged member of VLAN 3, the resulting LAG consisting of the two ports is an untagged member of VLAN 2 and a tagged member of VLANs 2 and 3.

Example

Dell(conf-if-te-0/2)#vlan untagged ?
<1-4094> Untagged VLAN id

Dell(conf-if-te-0/2)#
Dell(conf-if-te-0/2)#vlan untagged 4094
Dell(conf-if-te-0/2)#show config
!
interface TenGigabitEthernet 0/2
mtu 12000
vlan untagged 4094
!
port-channel-protocol LACP
port-channel 1 mode active
!
protocol lldp
advertise management-tlv system-name
dcbx port-role auto-downstream
no shutdown
Dell(conf-if-te-0/2)#

Related Commands

- **interface vlan** — Configures a VLAN.
- **vlan tagged** — Specifies which interfaces in a VLAN are tagged.
IPv4 Routing

The aggregator supports both IPv4 and IPv6 routing and these are used only for the management purpose. This chapter describes the IPv4 related commands. They are:

- clear tcp statistics
- debug ip dhcp
- debug ip icmp
- ip route
- management route
- show arp
- show ip management-route
- show ip multicast-cam stack-unit
- show ip interface
- show ip route
- show tcp statistics

clear tcp statistics
Clear the TCP counters.

Syntax

```
clear tcp statistics
```

Command Modes

- EXEC Privilege

Supported Modes

- All Modes

Command History

<table>

<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

debug ip dhcp
Enable debug information for DHCP relay transactions and display the information on the console.

Syntax

```
debug ip dhcp
```

Parameters

- debug ip dhcp

Defaults

Debug disabled
**debug ip dhcp**

View information on the internal control message protocol (ICMP).

**Syntax**

d debug ip dhcp [interface] [count value]

To disable debugging, use the `no debug ip dhcp` command.

**Parameters**

- **interface**
  
  (OPTIONAL) Enter the following keywords and slot/port or number information:
  
  - For the management interface, enter the keyword ManagementEthernet then the slot/port information. The slot range is 0 and the port range is 0.
For a 10 Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.

For VLAN, enter the keyword vlan then by a number from 1 to 4094.

count value (OPTIONAL) Enter the keywords count then the count value. The ranges from 1 to 65534. The default is Infinity.

Command Modes
EXEC Privilege

Supported Modes
All Modes

Command History

Version Description
9.4(0.0) Supported on the FN I/O Aggregator.
8.3.17.0 Supported on the M I/O Aggregator.

Usage Information
To stop packets from flooding the user terminal when debugging is turned on, use the count option.

Example
ICMP: echo request rcvd from src 40.40.40.40
ICMP: src 40.40.40.40, dst 40.40.40.40, echo reply
ICMP: src 40.40.40.40, dst 40.40.40.40, echo reply
ICMP: echo request sent to dst 40.40.40.40
ICMP: echo request rcvd from src 40.40.40.40
ICMP: src 40.40.40.40, dst 40.40.40.40, echo reply
ICMP: src 40.40.40.40, dst 40.40.40.40, echo reply
ICMP: echo request sent to dst 40.40.40.40:

ip route
Assign a static route to the switch.

Syntax
ip route destination mask {ip-address | interface [ip-address]}[distance]

To delete a specific static route, use the no ip route destination mask {address | interface [ip-address]} command.

To delete all routes matching a certain route, use the no ip route destination mask command.

Parameters

destination Enter the IP address in dotted decimal format of the destination device.

mask Enter the mask in the slash prefix format (/x) of the destination device's IP address.

ip-address Enter the IP address in dotted decimal format of the forwarding router.

interface For a VLAN, enter the keyword vlan followed by a number from 1 to 4094.

distance (OPTIONAL) Enter a number as the distance metric assigned to the route. The range is from 1 to 255.

Defaults
Not configured.

Command Modes
CONFIGURATION

Supported Modes
All Modes
management route

Configure a static route that points to the Management interface or a forwarding router.

Syntax

```
management route (ipv4-address | ipv6-address)/mask(forwarding-router-address | managementethernet)
```

Parameters

- `ipv4-address` or `ipv6-address` Enter an IPv4 address (A.B.C.D) or the IPv6 address followed by the prefix-length for the IP address of the management interface.
- `mask` Enter the mask for the IP address.
- `forwarding-router-address` Enter an IPv4 address of a forwarding router.
- `managementethernet` Enter the keyword managementethernet for the Management interface.

Defaults

Not configured.

Command Modes

CONFIGURATION

Supported Modes

All Modes

Command History

Version Description

9.4(0.0) Supported on the FN I/O Aggregator.

Usage Information

When a static route (or a protocol route) overlaps with Management static route, the static route (or a protocol route) is preferred over the Management Static route. Also, Management static routes and the Management Connected prefix are not reflected in the hardware routing tables. Separate routing tables are maintained for IPv4 management routes. This command manages both tables.
show arp

Displays the ARP table.

Syntax

show arp [interface interface ] [dynamic] [summary]

Parameters

interface interface  (OPTIONAL) Enter the following keywords and slot/port or number information:

- For the Management interface, enter the keyword managementethernet followed by the slot/port information.
- For a VLAN, enter the keyword vlan followed by a number from 1 to 4094.

dynamic  (OPTIONAL) Enter the keyword dynamic to view dynamic entries.

summary  (OPTIONAL) Enter the keyword summary to view a summary of ARP entries.

Command Modes

EXEC Privilege

Supported Modes

All Modes

Command History

Version 9.4(0.0)  Supported on the FN I/O Aggregator.

Usage Information

The following describes the show arp command shown in the following example.

Row Heading  Description

Protocol  Displays the protocol type.

Address  Displays the IP address of the ARP entry.

Age(min) Displays the age (in minutes) of the ARP entry.

Hardware Address  Displays the MAC address associated with the ARP entry.

Interface  Displays the first two letters of the interfaces type and the slot/port associated with the ARP entry.

VLAN  Displays the VLAN ID, if any, associated with the ARP entry.

CPU  Lists which CPU the entries are stored on.

Example

Dell#show arp

<table>
<thead>
<tr>
<th>Protocol</th>
<th>Address</th>
<th>Age(min)</th>
<th>Hardware Address</th>
<th>Interface</th>

```

show ip interface

View IP-related information on all interfaces.

Syntax

```
show ip interface [interface | brief] [configuration]
```

Parameters

<table>
<thead>
<tr>
<th>Parameters</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>interface</td>
<td>(OPTIONAL) Enter the following keywords and slot/port or number information:</td>
</tr>
<tr>
<td></td>
<td>• For the Management interface, enter the keyword ManagementEthernet</td>
</tr>
<tr>
<td></td>
<td>followed by zero (0).</td>
</tr>
<tr>
<td></td>
<td>• For a Port Channel interface, enter the keywords port-channel followed by a number. The range is from 1 to 128.</td>
</tr>
<tr>
<td></td>
<td>• For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet followed by the slot/port information.</td>
</tr>
<tr>
<td></td>
<td>• For a VLAN, enter the keyword vlan followed by a number from 1 to 4094.</td>
</tr>
<tr>
<td>brief</td>
<td>(OPTIONAL) Enter the keyword brief to view a brief summary of the interfaces and whether an IP address is assigned.</td>
</tr>
<tr>
<td>configuration</td>
<td>(OPTIONAL) Enter the keyword configuration to display the physical interfaces with non-default configurations only.</td>
</tr>
</tbody>
</table>

<tr>
<td>States if ICMP redirects are sent.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>States if ICMP unreachable messages are sent.</td>
</tr>
</tbody>
</table>

**Example**

```
Dell#show ip int te 0/0
TenGigabitEthernet 0/0 is down, line protocol is down
Internet address is not set
IP MTU is 1500 bytes
Inbound access list is not set
Proxy ARP is enabled
Split Horizon is enabled
Poison Reverse is disabled
ICMP redirects are not sent
ICMP unreachables are not sent
Dell#
```

**Usage Information**

The following describes the `show ip interface brief` command shown in the following example.

**Fields**

<table>
<thead>
<tr>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Displays type of interface and the associated slot and port number.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Displays the IP address for the interface, if configured.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>

</tr>
</thead>
<tbody>
<tr>
<td>Indicates if the hardware is functioning properly.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Displays “Manual” if the configuration is read from the saved configuration.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>States whether the interface is enabled (up) or disabled (administratively down).</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>States whether IP is enabled (up) or disabled (down) on the interface.</td>
</tr>
</tbody>
</table>

**Example (Brief)**

```
Dell#show ip int brief
Interface       IP-Address  OK? Method Status  Protocol
TenGigabitEthernet 0/1 unassigned NO  None   up      down
TenGigabitEthernet 0/2 unassigned YES None   up      up
TenGigabitEthernet 0/3 unassigned YES None   up      up
```
show ip management-route

View the IP addresses assigned to the Management interface.

Syntax

show ip management-route [all | connected | summary | static]

Parameters

all

(OPTIONAL) Enter the keyword all to view all IP addresses assigned to all Management interfaces on the switch.

connected

(OPTIONAL) Enter the keyword connected to view only routes directly connected to the Management interface.

summary

(OPTIONAL) Enter the keyword summary to view a table listing the number of active and non-active routes and their sources.

static

(OPTIONAL) Enter the keyword static to view non-active routes also.

Command Modes

• EXEC
• EXEC Privilege

Supported Modes

All Modes

Command History

Version Description

9.4(0.0) Supported on the FN I/O Aggregator.

8.3.17.0 Supported on the M I/O Aggregator.

Example

Dell#show ip management-route
Destination Gateway State
----------- ------- -----
10.1.2.0/24 ManagementEthernet 0/0 Connected
172.16.1.0/24 10.1.2.4 Active
Dell#

show ip multicast-cam stack-unit

Displays content-addressable memory (CAM) entries.

Syntax

show ip multicast-cam stack-unit 0-5 port-set pipe-number [ip-address mask [longer-prefixes] | detail | member-info | summary]

Parameters

0-5

Enter the stack-unit ID, from 0 to 5.
**pipe-number**
Enter the number of the Port-Pipe number. The range is from 0 to 0.

**ip-address mask**
(Optionalal) Enter the IP address and mask of a route to CAM entries for that route only.

**[longer-prefix]**
Enter the keyword longer-prefixes to view routes with a common prefix.

**detail**
Enter the keyword detail to display the group index ID used by the ecmp routes in the CAM.

**member-info**
Enter the keyword member-info to display the group index used by the ecmp, the number of egress ports (members) for the ecmp, and the port details of each member. The detail information under member-info will give the MAC address, VLAN ID and gateway of every member port of the ecmp.

**summary**
(Optionalal) Enter the keyword summary to view a table listing route prefixes and the total number routes which can be entered into CAM.

**Command Modes**
- EXEC
- EXEC Privilege

**Supported Modes**
All Modes

**Command History**
- 9.4(0.0) Supported on the FN I/O Aggregator.
- 8.3.17.0 Supported on the MI/O Aggregator.

**Usage Information**
The following describes the show ip fib stack-unit command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Destination</td>
<td>Displays the destination route of the index.</td>
</tr>
<tr>
<td>CG</td>
<td>Displays 0.</td>
</tr>
<tr>
<td>V</td>
<td>Displays a 1 if the entry is valid and a 0 otherwise.</td>
</tr>
<tr>
<td>C</td>
<td>Displays the CPU bit.</td>
</tr>
<tr>
<td></td>
<td>1 indicates that a packet hitting this entry is forwarded to the control processor, depending on Egress port.</td>
</tr>
<tr>
<td>V Id</td>
<td>Displays the VLAN ID. If the entry is 0, the entry is not part of a VLAN.</td>
</tr>
<tr>
<td>Mac Addr</td>
<td>Displays the next-hop router’s MAC address.</td>
</tr>
<tr>
<td>Port</td>
<td>Displays the egress interface. Use the second half of the entry to determine the interface. For example, in the entry 17cl CP, the CP is the pertinent portion.</td>
</tr>
<tr>
<td></td>
<td>• CP = control processor</td>
</tr>
<tr>
<td></td>
<td>• Fo= 40 Gigabit Ethernet interface</td>
</tr>
<tr>
<td></td>
<td>• Te = 10 Gigabit Ethernet interface</td>
</tr>
</tbody>
</table>

**Example**
Dell#show ip multicast-cam stack-unit 0 port-set 0 10.10.10.10/32 longer-prefixes
Destination  EC  CG  V  C  VId  Mac-Addr  Port
show ip route

View information, including how they were learned, about the IP routes on the switch.

Syntax

```
show ip route [hostname | ip-address [mask] [longer-prefixes] | list prefix-list [process-id] | connected | static | summary]
```

Parameters

- `ip-address` (OPTIONAL) Specify a name of a device or the IP address of the device to view more detailed information about the route.
- `mask` (OPTIONAL) Specify the network mask of the route. Use this parameter with the IP address parameter.
- `longer-prefixes` (OPTIONAL) Enter the keywords longer-prefixes to view all routes with a common prefix.
- `list prefix-list` (OPTIONAL) Enter the keyword list and the name of a configured prefix list.
- `process-id` (OPTIONAL) Specify that only OSPF routes with a certain process ID must be displayed.
- `connected` (OPTIONAL) Enter the keyword connected to view only the directly connected routes.
- `static` (OPTIONAL) Enter the keyword static to view only routes configured by the ip route command.
- `summary` (OPTIONAL) Enter the keyword summary.

Command Modes

- EXEC
- EXEC Privilege

Supported Modes

All Modes

Command History

- **Version** 9.4(0.0) Supported on the FN I/O Aggregator.
- **Version** 8.3.17.0 Supported on the M I/O Aggregator.

Usage Information

The following describes the `show ip route all` command in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>(undefined)</td>
<td>Identifies the type of route:</td>
</tr>
<tr>
<td></td>
<td>• C = connected</td>
</tr>
<tr>
<td></td>
<td>• S = static</td>
</tr>
<tr>
<td></td>
<td>• R = RIP</td>
</tr>
<tr>
<td></td>
<td>• B = BGP</td>
</tr>
<tr>
<td></td>
<td>• IN = internal BGP</td>
</tr>
</tbody>
</table>
**Field** | **Description**
---|---
• EX = external BGP
• LO = Locally Originated
• O = OSPF
• IA = OSPF inter area
• N1 = OSPF NSSA external type 1
• N2 = OSPF NSSA external type 2
• E1 = OSPF external type 1
• E2 = OSPF external type 2
• i = IS-IS
• L1 = IS-IS level-1
• L2 = IS-IS level-2
• IA = IS-IS inter-area
• * = candidate default
• > = non-active route
• + = summary routes

**Destination** | Identifies the route’s destination IP address.

**Gateway** | Identifies whether the route is directly connected and on which interface the route is configured.

**Dist/Metric** | Identifies if the route has a specified distance or metric.

**Last Change** | Identifies when the route was last changed or configured.

**Example**

**Example (Summary)**
Dell#show ip route summary
<table>
<thead>
<tr>
<th>Route Source</th>
<th>Active Routes</th>
<th>Non-active Routes</th>
</tr>
</thead>
<tbody>
<tr>

<td>1/0</td>
<td>3d2h</td>
</tr>
</tbody>
</table>
Dell#

**show tcp statistics**

View information on TCP traffic through the switch.

**Syntax**
show tcp statistics

**Command Modes**
EXEC Privilege

**Supported Modes**
All Modes
Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

Usage Information

The following describes the `show tcp statistics cp` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Rcvd:</td>
<td>Displays the number and types of TCP packets received by the switch.</td>
</tr>
<tr>
<td></td>
<td>• Total = total packets received</td>
</tr>
<tr>
<td></td>
<td>• no port = number of packets received with no designated port</td>
</tr>
<tr>
<td>0 checksum error...</td>
<td>Displays the number of packets received with the following:</td>
</tr>
<tr>
<td></td>
<td>• checksum errors</td>
</tr>
<tr>
<td></td>
<td>• bad offset to data</td>
</tr>
<tr>
<td></td>
<td>• too short</td>
</tr>
<tr>
<td>329 packets...</td>
<td>Displays the number of packets and bytes received in sequence.</td>
</tr>
<tr>
<td>17 dup...</td>
<td>Displays the number of duplicate packets and bytes received.</td>
</tr>
<tr>
<td>0 partially...</td>
<td>Displays the number of partially duplicated packets and bytes received.</td>
</tr>
<tr>
<td>7 out-of-order...</td>
<td>Displays the number of packets and bytes received out of order.</td>
</tr>
<tr>
<td>0 packets with data</td>
<td>Displays the number of packets and bytes received that exceed the switch's</td>
</tr>
<tr>
<td>after window</td>
<td>window size.</td>
</tr>
<tr>
<td>0 packets after close</td>
<td>Displays the number of packet received after the TCP connection was closed.</td>
</tr>
<tr>
<td>0 window probe packets</td>
<td>Displays the number of window probe and update packets received.</td>
</tr>
<tr>
<td>41 dup ack...</td>
<td>Displays the number of duplicate acknowledgement packets and acknowledgement</td>
</tr>
<tr>
<td></td>
<td>packets with data received.</td>
</tr>
<tr>
<td>10184 ack...</td>
<td>Displays the number of acknowledgement packets and bytes received.</td>
</tr>
<tr>
<td>Sent:</td>
<td>Displays the total number of TCP packets sent and the number of urgent packets sent.</td>
</tr>
<tr>
<td>25 control packets...</td>
<td>Displays the number of control packets sent and the number retransmitted.</td>
</tr>
<tr>
<td>11603 data packets...</td>
<td>Displays the number of data packets sent.</td>
</tr>
<tr>
<td>24 data packets retransmitted</td>
<td>Displays the number of data packets resent.</td>
</tr>
<tr>
<td>355 ack...</td>
<td>Displays the number of acknowledgement packets sent and the number of packet delayed.</td>
</tr>
<tr>
<td>0 window probe...</td>
<td>Displays the number of window probe and update packets sent.</td>
</tr>
<tr>
<td>7 Connections initiated</td>
<td>Displays the number of TCP connections initiated, accepted, and established.</td>
</tr>
</tbody>
</table>
Field | Description
--- | ---
14 Connections closed... | Displays the number of TCP connections closed, dropped.
20 Total rxmt... | Displays the number of times the switch tried to re-send data and the number of connections dropped during the TCP retransmit timeout period.
0 Keepalive... | Lists the number of keepalive packets in timeout, the number keepalive probes and the number of TCP connections dropped during keepalive.

Example

```
Dell#show tcp statistics
Rcvd: 9849 Total, 0 no port
0 checksum error, 0 bad offset, 0 too short
5735 packets (7919 bytes) in sequence
20 dup packets (2 bytes)
0 partially dup packets (0 bytes)
1 out-of-order packets (0 bytes)
0 packets (0 bytes) with data after window
0 packets after close
0 window probe packets, 0 window update packets
0 dup ack packets, 0 ack packets with unsend data
6671 ack packets (152813 bytes)
Sent: 6778 Total, 0 urgent packets
7 control packets
6674 data packets (152822 bytes)
12 data packets (1222 bytes) retransmitted
85 ack only packets (5677 delayed)
0 window probe packets, 0 window update packets
0 Connections initiated, 7 connections accepted, 7 connections established
8 Connections closed (including 4 dropped, 0 embryonic dropped)
12 Total rxmt timeout, 1 connections dropped in rxmt timeout
26 Keepalive timeout, 25 keepalive probe, 1 Connections dropped in keepalive
Dell#
```
iSCSI Optimization

Internet small computer system interface (iSCSI) optimization enables quality-of-service (QoS) treatment for iSCSI storage traffic on an Aggregator.

NOTE: When iSCSI storage devices are detected on the server-ports, storm-control is disabled on those ports. When the iSCSI devices are off the ports, storm-control is enabled again.

advertise dcbx-app-tlv

Configure DCBX to send iSCSI TLV advertisements.

Syntax

advertise dcbx-app-tlv iscsi

To disable DCBX iSCSI TLV advertisements, use the no advertise dcbx-app-tlv iscsi command.

Defaults

Disabled.

Command Modes

PROTOCOL LLDP

Supported Modes

Programmable-Mux (PMUX)

Command History

Version Description
9.4(0.0) Supported on the FN I/O Aggregator.
9.2(0.0) Introduced on the M I/O Aggregator.
8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

You can configure iSCSI TLVs to send either globally or on a specified interface. The interface configuration takes priority over global configuration.

iscsi aging time

Set the aging time for iSCSI sessions.

Syntax

iscsi aging time time

To remove the iSCSI session aging time, use the no iscsi aging time command.

Parameters

time

Enter the aging time for the iSCSI session. The range is from 5 to 43,200 minutes.

Defaults

10 minutes

Command Modes

CONFIGURATION
**Supported Modes**
Programmable-Mux (PMUX)

</tbody>
</table>

**iscsi cos**

Set the QoS policy that is applied to the iSCSI flows.

**Syntax**

```
iscsi cos {enable | disable | dot1p vlan-priority-value [remark] | dscp dscp-value [remark]}  
```

To disable the QoS policy, use the `no iscsi cos dscp` command.

**Parameters**

- **enable**
  - Enter the keyword `enable` to allow the application of preferential QoS treatment to iSCSI traffic so that the iSCSI packets are scheduled in the switch with a dot1p priority 4 regardless of the VLAN priority tag in the packet. The default is: the iSCSI packets are handled with dot1p priority 4 without remark.

- **disable**
  - Enter the keyword `disable` to disable the application of preferential QoS treatment to iSCSI frames.

- **dot1p vlan-priority-value**
  - Enter the dot1p value of the VLAN priority tag assigned to the incoming packets in an iSCSI session. The range is from 0 to 7. The default is the dot1p value in ingress iSCSI frames is not changed and is the same priority is used in iSCSI TLV advertisements if you did not enter the `iscsi priority-bits` command.

- **dscp dscp-value**
  - Enter the DSCP value assigned to the incoming packets in an iSCSI session. The valid range is from 0 to 63. The default is: the DSCP value in ingress packets is not changed.

- **remark**
  - Marks the incoming iSCSI packets with the configured dot1p or DSCP value when they egress to the switch. The default is: the dot1and DSCP values in egress packets are not changed.

**Defaults**

The default dot1p VLAN priority value is 4 without the `remark` option.

**Command Modes**

CONFIGURATION

**Supported Modes**
Programmable-Mux (PMUX)

<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>
**iscsi enable**

Globally enable iSCSI optimization.

**Syntax**

```
iscsi enable
```

To disable iSCSI optimization, use the `no iscsi enable` command.

**Parameters**

- `enable` Enter the keyword `enable` to enable the iSCSI optimization feature.

**Defaults**

Disabled.

**Command Modes**

CONFIGURATION

**Supported Modes**

Programmable-Mux (PMUX)

**Command History**

<table>

<td>Introduced on the M I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

When you enable the iSCSI feature using the `iscsi enable` command, flow control settings are set to `rx on tx off` on all interfaces.

**iscsi priority-bits**

Configure the iSCSI priority advertised for the iSCSI protocol in application priority TLVs.

**Syntax**

```
iscsi priority-bits priority-bitmap
```

To remove the configured iSCSI priority, use the `no iscsi priority-bits` command.

**Parameters**

- `priority-bitmap` Enter the priority-bitmap range. The range is from 1 to FF.

**Defaults**

0x10

**Command Modes**

</tr>
</tbody>
</table>

**iscsi target port**

Configure the iSCSI target ports and optionally, the IP addresses on which iSCSI communication is monitored.

**Syntax**

```
iscsi target port [tcp-port-2...tcp-port-16]ip-address [ip-address]
```

To remove the configured iSCSI target ports or IP addresses, use the `no iscsi target port` command.

**Parameters**

- `tcp-port-2...tcp-port-16`
  
  Enter the tcp-port number of the iSCSI target ports. The `tcp-port-n` is the TCP port number or a list of TCP port numbers on which the iSCSI target listens to requests. Separate port numbers with a comma. The default is 860, 3260.

- `ip-address`
  
  (Optional) Enter the ip-address that the iSCSI monitors. The ip-address specifies the IP address of the iSCSI target.

**Defaults**

860, 3260

**Command Modes**

CONFIGURATION

**Supported Modes**

Session 0 :
------------------------------------------
Up Time:00:00:01:28 (DD:HH:MM:SS)
Time for aging out:00:00:09:34 (DD:HH:MM:SS)
ISID: 806978696102
Initiator Initiator Target Target Connection
IP Address TCP Port IP Address TCP Port ID
10.10.0.44 33345 10.10.0.101 3260 0
```

```
Session 1 :
------------------------------------------
Up Time:00:00:01:22 (DD:HH:MM:SS)
Time for aging out:00:00:09:31 (DD:HH:MM:SS)
ISID: 806978696102
Initiator Initiator Target Target Connection
IP Address TCP Port IP Address TCP Port ID
10.10.0.53 33432 10.10.0.101 3260 0
```
Related Commands

- `show iscsi` — displays the currently configured iSCSI settings.
- `show iscsi sessions` — displays information on active iSCSI sessions on the switch that have been established since the last reload.
Isolated Networks

This chapter describes the isolated networks commands in the Dell Networking OS.

io-aggregator isolated-network vlan

Enable the isolated-network functionality for a particular VLAN or a set of VLANs.

Syntax
[no] io-aggregator isolated-network vlan vlan-range

Parameters
isolated-network
Specify an isolated network to be configured.

vlan vlan-range
Enter the keyword vlan followed by the member VLANs using VLAN IDs (separated by commas), a range of VLAN IDs (separated by a hyphen), a single VLAN ID, or a combination. For example: VLAN IDs (comma-separated): 3, 4, 6. Range (hyphen-separated): 5-10. Combination: 3, 4, 5-10, 8.

Defaults
Not configured.

Command Modes
CONFIGURATION

Usage Information
To add more VLANs into an isolated network, you can enter this same command at any later point. The VLANs specified are appended to the existing set of VLANs. To remove a VLAN or a set of VLANs from an isolated network, use the no form of command.

Supported Modes
All Modes

Command History
Version Description
9.5(0.0) Supported on the FN I/O Aggregator.
9.5(0.0) Supported on the M I/O Aggregator.

Example
Dell(conf)#io-aggregator isolated-network vlan 5-10

show io-aggregator isolated-networks

Display the VLANs that are configured to be part of an isolated network on an Aggregator.

Syntax
show io-aggregator isolated-networks

Parameters
isolated-networks
Specify an isolated network to be configured.
vlan vlan-range

Enter the keyword vlan followed by the member VLANs using VLAN IDs (separated by commas), a range of VLAN IDs (separated by a hyphen), a single VLAN ID, or a combination. For example: VLAN IDs (comma-separated): 3, 4, 6. Range (hyphen-separated): 5-10. Combination: 3, 4, 5-10, 8.

Defaults
None

Command Modes
EXEC Privilege

Usage Information
This command is used to show the isolated-network feature status and the VLANs configured for this feature. Show running-config will save this command under io-aggregator.

Supported Modes

Dell#show io-aggregator isolated-networks
Isolated Network Enabled VLANs : 5-10
Link Aggregation Control Protocol (LACP)

This chapter contains commands for Dell Networking’s implementation of the link aggregation control protocol (LACP) for the creation of dynamic link aggregation groups (LAGs — called port-channels in Dell Networking OS parlance).

**auto-lag enable**

Enable auto-lag on a server facing port.

**Syntax**

```
auto-lag enable
```

To disable the auto-lag use the `no auto-lag enable` command.

When disabled, the server port associated in a LAG is removed and the LAG itself gets removed. Any LACPDUs received on the server port are discarded.

**Defaults**

Enabled

**Command Modes**

INTERFACE

**Supported Modes**

Standalone, Stacking, VLT

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.6(0.0)</td>
<td>Supported on the FN I/O Aggregator</td>
</tr>
<tr>
<td>9.8(0.0)</td>
<td>Supported on the M I/O Aggregator</td>
</tr>
</tbody>
</table>

**clear lacp counters**

Clear Port Channel counters.

**Syntax**

```
clear lacp port-channel-number counters
```

**Parameters**

```
port-channel-number
```

Enter a port-channel number:

The range is from 1 to 128.

**Command Modes**

EXEC

EXEC Privilege

**Supported Modes**

All Modes

</tr>
</tbody>
</table>

Related Commands

- `show lacp` — displays the LACP configuration.

**debug lacp**

Debug LACP (events).

**Syntax**

ddebug lacp [pdu interface [in | out]]

To disable LACP debugging, use the `no debug lacp [pdu interface [in | out]]` command.

**Parameters**

- `pdu in | out` *(OPTIONAL)* Enter the keyword `pdu` to debug the LACP Protocol Data Unit information. Optionally, enter an `in` or `out` parameter to:
  - Receive enter `in`
  - Transmit enter `out`

- `interface in | out` Enter the following keywords and slot/port or number information:
  - For a Ten-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` followed by the slot/port information.

**Defaults**

- `none`

**Command Modes**

- EXEC
- EXEC Privilege

**Supported Modes**

<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
</tbody>
</table>

**io-aggregator auto-lag enable**

Enable auto-lag globally on the server facing ports

**Syntax**

`io-aggregator auto-lag enable`

To disable the auto-lag, use the `no io-aggregator auto-lag enable` command.

When disabled, all the server ports associated in a LAG are removed and the LAG itself gets removed. Any LACPDUs received on the server ports are discarded.
Defaults
Enabled

Related Commands
show io-aggregator auto-lag status — displays global information on the auto-lag status.

IACP link-fallback member

Enable the LACP link fallback member feature.

Syntax
```
lacp link-fallback member-independent port-channel 128
```
To disable the LACP link fallback member, use the
```
no lacp link-fallback member-independent port-channel 128
```
command.

Command Modes
INTERFACE

Supported Modes
Standalone, Stacking

Command History
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the M I/O Aggregator and FN I/O Aggregator.</td>
</tr>
</tbody>
</table>

IACP long-timeout

Configure a long timeout period (30 seconds) for an LACP session.

Syntax
```
lacp long-timeout
```
To reset the timeout period to a short timeout (1 second), use the
```
no lacp long-timeout
```
command.

Defaults
```
1 second
```

Command Modes
INTERFACE (conf-if-po-number)

Supported Modes
Programmable-Mux (PMUX)

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>

<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>
lacp port-priority

To influence which ports will be put in Standby mode when there is a hardware limitation that prevents all compatible ports from aggregating, configure the port priority.

Syntax

lacp port-priority priority-value

To return to the default setting, use the no lacp port-priority priority-value command.

Parameters

priority-value Enter the port-priority value. The higher the value number, the lower the priority. The range is from 1 to 65535. The default is 32768.

Defaults

32768

Command Modes

INTERFACE

Version Description

9.4(0.0) Supported on the FN I/O Aggregator.

9.2(0.0) Introduced on the M I/O Aggregator.

8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

port-channel mode

Configure the LACP port channel mode.

Syntax

port-channel number mode [active] [passive] [off]

Parameters

number Enter the keywords number then a number.

active Enter the keyword active to set the mode to the active state.

passive Enter the keyword passive to set the mode to the passive state.

off Enter the keyword off to set the mode to the off state.

NOTE: LACP modes are defined in Usage Information.
NOTE: LACP modes are defined in Usage Information.

Dell(conf-if-te-0/5)#port-channel-protocol lacp
Dell(conf-if-te-0/5-lacp)#port-channel 32 mode active
...
Dell(conf)#interface TenGigabitethernet 0/6
Dell(conf-if-te-0/6)#no shutdown
```
show interfaces port-channel

Display information on configured Port Channel groups.

Syntax

show interfaces port-channel [channel-number] [brief| description]

Parameters

  channel-number For a Port Channel interface, enter the keyword port-channel followed by a number. The range is from 1 to 128.
  brief (OPTIONAL) Enter the keyword brief to display only the port channel number, the state of the port channel, and the number of interfaces in the port channel.
  description (OPTIONAL) Enter the keyword description to display interface information with description.

Command Modes

  • EXEC
  • EXEC Privilege

Supported Modes

  All Modes

Command History

  Version Description
  9.7(0.0) Introduced on the M I/O Aggregator.
  9.4(0.0) Supported on the FN I/O Aggregator.

Usage Information

The following describes the show interfaces port-channel command shown in the following example.

Field Description

  Port-Channel 1... Displays the status of LAG. In the Example, the status of the LAG, LAG fate-sharing group ("Failover-group") is listed.
  Hardware is... Displays the interface's hardware information and its assigned MAC address.
  Port-channel is part... Indicates whether the LAG is part of a LAG fate-sharing group ("Failover-group").
  Internet address... States whether an IP address is assigned to the interface. If an IP address is assigned, that address is displayed.
  MTU 1554... Displays link and IP MTU.
  LineSpeed Displays the interface's line speed. For a port channel interface, it is the line speed of the interfaces in the port channel.
  Members in this... Displays the interfaces belonging to this port channel.
  ARP type... Displays the ARP type and the ARP timeout value for the interface.
  Last clearing... Displays the time when the show interfaces counters were cleared.
  Queueing strategy... States the packet queuing strategy. FIFO means first in first out.
<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>packets input...</td>
<td>Displays the number of packets and bytes into the interface.</td>
</tr>
<tr>
<td>Input 0 IP packets...</td>
<td>Displays the number of packets with IP headers, VLAN tagged headers, and MPLS headers. The number of packets may not add correctly because a VLAN tagged IP packet counts as both a VLAN packet and an IP packet.</td>
</tr>
<tr>
<td>0 64-byte...</td>
<td>Displays the size of packets and the number of those packets entering that interface. This information is displayed over two lines.</td>
</tr>
<tr>
<td>Received 0...</td>
<td>Displays the type and number of errors or other specific packets received. This information is displayed over three lines.</td>
</tr>
<tr>
<td>Output 0...</td>
<td>Displays the type and number of packets sent out the interface. This information is displayed over three lines.</td>
</tr>
<tr>
<td>Rate information...</td>
<td>Displays the traffic rate information into and out of the interface. Traffic rate is displayed in bits and packets per second.</td>
</tr>
<tr>
<td>Time since...</td>
<td>Displays the time since the last change in the configuration of this interface.</td>
</tr>
</tbody>
</table>

**Example (EtherScale)**

Dell#show interfaces port-channel  
Port-channel 1 is down, line protocol is down  
Hardware address is 00:1e:c9:f1:00:05, Current address is 00:1e:c9:f1:00:05  
Interface index is 1107755009  
Minimum number of links to bring Port-channel up is 1  
Internet address is not set  
Mode of IP Address Assignment : NONE  
DHCP Client-ID : lag1001ec9f10005  
MTU 12000 bytes, IP MTU 1500 bytes  
LineSpeed auto  
Members in this channel:  
ARP type: ARPA, ARP Timeout 04:00:00  
Last clearing of "show interface" counters 03:28:00  
Queueing strategy: fifo  
Input Statistics:  
0 packets, 0 bytes  
0 64-byte pkts, 0 over 64-byte pkts, 0 over 127-byte pkts  
0 over 255-byte pkts, 0 over 511-byte pkts, 0 over 1023-byte pkts  
0 Multicasts, 0 Broadcasts  
0 runts, 0 giants, 0 throttles  
0 CRC, 0 overrun, 0 discarded  
Output Statistics:  
0 packets, 0 bytes, 0 underruns  
0 64-byte pkts, 0 over 64-byte pkts, 0 over 127-byte pkts  
0 over 255-byte pkts, 0 over 511-byte pkts, 0 over 1023-byte pkts  
0 Multicasts, 0 Broadcasts, 0 Unicasts  
0 throttles, 0 discarded, 0 collisions

**User Information**  
The following describes the show interfaces port-channel brief command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>LAG</td>
<td>Lists the port channel number.</td>
</tr>
</tbody>
</table>
| Mode  | Lists the mode:  
  * L3 — for Layer 3  
  * L2 — for Layer 2 |
| Status| Displays the status of the port channel. |
Field | Description
---|---
• down — if the port channel is disabled (shutdown)  
• up — if the port channel is enabled (no shutdown)

Uptime | Displays the age of the port channel in hours:minutes:seconds.

Ports | Lists the interfaces assigned to this port channel.
(untitled) | Displays the status of the physical interfaces (up or down).
• In Layer 2 port channels, an * (asterisk) indicates which interface is the primary port of the port channel. The primary port sends out interface PDU.
• In Layer 3 port channels, the primary port is not indicated.

Example

```
Dell# show int po bri
Codes: L - LACP Port-channel  
       O - OpenFlow Controller Port-channel  
       A - Auto Port-channel  
       I - Internally Lagged
LAG Mode Status Uptime Ports
L 128 L3 down 00:00:00
Dell#
```

To indicate the LACP fallback, Internally lagged is added to the list. When the LAG auto-configures itself, the LAG status describes as ‘I’.

Related Commands | show lacp — displays the LACP matrix.

show io-aggregator auto-lag status

Displays global information on the auto-lag status.

**Syntax**

```
show io-aggregator auto-lag status
```

**Command Modes**

EXEC

**Supported Modes**

Standalone, Stacking, VLT

**Command History**

<table>
<thead>
<tr>
<th>Version</th>

<tr>
<td>9.6(0.0)</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Example**

```
Dell-ct-mxl-1-bl(conf)# do show io-aggregator auto-lag status
Auto LAG creation on server port(s) is disabled
```
**show lacp**

Displays the LACP matrix.

**Syntax**

```
show lacp port-channel-number [sys-id | counters]
```

**Parameters**

- `port-channel-number`  
Enter a port-channel number:
- The range is from 1 to 128.

- `sys-id`  
  (OPTIONAL) Enter the keywords `sys-id` and the value that identifies a system.

- `counters`  
  (OPTIONAL) Enter the keyword `counters` to display the LACP counters.

**Command Modes**

- EXEC
- EXEC Privilege

**Supported Modes**

All Modes

<tr>
<td>LAG bundle number</td>
<td>Number of the LAG bundle</td>
</tr>
<tr>
<td>Utilization (In Percent)</td>
<td>Traffic usage in percentage of the packets processed by the port channel</td>
</tr>
<tr>
<td>Alarm State</td>
<td>Indicates whether an alarm is generated if overutilization of the port channel occurred. Possible values are Active and Inactive</td>
</tr>
<tr>
<td>Interface</td>
<td>Slot and port number, and the type of the member interface of the port channel</td>
</tr>
<tr>
<td>Line Protocol</td>
<td>Indicates whether the interface is administratively up or down</td>
</tr>
<tr>
<td>Utilization (In Percent)</td>
<td>Traffic usage in percentage of the packets processed by the particular member interface</td>
</tr>
</tbody>
</table>

**Example**

```
Dell#show link-bundle-distribution port-channel
Link-bundle trigger threshold - 60
LAG bundle - 1     Utilization[(In Percent)] - 0     Alarm State - Inactive
Interface     Line Protocol     Utilization[(In Percent)]
Te 0/5         Up            0
```
show port-channel-flow

Display an egress port in a given port-channel flow.

Syntax

show port-channel-flow port-channel number incoming-interface interface
{ src-mac address dest-mac address {vlan vlanid | ether-type }} { src-ip address dest-ip address } { src-port number dest-port number }

Parameters

port-channel number Enter the keywords port-channel then the number of the port channel to display flow information. The range is from 1 to 128.

incoming-interface interface Enter the keywords incoming-interface then the interface type and slot/port or number information:

• For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.

src-mac address Enter the keywords src-mac then the MAC source address in the nn:nn:nn:nn:nn:nn format.

dest-mac address Enter the keywords dest-mac then the MAC destination address in the nn:nn:nn:nn:nn:nn format.

vlan vlan-id Enter the keyword vlan then the VLAN ID. The range is from 1 to 4094.

ether-type Enter the keywords ether-type then the ether-value in the XX:XX format.

src-ip address Enter the keywords src-ip then the IP source address in IP address format.

dest-ip address Enter the keywords dest-ip then the IP destination address in IP address format.

src-port number Enter the keywords src-port then the source port number. The range is from 1 to 65536. The default is None.

dest-port number Enter the keywords dest-port then the destination port number. The range is from 1 to 65536. The default is None.

Command Modes EXEC

Supported Modes All Modes

Command History

Version Description

9.4(0.0) Supported on the FN I/O Aggregator.

8.3.17.0 Supported on the M I/O Aggregator.

Usage Information

Because this command calculates based on a Layer 2 hash algorithm, use this command to display flows for switched Layer 2 packets, not for routed packets (use the show ip flow command to display routed packets).

The show port-channel-flow command returns the egress port identification in a given port-channel if a valid flow is entered. A mismatched flow error occurs if MAC-based hashing is configured for a Layer 2 interface and you are trying to display a Layer 3 flow.

The output displays three entries:

• Egress port for unfragmented packets.

• In the event of fragmented packets, the egress port of the first fragment.
• In the event of fragmented packets, the egress port of the subsequent fragments.

⚠️ **NOTE:** In the show port-channel-flow command output, the egress port for an unknown unicast, multicast, or broadcast traffic is not displayed.
Layer 2

This chapter describes commands to configure Layer 2 features.
This chapter contains the following sections:

- MAC Addressing Commands
- Virtual LAN (VLAN) Commands

MAC Addressing Commands

The following commands are related to configuring, managing, and viewing MAC addresses:

- `clear mac-address-table dynamic`
- `mac-address-table aging-time`
- `mac-address-table static`
- `mac-address-table station-move refresh-arp`
- `show cam mac stack-unit`
- `show mac-address-table`

Virtual LAN (VLAN) Commands

The following commands configure and monitor virtual local area networks (VLANs). VLANs are a virtual interface and use many of the same commands as physical interfaces.
For more information, also refer to Virtual LAN (VLAN) Commands.

clear mac-address-table dynamic

Clear the MAC address table of all MAC addresses learned dynamically.

Syntax: `clear mac-address-table dynamic {address mac-address | all | interface interface | vlan vlan-id}`

Parameters:
- `address mac-address`: Enter the keyword `address` followed by a MAC address in `nn:nn:nn:nn:nn:nn` format.
- `all`: Enter the keyword `all` to delete all MAC address entries in the MAC address table.
- `interface interface`: Enter the following keywords and slot/port or number information:
For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` followed by the slot/port information.

```
vlan vlan-id
```

</tbody>
</table>

### description

Add a description about the selected VLAN.

**Syntax**

```
description description
```

To remove the description from the VLAN, use the `no description` command.

**Parameters**

- `description` Enter a text string description to identify the VLAN (80 characters maximum).

**Defaults**

none

**Command Modes**

INTERFACE VLAN

**Supported Modes**

All Modes

**Command History**

<table>

</tbody>
</table>

**Related Commands**

- `show vlan` – displays the VLAN configuration.

### mac-address-table aging-time

Specify an aging time for MAC addresses to remove from the MAC address table.

**Syntax**

```
mac-address-table aging-time seconds
```

To delete the configured aging time, use the `no mac-address-table aging-time seconds` command.

**Parameters**

- `seconds` Enter either zero (0) or a number as the number of seconds before MAC addresses are relearned. To disable aging of the MAC address table, enter 0. The range is from 10 to 1000000. The default is 1800 seconds.
Defaults 1800 seconds

mac-address-table static

Associate specific MAC or hardware addresses to an interface and virtual local area networks (VLANs).

Syntax

mac-address-table static mac-address output interface vlan vlan-id

To remove a MAC address, use the no mac-address-table static mac-address output interface vlan vlan-id command.

Parameters

mac-address  Enter the 48-bit hexadecimal address in nn:nn:nn:nn:nn:nn format.
output interface  Enter the keyword output then one of the following interfaces for which traffic is forwarded:

- For a Port Channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.
- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.

vlan vlan-id  Enter the keyword vlan then a VLAN ID number from 1 to 4094.

Defaults  Not configured.

Usage Information
For details about using this command, refer to the “NIC Teaming” section of the Layer 2 chapter in the Dell Networking OS Configuration Guide.

show cam mac stack-unit

Display the content addressable memory (CAM) size and the portions allocated for MAC addresses and for MAC ACLs.

Syntax
show cam mac stack-unit unit_number port-set port-pipe count [vlan vlan-id] [interface interface]

Parameters
- stack-unit (REQUIRED) Enter the keyword stack-unit followed by a stack member number to select the stack unit for which to gather information. The range is 0 to 5.
- unit_number
- port-set port-pipe (REQUIRED) Enter the keywords port-set followed by a Port-Pipe number to select the Port-Pipe for which to gather information. The range is 0.
- address mac-addr (OPTIONAL) Enter the keyword address followed by a MAC address in the nn:nn:nn:nn:nn:nn format to display information on that MAC address.
- dynamic (OPTIONAL) Enter the keyword dynamic to display only those MAC addresses learned dynamically by the switch.
- static (OPTIONAL) Enter the keyword static to display only those MAC address specifically configured on the switch.
- interface interface (OPTIONAL) Enter the keyword interface followed by the interface type, slot and port information:
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet followed by the slot/port information.
- vlan vlan-id (OPTIONAL) Enter the keyword vlan followed by the VLAN ID to display the MAC address assigned to the VLAN. The range is from 1 to 4094.

Command Modes
- EXEC
- EXEC Privilege

Supported Modes
All Modes

</table>
show mac-address-table

Display the MAC address table.

**Syntax**

```
show mac-address-table [dynamic | static] [address mac-address | interface interface | vlan vlan-id] [count [vlan vlan-id] [interface interface-type [slot [/port]]]]
```

**Parameters**

- **dynamic** (OPTIONAL) Enter the keyword `dynamic` to display only those MAC addresses the switch dynamically learns. Optionally, you can also add one of these combinations: `address/mac-address`, `interface/interface`, or `vlan vlan-id`.
- **static** (OPTIONAL) Enter the keyword `static` to display only those MAC addresses specifically configured on the switch. Optionally, you can also add one of these combinations: `address/mac-address`, `interface/interface`, or `vlan vlan-id`.
- **address mac-address** (OPTIONAL) Enter the keyword `address` then a MAC address in the `nn:nn:nn:nn:nn:nn` format to display information on that MAC address.
- **interface interface** (OPTIONAL) Enter the keyword `interface` then the interface type, slot and port information:
  - For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- **interface interface-type** (OPTIONAL) Instead of entering the keyword `interface` then the interface type, slot and port information, as above, you can enter the interface type, then just a slot number.
- **vlan vlan-id** (OPTIONAL) Enter the keyword `vlan` then the VLAN ID to display the MAC address assigned to the VLAN. The range is 1 to 4094.
- **count** (OPTIONAL) Enter the keyword `count`, then optionally, by an interface or VLAN ID, to display total or interface-specific static addresses, dynamic addresses, and MAC addresses in use.

**Command Modes**

- EXEC
- EXEC Privilege

**Supported Modes**

Programmable-Mux (PMUX)

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
</tbody>
</table>
Version    Description

9.2(0.0)   Introduced on the M I/O Aggregator.

Usage Information
The following describes the show mac-address-table command shown in the following example.

Column Heading    Description

VlanId            Displays the VLAN ID number.

Type              Lists whether the MAC address was manually configured (Static), learned dynamically (Dynamic), or associated with a specific port (Sticky).

Interface         Displays the interface type and slot/port information. The following abbreviations describe the interface types:

- gi — Gigabit Ethernet then a slot/port.
- po — Port Channel then a number. The range is from 1 to 255 for TeraScale.
- so — SONET then a slot/port.
- te — 10 Gigabit Ethernet then a slot/port.

State             Lists if the MAC address is in use (Active) or not in use (Inactive).

Example
Dell#show mac-address-table
VlanId Mac Address   Type     Interface  State
20   00:00:c9:ad:f6:12 Dynamic  Te 0/3     Active
Dell#

Usage Information
The following describes the show mac-address-table command shown in the following example.

Column Heading    Description

VlanId            Displays the VLAN ID number.

Type              Lists whether the MAC address was manually configured (Static), learned dynamically (Dynamic), or associated with a specific port (Sticky). An (N) indicates that the specified MAC address has been learnt by a neighbor and is synced to the node.

Interface         Displays the interface type and slot/port information. The following abbreviations describe the interface types:

- gi — Gigabit Ethernet then a slot/port.
- po — Port Channel then a number. The range is from 1 to 255 for TeraScale.
- so — SONET then a slot/port.
- te — 10 Gigabit Ethernet then a slot/port.

State             Lists if the MAC address is in use (Active) or not in use (Inactive).

The following describes the show mac-address-table count command shown in the following example.

Line Beginning With    Description

MAC Entries... Displays the number of MAC entries learned per VLAN.
<table>
<thead>
<tr>
<th>Line Beginning With</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Dynamic Address...</td>
<td>Lists the number of dynamically learned MAC addresses.</td>
</tr>
<tr>
<td>Static Address...</td>
<td>Lists the number of user-defined MAC addresses.</td>
</tr>
<tr>
<td>Total MAC...</td>
<td>Lists the total number of MAC addresses the switch uses.</td>
</tr>
</tbody>
</table>

**Example (Count)**

Dell#show mac-address-table count
MAC Entries for all vlans:
Dynamic Address Count: 5
Static Address (User-defined) Count: 0
Total MAC Addresses in Use: 5
Dell#
Link Layer Discovery Protocol (LLDP)

The link layer discovery protocol (LLDP) advertises connectivity and management from the local station to the adjacent stations on an IEEE 802 LAN. LLDP facilitates multi-vendor interoperability by using standard management tools to discover and make available a physical topology for network management. The Dell Networking OS implementation of LLDP is based on IEEE standard 801.1ab.

This chapter describes the LLDP commands.

The starting point for using LLDP is invoking LLDP with the `protocol lldp` command in either `CONFIGURATION` or `INTERFACE` mode.

The information LLDP distributes is stored by its recipients in a standard management information base (MIB). You can access the information by a network management system through a management protocol such as simple network management protocol (SNMP).

For details about implementing LLDP/LLDP-MED, refer to the Link Layer Discovery Protocol chapter of the *Dell PowerEdge FN I/O Aggregator Configuration Guide*.

advertise dot3-tlv

Advertise dot3 TLVs (Type, Length, Value).

**Syntax**

```
advertise dot3-tlv {max-frame-size}
```

To remove advertised dot3-tlv, use the `no advertise dot3-tlv {max-frame-size}` command.

**Parameters**

- `max-frame-size`
  
  Enter the keywords `max-frame-size` to advertise the dot3 maximum frame size.

**Defaults**

none

**Command Modes**

- `CONFIGURATION (conf-lldp)` and `INTERFACE (conf-if-interface-lldp)`

**Supported Modes**

Programmable-Mux (PMUX)

**Command History**

<table>
<thead>
<tr>

</tr>
</tbody>
</table>
advertise management-tlv

Advertise management TLVs (Type, Length, Value).

**Syntax**
```plaintext
advertise management-tlv {system-capabilities | system-description | system-name}
```

To remove advertised management TLVs, use the `no advertise management-tlv {system-capabilities | system-description | system-name}` command.

**Parameters**
- **system-capabilities**
  - Enter the keywords `system-capabilities` to advertise the system capabilities TLVs to the LLDP peer.
- **system-description**
  - Enter the keywords `system-description` to advertise the system description TLVs to the LLDP peer.
- **system-name**
  - Enter the keywords `system-name` to advertise the system name TLVs to the LLDP peer.

**Defaults**
- none

**Command Modes**
- CONFIGURATION (conf-lldp)

**Supported Modes**
- Programmable-Mux (PMUX)

**Command History**

<table>
<thead>

</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

The command options `system-capabilities`, `system-description`, and `system-name` can be invoked individually or together, in any sequence.

---

clear lldp counters

Clear LLDP transmitting and receiving counters for all physical interfaces or a specific physical interface.

**Syntax**
```plaintext
clear lldp counters interface
```

**Parameters**
- **interface**
  - Enter the following keywords and slot/port or number information:
    - For a 10-Gigabit Ethernet interface, enter the keyword `tenGigabitEthernet` followed by the slot/port information.

**Defaults**
- none

**Command Modes**
- EXEC Privilege

**Supported Modes**
- All Modes
clear lldp neighbors

Clear LLDP neighbor information for all interfaces or a specific interface.

Syntax: clear lldp neighbors {interface}

Parameters:
- interface: Enter the following keywords and slot/port or number information:
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.

Defaults: none

Command Modes: EXEC Privilege

Supported Modes: Programmable-Mux (PMUX)

Command History:
- Version 9.4(0.0): Supported on the FN I/O Aggregator.

debug lldp interface

Enable LLDP debugging to display timer events, neighbor additions or deletions, and other information about incoming and outgoing packets.

Syntax: debug lldp interface {interface | all}{events | packet {brief | detail} {tx | rx | both}}

To disable debugging, use the no debug lldp interface {interface | all}{events} {packet {brief | detail} {tx | rx | both}} command.

Parameters:
- interface: Enter the following keywords and slot/port or number information:
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet followed by the slot/port information.
- all: (OPTIONAL) Enter the keyword all to display information on all interfaces.
- events: (OPTIONAL) Enter the keyword events to display major events such as timer events.
- packet: (OPTIONAL) Enter the keyword packet to display information regarding packets coming in or going out.
- brief: (OPTIONAL) Enter the keyword brief to display brief packet information.
detail (OPTIONAL) Enter the keyword detail to display detailed packet information.
tx (OPTIONAL) Enter the keyword tx to display transmit-only packet information.
rx (OPTIONAL) Enter the keyword rx to display receive-only packet information.
both (OPTIONAL) Enter the keyword both to display both receive and transmit packet information.

Defaults none
Command Modes EXEC Privilege
Supported Modes All Modes
Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>

</tr>
</tbody>
</table>

**disable**

Enable or disable LLDP.

**Syntax**

```plaintext
disable
```

To enable LLDP, use the `no disable` command.

**Defaults**

Enabled, that is `no disable`.

**Command Modes**

CONFIGURATION (conf-lldp) and INTERFACE (conf-if-interface-lldp)

**Supported Modes**

Programmable-Mux (PMUX)

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>

</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Related Commands**

`debug lldp interface` — debugs LLDP.

**hello**

Configure the rate at which the LLDP control packets are sent to its peer.

**Syntax**

```plaintext
hello seconds
```

To revert to the default, use the `no hello seconds` command.
Parameters

- **seconds**
  - Enter the rate, in seconds, at which the control packets are sent to its peer. The rate is from 5 to 180 seconds. The default is **30 seconds**.

Defaults

- **30 seconds**

Command Modes

- CONFIGURATION (conf-lldp) and INTERFACE (conf-if-interface-lldp)

Supported Modes

- Programmable-Mux (PMUX)

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>

</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MxL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**multiplier**

Set the number of consecutive misses before LLDP declares the interface dead.

**Syntax**

```
multiplier integer
```

To return to the default, use the **no multiplier integer** command.

**Parameters**

- **integer**
  - Enter the number of consecutive misses before the LLDP declares the interface dead. The range is from 2 to 10.

 Defaults

- **4 x hello**

Command Modes

- CONFIGURATION (conf-lldp) and INTERFACE (conf-if-interface-lldp)

Supported Modes

- Programmable-Mux (PMUX)

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>

</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MxL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**protocol lldp (Configuration)**

Enable LLDP globally on the switch.

**Syntax**

```
protocol lldp
```

To disable LLDP globally on the chassis, use the **no protocol lldp** command.

**Defaults**

- Enabled.

Command Modes

- CONFIGURATION (conf-lldp)
Supported Modes  All Modes

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**protocol lldp (Interface)**

Enter the LLDP protocol in the INTERFACE mode.

**Syntax**

```
[no] protocol lldp
```

To return to the global LLDP configuration mode, use the `no protocol lldp` command from Interface mode.

**Defaults**

Enabled

**Command Modes**

INTERFACE (conf-if-interface-lldp)

**Supported Modes**

All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

This command is available only in PMUX mode.

By default, protocol lldp is enabled. To disable, use the `no protocol lldp` command.

When you enter the LLDP protocol in the Interface context, it overrides global configurations. When you execute the `no protocol lldp` from INTERFACE mode, interfaces begin to inherit the configuration from global LLDP CONFIGURATION mode.

**show lldp neighbors**

Display LLDP neighbor information for all interfaces or a specified interface.

**Syntax**

```
show lldp neighbors [interface] [detail]
```

**Parameters**

- **interface** (OPTIONAL) Enter the following keywords and slot/port or number information:
  - For a 10-Gigabit Ethernet interface, enter the keyword `tenGigabitEthernet` then the slot/port information.

- **detail** (OPTIONAL) Enter the keyword `detail` to display all the TLV information, timers, and LLDP tx and rx counters.
Defaults none
Command Modes EXEC Privilege
Supported Modes All Modes

Total number of Table Age Outs: 0
Dell#
NPIV Proxy Gateway

The N-port identifier virtualization (NPIV) Proxy Gateway (NPG) feature provides FCoE-FC bridging capability on the FN I/O Aggregator with the FC Flex IO module switch, allowing server CNAs to communicate with SAN fabrics over the FN I/O Aggregator with the FC Flex IO module.

To configure the FN I/O Aggregator with the FC Flex IO module to operate as an NPIV proxy gateway, use the following commands:

dcb-map

Create a DCB map to configure priority flow control (PFC) and enhanced transmission selection (ETS) on Ethernet ports that support converged Ethernet traffic. Apply the DCB map to an Ethernet interface.

Syntax  
dcb-map map-name

Parameters  
map-name  
Enter a DCB map name. The maximum number of alphanumeric characters is 32.

Defaults  
None.

Command Modes  
CONFIGURATION

Supported Modes  
Programmable-Mux (PMUX)

Command History  
Version  
9.4(0.0)  
Supported on the FN I/O Aggregator.

Usage Information  
A DCB map is a template used to configure DCB parameters and apply them on converged Ethernet interfaces. DCB parameters include priority-based flow control (PFC) and enhanced traffic selection (ETS).

To display the PFC and ETS settings in DCB maps, enter the show qos dcb-map command.

Use the dcb-map command to create a DCB map to specify PFC and ETS settings and apply it on Ethernet ports. After you apply a DCB map to an interface, the PFC and ETS settings in the map are applied when the Ethernet port is enabled. DCBx is enabled on Ethernet ports by default.

The dcb-map command is supported only on physical Ethernet interfaces.

To remove a DCB map from an interface, enter the no dcb-map map-name command in Interface configuration mode.

Related Commands  
show qos dcb-map – displays the dcb-map profiles configured on the system.

dcb-map stack-unit all stack-ports all – applies a DCB map on all ports of a switch stack.

**description (for FCoE maps)**

In an FCoE map, add a text description of the FCoE and FC parameters used to transmit storage traffic over an FN 2210S Aggregator and M I/O Aggregator NPIV proxy gateway in a converged fabric.

**Syntax**

description text

**Parameters**

text Enter a maximum of 32 characters.

**Defaults**

None

**Command Modes**

FCOE MAP

**Supported Modes**

Programmable-Mux (PMUX)

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.6(0.0)</td>
<td>Supported on the FN 2210S Aggregator.</td>
</tr>
<tr>
<td>9.3(0.0)</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

The text description is displayed in `show fcoe-map` command output.

**Related Commands**

- `fcoe-map` — creates an FCoE map which contains the parameters used in the communication between servers and a SAN fabric.

- `show fcoe-map` — displays the Fibre Channel and FCoE configuration parameters in FCoE maps.

---

**fabric-id vlan**

In an FCoE map, configure the association between the dedicated VLAN used to carry FCoE traffic between servers and a SAN, and the fabric where the desired storage arrays are installed.

**Syntax**

fabric-id fabric-num vlan vlan-id

**Parameters**

- `fabric-id fabric-num` Enter a fabric ID number that is the same as the ID number of the dedicated VLAN used to carry FCoE storage traffic to the fabric specified in the FCoE map. You can enter a fabric ID in the range 2–4094.

- `vlan vlan-id` Enter the ID number of the dedicated VLAN used to carry FCoE storage traffic between servers and a SAN fabric and specified with the `vlan` command in the FCoE map.

**Defaults**

None

**Command Modes**

FCOE MAP

**Supported Modes**

Programmable-Mux (PMUX)
**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.6(0.0)</td>
<td>Supported on the FN 2210S Aggregator.</td>
</tr>
<tr>
<td>9.3(0.0)</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

In the `fabric-id vlan` command, the fabric and VLAN ID numbers must be the same.

In each FCoE map, the fabric ID, FC-MAP value, and FCoE VLAN parameters must be unique.

To remove a fabric-VLAN association from an FCoE map, enter the `no fabric-id vlan` command.

Create a VLAN and then specify the configured VLAN ID in the `fabric-id vlan` command. Otherwise, the following error message is displayed:

```
Dell(conf-fcoe-f)#fabric-id 10 vlan 10 % Error: Vlan 10 does not exist
```

**Related Commands**

- `fcoe-map` — creates an FCoE map which contains the parameters used in the communication between servers and a SAN fabric.

- `show fcoe-map` — displays the Fibre Channel and FCoE configuration parameters in FCoE maps.

---

**fcf-priority**

In an FCoE map, configure the priority used by a server CNA to select an upstream FCoE forwarder (FCF).

**Syntax**

```
fcf-priority priority
```

**Parameters**

- `priority`  
Enter the priority assigned to the FN 2210S Aggregator NPIV proxy gateway, which appears to a downstream server CNA as an FCF. The range of FCF priority values is from 1 to 255.

**Defaults**

128

**Command Modes**

FCOE MAP

**Supported Modes**

Programmable-Mux (PMUX)

<tbody>
<tr>
<td>9.6(0.0)</td>
<td>Supported on the FN 2210S Aggregator.</td>
</tr>
<tr>
<td>9.3(0.0)</td>
<td>Introduced on the M I/O Aggregator and MXL 10/40GbE Switch with the FC Flex IO module.</td>
</tr>
</tbody>
</table>

**Usage Information**

The FCF priority you assign to an FN 2210S Aggregator is used by server CNAs to select an upstream FCF to use for a fabric login (FLOGI).

To remove a configured FCF priority from an FCoE map, enter the `no fcf-priority` command.

**Related Commands**

- `fcoe-map` — creates an FCoE map which contains the parameters used in the communication between servers and a SAN fabric.
show fcoe-map displays the Fibre Channel and FCoE configuration parameters in FCoE maps.

**fc-map**

In an FCoE map, configure the FCoE mapped address prefix (FC-MAP) value which is used to identify FCoE traffic transmitted on the FCoE VLAN for the specified fabric.

**Syntax**

```
fc-map fc-map-value
```

**Parameters**

- `fc-map-value` Enter the unique MAC address prefix used by a SAN fabric.
  
  The range of FC-MAP values is from 0EFC00 to 0EFCFF.

**Defaults**

None

**Command Modes**

FCoE MAP

**Supported Modes**

Programmable-Mux (PMUX)

**Command History**

<table>
<thead>
<tr>
<th>Version</th>

</tr>
</thead>
<tbody>
<tr>
<td>9.6(0.0)</td>
<td>Supported on the FN 2210S Aggregator.</td>
</tr>
<tr>
<td>9.3(0.0)</td>
<td>Introduced on the M I/O Aggregator and MXL 10/40GbE Switch with the FC Flex IO module.</td>
</tr>
</tbody>
</table>

**Usage Information**

The FC-MAP value you enter must match the FC-MAP value used by an FC switch or FCoE forwarder (FCF) in the fabric. An FCF switch accepts only FCoE traffic that uses the correct FC-MAP value.

The FC-MAP value is used to generate the fabric-provided MAC address (FP-MAC). The FPMA is used by servers to transmit FCoE traffic to the fabric. An FC-MAP can be associated with only one FCoE VLAN and vice versa.

In an FCoE map, the FC-MAP value, fabric ID, and FCoE VLAN parameters must be unique.

To remove a configured FC-MAP value from an FCoE map, enter the `no fc-map` command.

**Related Commands**

- `fcoe-map` — creates an FCoE map which contains the parameters used in the communication between servers and a SAN fabric.
  
- `show fcoe-map` — displays the Fibre Channel and FCoE configuration parameters in FCoE maps.

**fcoe-map**

Create an FCoE map which contains the parameters used to configure the links between server CNAs and a SAN fabric. Apply the FCoE map on a server-facing Ethernet port.

**Syntax**

```
fcoe-map map-name
```
Parameters

map-name Maximum: 32 alphanumeric characters.

Defaults

On the FN2210S Aggregator with PMUX modules, the following parameters are applied on all the PMUX module interfaces:

- Description: SAN_FABRIC
- Fabric-id: 1002
- Fcoe-vlan: 1002
- Fc-map: 0x0efc00
- Fcf-priority: 128
- Fka-adv-period: 8000mSec
- Keepalive: enable
- Vlan priority: 3

Command Modes

CONFIGURATION
INTERFACE

Supported Modes

Programmable-Mux (PMUX)

Command History

Version Description
9.6(0.0) Supported on the FN2210S Aggregator with the PMUX module.
9.3(0.0) Introduced on the M I/O Aggregator with the PMUX module.

Usage Information

An FCoE map is a template used to map FCoE and FC parameters in a converged fabric. An FCoE map is used to virtualize upstream FC ports on an FN2210S Aggregator with the PMUX module NPIV proxy gateway so that they appear to downstream server CNA ports as FCoE forwarder (FCF) ports on an FCoE network. When applied to FC and Ethernet ports on an NPIV proxy gateway, an FCoE map allows the switch to operate as an FCoE-FC bridge between an FC SAN and an FCoE network by providing FCoE-enabled servers and switches with the necessary parameters to log in to a SAN fabric.

On an FN2210S Aggregator with the PMUX module NPIV proxy gateway, you cannot apply an FCoE map applied on fabric-facing FC ports and server-facing 10-Gigabit Ethernet ports.

An FCoE map consists of the following parameters: the dedicated FCoE VLAN used for storage traffic, the destination SAN fabric (FC-MAP value), FCF priority used by a server, and the FIP keepalive (FKA) advertisement timeout.

In each FCoE map, the fabric ID, FC-MAP value, and FCoE VLAN parameters must be unique. Use one FCoE map to access one SAN fabric. You cannot use the same FCoE map to access different fabrics.

To remove an FCoE map from an Ethernet interface, enter the no fcoe-map map-name command in Interface configuration mode.

Related Commands

show fcoe-map— displays the Fibre Channel and FCoE configuration parameters in FCoE maps.
feature fc

Enables the Fibre channel communication via the NPG functionality.

Syntax

feature fc

</tbody>
</table>

Usage Information

The command is supported only in FN2210S Aggregator.

fka-adv-period

In an FCoE map, configure the time interval used to transmit FIP keepalive (FKA) advertisements.

Syntax

fka-adv-period seconds

Parameters

seconds Enter the time period (in seconds) used to send FIP keepalive messages to peer devices. The range is from 8 to 90 seconds.

Defaults

8 seconds

Command Modes FCoE MAP

</tr>
</tbody>
</table>

Usage Information

To delete the FIP keepalive time period from an FCoE map, enter the no fka-adv-period command.

Related Commands

fcoe-map — creates an FCoE map which contains the parameters used in the communication between servers and a SAN fabric.

show fcoe-map — displays the Fibre Channel and FCoE configuration parameters in FCoE maps.
**keepalive**

In an FCoE map, enable the monitoring of FIP keepalive messages (if it is disabled).

**Syntax**

```
keepalive
```

**Parameters**

None

**Defaults**

FIP keepalive monitoring is enabled on Ethernet and Fibre Channel interfaces.

**Command Modes**

FCoE MAP

**Supported Modes**

Programmable-Mux (PMUX)

**Command History**

<td>Introduced on the M I/O Aggregator and MXL 10/40GbE Switch with the FC Flex IO module.</td>
</tr>
</tbody>
</table>

**Usage Information**

FIP keepalive (FKA) messaging is used to detect if other FCoE devices are reachable.

To remove FIP keepalive monitoring from an FCoE map, enter the `no keepalive` command.

**Related Commands**

- `fcoe-map` — creates an FCoE map which contains the parameters used in the communication between servers and a SAN fabric.
- `show fcoe-map` — displays the Fibre Channel and FCoE configuration parameters in FCoE maps.

---

**show fcoe-map**

Display the Fibre Channel and FCoE configuration parameters in FCoE maps.

**Syntax**

```
show fcoe-map [brief | map-name]
```

**Parameters**

- `brief`  
  Displays an overview of currently configured FCoE maps.

- `map-name`  
  Displays the FC and FCoE configuration parameters in a specified FCoE map. The FCoE map is applied on Ethernet (FCoE) and FC ports to transmit FC storage traffic to a specified fabric.

**Command Modes**

- EXEC
- EXEC Privilege

**Supported Modes**

**Example**

```
Dell(conf)#do show fc sw
Switch Mode : NPG
Switch WWN : 10:00:00:1e:c9:f1:00:d7
```
show interfaces status

Displays a summary of interface information or specify a stack unit and interface to display status information for that specific interface only.

Syntax
show interfaces [interface | stack-unit unit-number] status

Parameters

- **interface**  
  (OPTIONAL) Enter one of the following keywords and slot/port or number information:
  
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet followed by the slot/port information.

- **linecard slot-number**  
  (OPTIONAL) Enter the keyword linecard then the slot number.

Defaults

none

Dell#

show npiv devices

Displays the FCoE and FC devices currently logged into an FN I/O Aggregator Switch with the FC Flex IO module NPIV proxy gateway.

Syntax
show npiv devices [brief]
Parameters

brief Displays an overview of current server CNA-fabric connections over an FN I/O Aggregator with the FC Flex IO module NPIV proxy gateway.

Command Modes

- EXEC
- EXEC Privilege

Supported Modes

All modes

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.6.0(0.0)</td>
<td>Supported on the FN2210S Aggregator.</td>
</tr>
<tr>
<td>9.3(0.0)</td>
<td>Introduced on the M I/O Aggregator and MXL 10/40GbE Switch with the FC Flex IO module.</td>
</tr>
</tbody>
</table>

Usage Information

Use the `show npiv devices` command to display information on the server CNA, server-facing Ethernet and fabric-facing FC ports, and the SAN fabric in each server-fabric connection over an FN I/O Aggregator with the FC Flex IO module NPIV proxy gateway.

The following table describes the `show npiv devices brief` output shown in the example below.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ENode-Intf</td>
<td>FN I/O Aggregator with the FC Flex IO module Ethernet interface (slot/port) to which a server CNA is connected.</td>
</tr>
<tr>
<td>ENode-WWPN</td>
<td>Worldwide port name (WWPN) of a server CNA port.</td>
</tr>
<tr>
<td>FCoE-Vlan</td>
<td>VLAN ID of the dedicated VLAN used to transmit FCoE traffic to and from the fabric.</td>
</tr>
<tr>
<td>Fabric-Intf</td>
<td>Fabric-facing Fibre Channel port (slot/port) on which FC traffic is transmitted to the specified fabric.</td>
</tr>
<tr>
<td>Fabric-Map</td>
<td>Name of the FCoE map containing the FCoE/FC configuration parameters for the server CNA-fabric connection.</td>
</tr>
<tr>
<td>LoginMethod</td>
<td>Method used by the server CNA to log in to the fabric; for example: FLOGI - ENode logged in using a fabric login (FLOGI). FDISC - ENode logged in using a fabric discovery (FDISC).</td>
</tr>
<tr>
<td>Status</td>
<td>Operational status of the link between a server CNA port and a SAN fabric: Logged In - Server has logged in to the fabric and is able to transmit FCoE traffic.</td>
</tr>
</tbody>
</table>

Example

```
Dell# show npiv devices brief
Total NPIV Devices = 2

ENode-Intf     ENode-WWPN           FCoE-Vlan  Fabric-Intf   Fabric-Map   LoginMethod  Status
------------------------ ----------- ----------- ----------- ----------- ---------------
Te 0/12 20:01:00:10:18:f1:94:20   1003      Fc 0/5      fid_1003     FLOGI          LOGGED_IN
Te 0/13 10:00:00:00:c9:d9:9c:cb   1003      Fc 0/0      fid_1003     FDISC          LOGGED_IN
```

Usage Information

The following table describes the `show npiv devices` output shown in the example below.
<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ENode [number]</td>
<td>A server CNA that has successfully logged in to a fabric over an FN I/O Aggregator with the FC Flex IO module Ethernet port in ENode mode.</td>
</tr>
<tr>
<td>Enode MAC</td>
<td>MAC address of a server CNA port.</td>
</tr>
<tr>
<td>Enode Intf</td>
<td>Port number of a server-facing Ethernet port operating in ENode mode.</td>
</tr>
<tr>
<td>FCF MAC</td>
<td>Fibre Channel forwarder MAC: MAC address of FN I/O Aggregator Switch with the FC Flex IO module Ethernet port and server CNA port.</td>
</tr>
<tr>

show qos dcb-map

Display the DCB parameters configured in a specified DCB map.

**Syntax**
```
show qos dcb-map map-name
```

**Parameters**
- `map-name`: Displays the PFC and ETS parameters configured in the specified map.

**Command Modes**
- EXEC
- EXEC Privilege

**Supported Modes**
All Modes

**Command History**
- **Version**
  9.6(0.0) Supported on the FN I/O Aggregator.
  9.6(0.0) Supported on the M I/O Aggregator.

**Usage Information**
Use the `show qos dcb-map` command to display the enhanced transmission selection (ETS) and priority-based flow control (PFC) parameters used to configure server-facing Ethernet ports.

The following table describes the `show qos dcb-map` output shown in the example below.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>State</td>
<td>Complete: All mandatory DCB parameters are correctly configured. In progress: The DCB map configuration is not complete. Some mandatory parameters are not configured.</td>
</tr>
<tr>
<td>PFC Mode</td>
<td>PFC configuration in DCB map: On (enabled) or Off.</td>
</tr>
<tr>
<td>PG</td>
<td>Priority group configured in the DCB map.</td>
</tr>
<tr>
<td>TSA</td>
<td>Transmission scheduling algorithm used by the priority group: Enhanced Transmission Selection (ETS).</td>
</tr>
<tr>
<td>BW</td>
<td>Percentage of bandwidth allocated to the priority group.</td>
</tr>
<tr>
<td>PFC</td>
<td>PFC setting for the priority group: On (enabled) or Off.</td>
</tr>
<tr>
<td>Priorities</td>
<td>802.1p priorities configured in the priority group.</td>
</tr>
</tbody>
</table>

**Example**
```
Dell# show qos dcb-map dcbmap2
State :Complete
PfcMode:ON
---------------------
PG:0 TSA:ETS  BW:50  PFC:OFF
Priorities:0 1 2 4 5 6 7
```
show running-config fcoe-map

Displays the current fcoe-map configurations.

Syntax

   show running-config fcoe-map

Command Modes

   EXEC Privilege

Supported Modes

   All Modes

Command History

   Version     Description
   -------     9.6(0.0)        Supported on the FN2210S Aggregator.
   9.3(0.0)     Introduced on the M I/O Aggregator and MXL 10/40GbE Switch with the FC Flex
                IO module.

Example

   Dell(conf)#do show running-config fcoe-map
   !
   fcoe-map map
   fc-map 0e6c00
   fabric-id 100 vlan 100
Port Monitoring

The port monitoring feature allows you to monitor network traffic by forwarding a copy of each incoming or outgoing packet from one port to another port.

Important Points to Remember

- Port monitoring is supported on physical ports only. Port-channel interfaces and virtual local area networks (VLANs), are not supported.
- The monitoring (destination, “MG”) and monitored (source, “MD”) ports must be on the same switch.
- The monitored (source) interface must be a server-facing interface in the format slot/port, where valid slot number is 0 and server-facing port numbers are from 1 to 8. The monitoring interface must be an uplink port in the chassis.
- Dell Networking OS permits a limited set of commands for monitoring ports. To display these commands, use the ? command.
- A monitoring port may not be a member of a VLAN.
- There may only be one destination port in a monitoring session.
- A source port (MD) can only be monitored by one destination port (MG). If you try to assign a monitored port to more than one monitoring port, the following error is displayed as shown in example.

Example

```
Dell(conf)#mon ses 1
Dell(conf-mon-sess-1)#source tengig 0/1 destination tengig 0/6 direction both
Dell(conf-mon-sess-1)#do show mon ses
SessionID Source      Destination  Direction  Mode  Type
--------- ------      -----------  ---------  ----  ----
1    TenGig 0/1  TenGig 0/6  both            interface
Port-based
```

```
Dell(conf-mon-sess-2)#source tengig 0/1 destination tengig 0/7 direction both
% Error: MD port is already being monitored.
```

NOTE: There is no limit to the number of monitoring sessions per system, provided that there are only four destination ports per port-pipe. If each monitoring session has a unique destination port, the maximum number of session is four per port-pipe.

description

Enter a description of this monitoring session.

Syntax

description {description}

To remove the description, use the no description {description} command.
**Parameters**

<table>
<thead>
<tr>
<th>Parameters</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>description</td>
<td>Enter a description regarding this session (80 characters maximum).</td>
</tr>
</tbody>
</table>

**Defaults**
none

**Command Modes**
MONITOR SESSION (conf-mon-sess-session-ID)

**Supported Modes**
All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>

<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Related Commands**
monitor session — enables a monitoring session.

---

**monitor session**

Create a session for monitoring traffic with port monitoring.

**Syntax**

```
monitor session session-ID
```

To delete a session, use the `no monitor session session-ID` command.

To delete all monitor sessions, use the `no monitor session all` command.

**Parameters**

<table>
<thead>
<tr>
<th>Parameters</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>session-ID</td>
<td>Enter a session identification number. The range is from 0 to 65535.</td>
</tr>

</table>
show config
Display the current monitor session configuration.

Syntax
show config

Defaults
none

Command Modes
MONITOR SESSION (conf-mon-sess-session-ID)

Supported Modes
All Modes

Command History

Example

Dell(conf-mon-sess-5)#show config
!
monitor session 5
source TenGigabitEthernet 0/4 destination TenGigabitEthernet 0/7 direction rx
Dell(conf-mon-sess-5)#

show monitor session
Display the monitor information of a particular session or all sessions.

Syntax

show monitor session {session-ID}

To display monitoring information for all sessions, use the show monitor session command.

Parameters

session-ID (OPTIONAL) Enter a session identification number. The range is from 0 to 65535.

Defaults
none

Command Modes

• EXEC
• EXEC Privilege

Supported Modes
All Modes

Command History

Version Description
9.4(0.0) Supported on the FN I/O Aggregator.

Example

Dell#show monitor session 5
SessionID Source   Destination Direction Mode      Type
--------- ------   ----------- --------- ----      ----
5        Te 0/4  Te 0/3       rx     interface  Port-based
Dell#

Related Commands

monitor session — creates a session for monitoring.
show running-config monitor session
Displays the running configuration of all monitor sessions or a specific session.

Syntax
show running-config monitor session (session-ID)
To display the running configuration for all monitor sessions, use the show running-config monitor session command.

Parameters
session-ID (OPTIONAL) Enter a session identification number. The range is from 0 to 65535.

Defaults
none

Command Modes
EXEC Privilege

Supported Modes
All Modes

Command History
Version Description
9.4(0.0) Supported on the FN I/O Aggregator.

Usage Information
The monitoring command is saved in the running configuration at the Monitor Session mode level and can be restored after a chassis reload.

Example
Dell#show run monitor session
!
monitor session 5
source TenGigabitEthernet 0/4 destination TenGigabitEthernet 0/5 direction rx
!
monitor session 20
source TenGigabitEthernet 0/3 destination TenGigabitEthernet 0/2 direction both

Dell#show run monitor session 20
!
monitor session 20
source TenGigabitEthernet 0/3 destination TenGigabitEthernet 0/2 direction both
Dell#

Related Commands
monitor session — creates a session for monitoring.
show monitor session — displays a monitor session.

source (port monitoring)
Configure a port monitor source.

Syntax
source interface destination interface direction {rx | tx | both}
To disable a monitor source, use the no source interface destination interface direction {rx | tx | both} command.

Parameters
interface Enter the one of the following keywords and slot/port information:
For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.

- **destination**: Enter the keyword `destination` to indicate the interface destination.
- **direction (rx | tx | both)**: Enter the keyword `direction` followed by one of the packet directional indicators.
  - **rx**: to monitor receiving packets only.
  - **tx**: to monitor transmitting packets only.
  - **both**: to monitor both transmitting and receiving packets.

**Defaults**

- **none**

**Command Modes**

- **MONITOR SESSION (conf-mon-sess-session-ID)**

**Supported Modes**

- **All Modes**

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Example**

```
Dell(conf-mon-sess-11)#source tengig 0/1 destination tengig 0/8 direction rx
Dell(conf-mon-sess-11)#
```

**Usage Information**

The monitored (source) interface must be a server-facing interface in the format slot/port, where valid slot number is 0 and server-facing port numbers are from 1 to 8.
Quality of Service (QoS)

The Dell Networking operating software commands for quality of service (QoS) include traffic conditioning and congestion control. QoS commands are not universally supported on all Dell Networking Products.

Per-Port QoS Commands

Per-port QoS (port-based QoS) allows you to define the QoS configuration on a per-physical-port basis.

Policy-Based QoS Commands

Policy-based QoS is not supported on logical interfaces, such as port-channels, VLANs, or Loopbacks. The commands are:

- `show qos dcb-map`
- `show qos dot1p-queue-mapping`

**bandwidth-percentage**

Assign a percentage of weight to the class/queue.

**Syntax**

```
bandwidth-percentage percentage
```

To remove the bandwidth percentage, use the `no bandwidth-percentage` command.

**Parameters**

- `percentage` Enter the percentage assignment of weight to the class/queue. The range is from 1 to 100% (granularity 1%).

**Defaults**

none

**Command Modes**

CONFIGURATION (conf-qos-policy-out)

**Supported Modes**

Programmable-Mux (PMUX)

**Command History**

- **Version**
  - 9.4(0.0) Supported on the FN I/O Aggregator.
  - 9.2(0.0) Introduced on the M I/O Aggregator.
  - 8.3(16.1) Introduced on the MXL 10/40GbE Switch IO Module.
Usage Information
The unit of bandwidth percentage is 1%. A bandwidth percentage of 0 is allowed and disables the scheduling of that class. If the sum of the bandwidth percentages given to all eight classes exceeds 100%, the bandwidth percentage automatically scales down to 100%.

Related Commands
- `qos-policy-output` — creates a QoS output policy.

**description**

Add a description to the selected policy map or QoS policy.

**Syntax**
```
description {description}
```
To remove the description, use the `no description {description}` command.

**Parameters**
- `description` Enter a description to identify the policies (80 characters maximum).

**Defaults**
none

**Command Modes**
- CONFIGURATION (policy-map-input and policy-map-output; conf-qos-policy-in and conf-qos-policy-out; wred)
- Programmable-Mux (PMUX)

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>

</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Related Commands**
- `policy-map-output` — creates an output policy map.
- `qos-policy-output` — creates an output QoS-policy on the router.

**dot1p-priority**

Assign a value to the IEEE 802.1p bits on the traffic this interface receives.

**Syntax**
```
dot1p-priority priority-value
```
To delete the IEEE 802.1p configuration on the interface, use the `no dot1p-priority` command.

**Parameters**
- `priority-value` Enter a value from 0 to 7.

<table>
<thead>
<tr>
<th>dot1p</th>
<th>Queue Number</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>2</td>
</tr>
<tr>
<td>1</td>
<td>0</td>
</tr>
<tr>
<td>2</td>
<td>1</td>
</tr>
</tbody>
</table>
### dot1p-priority

The `dot1p-priority` command changes the priority of incoming traffic on the interface. The system places traffic marked with a priority in the correct queue and processes that traffic according to its queue.

When you set the priority for a port channel, the physical interfaces assigned to the port channel are configured with the same value. You cannot assign the `dot1p-priority` command to individual interfaces in a port channel.

#### Syntax

```
dot1p-priority queue-number
```

#### Parameters

- `queue-number`: Enter the queue number (1-7) for the dot1p priority.

#### Defaults

- none

#### Command Modes

- INTERFACE

#### Supported Modes

- Programmable-Mux (PMUX)

#### Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

#### Usage Information

The `dot1p-priority` command changes the priority of incoming traffic on the interface. The system places traffic marked with a priority in the correct queue and processes that traffic according to its queue.

When you set the priority for a port channel, the physical interfaces assigned to the port channel are configured with the same value. You cannot assign the `dot1p-priority` command to individual interfaces in a port channel.

### policy-aggregate

Allow an aggregate method of configuring per-port QoS via policy maps. An aggregate QoS policy is part of the policy map (input/output) applied on an interface.

#### Syntax

```
policy-aggregate qos-policy-name
```

To remove a policy aggregate configuration, use the `no policy-aggregate qos-policy-name` command.

#### Parameters

- `qos-policy-name`: Enter the name of the policy map in character format (32 characters maximum).

#### Defaults

- none

#### Command Modes

- CONFIGURATION (policy-map-input and policy-map-output)

#### Supported Modes

- Programmable-Mux (PMUX)

#### Command History

<table>
<thead>
<tr>

</tr>
<tr>
<td>7</td>
<td>7</td>
</tr>
</tbody>
</table>
Version Description
8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
Aggregate input/output QoS policy applies to all the port going/going traffic. Aggregate input/output QoS policy can coexist with per queue input/output QoS policies.

1. If only aggregate input QoS policy exists, input traffic conditioning configurations (rate-police) apply. Any marking configurations in aggregate input QoS policy are ignored.
2. If aggregate input QoS policy and per class input QoS policy coexist, aggregate input QoS policy preempts per class input QoS policy on input traffic conditioning (rate-police). In other words, if rate police configuration exists in the aggregate QoS policy, the rate police configurations in per class QoS are ignored. Marking configurations in per class input QoS policy still apply to each queue.

Related Commands
policy-map-output — creates an output policy map.

policy-map-output

Create an output policy map.

Syntax
policy-map-output policy-map-name

To remove a policy map, use the no policy-map-output policy-map-name command.

Parameters

policy-map-name Enter the name for the policy map in character format (32 characters maximum).

Defaults
none

Command Modes
CONFIGURATION

Supported Modes
Programmable-Mux (PMUX)

Command History

Version Description
9.4(0.0) Supported on the FN I/O Aggregator.
9.2(0.0) Introduced on the M I/O Aggregator.
8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
To assign traffic to different flows using QoS policy, use the Output Policy map. This command enables Policy-Map-Output Configuration mode (conf-policy-map-out).

Related Commands
service-queue — assigns a class map and QoS policy to different queues.
policy-aggregate — allows an aggregate method of configuring per-port QoS using policy maps.
service-policy output — applies an output policy map to the selected interface.
qos-policy-output

Create a QoS output policy.

Syntax

qos-policy-output qos-policy-name

To remove an existing output QoS policy, use the no qos-policy-output qos-policy-name command.

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>qos-policy-name</td>
<td>Enter your output QoS policy name in character format (32 characters maximum).</td>
</tr>
</tbody>
</table>

Defaults

none

Command Modes

CONFIGURATION

Supported Modes

Programmable-Mux (PMUX)

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

To specify the name of the output QoS policy, use this command. After the output policy is specified, rate-limit, bandwidth-percentage, and WRED can be defined. This command enables Qos-Policy-Output Configuration mode — (conf-qos-policy-out).

Related Commands

- bandwidth-percentage — assigns weight to the class/queue percentage.

rate-shape

Shape the traffic output on the selected interface.

Syntax

rate shape [kbps] rate [burst-KB]

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>kbps</td>
<td>Enter the keyword kbps to specify the rate limit in Kilobits per second (Kbps). Make the following value a multiple of 64. The range is from 0 to 40000000. The default granularity is Megabits per second (Mbps).</td>
</tr>
<tr>
<td>rate</td>
<td>Enter the outgoing rate in multiples of 10 Mbps. The range is from 10 to 10000. (OPTIONAL) Enter the burst size in KB. The range is from 0 to 10000. The default is 50.</td>
</tr>
</tbody>
</table>

Defaults

Granularity for rate is Mbps unless you use the kbps option.

Command Modes

QOS-POLICY-OUT

Supported Modes

Programmable-Mux (PMUX)

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
</tbody>
</table>
Version Description
9.2(0.0) Introduced on the M I/O Aggregator.
8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
When you apply rate-shape in GoS policy both on the Queue Level and in Aggregate mode, the queue-based shaping occurs first then aggregate rate shaping.

service-class bandwidth-percentage

Specify a minimum bandwidth for queues.

Syntax
service-class bandwidth-percentage queue0 number queue1 number queue2 number queue3 number

Parameters
number Enter the bandwidth-weight, as a percentage. The range is from 1 to 100.

Defaults
none

Command Modes
CONFIGURATION

Supported Modes
Programmable-Mux (PMUX)

Command History

Version Description
9.4(0.0) Supported on the FN I/O Aggregator.
9.2(0.0) Introduced on the M I/O Aggregator.
8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
Guarantee a minimum bandwidth to different queues globally using the service-class bandwidth-percentage command from CONFIGURATION mode. The command is applied in the same way as the bandwidth-percentage command in an output GoS policy. The bandwidth-percentage command in QOS-POLICY-OUT mode supersedes the service-class bandwidth-percentage command.

When you enable ETS, the egress QoS features in the output QoS policy-map (such as service-class bandwidth-percentage and bandwidth-percentage), the default bandwidth allocation ratio for egress queues are superseded by ETS configurations. This is to provide compatibility with DCBX. Therefore, Dell Networking OS recommends disabling ETS when you wish to apply these features exclusively. After you disable ETS on an interface, the configured parameters are applied.

service-class dot1p-mapping

Configure a service-class criterion based on a dot1p value.

Syntax
service-class dot1p-mapping {dot1p0 value | dot1p1 value | dot1p2 queue | dot1p3 value | dot1p4 value | dot1p5 value | dot1p6 value | dot1p7 value}
**Parameters**

| value | Enter a dot1p list number and value. The list number range is from 0 to 7. The range is from 0 to 3. |

**Defaults**

For each dot1p Priority, the default CoS queue value is:

- dot1p CoS Queue
  - 0 0-7
  - 1 0-7
  - 2 0-7
  - 3 0-7
  - 4 0-7
  - 5 0-7
  - 6 0-7
  - 7 0-7

**Command Modes**

CONFIGURATION

**Supported Modes**

Programmable-Mux (PMUX)

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

To apply dot1p-queue-mapping, use the `service-class dynamic dot1p` command.

### service-class dynamic dot1p

Honor all 802.1p markings on incoming switched traffic on an interface (from INTERFACE mode) or on all interfaces (from CONFIGURATION mode). A CONFIGURATION mode entry supersedes an INTERFACE mode entry.

**Syntax**

```
service-class dynamic dot1p
```

To return to the default setting, use the `no service-class dynamic dot1p` command.

**Defaults**

All dot1p traffic is mapped to Queue 0 unless you enable the `service-class dynamic dot1p` command. The default mapping is as follows:

<table>
<thead>
<tr>
<th>dot1p</th>
<th>Queue ID</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>0</td>
</tr>
<tr>
<td>1</td>
<td>0</td>
</tr>
<tr>
<td>2</td>
<td>0</td>
</tr>
<tr>
<td>3</td>
<td>1</td>
</tr>
</tbody>
</table>
## dot1p Queue ID

<table>
<thead>
<tr>
<th>dot1p</th>
<th>Queue ID</th>
</tr>
</thead>
<tbody>
<tr>
<td>4</td>
<td>2</td>
</tr>
<tr>
<td>5</td>
<td>3</td>
</tr>
<tr>
<td>6</td>
<td>3</td>
</tr>
<tr>
<td>7</td>
<td>3</td>
</tr>
</tbody>
</table>

### Command Modes

- INTERFACE
- CONFIGURATION

### Supported Modes

Programmable-Mux (PMUX)

### Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

### Usage Information

To honor all incoming 802.1p markings on incoming switched traffic on the interface, enter this command. By default, this facility is not enabled (that is, the 802.1p markings on incoming traffic are not honored).

You can apply this command on both physical interfaces and port channels. When you set the service-class dynamic for a port channel, the physical interfaces assigned to the port channel are automatically configured; you cannot assign the service-class dynamic command to individual interfaces in a port channel.

- All dot1p traffic is mapped to Queue 0 unless you enable the service-class dynamic dot1p command on an interface or globally.
- Layer 2 or Layer 3 service policies supersede dot1p service classes.

---

## service-policy output

Apply an output policy map to the selected interface.

### Syntax

```
service-policy output policy-map-name
```

To remove the output policy map from the interface, use the no service-policy output policy-map-name command.

### Parameters

- `policy-map-name` Enter the name for the policy map in character format (16 characters maximum).

You can identify an existing policy map or name one that does not yet exist.

### Defaults

none

### Command Modes

INTERFACE

### Supported Modes

Programmable-Mux (PMUX)
### service-queue

Assign a class map and GoS policy to different queues.

**Syntax**

```
service-queue queue-id [class-map class-map-name] [qos-policy qos-policy-name]
```

To remove the queue assignment, use the `no service-queue queue-id [class-map class-map-name] [qos-policy qos-policy-name]` command.

**Parameters**

- **queue-id**
  
  Enter the value used to identify a queue. The range is from 0 to 3 (four queues per interface; four queues are reserved for control traffic).

- **class-map class-map-name**
  
  (OPTIONAL) Enter the keyword `class-map` then the class map name assigned to the queue in character format (32 character maximum).

  **NOTE:** This option is available under `policy-map-input` only.

- **qos-policy qos-policy-name**
  
  (OPTIONAL) Enter the keywords `qos-policy` then the GoS policy name assigned to the queue in text format (32 characters maximum). This specifies the input GoS policy assigned to the queue under `policy-map-input` and output GoS policy under `policy-map-output` context.

**Defaults**

none

**Command Modes**

CONFIGURATION (conf-policy-map-in and conf-policy-map-out)

**Supported Modes**

Programmable-Mux (PMUX)

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
<tr>
<td>8.3(16.1)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

This command assigns a class map or GoS policy to different queues.

**Related Commands**

- `service-policy output` — applies an output policy map to the selected interface.
show qos dcb-map

Display the DCB parameters configured in a specified DCB map.

Syntax

    show qos dcb-map map-name

Parameters

    map-name

Displays the PFC and ETS parameters configured in the specified map.

Command Modes

    • EXEC
    • EXEC Privilege

Command History

Version 9.4(0.0)  Supported on the FN I/O aggregator.

Usage Information

Use the show qos dcb-map command to display the enhanced transmission selection (ETS) and priority-based flow control (PFC) parameters used to configure server-facing Ethernet ports.

The following table describes the show qos dcb-map output shown in the example below.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>State</td>
<td>Complete: All mandatory DCB parameters are correctly configured. In progress: The DCB map configuration is not complete. Some mandatory parameters are not configured.</td>
</tr>
<tr>
<td>PFC Mode</td>
<td>PFC configuration in DCB map: On (enabled) or Off.</td>
</tr>
<tr>
<td>PG</td>
<td>Priority group configured in the DCB map.</td>
</tr>
<tr>
<td>TSA</td>
<td>Transmission scheduling algorithm used by the priority group: Enhanced Transmission Selection (ETS).</td>
</tr>
<tr>
<td>BW</td>
<td>Percentage of bandwidth allocated to the priority group.</td>
</tr>
<tr>
<td>PFC</td>
<td>PFC setting for the priority group: On (enabled) or Off.</td>
</tr>
<tr>
<td>Priorities</td>
<td>802.1p priorities configured in the priority group.</td>
</tr>
</tbody>
</table>

Example

Dell# show qos dcb-map dcbmap2

    State :Complete
    PfcMode:ON
    ----------------------
    PG:0 TSA:ETS BW:50 PFC:OFF
    Priorities:0 1 2 4 5 6 7

    PG:1 TSA:ETS BW:50 PFC:ON
    Priorities:3

Related Commands
dcb-map — creates a DCB map to configure PFC and ETS parameters and applies the PFC and ETS settings on Ethernet ports.
show qos dot1p-queue-mapping

View dot1p to queue mapping.

Syntax
show qos dot1p-queue-mapping

Defaults
none

Command Modes
- EXEC
- EXEC Privilege

Supported Modes
All Modes

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>

</tbody>
</table>

Example

Dell#show qos dot1p-queue-mapping
Dot1p Priority : 0 1 2 3 4 5 6 7
      Queue : 0 0 0 1 2 3 3 3
Dell#

show qos qos-policy-output

View the output QoS policy details.

Syntax
show qos qos-policy-output [qos-policy-name]

Parameters
qos-policy-name Enter the QoS policy name.

Defaults
none

Command Modes
- EXEC
- EXEC Privilege

Supported Modes
Programmable-Mux (PMUX)

Command History

<table>

Qos-policy-output qmap_out
Bandwidth-percentage 10
Qos-policy-output qmap_wg
Rate-shape 100 50
Wred yellow wy
trust

Specify dynamic classification (DSCP) or dot1p to trust.

Syntax

```plaintext
trust {diffserv [fallback] | dotlp [fallback]}
```

Parameters

- **diffserv**: Enter the keyword `diffserv` to specify trust of DSCP markings.
- **dotlp**: Enter the keyword `dotlp` to specify trust dot1p configuration.
- **fallback**: Enter the keyword `fallback` to classify packets according to their DSCP value as a secondary option in case no match occurs against the configured class maps.

Defaults

none

Command Modes

- CONFIGURATION (conf-policy-map-in)

Supported Modes

Programmable-Mux (PMUX)

Command History

Version Description

9.4(0.0) Supported on the FN I/O Aggregator.

Usage Information

When you configure `trust`, matched bytes/packets counters are not incremented in the `show qos statistics` command.

Dynamic mapping honors packets marked according to the standard definitions of DSCP. The following lists the default mapping.

<table>
<thead>
<tr>
<th>DSCP/CP hex Range (XXX)</th>

Security

This chapter describes various types of security commands in the Dell Networking OS, in the following sections:

The commands are listed in the following sections:

- AAA Accounting Commands
- Authentication and Password Commands
- RADIUS Commands
- TACACS+ Commands
- SSH Server and SCP Commands

NOTE: Starting with the Dell Networking OS version 7.2.1.0, LEAP with MSCHAP v2 supplicant is implemented.

AAA Accounting Commands

AAA Accounting enables tracking of services that users are accessing and the amount of network resources being consumed by those services. When you enable AAA Accounting, the network server reports user activity to the TACACS+ security server in the form of accounting records. Each accounting record is comprised of accounting AV pairs and is stored on the access control server. As with authentication and authorization, you must configure AAA Accounting by defining a named list of accounting methods, and then applying that list to various interfaces.

aaa accounting

Enable AAA Accounting and create a record for monitoring the accounting function.

Syntax

```
aaa accounting {system | exec | commands level} {name | default}{start-stop | wait-start | stop-only} {tacacs+}
```

To disable AAA Accounting, use the `no aaa accounting {system | exec | command level} {name | default}{start-stop | wait-start | stop-only} {tacacs+} command.

Parameters

- **system**: Enter the keyword `system` to send accounting information of any other AAA configuration.
- **exec**: Enter the keyword `exec` to send accounting information when a user has logged in to EXEC mode.
- **commands level**: Enter the keyword `commands` then a privilege level for accounting of commands executed at that privilege level.
- **name | default**: Enter one of the following:
  - For `name`, enter a user-defined name of a list of accounting methods.
  - For `default`, the default accounting methods used.
Enter the keywords `start-stop` to send a “start accounting” notice at the beginning of the requested event and a “stop accounting” notice at the end of the event.

Enter the keywords `wait-start` to ensure that the TACACS+ security server acknowledges the start notice before granting the user’s process request.

Enter the keywords `stop-only` to instruct the TACACS+ security server to send a “stop record accounting” notice at the end of the requested user process.

Enter the keyword `tacacs+` to use TACACS+ data for accounting. Dell Networking OS currently only supports TACACS+ accounting.

**Defaults**

| none |

**Command Modes**

CONFIGURATION

**Supported Modes**

All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator and M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

In the example above, TACACS+ accounting is used to track all usage of EXEC command and commands on privilege level 15.

Privilege level 15 is the default. If you want to track usage at privilege level 1 for example, use the `aaa accounting command 1` command.

**Example**

```plaintext
Dell(conf)# aaa accounting exec default start-stop tacacs+
Dell(conf)# aaa accounting command 15 default start-stop tacacs+
Dell(config)#
```

**Related Commands**

`enable password` — changes the password for the `enable` command.

### aaa accounting suppress

Prevent the generation of accounting records of users with the user name value of NULL.

**Syntax**

`aaa accounting suppress null-username`

To permit accounting records to users with user name value of NULL, use the `no aaa accounting suppress null-username` command.

**Defaults**

Accounting records are recorded for all users.

**Command Modes**

CONFIGURATION

**Supported Modes**

All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator and M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

Dell Networking OS issues accounting records for all users on the system, including users whose username string, due to protocol translation, is NULL. For example, a user who comes on line with the `aaa

270
authentication login method-list none command is applied. To prevent the accounting
records from being generated for sessions that do not have user names associated to them, use the aaa
accounting suppress command.

aaa authorization commands

Set parameters that restrict (or permit) a user’s access to EXEC and CONFIGURATION level commands.

Syntax

```
aaa authorization commands {level}{name|default} {local | tacacs+ | none}
```

Undo a configuration with the no aaa authorization commands {level}{name|default} 
{local | tacacs+ | none} command.

Parameters

- **commands level**: Enter the keyword commands then the command privilege level for command level
  authorization.
- **name**: Define a name for the list of authorization methods.
- **default**: Define the default list of authorization methods.
- **local**: Use the authorization parameters on the system to perform authorization.
- **tacacs+**: Use the TACACS+ protocol to perform authorization.
- **none**: Enter the keyword none to apply no authorization.

Defaults

```
none
```

Command Modes

**CONFIGURATION**

Supported Modes

**All Modes**

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.6.(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
</tbody>
</table>

aaa authorization config-commands

Set parameters that restrict (or permit) a user’s access to EXEC level commands.

Syntax

```
aaa authorization config-commands
```

Disable authorization checking for CONFIGURATION level commands using the no aaa 
authorization config-commands command.

Defaults

```
Enabled when you configure aaa authorization commands command.
```

Command Modes

**CONFIGURATION**

Supported Modes

**All Modes**

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.
The following table lists the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.6.(0.0)</td>
<td>Supported on the FN I/O Aggregator and M I/O Aggregator.</td>
</tr>
</tbody>
</table>

Usage Information

By default, the `aaa authorization commands` command configures the system to check both EXEC level and CONFIGURATION level commands. Use the command `no aaa authorization config-commands` to enable only EXEC-level command checking.

aaa authorization exec

Set parameters that restrict (or permit) a user’s access to EXEC-level commands.

Syntax

```
aaa authorization exec {name | default} {local || tacacs+ || if-authenticated || none}
```

To disable authorization checking for EXEC level commands, use the `no aaa authorization exec` command.

Parameters

- **name**
  - Define a name for the list of authorization methods.
- **default**
  - Define the default list of authorization methods.
- **local**
  - Use the authorization parameters on the system to perform authorization.
- **tacacs+**
  - Use the TACACS+ protocol to perform authorization.
- **none**
  - Enter the keyword `none` to apply no authorization.

Defaults

none

</thead>
<tbody>
<tr>
<td>9.6.(0.0)</td>
<td>Supported on the FN I/O Aggregator and M I/O Aggregator.</td>
</tr>
</tbody>
</table>

accounting

Apply an accounting method list to terminal lines.

Syntax

```
accounting {exec | commands level} method-list
```

Parameters

- **exec**
  - Enter the keyword `exec` to apply an EXEC level accounting method list.
- **commands level**
  - Enter the keywords `commands level` to apply an EXEC and CONFIGURATION level accounting method list.
- **method-list**
  - Enter a method list that you defined using the `aaa accounting exec` or `aaa accounting commands`.

272
show accounting

Display the active accounting sessions for each online user.

Syntax

show accounting

Defaults

none

Command Modes

EXEC

Supported Modes

All Modes

Command History

Version Description
9.4(0.0) Supported on the FN I/O Aggregator.

Usage Information

This command steps through all active sessions and then displays the accounting records for the active
account functions.

Example

Dell#show accounting
Active accounted actions on tty2, User admin Priv 1
   Task ID 1, EXEC Accounting record, 00:00:39 Elapsed, service=shell
Active accounted actions on tty3, User admin Priv 1
   Task ID 2, EXEC Accounting record, 00:00:26 Elapsed, service=shell
Dell#

Related Commands

aaa accounting — enables AAA Accounting and creates a record for monitoring the accounting function.

Authentication and Password Commands

This section contains the commands that control the management access to the system.

aaa authentication enable

Configure AAA Authentication method lists for user access to EXEC privilege mode (the “Enable” access).

Syntax

aaa authentication enable {default | method-list-name} method [... method2]

To return to the default setting, use the no aaa authentication enable {default | method-list-name} method [... method2] command.
Parameters

**default**

Enter the keyword default then the authentication methods to use as the default sequence of methods for the Enable login. The default is default enable.

**method-list-name**

Enter a text string (up to 16 characters long) to name the list of enabled authentication methods activated at login.

**method**

Enter one of the following methods:

- **enable**: use the password the `enable password` command defines in CONFIGURATION mode.
- **line**: use the password the `password` command defines in LINE mode.
- **none**: no authentication.
- **radius**: use the RADIUS servers configured with the `radius-server host` command.
- **tacacs+**: use the TACACS+ server(s) configured with the `tacacs-server host` command.

**... method2**

(OPTIONAL) In the event of a “no response” from the first method, Dell Networking Operating System (OS) applies the next configured method.

Defaults

Use the `enable password`.

Command Modes

CONFIGURATION

Supported Modes

All Modes

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.3(0.0)</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

Usage Information

By default, the Enable password is used. If you configure `aaa authentication enable default`, Dell Networking Operating System (OS) uses the methods defined for Enable access instead.

Methods configured with the `aaa authentication enable` command are evaluated in the order they are configured. If authentication fails using the primary method, Dell Networking Operating System (OS) employs the second method (or third method, if necessary) automatically. For example, if the TACACS+ server is reachable, but the server key is invalid, Dell Networking OS proceeds to the next authentication method. The TACACS+ is incorrect, but the user is still authenticated by the secondary method.

Related Commands

- `enable password` — changes the password for the `enable` command.
- `login authentication` — enables AAA login authentication on the terminal lines.
- `radius-server host` — specifies a RADIUS server host.
- `tacacs-server host` — specifies a TACACS+ server host.
**aaa authentication login**

Configure AAA Authentication method lists for user access to EXEC mode (Enable log-in).

**Syntax**

```
aaa authentication login {method-list-name | default} method [... method4]
```

To return to the default setting, use the `no aaa authentication login {method-list-name | default}` command.

**Parameters**

- **method-list-name**: Enter a text string (up to 16 characters long) as the name of a user-configured method list that can be applied to different lines.
- **default**: Enter the keyword `default` to specify that the method list specified is the default method for all terminal lines.
- **method**: Enter one of the following methods:
  - `enable`: use the password the `enable password` command defines in CONFIGURATION mode.
  - `line`: use the password the `password` command defines in LINE mode.
  - `none`: no authentication.
  - `radius`: use the RADIUS servers configured with the `radius-server host` command.
  - `tacacs+`: use the TACACS+ servers configured with the `tacacs-server host` command.
- **... method4**: (OPTIONAL) Enter up to four additional methods. In the event of a “no response” from the first method, Dell Networking Operating System (OS) applies the next configured method (up to four configured methods).

**Defaults**

Not configured (that is, no authentication is performed).

**Command Modes**

CONFIGURATION

**Supported Modes**

All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.3(0.0)</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

By default, the locally configured username password is used. If you configure `aaa authentication login default`, Dell Networking Operating System (OS) uses the methods this command defines for login instead.

Methods configured with the `aaa authentication login` command are evaluated in the order they are configured. If users encounter an error with the first method listed, Dell Networking Operating System (OS) applies the next method configured. If users fail the first method listed, no other methods are applied. The only exception is the local method. If the user’s name is not listed in the local database, the next method is applied. If the correct user name/password combination is not entered, the user is not allowed access to the switch.
NOTE: If authentication fails using the primary method, Dell Networking Operating System (OS) employs the second method (or third method, if necessary) automatically. For example, if the TACACS+ server is reachable, but the server key is invalid, Dell Networking Operating System (OS) proceeds to the next authentication method. The TACACS+ is incorrect, but the user is still authenticated by the secondary method.

After configuring the `aaa authentication login` command, configure the `login authentication` command to enable the authentication scheme on terminal lines.

Connections to the SSH server work with the following login mechanisms: local, radius, and tacacs.

**Related Commands**

- `login authentication` — enables AAA login authentication on the terminal lines.
- `radius-server host` — specifies a RADIUS server host.
- `tacacs-server host` — specifies a TACACS+ server host.

**banner exec**

Configure a message that is displayed when you enter EXEC mode.

**Syntax**

```
banner exec c line c
```

To delete a banner, use the `no banner exec` command.

**Parameters**

- `c` Enter the keywords `banner exec`, then enter a character delineator, represented here by the letter `c`. Press ENTER.
- `line` Enter a text string for your banner message ending the message with your delineator. In the following example, the delineator is a percent character (%); the banner message is "testing, testing".

**Defaults**

No banner is displayed.

**Command Modes**

- `CONFIGURATION`

**Supported Modes**

- All Modes

**Command History**

<table>
<thead>
<tr>

<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.3(0.0)</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

After entering the `banner login` command, type one or more spaces and a delineator character. Enter the banner text then the second delineator character. When the user is connected to the router, if a message of the day banner is configured, it displays first. If no message of the day banner is configured, the login banner and prompt appear. After the user has logged in, the EXEC banner (if configured) displays.

**Example**

```
Dell(conf)#banner exec ?
LINE c banner-text c, where 'c' is a delimiting character
Dell(conf)#banner exec %
Enter TEXT message. End with the character '%'.
This is the banner%
Dell(conf)#end
Dell#exit

Related Commands

banner login — sets a banner for login connections to the system.
exec-banner — enables the display of a text string when you enter EXEC mode.
line — enables and configures the console and virtual terminal lines to the system.

**banner login**

Set a banner to display when logging on to the system.

**Syntax**

```
banner login {keyboard-interactive | no keyboard-interactive} [c line c]
```

**Parameters**

- `keyboard-interactive` Enter the keyword `keyboard-interactive` to require a carriage return (CR) to get the message banner prompt.
- `c` Enter a delineator character to specify the limits of the text banner. The delineator is a percent character (%).
- `line` Enter a text string for your text banner message ending the message with your delineator. The delineator is a percent character (%). Range: maximum of 50 lines, up to 255 characters per line.

**Defaults**
No banner is configured and the CR is required when creating a banner.

Related Commands

- **exec-banner** — enables the display of a text string when you enter EXEC mode.

---

**banner motd**

Set a message of the day (MOTD) banner.

**Syntax**

```
banner motd c line c
```

**Parameters**

- `c`  
  Enter a delineator character to specify the limits of the text banner. The delineator is a percent character (%).

- `line`  
  Enter a text string for your MOTD banner the message with your delineator. The delineator is a percent character (%).

**Defaults**

No banner is configured.

</table>

**Usage Information**

After entering the banner login command, type one or more spaces and a delineator character. Enter the banner text then the second delineator character. When the user is connected to the router, if a message of the day banner is configured, it displays first. If no message of the day banner is configured, the login banner and prompt appear. After the user has logged in, the EXEC banner (if configured) displays.

**Related Commands**

- **banner exec** — enables the display of a text string when you enter EXEC mode.

- **banner login** — sets a banner to display after successful login to the system.

---

**debug radius**

View RADIUS transactions to assist with troubleshooting.

**Syntax**

```
debug radius
```

To disable debugging of RADIUS, use the `no debug radius` command.
debug tacacs+
To assist with troubleshooting, view TACACS+ transactions.

Syntax
debug tacacs+
To disable debugging of TACACS+, use the no debug tacacs+ command.

Defaults
Disabled.

Usage Information
Optionally, use the banner exec command to create a text string that is displayed when you access EXEC mode. This command toggles that display.

Related Commands
banner exec — configures a banner to display when entering EXEC mode.
line — enables and configures console and virtual terminal lines to the system.
**ip radius source-interface**

Specify an interface’s IP address as the source IP address for RADIUS connections.

**Syntax**

```
ip radius source-interface interface
```

To delete a source interface, use the `no ip radius source-interface` command.

**Parameters**

- **interface**: Enter the following keywords and slot/port or number information:
  - For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
  - For a ten-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

**Defaults**

- Not configured.

**ip tacacs source-interface**

Specify an interface’s IP address as the source IP address for TACACS+ connections.

**Syntax**

```
ip tacacs source-interface interface
```

To delete a source interface, use the `no ip tacacs source-interface` command.

**Parameters**

- **interface**: Enter the following keywords and slot/port or number information:
  - For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
  - For a ten-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.

**login authentication**

To designate the terminal lines, apply an authentication method list.

**Syntax**

```
login authentication {method-list-name | default}
```

To use the local user/password database for login authentication, use the `no login authentication` command.

**Parameters**

- `method-list-name`
  - Enter the keywords `method-list-name` to specify that method list, created in the `aaa authentication login` command, to be applied to the designated terminal line.

- `default`
  - Enter the keyword `default` to specify that the default method list, created in the `aaa authentication login` command, is applied to the terminal line.

**Defaults**

No authentication is performed on the console lines. Local authentication is performed on the virtual terminal and auxiliary lines.

</tr>
</tbody>
</table>

**Usage Information**

If you configure the `aaa authentication login default` command, the `login authentication default` command automatically is applied to all terminal lines.

**Related Commands**

- `aaa authentication login` — selects the login authentication methods.

---

**RADIUS Commands**

The following RADIUS commands are supported by Dell Networking Operating System (OS).

**radius-server deadtime**

Configure a time interval during which non-responsive RADIUS servers to authentication requests are skipped.

**Syntax**

```
radius-server deadtime seconds
```

To disable this function or return to the default value, use the `no radius-server deadtime` command.

**Parameters**

- `seconds`
  - Enter a number of seconds during which non-responsive RADIUS servers are skipped. The range is from 0 to 2147483647 seconds. The default is 0 seconds.

**Defaults**

0 seconds

**Command Modes**

- CONFIGURATION
radius-server host

Configure a RADIUS server host.

**Syntax**

```
radius-server host {hostname | ipv4-address | ipv6-address} [auth-port port-number] [retransmit retries] [timeout seconds] [key [encryption-type] key]
```

**Parameters**

- `hostname`:
  - Enter the name of the RADIUS server host.

- `ipv4-address | ipv6-address`:
  - Enter the IPv4 address (A.B.C.D) or IPv6 address (X:X:X:X::X) of the RADIUS server host.

- `auth-port port-number` (OPTIONAL):
  - Enter the keywords `auth-port` then a number as the port number. The range is from zero (0) to 65535. The default port-number is **1812**.

- `retransmit retries` (OPTIONAL):
  - Enter the keyword `retransmit` then a number as the number of attempts. This parameter overwrites the `radius-server retransmit` command. The range is from zero (0) to 100. The default is **3 attempts**.

- `timeout seconds` (OPTIONAL):
  - Enter the keyword `timeout` then the seconds the time interval the switch waits for a reply from the RADIUS server. This parameter overwrites the `radius-server timeout` command. The range is from 0 to 1000. The default is **5 seconds**.

- `key [encryption-type] key` (OPTIONAL):
  - Enter the keyword `key` then an optional encryption-type and a string up to 42 characters long as the authentication key. The RADIUS host server uses this authentication key and the RADIUS daemon operating on this switch.

For the encryption-type, enter either zero (0) or 7 as the encryption type for the key entered. The options are:

- 0 is the default and means the password is not encrypted and stored as clear text.
- 7 means that the password is encrypted and hidden.

Configure this parameter last because leading spaces are ignored.

**Defaults**

Not configured.

</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.3(0.0)</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>
Usage Information

To configure any number of RADIUS server hosts for each server host that is configured, use this command. Dell Networking Operating System (OS) searches for the RADIUS hosts in the order they are configured in the software.

The global default values for the timeout, retransmit, and key optional parameters are applied, unless those values are specified in the radius-server host or other commands. To return to the global default values, if you configure the timeout, retransmit, or key values, include those keywords when using the no radius-server host command syntax.

Related Commands

login authentication — sets the database to be checked when a user logs in.

radius-server retransmit — sets the number of times the RADIUS server attempts to send information.

radius-server timeout — sets the time interval before the RADIUS server times out.

radius-server key

Configure a key for all RADIUS communications between the switch and the RADIUS host server.

Syntax

radius-server key [encryption-type] key

To delete a password, use the no radius-server key command.

Parameters

encryption-type

(Optional) Enter either zero (0) or 7 as the encryption type for the key entered. The options are:

- 0 is the default and means the key is not encrypted and stored as clear text.
- 7 means that the key is encrypted and hidden.

key

Enter a string that is the key to be exchanged between the switch and RADIUS servers. It can be up to 42 characters long.

Defaults

Not configured.

Command Modes

CONFIGURATION

Supported Modes

All Modes

Command History

Version Description

9.4(0.0) Supported on the FN I/O Aggregator.

9.3(0.0) Supported on the M I/O Aggregator.

Usage Information

The key configured on the switch must match the key configured on the RADIUS server daemon.

If you configure the key parameter in the radius-server host command, the key configured with the radius-server key command is the default key for all RADIUS communications.

Related Commands

radius-server host — configures a RADIUS host.
### radius-server retransmit

Configure the number of times the switch attempts to connect with the configured RADIUS host server before declaring the RADIUS host server unreachable.

**Syntax**

```
radius-server retransmit retries
```

To configure zero retransmit attempts, use the `no radius-server retransmit` command.

To return to the default setting, use the `radius-server retransmit 3` command.

**Parameters**

- `retries` Enter a number of attempts that Dell Networking Operating System (OS) tries to locate a RADIUS server. The range is from zero (0) to 100. The default is **3 retries**.

**Defaults**

**3 retries**

</tbody>
</table>

**Related Commands**

- `radius-server host` — configures a RADIUS host.

### radius-server timeout

To reply to a request, configure the amount of time the RADIUS client (the switch) waits for a RADIUS host server.

**Syntax**

```
radius-server timeout seconds
```

To return to the default value, use the `no radius-server timeout` command.

**Parameters**

- `seconds` Enter the number of seconds between an unsuccessful attempt and the radius-server timeout times out. The range is from zero (0) to 1000 seconds. The default is **5 seconds**.

**Defaults**

**5 seconds**

Current privilege level is 15
Dell#
```

---

**Suppressing AAA Accounting for Null Username Sessions**

When you activate AAA accounting, the Dell Networking OS software issues accounting records for all users on the system, including users whose username string, because of protocol translation, is NULL. An example of this is a user who comes in on a line where the AAA authentication `login method-list none` command is applied. To prevent accounting records from being generated for sessions that do not have usernames associated with them, use the following command:

- Prevent accounting records from being generated for users whose username string is NULL.
  
  **CONFIGURATION mode**

  ```
  aaa accounting suppress null-username
  ```

---

**TACACS+ Commands**

Dell Networking OS supports TACACS+ as an alternate method for login authentication.

**TACACS+ Accounting**

Enable AAA Accounting and create a record for monitoring the accounting function.

```
Syntax

aaa accounting {system | exec | commands level} {name | default}{start-stop | wait-start | stop-only} {tacacs+}

To disable AAA Accounting, use the

```no aaa accounting {system | exec | command level} {name | default}{start-stop | wait-start | stop-only} {tacacs+}```

command
Defaults.

Parameters

- **system**: Enter the keyword system to send accounting information of any other AAA configuration.
- **exec**: Enter the keyword exec to send accounting information when a user has logged in to EXEC mode.
- **commands level**: Enter the keyword command then a privilege level for accounting of commands executed at that privilege level.
- **name | default**: Enter one of the following:
  - For name, enter a user-defined name of a list of accounting methods.
  - For default, the default accounting methods used.
- **start-stop**: Enter the keywords start-stop to send a “start accounting” notice at the beginning of the requested event and a “stop accounting” notice at the end of the event.
- **wait-start**: Enter the keywords wait-start to ensure that the TACACS+ security server acknowledges the start notice before granting the user’s process request.
- **stop-only**: Enter the keywords stop-only to instruct the TACACS+ security server to send a “stop record accounting” notice at the end of the requested user process.
- **tacacs+**: Enter the keyword tacacs+ to use TACACS+ data for accounting.

Dell Networking OS currently only supports TACACS+ accounting.

Defaults

None

Command Modes

- **CONFIGURATION**

Usage Information

In the example above, TACACS+ accounting is used to track all usage of EXEC command and commands on privilege level 15. Privilege level 15 is the default. If you want to track usage at privilege level 1 for example, use the `aaa accounting command 1` command.

Supported Modes

All Modes

Command History

- **Version**
  - **9.5(0.0)**: Supported on the FN I/O Aggregator and M I/O Aggregator.

Example

Dell(config)# aaa accounting exec default start-stop tacacs+
Dell(config)# aaa accounting command 15 default start-stop tacacs+
Dell(config)#

Related Commands

- **enable password** changes the password for the enable command.
- **login authentication** enables AAA login authentication on the terminal lines.
- **password** creates a password.
- **tacacs-server host** specifies a TACACS+ server host.
**tacacs-server host**

Specify a TACACS+ host.

**Syntax**

```
tacacs-server host {hostname | ipv4-address | ipv6-address} [port number] [timeout seconds] [key key]
```

**Parameters**

<table>
<thead>
<tr>

</tr>
<tr>
<td>9.3(0.0)</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

To list multiple TACACS+ servers to be used by the aaa authentication login command, configure this command multiple times.

If you are not configuring the switch as a TACACS+ server, you do not need to configure the port, timeout and key optional parameters. If you do not configure a key, the key assigned in the tacacs-server key command is used.

**Related Commands**

- `aaa authentication login` — specifies the login authentication method.
- `tacacs-server key` — configures a TACACS+ key for the TACACS server.

**tacacs-server key**

Configure a key for communication between a TACACS+ server and a client.

**Syntax**

```
tacacs-server key [encryption-type] key
```

To delete a key, use the no tacacs-server key key command.
**encryption-type**

(OPTIONAL) Enter either zero (0) or 7 as the encryption type for the key entered. The options are:

- 0 is the default and means the key is not encrypted and stored as clear text.
- 7 means that the key is encrypted and hidden.

**key**

Enter a text string, up to 42 characters long, as the clear text password. Leading spaces are ignored.

**Defaults**

Not configured.

<tr>
<td>9.3(0.0)</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

The key configured with this command must match the key configured on the TACACS+ daemon.

### timeout login response

Specify how long the software waits for the login input (for example, the user name and password) before timing out.

**Syntax**

```
timeout login response seconds
```

To return to the default values, use the `no timeout login response` command.

**Parameters**

**seconds**

Enter a number of seconds the software waits before logging you out. The range is:

- VTY: the range is from 1 to 30 seconds, the default is **30 seconds**.
- Console: the range is from 1 to 300 seconds, the default is **0 seconds** (no timeout).
- AUX: the range is from 1 to 300 seconds, the default is **0 seconds** (no timeout).

**Defaults**

See the defaults settings shown in **Parameters**.

**Command Modes**

LINE

<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.3(0.0)</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

The software measures the period of inactivity defined in this command as the period between consecutive keystrokes. For example, if your password is “password” you can enter “p” and wait 29 seconds to enter the next letter.
**SSH Server and SCP Commands**

The Dell Networking OS supports secure shell (SSH) protocol versions 1.5 and 2.0. SSH is a protocol for secure remote login over an insecure network. SSH sessions are encrypted and use authentication.

### enable password

Change the password for the enable command.

**Syntax**

```
enable password [level level] [encryption-type] password
```

To delete a password, use the `no enable password [encryption-type] password [level level]` command.

**Parameters**

- **level level**  
  (OPTIONAL) Enter the keyword `level` followed by a number as the level of access. The range is from 1 to 15.

- **encryption-type**  
  (OPTIONAL) Enter the number 7 or 0 as the encryption type.

  Enter a 7 followed by a text string as the hidden password. The text string must be a password that was already encrypted by a Dell Networking router.

  Use this parameter only with a password that you copied from the `show running-config` file of another Dell Networking router.

  `password`  
  Enter a text string, up to 32 characters long, as the clear text password.

**Defaults**

No password is configured. `level = 15`.

**Command Modes**

CONFIGURATION

<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

Use this command to define a password for a level.

Passwords must meet the following criteria:

- Start with a letter, not a number.
- Passwords can have a regular expression as the password. To create a password with a regular expression in it, use CNTL + v prior to entering regular expression. For example, to create the password `abcd\[e`, you type “abcd CNTL v [e”. When the password is created, you do not use the CNTL + v key combination and enter “abcd\[e”.

> **NOTE:** The question mark (?) and the tilde (~) are not supported characters.

**Related Commands**

- `show running-config` — views the current configuration.
enable restricted

Allows Dell Networking technical support to access restricted commands.

Syntax

```
enable restricted [encryption-type] password
```

To disallow access to restricted commands, use the no enable restricted command.

Parameters

- **encryption-type** (OPTIONAL) Enter the number 7 as the encryption type.

  Enter 7 followed a text string as the hidden password. The text string must be a password that was already encrypted by a Dell Networking router.

  Use this parameter only with a password that you copied from the show running-config file of another Dell Networking router.

- **password**

  Enter a text string, up to 32 characters long, as the clear text password.

Command Modes

Not configured.

<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

Usage Information

⚠️ **CAUTION:** Encrypting passwords with this command does not provide a high level of security. When the passwords are encrypted, you cannot return them to plain text unless you re-configure them. To remove an encrypted password, use the no password password command.

To keep unauthorized people from viewing passwords in the switch configuration file, use the service password-encryption command. This command encrypts the clear-text passwords created for user
name passwords, authentication key passwords, the privileged command password, and console and virtual
terminal line access passwords.

To view passwords, use the show running-config command.

**show ip ssh**

Display information about established SSH sessions.

**Syntax**

```
show ip ssh
```

**Command Modes**

- EXEC
- EXEC Privilege

**Supported Modes**

All Modes

</tr>
<tr>
<td>User</td>
<td>Displays the user name of all users logged in.</td>
</tr>
</tbody>
</table>
Field | Description
--- | ---
Host(s) | Displays the terminal line status.
Location | Displays the IP address of the user.

Example

```
Dell#show user
Line          User               Host(s)               Location
0  console 0  admin              idle
* 3  vty   1  admin              idle                  172.31.1.4
Dell#
```

Related Commands  
**ssh** — enables a user.

**ssh**

Open an SSH connection specifying the host name, username, port number and version of the SSH client.

Dell Networking OS supports both inbound and outbound SSH sessions using IPv4 addressing. Inbound SSH supports accessing the system through the management interface as well as through a physical Layer 3 interface.

**Syntax**

```
ssh {hostname | ipv4 address} [-l username | -p port-number][-v {1 | 2}]
```

**Parameters**

- `hostname` *(OPTIONAL)* Enter the IP address or the host name of the remote device.
- `ipv4 address` *(OPTIONAL)* Enter the IP address in dotted decimal format A.B.C.D.
- `-l username` *(OPTIONAL)* Enter the keyword `-l` followed by the user name used in this SSH session. The default is the user name of the user associated with the terminal.
- `-p port-number` *(OPTIONAL)* Enter the keyword `-p` followed by the port number. The range is from 1 to 65536. The default is 22.
- `-v {1 | 2}` *(OPTIONAL)* Enter the keyword `-v` then the SSH version 1 or 2. The default is the version from the protocol negotiation.

**Defaults**

As shown in the Parameters section.

**Command Modes**

EXEC Privilege

**Supported Modes**

All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Example**

```
Dell#ssh 123.12.1.123 -l ashwani -p 5005 -v 2
```

**username**

Establish an authentication system based on user names.

**Syntax**

```
username name [nopassword | {password | secret} [encryption-type] password] [privilege level]
```

If you do not want a specific user to enter a password, use the nopassword option.

To delete authentication for a user, use the no username name command.
Parameters

- **name**: Enter a text string for the name of the user up to 63 characters.
- **nopassword**: Enter the keyword `nopassword` to specify that the user should not enter a password.
- **password**: Enter the keyword `password` followed by the encryption-type or the password.
- **secret**: Enter the keyword `secret` followed by the encryption-type or the password.
- **encryption-type**: Enter an encryption type for the password that you enter.
  - 0 directs Dell Networking OS to store the password as clear text. It is the default encryption type when using the `password` option.
  - 7 to indicate that a password encrypted using a DES hashing algorithm follows. This encryption type is available with the `password` option only.
  - 5 to indicate that a password encrypted using an MD5 hashing algorithm follow. This encryption type is available with the `secret` option only, and is the default encryption type for this option.

- **password**: Enter a string up to 32 characters long.
- **privilege level**: Enter the keyword `privilege` then a number from zero (0) to 15.
- **secret**: Enter the keyword `secret` then the encryption type.

**Defaults**
The default encryption type for the `password` option is 0. The default encryption type for the `secret` option is 0.

**Usage Information**
To view the defined user names, use the `show running-config user` command.

**Related Commands**

- `service password-encryption` — specifies a password for users on terminal lines.
- `show running-config` — views the current configuration.
Stacking Commands

Stacking is supported on the FN410S and FN410T cards with ports 9 and 10 as the stack ports. Stacking is limited to six Aggregators in the same or different chassis in a single stack.

Stacking provides a single point of management and NIC teaming for high availability and higher throughput. To configure an Aggregator stack, you must use the CLI.

The stacking commands are always available and operational. You can use the commands to pre-configure an Aggregator, so that the configuration settings are invoked when the Aggregator is attached to other Aggregator blades.

For more information about using the Aggregator stacking feature, refer to the Stacking Aggregators chapter in the Dell Networking OS Configuration Guide for the FN I/O Aggregator.

You can use the following commands to manage a stack of Aggregator I/O modules:

- `power-cycle stack-unit`
- `reset stack-unit`
- `show system stack-ports`
- `show system stack-unit stack-group`
- `stack-unit iom-mode`

### power-cycle stack-unit

To hard reset any stack unit including master unit.

**Syntax**

```
power-cycle stack-unit unit-number
```

**Parameter**

- **Unit number**
  - The unit number ranges from 0 to 5.

**Defaults**

None

**Command Modes**

EXEC Privilege

<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

- This command is supported on the M I/O, FN410S, and FN410T Aggregators.

- This command is used to reset the stack-unit. The master unit can also be power cycled using this command.
reset stack-unit

Reset any designated stack member except the management unit (master unit).

Syntax
reset stack-unit 0–5 hard

Parameters

- **0–5**  
Enter the stack member unit identifier of the stack member to reset.
- **hard**  
Reset the stack unit if the unit is in a problem state.

Defaults
none

Command Modes
EXEC Privilege

</table>

Usage Information

This command is supported on the M I/O, FN410S, and FN410T Aggregators.

Resetting the management unit is not allowed and an error message displays if you try to do so. Resetting is a soft reboot, including flushing the forwarding tables.

You can run this command directly on the stack standby unit (Standby Master) to reset the standby. You cannot reset any other unit from the standby unit.

Example

```
Dell#show system brief
Stack MAC : 00:1e:c9:f1:00:9b
-- Stack Info --

```

Related Commands  
**reload** — reboots the system.
**show system stack-ports**

Display information about the stacking ports on all switches in the FN I/O Aggregator switch stack.

**Syntax**

`show system stack-ports [status | topology]`

**Parameters**

- `status` *(OPTIONAL)* Enter the keyword `status` to display the command output without the Connection field.
- `topology` *(OPTIONAL)* Enter the keyword `topology` to limit the table to just the Interface and Connection fields.

**Defaults**

`none`

**Command Modes**

- EXEC
- EXEC Privilege

**Supported Modes**

All Modes

**Command History**

- **Version 9.6.(0.0)**
  - Supported on the FN I/O Aggregator.

**Usage Information**

This command is supported on the M I/O, FN410S, and FN410T Aggregators.

The following describes the `show interfaces` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Topology</td>
<td>Lists the topology of stack ports connected: Ring, Daisy chain, or Standalone.</td>
</tr>
<tr>
<td>Interface</td>
<td>The unit/port ID of the connected stack port on this unit.</td>
</tr>
<tr>
<td>Link Speed</td>
<td>Link Speed of the stack port (10) in Gb/s.</td>
</tr>
<tr>
<td>Admin Status</td>
<td>The only currently listed status is Up.</td>
</tr>
<tr>
<td>Connection</td>
<td>The stack port ID to which this unit’s stack port is connected.</td>
</tr>
</tbody>
</table>

**Example**

```
Dell# show system stack-ports
Topology: Ring

Interface Connection Link Speed (Gb/s) Admin Link Trunk
0/9               10             up    down
0/10              1/10           10     up     up
1/9               10             up    down
1/10              0/10           10     up     up
```

**Example (Status)**

```
Dell# show system stack-ports status
Topology: Daisy chain

Interface Link Speed (Gb/s) Admin Link Trunk
0/9               10             up    down
0/10              10             up    up
1/9               10             up    down
1/10              10             up    up
```
Example (Topology)

```
Dell# show system stack-ports topology
Topology: Daisy chain

Interface Connection Trunk
  Group
0/9       1/10
1/10       0/10
```

Related Commands

Dell#
```

**Related Commands**

- `reload`: reboots the system.
- `show system`: displays the current status of all stack members or a specific member.

**stack-unit iom-mode**

Toggle the Aggregator operating mode between programmable multiplex, standalone, stack, and VLT modes.

**Syntax**

```
stack-unit <unit-number> iom-mode [programmable-mux | stack | standalone | vlt]
```

**Parameters**

- `unit number <0-5>`: Enter the number of the member stack unit. The range is from 0 to 5.
- `programmable-mux`: Enable programmable multiplex mode.
- `stack`: Enable stack mode.
- `standalone`: Enable stand-alone mode.
- `vlt`: Enable virtual link trunking mode.

**Defaults**

standalone

</table>

Usage Information

This command is supported on the M I/O, FN410S, and FN410T Aggregators.

Example

Dell(conf)#stack-unit 0 iom-mode stack
% You are about to stack your IOA module, please reload the IOA
and then plug in the stacking cable for the changes to take effect.
Dell(conf)#

Dell#

Related Commands

- reload — Reboots the operating system.
- show system — displays the current status of all stack members or a specific member.

---

**stack-unit priority**

Configure the ability of a switch to become the management unit of a stack.

Syntax

```
stack-unit stack-number priority 1-14
```

Parameters

- `stack-number`: Enter the stack member unit identifier.
- `1-14`: This preference parameter allows you to specify the management priority of one backup switch over another, with 0 the lowest priority and 14 the highest. The switch with the highest priority value is chosen to become the management unit if the active management unit fails or on the next reload.

Defaults

0

Usage Information

This command is supported on the M I/O, FN410S, and FN410T Aggregators.

Related Commands

- **reload** — reboots Dell Networking Operating System (OS).
- **show system** — displays the status of all stack members or a specific member.
stack-unit renumber

Change the stack member ID of any stack member or a stand-alone unit.

Syntax

stack-unit 0-5 renumber 0-5

Parameters

0-5

The first instance of this value is the stack member unit identifier, from 0 to 5, of the switch that you want add to the stack. The range is from 0 to 5. The second instance of this value is the desired new unit identifier number.

Defaults

none

Command Modes

EXEC Privilege

Supported Modes

All Modes

Command History

Version Description

9.6.(0.0) Supported on the FN I/O Aggregator.

9.3(0.0) Supported on the M I/O Aggregator.

Usage Information

This command is supported on the FN410S and the FN410T Aggregators.

You can renumber any switch, including the management unit or a stand-alone unit.

You cannot renumber a unit to a number of an active member in the stack.

When executing this command on the master, the stack reloads. When the members are renumbered, only that specific unit is reset and comes up with the new unit number.

Example

Dell#stack-unit 5 renumber 4

Renumbering will reset the unit.
Warning: Interface configuration for current unit will be lost!
Proceed to renumber [confirm yes/no]:

Related Commands

- reload — reboots Dell Networking Operating System (OS).
- reset stack-unit — resets the designated stack member.
- show system — displays the current status of all stack members or a specific member.
Storm Control

The Dell Networking operating software storm control feature allows you to limit or suppress traffic during a traffic storm.

Important Points to Remember

- Interface commands can only be applied on physical interfaces (virtual local area networks [VLANs] and link aggregation group [LAG] interfaces are not supported).
- An INTERFACE-level command only supports storm control configuration on ingress.
- An INTERFACE-level command overrides any CONFIGURATION-level ingress command for that physical interface, if both are configured.
- You can apply the CONFIGURATION-level storm control commands at ingress or egress and are supported on all physical interfaces.
- When storm control is applied on an interface, the percentage of storm control applied is calculated based on the advertised rate of the line card. It is not based on the speed setting for the line card.
- Do not apply per-VLAN quality of service (QoS) on an interface that has storm control enabled (either on an interface or globally).
- When you enable broadcast storm control on an interface or globally on ingress, and DSCP marking for a DSCP value 1 is configured for the data traffic, the traffic goes to queue 1 instead of queue 0.
- Similarly, if you enable unicast storm control on an interface or globally on ingress, and DSCP marking for a DSCP value 2 is configured for the data traffic, the traffic goes to queue 2 instead of queue 0.

**NOTE:** Bi-directional traffic (unknown unicast and broadcast) along with egress storm control causes the configured traffic rates split between the involved ports. The percentage of traffic that each port receives after the split is not predictable. These ports can be in the same/different port pipes or the same/different line cards.

**NOTE:** The policy discard drop counters are common across storm-control drops, ACL drops and QoS drops. Therefore, if your configuration includes ACL and QoS, those drops are also computed and displayed in the policy discard drops counter field along with storm-control drops. The packets dropped by the storm control feature can be monitored by viewing the value of the Policy Discard Drops field of the output of the show hardware stack-unit 0 drops command.

**io-aggregator broadcast storm-control**

Rate-limit the traffic storm to 1 Gbps.

**Syntax**

```
io-aggregator broadcast storm-control
```

To disable storm control, use the `no io-aggregator broadcast storm-control` command.

**Defaults**

Enabled

**Command Modes**

- CONFIGURATION
show io-aggregator broadcast storm-control status

Shows if storm control is enabled or disabled. If enabled, displays information on the rate limit value.

Syntax
show io-aggregator broadcast storm-control status

Command Modes
• EXEC Privilege

Supported Modes
Standalone-Mux (SMUX)

Command History
Version Description
9.4(0.0) Supported on the FN I/O Aggregator.
8.3.17.0 Supported on the M I/O Aggregator.

Example
Dell#show io-aggregator broadcast storm-control status
Storm-Control Enabled
Broadcast Traffic limited to 1000 Mbps
Dell#

show storm-control unknown-unicast

Display the storm control unknown-unicast configuration.

Syntax
show storm-control unknown-unicast [interface]

Parameters
interface (OPTIONAL) Enter the following interface to display the interface specific storm control configuration:
  • For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.

Defaults
none

Command Modes
• EXEC
• EXEC Privilege

Supported Modes
Programmable-Mux (PMUX)
storm-control broadcast (Interface)

Configure the percentage of broadcast traffic allowed on an interface.

Syntax

`storm-control broadcast [packets_per_second in]`

To disable broadcast storm control on the interface, use the `no storm-control broadcast [packets_per_second in]` command.

Parameters

- `packets_per_second` Enter the packets per second of broadcast traffic allowed into the network. The range is from 0 to 33554368.

Command Modes

- INTERFACE (conf-if-interface-slot/port)

Supported Modes

- Programmable-Mux (PMUX)

</tbody>
</table>
```
System Time

The commands in this chapter configure time values on the system, either using the Dell Networking OS, the hardware, or using the network time protocol (NTP). With NTP, the switch can act only as a client to an NTP clock host.

For more information, refer to the Network Time Protocol section of the Management chapter in the Dell PowerEdge M I/O Aggregator Configuration Guide.

The NTP commands are:

- calendar set
- ntp server
- show calendar
- show clock
- clock read-calendar
- clock set
- clock summer-time date
- clock summer-time recurring
- clock timezone
- clock update-calendar

### calendar set

Set the time and date for the switch hardware clock.

**Syntax**

```plaintext
calendar set time month day year
```

**Parameters**

- **time**
  - Enter the time in hours:minutes:seconds. For the hour variable, use the 24-hour format; for example, 17:15:00 is 5:15 pm.

- **month**
  - Enter the name of one of the 12 months in English. You can enter the name of a day to change the order of the display to time day month year.

- **day**
  - Enter the number of the day. The range is from 1 to 31. You can enter the name of a month to change the order of the display to time day month year.

- **year**
  - Enter a four-digit number as the year. The range is from 1993 to 2035.

**Command Modes**

EXEC Privilege

**Supported Modes**

<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.170</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>
Usage Information

You can change the order of the month and day parameters to enter the time and date as time day month year.

In the switch, the hardware clock is separate from the software and is called the calendar. This hardware clock runs continuously. After the hardware clock (the calendar) is set, the operating system automatically updates the software clock after system bootup. You cannot delete the hardware clock (calendar).

To manually update the software with the hardware clock, use the clock read-calendar command.

Example

Dell#calendar set 08:55:00 june 18 2006
Dell#

Related Commands

clock read-calendar — sets the software clock based on the hardware clock.

clock set — sets the software clock.

clock update-calendar — sets the hardware clock based on the software clock.

show clock — displays the clock settings.

clock read-calendar

Set the software clock on the switch from the information set in hardware clock (calendar).

Syntax

clock read-calendar

Defaults

Not configured.

Command Modes

EXEC Privilege

Supported Modes

All Modes

Command History

Version Description

9.4(0.0) Supported on the FN I/O Aggregator.

8.3.17.0 Supported on the M I/O Aggregator.

Usage Information

In the switch, the hardware clock is separate from the software and is called the calendar. This hardware clock runs continuously. After the hardware clock (the calendar) is set, the operating system automatically updates the software clock after system bootup.

You cannot delete this command (there is not a no version of this command).

clock set

Set the software clock in the switch.

Syntax

clock set time month day year
Parameters

- **time**: Enter the time in hours:minutes:seconds. For the hour variable, use the 24-hour format; example, 17:15:00 is 5:15 pm.
- **month**: Enter the name of one of the 12 months, in English. You can enter the number of a day and change the order of the display to `time day month year`.
- **day**: Enter the number of the day. The range is from 1 to 31. You can enter the name of a month to change the order of the display to `time month day year`.
- **year**: Enter a four-digit number as the year. The range is from 1993 to 2035.

<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

Usage Information
You can change the order of the month and day parameters to enter the time and date as `time day month year`. You cannot delete the software clock.

The software clock runs only when the software is up. The clock restarts, based on the hardware clock, when the switch reboots.

Dell Networking recommends using an outside time source, such as NTP, to ensure accurate time on the switch.

Example

```
Dell#clock set 12:11:00 21 may 2012
Dell#
```

clock summer-time date

Set a date (and time zone) on which to convert the switch to daylight saving time on a one-time basis.

**Syntax**

```
clock summer-time time-zone date start-month start-day start-year start-time end-month end-day end-year end-time [offset]
```

To delete a daylight saving time zone configuration, use the `no clock summer-time` command.

**Parameters**

- **time-zone**: Enter the three-letter name for the time zone. This name is displayed in the show clock output.
- **start-month**: Enter the name of one of the 12 months in English. You can enter the name of a day to change the order of the display to `time day month year`.
- **start-day**: Enter the number of the day. The range is from 1 to 31. You can enter the name of a month to change the order of the display to `time month day year`.
- **start-year**: Enter a four-digit number as the year. The range is from 1993 to 2035.
**clock summer-time recurring**

Set the software clock to convert to daylight saving time on a specific day each year.

**Syntax**

```
clock summer-time time-zone recurring [start-week start-day start-month start-time end-week end-day end-month end-time [offset]]
```

To delete a daylight saving time zone configuration, use the `no clock summer-time` command.

**Parameters**

- **time-zone**: Enter the three-letter name for the time zone. This name is displayed in the `show clock` output. You can enter up to eight characters.

- **start-week**: (OPTIONAL) Enter one of the following as the week that daylight saving begins and then enter values for start-day through end-time:
  - `week-number`: Enter a number from 1 to 4 as the number of the week in the month to start daylight saving time.
  - `first`: Enter this keyword to start daylight saving time in the first week of the month.
  - `last`: Enter this keyword to start daylight saving time in the last week of the month.

**Defaults**

- Not configured.

</tbody>
</table>

**Related Commands**

- `clock summer-time recurring` — sets a date (and time zone) on which to convert the switch to daylight saving time each year.

- `show clock` — displays the current clock settings.
**start-day** Enter the name of the day that you want daylight saving time to begin. Use English three letter abbreviations; for example, Sun, Sat, Mon, and so on. The range is from Sun to Sat.

**start-month** Enter the name of one of the 12 months in English.

**start-time** Enter the time in hours:minutes. For the hour variable, use the 24-hour format; example, 17:15 is 5:15 pm.

**end-week** Enter the one of the following as the week that daylight saving ends:

- week-number: enter a number from 1 to 4 as the number of the week to end daylight saving time.
- first: enter the keyword first to end daylight saving time in the first week of the month.
- last: enter the keyword last to end daylight saving time in the last week of the month.

**end-day** Enter the weekday name that you want daylight saving time to end. Enter the weekdays using the three letter abbreviations; for example Sun, Sat, Mon, and so on. The range is from Sun to Sat.

**end-month** Enter the name of one of the 12 months in English.

**end-time** Enter the time in hours:minutes:seconds. For the hour variable, use the 24-hour format; example, 17:15:00 is 5:15 pm.

**offset** (OPTIONAL) Enter the number of minutes to add during the summer-time period. The range is from 1 to 1440. The default is 60 minutes.

**Defaults** Not configured.

**Related Commands**

- **clock summer-time date** — sets a date (and time zone) on which to convert the switch to daylight saving time on a one-time basis.

- **show clock** — displays the current clock settings.

---

**clock timezone**

Configure a timezone for the switch.

**Syntax**

```
clock timezone timezone-name offset
```

To delete a timezone configuration, use the `no clock timezone` command.

**Parameters**

- **timezone-name** Enter the name of the timezone. You cannot use spaces.
**offset**

Enter one of the following:

- a number from 1 to 23 as the number of hours in addition to universal time coordinated (UTC) for the timezone.
- a minus sign (-) then a number from 1 to 23 as the number of hours.

**Defaults**

Not configured.

**Command Modes**

CONFIGURATION

**Supported Modes**

All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

Coordinated universal time (UTC) is the time standard based on the International Atomic Time standard, commonly known as Greenwich Mean time. When determining system time, include the differentiator between UTC and your local timezone. For example, San Jose, CA is the Pacific Timezone with a UTC offset of -8.

---

**clock update-calendar**

Set the switch hardware clock based on the software clock.

**Syntax**

```
clock update-calendar
```

**Defaults**

Not configured.

**Command Modes**

EXEC Privilege

**Supported Modes**

All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>

<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

Use this command only if you are sure that the hardware clock is inaccurate and the software clock is correct. You cannot delete this command (there is not a no form of this command).

**Related Commands**

`calendar set` — sets the hardware clock.

---

**ntp server**

Configure an NTP time-serving host.

**Syntax**

```
ntp server {ipv4-address}
```

**Parameters**

`ipv4-address` Enter an IPv address (A.B.C.D).
show calendar

Display the current date and time based on the switch hardware clock.

Syntax

show calendar

Command Modes

• EXEC
• EXEC Privilege

Supported Modes

All Modes

Command History

Version Description
9.4(0.0) Supported on the FN I/O Aggregator.
8.3.17.0 Supported on the M I/O Aggregator.

Example

Dell#show calendar
12:29:34 pacific Tue May 22 2012
Dell#

Related Commands

show clock — displays the time and date from the switch software clock.

show clock

Displays the current clock settings.

Syntax

show clock [detail]

Parameters

detail (OPTIONAL) Enter the keyword detail to view the source information of the clock.

Command Modes

• EXEC

Example

Dell#show clock
12:30:04.402 pacific Tue May 22 2012
Dell#

Example (Detail)

Dell#show clock detail
12:30:26.892 pacific Tue May 22 2012
Time source is RTC hardware
Summer time starts 00:00:00 UTC Wed Mar 14 2012
Summer time ends 00:00:00 pacific Wed Nov 7 2012
Dell#

Related Commands

- **clock summer-time recurring** — sets the software clock to convert to daylight saving time on a specific day each year.

- **ntp server** — configures an NTP time-serving host.
Uplink Failure Detection (UFD)

Uplink failure detection (UFD) provides detection of the loss of upstream connectivity and, if you use this with network interface controller (NIC) teaming, automatic recovery from a failed link.

**NOTE:** In Standalone, VLT, and Stacking modes, the UFD group number is 1 by default and cannot be changed.

**clear ufd-disable**

Re-enable one or more downstream interfaces on the switch/router that are in a UFD-Disabled Error state so that an interface can send and receive traffic.

**Syntax**

clear ufd-disable {interface interface | uplink-state-group group-id}

**Parameters**

- **interface interface**
  
  Specify one or more downstream interfaces. For `interface`, enter one of the following interface types:
  
  - 10 Gigabit Ethernet: `tengigabitethernet {slot/port | slot/port-range}`
  - Port channel: `port-channel {1-512 | port-channel-range}`

  Where `port-range` and `port-channel-range` specify a range of ports separated by a dash (-) and/or individual ports/port channels in any order; for example: `tengigabitethernet 1/1-2,5,9,11-12 port-channel 1-3,5`. A comma is required to separate each port and port-range entry.

- **uplink-state-group group-id**
  
  Re-enables all UFD-disabled downstream interfaces in the group. The valid group-id values are from 1 to 16.

**Defaults**

A downstream interface in a UFD-disabled uplink-state group is also disabled and is in a UFD-Disabled Error state.

**Command Modes**

- CONFIGURATION

**Supported Modes**

- Programmable-Mux (PMUX)

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>

</tr>
</tbody>
</table>

**Related Commands**

- **downstream** — assigns a port or port-channel to the uplink-state group as a downstream interface.
- **uplink-state-group** — creates an uplink-state group and enables the tracking of upstream links.
**debug uplink-state-group**

Enable debug messages for events related to a specified uplink-state group or all groups.

**Syntax**

```
debug uplink-state-group [group-id]
```

To turn off debugging event messages, enter the `no debug uplink-state-group [group-id]` command.

**Parameters**

- `group-id` Enables debugging on the specified uplink-state group. The valid group-id values are from 1 to 16.

**Defaults**

none

**Command Modes**

EXEC Privilege

**Supported Modes**

Programmable-Mux (PMUX)

**Command History**

</tbody>
</table>

**Related Commands**

- `clear ufd-disable` — re-enables downstream interfaces that are in a UFD-Disabled Error state.

---

**defer-timer**

Configure a timer that prevents unwanted flapping of downstream ports when the uplink port channel goes down and comes up.

**Syntax**

```
defer-timer seconds
```

**Defaults**

10 (Standalone mode)

**Parameters**

- `seconds` Specify the time (in seconds) to wait for the upstream port channel (LAG 128) to come back up before server ports are brought down. The range is from 1 to 120.

**Command Modes**

UPLINK-STATE-GROUP

**Supported Modes**

Standalone, Stacking, VLT

**Example**

Dell(conf-uplink-state-group-16)# description test
Dell(conf-uplink-state-group-16)#

**Related Commands**

- **uplink-state-group** — creates an uplink-state group and enables the tracking of upstream links.

---

**downstream**

Assign a port or port-channel to the uplink-state group as a downstream interface.

**Syntax**

downstream interface

To delete an uplink-state group, enter the no downstream interface command.

**Parameters**

interface  
Enter one of the following interface types:

- 10 Gigabit Ethernet: tengigabitethernet {slot/port | slot/port-range}
- Port channel: port-channel {1-512 | port-channel-range}

Where port-range and port-channel-range specify a range of ports separated by a dash (-) and/or individual ports/port channels in any order; for example: tengigabitethernet 1/1-2,5,9,11-12 port-channel 1-3,5. A comma is required to separate each port and port-range entry.

**Defaults**

none

**Command Modes**

UPLINK-STATE-GROUP

**Supported Modes**

Programmable-Mux (PMUX)

**Command History**

<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
</tbody>
</table>
Usage Information

You can assign physical port or port-channel interfaces to an uplink-state group.

You can assign an interface to only one uplink-state group. Configure each interface assigned to an uplink-state group as either an upstream or downstream interface, but not both.

You can assign individual member ports of a port channel to the group. An uplink-state group can contain either the member ports of a port channel or the port channel itself, but not both.

Related Commands

- `upstream` — assigns a port or port-channel to the uplink-state group as an upstream interface.
- `uplink-state-group` — creates an uplink-state group and enables the tracking of upstream links.

**downstream auto-recover**

Enable auto-recovery so that UFD-disabled downstream ports in an uplink-state group automatically come up when a disabled upstream port in the group comes back up.

**Syntax**

`downstream auto-recover`

To disable auto-recovery on downstream links, use the `no downstream auto-recover` command.

**Defaults**

The auto-recovery of UFD-disabled downstream ports is enabled.

**Command Modes**

UPLINK-STATE-GROUP

**Supported Modes**

Programmable-Mux (PMUX)

**Command History**

<table>
<thead>
<tr>
<th>Version</th>

<td>9.2(0.0)</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Related Commands**

- `downstream` — assigns a port or port-channel to the uplink-state group as a downstream interface.
- `uplink-state-group` — creates an uplink-state group and enables the tracking of upstream links.

**downstream disable links**

Configure the number of downstream links in the uplink-state group that are disabled if one upstream link in an uplink-state group goes down.

**Syntax**

`downstream disable links {number | all}`

To revert to the default setting, use the `no downstream disable links` command.

**Parameters**

- `number` Enter the number of downstream links to be brought down by UFD. The range is from 1 to 1024.
- `all` Brings down all downstream links in the group.
Defaults

No downstream links are disabled when an upstream link in an uplink-state group goes down.

Command Modes

UPLINK-STATE-GROUP

Supported Modes

Programmable-Mux (PMUX)

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>

<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

Usage Information

A user-configurable number of downstream interfaces in an uplink-state group are put into a link-down state with an UFD-Disabled error message when one upstream interface in an uplink-state group goes down.

If all upstream interfaces in an uplink-state group go down, all downstream interfaces in the same uplink-state group are put into a link-down state.

Related Commands

- downstream — assigns a port or port-channel to the uplink-state group as a downstream interface.
- uplink-state-group — creates an uplink-state group and enables the tracking of upstream links.

enable

Re-enable upstream-link tracking for an uplink-state group after it has been disabled.

Syntax

```
enable
```

To disable upstream-link tracking without deleting the uplink-state group, use the `no enable` command.

Parameters

- `group-id` Enables debugging on the specified uplink-state group. Valid `group-id` values are 1 to 16.

Defaults

Upstream-link tracking is automatically enabled in an uplink-state group.

Command Modes

</tbody>
</table>

show running-config uplink-state-group

Display the current configuration of one or more uplink-state groups.

Syntax

```
show running-config uplink-state-group [group-id]
```

Parameters

- `group-id` Displays the current configuration of all uplink-state groups or a specified group. The valid `group-id` values are from 1 to 16.
Defaults
none

<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

After you enter the command, to assign upstream and downstream interfaces to the group, enter Uplink-State-Group Configuration mode.

An uplink-state group is considered to be operationally up if at least one upstream interface in the group is in the Link-Up state.

An uplink-state group is considered to be operationally down if no upstream interfaces in the group are in the Link-Up state. No uplink-state tracking is performed when a group is disabled or in an operationally down state.
To disable upstream-link tracking without deleting the uplink-state group, use the no enable command in uplink-state-group configuration mode.

Example

Dell(conf)#uplink-state-group 16
Dell(conf)#
02:23:17: %RPM0-P:CP %IFMGR-5-ASTATE_UP: Changed uplink state group Admin state to up: Group 16

Related Commands
- `show running-config uplink-state-group` — displays the current configuration of one or more uplink-state groups.
- `show uplink-state-group` — displays the status information on a specified uplink-state group or all groups.

upstream

Assign a port or port-channel to the uplink-state group as an upstream interface.

Syntax

```
upstream interface
```

To delete an uplink-state group, use the no upstream interface command.

Parameters

- `interface` - Enter one of the following interface types:
  - 10 Gigabit Ethernet: `tengigabitethernet {slot/port | slot/port-range}`
  - Port channel: `port-channel {1-512 | port-channel-range}`

Where `port-range` and `port-channel-range` specify a range of ports separated by a dash (-) and/or individual ports/port channels in any order; for example: `tengigabitethernet 0/1-2,5,9,11-12 port-channel 1-3,5`. A comma is required to separate each port and port-range entry.

Defaults

none

Usage Information

You can assign physical port or port-channel interfaces to an uplink-state group.

You can assign an interface to only one uplink-state group. Configure each interface assigned to an uplink-state group as either an upstream or downstream interface, but not both.

You can assign individual member ports of a port channel to the group. An uplink-state group can contain either the member ports of a port channel or the port channel itself, but not both.
Example

Dell(conf-uplink-state-group-16)# upstream tengigabitethernet 0/1-5
Dell(conf-uplink-state-group-16)#

Related Commands

• downstream — assigns a port or port-channel to the uplink-state group as a downstream interface.
• uplink-state-group — creates an uplink-state group and enables the tracking of upstream links.
Virtual Link Trunking (VLT)

VLT allows physical links between two chassis to appear as a single virtual link to the network core. VLT eliminates the requirement for Spanning Tree protocols by allowing link aggregation group (LAG) terminations on two separate distribution or core switches, and by supporting a loop-free topology. VLT provides Layer 2 multipathing, creating redundancy through increased bandwidth and enabling multiple parallel paths between nodes and load-balancing traffic where alternative paths exist.

NOTE: When you launch the VLT link, the VLT peer-ship is not established if any of the following is TRUE:

- The VLT System-MAC configured on both the VLT peers do not match.
- The VLT Unit-Id configured on both the VLT peers are identical.
- The VLT System-MAC or Unit-Id is configured only on one of the VLT peers.
- The VLT domain ID is not the same on both peers.

If the VLT peer-ship is already established, changing the System-MAC or Unit-Id does not cause VLT peer-ship to go down.

Also, if the VLT peer-ship is already established and the VLT Unit-Id or System-MAC are configured on both peers, then changing the CLI configurations on the VLT Unit-Id or System-MAC is rejected if any of the following become TRUE:

- After making the CLI configuration change, the VLT Unit-Id becomes identical on both peers.
- After making the CLI configuration change, the VLT System-MAC do not match on both peers.

When the VLT peer-ship is already established, you can remove the VLT Unit-Id or System-MAC configuration from either or both peers. However, removing configuration settings can cause the VLT ports to go down if you configure the Unit-Id or System-MAC on only one of the VLT peers.

back-up destination

Configure the IPv4 or IPv6 address of the management interface on the remote VLT peer to be used as the endpoint of the VLT backup link for sending out-of-band hello messages.

Syntax

```
back-up destination {[ipv4-address] | [ipv6 ipv6-address] [interval seconds]}
```

Parameters

- `ipv4-address` Enter the IPv4 address of the backup destination.
- `ipv6` Enter the keyword `ipv6` then an IPv6 address in the X:XX:XX::XX format.
- `interval seconds` Enter the keyword `interval` to specify the time interval to send hello messages. The range is from 1 to 5 seconds. The default is 1 second.

Defaults

1 second

Command Modes

- VLT DOMAIN

Supported Modes

- Programmable-Mux (PMUX)
clear vlt statistics

Clear the statistics on VLT operations.

Syntax

```
clear vlt statistics [arp | domain | igmp-snoop | mac | multicast | ndp]
```

Parameters

- **domain**: Clear the VLT statistics for the domain.
- **multicast**: Clear the VLT statistics for multicast.
- **mac**: Clear the VLT statistics for the MAC address.
- **arp**: Clear the VLT statistics for ARP.
- **igmp-snoop**: Clear the VLT statistics for IGMP snooping.
- **ndp**: Clear the VLT statistics for NDP.

```

lacp ungroup member-independent

Prevent possible loop during the bootup of a VLT peer switch or a device that accesses the VLT domain.

Syntax

```
lacp ungroup member-independent {vlt | port-channel}
```

Parameters

- **port-channel**: Force all LACP port-channel members to become switchports.
- **vlt**: Force all VLT LACP members to become switchports.

Defaults

Not configured.

<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

Usage Information
LACP on the VLT ports (on a VLT switch or access device), which are members of the virtual link trunk, is not brought up until the VLT domain is recognized on the access device.

To ungroup the VLT and port-channel configurations, use the `no lacp ungroup member independent` command on a VLT port channel, depending on whether the port channel is VLT or non-VLT.

Example
Dell(conf)#lacp ungroup member-independent ?
port-channel LACP port-channel members become switchports
vlt All VLT LACP members become switchports

peer-link port-channel

Configure the specified port channel as the chassis interconnect trunk between VLT peers in the domain.

Syntax
peer-link port-channel port-channel-number {peer-down-vlan vlan id}

Parameters
- `port-channel-number` Enter the port-channel number that acts as the interconnect trunk.
- `peer-down-vlan vlan id` Enter the keyword `peer-down-vlan` then a VLAN ID to configure the VLAN that the VLT peer link uses when the VLT peer is down.

Defaults
Not configured.

Command Modes

Multicast peer-routing timeout                  : 150 seconds

show vlt detail
Displays detailed status information about VLT domains currently configured on the switch.

Syntax
   show vlt detail

Default
Not configured.

Command Modes
   EXEC

Supported Modes
   All Modes

Command History
   Version     Description
   --------------- -----------------------------------------
   9.4(0.0)     Supported on the FN I/O Aggregator.
   9.2(0.0)     Supported on the M I/O Aggregator.

Example
   Dell# show vlt detail
   Local LAG Id Peer LAG Id Local Status  Peer Status  Active VLANs
   ------------ ----------- ------------  -----------  --------------
   128            128            UP            UP        1000
   Dell#

show vlt mismatch
Display mismatches in VLT parameters.

Syntax
   show vlt mismatch

Command Modes
   EXEC

Supported Modes
   Programmable-Mux (PMUX)

Command History
   Version     Description
   --------------- -----------------------------------------
   9.4(0.0)     Supported on the FN I/O Aggregator.
   9.2(0.0)     Supported on the M I/O Aggregator.

Example
   Dell#show vlt mismatch
   Domain
   ----------------
   Parameters     Local     Peer

stack-unit iom-mode

Set the Aggregator operating mode to VLT mode.

Syntax

stack-unit <unit-number> iom-mode vlt

Parameters

unit number <0-5>  Enter the number of the member stack unit. The range is from 0 to 5. The default is 0.

vlt  Enable virtual link trunking mode.

Command Modes

CONFIGURATION

Supported Modes

All Modes

Command History

Version Description
9.4(0.0) Supported on the FN I/O Aggregator.
9.2(0.0) Supported on the M I/O Aggregator.

Usage Information

This command resets the operating mode to VLT. You must reboot the Aggregator after using this command.

system-mac

Reconfigure the default MAC address for the domain.

Syntax

system-mac mac-address

Parameters

mac-address  Enter the system MAC address for the VLT domain.

Defaults

Not configured.

Command Modes

VLT DOMAIN

Supported Modes

Programmable-Mux (PMUX)

Command History

Version Description
9.4(0.0) Supported on the FN I/O Aggregator.
9.2(0.0) Supported on the M I/O Aggregator.

Usage Information

When you create a VLT domain on a switch, Dell Networking OS automatically creates a VLT-system MAC address used for internal system operations.

To reconfigure the default MAC address for the domain by entering a new MAC address in the format nnn:nnn:nnn:nnn:nnn:nnn, use the system-mac command.
You must also reconfigure the same MAC address on the VLT peer switch.

**unit-id**

Explicitly configure the default unit ID of a VLT peer switch.

**Syntax**

```
unit-id [0 | 1]
```

**Parameters**

0 | 1  Configure the default unit ID of a VLT peer switch. Enter 0 for the first peer or enter 1 for the second peer.

**Defaults**

Automatically assigned based on the MAC address of each VLT peer. The peer with the lower MAC address is assigned unit 0; the peer with the higher MAC address is assigned unit 1.

**Command Modes**

VLT DOMAIN

**Supported Modes**

Programmable-Mux (PMUX)

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

When you create a VLT domain on a switch, Dell Networking OS automatically assigns a unique unit ID (0 or 1) to each peer switch. The unit IDs are used for internal system operations. Use the `unit-id` command to explicitly configure the unit ID of a VLT peer. Configure a different unit ID (0 or 1) on each peer switch.

To minimize the time required for the VLT system to determine the unit ID assigned to each peer switch when one peer reboots, use this command.

**vlt domain**

Enable VLT on a switch, configure a VLT domain, and enter VLT-domain configuration mode.

**Syntax**

```
vlt domain domain-id
```

**Parameters**

`domain-id`  Enter the Domain ID number. Configure the same domain ID on the peer switch. The range of domain IDs is from 1 to 1000.

**Command Modes**

CONFIGURATION

**Supported Modes**

Programmable-Mux (PMUX)

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>
Usage Information
The VLT domain ID must be the same between the two VLT devices. If the domain ID is not the same, a syslog message is generated and VLT does not launch.

vlt-peer-lag port-channel

Associate the port channel to the corresponding port channel in the VLT peer for the VLT connection to an attached device.

Syntax
vlt-peer-lag port-channel id-number

Parameters
id-number
Enter the respective vlt port-channel number of the peer device.

Defaults
Not configured.

Command Modes
INTERFACE PORT-CHEL

Supported Modes
Programmable-Mux (PMUX)

Command History

<table>
<thead>

</tbody>
</table>
Debugging and Diagnostics

This chapter contains the following sections:

- Offline Diagnostic Commands
- Hardware Commands

Offline Diagnostic Commands

The offline diagnostics test suite is useful for isolating faults and debugging hardware. While tests are running, the Dell Networking OS results are saved as a text file (TestReport-SU-X.txt) in the flash directory. The `show file` command is available only on Master and Standby.

**Important Points to Remember**

- Offline diagnostics can only be run when the unit is offline.
- Offline diagnostics cannot be run in Stacking mode.
- You can only run offline diagnostics on a unit to which you are connected via the console. In other words, you cannot run diagnostics on a unit to which you are connected via a stacking link.
- Diagnostic results are stored in a file (TestReport-SU-X.txt) in the flash directory. To review the results, use the `show file` command, which prints the results to the screen.
- Diagnostics only test connectivity, not the entire data path.

The offline diagnostics commands are:

- `diag stack-unit`
- `offline stack-unit`
- `show diag`

Hardware Commands

These commands display information from a hardware sub-component or ASIC.

The hardware commands are:

- `clear hardware stack-unit`
- `show diag`
- `show hardware stack-unit`
- `show hardware system-flow`
clear hardware stack-unit

Clear statistics from selected hardware components.

Syntax
```
clear hardware stack-unit 0-5 {counters | unit 0-1 counters | cpu data-plane statistics | stack-port 9-12}
```

Parameters
- **stack-unit 0–5**: Enter the keywords `stack-unit` then 0 to 5 to select a particular stack member and then enter one of the following command options to clear a specific collection of data.
- **counters**: Enter the keyword `counters` to clear the counters on the selected stack member.
- **unit 0–1 counters**: Enter the keyword `unit` along with a port-pipe number, from 0 to 1, then the keyword `counters` to clear the counters on the selected port-pipe.
- **cpu data-plane statistics**: Enter the keywords `cpu data-plane statistics` to clear the data plane statistics.
- **stack-port 9–12**: Enter the keywords `stack-port` then the port number of the stacking port to clear the statistics of the particular stacking port. The range is from 9 to 12.

**NOTE**: You can identify stack port numbers by physical inspection of the rear modules. The numbering is the same as for the 10G ports. You can also inspect the output of the `show system stack-ports` command.

Defaults
- none

Command Modes
- EXEC Privilege

Supported Modes
- All Modes

Command History
- **Version**: 9.4(0.0)
- **Description**: Supported on the FN I/O Aggregator.

Related Commands
- `show diag` — displays the data plane or management plane input and output statistics of the designated component of the designated stack member.

---

diag stack-unit

Run offline diagnostics on a stack unit.

Syntax
```
diag stack-unit number {alllevels | level0 | level1 | level2 [verbose no-reboot] | terminate | interactive test <id>}
```

Parameters
- **number**: Enter the stack-unit number. The range is from 0 to 5.
- **alllevels**: Enter the keyword `alllevels` to run the complete set of offline diagnostic tests.
- **level0**: Enter the keyword `level0` to run Level 0 diagnostics. Level 0 diagnostics check for the presence of various components and perform essential path verifications. In addition, they verify the identification registers of the components on the board.
- **level1**: Enter the keyword `level1` to run Level 1 diagnostics. Level 1 diagnostics is a smaller set of diagnostic tests with support for automatic partitioning. They
perform status/self test for all the components on the board and test their registers for appropriate values. In addition, they perform extensive tests on memory devices (for example, SDRAM, flash, NVRAM, EEPROM, and CPLD) wherever possible. There are no tests on 10G links. At this level, stack ports are shut down automatically.

**level2**

Enter the keyword `level2` to run Level 2 diagnostics. Level 2 diagnostics are a full set of diagnostic tests with no support for automatic partitioning. Level 2 diagnostics are used primarily for on-board loopback tests and more extensive component diagnostics. Various components on the board are put into Loopback mode and test packets are transmitted through those components. These diagnostics also perform snake tests using VLAN configurations. To test 10G links, physically remove the unit from the stack.

**verbose**

Enter the keyword `verbose` to run the diagnostic in Verbose mode. Verbose mode gives more information in the output than Standard mode.

**no-reboot**

Enter the keyword `no-reboot` to avoid automatic rebooting of the chassis after completion of diagnostic execution. Generally, this option is never used because if you run the diagnostic once again without rebooting the chassis, it may cause an issue with the diagnostic results.

**terminate**

Enter the keyword `terminate` to stop the execution of the level diag that is already started using the diag stack-unit command. Once this CLI is issued, syslogs indicating the termination of the diag test is displayed. The diag results for the executed tests are stored in the flash directory (TestReport-SU-X.txt).

**interactive**

Enter the keyword `interactive` to run some individual diag tests such as POWERLEDTEST, STATUSLEDTEST and so on. The help option under the interactive command displays the list of tests that can be run.

**hardware watchdog**

Set the watchdog timer to trigger a reboot and restart the system.

**Syntax**

```
hardware watchdog
```

**Defaults**

Enabled

**Command Modes**

- EXEC Privilege
- CONFIGURATION

**Supported Modes**

- All Modes

**Command History**

<table>

</tr>
</tbody>
</table>
offline stack-unit

Place a stack unit in the offline state.

Syntax

    offline stack-unit number

Parameters

    number Enter the stack-unit number. The range is from 0 to 5.

Defaults

    none

Command Modes

    EXEC Privilege

Supported Modes

    All Modes

Command History

    Version     Description
    9.4(0.0)     Supported on the FN I/O Aggregator.
    8.3.17.0     Supported on the M I/O Aggregator.

Usage Information

While executing the offline stack unit CLI, the following warning message is displayed:

Dell#offline stack-unit 0
Warning - offline of unit will bring down all the protocols and
the unit will be operationally down, except for running Diagnostics.
Please make sure that stacking/fanout not configured for Diagnostics
execution.
Also reboot/online command is necessary for normal operation after the
offline command is issued.
Proceed with Offline [confirm yes/no]:no
Dell#

Make sure that stacking is not configured for Diagnostics execution. Also, reboot/online command is
necessary for normal operation after the offline command is issued.

show diag

View diagnostics information.

Syntax

    show diag {information | stack-unit unit-id [detail | summary] | testcase}
Parameters

- **information**: Enter the keyword `information` to view current diagnostics information in the system.

- **stack-unit unit-id**: Enter the keyword `stack-unit` followed by the `unit-id` to display information on a specific stack member. The range is from 0 to 5.

- **detail** (OPTIONAL): Enter the keyword `detail` to view detailed diagnostics information.

- **summary** (OPTIONAL): Enter the keyword `summary` to view a summary of the diagnostics information. By default, the summary is displayed.

- **testcase**: Enter the keyword `testcase` to view the list of all the diag tests available.

Defaults

- Summary

```

**show hardware stack-unit**

Display the data plane or management plane input and output statistics of the designated component of the designated stack member.

**Syntax**

```
show hardware stack-unit 0 {buffer [ unit 0 ] total buffer | buffer unit 0 interface all queue [(0-14) | all] buffer-info} {cpu {data-plane statistics | management statistics | private-mgmt statistics} | drops [unit 0-0 | fpga registers | fru dump | stack-port 9-12 | unit 0-0 {counters | details | ipmc-replication | port-stats [detail] | register | table-dump WORD}}
```

**Parameters**

- **stack-unit 0 (command-option)**: Enter the keywords stack-unit then 0 to select the stack member and then enter one of the following command options to display a collection of data based on the option entered.
- **buffer**: Enter the keyword buffer. To display buffer statistics for all interface, enter the keyword interface followed by the keyword all. To display the forwarding plane statistics containing the packet buffer usage per port per stack unit, enter the
Enter the keyword **port** and the port number (42-53, and then buffer-info.

cpu (data-plane statistics | management statistics | private-mgmt statistics)

Enter the keyword **cpu** then one of the keywords to display the CPU statistics:
data-plane statistics, management statistics, or private-mgmt statistics.

drops interface

Enter the keyword **drops** to display internal drops on the selected stack member.

fpga registers

Enter the keywords **fpga registers** to display fpga details.

fru dump

Enter the keywords **fru dump** to display fru details.

stack-port 9-12

Enter the keywords **stack-port** and a stacking port number to select a stacking port for which to display statistics. Identify the stack port number as you would to identify a 10G port that was in the same place in one of the rear modules.

**NOTE:** You can identify stack port numbers by physical inspection of the rear modules. The numbering is the same as for the 10G ports. You can also inspect the output of the show system stack-ports command.

unit 0-0 (counters | details | ipmc-replication | port-stats [detail] | register | table-dump WORD)

Enter the keyword **unit** then 0 for port-pipe 0, and then enter one of the following keywords to troubleshoot errors on the selected port-pipe and to give status on why a port is not coming up to register level: counters, details, ipmc-replication, port-stats [detail], register, or table-dump WORD.

Related Commands
- `show interfaces stack-unit` — displays information on all interfaces on a specific stack member.
- `show processes cpu` — displays CPU usage information based on running processes.
- `show system` — displays the current status of all stack members or a specific member.
show hardware system-flow

Display Layer 2 ACL or QoS data for the selected stack member and stack member port-pipe.

Syntax

```
show hardware system-flow layer2 stack-unit 0–5 port-set 0–0 [counters]
```

Parameters

- `acl | qos` : For the selected stack member and stack member port-pipe, display which system flow entry the packet hits and what queue the packet takes as it dumps the raw system flow tables.

- `stack-unit 0–5` : Enter the keywords `stack-unit` then 0 to 5 to select a stack member ID.

- `port-set 0–0` : Enter the keywords `port-set` with a port-pipe number—0.

- `[counters]` : (OPTIONAL) Enter the keyword `counters` to display hit counters for the selected ACL or QoS option.

Defaults

```
none

!--------- output truncated -----------------!

show hardware buffer interface

Display buffer statistics for a specific interface.

Syntax

show hardware buffer interface interface(priority-group { id | all } | queue { id| all } ) buffer-info

Parameters

interface interface Enter any of the following keywords and slot/port or number information:

• For a 10-Gigabit Ethernet interface, enter the keyword
  TenGigabitEthernet then the slot/port information.

Dell EMC Networking N3000E-ON/N4000E-ON/N2000 Series Switches CLI Reference Guide
For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.

- `priority-group` Identifier of the priority group in the range of 0 to 7.
- `queue` Enter the keyword queue followed by `id` for specific queue or keyword `all`.
- `buffer-info` To display total buffer information for the interface, enter the keywords `buffer-info`.

**Command Modes**
- EXEC
- EXEC Privilege

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.8(0.0)</td>
<td>Introduced on the M I/O Aggregator and FN I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Example displaying total-buffer information for the interface**

```bash
Dell# show hardware buffer interface tengigabitethernet 1/1 buffer-info
-----  Buffer Stats for Interface Te 1/1 -----  
Maximum Shared Limit for the Interface: 38336
Default Packet Buffer allocate for the Interface: 120
Used Packet Buffer for the Interface: 0
```

**Example displaying priority-group range**

```bash
Dell#show hardware buffer interface tengigabitethernet 1/1 priority-group 0 buffer-info
----- Buffer stats for unit: 0 port: 1 (interface Te 1/1) -----  
PG# PRIORITIES ALLOCATED (CELLS) COUNTER (CELLS)  
MIN    SHARED    MODE HDRM MIN    SHARED  HDRM
0   -             61440  0         STATIC  174    0      0       0
```

**Example displaying queue range**

```bash
Dell#show hardware buffer interface tengigabitethernet 1/1 queue all buffer-info
----- Buffer Stats for Interface Te 1/1 Queue 0 -----  
Maximum Shared Limit: 29514
Default Packet Buffer allocate for the Queue: 8
Used Packet Buffer: 0
```

```bash
Dell#show hardware buffer interface tengigabitethernet 1/1 queue 0 buffer-info
----- Buffer Stats for Interface Te 1/1 Queue 0 -----  
Maximum Shared Limit: 29514
Default Packet Buffer allocate for the Queue: 8
Used Packet Buffer: 0
```

```bash
Dell#show hardware buffer interface tengigabitethernet 1/1 queue 1 buffer-info
----- Buffer Stats for Interface Te 1/1 Queue 1 -----  
Maximum Shared Limit: 29514
Default Packet Buffer allocate for the Queue: 8
Used Packet Buffer: 0
```

```bash
Dell#show hardware buffer interface tengigabitethernet 1/1 queue 2 buffer-info
----- Buffer Stats for Interface Te 1/1 Queue 2 -----  
Maximum Shared Limit: 29514
Default Packet Buffer allocate for the Queue: 8

Maximum Shared Limit: 29514  
Default Packet Buffer allocate for the Queue: 8  
Used Packet Buffer: 0  
----- Buffer Stats for Interface Te 1/1 Queue 11 -----  
Maximum Shared Limit: 29514  
Default Packet Buffer allocate for the Queue: 8  
Used Packet Buffer: 0  

<output truncated for brevity>

**show hardware counters interface** *interface*

Display the counter information for a specific interface.

**Syntax**
```
show hardware counters interface interface
```

**Parameters**
- **counters**
  Enter the keywords `counters` to display counter value for the specified stack-member the port-pipe.
- **interface**
  Enter any of the following keywords and slot/port or number information:
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.

**Defaults**
```
none
```

**Command Modes**
- EXEC
- EXEC Privilege

**Command History**
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

RX - PFC Frame Priority 5                          0
RX - PFC Frame Priority 6                          0
RX - PFC Frame Priority 7                          0
RX - Debug Counter 0                                0
RX - Debug Counter 1                                0
RX - Debug Counter 2                                0
```

**show hardware stack-unit buffer-stats-snapshot (Total Buffer Information)**

View the buffer statistics tracking resource information depending on the type of buffer information, such as device-level details, port-level counters, queue-based snapshots, or priority group-level snapshot in the egress and ingress direction of traffic.

**Syntax**

```
show hardware stack-unit {id} buffer-stats-snapshot unit {id} resource
interface all {priority-group { id | all } | queue { ucast{id | all} | mcast {id | all} | all}
```
Parameters

**stack-unit stack-unit-number**
Unique ID of the stack unit to select a particular stack member and then enter one of the following command options to display a collection of data based on the option entered. The range is from 0 to 11.

**buffer-stats-snapshot unit number**
Display the historical snapshot of buffer statistical values unit Enter the keyword unit along with a port-pipe number. The range is from 0 to 0.

**buffer-info**
buffer-info Displays total buffer information for a group, where x can be one of the following:
- All - Displays ingress and egress device, port, and queue snapshots
- Interface all queue (all) - egress queue-level snapshot for both unicast and multicast packets
- Interface all queue (id | all) - egress queue-level snapshot for unicast packets only
- Interface all queue mcast (id | all) - egress queue-level snapshot for multicast packets only
- Interface all prio-group (id | all) - ingress priority-group level snapshot

Command Modes

**EXEC**

**EXEC Privilege**

Command History

**Version** | **Description**
--- | ---
9.8(0.0) | Introduced on the MI/O Aggregator, and FN I/O Aggregator.

Usage Information

The following information is displayed based on the buffer-info type, such as device-level details, queue-based snapshots, or priority group-level snapshot in the egress and ingress direction of traffic:
- **Device-ingress** – Displays total buffer accounting usage for the unit.
- **Device-egress** – Display total buffer usage for the unit, total multicast buffer usage for the unit and also on per-service-pool basis. Counters will be displayed for the 2 service-pools – one for normal traffic and other for DCB traffic.

When the buffer-stats-snapshot is disabled, the following informational message is displayed when you run the show command:

```
%Info: Buffer-stats-snapshot feature is disabled.
```

Example

```
Dell#show hardware stack-unit 1 buffer-stats-snapshot unit 3 resource interface all queue mcast 3
Unit 1 unit: 3 port: 1 (interface Fo 1/144)
---------------------------------------
Q# TYPE Q# TOTAL BUFFERED CELLS
---------------------------------------
MCAST 3 0

Unit 1 unit: 3 port: 5 (interface Fo 1/148)
---------------------------------------
Q# TYPE Q# TOTAL BUFFERED CELLS
---------------------------------------
MCAST 3 0

Unit 1 unit: 3 port: 9 (interface Fo 1/152)
---------------------------------------
```
show hardware buffer-stats-snapshot

Displays buffer statistics tracking resource information for a specific interface.

Syntax

Dell#show hardware stack-unit <id> buffer-stats-snapshot unit <id> resource x

Parameters

buffer-info  buffer-info Displays total buffer information for a group, where x can be one of the following:

- All - Displays ingress and egress device, port, and queue snapshots
- Interface all queue (all) - egress queue-level snapshot for both unicast and multicast packets

</table>
show hardware drops

Displays internal drops on the specified interface or for a range of interface.

Syntax
show hardware drops interface interface

Parameters

interface

Enter any of the following keywords and slot/port or slot/port-range or number information:

- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.

drops

Enter the keyword drops to display internal drops.

Command Modes
EXEC

EXEC Privilege

Internet Control Message Protocol (ICMP) Message Types

This chapter lists and describes the possible ICMP message type resulting from a ping. The first three columns list the possible symbol or type/code. For example, you would receive a ! or 03 as an echo reply from your ping.
