Notes, cautions, and warnings

NOTE: A NOTE indicates important information that helps you make better use of your computer.

CAUTION: A CAUTION indicates either potential damage to hardware or loss of data and tells you how to avoid the problem.

WARNING: A WARNING indicates a potential for property damage, personal injury, or death.

About this Guide

This book provides information about the Dell Networking OS command line interface (CLI) on the Dell PowerEdge M I/O Aggregator.

This book also includes information about the protocols and features found in the Dell Networking OS and on the Dell Networking systems supported by the Dell Networking OS.

References

For more information about your system, refer to the following documents:

- Dell PowerEdge M I/O Aggregator Configuration Guide
- Dell PowerEdge M I/O Aggregator Getting Started Guide
- Release Notes for the Dell PowerEdge M I/O Aggregator

Objectives

This book is intended as a reference guide for the Aggregator CLI commands, with detailed syntax statements, along with usage information and sample output.

This guide contains an Appendix with a list of the request for comment (RFCs) and management information base files (MIBs) supported.

NOTE: For more information about when to use the CLI commands, refer to the Dell PowerEdge M I/O Aggregator Configuration Guide for your system.

Audience

This book is intended for system administrators who are responsible for configuring or maintaining networks. This guide assumes that you are knowledgeable in Layer 2 and Layer 3 networking technologies.

Conventions

This book uses the following conventions to describe command syntax.

<table>
<thead>
<tr>
<th>Term</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Keyword</td>
<td>Keywords are in Courier font and must be entered in the CLI as listed.</td>
</tr>
<tr>
<td>parameter</td>
<td>Parameters are in italics and require a number or word to be entered in the CLI.</td>
</tr>
<tr>
<td>(X)</td>
<td>Keywords and parameters within braces must be entered in the CLI.</td>
</tr>
</tbody>
</table>
[X] Keywords and parameters within brackets are optional.

x|y Keywords and parameters separated by a bar require you to choose one option.

x||y Keywords and parameters separated by a double bar allows you to choose any or all of the options.

Information Icons

This book uses the following information symbols:

- **NOTE:** The Note icon signals important operational information.

- **CAUTION:** The Caution icon signals information about situations that could result in equipment damage or loss of data.

- **WARNING:** The Warning icon signals information about hardware handling that could result in injury.
Before You Start

By following the instructions in the Dell PowerEdge M I/O Aggregator Getting Started Guide that is shipped with the product, you install the Aggregator in a Dell PowerEdge M1000e Enclosure.

The Aggregator installs with zero-touch configuration. After you power it on, an Aggregator boots up with default settings and auto-configures with software features enabled. This chapter describes the default settings and software features that are automatically configured at startup. Use the tasks described in the other chapters to reconfigure the Aggregator for customized network operation.

Operational Modes

The I/O Aggregator supports four operational modes. Select the operational mode that meets your deployment needs. To enable a new operational mode, reload the switch.

• Standalone mode — stack-unit unit iom-mode standalone. This is the default mode for IOA. It is fully automated zero-touch mode that allows you to configure VLAN memberships. (Supported in CMC)
• Programmable MUX mode (PMUX) — stack-unit unit iom-mode programmable-mux. Select this mode to configure PMUX mode CLI commands.
• Stacking mode — stack-unit unit iom-mode stacking. Select this mode to stack up to 6 IOA stack units as a single logical switch. The stack units can be in the same or on different chassis. This is a low-touch mode where all configuration except VLAN membership is automated. To enable VLAN, you must configure it. In this operational mode, base module links are dedicated to stacking.
• Virtual Link Trunking mode (VLT) — stack-unit unit iom-mode vlt. Select this mode to multi-home server interfaces to different IOA modules. This is a low-touch mode where all configuration except VLAN membership is automated. To enable VLAN, you must configure it. In this mode, base module links are dedicated to VLT interconnect.

For more information, refer to the Dell PowerEdge M I/O Aggregator Configuration Guide.

Default Settings

The I/O Aggregator provides zero-touch configuration with the following default configuration settings:

• Default user name (root)
• Password (calvin)
• VLAN (vlan1) and IP address for in-band management (DHCP-assigned)
• IP address for out-of-band (OOB) management (DHCP-assigned)
• Read-only SNMP community name (public)
• Broadcast storm control (enabled)
• Unregistered Multicast Packets flooding (enabled)
• IGMP snooping in all VLANs except the default VLAN (enabled)
• VLAN configuration (all ports belong to all VLANs)

You can change any of these default settings using the CLI. Refer to the appropriate chapter for details.

Other Auto-Configured Settings

After the Aggregator powers on, it auto-configures and is operational with software features enabled, including:

- VLANs: All ports are configured as members of all (4094) VLANs. All VLANs are up and can send or receive layer 2 traffic. For more information, refer to VLANs.
- Data Center Bridging Capability Exchange Protocol (DCBX)
- Fibre Channel over Ethernet (FCoE) connectivity
- FCoE Initiation Protocol (FIP) snooping
- Hybrid ports: Ports are administratively up and auto-configured to operate as hybrid ports to transmit tagged and untagged VLAN traffic.
- iSCSI optimization
- IGMP snooping
- Jumbo frames: Ports are set to a maximum MTU of 12,000 bytes by default.
- Link aggregation: All uplink ports are configured in a single LAG (LAG 128).
- Link Layer Discovery Protocol (LLDP): Enabled on all ports.
- Link tracking: Enables server-facing links to be brought up only if the uplink port-channel (LAG 128) is up.
- Stacking: Stacking is supported only on the 40GbE ports on the base module. A single stack is limited to six Aggregators in the same chassis. Up to three stacks are supported in an M1000e chassis. To configure a switch stack, you must use the CLI. For more information, refer to Stacking Commands.

DCB Support

DCB enhancements for data center networks are supported to eliminate packet loss and provision links with required bandwidth. The Aggregator provides zero-touch configuration for DCB. The Aggregator auto-configures DCBX port roles to match the DCBX configuration in the ToR switches to which it connects through its uplink ports.

The Aggregator supports DCB only in standalone mode and not in the stacking mode.

FCoE Connectivity

Many data centers use Fibre Channel (FC) in storage area networks (SANs). Fibre Channel over Ethernet (FCoE) encapsulates Fibre Channel frames over Ethernet networks.

On an Aggregator, the internal ports support FCoE connectivity and connect to the converged network adapter (CNA) in blade servers. FCoE allows Fibre Channel to use 10-Gigabit Ethernet networks while preserving the Fibre Channel protocol.

The Aggregator also provides zero-touch configuration for FCoE configuration. The Aggregator auto-configures to match the FCoE settings used in the ToR switches to which it connects through its uplink ports.

iSCSI Operation

Support for iSCSI traffic is turned on by default when the Aggregator powers up. No configuration is required.

When the Aggregator powers up, it monitors known TCP ports for iSCSI storage devices on all interfaces. When a session is detected, an entry is created and monitored as long as the session is active.
The Aggregator also detects iSCSI storage devices on all interfaces and auto-configures to optimize performance. Performance optimization operations, such as Jumbo frame size support, and disabling storm control on interfaces connected to an iSCSI EqualLogic (EQL) storage device, are applied automatically.

CLI configuration is necessary only when the configuration includes iSCSI storage devices that cannot be automatically detected and when non-default GoS handling is required.

**Link Aggregation**

In Standalone, VLT, and Stacking modes, all uplink ports are configured in a single LAG (LAG 128). There can be multiple uplink LAGs in programmable-mux mode. Server-facing ports are auto-configured as part of link aggregation groups if the corresponding server is configured for LACP-based NIC teaming. Static LAGs are supported in PUX mode.

⚠️ **NOTE:** The recommended LACP timeout is Long-Timeout mode.

**Link Tracking**

By default, all server-facing ports are tracked by the operational status of the uplink LAG. If the uplink LAG goes down, the Aggregator loses its connectivity and is no longer operational; all server-facing ports are brought down.

⚠️ **NOTE:** If installed servers do not have connectivity to a ToR switch, check the Link Status LED of uplink ports on the Aggregator. If all LEDs are ON, check the LACP configuration on the ToR switch that is connected to the Aggregator to ensure the LACP is correctly configured.

**VLANs**

By default, all Aggregator ports belong to all 4094 VLANs and are members of untagged VLAN 1. You can use the CLI or CMC interface to configure only the required VLANs on a port.

When you configure VLANs on server-facing interfaces (ports 1 to 32), you can assign VLANs to a port or a range of ports by entering the `vlan tagged` or `vlan untagged` commands in interface configuration mode; for example:

```
Dell(conf)# interface tengigabitethernet 0/2 - 4
Dell(conf-if-range-te-0/2-4)# vlan tagged 5,7,10-12
Dell(conf-if-range-te-0/2-4)# vlan untagged 3
```

⚠️ **NOTE:** You can also use the CMC interface to configure VLANs.

**Uplink LAG**

The tagged VLAN membership of the uplink LAG is automatically configured based on the tagged and untagged VLAN configuration of all server-facing ports (ports 1 to 32).

The untagged VLAN used for the uplink LAG is always the default VLAN.

**Server-Facing LAGs**

The tagged VLAN membership of a server-facing LAG is automatically configured based on the server-facing ports that are members of the LAG.

The untagged VLAN of a server-facing LAG is configured based on the untagged VLAN to which the lowest numbered server-facing port in the LAG belongs.

⚠️ **NOTE:** Dell Networking recommends that you configure the same VLAN membership on all LAG member ports.

**Stacking Mode**
When you configure an Aggregator to operate in stacking mode (See “Configuring and Bringing Up a Stack” in the Dell Networking Configuration Guide for the M I/O Aggregator), VLANs are reconfigured as follows:

If an Aggregator port belonged to all 4094 VLANs in standalone mode (default), all VLAN membership is removed and the port is assigned only to default VLAN 1. You must configure additional VLAN membership as necessary.

If you had manually configured an Aggregator port to belong to one or more VLANs (non-default) in standalone mode, the VLAN configuration is retained in stacking mode only on the master switch.

When you reconfigure an Aggregator from stacking to standalone mode:

Aggregator ports that you manually configured for VLAN membership in stacking mode retain their VLAN configuration in standalone mode.

To restore the default auto-VLAN mode of operation (in which all ports are members of all 4094 VLANs) on a port, enter the auto vlan command; for example:

Dell(conf)# interface tengigabitethernet 0/2
Dell(conf-if-te-0/2)# auto vlan

To get the default standalone mode configurations:

1. Delete the startup-config file and reboot the system.
2. Restore to factory default settings.
3. Configure auto vlan command on all the server ports.

Where to Go From Here

You can customize the Aggregator for use in your data center network as necessary. To perform additional switch configuration, do one of the following:

- For remote out-of-band management, enter the OOB management interface IP address into a Telnet or SSH client and log in to the switch using the user ID and password to access the CLI.
- For local management using the CLI, use the attached console connection.
- For remote in-band management from a network management station, enter the VLAN IP address of the management port and log in to the switch to access the CLI.

If you installed the Aggregator in a stack, you can configure additional settings for switch stacking.

In case of a Dell Networking OS upgrade, you can check to see that an Aggregator is running the latest Dell Networking OS version by entering the show version command. To download a Dell Networking OS version, go to http://support.dell.com.

Refer to the appropriate chapter for detailed information on how to configure specific software settings.
This chapter describes the command line interface (CLI) structure and command modes. The Dell operating system commands are in a text-based interface that allows you to use the launch commands, change command modes, and configure interfaces and protocols.

Accessing the Command Line

When the system boots successfully, you are positioned on the command line in EXEC mode and not prompted to log in. You can access the commands through a serial console port or a Telnet session. When you Telnet into the switch, you are prompted to enter a login name and password.

Example

```
telnet 172.31.1.53
Trying 172.31.1.53...
Connected to 172.31.1.53.
Escape character is '^]'.
Login: username
Password:
Dell>
```

After you log in to the switch, the prompt provides you with the current command-level information. For example:

```
Prompt CLI Command Mode
Dell> EXEC
Dell# EXEC Privilege
Dell(conf)# CONFIGURATION
```

NOTE: For a list of all the command mode prompts, refer to the Command Modes Modes section.

Multiple Configuration Users

When a user enters CONFIGURATION mode and another user is already in CONFIGURATION mode, the Dell operating system generates an alert warning message similar to the following:

```
Dell#conf
% Warning: The following users are currently configuring the system:
User "" on line console0
User "admin" on line vty0 (123.12.1.123)
User "admin" on line vty1 (123.12.1.123)
User "Irene" on line vty3 (123.12.1.321)
Dell#conf
```

When another user enters CONFIGURATION mode, the Dell Networking OS sends a message similar to the following:

```
% Warning: User "admin" on line vty2 "172.16.1.210" is in configuration
```
In this case, the user is “admin” on vty2.

**Navigating the CLI**

The Dell Networking OS displays a CLI prompt comprised of the host name and CLI mode.

- Host name is the initial part of the prompt and is “Dell” by default. You can change the host name with the `hostname` command.
- CLI mode is the second part of the prompt and reflects the current CLI mode. For a list of the Dell Networking OS command modes, refer to the command mode list in the Accessing the Command Line section.

The CLI prompt changes as you move up and down the levels of the command structure. Starting with CONFIGURATION mode, the command prompt adds modifiers to further identify the mode. For more information about command modes, refer to the Command Modes section.

<table>
<thead>
<tr>
<th>Prompt</th>
<th>CLI Command Mode</th>
</tr>
</thead>
<tbody>
<tr>
<td>Dell&gt;</td>
<td>EXEC</td>
</tr>

</tr>
</tbody>
</table>

**Obtaining Help**

As soon as you are in a command mode there are several ways to access help.

- **To obtain a list of keywords at any command mode:** Type a `?` at the prompt or after a keyword. There must always be a space before the `?`.
- **To obtain a list of keywords with a brief functional description:** Type `help` at the prompt.
- **To obtain a list of available options:** Type a keyword and then type a space and a `?`.
- **To obtain a list of partial keywords using a partial keyword:** Type a partial keyword and then type a `?`. 
Example

The following is an example of typing `ip ?` at the prompt:

```
Dell(conf)#ip ?
igmp     Internet Group Management Protocol
route    Establish static routes
telnet   Specify telnet options
```

When entering commands, you can take advantage of the following timesaving features:

- The commands are not case-sensitive.
- You can enter partial (truncated) command keywords. For example, you can enter `int tengig int` for the `interface tengigabitethernet` interface command.
- To complete keywords in commands, use the TAB key.
- To display the last enabled command, use the up Arrow key.
- To erase the previous character, use either the Backspace key or Delete key.
- To navigate left or right in the Dell Networking OS command line, use the left and right Arrow keys.

The shortcut key combinations at the Dell Networking OS command line are as follows:

<table>
<thead>
<tr>
<th>Key Combination</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>CNTL-A</td>
<td>Moves the cursor to the beginning of the command line.</td>
</tr>
<tr>
<td>CNTL-B</td>
<td>Moves the cursor back one character.</td>
</tr>
<tr>
<td>CNTL-D</td>
<td>Deletes the character at the cursor.</td>
</tr>
<tr>
<td>CNTL-E</td>
<td>Moves the cursor to the end of the line.</td>
</tr>
<tr>
<td>CNTL-F</td>
<td>Moves the cursor forward one character.</td>
</tr>
<tr>
<td>CNTL-I</td>
<td>Completes a keyword.</td>
</tr>
<tr>
<td>CNTL-K</td>
<td>Deletes all the characters from the cursor to the end of the command line.</td>
</tr>
<tr>
<td>CNTL-L</td>
<td>Re-enters the previous command.</td>
</tr>
<tr>
<td>CNTL-N</td>
<td>Returns to the more recent commands in the history buffer after recalling commands with Ctrl-P or the up Arrow key.</td>
</tr>
<tr>
<td>CNTL-P</td>
<td>Recalls commands, beginning with the last command.</td>
</tr>
<tr>
<td>CNTL-U</td>
<td>Deletes the line.</td>
</tr>
<tr>
<td>CNTL-W</td>
<td>Deletes the previous word.</td>
</tr>
<tr>
<td>CNTL-X</td>
<td>Deletes the line.</td>
</tr>
<tr>
<td>CNTL-Z</td>
<td>Comes back to EXEC mode from any CONFIGURATION mode.</td>
</tr>
<tr>
<td>Esc B</td>
<td>Moves the cursor back one word.</td>
</tr>
<tr>
<td>Esc F</td>
<td>Moves the cursor forward one word.</td>
</tr>
<tr>
<td>Esc D</td>
<td>Deletes all the characters from the cursor to the end of the word.</td>
</tr>
</tbody>
</table>
Using the Keyword no Command

To disable, delete or return to default values, use the `no` form of the commands.

For most commands, if you type the keyword `no` in front of the command, you disable that command or delete it from the running configuration. In this guide, the `no` form of the command is described in the Syntax portion of the command description. For example:

Syntax

```
no {boot | default | enable | ftp-server | hardware | hostname | ip | line
   | logging | monitor | service | io-aggregator broadcast storm-control |
   | snmp-server | username}
```

Defaults

None

</tbody>
</table>

Filtering show Commands

To find specific information, display certain information only or begin the command output at the first instance of a regular expression or phrase, you can filter the display output of a `show` command.

When you execute a `show` command, and then enter a pipe ( | ), one of the following parameters, and a regular expression, the resulting output either excludes or includes those parameters.

**NOTE:** The Dell Networking OS accepts a space before or after the pipe, no space before or after the pipe, or any combination. For example: `Dell#command | grep TenGig|except regular-expression | find regular-expression`.

- **except** displays only the text that does not match the pattern (or regular expression)
- **find** searches for the first occurrence of a pattern
- **grep** displays text that matches a pattern.
- **no-more** does not paginate the display output
- **save** copies the output to a file for future use

The `grep` command option has an ignore-case sub-option that makes the search case-insensitive. For example, the commands:

- `show run | grep Ethernet returns a search result with instances containing a capitalized “Ethernet,” such as interface TenGigabitEthernet 0/1.`
- `show run | grep ethernet does not return the search result above because it only searches for instances containing a non-capitalized “ethernet”.`
- `show run | grep Ethernet ignore-case returns instances containing both “Ethernet” and “ethernet”.`
Displaying All Output
To display the output all at once (not one screen at a time), use the no-more option after the pipe. This operation is similar to the terminal length screen-length command except that the no-more option affects the output of just the specified command. For example:

Dell# show running-config|no-more

Filtering the Command Output Multiple Times
You can filter a single command output multiple times. To filter a command output multiple times, place the save option as the last filter. For example:

Dell# command | grep regular-expression | except regular-expression | grep other-regular-expression | find regular-expression | no-more | save

Command Modes
To navigate and launch various CLI modes, use specific commands. Navigation to these modes is described in the following sections.

EXEC Mode
When you initially log in to the switch, by default, you are logged in to EXEC mode. This mode allows you to view settings and enter EXEC Privilege mode, which is used to configure the device.
When you are in EXEC mode, the > prompt is displayed following the host name prompt, which is “Dell” by default. You can change the host name prompt using the hostname command.

NOTE: Each mode prompt is preceded by the host name.

EXEC Privilege Mode
The enable command accesses EXEC Privilege mode. If an administrator has configured an “Enable” password, you are prompted to enter it.
EXEC Privilege mode allows you to access all the commands accessible in EXEC mode, plus other commands, such as to clear address resolution protocol (ARP) entries and IP addresses. In addition, you can access CONFIGURATION mode to configure interfaces, routes and protocols on the switch. While you are logged in to EXEC Privilege mode, the # prompt displays.

CONFIGURATION Mode
In EXEC Privilege mode, use the configure command to enter CONFIGURATION mode and configure routing protocols and access interfaces.
To enter CONFIGURATION mode:
1. Verify that you are logged in to EXEC Privilege mode.
2. Enter the configure command. The prompt changes to include (conf).

From this mode, you can enter INTERFACE mode by using the interface command.

INTERFACE Mode
To configure interfaces or IP services on those interfaces, use INTERFACE mode. An interface can be physical (for example, a TenGigabit Ethernet port) or virtual (for example, the VLAN interface).
To enter INTERFACE mode:

1. Verify that you are logged in to CONFIGURATION mode.
2. Enter the interface command and then enter an interface type and interface number that is available on the switch.

The prompt changes to include the designated interface and slot/port number. For example:

<table>
<thead>
<tr>
<th>Prompt</th>
<th>Interface Type</th>
</tr>
</thead>
<tbody>
<tr>
<td>Dell(conf-if-te-0/1)#</td>
<td>Ten-Gigabit Ethernet interface then slot/port information</td>
</tr>
<tr>
<td>Dell(conf-if-vl-1)#</td>
<td>VLAN Interface then VLAN number (range 1–4094)</td>
</tr>
<tr>
<td>Dell(conf-if-ma-0/1)#</td>
<td>Management Ethernet interface then slot/port information</td>
</tr>
<tr>
<td>Dell(conf-if-range)#</td>
<td>Designated interface range (used for bulk configuration)</td>
</tr>
</tbody>
</table>

**LINE Mode**

To configure the console or virtual terminal parameters, use LINE mode.

To enter LINE mode:

1. Verify that you are logged in to CONFIGURATION mode.
2. Enter the line command. Include the keywords console or vty and their line number available on the switch. The prompt changes to include (config-line-console) or (config-line-vty).

You can exit this mode by using the exit command.

**MONITOR SESSION Mode**

In CONFIGURATION mode, use the monitor session command to enter MONITOR SESSION mode and configure port monitoring.

To enter MONITOR SESSION mode:

1. Verify that you are logged in to CONFIGURATION mode.
2. Use the monitor session command. Include the monitor session ID. The prompt changes to include (conf-mon-sess).

You can return to CONFIGURATION mode by using the exit command.

**PROTOCOL LLDP Mode**

In CONFIGURATION mode, use the protocol lldp command to enter PROTOCOL LLDP mode and configure the LLDP protocol.

To enter PROTOCOL LLDP mode:

1. Verify that you are logged in to CONFIGURATION mode.
2. Enter the protocol lldp command. The prompt changes to include Dell(config-lldp).

You can return to CONFIGURATION mode by using the exit command.
File Management

This chapter contains commands needed to manage the configuration files and includes other file management commands. The commands in this chapter are supported by the Dell Networking OS.

boot system gateway

Specify the IP address of the default next-hop gateway for the management subnet.

Syntax

```
boot system gateway ip-address
```

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>ip-address</code></td>
<td>Enter an IP address in dotted decimal format.</td>
</tr>
</tbody>
</table>

Command Modes

Command History

- **Version** 9.4(0.0)
  - Supported on the FN I/O Aggregator.
- **Version** 8.3.17.0
  - Supported on the M I/O Aggregator.

Usage Information

Saving the address to the startup configuration file preserves the address in NVRAM in case the startup configuration file is deleted.

boot system stack-unit

Specify the location of the Dell Networking OS image to be used to boot the system.

Syntax

```
boot system stack-unit <0-5 | all> {default | primary | secondary}
```

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>0-5</code></td>
<td>Enter the stack member unit identifier of the stack member.</td>
</tr>
<tr>

</tr>
<tr>
<td><code>default</code></td>
<td>Enter the keyword default to set the default image path for the system.</td>
</tr>
<tr>
<td><code>primary</code></td>
<td>Enter the keyword primary to set the primary image path for the system.</td>
</tr>
<tr>
<td><code>secondary</code></td>
<td>Enter the keyword secondary to set the secondary image path for the system.</td>
</tr>
</tbody>
</table>
**cd**

Change to a different working directory.

**Syntax**

```
cd directory
```

**Parameters**

- `directory`  
  (OPTIONAL) Enter one of the following:
  - `flash:` (internal Flash) or any sub-directory
  - `usbflash:` (external Flash) or any sub-directory

**Command Modes** EXEC Privilege

<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**copy**

Copy one file to another location. The Dell Networking OS supports IPv4 addressing for FTP, TFTP, and SCP (in the `hostip` field).

**Syntax**

```
copy source-file-url destination-file-url
```

**Parameters**

- `file-url`  
  Enter the following location keywords and information:
  - To copy a file from the internal FLASH, enter `flash://` then the filename.
  - To copy the running configuration, enter the keywords `running-config`.
  - To copy the startup configuration, enter the keywords `startup-config`.
  - To copy a file on the external FLASH, enter `usbflash://` then the filename.

**Command Modes** EXEC Privilege
Supported Modes

All Modes

Command History

<table>
<thead>
<tr>
<th>Version</th>

</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

Usage Information

The Dell Networking OS supports a maximum of 100 files, at the root directory level, on both the internal and external Flash.

The `usbflash` commands are supported. For a list of approved USB vendors, refer to the Dell Networking OS Release Notes.

When copying a file to a remote location (for example, using Secure Copy [SCP]), enter only the keywords and Dell Networking OS prompts you for the rest of the information.

- **NOTE:** Dell Networking OS imposes a length limit on the password you create for performing the secure copy operation. Your password can be no longer than 32 characters.

For example, when using SCP, you can enter the `copy running-config scp:` command. The `running-config` is the source and the target is specified in the ensuing prompts. Dell Networking OS prompts you to enter any required information, as needed for the named destination — remote destination, destination filename, user ID and password, and so forth.

When you use the `copy running-config startup-config` command to copy the running configuration (the startup configuration file amended by any configuration changes made because the system was started) to the startup configuration file, Dell Networking OS creates a backup file on the internal flash of the startup configuration.

The Dell Networking OS supports copying the running-configuration to a TFTP server or to an FTP server:

- `copy running-config tftp:
- `copy running-config ftp:

- **NOTE:** Dell Networking OS imposes a length limit on the password you create for accessing the FTP server. Your password can be no longer than 32 characters.

In the `copy scp: flash:` example, specifying SCP in the first position indicates that the target to specify in the ensuing prompts. Entering `flash:` in the second position means that the target is the internal Flash. In this example, the source is on a secure server running SSH, so you are prompted for the UDP port of the SSH server on the remote host.

**Example (running-config scp):**

```
Dell#copy running-config scp:
Address or name of remote host [ ]: 10.10.10.1
Port number of the server [22]: 99
Destination file name [startup-config]: old_running
User name to login remote host: sburgess
Password to login remote host:

Password to login remote host? dilling
```

**Example (copy scp):**

```
Dell#copy scp: flash:
Address or name of remote host [ ]: 10.11.199.134
Port number of the server [22]: 99
Source file name [ ]: test.cfg
User name to login remote host: admin
```
Password to login remote host: 
Destination file name [test.cfg]: test1.cfg

Related Commands

flash: 2143281152 bytes total (1389801472 bytes free)
Dell#

Related Commands  
cd — Changes the working directory.

format flash

Erase all existing files and reformat the filesystem in the internal flash memory. After the filesystem is formatted, files cannot be restored.

Syntax  
format {flash: | usbflash:}

Defaults  
flash memory

Command Modes  EXEC Privilege

Supported Modes  All Modes

</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
</tbody>
</table>
Version | Description
---|---
8.3.17.0 | Supported on the M I/O Aggregator.

Usage Information

You must include the colon (:) when entering this command.

⚠️ **CAUTION:** This command deletes all files, including the startup configuration file. So, after executing this command, consider saving the running config as the startup config (use the `write memory` command or `copy run start` command).

Related Commands

- `copy` — copies the current configuration to either the startup-configuration file or the terminal.
- `show file` — displays the contents of a text file in the local filesystem.
- `show file-systems` — displays information about the file systems on the system.

---

### HTTP Copy via CLI

Copy one file to another location. Dell Networking OS supports IPv4 and IPv6 addressing for FTP, TFTP, and SCP (in the `hostip` field).

**Syntax**

```
copy http://[remote_host]/sample_file flash://sample_file
copy flash://sample_file http://[remote_host]/sample_file
```

You can copy from the server to the switch and vice-versa.

**Parameters**

- `copy http:`
  - Address or name of remote host [:]: 10.16.206.77

- `copy flash:`
  - Port number of the server [80]:
  - Source file name [:]: sample_file
  - User name to login remote host: x
  - Password to login remote host:
  - Destination file name [sample_file]:

**Defaults**

None.

**Command Modes**

- EXEC

**Supported Modes**

- All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Introduced on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.3(0.1)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Example**

```
copy http://admin:admin123@10.16.206.77/sample_file flash://sample_file
```

**Related Commands**

- `copy ftp:flash`
Copy files from FTP server to switch

logging coredump stack-unit

Enable the coredump.

**Syntax**

logging coredump stack-unit all

**Command Modes**

CONFIGURATION

**Supported Modes**

All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

The Kernel core dump can be large and may take up to five to 30 minutes to upload. The Dell Networking OS does not overwrite application core dumps so delete them as necessary to conserve space on the flash; if the flash is out of memory, the coredump is aborted. The Dell Networking OS completes the coredump process and waits until the upload is complete before rebooting the system.

pwd

Display the current working directory.

**Syntax**

pwd

**Command Modes**

EXEC Privilege

**Supported Modes**

All Modes

</tbody>
</table>

**Example**

Dell#pwd
flash:
Dell#

**Related Commands**

cd — changes the directory.

rename

Rename a file in the local file system.

**Syntax**

rename url url
Parameters  

**url**  
Enter the following keywords and a filename:  

- For a file on the internal Flash, enter `flash://` then the filename.  
- For a file on an external USB drive, enter `usbflash://` then the filename.

---

### restore factory-defaults

Restores factory defaults.

**Syntax**  

```
restore factory-defaults stack-unit id {clear-all | nvram}
```

**Parameters**  

- **factory-defaults**  
  Return the system to its factory default mode.

- **id**  
  Enter the stack member unit identifier to restore the mentioned stack-unit. The range is from 0 to 6. Enter the keyword all to restore all units in the stack.

- **clear-all**  
  Enter the keywords clear-all to reset the NVRAM and the system startup configuration.

- **nvram**  
  Enter the keyword nvram to reset the NVRAM only.

**Command Modes**  
EXEC Privilege

**Supported Modes**  
All Modes

**Command History**  

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**  
Restoring factory defaults deletes the existing startup configuration and all persistent settings (stacking, fanout, and so forth).

When restoring all units in a stack, all the units in the stack are placed into stand-alone mode.

When restoring a single unit in a stack, that unit placed in stand-alone mode. No other units in the stack are affected.

When restoring units in stand-alone mode, the units remain in stand-alone mode after the restoration. After the restore is complete, the units power cycle immediately.

⚠️ **CAUTION: There is no undo for this command.**
**Example**

Dell#restore factory-defaults stack-unit 0 clear-all
******************************************************************************
* Warning - Restoring factory defaults will delete the existing *
* startup-config and all persistent settings (stacking, fanout, etc.)*
* After restoration the unit(s) will be powercycled immediately. *
* Proceed with caution ! *
******************************************************************************
Proceed with factory settings? Confirm [yes/no]:yes
-- Restore status --

Dell#
```

**Related Commands**

- `format flash` — erases all the existing files and reformats the filesystem in the internal flash memory.
- `show file` — displays the contents of a text file in the local filesystem.
show os-version

Displays the release and software image version information of the image file specified.

Syntax

```
show os-version [file-url]
```

Parameters

- **file-url**: (OPTIONAL) Enter the following location keywords and information:
  - For a file on the internal Flash, enter `flash://` then the filename.
  - For a file on an FTP server, enter `ftp://user:password@hostip/filepath`.
  - For a file on a TFTP server, enter `tftp://hostip/filepath`.
  - For a file on the external Flash, enter `usbflash://filepath` then the filename.

Defaults

`none`

Command Modes

- **EXEC Privilege**

Supported Modes

- **All Modes**

Command History

- **Version 9.4(0.0)***
  - Supported on the FN I/O Aggregator.
- **Version 8.3.17.0***
  - Supported on the M I/O Aggregator.

Usage Information

![ NOTE: A filepath that contains a dot (.) is not supported. ]

Example

```
Dell#show os-version
RELEASE IMAGE INFORMATION :

```

Dell#

show running-config

Displays the current configuration and display changes from the default values.

Syntax

```
show running-config [entity] [configured] [status]
```

Parameters

- **entity**: (OPTIONAL) To display that entity’s current (non-default) configuration, enter one of the following keywords:
NOTE: If you did not configure anything for that entity, nothing displays and the prompt returns.

**boot** for the current boot configuration

**ftp** for the current FTP configuration

**igmp** for the current IGMP configuration

**interface** for the current interface configuration

**line** for the current line configuration

**lldp** for the current lldp configuration

**logging** for the current logging configuration

**management-route** for the current Management port forwarding configuration

**monitor** for the current Monitor configuration

**snmp** for the current SNMP configuration

**uplink-state-group** for the uplink state group configuration

**users** for the current users configuration

**configured** (OPTIONAL) Enter the keyword configured to display line card interfaces with non-default configurations only.

**status** (OPTIONAL) Enter the keyword status to display the checksum for the running configuration and the start-up configuration.

**Command Modes** EXEC Privilege

**Supported Modes** All Modes

Dell Force10 uptime is... Amount of time the system has been up
System image... Image file name
Chassis Type: System type (M I/O Aggregator)
Lines Beginning With | Description
--- | ---
Control Processor... | Control processor information and amount of memory on processor
256M bytes... | Amount of boot flash memory on the system
1 34 Port | Hardware configuration of the system, including the number and type of physical interfaces available

**upgrade boot**

Upgrade the bootflash image or bootselector image.

**Syntax**

```plaintext
upgrade boot {all | bootflash-image | bootselector-image} stack-unit {0-5 | all} {booted | flash: | ftp: | tftp: | usbflash:} (A: | B:)
```

**Parameters**

- `all`
  - Enter the keyword `all` to change both the bootflash and bootselector images.
- `bootflash-image`
  - Enter the keywords `bootflash-image` to change the bootflash image.
- `bootselector-image`
  - Enter the keywords `bootselector-image` to change the bootselector image.
- `0-5`
  - Enter the keyword `0-5` to upgrade only the mentioned stack-unit.
- `all`
  - Enter the keyword `all` to upgrade all the member stack-units.
- `booted`
  - Enter the keyword `booted` to upgrade from the current image in the M I/O Aggregator.
- `ftp:`
  - After entering the keyword `ftp:` you can either follow it with the location of the source file in this form: `//userid:password@hostip/filepath` or press Enter to launch a prompt sequence.
- `tftp:`
  - After entering the keyword `tftp:` you can either follow it with the location of the source file in this form: `//hostlocation/filepath` or press Enter to launch a prompt sequence.
- `flash:`
  - After entering the keyword `flash:` you can either follow it with the location of the source file in this form: `//filepath` or press Enter to launch a prompt sequence.
- `usbflash:`
  - After entering the keyword `usbflash:` you can either follow it with the location of the source file in this form: `//filepath` or press Enter to launch a prompt sequence.
- `A:`
  - Enter this keyword to upgrade the bootflash partition A.
- `B:`
  - Enter this keyword to upgrade the bootflash partition B.

**Defaults**

- `none`

**Command Modes**

- EXEC Privilege

**Supported Modes**

- All Modes
upgrade system

Upgrade the bootflash image or system image.

Syntax

```
upgrade system {flash: | ftp: | scp: | tftp: | usbflash: | stack-unit {0-5 | all} {A: | B:}
```

Parameters

- **0–5**: Enter the keyword 0–5 to upgrade only the mentioned stack-unit.
- **all**: Enter the keyword all to upgrade all the member units of the stack.
- **ftp**: After entering the keyword ftp you can either follow it with the location of the source file in this form: `//userid:password@hostip/filepath`, or press Enter to launch a prompt sequence.
- **scp**: After entering the keyword scp you can either follow it with the location of the source file in this form: `//userid:password@hostip/filepath`, or press Enter to launch a prompt sequence.
- **tftp**: After entering the keyword tftp you can either follow it with the location of the source file in this form: `//hostlocation/filepath`, or press Enter to launch a prompt sequence.
- **flash**: After entering the keyword flash you can either follow it with the location of the source file in this form: `//filepath`, or press Enter to launch a prompt sequence.
- **usbflash**: After entering the keyword usbflash you can either follow it with the location of the source file in this form: `//filepath`, or press Enter to launch a prompt sequence.
- **A**: Enter this keyword to upgrade the bootflash partition A.
- **B**: Enter this keyword to upgrade the bootflash partition B.

Defaults

none

Usage Information

You must reload Dell Networking OS after executing this command. Use the command `upgrade system stack-unit` to copy Dell Networking OS from the management unit to one or more stack members.

Example

Dell#upgrade system ?
flash: Copy from flash file system (flash://filepath)
ftp: Copy from remote file system, IPv4 or IPv6, (ftp://userid:password@hostip/filepath)
scp: Copy from remote file system, IPv4 or IPv6, (scp://userid:password@hostip/filepath)
stack-unit Sync image to the stack-unit
tftp: Copy from remote file system, IPv4 or IPv6, (tftp://hostip/filepath)
usbflash: Copy from usbflash file system (usbflash://filepath)
Dell#
Control and Monitoring

This chapter describes control and monitoring for the I/O Aggregator.

asset-tag

Assign and store a unique asset-tag to the stack member.

Syntax: asset-tag stack-unit unit-id Asset-tag ID

To remove the asset tag, use the no stack-unit unit-id Asset-tag ID command.

Parameters:

- **stack-unit unit-id**: Enter the keywords stack-unit then the unit-id to assign a tag to the specific member. The range is from 0 to 5.
- **Asset-tag ID**: Enter a unique asset-tag ID to assign to the stack member. This option accepts a maximum of 10 characters, including all special characters except double quotes. To include a space in the asset-tag, enter a space within double quotes.

Defaults: No asset-tag is assigned.

Command Modes: EXEC Privilege

Supported Modes: All Modes

Command History:

- **Version 9.4(0.0)**: Supported on the FN I/O Aggregator.
- **Version 9.2(0.0)**: Introduced on the M I/O Aggregator.

Related Commands:

- **show system** — Displays the current status of all stack members or a specific member.

**clear alarms**

Clear the alarms on the system.

Syntax: clear alarms

Command Modes: EXEC Privilege

Supported Modes: All Modes

Command History:

- **Version 9.4(0.0)**: Supported on the FN I/O Aggregator.
clear command history

Clear the command history log.

Syntax  
clear command history

Command Modes  
EXEC Privilege

Supported Modes  
All Modes

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

Related Commands  
show command-history — displays a buffered log of all the commands all users enter along with a time stamp.

configure

Enter CONFIGURATION mode from EXEC Privilege mode.

Syntax  
configure [terminal]

Parameters

terminal  
(Optional) Enter the keyword terminal to specify that you are configuring from the terminal.

Command Modes  
EXEC Privilege

Supported Modes  
All Modes

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

Example  
Dell#configure
Dell(config)#
debug cpu-traffic-stats

Enable the collection of computer processor unit (CPU) traffic statistics.

Syntax: debug cpu-traffic-stats

Defaults: Disabled

Command Modes: EXEC Privilege

Supported Modes: All Modes

Command History:

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

Usage Information: This command enables (and disables) the collection of CPU traffic statistics from the time this command is executed (not from system boot). However, excessive traffic a CPU receives automatically triggers (turn on) the collection of CPU traffic statics.

To view the traffic statistics, use the show cpu-traffic-stats command.

If the CPU receives excessive traffic, traffic is rate controlled.

NOTE: You must enable this command before the show cpu-traffic-stats command displays traffic statistics. Dell Networking recommends disabling debugging (no debug cpu-traffic-stats) after troubleshooting is complete.

Related Commands: show cpu-traffic-stats — displays the cpu traffic statistics.

debug ifm trace-flags

Turn on the IFM internal trace-flags.

Syntax: debug ifm trace-flags trace-flags

To disable this command, use the no debug ifm trace-flags command.

Parameters:

- trace-flags: Enter a hexadecimal number representing the trace-flag.

Defaults: None

Command Modes: EXEC Privilege

Supported Modes: All Modes

Command History:

<table>
<thead>
<tr>

</tbody>
</table>

NOTE: Use this command only when you are working directly with a technical support representative to troubleshoot a problem. Do not use this command unless a technical support representative instructs you to do so.
disable

Return to EXEC mode.

Syntax
disable [level]

Parameters
level (OPTIONAL) Enter a number for a privilege level of the Dell Networking OS. The range is from 0 to 15. The default is 1.

Defaults
1

Command Modes EXEC Privilege

Supported Modes All Modes

Command History

Version Description
9.4(0.0) Supported on the FN I/O Aggregator.
8.3.17.0 Supported on the M I/O Aggregator.

enable

Enter EXEC Privilege mode or any other privilege level configured. After entering this command, you may need to enter a password.

Syntax
enable [level]

Parameters
level (OPTIONAL) Enter a number for a privilege level of the Dell Networking OS. The range is from 0 to 15. The default is 15.

Defaults
15

Command Modes EXEC

Supported Modes All Modes

Command History

Version Description
9.4(0.0) Supported on the FN I/O Aggregator.
8.3.17.0 Supported on the M I/O Aggregator.

Usage Information

Users entering EXEC Privilege mode or any other configured privilege level can access configuration commands. To protect against unauthorized access, use the enable password command to configure a password for the enable command at a specific privilege level. If no privilege level is specified, the default is privilege level 15.

Related Commands enable password—configures a password for the enable command and to access a privilege level.
end
Return to EXEC Privilege mode from other command modes (for example, CONFIGURATION mode).

Syntax
end

Related Commands

- `ftp-server topdir` — sets the directory to be used for incoming FTP connections.
- `ftp-server username` — sets a username and password for incoming FTP connections.

**ftp-server topdir**

Specify the top-level directory to be accessed when an incoming FTP connection request is made.

**Syntax**

`ftp-server topdir directory`

**Parameters**

- `directory` Enter the directory path.

**Defaults**

The internal flash is the default directory.

**Command Modes**

CONFIGURATION

<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>
Usage Information

After you enable FTP server functions with the `ftp-server enable` command, Dell Networking recommends specifying a top-level directory path. Without a top-level directory path specified, the Dell Networking OS directs users to the flash directory when logging in to the FTP server.

Related Commands

`ftp-server enable` — enables FTP server functions on the M I/O Aggregator.

`ftp-server username` — sets a username and password for incoming FTP connections to the M I/O Aggregator.

**ftp-server username**

Create a user name and associated password for incoming FTP server sessions.

**Syntax**

```plaintext
ftp-server username username password [encryption-type] password
```

**Parameters**

- `username` : Enter a text string up to 40 characters long as the user name.
- `password` : Enter the keyword `password` then a string up to 40 characters long as the password. Without specifying an encryption type, the password is unencrypted.
- `encryption-type` (OPTIONAL) After the keyword `password`, enter one of the following numbers:
  - 0 (zero) for an unencrypted (clear text) password
  - 7 (seven) for a hidden text password

**Defaults**

Not enabled.

</tr>
</tbody>
</table>

ip telnet source-interface

Set an interface's IP address as the source address in outgoing packets for Telnet sessions.

Syntax  ip telnet source-interface interface

Parameters  

Parameters  

interface  Enter the following keyword and slot/port or number information:

- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet followed by the slot/port information.
- For VLAN interface, enter the keyword vlan then a number from 1 to 4094.

Defaults  The IP address on the system that is closest to the Telnet address is used in the outgoing packets.

Related Commands

**line**

Enable and configure console and virtual terminal lines to the system. This command accesses LINE mode, where you can set the access conditions for the designated line.

**Syntax**

```plaintext
line {console 0 | vty number [end-number]}
```

**Parameters**

- **console 0**
  - Enter the keyword `console 0` to configure the console port.
  - The console option is `<0-0>`.

- **vty number**
  - Enter the keyword `vty` followed by a number from 0 to 9 to configure a virtual terminal line for Telnet sessions.
  - The system supports 10 Telnet sessions.

- **end-number**
  - (OPTIONAL) Enter a number from 1 to 9 as the last virtual terminal line to configure.
  - You can configure multiple lines at one time.

**Defaults**

Not configured

<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

- You cannot delete a terminal connection.

**Related Commands**

- **show memory** — View current memory usage on the M I/O Aggregator.

**ping**

Test connectivity between the system and another device by sending echo requests and waiting for replies.

**Syntax**

```plaintext
ping [host | ip-address] [count {number | continuous}] [datagram-size] [timeout] [source (ip src-ipv4-address) | interface] [tos] [df-bit (y|n)] [validate-reply(y|n)] [pattern pattern] [sweep-min-size] [sweep-max-size] [sweep-interval] [cinterface (ip src-ipv4-address) | interface]
```

**Parameters**

- **host**
  - (OPTIONAL) Enter the host name of the devices to which you are testing connectivity.
ip-address  (OPTIONAL) Enter the IPv4 address of the device to which you are testing connectivity. The address must be in the dotted decimal format.

count  Enter the number of echo packets to be sent. The default is 5.
  - number: from 1 to 2147483647
  - continuous: transmit echo request continuously

datagram size  Enter the ICMP datagram size. The range is from 36 to 15360 bytes. The default is 100.

timeout  Enter the interval to wait for an echo reply before timing out. The range is from 0 to 3600 seconds. The default is 2 seconds.

source  Enter the IPv4 source ip address or the source interface. Enter the IP address in A.B.C.D format.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  - For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.

tos  Enter the type of service required. The range is from 0 to 255. The default is 0.

df-bit  Enter Y or N for the “don’t fragment” bit in IPv4 header.
  - N: Do not set the “don’t fragment” bit.
  - Y: Do set “don’t fragment” bit

  The default is No.

validate-reply  Enter Y or N for reply validation.
  - N: Do not validate reply data.
  - Y: Do validate reply data.

  The default is No.

pattern pattern  Enter the IPv4 data pattern. The range is from 0 to FFFF. The default is 0xABCD.

sweep-min-size  Enter the minimum size of datagram in sweep range. The range is from 52 to 15359 bytes.

sweep-max-size  Enter the maximum size of datagram in sweep range. The range is from 53 to 15359 bytes.

sweep-interval  Enter the incremental value for sweep size. The range is from 1 to 15308 seconds.

output interface  Enter the outgoing interface for multicast packets. Enter the IP address in A.B.C.D format.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  - For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.

Defaults  See parameters above.

Command Modes  • EXEC
  • EXEC Privilege
### ping

When you enter the `ping` command without specifying an IP address (Extended Ping), you are prompted for a target IP address, a repeat count, a datagram size (up to 1500 bytes), a timeout (in seconds), and for Extended Commands. For information on the ICMP message codes that return from a `ping` command, refer to [Internet Control Message Protocol (ICMP) Message Types](#).

**Example (IPv4)**

```
Dell#ping 172.31.1.255
Type Ctrl-C to abort.

Sending 5, 100-byte ICMP Echos to 172.31.1.255, timeout is 2 seconds:
Reply to request 1 from 172.31.1.208 0 ms
Reply to request 1 from 172.31.1.216 0 ms
Reply to request 1 from 172.31.1.205 16 ms
::
Reply to request 5 from 172.31.1.209 0 ms
Reply to request 5 from 172.31.1.66 0 ms
Reply to request 5 from 172.31.1.87 0 ms
Dell#
```

### reload

Reboot the Dell Networking OS.

**Syntax**
```
reload
```

**Command Modes** EXEC Privilege

**Supported Modes** All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information** If there is a change in the configuration, the Dell Networking OS prompts you to save the new configuration. Or you can save your running configuration with the `copy running-config` command.

**Related Commands** `reset stack-unit` — resets any designated stack member except the management unit.

### service timestamps

Add time stamps to debug and log messages. This command adds either the uptime or the current time and date.

**Syntax**
```
service timestamps [debug | log] [datetime [ localtime] [msec] [show-timezone]] uptime
```

**Parameters**
- `debug` (OPTIONAL) Enter the keyword `debug` to add timestamps to debug messages.
log

(OPTIONAL) Enter the keyword log to add timestamps to log messages with severity from 0 to 6.

datetime

(OPTIONAL) Enter the keyword datetime to have the current time and date added to the message.

localtime

(OPTIONAL) Enter the keyword localtime to include the localtime in the timestamp.

msec

(OPTIONAL) Enter the keyword msec to include milliseconds in the timestamp.

show-timezone

(OPTIONAL) Enter the keyword show-timezone to include the time zone information in the timestamp.

uptime

(OPTIONAL) Enter the keyword uptime to have the timestamp based on time elapsed since system reboot.

Defaults
Not configured.

Command Modes

[5/4 9:19:29]: CMD-(TEL0):[enable]by admin from vty0 (10.11.68.14)
show configuration lock

Display the configuration lock status.

Syntax

show configuration lock

Defaults

None

Command Modes

EXEC Privilege

Supported Modes

All Modes

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

Usage Information

The type may be auto, manual, or rollback. When set to auto, Dell Networking OS automatically denies access to CONFIGURATION mode to all other users every time the user on the listed VTY line enters CONFIGURATION mode. When set to manual, the user on the listed VTY line must explicitly set the lock each time before entering CONFIGURATION mode. Rollback indicates that Dell Networking OS is in a rollback process. The line number shown in the output can be used to send the messages to that session or release a lock on a VTY line.

Example

Dell#show configuration lock
Configure exclusively locked by the following line:
Line : vty 0
Line number : 2
User : admin
Type : AUTO
State : LOCKED
Ip address : 10.11.9.97
Dell#

show cpu-traffic-stats

Display the CPU traffic statistics.

Syntax

show cpu-traffic-stats [port number | all]

Parameters

port number (OPTIONAL) Enter the port number to display traffic statistics on that port only. The range is from 1 to 1568.
all  (OPTIONAL) Enter the keyword all to display traffic statistics on all the interfaces receiving traffic, sorted based on the traffic.

Defaults

all

Command Modes

EXEC

Supported Modes

All Modes

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

Usage Information

Traffic statistics are sorted on a per-interface basis; the interface receiving the most traffic is displayed first. All CPU and port information is displayed unless a specific port or CPU is specified. Traffic information is displayed for router ports only; not for management interfaces. The traffic statistics are collected only after the debug cpu-traffic-stats command is executed; not from the system bootup.

NOTE: After debugging is complete, use the no debug cpu-traffic-stats command to shut off traffic statistics collection.

Example

Dell#show cpu-traffic-stats
Processor : CP
--------------
Received 100% traffic on TenGigabitEthernet 8/2 Total packets:100
   LLC:0, SNAP:0, IP:100, ARP:0, other:0
   Unicast:100, Multicast:0, Broadcast:0
Dell#

Related Commands

default cpu-traffic-stats — enables CPU traffic statistics for debugging.

show debugging

   IP packet debugging is on for (Access List: test)
   TenGigabitEthernet 0/16
   ICMP packet debugging is on for
   TenGigabitEthernet 0/16
   OSPF:1
   OSPF packet debugging is on
   DHCP:
show diag

Display the diagnostics information.

Syntax

show diag {information | stack-unit number [detail | summary] | testcase}

Parameters

- `information` Enter the keyword information to view current diagnostics information in the system.
- `stack-unit unit-id` (OPTIONAL) Enter the keywords stack-unit then the unit-id to display information on a specific stack member. The range is from 0 to 5.
- `detail` (OPTIONAL) Enter the keyword detail to view detailed diagnostics information.
- `summary` (OPTIONAL) Enter the keyword summary to view a summary of the diagnostics information.
- `testcase` Enter the keyword testcase to view current diagnostics testcases available in the system.

Defaults

64 66
```

### show inventory

Displays the switch type, components (including media), and Dell Networking OS version including hardware identification numbers and configured protocols.

**Syntax**

```
show inventory [media slot][[optional-module]]
```

**Parameters**

- **media slot**  (OPTIONAL) Enter the keyword media then the stack ID of the stack member you want to display pluggable media inventory.
- **optional-module**  OPTIONAL) Enter the keyword optional-module to display optional module information.

**Defaults**

none

**Command Modes**

EXEC
show memory

Display current memory usage on the M I/O Aggregator.

Syntax

show memory [stack-unit 0-5]
Parameters

- **stack-unit 0–5** (OPTIONAL) Enter the keywords `stack-unit` then the stack unit ID of the stack member to display memory information on the designated stack member.

Command Modes

- EXEC
- EXEC Privilege

Supported Modes

All Modes

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

Usage Information

The output for `show memory` command displays the memory usage of LP part (sysdlp) of the system. The sysdlp is an aggregate task that handles all the tasks running on the CPU.

Example

```
Dell#show memory
Statistics On Unit 0 Processor
===========================================
Total(b)  Used(b)  Free(b)  Lowest(b)  Largest(b)
268435456 4010354 264425102 264375410 264425102
```

**show processes cpu**

Display CPU usage information based on processes running.

Syntax

```
show processes cpu [management-unit 1-99 [details]] | stack-unit 0–5 |
summary | ipc | memory [stack-unit 0–5]]
```

Parameters

- **management-unit 1-99 [details]** (OPTIONAL) Display processes running in the control processor. The 1–99 variable sets the number of tasks to display in order of the highest CPU usage in the past five (5) seconds. Add the keyword `details` to display all running processes (except sysdlp). Refer to Example (management-unit).

- **stack-unit 0–5** (OPTIONAL) Enter the keywords `stack-unit` then the stack member ID. The range is from 0 to 5.

As an option of the `show processes cpu` command, this option displays CPU usage for the designated stack member. Or, as an option of `memory`, this option limits the output of memory statistics to the designated stack member. Refer to Example (stack-unit).

- **summary** (OPTIONAL) Enter the keyword `summary` to view a summary view CPU utilization of processes related to line card processing. Refer to Example (summary).

- **ipc** (OPTIONAL) Enter the keyword `ipc` to display interprocess communication statistics.

- **memory** (OPTIONAL) Enter the keyword `memory` to display memory statistics. Refer to Example (memory).
**Command Modes**

- EXEC
- EXEC Privilege

**Supported Modes**

Related Commands
- **show diag** — displays the data plane or management plane input and output statistics of the designated component of the designated stack member.
- **show hardware system-flow** — displays Layer 3 ACL or QoS data for the selected stack member and stack member port-pipe.
- **show interfaces stack-unit** — displays information on all interfaces on a specific stack member.
- **show processes memory** — displays CPU usage information based on running processes.
show processes ipc flow-control

Display the single window protocol queue (SWPQ) statistics.

Syntax

```
show processes ipc flow-control [cp]
```

Parameters

- `cp` (OPTIONAL) Enter the keyword `cp` to view the control processor’s SWPQ statistics.

Defaults

none

Command Modes

- EXEC
- EXEC Privilege

Supported Modes

All Modes

</tr>
</tbody>
</table>

Usage Information

Field | Description
--- | ---
Source QID/Tx Process | Source Service Identifier
Destination QID/Rx Process | Destination Service Identifier
Cur Len | Current number of messages enqueued
High Mark | Highest number of packets in the queue at any time
# of to / Timeout | Timeout count
# of Retr / Retries | Number of retransmissions
# msg Sent/Msg Sent | Number of messages sent
# msg Ackd/Ack Rcvd | Number of messages acknowledged
Retr / Available Retra | Number of retries left
Total/ Max Retra | Number of retries allowed

Important Points:

- The SWP provides flow control-based reliable communication between the sending and receiving software tasks.
- A sending task enqueues messages into the SWP queue for a receiving task and waits for an acknowledgement.
- If no response is received within a defined period of time, the SWP timeout mechanism resubmits the message at the head of the FIFO queue.
- After retrying a defined number of times, the `SWP-2-NOMORETIMEOUT` timeout message is generated.
In the example, a retry (Retries) value of zero indicates that the SWP mechanism reached the maximum number of retransmissions without an acknowledgement.

Example

Dell#show processes ipc flow-control

Dell#

show processes memory

Display memory usage information based on processes running in the system.

Syntax

```
show processes memory {management-unit | stack unit {0-5 | all | summary}}
```

Parameters

- **management-unit**: Enter the keywords `management-unit` for CPU memory usage of the stack management unit.
- **stack unit 0-5**: Enter the keywords `stack unit` then a stack unit ID of the member unit for which to display memory usage on the forwarding processor.
- **all**: Enter the keyword `all` for detailed memory usage on all stack members.
- **summary**: Enter the keyword `summary` for a brief summary of memory availability and usage on all stack members.

Command Modes

- EXEC
- EXEC Privilege
## Usage Information

**show processes memory output**

<table>

</tr>
</tbody>
</table>

The output for the `show processes memory` command displays the memory usage statistics running on CP part (sysd) of the system. The sysd is an aggregate task that handles all the tasks running on the M I/O Aggregator’s CP.

The output of the `show memory` command and this command differ based on which the Dell Networking OS processes are counted.

- In the `show memory` output, the memory size is equal to the size of the application processes.
- In the output of this command, the memory size is equal to the size of the application processes plus the size of the system processes.

## Example

```
Dell#show processes memory stack-unit 1

show system

Displays the current status of all stack members or a specific stack member.

Syntax

show system [brief | stack-unit unit-id]

Parameters

brief (OPTIONAL) Enter the keyword brief to view an abbreviated list of system information.
stack unit unit-id (OPTIONAL) Enter the keywords stack unit then the stack member ID for information on the stack member. The range is from 0 to 5.

Command Modes

- EXEC
- EXEC Privilege

Supported Modes

All Modes

Command History

Version Description
9.4(0.0) Supported on the FN I/O Aggregator.
8.3.17.0 Supported on the M I/O Aggregator.

Example (show system brief command)

Dell#show system brief
Stack MAC : 00:01:e8:00:ab:03

No Of MACs : 3
Dell#

Related Commands

- **asset-tag**—Assign and store unique asset-tag to the stack member.
- **show version**—Displays the Dell version.
- **show processes memory**—Displays the memory usage based on the running processes.
- **show system stack-ports**—Displays information about the stack ports on all switches in the stack.
- **show diag**—Displays the data plane and management plane input and output statistics of a particular stack member.

**show tech-support**

Displays a collection of data from other show commands, necessary for Dell Networking technical support to perform troubleshooting on Aggregators.

**Syntax**

```
show tech-support [stack-unit unit-id | page]
```

**Parameters**

- **stack-unit** (OPTIONAL) Enter the keyword `stack-unit` to view CPU memory usage for the stack member designated by `unit-id`. The range is 0 to 5.
- **page** (OPTIONAL) Enter the keyword `page` to view 24 lines of text at a time. Press the SPACE BAR to view the next 24 lines. Press the ENTER key to view the next line of text.

When using the pipe command ( | ), enter one of these keywords to filter command output. Refer to CLI Basics for details on filtering commands.

- **save** Enter the keyword `save` to save the command output.

```
flash: Save to local flash drive (flash://filename (max 20 chars))
```

**Command Modes**

- EXEC Privilege
Supported Modes: All Modes

Command History:

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

Usage Information:

Without the `page` or `stack-unit` option, the command output is continuous, use Ctrl-z to interrupt the command output.

The `save` option works with other filtering commands. This allows you to save specific information of a show command. The `save` entry must always be the last option.

For example: `Dell#show tech-support |grep regular-expression |except regular-expression | find regular-expression | save flash://result`

This display output is an accumulation of the same information that is displayed when you execute one of the following `show` commands:

- `show cam`
- `show clock`
- `show environment`
- `show file`
- `show interfaces`
- `show inventory`
- `show processes cpu`
- `show processes memory`
- `show running-conf`
- `show version`

Example (save):

Dell#show tech-support ?
page          Page through output
stack-unit    Unit Number
|             Pipe through a command
<cr>
Dell#show tech-support stack-unit 1 ?
page          Page through output
|             Pipe through a command
<cr>
Dell#show tech-support stack-unit 1 | ?
ext except S how only text that does not match a pattern
find          Search for the first occurrence of a pattern
grep          Show only text that matches a pattern
no-more       Don't paginate output
save          Save output to a file
Dell#show tech-support stack-unit 1 | save ?
flash:       Save to local file system (flash://filename (max 20 chars) )
usbflash:     Save to local file system (usbflash://filename (max 20 chars) )
Dell#show tech-support stack-unit 1 | save flash://LauraSave
Start saving show command report .......

Command History
Version  Description
9.6(0.0)  Supported on the FN I/O Aggregator.
8.3.17.0  Supported on the M I/O Aggregator.

---

telnet

Connect through Telnet to a server. The Telnet client and server in Dell Networking OS support IPv4 connections. You can establish a Telnet session directly to the router or a connection can be initiated from the router.

Syntax
telnet {host | ip-address [/source-interface]}

Parameters
host  Enter the name of a server.

ip-address  Enter the IPv4 address in dotted decimal format of the server.

source-interface  (OPTIONAL) Enter the keywords /source-interface then the interface information to include the source interface. Enter the following keywords and slot/port or number information:

• For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
• For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.

Defaults
Not configured.

</tr>
</tbody>
</table>

**terminal length**

Configure the number of lines displayed on the terminal screen.

**Syntax**

```
terminal length screen-length
```

To return to the default values, use the `no terminal length` command.

**Parameters**

- `screen-length`
  
  Enter a number of lines. Entering zero will cause the terminal to display without pausing. The range is from 0 to 512.
  
  Default: 24 lines

**Defaults**

24 lines

<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

Usage Information

This command enables XML input mode where you can either cut and paste XML requests or enter the XML requests line-by-line.

**trace route**

View the packet path to a specific device.

Syntax

```
traceroute {host | ip-address}
```

Parameters

- **host**
  Enter the name of device.

- **ip-address**
  Enter the IP address of the device in dotted decimal format.
Defaults

Timeout = 5 seconds; Probe count = 3; 30 hops max; 40 byte packet size; UDP port = 33434

Command Modes

- EXEC
- EXEC Privilege

Supported Modes

All Modes

Command History

Version Description
9.4(0.0) Supported on the FN I/O Aggregator.
8.3.17.0 Supported on the M I/O Aggregator.

Usage Information

When you enter the traceroute command without specifying an IP address (Extended Traceroute), you are prompted for a target and source IP address, timeout in seconds (default is 5), a probe count (default is 3), minimum TTL (default is 1), maximum TTL (default is 30), and port number (default is 33434). To keep the default setting for those parameters, press the ENTER key.

Example (IPv4)

Dell#traceroute www.force10networks.com
Translating "www.force10networks.com"...domain server (10.11.0.1) [OK]
Type Ctrl-C to abort.

TTL Hostname Probel Probe2 Probe3
1 10.11.199.190 001.000 ms 001.000 ms 002.000 ms
2 gwegress-sjc-02.force10networks.com (10.11.30.126) 005.000 ms 001.000 ms 001.000 ms
3 fw-sjc-01.force10networks.com (10.11.127.254) 000.000 ms 000.000 ms 000.000 ms

Dell#

Related Commands

ping — Tests the connectivity to a device.

undebug all

Disable all debug operations on the system.

Syntax

undebug all

Defaults

none

Command Modes

- EXEC Privilege

Supported Modes

All Modes

Command History

Version Description
9.4(0.0) Supported on the FN I/O Aggregator.
8.3.17.0 Supported on the M I/O Aggregator.
write

Copy the current configuration to either the startup-configuration file or the terminal.

Syntax
write {memory | terminal}

Parameters
memory Enter the keyword memory to copy the current running configuration to the startup configuration file. This command is similar to the copy running-config startup-config command.

terminal Enter the keyword terminal to copy the current running configuration to the terminal. This command is similar to the show running-config command.

Command Modes
- EXEC Privilege

Supported Modes
All Modes

Command History
Version Description
9.4(0.0) Supported on the FN I/O Aggregator.
8.3.17.0 Supported on the M I/O Aggregator.

Usage Information
The write memory command saves the running-configuration to the file labeled startup-configuration. When using a LOCAL CONFIG FILE other than the startup-config not named “startup-configuration”, the running-config is not saved to that file; use the copy command to save any running-configuration changes to that local file.
u-Boot

All commands in this chapter are in u-Boot mode. These commands are supported on the Dell Networking Aggregator only.

To access this mode, hit Esc key when the following line appears on the console during a system boot: Hit Esc key to interrupt autoboot:

You enter u-Boot immediately, as indicated by the BOOT_USER# prompt.

**NOTE**: Only the most frequently used commands available in uBoot mode are described in this chapter.

In uBoot mode, you cannot use the Tab key for command completion.

### boot change

Change the operating system boot parameters.

**Syntax**

```
boot change [primary | secondary | default]
```

**Command Modes**

uBoot

Data Center Bridging (DCB)

Data center bridging (DCB) refers to a set of IEEE Ethernet enhancements that provide data centers with a single, robust, converged network to support multiple traffic types, including local area network (LAN), server, and storage traffic. DCB features are auto-configured in standalone mode.

The Dell Networking OS commands for DCB features include 802.1Qbb priority-based flow control (PFC), 802.1Qaz enhanced transmission selection (ETS), and the data center bridging exchange (DCBX) protocol.

CLI commands for individual DCB features are as follows:

**DCB command**
- `dcb enable auto-detect on-next-reload`
- `show qos dcb-map`

**PFC Commands**
- `clear pfc counters`
- `show interface pfc`
- `show interface pfc statistics`

**ETS Commands**
- `clear ets counters`
- `show interface ets`

**DCBX Commands**
- `dcbx version`
- `clear dcbx counters`
- `show dcb`
- `show interface dcbx detail`

Fibre Channel over Ethernet for FC Flex IO Modules

FCoE provides a converged Ethernet network that allows the combination of storage-area network (SAN) and LAN traffic on a Layer 2 link by encapsulating Fibre Channel data into Ethernet frames.

The Aggregator, installed with the FC Flex IO module, functions as a top-of-rack edge switch that supports converged enhanced Ethernet (CEE) traffic — Fibre channel over Ethernet (FCoE) for storage, Interprocess Communication (IPC) for servers, and Ethernet local area network (LAN) (IP cloud) for data — as well as FC links to one or more storage area network (SAN) fabrics.

FCoE works with the Ethernet enhancements provided in Data Center Bridging (DCB) to support lossless (no-drop) SAN and LAN traffic. In addition, DCB provides flexible bandwidth sharing for different traffic types, such as LAN and SAN, according to 802.1p priority classes of service. DCBx should be enabled on the system before the FIP snooping feature is enabled.
All of the commands that are supported for FCoE on the I/O Aggregator apply to the FC Flex IO modules. Similarly, all of the configuration procedures and the settings that are applicable for FCoE on the I/O Aggregator are valid for the FC Flex IO modules.

**advertise dcbx-appln-tlv**

On a DCBX port with a manual role, configure the application priority TLVs advertised on the interface to DCBX peers.

**Syntax**

```plaintext
advertise dcbx-appln-tlv {fcoe | iscsi}
```

To remove the application priority TLVs, use the `no advertise dcbx-appln-tlv {fcoe | iscsi}` command.

**Parameters**

- `(fcoe | iscsi)`

  Enter the application priority TLVs, where:
  - `fcoe`: enables the advertisement of FCoE in application priority TLVs.
  - `iscsi`: enables the advertisement of iSCSI in application priority TLVs.

**Defaults**

- Application priority TLVs are enabled to advertise FCoE and iSCSI.

**Command Modes**

- PROTOCOL LLDP

**Supported Modes**

- Programmable-Mux (PMUX)

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

To disable TLV transmission, use the `no` form of the command; for example, `no advertise dcbx-appln-tlv iscsi`.

**advertise dcbx-tlv**

On a DCBX port with a manual role, configure the PFC and ETS TLVs advertised to DCBX peers.

**Syntax**

```plaintext
advertise dcbx-tlv {ets-conf | ets-reco | pfc} [ets-conf | ets-reco | pfc]
```

To remove the advertised ETS TLVs, use the `no advertise dcbx-tlv` command.

**Parameters**

- `(ets-conf | ets-reco | pfc)`

  Enter the PFC and ETS TLVs advertised, where:
  - `ets-conf`: enables the advertisement of ETS configuration TLVs.
  - `ets-reco`: enables the advertisement of ETS recommend TLVs.
  - `pfc`: enables the advertisement of PFC TLVs.

**Defaults**

- All PFC and ETS TLVs are advertised.
You can configure the transmission of more than one TLV type at a time; for example: advertise dcbx-tlv ets-conf ets-reco.

You can enable ETS recommend TLVs (ets-reco) only if you enable ETS configuration TLVs (ets-conf). To disable TLV transmission, use the no form of the command; for example, no advertise dcbx-tlv pfc ets-reco.

DCBX requires that you enable LLDP to advertise DCBX TLVs to peers.

Configure DCBX operation at the INTERFACE level on a switch or globally on the switch. To verify the DCBX configuration on a port, use the show interface dcbx detail command.

### bandwidth-percentage

Assign a percentage of weight to the class/queue.

**Syntax**

```
bandwidth-percentage percentage
```

To remove the bandwidth percentage, use the `no bandwidth-percentage` command.

**Parameters**

- **percentage**
  - Enter the percentage assignment of weight to the class/queue. The range is from 1 to 100% (granularity 1%).

**Defaults**

none

**Command Modes**

CONFIGURATION (conf-qos-policy-out)

**Supported Modes**

Programmable-Mux (PMUX)

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

The unit of bandwidth percentage is 1%. A bandwidth percentage of 0 is allowed and disables the scheduling of that class. If the sum of the bandwidth percentages given to all eight classes exceeds 100%, the bandwidth percentage automatically scales down to 100%.

**Related Commands**

- **qos-policy-output** — creates a QoS output policy.

---

Data Center Bridging (DCB) 93
clear dcbx counters
Clear all DCBx TLV counters on an interface.

Syntax: clear dcbx counters tengigabitethernet slot/port

Defaults: none

Command Modes: EXEC Privilege

Supported Modes: All Modes

Command History:

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

clear ets counters
Clear ETS TLV counters.

Syntax: clear ets counters [tengigabitethernet slot/port]

Parameters:
- slot/port
  - Enter the slot/port number.

Command Modes: EXEC Privilege

Supported Modes: All Modes

Command History:

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

clear pfc counters
Clear the PFC TLV counters and PFC statistics on an interface or stack unit.

Syntax: clear pfc counters [port-type slot/port [statistics]]| [stack-unit {unit-number | all} stack-ports all]

Parameters:
- port-type
  - Enter the keywords port-type then the slot/port information.
- stack-unit unit number
  - Enter the keywords stack-unit then the stack-unit number to clear. The range is from 0 to 5.
- all stack-ports all
  - Enter the keywords all stack-ports all to clear the counters on all interfaces.
Enter the keyword `statistics` to clear only the hardware PFC counters.

**Defaults**

None

**Command Modes**

- EXEC Privilege

**Supported Modes**

All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

If you do not use the `statistics` parameter, both hardware and DCBx counters clear.

### dcb-enable

Enable data center bridging.

**Syntax**

dcb enable

To disable DCB, use the no dcb enable command.

**Defaults**

none

**Command Modes**

CONFIGURATION

**Supported Modes**

Programmable-Mux (PMUX)

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

DCB is not supported if you enable link-level flow control on one or more interfaces.

### dcb enable pfc-queues

Configure the number of PFC queues.

**Syntax**

dcb enable pfc-queues value

**Parameters**

- `value`
  
Enter the number of PFC queues. The range is from 1 to 4. The number of ports supported based on lossless queues configured will depend on the buffer.

**Default**

2

**Command Modes**

CONFIGURATION mode

**Supported Modes**

Programmable-Mux (PMUX)
Usage Information

You can configure up to a maximum of four lossless (PFC) queues. By configuring four lossless queues, you can configure four different priorities and assign a particular priority to each application that your network is used to process. For example, you can assign a higher priority for time-sensitive applications and a lower priority for other services, such as file transfers. You can configure the amount of buffer space to be allocated for each priority and the pause or resume thresholds for the buffer. This method of configuration enables you to effectively manage and administer the behavior of lossless queues.

Example

Dell(conf)#dcb pfc-queues 4

```
dell enable auto-detect on-next-reload
```

Enables or disables global DCB on a subsequent reload. This command also internally configures PFC buffers based on DCB enable/disable. Save and reload is mandatory for the configurations to take effect. Auto-detect keyword can be used to re-enable IOA with port wise DCB auto detect feature.

Syntax

dcb enable [auto-detect | on-next-reload]

To disable global DCB on a subsequent reload, use the no dcb enable on-next-reload command.

Parameters

auto-detect

Enter the keywords auto-detect to re-enable the Aggregator with port wise DCB auto detect feature.

on-next-reload

Enter the keywords on-next-reload to apply DCB configurations on subsequent reload.

Defaults

DCB is globally enabled with auto-detect feature.

**dcb-map stack-unit all stack-ports all**

Apply the specified DCB map on all ports of the switch stack.

**Syntax**
```
dcb-map stack-unit all stack-ports all dcb-map-name
```

To remove the PFC and ETS settings in a DCB map from all stack units, use the `no dcb-map stack-unit all stack-ports all` command.

**Parameters**
- `dcb-map-name` Enter the name of the DCB map.

**Defaults**
None

**Command Modes**
CONFIGURATION

**Supported Modes**
Programmable-Mux (PMUX)

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.3(0.0)</td>
<td>Introduced on the FC Flex IO Modules with I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**
The `dcb-map stack-unit all stack-ports all` command overwrites any previous DCB maps applied to stack ports.

**dcbx-port role**

Configure the DCBX port role the interface uses to exchange DCB information.

**Syntax**
```
dcbx port-role {config-source | auto-downstream | auto-upstream | manual}
```

To remove DCBX port role, use the `no dcbx port-role {config-source | auto-downstream | auto-upstream | manual}` command.

**Parameters**
- `config-source` Enter the DCBX port role, where:
  - `config-source`: configures the port to serve as the configuration source on the switch.
- `auto-upstream`:
  - `auto-upstream`: configures the port to receive a peer configuration. The configuration source is elected from auto-upstream ports.
- `auto-downstream`:
  - `auto-downstream`: configures the port to accept the internally propagated DCB configuration from a configuration source.
- `manual`:
  - `manual`: configures the port to operate only on administer-configured DCB parameters. The port does not accept a DCB configuration received form a peer or a local configuration source.

**Defaults**
Manual

**Command Modes**
INTERFACE PROTOCOL LLDP

**Supported Modes**
Programmable-Mux (PMUX)
dcnx version

Configure the DCBX version used on the interface.

Syntax

dcbx version {auto | cee | cin | ieee-v2.5}

To remove the DCBX version, use the no dcbx version {auto | cee | cin | ieee-v2.5} command.

Parameters

- auto | cee | cin | ieee-v2.5
  - Enter the DCBX version type used on the interface, where:
    - auto: configures the port to operate using the DCBX version received from a peer.
    - cee: configures the port to use CEE (Intel 1.01).
    - cin: configures the port to use Cisco-Intel-Nuova (DCBX 1.0).
    - ieee-v2.5: configures the port to use IEEE 802.1az (Draft 2.5).

Defaults

Auto

Command Modes

Command History

Version Description
9.4(0.0) Supported on the FN I/O Aggregator.
9.3(0.0) Introduced on the FC Flex IO module installed in the M I/O Aggregator.

Usage Information

DCBX requires that you enable LLDP to advertise DCBX TLVs to peers.

Configure DCBX operation at the INTERFACE level on a switch or globally on the switch. To verify the DCBX configuration on a port, use the show interface dcbx detail command.
**debug dcbx**

Enable DCBX debugging.

Syntax:
```
debug dcbx {all | auto-detect-timer | config-exchng | fail | mgmt | resource | sem | tlv}
```

To disable DCBX debugging, use the `no debug dcbx` command.

**Parameters**

- `all`: enables all DCBX debugging operations.
- `auto-detect-timer`: enables traces for DCBX auto-detect timers.
- `config-exchng`: enables traces for DCBX configuration exchanges.
- `fail`: enables traces for DCBX failures.
- `mgmt`: enables traces for DCBX management frames.
- `resource`: enables traces for DCBX system resource frames.
- `sem`: enables traces for the DCBX state machine.
- `tlv`: enables traces for DCBX TLVs.

**Defaults**

None

**Command Modes**

EXEC Privilege

**Supported Modes**

Programmable-Mux (PMUX)

**fc-map**

In an FCoE map, configure the FCoE mapped address prefix (FC-MAP) value which is used to identify FCoE traffic transmitted on the FCoE VLAN for the specified fabric.

Syntax:
```
fcs-map fc-map-value
```

**Parameters**

- `fc-map-value`: Enter the unique MAC address prefix used by a SAN fabric.

The range of FC-MAP values is from 0EFC00 to 0EFCFF.

**Defaults**

None

**Command Modes**

FCoE MAP

**Supported Modes**

Programmable-Mux (PMUX)

</tr>
</tbody>
</table>
Version | Description
--- | ---
9.3(0.0) | Introduced on the M I/O Aggregator and MXL 10/40GbE Switch with the FC Flex IO module.

Usage Information

The FC-MAP value you enter must match the FC-MAP value used by an FC switch or FCoE forwarder (FCF) in the fabric. An FCF switch accepts only FCoE traffic that uses the correct FC-MAP value.

The FC-MAP value is used to generate the fabric-provided MAC address (FP-MAC). The FPMA is used by servers to transmit FCOE traffic to the fabric. An FC-MAP can be associated with only one FCOE VLAN and vice versa.

In an FCoE map, the FC-MAP value, fabric ID, and FCoE VLAN parameters must be unique.

To remove a configured FC-MAP value from an FCoE map, enter the `no fc-map` command.

Related Commands

**fcoe-map** — creates an FCoE map which contains the parameters used in the communication between servers and a SAN fabric.

### fcoe-map

Create an FCoE map which contains the parameters used to configure the links between server CNAs and a SAN fabric. Apply the FCoE map on a server-facing Ethernet port.

**Syntax**

```text
fcoe-map map-name
```

**Parameters**

- `map-name` Maximum: 32 alphanumeric characters.

**Defaults**

On the FN2210S Aggregator with PMUX modules, the following parameters are applied on all the PMUX module interfaces:

- Description: SAN_FABRIC
- Fabric-id: 1002
- Fcoe-vlan: 1002
- Fc-map: 0x0efc00
- Fcf-priority: 128
- Fka-adv-period: 8000mSec
- Keepalive: enable
- Vlan priority: 3

**Command Modes**

<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.6(0.0)</td>
<td>Supported on the FN2210S Aggregator.</td>
</tr>
</tbody>
</table>
Usage Information

An FCoE map is a template used to map FCoE and FC parameters in a converged fabric. An FCoE map is used to virtualize upstream FC ports on an FN2210S Aggregator with the PMUX module NPIV proxy gateway so that they appear to downstream server CNA ports as FCoE forwarder (FCF) ports on an FCoE network. When applied to FC and Ethernet ports on an NPIV proxy gateway, an FCoE map allows the switch to operate as an FCoE-FC bridge between an FC SAN and an FCoE network by providing FCoE-enabled servers and switches with the necessary parameters to log in to a SAN fabric.

On an FN2210S Aggregator with the PMUX module NPIV proxy gateway, you cannot apply an FCoE map applied on fabric-facing FC ports and server-facing 10–Gigabit Ethernet ports.

An FCoE map consists of the following parameters: the dedicated FCoE VLAN used for storage traffic, the destination SAN fabric (FC-MAP value), FCF priority used by a server, and the FIP keepalive (FKA) advertisement timeout.

In each FCoE map, the fabric ID, FC-MAP value, and FCoE VLAN parameters must be unique. Use one FCoE map to access one SAN fabric. You cannot use the same FCoE map to access different fabrics.

To remove an FCoE map from an Ethernet interface, enter the `no fcoe-map map-name` command in Interface configuration mode.

fcoe priority-bits

Configure the FCoE priority advertised for the FCoE protocol in application priority TLVs.

Syntax

`fcoe priority-bits priority-bitmap`

To remove the configured FCoE priority, use the `no fcoe priority-bits` command.

Parameters

`priority-bitmap` Enter the priority-bitmap range. The range is from 1 to FF.

Defaults

0x8

Command Modes

PROTOCOL LLDP

Supported Modes

Programmable-Mux (PMUX)

</tr>
</tbody>
</table>

Usage Information

This command is available at the global level only.
**iscsi priority-bits**

Configure the iSCSI priority advertised for the iSCSI protocol in application priority TLVs.

**Syntax**

iscsi priority-bits priority-bitmap

To remove the configured iSCSI priority, use the no iscsi priority-bits command.

**Parameters**

- **priority-bitmap**
  
  Enter the priority-bitmap range. The range is from 1 to FF.

**Defaults**

0x10

**Command Modes**

- PROTOCOL LLDP

**Supported Modes**

Programmable-Mux (PMUX)

</tr>
</tbody>
</table>

**Usage Information**

This command is available at the global level only.

---

**keepalive**

Send keepalive packets periodically to keep an interface alive when it is not transmitting data.

**Syntax**

keepalive [seconds]

To stop sending keepalive packets, use the no keepalive command.

**Parameters**

- **seconds**
  
  (OPTIONAL) For interfaces with PPP encapsulation enabled, enter the number of seconds between keepalive packets. The range is from 0 to 23767. The default is 10 seconds.

**Defaults**

Enabled.

**Command Modes**

- INTERFACE

**Supported Modes**

Programmable-Mux (PMUX)

**Command History**

<table>
<thead>
<tr>

<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

When you configure keepalive, the system sends a self-addressed packet out of the configured interface to verify that the far end of a WAN link is up. When you configure no keepalive, the system does not send keepalive packets and so the local end of a WAN link remains up even if the remote end is down.
interface vlan (NPIV proxy gateway)

Create a dedicated VLAN to be used to send and receive Fibre Channel traffic over FCoE links between servers and a fabric over an Aggregator with the PMUX module of NPIV proxy gateway.

Syntax

interface vlan vlan-id

Parameters

vlan-id Enter a number as the VLAN Identifier. The range is 1 to 4094.

Defaults

Not configured.

Command Modes

CONFIGURATION

Supported Modes

Programmable-Mux (PMUX)

Command History

Version Description
9.4(0.0) Introduced on the FN I/O Aggregator.
9.3(0.0) Introduced on the M I/O Aggregator.

Usage Information

FCoE storage traffic received from servers on an M I/O Aggregator with the PMUX module NPIV proxy gateway is de-capsulated into Fibre Channel packets and forwarded over FC links to SAN switches in a specified fabric. You must configure a separate FCoE VLAN for each fabric to which FCoE traffic is forwarded. Any non-FCoE traffic sent on a dedicated FCoE VLAN will be dropped.

You configure the association between a dedicated VLAN, which carries FCoE traffic from server CNAs over the NPIV proxy gateway to a SAN fabric in which destination storage arrays are installed, in an FCoE map by using the fabric id vlan command.

When you apply an FCoE map to a server-facing Ethernet port, the port is automatically configured as a tagged member of the FCoE VLAN.

For more information about VLANs and the commands to configure them, refer to the Virtual LAN (VLAN) Commands section.

Example (Single Range)

Dell(conf)#interface vlan 10
Dell(conf-if-vl-3)#

Related Commands

fcoe-map — creates an FCoE map which contains the parameters used in the communication between servers and a SAN fabric.

pfc mode on

Enable the PFC configuration on the port so that the priorities are included in DCBX negotiation with peer PFC devices.

Syntax

pfc mode on

To disable the PFC configuration, use the no pfc mode on command.

Defaults

PFC mode is on.

Command Modes

DCB MAP
**Supported Modes**
Programmable-Mux (PMUX)

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Introduced on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

By applying a DCB input policy with PFC enabled, you enable PFC operation on ingress port traffic. To achieve complete lossless handling of traffic, also enable PFC on all DCB egress ports or configure the dot1p priority-queue assignment of PFC priorities to lossless queues (refer to `pfc no-drop queues`).

To disable PFC operation on an interface, enter the `no pfc mode` command in DCB Input Policy Configuration mode. PFC is enabled and disabled as global DCB operation is enabled (`dcb-enable`) or disabled (`no dcb-enable`).

You cannot enable PFC and link-level flow control at the same time on an interface.

---

### pfc no-drop queues

Configure the port queues that still function as no-drop queues for lossless traffic.

**Syntax**

```
pfc no-drop queues queue-range
```
To remove the no-drop port queues, use the `no pfc no-drop queues` command.

**Parameters**

- `queue-range` Enter the queue range. Separate the queue values with a comma; specify a priority range with a dash; for example, `pfc no-drop queues 1,3` or `pfc no-drop queues 2-3`. The range is from 0 to 3.

**Defaults**

No lossless queues are configured.

**Command Modes**

<tr>
<td>7</td>
<td>3</td>
</tr>
</tbody>
</table>

**pfc priority**

Configure the CoS traffic to be stopped for the specified delay.

**Syntax**

```
pfc priority priority-range
```

To delete the pfc priority configuration, use the `no pfc priority` command.

**Parameters**

- `priority-range` Enter the 802.1p values of the frames to be paused. Separate the priority values with a comma; specify a priority range with a dash; for example, `pfc priority 1,3,5-7`. The range is from 0 to 7.

**Defaults**

none

**Command Modes**

Interface

**Supported Modes**

Programmable-Mux (PMUX)

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

You can enable any number of 802.1p priorities for PFC. Queues to which PFC priority traffic is mapped are lossless by default. Traffic may be interrupted due to an interface flap (going down and coming up) when you reconfigure the lossless queues for no-drop priorities in a PFC input policy and reapply the policy to an interface.

The maximum number of lossless queues supported on the I/O Aggregator switch is four.

A PFC peer must support the configured priority traffic (as DCBX detects) to apply PFC.
**priority-group**

To use with an ETS output policy, create an ETS priority group.

**Syntax**

```
priority-group group-name
```

To remove the priority group, use the `no priority-group` command.

**Parameters**

- `group-name`  
Enter the name of the ETS priority group. The maximum is 32 characters.

**Defaults**

none

**Command Modes**

CONFIGURATION

**Supported Modes**

Programmable-Mux (PMUX)

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>

<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

A priority group consists of 802.1p priority values that are grouped for similar bandwidth allocation and scheduling, and that share latency and loss requirements. All 802.1p priorities mapped to the same queue must be in the same priority group.

You must configure 802.1p priorities in priority groups associated with an ETS output policy. You can assign each dot1p priority to only one priority group.

The maximum number of priority groups supported in ETS output policies on an interface is equal to the number of data queues (4) on the port. The 802.1p priorities in a priority group can map to multiple queues.

If you configure more than one priority queue as strict priority or more than one priority group as strict priority, the higher numbered priority queue is given preference when scheduling data traffic.

---

**priority-group bandwidth pfc**

Configure the ETS bandwidth allocation and PFC mode used to manage port traffic in an 802.1p priority group.

**Syntax**

```
priority-group group-num {bandwidth percentage | strict-priority} pfc {on | off}
```

**Parameters**

- `priority-group`  
Enter the keyword `priority-group` followed by the number of an 802.1p priority group. Use the `priority-pgid` command to create the priority groups in a DCB map.

- `group-num`  
Enter the number of the priority group.

- `bandwidth`  
Enter the keyword `bandwidth` followed by a bandwidth percentage allocated to the priority group. The range of valid values is 1 to 100. The sum of all allocated bandwidth percentages in priority groups in a DCB map must be 100%.  

- `percentage`  
Enter the percentage of bandwidth.
strict-priority Configure the priority-group traffic to be handled with strict priority scheduling. Strict-priority traffic is serviced first, before bandwidth allocated to other priority groups is made available.

pfc {on | off} Configure whether priority-based flow control is enabled (on) or disabled (off) for port traffic in the priority group.

**Defaults**
None

**Command Modes**
DCB MAP

**Supported Modes**
Programmable-Mux (PMUX)

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.3(0.0)</td>
<td>Introduced on the FC Flex IO module installed in the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**
Use the `dcb-map` command to configure priority groups with PFC and/or ETS settings and apply them to Ethernet interfaces.

Use the `priority-pgid` command to map 802.1p priorities to a priority group. You can assign each 802.1p priority to only one priority group. A priority group consists of 802.1p priority values that are grouped together for similar bandwidth allocation and scheduling, and that share latency and loss requirements. All 802.1p priorities mapped to the same queue must be in the same priority group.

Repeat the `priority-group bandwidth pfc` command to configure PFC and ETS traffic handling for each priority group in a DCB map.

You can enable PFC on a maximum of two priority queues.

If you configure more than one priority group as strict priority, the higher numbered priority queue is given preference when scheduling data traffic.

If a priority group does not use its allocated bandwidth, the unused bandwidth is made available to other priority groups.

To remove a priority-group configuration in a DCB map, enter the `no priority-group bandwidth pfc` command.

By default, equal bandwidth is assigned to each dot1p priority in a priority group. Use the `bandwidth` parameter to configure the bandwidth percentage assigned to a priority group. The sum of the bandwidth allocated to all priority groups in a DCB map must be 100% of the bandwidth on the link. You must allocate at least 1% of the total port bandwidth to each priority group.

**Related Commands**

- `priority-pgid` — Configures the 802.1p priority traffic in a priority group for a DCB map.
priority-pgid

Assign 802.1p priority traffic to a priority group in a DCB map.

Syntax

```
priority-pgid dot1p0_group-num dot1p1_group-num dot1p2_group-num
dot1p3_group-num dot1p4_group-num dot1p5_group-num dot1p6_group-num
dot1p7_group-num
```

Parameters

- `dot1p0_group-num` Enter the priority group number for each 802.1p class of traffic in a DCB map.
- `dot1p1_group-num`
- `dot1p2_group-num`
- `dot1p3_group-num`
- `dot1p4_group-num`
- `dot1p5_group-num`
- `dot1p6_group-num`
- `dot1p7_group-num`

Defaults

None

Command Modes

DCB MAP

<tr>
<td>9.3(0.0)</td>
<td>Introduced on the FC Flex IO module installed in the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

Usage Information

PFC and ETS settings are not pre-configured on Ethernet ports. You must use the `dcb-map` command to configure different groups of 802.1p priorities with PFC and ETS settings.

Using the `priority-pgid` command, you assign each 802.1p priority to one priority group. A priority group consists of 802.1p priority values that are grouped together for similar bandwidth allocation and scheduling, and that share latency and loss requirements. All 802.1p priorities mapped to the same queue must be in the same priority group. For example, the `priority-pgid 0 0 0 1 2 4 4 4` command creates the following groups of 802.1p priority traffic:

- Priority group 0 contains traffic with dot1p priorities 0, 1, and 2.
- Priority group 1 contains traffic with dot1p priority 3.
- Priority group 2 contains traffic with dot1p priority 4.
- Priority group 4 contains traffic with dot1p priority 5, 6, and 7.

To remove a priority-pgid configuration from a DCB map, enter the `no priority-pgid` command.

Related Commands

- `priority-group bandwidth pfc`— Configures the ETS bandwidth allocation and the PFC setting used to manage the port traffic in an 802.1p priority group.
qos-policy-output ets

To configure the ETS bandwidth allocation and scheduling for priority traffic, create a QoS output policy.

Syntax

```
qos-policy-output policy-name ets
```

To remove the QoS output policy, use the `no qos-policy-output ets` command.

Parameters

- `policy-name` Enter the policy name. The maximum is 32 characters.

</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

If an error occurs in an ETS output-policy configuration, the configuration is ignored and the scheduler and bandwidth allocation settings are reset to the ETS default values (all priorities are in the same ETS priority group and bandwidth is allocated equally to each priority).

If an error occurs when a port receives a peer’s ETS configuration, the port’s configuration is reset to the previously configured ETS output policy. If no ETS output policy was previously applied, the port is reset to the default ETS parameters.

Related Commands

- `scheduler` — schedules the priority traffic in port queues.
- `bandwidth-percentage` — bandwidth percentage allocated to the priority traffic in port queues.

scheduler

Configure the method used to schedule priority traffic in port queues.

Syntax

```
scheduler value
```

To remove the configured priority schedule, use the `no scheduler` command.

Parameters

- `value` Enter schedule priority value. The valid values are:
  - `strict`: strict-priority traffic is serviced before any other queued traffic.
  - `werr`: weighted elastic round robin (werr) provides low-latency scheduling for priority traffic on port queues.

Defaults

Weighted elastic round robin (WERR) scheduling is used to queue priority traffic.

Command Modes

- POLICY-MAP-OUT-ETS

Supported Modes

- Programmable-Mux (PMUX)
dot1p priority traffic on the switch is scheduled to the current queue mapping. dot1p priorities within the same queue must have the same traffic properties and scheduling method.

ETS-assigned scheduling applies only to data queues, not to control queues.

The configuration of bandwidth allocation and strict-queue scheduling is not supported at the same time for a priority group. If you configure both, the configured bandwidth allocation is ignored for priority-group traffic when you apply the output policy on an interface.

Related Commands

- `bandwidth-percentage` — bandwidth percentage allocated to priority traffic in port queues.

**show dcb**

Displays the data center bridging status, the number of PFC-enabled ports, and the number of PFC-enabled queues.

**Syntax**

```
show dcb [stack-unit unit-number]
```

**Parameters**

- `unit number` Enter the DCB unit number. The range is from 0 to 5.

**Command Modes**

- EXEC Privilege
- All Modes

**Command History**

- **Version**
  - 9.4(0.0) Supported on the FN I/O Aggregator.
  - 9.2(0.0) Introduced on the M I/O Aggregator.
  - 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

Specify a stack-unit number on the Master switch in a stack.

**Example**

```
Dell#show dcb
stack-unit 0 port-set 0
DCB Status : Enabled
PFC Queue Count : 2
Total Buffer[lossy + lossless] (in KB) : 3822
PFC Total Buffer (in KB) : 1912
PFC Shared Buffer (in KB) : 832
PFC Available Buffer (in KB) : 1080
```
show interface dcbx detail

Displays the DCBX configuration on an interface.

Syntax

```
show interface port-type slot/port dcbx detail
```

Parameters

- `port-type` Enter the port type.
- `slot/port` Enter the slot/port number.

Example

```
Dell(conf)# show interface tengigabitethernet 0/49 dcbx detail
Dell#show interface te 0/49 dcbx detail

E-ETS Configuration TLV enabled
e-ETS Configuration TLV disabled
R-ETS Recommendation TLV enabled
r-ETS Recommendation TLV disabled
P-PFC Configuration TLV enabled
p-PFC Configuration TLV disabled
F-Application priority for FCOE enabled
f-Application Priority for FCOE disabled
I-Application priority for iSCSI enabled
i-Application Priority for iSCSI disabled

Interface TenGigabitEthernet 0/49
 Remote Mac Address 00:00:00:00:00:11
 Port Role is Auto-Upstream
 DCBX Operational Status is Enabled
 Is Configuration Source? TRUE

Local DCBX Compatibility mode is CEE
Local DCBX Configured mode is CEE
Peer Operating version is CEE
Local DCBX TLVs Transmitted: ErPfi
```
Local DCBX Status
-----------------
  DCBX Operational Version is 0
  DCBX Max Version Supported is 0
  Sequence Number: 2
  Acknowledgment Number: 2
  Protocol State: In-Sync

Peer DCBX Status:
-----------------
  DCBX Operational Version is 0
  DCBX Max Version Supported is 255
  Sequence Number: 2
  Acknowledgment Number: 2
  Total DCBX Frames transmitted 27
  Total DCBX Frames received 6
  Total DCBX Frame errors 0
  Total DCBX Frames unrecognized 0

**show interface ets**

Displays the ETS configuration applied to egress traffic on an interface, including priority groups with priorities and bandwidth allocation.

**Syntax**

```
show interface port-type slot/port ets {summary | detail}
```

**Parameters**

- `port-type slot/port`
  - Enter the port-type slot and port ETS information.
- `{summary | detail}`
  - Enter the keyword `summary` for a summary list of results or enter the keyword `detail` for a full list of results.

**Command Modes**

- **CONFIGURATION**

**Supported Modes**

All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
<tr>
<td>8.3(16.1)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

To clear ETS TLV counters, use the `clear ets counters interface port-type slot/port` command.

The following describes the `show interface summary` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Interface</td>
<td>Interface type with stack-unit and port number.</td>
</tr>
<tr>
<td>Max Supported TC Group</td>
<td>Maximum number of priority groups supported.</td>

### show interface pfc

Displays the PFC configuration applied to ingress traffic on an interface, including priorities and link delay.

**Syntax**

```
show interface port-type slot/port pfc {summary | detail}
```

**Parameters**

- `port-type slot/port pfc` Enter the port-type slot and port PFC information.
- `(summary | detail)` Enter the keyword `summary` for a summary list of results or enter the keyword `detail` for a full list of results.

**Command Modes**

- `INTERFACE`

**Supported Modes**

- All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>

**show qos dcb-map**

Display the DCB parameters configured in a specified DCB map.

**Syntax**

```
show qos dcb-map map-name
```

**Parameters**

- **map-name**: Displays the PFC and ETS parameters configured in the specified map.

**Command Modes**

- EXEC
- EXEC Privilege

**Supported Modes**

- All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.6(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>
Usage Information

Use the `show qos dcb-map` command to display the enhanced transmission selection (ETS) and priority-based flow control (PFC) parameters used to configure server-facing Ethernet ports.

The following table describes the `show qos dcb-map` output shown in the example below.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>State</td>
<td>Complete: All mandatory DCB parameters are correctly configured. In progress: The DCB map configuration is not complete. Some mandatory parameters are not configured.</td>
</tr>
<tr>
<td>PFC Mode</td>
<td>PFC configuration in DCB map: On (enabled) or Off.</td>
</tr>
<tr>
<td>PG</td>
<td>Priority group configured in the DCB map.</td>
</tr>
<tr>
<td>TSA</td>
<td>Transmission scheduling algorithm used by the priority group: Enhanced Transmission Selection (ETS).</td>
</tr>
<tr>
<td>BW</td>
<td>Percentage of bandwidth allocated to the priority group.</td>
</tr>
<tr>
<td>PFC</td>
<td>PFC setting for the priority group: On (enabled) or Off.</td>
</tr>
<tr>
<td>Priorities</td>
<td>802.1p priorities configured in the priority group.</td>
</tr>
</tbody>
</table>

Example

```
Dell# show qos dcb-map dcbmap2
State: Complete
PfcMode: ON
---------------------
PG: 0  TSA: ETS  BW: 50  PFC: OFF
Priorities: 0  1  2  4  5  6  7

PG: 1  TSA: ETS  BW: 50  PFC: ON
Priorities: 3
```

show stack-unit stack-ports ets details

Displays the ETS configuration applied to egress traffic on stacked ports, including ETS Operational mode on each unit and the configured priority groups with dot1p priorities, bandwidth allocation, and scheduler type.

Syntax

```
show stack-unit {all | stack-unit} stack-ports {all | port-number} ets details
```

Parameters

- `stack-unit` Enter the stack unit identification.
- `port-number` Enter the port number.

Command Modes

- CONFIGURATION

Supported Modes

- All Modes

Command History

- Version 9.4(0.0) Supported on the FN I/O Aggregator.
- Version 9.2(0.0) Introduced on the M I/O Aggregator.
show stack-unit stack-ports pfc details

Displays the PFC configuration applied to ingress traffic on stacked ports, including PFC Operational mode on each unit with the configured priorities, link delay, and number of pause packets sent and received.

Syntax

```
show stack-unit {all | stack-unit} stack-ports {all | port-number} pfc details
```

Parameters

- `stack-unit` Enter the stack unit.
- `port-number` Enter the port number.

Command Modes

- CONFIGURATION

Supported Modes

- All Modes
### Command History

<table>
<thead>
<tr>
<th>Version</th>

</tr>
</tbody>
</table>

### Example

Dell(conf)# show stack-unit all stack-ports all pfc details

```
stack unit 0 stack-port all
  Admin mode is On
  Admin is enabled, Priority list is 4-5
  Local is enabled, Priority list is 4-5
  Link Delay 45556 pause quantum
  0 Pause Tx pkts, 0 Pause Rx pkts

stack unit 1 stack-port all
  Admin mode is On
  Admin is enabled, Priority list is 4-5
  Local is enabled, Priority list is 4-5
  Link Delay 45556 pause quantum
  0 Pause Tx pkts, 0 Pause Rx pkts
```
Dynamic Host Configuration Protocol

Dynamic host configuration protocol (DHCP) is an application layer protocol that dynamically assigns IP addresses and other configuration parameters to network end-stations (hosts) based on configuration policies determined by network administrators.

An Aggregator can operate as a DHCP client. As a DHCP client, the Aggregator requests an IP address from a DHCP server.

The following types of DHCP commands are described in this chapter:

• DHCP Client Commands
• Other Commands supported by DHCP Client

DHCP Client Commands

• clear ip dhcp client statistics
• ip address dhcp
• release dhcp interface
• renew dhcp interface
• show ip dhcp client statistics
• show ip dhcp lease

Other Commands supported by DHCP Client

• debug ip dhcp client events
• debug ip dhcp client packets

**clear ip dhcp client statistics**

Displays DHCP client statistics, including the number of DHCP messages sent and received on an interface.

**Syntax**

```plaintext
clear ip dhcp client statistics interface type slot/port
```

**Parameters**

- `interface type slot/port` Clear DHCP client statistics on the specified interface.
  
  • For the management interface on the stack-unit, enter the keyword `managementethernet` followed by slot/port information. The slot and port range is 0.
  
  • For a VLAN, enter the keyword `vlan` followed by a number from 1 to 4094.

**Command Modes** EXEC Privilege

**Supported Modes** All Modes

**Default** None
debug ip dhcp client events

Enable the display of log messages for the following events on DHCP client interfaces:

- IP address acquisition
- IP address release
- Renewal of IP address and lease time
- Release of an IP address

Syntax

```
debug ip dhcp client events [interface type slot/port]
```

Parameters

- `interface type slot/port`: Display log messages for DHCP packets sent and received on the specified interface.
  - For the management interface on the stack-unit, enter the keyword `managementethernet` followed by slot/port information. The slot and port range is 0.
  - For a VLAN, enter the keyword `vlan` followed by a number from 1 to 4094.

Command Modes

- EXEC Privilege

Supported Modes

- All Modes

Default

- None

Command History

<table>

<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

debug ip dhcp client packets

Enable the display of log messages for all DHCP packets sent and received on DHCP client interfaces.

Syntax

```
debug ip dhcp client packets [interface type slot/port]
```

Parameters

- `interface type slot/port`: Display log messages for DHCP packets sent and received on the specified interface.
  - For the management interface on the stack-unit, enter the keyword `managementethernet` followed by slot/port information. The slot and port range is 0.

Command Modes

- EXEC Privilege

Supported Modes

- All Modes

Default

- None

Command History

</tbody>
</table>

**ip address dhcp**

Acquire an IP address dynamically on an interface from the DHCP server.

**Syntax**

```plaintext
ip address dhcp [relay | vendor-class-identifier]
```

To disable DHCP Client on an interface, use the `no ip address dhcp` command.

**Command Modes**

INTERFACE

**Supported Modes**

All Modes

**Default**

Enabled

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

In the I/O Aggregator, the DHCP client is enabled only on the default VLAN and management interface 0/0. Use the `ip address` command to assign a static IP address that overwrites the dynamically assigned IP address.

**release dhcp interface**

Release the dynamically-acquired IP address on an Ethernet interface while retaining the DHCP client configuration on the interface.

**Syntax**

```plaintext
release dhcp interface type slot/port
```

**Parameters**

- `interface type slot/port`
  - For the management interface on the stack-unit, enter the keyword `management ethernet` followed by slot/port information. The slot and port range is 0.
  - For a VLAN, enter the keyword `vlan` followed by a number from 1 to 4094.

**Command Modes**

EXEC Privilege
Supported Modes
All Modes
Default
None

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

Usage Information
When you enter the release dhcp command, although the IP address that was dynamically-acquired from a DHCP server is released from an interface, the ability to acquire a new DHCP server-assigned address remains in the running configuration for the interface. To acquire a new IP address, enter either the renew dhcp command at the EXEC privilege level or the ip address dhcp command at the interface configuration level.

renew dhcp interface
Re-acquire a dynamic IP address on an Ethernet interface enabled as a DHCP client.

Syntax
renew dhcp interface type slot/port

Parameters
- interface type slot/port
  - Enter any of the following keywords and slot/port or number to clear counters from a specified interface:
    - For the management interface on the stack-unit, enter the keyword managementethernet followed by slot/port information. The slot and port range is 0.
    - For a VLAN, enter the keyword vlan followed by a number from 1 to 4094.

<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

Usage Information
The renew dhcp command is used to renew the lease of IP address obtained through dhcp.
To display the currently configure dynamic IP address and lease time, enter the show ip dhcp lease command.
show ip dhcp client statistics

Displays DHCP client statistics, including the number of DHCP messages sent and received on an interface.

**Syntax**
```
show ip dhcp client statistics interface type slot/port
```

**Parameters**
- **interface type slot/port**
  - Display DHCP client statistics on the specified interface.
  - For the management interface on the stack-unit, enter the keyword managementethernet followed by slot/port information. The slot and port range is 0.
  - For a VLAN, enter the keyword vlan followed by a number from 1 to 4094.

**Command Modes**

<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

show ip dhcp lease

Displays lease information about the dynamic IP address currently assigned to a DHCP client-enabled interface.

**Syntax**
```
show ip dhcp lease[interface type slot/port]
```

**Parameters**
- **interface type slot/port**
  - Display DHCP client statistics on the specified interface.
  - For the management interface on the stack-unit, enter the keyword managementethernet followed by slot/port information. The slot and port range is 0.
  - For a VLAN, enter the keyword vlan followed by a number from 1 to 4094.

**Command Modes**
- EXEC Privilege

**Supported Modes**
- All Modes

**Default**
- Display DHCP lease information on all DHCP client-enabled interfaces on the switch.

FC Flex IO Modules

This chapter provides a generic, broad-level description of the operations, capabilities, and configuration commands of the Fiber Channel (FC) Flex IO module.

Fibre Channel over Ethernet for FC Flex IO Modules

FCoE provides a converged Ethernet network that allows the combination of storage-area network (SAN) and LAN traffic on a Layer 2 link by encapsulating Fibre Channel data into Ethernet frames.

The Aggregator, installed with the FC Flex IO module, functions as a top-of-rack edge switch that supports converged enhanced Ethernet (CEE) traffic — Fibre channel over Ethernet (FCoE) for storage, Interprocess Communication (IPC) for servers, and Ethernet local area network (LAN) (IP cloud) for data — as well as FC links to one or more storage area network (SAN) fabrics.

FCoE works with the Ethernet enhancements provided in Data Center Bridging (DCB) to support lossless (no-drop) SAN and LAN traffic. In addition, DCB provides flexible bandwidth sharing for different traffic types, such as LAN and SAN, according to 802.1p priority classes of service. DCBx should be enabled on the system before the FIP snooping feature is enabled.

All of the commands that are supported for FCoE on the I/O Aggregator apply to the FC Flex IO modules. Similarly, all of the configuration procedures and the settings that are applicable for FCoE on the I/O Aggregator are valid for the FC Flex IO modules.

NPIV Proxy Gateway for FC Flex IO Modules

The N-port identifier virtualization (NPIV) Proxy Gateway (NPG) feature provides FCoE-FC bridging capability on the M I/O Aggregator with the FC Flex IO module switch, allowing server CNAs to communicate with SAN fabrics over the M I/O Aggregator with the FC Flex IO module.

To configure the M I/O Aggregator with the FC Flex IO module to operate as an NPIV proxy gateway, use the following commands:

description (for FCoE maps)

In an FCoE map, add a text description of the FCoE and FC parameters used to transmit storage traffic over an M I/O Aggregator with the FC Flex IO module NPIV proxy gateway in a converged fabric.

M I/O Aggregator with the FC Flex IO module

</thead>
<tbody>
<tr>
<td>9.3(0.0)</td>
<td>Introduced on the M I/O Aggregator and MXL 10/40GbE Switch with the FC Flex IO module.</td>
</tr>
</tbody>
</table>

**Usage Information**

An FCoE map is a template used to map FCoE and FC parameters in a converged fabric. An FCoE map is used to virtualize upstream FC ports on an M I/O Aggregator with the FC Flex IO module NPIV proxy gateway so that they appear to downstream server CNA ports as FCoE forwarder (FCF) ports on an FCoE network. When applied to FC and Ethernet ports on an NPIV proxy gateway, an FCoE map allows the switch to operate as an FCoE-FC bridge between an FC SAN and an FCoE network by providing FCoE-enabled servers and switches with the necessary parameters to log in to a SAN fabric. Use the `fcoe-map` command to create an FCoE map.

On an M I/O Aggregator with the FC Flex IO module NPIV proxy gateway, you cannot apply an FCoE map on fabric-facing FC ports and server-facing Ethernet ports.

After you apply an FCoE map on an FC interface, when the port is enabled (`no shutdown`), the NPIV proxy gateway starts sending FIP multicast advertisements on behalf of the FC port to downstream servers in order to advertise the availability of a new FCF port on the FCoE VLAN.
To remove an FCoE map from an FC interface, enter the `no fabric map-name` command in Interface configuration mode.

### Related Commands

- **fcoe-map** — creates an FCoE map which contains the parameters used in the communication between servers and a SAN fabric.
- **show fcoe-map** — displays the Fibre Channel and FCoE configuration parameters in FCoE maps.

## fabric-id vlan

In an FCoE map, configure the association between the dedicated VLAN used to carry FCoE traffic between servers and a SAN, and the fabric where the desired storage arrays are installed.

### M I/O Aggregator with the FC Flex IO module

**Syntax**

```
fabric-id fabric-num vlan vlan-id
```

**Parameters**

- **fabric-id fabric-num**
  - Enter a fabric ID number that is the same as the ID number of the dedicated VLAN used to carry FCoE storage traffic to the fabric specified in the FCoE map. You can enter a fabric ID in the range 1–4094.

- **vlanvlan-id**
  - Enter the ID number of the dedicated VLAN used to carry FCoE storage traffic between servers and a SAN fabric and specified with the `vlan` command in the FCoE map.

**Defaults**

None

**Command Modes**

- FCOE MAP

**Supported Modes**

Programmable-Mux (PMUX)

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.3(0.0)</td>
<td>Introduced on the M I/O Aggregator and MXL 10/40GbE Switch with the FC Flex IO module.</td>
</tr>
</tbody>
</table>

**Usage Information**

In the `fabric-id vlan` command, the fabric and VLAN ID numbers must be the same.

In each FCoE map, the fabric ID, FC-MAP value, and FCoE VLAN parameters must be unique.

To remove a fabric-VLAN association from an FCoE map, enter the `no fabric-id vlan` command.

You must first create a VLAN and then specify the configured VLAN ID in the `fabric-id vlan` command. Otherwise, the following error message is displayed.

```
FTOS(conf-fcoe-f)#fabric-id 10 vlan 10 % Error: Vlan 10 does not exist
```

**Related Commands**

- **fcoe-map** — creates an FCoE map which contains the parameters used in the communication between servers and a SAN fabric.
- **show fcoe-map** — displays the Fibre Channel and FCoE configuration parameters in FCoE maps.
**fcf-priority**

In an FCoE map, configure the priority used by a server CNA to select an upstream FCoE forwarder (FCF).

**M I/O Aggregator with the FC Flex IO module**

**Syntax**

fcf-priority priority

**Parameters**

- **priority**
  - Enter the priority assigned to the M I/O Aggregator with the FC Flex IO module NPIV proxy gateway, which appears to a downstream server CNA as an FCF. The range of FCF priority values is from 1 to 255.

**Defaults**

128

**Command Modes**

FCOE MAP

**Supported Modes**

Programmable-Mux (PMUX)

**Command History**

**Version** | **Description**
---|---
9.3(0.0) | Introduced on the M I/O Aggregator and MXL 10/40GbE Switch with the FC Flex IO module.

**Usage Information**

The FCF priority you assign to an M I/O Aggregator with the FC Flex IO module is used by server CNAs to select an upstream FCF to use for a fabric login (FLOGI).

To remove a configured FCF priority from an FCoE map, enter the `no fcf-priority` command.

**Related Commands**

- `fcoe-map` — creates an FCoE map which contains the parameters used in the communication between servers and a SAN fabric.
- `show fcoe-map` — displays the Fibre Channel and FCoE configuration parameters in FCoE maps.

---

**fc-map**

In an FCoE map, configure the FCoE mapped address prefix (FC-MAP) value which is used to identify FCoE traffic transmitted on the FCoE VLAN for the specified fabric.

**M I/O Aggregator with the FC Flex IO module**

**Syntax**

fc-map fc-map-value

**Parameters**

- **fc-map-value**
  - Enter the unique MAC address prefix used by a SAN fabric.
  - The range of FC-MAP values is from 0EFC00 to 0EFCFF.

**Defaults**

None

**Command Modes**

FCOE MAP

**Supported Modes**

Programmable-Mux (PMUX)
Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.3(0.0)</td>
<td>Introduced on the M I/O Aggregator and MXL 10/40GbE Switch with the FC Flex IO module.</td>
</tr>
</tbody>
</table>

Usage Information

The FC-MAP value you enter must match the FC-MAP value used by an FC switch or FCoE forwarder (FCF) in the fabric. An FCF switch accepts only FCoE traffic that uses the correct FC-MAP value.

The FC-MAP value is used to generate the fabric-provided MAC address (FP-MAC). The FPMA is used by servers to transmit FCoE traffic to the fabric. An FC-MAP can be associated with only one FCoE VLAN and vice versa.

In an FCoE map, the FC-MAP value, fabric ID, and FCoE VLAN parameters must be unique.

To remove a configured FC-MAP value from an FCoE map, enter the `no fc-map` command.

Related Commands

- `fc-map` — creates an FCoE map which contains the parameters used in the communication between servers and a SAN fabric.

**fcoe-map**

Create an FCoE map which contains the parameters used to configure the links between server CNAs and a SAN fabric. Apply the FCoE map on a server-facing Ethernet port.

**M I/O Aggregator with the FC Flex IO module**

**Syntax**

```
fcoe-map map-name
```

**Parameters**

- `map-name`  
  Maximum: 32 alphanumeric characters.

**Defaults**

On the I/O Aggregator with PMUX modules, the following parameters are applied on all the PMUX module interfaces:

- Description: SAN_FABRIC
- Fabric-id: 1002
- Fcoe-vlan: 1002
- Fc-map: 0x0efc00
- Fcf-priority: 128
- Fka-adv-period: 8000mSec
- Keepalive: enable
- Vlan priority: 3

 Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
</table>
| 9.3(0.0) |Introduced on the M I/O Aggregator and MXL 10/40GbE Switch with the FC Flex IO module.

Usage Information

An FCoE map is a template used to map FCoE and FC parameters in a converged fabric. An FCoE map is used to virtualize upstream FC ports on an M I/O Aggregator with the PMUX module NPIV proxy gateway so that they appear to downstream server CNA ports as FCoE forwarder (FCF) ports on an FCoE network. When applied to FC and Ethernet ports on an NPIV proxy gateway, an FCoE map allows the switch to operate as an FCoE-FC bridge between an FC SAN and an FCoE network by providing FCoE-enabled servers and switches with the necessary parameters to log in to a SAN fabric.

On an M I/O Aggregator with the PMUX module NPIV proxy gateway, you cannot apply an FCoE map is applied on fabric-facing FC ports and server-facing 10–Gigabit Ethernet ports.

An FCoE map consists of the following parameters: the dedicated FCoE VLAN used for storage traffic, the destination SAN fabric (FC-MAP value), FCF priority used by a server, and the FIP keepalive (FKA) advertisement timeout.

In each FCoE map, the fabric ID, FC-MAP value, and FCoE VLAN parameters must be unique. Use one FCoE map to access one SAN fabric. You cannot use the same FCoE map to access different fabrics.

To remove an FCoE map from an Ethernet interface, enter the `no fcoe-map map-name` command in Interface configuration mode.

Related Commands

`show fcoe-map` — displays the Fibre Channel and FCoE configuration parameters in FCoE maps.

**fka-adv-period**

In an FCoE map, configure the time interval used to transmit FIP keepalive (FKA) advertisements.

**M I/O Aggregator with the FC Flex IO module**

**Syntax**

```
fka-adv-period seconds
```

**Parameters**

- `seconds` Enter the time period (in seconds) used to send FIP keepalive messages to peer devices. The range is from 8 to 90 seconds.

**Defaults**

8 seconds

**Command Modes**

FCOE MAP

**Supported Modes**

Programmable-Mux (PMUX)

**Command History**

| 9.3(0.0) |Introduced on the M I/O Aggregator and MXL 10/40GbE Switch with the FC Flex IO module.

**Usage Information**

To delete the FIP keepalive time period from an FCoE map, enter the `no fka-adv-erpiod` command.
interface vlan (NPIV proxy gateway)

Create a dedicated VLAN to be used to send and receive Fibre Channel traffic over FCoE links between servers and a fabric over an M I/O Aggregator with the PMUX module NPIV proxy gateway.

M I/O Aggregator with the FC Flex IO module

Syntax

interface vlan vlan-id

Parameters

vlan-id

Enter a number as the VLAN Identifier. The range is 1 to 4094.

Defaults

Not configured.

Command Modes

CONFIGURATION

Supported Modes

Programmable-Mux (PMUX)

Command History

Version Description
9.3(0.0) Introduced on the M I/O Aggregator and MXL 10/40GbE Switch with the FC Flex IO module configured as an NPIV proxy gateway.

Usage Information

FCoE storage traffic received from servers on an M I/O Aggregator with the PMUX module NPIV proxy gateway is de-capsulated into Fibre Channel packets and forwarded over FC links to SAN switches in a specified fabric. You must configure a separate FCoE VLAN for each fabric to which FCoE traffic is forwarded. Any non-FCoE traffic sent on a dedicated FCoE VLAN will be dropped.

You configure the association between a dedicated VLAN, which carries FCoE traffic from server CNAs over the NPIV proxy gateway to a SAN fabric in which destination storage arrays are installed, in an FCoE map by using the fabric id vlan command.

When you apply an FCoE map to a server-facing Ethernet port, the port is automatically configured as a tagged member of the FCoE VLAN.

For more information about VLANs and the commands to configure them, refer to the Virtual LAN (VLAN) Commands section.

Example (Single Range)

Dell(conf)#interface vlan 10
Dell(conf-if-vl-3)#

Related Commands

fcoe-map — creates an FCoE map which contains the parameters used in the communication between servers and a SAN fabric.
**keepalive**

In an FCoE map, enable the monitoring of FIP keepalive messages (if it is disabled).

**M I/O Aggregator with the FC Flex IO module**

<table>
<thead>

</table>
Switch WWN

Factory-assigned worldwide node (WWN) name of the Aggregator. The M I/O Aggregator WWN name is not user-configurable.

Example

Dell(conf)#do show fc switch
Switch Mode : NPG
Switch WWN : 10:00:aa:00:00:00:00:ac
Dell(conf)#

show fcoe-map

Display the Fibre Channel and FCoE configuration parameters in FCoE maps.

M I/O Aggregator with the FC Flex IO module

Syntax

`show fcoe-map [brief | map-name]`

Parameters

- **brief**: Displays an overview of currently configured FCoE maps.
- **map-name**: Displays the FC and FCoE configuration parameters in a specified FCoE map. The FCoE map is applied on Ethernet (FCoE) and FC ports to transmit FC storage traffic to a specified fabric.

Command Modes

- EXEC
- EXEC Privilege

Supported Modes

All Modes

Command History

<table>
<thead>
<tr>

</tr>
</thead>
<tbody>
<tr>
<td>9.3(0.0)</td>
<td>Introduced on the M I/O Aggregator and MXL 10/40GbE Switch with the FC Flex IO module.</td>
</tr>
</tbody>
</table>

Usage Information

Use the `show fcoe-map` command to display the FC and FCoE parameters used to configure server-facing Ethernet (FCoE) and fabric-facing FC ports in all FCoE maps on an M I/O Aggregator with the FC Flex IO module NPIV proxy gateway.

In each FCoE map, the values for the fabric ID and FC-MAP that identify the SAN fabric to which FC storage traffic is sent, and the FCoE VLAN to be used must be unique.

An FCoE map is used to identify the SAN fabric to which FCoE storage traffic is sent and to virtualize M I/O Aggregator with the FC Flex IO module FC ports so that they appear to downstream server CNA ports as FCoE Forwarder (FCF) ports on an FCoE network.

The following table describes the `show fcoe-map brief` output shown in the example below.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fabric-Name</td>
<td>Name of a SAN fabric.</td>
</tr>

Related Commands  fcoe-map — creates an FCoE map which contains the parameters used in the communication between servers and a SAN fabric.

show npiv devices

Display the FCoE and FC devices currently logged into an M I/O Aggregator with the FC Flex IO module NPIV proxy gateway.

M I/O Aggregator with the FC Flex IO module

Syntax            show npiv devices [brief]

Parameters

- brief            Displays an overview of current server CNA-fabric connections over an M I/O Aggregator with the FC Flex IO module NPIV proxy gateway.

Command Modes

- EXEC
- EXEC Privilege

Supported Modes

All Modes

Command History

Version  Description
9.3(0.0)  Introduced on the M I/O Aggregator and MXL 10/40GbE Switch with the FC Flex IO module.

Usage Information

Use the show npiv devices command to display information on the server CNA, server-facing Ethernet and fabric-facing FC ports, and the SAN fabric in each server-fabric connection over an M I/O Aggregator with the FC Flex IO module that operates as an NPIV proxy gateway.

The following table describes the show npiv devices brief output shown in the example below.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ENode-Intf</td>
<td>M I/O Aggregator with the FC Flex IO module Ethernet interface (slot/port) to which a server CNA is connected.</td>
</tr>
<tr>
<td>ENode-WWPN</td>
<td>Worldwide port name (WWPN) of a server CNA port.</td>
</tr>
<tr>
<td>FCoE-Vlan</td>
<td>VLAN ID of the dedicated VLAN used to transmit FCoE traffic to and from the fabric.</td>
</tr>
<tr>
<td>Fabric-Intf</td>
<td>Fabric-facing Fibre Channel port (slot/port) on which FC traffic is transmitted to the specified fabric.</td>
</tr>
</tbody>
</table>
Field                      Description
Fabric-Map                 Name of the FCoE map containing the FCoE/FC configuration parameters for the server CNA-fabric connection.
LoginMethod                Method used by the server CNA to log in to the fabric; for example: FLOGI - ENode logged in using a fabric login (FLOGI).
                          FDISC - ENode logged in using a fabric discovery (FDISC).
Status                     Operational status of the link between a server CNA port and a SAN fabric: Logged In - Server has logged in to the fabric and is able to transmit FCoE traffic.

Example

Dell# show npiv devices brief
Total NPIV Devices = 2

Usage Information

The following table describes the show npiv devices output shown in the example below.

Field                      Description
ENode [number]             A server CNA that has successfully logged in to a fabric over an M I/O Aggregator with the FC Flex IO module Ethernet port in ENode mode.
Enode MAC                   MAC address of a server CNA port.
Enode Intf                  Port number of a server-facing Ethernet port operating in ENode mode.
FCF MAC                     Fibre Channel forwarder MAC: MAC address of M I/O Aggregator with the FC Flex IO module FCF interface.
Fabric Intf                 Fabric-facing Fibre Channel port (slot/port) on which FCoE traffic is transmitted to the specified fabric.
FCoE VLAN                   ID of the dedicated VLAN used to transmit FCoE traffic from a server CNA to a fabric and configured on both the server-facing M I/O Aggregator with the FC Flex IO module port and server CNA port.
Fabric Map                  Name of the FCoE map containing the FCoE/FC configuration parameters for the server CNA-fabric connection.
Enode WWPN                  Worldwide port name of the server CNA port.
Enode WWNN                  Worldwide node name of the server CNA.
FCoE MAC                    Fabric-provided MAC address (FPMA). The FPMA consists of the FC-MAP value in the FCoE map and the FC-ID provided by the fabric after a successful FLOGI. In the FPMA, the most significant bytes are the FC-MAP; the least significant bytes are the FC-ID.
FC-ID                       FC port ID provided by the fabric.
LoginMethod                 Method used by the server CNA to log in to the fabric; for example, FLOGI or FDISC.
Secs                        Number of seconds that the fabric connection is up.
State                       Status of the fabric connection: logged in.
Example

ENode[0]:
ENode MAC : 00:10:18:f1:94:21
ENode Intf : Te 0/12
FCF MAC : 5c:f9:dd:ef:10:c8

LoginMethod : FDISC
Secs : 5593
Status : LOGGED_IN

Related Commands

- **fcoe-map** — creates an FCoE map which contains the parameters used in the communication between servers and a SAN fabric.

**show running-config fcoe-map**

Displays the current fcoe-map configurations.

**M I/O Aggregator with the FC Flex IO module**

**Syntax**

- `show running-config fcoe-map`

**Command Modes**

- EXEC Privilege

**Supported Modes**

- All Modes

**Command History**

- **Version**
  - **9.6(0.0)**: Supported on the FN2210S Aggregator.
  - **9.3(0.0)**: Introduced on the M I/O Aggregator and MXL 10/40GbE Switch with the FC Flex IO module.

**Example**

```
Dell(conf)#do show running-config fcoe-map
!
fcoe-map map
   fc-map 0efc00
   fabric-id 100 vlan 100
```
FC FLEXIO FPORT

The switch is a Trident+ based switch which is plugged into the Dell M1000 Blade server chassis. The blade module contains two slots for pluggable flexible module. The goal is to provide support for direct connectivity to FC equipments through Fibre channel ports by FC Flex IO optional module. The FC Flex IO utilizes Broadcom Montreal (BCM84757) FC/FCOE mapper to provide FCOE to FC functionality.

active-zoneset

Activate the zoneset.

Syntax

active-zoneset zoneset_name

To change to the default zone behavior, use the no active-zoneset zoneset_name command.

Parameters

zoneset_name Enter the zoneset name.

Command Modes

FC FABRIC CONFIGURATION

Supported Modes

All Modes

Command History

Version Description
9.7(0.0) Introduced on the M I/O Aggregator.

Example

Dell(conf)# fcoe-map default_full_fabric
Dell(conf-fcoe-default_full_fabric)# fc-fabric
Dell(conf-fmap-default_full_fabric-fcfabric)# active-zoneset zs1

Related Commands

show fc zoneset — displays the configured and active zoneset.

fabric

Apply an FCoE map on a fabric-facing Fibre Channel (FC) port.

Syntax

fabric map-name

Parameters

map-name Maximum: 32 alphanumeric characters.

Defaults

None

Command Modes

INTERFACE FIBRE_CHANNEL

Supported Modes

All Modes
An FCoE map is a template used to map FCoE and FC parameters in a converged fabric. An FCoE map virtualizes the upstream FC ports on an M I/O Aggregator NPIV proxy gateway to appear to downstream server CNA ports as FCoE forwarder (FCF) ports on an FCoE network. When applied to FC and Ethernet ports on an NPIV proxy gateway, an FCoE map allows the switch to operate as an FCoE-FC bridge between an FC SAN and an FCoE network. It provides necessary parameters to FCoE-enabled servers and switches to log in to a SAN fabric. Use the `fcoe-map` command to create an FCoE map.

On an M I/O Aggregator NPIV proxy gateway, an FCoE map is applied on fabric-facing FC ports and server-facing Ethernet ports. Use the `fabric` command to apply an FCoE map on an FC port. Use the `fcoe-map` command to apply an FCoE map on an Ethernet port.

After you apply an FCoE map on an FC interface, when the port is enabled (**no shutdown**), the NPIV proxy gateway starts sending FIP multicast advertisements on behalf of the FC port to downstream servers to advertise the availability of a new FCF port on the FCoE VLAN.

To remove an FCoE map from an FC interface, enter the **no fabric map-name** command in Interface configuration mode.

**Related Commands**

- `fcoe-map` — creates an FCoE map which contains the parameters used in the communication between servers and a SAN fabric.
- `show fcoe-map` — displays the Fibre Channel and FCoE configuration parameters in FCoE maps.

### fc alias

Create a zone alias name.

**Syntax**

```
fcregister ZoneAliasName member name
```

To delete a zone alias name, use the **no fc zone ZoneAliasName** command.

**Parameters**

- `ZoneAliasName member name`
  - Enter the zone alias name.
  - Enter the WWPN, port ID, or domain/port.

**Command Modes**

- **CONFIGURATION**

**Supported Modes**

- All Modes

**Command History**

- **Version**
  - 9.7(0.0) Introduced on the M I/O Aggregator.

**Example**

Syntax:

```
Dell(conf)#fc alias test12
Dell(conf-fc-alias-test12)#?
end                     Exit from configuration mode
exit                    Exit from Alias config mode
```

144   FC FLEXIO FPORT
member                  Add Alias member
no                      Negate a command or set its defaults
show                    Show alias profile configuration

Dell(conf-fc-alias-test12)#member ?
WORD                    WWN(00:00:00:00:00:00:00:00), or portID(123000)

Related Commands
show fc alias — displays the configured alias.

**fc zone**

Create a zone.

**Syntax**

fc zone zonename member

To delete a zone, use the no fc zone zonename member command.

**Parameters**

zonename            Enter the zone name.
member              Enter the WWPN, port ID, or domain/port.

**Command Modes**

ALIAS CONFIGURATION

Dell(conf-fc-zoneset-test1)#member

**Related Commands**

- `show fc zoneset` — displays the configured and active zoneset.
- `show fcoe-map` — displays the fabric parameters.

## fcoe-map

Create an FCoE map which contains the parameters used to configure the links between server CNAs and a SAN fabric. Apply the FCoE map on a server-facing Ethernet port.

**Syntax**

```
fcoe-map map-name
```

**Parameters**

- `map-name` Maximum: 32 alphanumeric characters.

**Defaults**

None

**Command Modes**

- **CONFIGURATION**
- **INTERFACE**

**Supported Modes**

- All Modes

**Command History**

- **Version 9.3(0.0)**
  - Introduced on the M I/O Aggregator.

**Usage Information**

An FCoE map is a template to map FCoE and FC parameters in a converged fabric. An FCoE map virtualizes upstream FC ports on an M I/O Aggregator NPIV proxy gateway to appear to downstream server CNA ports as FCoE forwarder (FCF) ports on an FCoE network. When applied to FC and Ethernet ports on an NPIV proxy gateway, an FCoE map allows the switch to operate as an FCoE-FC bridge between an FC SAN and an FCoE network. It provides necessary parameters to FCoE-enabled servers and switches to log in to a SAN fabric.
On an M I/O Aggregator NPIV proxy gateway, an FCoE map is applied on fabric-facing FC ports and server-facing Ethernet ports. Use the `fcoe-map` command to apply an FCoE map on an Ethernet port. Use the `fabric` command to apply an FCoE map on an FC port.

An FCoE map consists of the following parameters: the dedicated FCoE VLAN for storage traffic, the destination SAN fabric (FC-MAP value), FCF priority, and the FIP keepalive (FKA) advertisement timeout.

To remove an FCoE map from an Ethernet interface, enter the `no fcoe-map map-name` command in Interface configuration mode.

NOTE: You cannot create fcoe-map in IOA mode. It can only be created in PMUX mode.

NOTE: In FCF F mode, you can create only one FCoE map. It doesn't get created automatically. If you try to create more than one map, an error message is displayed.

Related Commands

- `show fcoe-map`— displays the Fibre Channel and FCoE configuration parameters in FCoE maps.

**feature fc**

Enable feature fc with FPort functionality.

**Syntax**

```
feature fc fport domain-id range
```

**Parameters**

- `Range` Enter the range from 1 to 239.

**Command Modes**

- CONFIGURATION

9.3(0.0) Introduced on the M I/O Aggregator.

Usage Information

Use the show fcoe-map command to display the FC and FCoE parameters used to configure server-facing Ethernet (FCoE) and fabric-facing FC ports in all FCoE maps on an M I/O Aggregator Switch.

In each FCoE map, the values for the fabric ID and FC-MAP that identify the SAN fabric to which FC storage traffic is sent, and the FCoE VLAN to be used must be unique.

An FCoE map is used to identify the SAN fabric to which FCoE storage traffic is sent. It also virtualizes M I/O Aggregator Switch with the FC Flex IO module FC ports so that they appear to downstream server CNA ports as FCoE Forwarder (FCF) ports on an FCoE network.

Example

Dell(conf)#do show fcoe-map

Fabric Name          SAN_FABRIC
Fabric Type          npiv
Fabric Id            1002
Vlan Id              1002
Vlan priority        3
FC-MAP               0efc00
FKA-ADV-Period       8
Fcf Priority         128
Config-State         ACTIVE
Oper-State           UP

Dell(conf)#

Related Commands
fcoe-map — creates an FCoE map which contains the parameters used in the communication between servers and a SAN fabric.
FIP Snooping

In a converged Ethernet network, an Aggregator can operate as an intermediate Ethernet bridge to snoop on Fibre Channel over Ethernet Initialization Protocol (FIP) packets during the login process on Fibre Channel over Ethernet (FCoE) forwarders (FCFs). Acting as a transit FIP snooping bridge, the switch uses dynamically-created ACLs to permit only authorized FCoE traffic to be transmitted between an FCoE end-device and an FCF.

This chapter describes the FIP snooping commands.

clear fip-snooping database interface vlan

Clear FIP snooping information on a VLAN for a specified FCoE MAC address, ENode MAC address, or FCF MAC address, and remove the corresponding ACLs FIP snooping generates.

Syntax

```
clear fip-snooping database interface vlan vlan-id {fcoe-mac-address | enode-mac-address | fcf-mac-address}
```

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>fcoe-mac-address</td>
<td>Enter the FCoE MAC address to be cleared of FIP snooping information.</td>
</tr>
<tr>
<td>enode-mac-address</td>
<td>Enter the ENode MAC address to be cleared of FIP snooping information.</td>
</tr>
<tr>
<td>fcf-mac-address</td>
<td>Enter the FCF MAC address to be cleared of FIP snooping information.</td>
</tr>
</tbody>
</table>

clear fip-snooping statistics

Clear the statistics on the FIP packets snooped on all VLANs, a specified VLAN, or a specified port interface.

Syntax

```
clear fip-snooping statistics [interface vlan vlan-id] interface port-type port/slot | interface port-channel port-channel-number]
```

Parameters

<table>

**fip-snooping enable**

Enable FIP snooping on all VLANs or on a specified VLAN.

**Syntax**

fip-snooping enable

To disable the FIP snooping feature on all or a specified VLAN, use the no fip-snooping enable command.

**Defaults**

FIP snooping is disabled on all VLANs.

</table>
Version Description
8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
The maximum number of FCFs supported per FIP snooping-enabled VLAN is four. The maximum number of FIP snooping sessions supported per ENode server is 16.

fip-snooping fc-map
Configure the FC-MAP value FIP snooping uses on all VLANs.

Syntax
fip-snooping fc-map fc-map-value

To return the configured FM-MAP value to the default value, use the no fip-snooping fc-map command.

Parameters
fc-map-value Enter the FC-MAP value FIP snooping uses. The range is from 0EFC00 to 0EFCFF.

Defaults
0x0EFC00

Command Modes

Usage Information
The maximum number of FCFs supported per FIP snooping-enabled VLAN is four.
show fip-snooping statistics

Displays statistics on the FIP packets snooped on all interfaces, including VLANs, physical ports, and port channels.

Syntax

```
show fip-snooping statistics [interface vlan vlan-id | interface port-type port/slot | interface port-channel port-channel-number]
```

Parameters

- **vlan-id**
  - Enter the VLAN ID of the FIP packet statistics to be displayed.

- **port-type port/slot**
  - Enter the port-type and slot number of the FIP packet statistics to be displayed.

- **port-channel-number**
  - Enter the port channel number of the FIP packet statistics to be displayed.

debug fip-snooping
Enable the debug FIP protocol specific messages.

Syntax          debug fip-snooping [all|acl|error|ifm|info|ipc|rx]

Parameters

- all       Enable all the debug options.
- acl       Enable for ACL specific debugs
- error     Enable for Error specific debugs
- ifm       Enable for IFM specific debugs
- info      Enable for Information specific debugs

Command History
Version Description
9.4(0.0) Supported on the FN I/O Aggregator.
8.3.17.0 Supported on the M I/O Aggregator.

Usage Information
The following table describes the show fip-snooping fcf command.

Field Description
FCF MAC MAC address of the FCF
FCF Interface Slot/ port number of the interface to which the FCF is connected.

Example
Dell# show fip-snooping enode
Enode MAC Enode Interface FCF MAC
VLAN FC-ID
-------- --------------- ----
---- ---- ------ d4:ae:52:1b:e3:cd Te 0/11
54:7f:ee:37:34:40 100 62:00:11

Usage Information
The following table describes the show fip-snooping enode command.

Field Description
ENode MAC MAC address of the ENode
ENode Interface Slot/ port number of the interface connected to the ENode.
FCF MAC MAC address of the FCF
VLAN VLAN ID number used by the session
FC-ID Fibre Channel session ID assigned by the FCF.

Example
Dell# show fip-snooping enode
Enode MAC Enode Interface FCF MAC
VLAN FC-ID
-------- --------------- ----
---- ---- ------ d4:ae:52:1b:e3:cd Te 0/11
54:7f:ee:37:34:40 100 62:00:11
### show fip-snooping sessions

Displays information on FIP-snooped sessions on all VLANs or a specified VLAN, including the ENode interface and MAC address, the FCF interface and MAC address, VLAN ID, FCoE MAC address and FCoE session ID number (FC-ID), worldwide node name (WWNN) and the worldwide port name (WWPN).

**Syntax**

```
show fip-snooping sessions[interface vlan vlan-id]
```

**Parameters**

- `vlan-id` Enter the vlan-id of the specified VLAN to be displayed.

**Command Modes**

- EXEC
- EXEC Privilege

**Supported Modes**

All Modes

**Command History**

- **Version**
  - 9.4(0.0) Supported on the FN I/O Aggregator.

</tr>
</tbody>
</table>
show fip-snooping statistics

Displays statistics on the FIP packets snooped on all interfaces, including VLANs, physical ports, and port channels.

Syntax

```
show fip-snooping statistics [interface vlan vlan-id | interface port-type port/slot | interface port-channel port-channel-number]
```

Parameters

- **vlan-id**: Enter the VLAN ID of the FIP packet statistics to be displayed.
- **port-type port/slot**: Enter the port-type and slot number of the FIP packet statistics to be displayed.
- **port-channel-number**: Enter the port channel number of the FIP packet statistics to be displayed.

<td>0X0EFC00</td>
<td>1</td>
<td>1</td>
<td>1</td>
</tr>
</tbody>
</table>
```
Internet Group Management Protocol (IGMP)

The Dell Networking OS supports IGMP snooping version 2 and 3 on all Dell Networking systems.

IGMP Commands

The Dell Networking OS supports the following IGMP commands:

- `clear ip igmp groups`
- `debug ip igmp`
- `ip igmp group-join-limit`
- `ip igmp querier-timeout`
- `ip igmp query-interval`
- `ip igmp query-max-resp-time`
- `ip igmp snooping enable`
- `ip igmp snooping fast-leave`
- `ip igmp snooping flood`
- `ip igmp snooping last-member-query-interval`
- `ip igmp snooping mrouter`
- `ip igmp snooping querier`
- `ip igmp version`
- `show ip igmp groups`
- `show ip igmp interface`
- `show ip igmp snooping mrouter`

Important Points to Remember

- Dell Networking OS supports version 1, version 2, and version 3 hosts.
- Dell Networking OS IGMP snooping implementation is based on IP multicast address (not based on Layer 2 multicast mac-address) and the IGMP snooping entries are in Layer 3 flow table not in Layer 2 forwarding information base (FIB).
- Dell Networking OS IGMP snooping implementation is based on draft-ietf-magma-snoop-10.
- IGMP snooping is supported on all M I/O Aggregator stack members.
- IGMP snooping is enabled by default on the switch.
- A maximum of 8k groups and 4k virtual local area networks (VLAN) are supported.
- IGMP snooping is not supported on default VLAN interface.
- Flooding of unregistered multicast traffic is enabled by default.
- Queries are not accepted from the server side ports and are only accepted from the uplink LAG.
- Reports and Leaves are flooded by default to the uplink LAG irrespective of whether it is an mrouter port or not.
IGMP Snooping Commands

Dell Networking OS supports IGMP Snooping version 2 and 3 on all Dell Networking systems.

Important Points to Remember for IGMP Snooping

• Dell Networking OS supports version 1, version 2, and version 3 hosts.
• Dell Networking OS IGMP snooping implementation is based on IP multicast address (not based on Layer 2 multicast mac address) and the IGMP snooping entries are in Layer 3 flow table not in Layer 2 forwarding information base (FIB).
• Dell Networking OS IGMP snooping implementation is based on draft-ietf-magma-snoop-10.
• Dell Networking OS supports IGMP snooping on JUMBO-enabled cards.
• IGMP snooping is not enabled by default on the switch.
• A maximum of 1800 groups and 600 VLAN are supported.
• IGMP snooping is not supported on a default VLAN interface.
• IGMP snooping is not supported over VLAN-Stack-enabled VLAN interfaces (you must disable IGMP snooping on a VLAN interface before configuring VLAN-Stack-related commands).

clear ip igmp groups

Clear entries from the group cache table.

Syntax

```plaintext
clear ip igmp groups [group-address | interface]
```

Parameters

- **group-address** (OPTIONAL) Enter the IP multicast group address in dotted decimal format.
- **interface** (OPTIONAL) Enter the interface type and slot/port information: For a VLAN interface enter the keyword vlan followed by a number from 1 to 4094.

Command Modes

- EXEC Privilege

Supported Modes

- All Modes

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

debug ip igmp

Enable debugging of IGMP packets.

Syntax

```plaintext
debug ip igmp [group address | interface]
```

To disable IGMP debugging, enter the `no ip igmp` command. To disable all debugging, enter the `undebug all` command.

Defaults

- Disabled

Parameters

- **group-address** (OPTIONAL) Enter the IP multicast group address in dotted decimal format.
interface (OPTIONAL) Enter the interface type and slot/port information:
For a VLAN interface enter the keyword vlan followed by a number from 1 to 4094.

</tr>
</tbody>
</table>

**ip igmp group-join-limit**

To limit the number of IGMP groups that can be joined in a second, use this feature.

**Syntax**

```
ip igmp group-join-limit number
```

**Parameters**

- **number**
  Enter the number of IGMP groups permitted to join in a second. The range is from 1 to 10000.

**Defaults**

none

**Command Modes**

CONFIGURATION (conf-if-interface-slot/port)

**Supported Modes**

Programmable-Mux (PMUX)

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>

<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**ip igmp querier-timeout**

Change the interval that must pass before a multicast router decides that there is no longer another multicast router that should be the querier.

**Syntax**

```
ip igmp querier-timeout seconds
```

To return to the default value, use the `no ip igmp querier-timeout` command.

**Parameters**

- **seconds**
  Enter the number of seconds the router must wait to become the new querier. The range is from 60 to 300. The default is 125 seconds.

**Defaults**

125 seconds

**Command Modes**

INTERFACE

**Supported Modes**

Programmable-Mux (PMUX)
ip igmp query-interval

Change the transmission frequency of IGMP general queries the Querier sends.

Syntax

```
ip igmp query-interval seconds
```

To return to the default values, use the `no ip igmp query-interval` command.

Parameters

- `seconds`
  
  Enter the number of seconds between queries sent out. The range is from 1 to 18000. The default is 60 seconds.

Defaults

- 60 seconds

Command Modes

- INTERFACE

Supported Modes

- Programmable-Mux (PMUX)

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

ip igmp query-max-resp-time

Set the maximum query response time advertised in general queries.

Syntax

```
ip igmp query-max-resp-time seconds
```

To return to the default values, use the `no ip igmp query-max-resp-time` command.

Parameters

- `seconds`
  
  Enter the number of seconds for the maximum response time. The range is from 1 to 25. The default is 10 seconds.

Defaults

- 10 seconds

Command Modes

- INTERFACE

Supported Modes

- Programmable-Mux (PMUX)

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>
**ip igmp snooping enable**

Enable IGMP snooping on all or a single VLAN. This command is the master on/off switch to enable IGMP snooping.

**Syntax**

```
ip igmp snooping enable
```

To disable IGMP snooping, use the `no ip igmp snooping enable` command.

**Defaults**

Disabled.

**Command Modes**

- CONFIGURATION
- INTERFACE VLAN

**Supported Modes**

Programmable-Mux (PMUX)

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

To enable IGMP snooping, enter this command. When you enable this command from CONFIGURATION mode, IGMP snooping enables on all VLAN interfaces (except the default VLAN).

NOTE: Execute the `no shutdown` command on the VLAN interface for IGMP Snooping to function.

---

**ip igmp snooping fast-leave**

Enable IGMP snooping fast-leave for this VLAN.

**Syntax**

```
ip igmp snooping fast-leave
```

To disable IGMP snooping fast leave, use the `no igmp snooping fast-leave` command.

**Defaults**

Not configured.

**Command Modes**

INTERFACE VLAN — (conf-if-vl-n)

**Supported Modes**

Programmable-Mux (PMUX)

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

Queriers normally send some queries when a leave message is received prior to deleting a group from the membership database. There may be situations when you require a fast deletion of a group. When you enable IGMP fast leave processing, the switch removes an interface from the multicast group as soon as it detects an IGMP version 2 leave message on the interface.
**ip igmp snooping flood**

This command controls the flooding behavior of unregistered multicast data packets. When flooding is disabled, unregistered multicast data traffic is forwarded to only multicast router ports in a VLAN. If there is no multicast router port in a VLAN, unregistered multicast data traffic is dropped.

**Syntax**

```
ip igmp snooping flood
```

To disable the flooding, use the `no ip igmp snooping flood` command.

**Parameters**

- Enabled

**Command Modes**

CONFIGURATION

**Supported Modes**

All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**ip igmp snooping last-member-query-interval**

The last member query interval is the maximum response time inserted into Group-Specific queries sent in response to Group-Leave messages.

**Syntax**

```
ip igmp snooping last-member-query-interval milliseconds
```

To return to the default value, use the `no ip igmp snooping last-member-query-interval` command.

**Parameters**

- `milliseconds` - Enter the interval in milliseconds. The range is from 100 to 65535. The default is 1000 milliseconds.

**Defaults**

1000 milliseconds

**Command Modes**

INTERFACE VLAN

**Supported Modes**

Programmable-Mux (PMUX)

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

This last-member-query-interval is also the interval between successive Group-Specific Query messages. To change the last-member-query interval, use this command.
**ip igmp snooping mrouter**

Statically configure a VLAN member port as a multicast router interface.

**Syntax**

```
ip igmp snooping mrouter interface interface
```

To delete a specific multicast router interface, use the **no igmp snooping mrouter interface interface** command.

**Parameters**

`interface interface`  
Enter the following keywords and slot/port or number information:

- For a 100/1000 Ethernet interface, enter the keyword `gigabitethernet` followed by the slot/port information.
- For a 1-Gigabit Ethernet interface, enter the keyword `gigabitethernet` followed by the slot/port information.
- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
- For a Port Channel interface, enter the keywords `port-channel` then a number.

**Defaults**  
Not configured.

**Command Modes**  
INTERFACE VLAN — (conf-if-vl-n)

**Supported Modes**  
Programmable-Mux (PMUX)

**Command History**  
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
</table>
| 9.2(0.0) | Introduced on the M I/O Aggregator.

**Usage Information**  
Dell Networking OS provides the capability of statically configuring the interface to which a multicast router is attached. To configure a static connection to the multicast router, enter the `ip igmp snooping mrouter interface interface` command in the VLAN context. The interface to the router must be a part of the VLAN where you are entering the command.

**ip igmp snooping querier**

Enable IGMP querier processing for the VLAN interface.

**Syntax**

```
ip igmp snooping querier
```

To disable IGMP querier processing for the VLAN interface, use the **no ip igmp snooping querier** command.

**Defaults**  
Not configured.

**Command Modes**  
INTERFACE VLAN — (conf-if-vl-n)
Supported Modes
Programmable-Mux (PMUX)

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

Usage Information
This command enables the IGMP switch to send General Queries periodically. This behavior is useful when there is no multicast router present in the VLAN because the multicast traffic is not routed. Assign an IP address to the VLAN interface for the switch to act as a querier for this VLAN.

**ip igmp version**

Manually set the version of the router to IGMPv2 or IGMPv3.

Syntax
```plaintext
ip igmp version {2 | 3}
```

Parameters
- **2**
  - Enter the number 2 to set the IGMP version number to IGMPv2.
- **3**
  - Enter the number 3 to set the IGMP version number to IGMPv3.

Defaults
2 (that is, IGMPv2)

Command Modes
- INTERFACE

Supported Modes
Programmable-Mux (PMUX)

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**show ip igmp groups**

View the IGMP groups.

Syntax
```plaintext
show ip igmp groups [group-address [detail] | detail | interface [group-address [detail]]]
```

Parameters
- **group-address**
  - (OPTIONAL) Enter the group address in dotted decimal format to view information on that group only.
- **interface**
  - (OPTIONAL) Enter the interface type and slot/port information:
    - For a VLAN interface enter the keyword vlan followed by a number from 1 to 4094.
- **detail**
  - (OPTIONAL) Enter the keyword detail to display the IGMPv3 source information.

Command Modes
- EXEC
Internet Group Management Protocol (IGMP)

show ip igmp groups
View information on the interfaces participating in IGMP.

Syntax
show ip igmp interface [interface]

Parameters
interface  (OPTIONAL) Enter any of the following keywords and slot/port or number to clear counters from a specified interface:

Field | Description
--- | ---
Group Address | Lists the multicast address for the IGMP group.
Interface | Lists the interface type, slot and port number.
Mode | Displays the IGMP version used.
Uptime | Displays the amount of time the group has been operational.
Expires | Displays the amount of time until the entry expires.
Last Reporter | Displays the IP address of the last host to be a member of the IGMP group.
Member Ports | Indicates the member ports of the port channel. If the port channel is VLT, an asterisk (*) after the port channel number indicates the port channel is locally down and that a remote VLT port is up.

Example
Dell#show ip igmp groups
Total Number of Groups: 5
IGMP Connected Group Membership
Group Address Interface Mode Uptime Expires Last Reporter
225.0.0.0 Vlan 100 IGMPv2 00:00:05 00:02:04 3.0.0.51
Member Ports: Po 2
225.0.0.2 Vlan 100 IGMPv2 00:00:05 00:02:04 3.0.0.51
Member Ports: Po 2
225.0.0.3 Vlan 100 IGMPv2 00:00:05 00:02:04 3.0.0.51
Member Ports: Po 2
225.0.0.4 Vlan 100 IGMPv2 00:00:05 00:02:04 3.0.0.51
Member Ports: Po 2

show ip igmp interface
View information on the interfaces participating in IGMP.

Syntax
show ip igmp interface [interface]

Parameters
interface  (OPTIONAL) Enter any of the following keywords and slot/port or number to clear counters from a specified interface:

Example
Dell#show ip igmp groups
Total Number of Groups: 5
IGMP Connected Group Membership
Group Address Interface Mode Uptime Expires Last Reporter
225.0.0.0 Vlan 100 IGMPv2 00:00:05 00:02:04 3.0.0.51
Member Ports: Po 2
225.0.0.2 Vlan 100 IGMPv2 00:00:05 00:02:04 3.0.0.51

225.0.0.3 Vlan 100 IGMPv2 00:00:05 00:02:04 3.0.0.51
Member Ports: Po 2
225.0.0.4 Vlan 100 IGMPv2 00:00:05 00:02:04 3.0.0.51
Member Ports: Po 2

Field | Description
--- | ---
Group Address | Lists the multicast address for the IGMP group.
Interface | Lists the interface type, slot and port number.
Mode | Displays the IGMP version used.
Uptime | Displays the amount of time the group has been operational.
Expires | Displays the amount of time until the entry expires.
Last Reporter | Displays the IP address of the last host to be a member of the IGMP group.
Member Ports | Indicates the member ports of the port channel. If the port channel is VLT, an asterisk (*) after the port channel number indicates the port channel is locally down and that a remote VLT port is up.

Example
Dell#show ip igmp groups
Total Number of Groups: 5
IGMP Connected Group Membership
Group Address Interface Mode Uptime Expires Last Reporter
225.0.0.0 Vlan 100 IGMPv2 00:00:05 00:02:04 3.0.0.51
Member Ports: Po 2
225.0.0.2 Vlan 100 IGMPv2 00:00:05 00:02:04 3.0.0.51

Related Commands

- `show ip igmp groups` — Use this IGMP command to view groups.
Interfaces

This chapter defines the interface commands on the Aggregator switch.

Port Interface Commands

The following commands are for physical, loopback, and null interfaces:

- clear counters
- clear mac-address-table dynamic
- interface range

Port Channel Commands

A Link Aggregation Group (LAG) is a group of links that appear to a MAC client as if they were a single link according to IEEE 802.3ad. In Dell Networking OS, a LAG is referred to as a Port Channel.

- For the Aggregator, the maximum port channel ID is 128 and the maximum members per port channel is 16.

Because each port can be assigned to only one Port Channel, and each Port Channel must have at least one port, some of those nominally available Port Channels might have no function because they could have no members if there are not enough ports installed. In the Aggregator, stack members can provide those ports.

The commands in this section are specific to Port Channel interfaces:

- auto vlan
• monitor interface
• show config (from INTERFACE RANGE mode)
• show interfaces port-channel

NOTE: The Dell Networking OS implementation of LAG or Port Channel requires that you configure a LAG on both switches manually. For information about Dell Networking OS link aggregation control protocol (LACP) for dynamic LAGs, refer to the Link Aggregation Control Protocol (LACP) chapter. For more information about configuring and using Port Channels, refer to the Dell PowerEdge M I/O Aggregator Configuration Guide

Time Domain Reflectometer (TDR) Commands

TDR is useful for troubleshooting an interface that is not establishing a link; either it is flapping or not coming up at all. TDR detects open or short conditions of copper cables on 100/1000/10G Base-T modules.

• tdr-cable-test
• show tdr

Important Points to Remember

• The interface and port must be enabled (configured—see the interface command) before running TDR. An error message is generated if you have not enabled the interface.
• The interface on the far-end device must be shut down before running TDR.
• Because TDR is an intrusive test on an interface that is not establishing a link, do not run TDR on an interface that is passing traffic.
• When testing between two devices, do not run the test on both ends of the cable.

Virtual LAN (VLAN) Commands

The following commands configure and monitor virtual local area networks (VLANs). VLANs are a virtual interface and use many of the same commands as physical interfaces.

You can configure an IP address only on the default VLAN. FTP, TFTP, ACLs, and SNMP are not supported on a VLAN.

Occasionally, while sending broadcast traffic over multiple VLANs, state of a VLAN interface may continually switch between Master and Backup.

• auto vlan
• default vlan-id
• name
• show config (from INTERFACE VLAN mode)
• show vlan
• vlan tagged
• vlan untagged

auto vlan

Change the port to auto or admin vlan mode (enable or disable all auto VLANs).

Syntax

auto vlan
To remove membership from 4K VLAN, use the `no auto vlan` command.

**Defaults**
none

**Parameters**
- `description` Enter a text string description to identify the VLAN (80 characters maximum).

**Command Modes**
- INTERFACE

**Supported Modes**
- Standalone Mode

**Usage Information**
The `auto vlan` command adds the port as untagged to default vlan and tagged to all other 4094 VLAN.

**Command History**

<table>
<thead>

</tr>
</tbody>
</table>

### channel-member

Add an interface to the Port Channel, while in INTERFACE PORTCHANNEL mode.

**Syntax**
```plaintext
channel-member interface
```

To delete an interface from a Port Channel, use the `no channel-member interface` command.

**Parameters**
- `interface` (OPTIONAL) Enter any of the following keywords and slot/port or number information:
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.

**Defaults**
Not configured.

**Command Modes**
- INTERFACE PORTCHANNEL

**Supported Modes**
- Programmable-Mux (PMUX)

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**
Use the `interface port-channel` command to access this command.

You cannot add an interface to a Port Channel if the interface contains an IP address in its configuration.

Link MTU and IP MTU considerations for Port Channels are:

- All members must have the same link MTU value and the same IP MTU value.
- The Port Channel link MTU and IP MTU must be less than or equal to the link MTU and IP MTU values configured on the channel members. For example, if the members have a link MTU of 2100 and an IP
MTU 2000, the Port Channel’s MTU values cannot be higher than 2100 for link MTU or 2000 bytes for IP MTU.

When an interface is removed from a Port Channel with the no channel-member command, the interface reverts to its configuration prior to joining the Port Channel.

An interface can belong to only one Port Channel.

You can add up to 16 interfaces to a Port Channel on the MXL switch. The interfaces can be located on different line cards but must be the same physical type and speed (for example, all 10-Gigabit Ethernet interfaces). However, you can combine 100/100 interfaces and GE interfaces in the same Port Channel.

If the Port Channel contains a mix of interfaces with 100 Mb/s speed and 1000 Mb/s speed, the software disables those interfaces whose speed does not match the speed of the first interface configured and enabled in the Port Channel. If that first interface goes down, the Port Channel does not change its designated speed; disable and re-enable the Port Channel or change the order of the channel members configuration to change the designated speed. If the Port Channel contains a mix of interfaces with 100 Mb/s speed and 1000 Mb/s speed, the software disables those interfaces whose speed does not match the speed of the first interface configured and enabled in the Port Channel. If that first interface goes down, the Port Channel does not change its designated speed; disable and re-enable the Port Channel or change the order of the channel members configuration to change the designated speed. For more information about Port Channels, refer to the Dell Networking OS Configuration Guide.

Related Commands

**interface port-channel** — creates a Port Channel interface.

---

**clear counters**

Clear the counters used in the show interfaces commands for VLANs, and physical interfaces, or selected ones.

**Syntax**

clear counters interface

**Defaults**

Without a specific interface specified, the command clears all interface counters.

**Parameters**

`interface` (OPTIONAL) Enter any of the following keywords and slot/port or number to clear counters from a specified interface:

- For the management interface on the stack-unit, enter the keyword `managementethernet` followed by slot/port information. The slot and port range is 0.
- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` followed by the slot/port information.
- For a Port Channel interface, enter the keyword `port-channel` followed by a number. Range: 1-128

**Command Modes**

</tbody>
</table>
**clear mac-address-table dynamic**

Clear the MAC address table of all MAC addresses learned dynamically.

**Syntax**

```
clear mac-address-table dynamic {interface tengigabitethernet slot/port-id}
```

**Parameters**

- `interface` Enter the keyword `interface range` and one of the interfaces — slot/port, port-channel or VLAN number. Select the range of interfaces for bulk configuration. You can enter up to six comma separated ranges-spaces are not required between the commas. Comma-separated ranges can include VLANs, port-channels and physical interfaces.

  - Slot/Port information must contain a space before and after the dash. For example, interface range tengigabitethernet 0/1 - 5 is valid; interface range tengigabitethernet 0/1-5 is not valid.

  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` followed by the slot/port information.

<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

- Spaces between characters are not preserved after entering this command unless you enclose the entire description in quotation marks (“desc_text”).
- Entering a text string after the default vlan-id command overwrites any previous text string configured as the description.
- The show tdr and default vlan-id commands are the only commands that you can configure on an interface that is a member of a port-channel.
- Use the show interfaces description command to display descriptions configured for each interface.

**Related commands**  

**show interfaces description** — Displays the description field of interfaces.

</tbody>
</table>
**flowcontrol**

Control how the system responds to and generates 802.3x pause frames on 10G and 40Gig stack units.

**Syntax**

```
flowcontrol rx {off | on} tx {off | on} threshold
```

**Parameters**

- **rx on**
  - Enter the keywords `rx on` to process the received flow control frames on this port. This is the default value for the receive side.
  
- **rx off**
  - Enter the keywords `rx off` to ignore the received flow control frames on this port.
  
- **tx on**
  - Enter the keywords `tx on` to send control frames from this port to the connected device when a higher rate of traffic is received. This is the default value on the send side.
  
- **tx off**
  - Enter the keywords `tx off` so that flow control frames are not sent from this port to the connected device when a higher rate of traffic is received.

**Defaults**

- `rx off`
- `tx off`

**Command Modes**

- `INTERFACE`

**Supported Modes**

Programmable-Mux (PMUX)

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
<tr>
<td>8.3(16.1)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

The globally assigned 48-bit Multicast address 01-80-C2-00-00-01 is used to send and receive pause frames. To allow full-duplex flow control, stations implementing the pause operation instruct the MAC to enable the reception of frames with a destination address equal to this multicast address.

The pause:

- Starts when either the packet pointer or the buffer threshold is met (whichever is met first). When the discard threshold is met, packets are dropped.
- Ends when both the packet pointer and the buffer threshold fall below 50% of the threshold settings.

The **discard threshold** defines when the interface starts dropping the packet on the interface. This may be necessary when a connected device does not honor the flow control frame sent by the switch. The discard threshold should be larger than the **buffer threshold so that the buffer holds at least three packets.**

**Important Points to Remember**

- Do not enable `tx pause` when buffer carving is enabled. For information and assistance, consult Dell Networking TAC.
- Asymmetric flow control (`rx on tx off` or `rx off tx on`) setting for the interface port less than 100 Mb/s speed is not permitted. The following error is returned: Can’t configure Asymmetric flowcontrol when speed <1G, config ignored
- The only configuration applicable to half duplex ports is `rx off tx off`. The following error is returned: Cannot configure Asymmetric flowcontrol when speed <1G, config ignored
- You cannot configure half duplex when the flow control configuration is on (default is `rx on tx on`). The following error is returned: Cannot configure half duplex when flowcontrol is on, config ignored
NOTE: The flow control must be off (rx off tx off) before configuring the half duplex.

Example (partial)

Dell(conf-if-tengig-0/1)#show config
!
interface TenGigabitEthernet 0/1
no ip address
switchport
no negotiation auto
flowcontrol rx off tx on
no shutdown
...

Example (Values)

This Example shows how the Dell Networking OS negotiates the flow control values between two Dell Networking chassis connected back-to-back using 1G copper ports.

Related Commands

- show running-config — displays the flow configuration parameters (non-default values only).
- show interfaces — displays the negotiated flow control parameters.
interface

Configure a physical interface on the switch.

Syntax

```
interface interface
```

Parameters

- `interface`:
  Enter one of the following keywords and slot/port or number information:
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.

Defaults

Not configured.

<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

Usage Information

- You cannot delete a physical interface.
- By default, physical interfaces are disabled (`shutdown`) and are in Layer 3 mode. To place an interface in layer 2 mode, ensure that the interface’s configuration does not contain an IP address and enter the `Port Channel Commands` command.
- The tunnel interface operates as an ECMP (equal cost multi path) only when the next hop to the tunnel destination is over a physical interface. If you select any other interface as the next hop to the tunnel destination, the tunnel interface does not operate as an ECMP.

Example

```
Dell(conf)#interface tengig 0/1
Dell(conf-if-te-0/1)#exit#
```

Related Commands

- `interface port-channel` — configures a port channel.
- `interface vlan` — configures a VLAN.
- `show interfaces` — displays the interface configuration.

interface ManagementEthernet

Configure the Management port on the system.

Syntax

```
interface ManagementEthernet slot/port
```

Parameters

- `slot/port`:
  Enter the keyword `ManagementEthernet`, then the slot number (0) and port number zero (0).

Defaults

Not configured.
Command Modes

<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator and M I/O Aggregator.</td>
</tr>
</tbody>
</table>

Usage Information

- You cannot delete a Management port.

  The Management port is enabled by default (`no shutdown`). To assign an IP address to the Management port, use the `ip address` command.

Example

```
Dell(conf)#interface managementethernet 0/0
Dell(conf-if-ma-0/0)#
```

interface port-channel

Create a Port Channel interface, which is a link aggregation group (LAG) containing physical interfaces on the Aggregator.

**Syntax**

```
interface port-channel channel-number
```

To delete a Port Channel, use the `no interface port-channel channel-number` command.

**Parameters**

- `channel-number`: For a Port Channel interface, enter the keywords `port-channel` then a number.
  - The range is from 1 to 128.

**Defaults**

Not configured.

**Command Modes**

- **CONFIGURATION**

**Supported Modes**

- Programmable-Mux (PMUX)

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
<tr>
<td>8.3(16.1)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

Port Channel interfaces are logical interfaces and can be either in Layer 2 mode (by using the `switchport` command) or Layer 3 mode (by configuring an IP address). You can add a Port Channel in Layer 2 mode to a VLAN.

A Port Channel can contain both 100/1000 interfaces and GE interfaces. Based on the first interface configured in the Port Channel and enabled, the Dell Networking OS determines if the Port Channel uses 100 Mb/s or 1000 Mb/s as the common speed. For more information, refer to `channel-member`.

If the line card is in a Jumbo mode chassis, you can also configure the `mtu` and `ip mtu` commands. The Link MTU and IP MTU values configured on the channel members must be greater than the Link MTU and IP MTU values configured on the Port Channel interface.
NOTE: In a Jumbo-enabled system, you must configure all members of a Port Channel with the same link MTU values and the same IP MTU values.

Example

```
Dell(conf)#int port-channel 2
Dell(conf-if-po-2)#
```

Related Commands

- `channel-member` — adds a physical interface to the LAG.
- `interface` — configures a physical interface.
- `interface vlan` — configures a VLAN.

**interface range**

This command permits configuration of a range of interfaces to which subsequent commands are applied (bulk configuration). Using the `interface range` command, you can enter identical commands for a range of interface.

**Syntax**

```
interface range interface, interface,...
```

To delete a description, enter `no description` command.

**Parameters**

- `interface, interface,...` Enter the keyword interface range and one of the interfaces — slot/port, port-channel or VLAN number. Select the range of interfaces for bulk configuration. You can enter up to six comma separated ranges — spaces are not required between the commas. Comma-separated ranges can include VLANs, port-channels and physical interfaces.

  Slot/Port information must contain a space before and after the dash. For example, `interface range tengigabitethernet 0/1 - 5` is valid; `interface range tengigabitethernet 0/1-5` is not valid.

  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` followed by the slot/port information.
  - For a VLAN, enter the keyword `vlan` followed by a number from 1 to 4094.

**Defaults**

none

**Command Modes**

CONFIGURATION

**Supported Modes**

All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

When creating an interface range, interfaces appear in the order they are entered; they are not sorted. The command verifies that interfaces are present (physical) or configured (logical). Important things to remember:

- Bulk configuration is created if at least one interface is valid.
- Non-existing interfaces are excluded from the bulk configuration with a warning message.
The interface range prompt includes interface types with slot/port information for valid interfaces. The prompt allows for a maximum of 32 characters. If the bulk configuration exceeds 32 characters, it is represented by an ellipsis (...).

- When the interface range prompt has multiple port ranges, the smaller port range is excluded from the prompt.
- If overlapping port ranges are specified, the port range is extended to the smallest start port and the biggest end port.

**Example-Bulk Configuration**

Dell(conf)#interface range tengig 2/0 - 1, tengig 10/0, tengig 3/0, fa 0/0
% Warning: Non-existing ports (not configured) are ignored by interface-range

**Example-Interface Range prompt with Multiple Ports**

Dell(conf)#interface range tengig 2/0 - 23, tengig 2/1 - 10
Dell(conf-if-range-tengig-2/0-23#)

**Example-Interface Range prompt Overlapping Port Ranges**

Dell(conf)#interface range tengig 2/1 - 11, tengig 2/1 - 23
Dell(conf-if-range-tengig-2/1-23#)

Only VLAN and port-channel interfaces created using the interface vlan and vlan tagged commands can be used in the interface range command.

Use the show running-config command to display the VLAN and port-channel interfaces, VLAN or port-channel interfaces that are not displayed in the show running-config command cannot be used with the bulk configuration feature of the interface range command. You cannot create virtual interfaces (VLAN, Port-channel) using the interface range command.

**NOTE:** If a range has VLAN, physical, and port-channel interfaces, only commands related to physical interfaces can be bulk configured. To configure commands specific to VLAN or port-channel, only those respective interfaces should be configured in a particular range.

**Example-Single Range Bulk Configuration**

Dell(conf)# interface range tengigabitethernet 5/1 - 23
Dell(conf-if-range)# no shutdown
Dell(conf-if-range)#

**Example-Multiple Range Bulk Configuration**

Dell(conf-if)# interface range tengigabitethernet 5/1 - 23, tengigabitethernet 1/1 - 2
Dell(conf-if-range)# no shutdown
Dell(conf-if-range)#

The following example shows how to use commas to add different interface types to the range enabling all TenGigabit Ethernet interfaces in the range 5/1 to 5/23 and both Ten Gigabit Ethernet interfaces 1/1 and 1/2.

**Example-Multiple Range Bulk Configuration with VLAN and port-channel**

Dell(conf-if)# interface range tengigabitethernet 5/1 - 23,
tengigabitethernet 1/1 - 2,
Vlan 2 - 100, Port 1 - 25
Dell(conf-if-range)# no shutdown
Dell(conf-if-range)#

**Related commands**

- `show config (from INTERFACE RANGE mode)` — Shows the bulk configuration interfaces.
- `show interfaces status` — Displays a summary of interface information.
**interface vlan**

Configure a VLAN. Configure the default VLAN to enable Static or DCHP IP configuration. You can configure up to 4094 VLANs.

**Syntax**

```
interface vlan vlan-id
```

To delete a VLAN, use the `no interface vlan vlan-id` command.

**Parameters**

- **vlan-id**
  
  Enter 1 for the default VLAN. Enter a number as the VLAN identifier. The range is from 1 to 4096.

**Defaults**

Not configured, except for the default VLAN, which is configured as VLAN 1.

**Command Modes**

- CONFIGURATION

**Supported Modes**

<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

For more information about VLANs and the commands to configure them, refer to Virtual LAN (VLAN) Commands.

FTP, TFTP, and SNMP operations are not supported on a VLAN. MAC/IP ACLs are not supported.

**Examples**

```
Dell(conf)#int vlan 1
Dell(conf-if-vl-1)#
```

```
Dell(conf)#int vlan 3
Dell(conf-if-vl-3)#
```

**Related commands**

- `show vlan` — Displays the current VLAN configuration on the switch.
- `vlan tagged` — Adds a Layer 2 interface to a VLAN as a tagged interface.
- `vlan untagged` — Adds a Layer 2 interface to a VLAN as an untagged interface.

**intf-type cr4 autoneg**

Set the interface type as CR4 with auto-negotiation enabled.

**Syntax**

```
intf-type cr4 autoneg
```

If you configure `intf-type cr4 autoneg`, use the `no intf-type cr4 autoneg` command to set the interface type as cr4 with autonegotiation disabled.

**Defaults**

Not configured

**Command Modes**

- CONFIGURATION

**Supported Modes**

All Modes
Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>

<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

Usage Information
If you configure interface type as CR4 with auto-negotiation enabled, also configure CR4 with auto-negotiation. Many DAC cable link issues are resolved by setting the interface type as CR4.

Related Commands
- interface — configures a physical interface.
- interface port-channel — configures a port channel group.

keepalive
Send keepalive packets periodically to keep an interface alive when it is not transmitting data.

Syntax
keepalive [seconds]
To stop sending keepalive packets, use the no keepalive command.

Parameters
seconds (OPTIONAL) For interfaces with PPP encapsulation enabled, enter the number of seconds between keepalive packets. The range is from 0 to 23767. The default is 10 seconds.

Defaults
Enabled.

Command Modes
INTERFACE

Supported Modes

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch I/O Module.</td>
</tr>
</tbody>
</table>

Usage Information
When you configure keepalive, the system sends a self-addressed packet out of the configured interface to verify that the far end of a WAN link is up. When you configure no keepalive, the system does not send keepalive packets and so the local end of a WAN link remains up even if the remote end is down.

minimum-links
Configure the minimum number of links in a LAG (Port Channel) that must be in "oper up" status for the LAG to be also in "oper up" status.

Syntax
minimum-links number
### Parameters

**number**
Enter the number of links in a LAG that must be in "oper up" status. The range is from 1 to 16. The default is 1.

### Defaults

1

### Command Modes

INTERFACE

### Supported Modes

Programmable-Mux (PMUX)

### Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

### Usage Information

If you use this command to configure the minimum number of links in a LAG that must be in "oper up" status, the LAG must have at least that number of "oper up" links before it can be declared as up. For example, if the required minimum is four, and only three are up, the LAG is considered down.

---

### monitor interface

Monitor counters on a single interface or all interfaces on a stack unit. The screen is refreshed every five seconds and the CLI prompt disappears.

**Syntax**

```
monitor interface [interface]
```

To disable monitoring and return to the CLI prompt, press the q key.

**Parameters**

**interface**

(Optional) Enter the following keywords and slot/port or number information:

- For the management port, enter the keyword `managementethernet` followed by the slot (0 or 1) and the port (0).
- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` followed by the slot/port information.
- For a Port Channel interface, enter the keyword `port-channel` followed by a number. The range is from 1 to 4094.

**Command Modes**

- EXEC
- EXEC Privilege

**Supported Modes**

All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>8.3.17.0</td>
<td>Supported on M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

The delta column displays changes since the last screen refresh.

The following are the `monitor command` menu options.
Key | Description
--- | ---
systest-3 | Displays the host name assigned to the system.
monitor time | Displays the amount of time since the monitor interface command was entered.
time | Displays the amount of time the chassis is up (since last reboot).
m | Change the view from a single interface to all interfaces on the stack unit or visa-versa.
c | Refresh the view.
b | Change the counters displayed from Packets on the interface to Bytes.
r | Change the [delta] column from change in the number of packets/bytes in the last interval to rate per second.
l | Change the view to the next interface on the stack unit, or if in the stack unit mode, the next stack unit in the chassis.
a | Change the view to the previous interface on the stack unit, or if in line stack unit mode, the previous stack unit in the chassis.
T | Increase the screen refresh rate.
t | Decrease the screen refresh rate.
q | Return to the CLI prompt.

Example (Single Interface)
systest-3 Monitor time: 00:00:06 Refresh Intvl.: 2s Time: 03:26:26
Interface: tengig 0/3, Enabled, Link is Up, Linespeed is 1000 Mbit

Traffic statistics: Current Rate Delta
Input bytes: 9069828 43 Bps 86
Output bytes: 606915800 43 Bps 86
Input packets: 54001 0 pps 1
Output packets: 9401589 0 pps 1
64B packets: 67 0 pps 0
Over 64B packets: 49166 0 pps 1
Over 127B packets: 350 0 pps 0
Over 255B packets: 1351 0 pps 0
Over 511B packets: 286 0 pps 0
Over 1023B packets: 2781 0 pps 0
Error statistics:
Input underruns: 0 0 pps 0
Input giants: 0 0 pps 0
Input throttles: 0 0 pps 0
Input CRC: 0 0 pps 0
Input IP checksum: 0 0 pps 0
Input overrun: 0 0 pps 0
Output underruns: 0 0 pps 0
Output throttles: 0 0 pps 0

m - Change mode  c - Clear screen
l - Page up  a - Page down
T - Increase refresh interval  t - Decrease refresh interval
q - Quit

Example (All Interfaces)

**mtu**

Set the link maximum transmission unit (MTU) (frame size) for an Ethernet interface.

**Syntax**

```
mtu value
```

To return to the default MTU value, use the `no mtu` command.

**Parameters**

- **value**
  
  Enter a maximum frame size in bytes. The range is from 594 to 9252. MXL Switch Range is from 594 to 12000. The default is **1554**.

**Defaults**

- **1554**

**Command Modes**

- INTERFACE

**Supported Modes**

- Programmable-Mux (PMUX)

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
<tr>
<td>8.3(61)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

- If the packet includes a Layer 2 header, the difference between the link MTU and IP MTU (`ip mtu` command) must be enough bytes to include the Layer 2 header.
  - The IP MTU is adjusted automatically when you configure the Layer 2 MTU with the `mtu` command.
When you enter the `no mtu` command, the Dell Networking OS reduces the IP MTU value to 1536 bytes.

Link MTU and IP MTU considerations for port channels and VLANs are as follows.

**port channels:**
- All members must have the same link MTU value and the same IP MTU value.
- The port channel link MTU and IP MTU must be less than or equal to the link MTU and IP MTU values configured on the channel members. For example, if the members have a link MTU of 2100 and an IP MTU 2000, the port channel's MTU values cannot be higher than 2100 for link MTU or 2000 bytes for IP MTU.

**VLANs:**
- All members of a VLAN must have same IP MTU value.
- Members can have different Link MTU values. Tagged members must have a link MTU 4 bytes higher than untagged members to account for the packet tag.
- The VLAN link MTU and IP MTU must be less than or equal to the link MTU and IP MTU values configured on the VLAN members. For example, the VLAN contains tagged members with Link MTU of 1522 and IP MTU of 1500 and untagged members with Link MTU of 1518 and IP MTU of 1500. The VLAN's Link MTU cannot be higher than 1518 bytes and its IP MTU cannot be higher than 1500 bytes.

The following shows the difference between Link MTU and IP MTU.

<table>
<thead>
<tr>
<th>Layer 2 Overhead</th>
<th>Link MTU and IP MTU Delta</th>
</tr>
</thead>
<tbody>
<tr>
<td>Ethernet (untagged)</td>
<td>18 bytes</td>
</tr>
<tr>
<td>VLAN Tag</td>
<td>22 bytes</td>
</tr>
<tr>
<td>Untagged Packet with VLAN-Stack Header</td>
<td>22 bytes</td>
</tr>
<tr>
<td>Tagged Packet with VLAN-Stack Header</td>
<td>26 bytes</td>
</tr>
</tbody>
</table>

**name**

Assign a name to the Default VLAN.

**Syntax**

```
name vlan-name
```

To remove the name from the VLAN, use the `no name` command.

**Parameters**

- **vlan-name**: Enter up to 32 characters as the name of the VLAN.

**Defaults**

Not configured.

**Command Modes**

- INTERFACE VLAN

**Supported Modes**

- All Modes
negotiation auto

Enable auto-negotiation on an interface.

Syntax

```
negotiation auto
```

To disable auto-negotiation, enter `no negotiation auto` command.

Defaults

Enabled.

Command Modes

INTERFACE

Supported Modes

All Modes

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator</td>
</tr>
</tbody>
</table>

Usage Information

The `no negotiation auto` command is only available if you first manually set the speed of a port to 10Mbits or 100Mbits.

The `negotiation auto` command provides a mode option for configuring an individual port to forced-master/forced slave once auto-negotiation is enabled.

If the mode option is not used, the default setting is slave. If you do not configure forced-master or forced slave on a port, the port negotiates to either a master or a slave state. Port status is one of the following:

- Forced-master
- Force-slave
- Master
- Slave
- Auto-neg Error—typically indicates that both ends of the node are configured with forced-master or forced-slave
CAUTION: Ensure that one end of your node is configured as forced-master and one is configured as forced-slave. If both are configured the same (that is forced-master or forced-slave), the show interfaces command will flap between an auto-neg-error and forced-master/slave states.

You can display master/slave settings with the `show interfaces` command.

**Example (Master/Slave)**

```
Dell(conf)# interface tengig 0/0
Dell(conf-if)# neg auto
Dell(conf-if-autoneg)# ?

  end          Exit from configuration mode
  exit         Exit from autoneg configuration mode
  mode         Specify autoneg mode
  no           Negate a command or set its defaults
  show         Show autoneg configuration information

Dell(conf-if-autoneg)# mode ?
  forced-master Force port to master mode
  forced-slave  Force port to slave mode
Dell(conf-if-autoneg)#
```

```
Dell#show interfaces configured
TenGigabitEthernet 13/18 is up, line protocol is up
  Hardware is Dell Eth, address is 00:01:e8:05:f7:fc
    Current address is 00:01:e8:05:f7:fc
  Interface index is 474791997
  Internet address is 1.1.1.1/24
  LineSpeed 1000 Mbit, Mode full duplex, Master
  ARP type: ARPA, ARP Timeout 04:00:00
  Last clearing of "show interfaces" counters 00:12:42
  Queueing strategy: fifo
  Input Statistics:
    ...
```

**User Information**

Both sides of the link must have auto-negotiation enabled or disabled for the link to come up.

The following details the possible speed and auto-negotiation combinations for a line between two 10/100/1000 Base-T Ethernet interfaces.

**Port 0**

- auto-negotiation enabled* speed 1000 or auto
- auto-negotiation enabled speed 100
- auto-negotiation disabled speed 100
- auto-negotiation disabled speed 100
- auto-negotiation enabled* speed 1000 or auto

**Port 1**

- auto-negotiation enabled* speed 1000 or auto
- auto-negotiation enabled speed 100
- auto-negotiation disabled speed 100
- auto-negotiation enabled speed 100
- auto-negotiation disabled speed 100

**Link Status Between Port 1 and Port 2**

- Up at 1000 Mb/s
- Up at 100 Mb/s
• Up at 100 Mb/s
• Down
• Down

* You cannot disable auto-negotiation when the speed is set to 1000 or auto.

Related Commands

speed (for 1000/10000 interfaces) — sets the link speed to 1000, 10000, or auto-negotiate the speed.

remote-fault-signaling rx

Brings the interface up or down when a Remote Fault Indication (RFI) error is detected.

Syntax

remote-fault-signaling rx {on | off}

Parameters

on 
Brings the interface up when an RFI error is detected.

off 
Brings the interface down when an RFI error is detected.

Defaults

ON.

Command Modes

INTERFACE CONFIGURATION

Command History

Version 9.7(0.0) 
Introduced on the M I/O Aggregator.

Usage Information

By default, the M I/O Aggregator processes RFI errors transmitted by remote peers and brings down the interface when an RFI error is detected.

Example

Dell(conf-if-te-1/3)#remote-fault-signaling rx ?
on Enable
off Disable

show config (INTERFACE mode)

Displays the interface configuration.

Syntax

show config

Command Modes

INTERFACE

Supported Modes

All Modes

Command History

Version Description
9.4(0.0) Supported on the FN I/O Aggregator.
8.3.17.0 Supported on the M I/O Aggregator.

Example

Dell(conf-if)#show conf
!
interface TenGigabitEthernet 1/7
  no ip address
  switchport
show config (from INTERFACE RANGE mode)

Display the bulk configured interfaces (group).

Syntax
show config

</tbody>
</table>

**Example**

Dell(conf-lldp)#show conf
!
protocol lldp
Dell(conf-lldp)#

**show interfaces**

Displays information on a specific physical interface or virtual interface.

**Syntax**

show interfaces interface

**Parameters**

`interface` Enter one of the following keywords and slot/port or number information:

- For the management interface on the stack-unit, enter the keyword `managementethernet` followed by slot/port information. The slot and port range is 0.
- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a VLAN interface, enter the keyword `vlan` followed by a number from 1 to 4094.
- For a Port Channel interface, enter the keyword `port-channel` followed by a number. The range is from 1 to 128.

**Command Modes**

- EXEC
- EXEC Privilege

**Supported Modes**

All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.6(0.0)</td>
<td>Added support for Auto-LAG on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>
Version: Description
8.3.17.0 Supported on the M I/O Aggregator

Usage Information

Use the `show interfaces command for details on a specific interface. Use the `show interfaces stack-unit` command for details on all interfaces on the designated stack unit.

On the M I/O Aggregator, the `show interface` output displays incorrect rate information details over time for link monitoring when the rate-interval is configured for 5 seconds. Dell Networking recommends using higher rate-intervals such as 15 to 299 seconds to minimize the errors seen.

- **NOTE:** In the CLI output, the power value will be rounded to a 3-digit value. For receive/transmit power that is less than 0.000, an `snmp` query will return the corresponding dbm value even though the CLI displays as 0.000.

- **NOTE:** After the counters are cleared, the line-rate continues to increase until it reaches the maximum line rate. When the maximum line rate is reached, there will be no change in the line-rate.

User Information

The following describes the `show interfaces` command shown in the 10G example below.

**Line**

<table>
<thead>
<tr>
<th>Line Description</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>TenGigabitEthernet 2/0...</td>
<td>Displays the interface’s type, slot/port, and administrative and line protocol status.</td>
</tr>
<tr>
<td>Hardware is...</td>
<td>Displays the interface’s hardware information and its assigned MAC address.</td>
</tr>
<tr>
<td>Interface index...</td>
<td>Displays the interface index number used by SNMP to identify the interface.</td>
</tr>
<tr>
<td>Internet address...</td>
<td>States whether an IP address is assigned to the interface. If an IP address is assigned, that address is displayed.</td>
</tr>
<tr>
<td>MTU 1554...</td>
<td>Displays link and IP MTU information. If the chassis is in Jumbo mode, this number can range from 576 to 12000.</td>
</tr>
<tr>
<td>LineSpeed</td>
<td>Displays the interface’s line speed.</td>
</tr>
<tr>
<td>ARP type...</td>
<td>Displays the ARP type and the ARP timeout value for the interface.</td>
</tr>
<tr>
<td>Last clearing...</td>
<td>Displays the time when the <code>show interfaces</code> counters where cleared.</td>
</tr>
<tr>
<td>Queuing strategy...</td>
<td>States the packet queuing strategy. FIFO means first in first out.</td>
</tr>
<tr>
<td>Input Statistics:</td>
<td>Displays all the input statistics including:</td>
</tr>
<tr>
<td></td>
<td>- Number of packets and bytes into the interface</td>
</tr>
<tr>
<td></td>
<td>- Number of packets with IP headers and VLAN tagged headers.</td>
</tr>
<tr>
<td></td>
<td>- Number of symbol errors, runts, giants, and throttles packets:</td>
</tr>
<tr>
<td></td>
<td>- symbol errors = number packets containing bad data. That is, the port MAC detected a physical coding error in the packet.</td>
</tr>
<tr>
<td></td>
<td>- runts = number of packets that are less than 64B</td>
</tr>
<tr>
<td></td>
<td>- giants = packets that are greater than the MTU size</td>
</tr>
<tr>
<td></td>
<td>- throttles = packets containing PAUSE frames</td>
</tr>
<tr>
<td></td>
<td>- Number of CRC, IP Checksum, overrun, and discarded packets:</td>
</tr>
</tbody>
</table>
Line Description
- CRC = packets with CRC/FCS errors
- IP Checksum = packets with IP Checksum errors
- overrun = number of packets discarded due to FIFO overrun conditions
- discarded = the sum of runts, giants, CRC, IP Checksum, and overrun packets discarded without any processing

Output Statistics: Displays output statistics sent out of the interface including:

- Number of packets, bytes, and underruns out of the interface
  - packets = total number of packets
  - bytes = total number of bytes
  - underruns = number of packets with FIFO underrun conditions
- Number of Multicast, Broadcast, and Unicast packets:
  - Multicasts = number of MAC multicast packets
  - Broadcasts = number of MAC broadcast packets
  - Unicasts = number of MAC unicast packets
- Number of throttles and discards packets:
  - throttles = packets containing PAUSE frames
  - discarded = number of packets discarded without any processing

Rate information... Estimate of the input and output traffic rate over a designated interval (30 to 299 seconds). Traffic rate is displayed in bits, packets per second, and percent of line rate.

Time since... Elapsed time since the last interface status change (hh:mm:ss format).

Usage Information
The interface counter "over 1023-byte pkts" does not increment for packets in the range 9216 > x < 1023.

The Management port is enabled by default (no shutdown). If necessary, use the ip address command to assign an IP address to the Management port.

Example 10G Port
Dell-IOA-A1(conf-if-te-0/1)#do show int te 0/1
TenGigabitEthernet 0/1 is up, line protocol is down(error-disabled[UFD])
Hardware is DellEth, address is f8:b1:56:07:1d:8e

Auto-lag is disabled
Flowcontrol rx on tx off
ARP type: ARPA, ARP Timeout 04:00:00
Last clearing of "show interface" counters 00:12:53
Queueing strategy: fifo
Input Statistics:
  0 packets, 0 bytes
  0 64-byte pkts, 0 over 64-byte pkts, 0 over 127-byte pkts
  0 over 255-byte pkts, 0 over 511-byte pkts, 0 over 1023-byte pkts
  0 Multicasts, 0 Broadcasts
  0 runts, 0 giants, 0 throttles
  0 CRC, 0 overrun, 0 discarded
Example (ManagementEthernet)

Dell#show interface managementethernet ?
0/0 Management Ethernet interface number
Dell#show interface managementethernet 0/0
ManagementEthernet 0/0 is up, line protocol is up
Hardware is DellForce10Eth, address is 00:1e:c9:f1:00:05
Current address is 00:1e:c9:f1:00:05
Pluggable media not present
Interface index is 235159752
Internet address is 10.11.209.87/16
Mode of IP Address Assignment : MANUAL
DHCP Client-ID: mgmt001ec9f10005
Virtual-IP is not set
Virtual-IP IPv6 address is not set
MTU 1554 bytes, IP MTU 1500 bytes
LineSpeed 100 Mbit, Mode full duplex
ARP type: ARPA, ARP Timeout 04:00:00
Last clearing of "show interface" counters 5d4h57m
Queueing strategy: fifo
Input 3448753 packets, 950008323 bytes, 3442163 multicast
Received 0 errors, 0 discarded
Output 4627 packets, 814226 bytes, 0 multicast
Output 0 errors, 0 invalid protocol

Related Commands show interfaces configured—Displays any interface with a non-default configuration.
show interfaces port-channel— Displays information on all interfaces on a specific stack unit.
show interfaces switchport — Displays Layer 2 information about the interfaces.
show inventory — Displays the M I/O Aggregator type, components (including media), Dell Networking OS version including hardware identification numbers and configured protocols.
show ip interface — Displays Layer 3 information about the interfaces.
show memory — Displays the stack unit(s) status.
show interfaces status— Displays all interfaces configured using the interface range command.

show interfaces configured
Displays any interface with a non-default configuration.

Syntax
show interfaces configured

Command Modes
• EXEC
• EXEC Privilege

Output Statistics:
0 packets, 0 bytes, 0 underruns
0 64-byte pkts, 0 over 64-byte pkts, 0 over 127-byte pkts
0 over 255-byte pkts, 0 over 511-byte pkts, 0 over 1023-byte pkts
0 Multicasts, 0 Broadcasts, 0 Unicasts
0 throttles, 0 discarded, 0 collisions, 0 wreddrops
Rate info (interval 299 seconds):
Input 00.00 Mbits/sec, 0 packets/sec, 0.00% of line-rate
Output 00.00 Mbits/sec, 0 packets/sec, 0.00% of line-rate
Time since last interface status change: 00:11:36
show interfaces description

Display the descriptions configured on the interface.

**Syntax**

```
show interfaces [interface] description
```

**Parameters**

`interface`

- Enter one of the following keywords and slot/port or number information:
  - For the management interface on the stack unit enter the keyword `ManagementEthernet` followed by the slot/port information. The slot range is 0-0 and the port range is 0.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` followed by the slot/port information.

**Example**

```
Dell#show interfaces configured
TenGigabitEthernet 1/1 is up, line protocol is down(error-disabled[UFD])
Hardware is DellForce10Eth, address is 00:01:e8:00:ab:01
Current address is 00:01:e8:00:ab:01
Server Port AdminState is Down
Pluggable media not present
Interface index is 67703553
Internet address is not set
Mode of IP Address Assignment : NONE
DHCP Client-ID :tenG2580001e800ab01
MTU 12000 bytes, IP MTU 11982 bytes
LineSpeed auto
Flowcontrol rx off tx off
ARP type: ARPA, ARP Timeout 04:00:00
Last clearing of "show interface" counters 05:15:07
Queueing strategy: fifo
Input Statistics:
  0 packets, 0 bytes
  0 64-byte pkts, 0 over 64-byte pkts, 0 over 127-byte pkts
  0 over 255-byte pkts, 0 over 511-byte pkts, 0 over 1023-byte pkts
  0 Multicasts, 0 Broadcasts
  0 runts, 0 giants, 0 throttles
  0 CRC, 0 overrun, 0 discarded
Output Statistics:
  0 packets, 0 bytes, 0 underruns
  0 64-byte pkts, 0 over 64-byte pkts, 0 over 127-byte pkts
  0 over 255-byte pkts, 0 over 511-byte pkts, 0 over 1023-byte pkts
  0 Multicasts, 0 Broadcasts, 0 Unicasts
  0 throttles, 0 discarded, 0 collisions, 0 wreddrops
Rate info (interval 299 seconds):
  Input 00.00 Mbits/sec, 0 packets/sec, 0.00% of line-rate
  Output 00.00 Mbits/sec, 0 packets/sec, 0.00% of line-rate
Time since last interface status change: 05:14:12
TenGigabitEthernet 1/2 is up, line protocol is down(error-disabled[UFD])
Dell#
```
For VLAN interfaces, enter the keyword `vlan` followed by a number from 1 to 4094.

<tr>
<td>Protocol</td>
<td>States whether IP is enabled (up) or disabled (down) on the interface.</td>
</tr>
<tr>
<td>Description</td>
<td>Displays the description (if any) manually configured for the interface.</td>
</tr>
</tbody>
</table>

**Example**

```
Dell#show interface description
Interface          OK Status      Protocol    Description
TenGigabitEthernet 0/1 NO admin down  down
TenGigabitEthernet 0/2 NO admin up    down
TenGigabitEthernet 0/3 NO admin up    down
TenGigabitEthernet 0/4 NO admin up    down
TenGigabitEthernet 0/5 NO admin up    down
TenGigabitEthernet 0/6 NO admin up    down
TenGigabitEthernet 0/7 NO up down
TenGigabitEthernet 0/8 YES up up
```

**show interfaces port-channel**
Display information on configured Port Channel groups.

**Syntax**
```
show interfaces port-channel [channel-number] [brief| description]
```

**Parameters**

- **channel-number**: For a Port Channel interface, enter the keyword `port-channel` followed by a number. The range is from 1 to 128.
- **brief** (OPTIONAL) Enter the keyword `brief` to display only the port channel number, the state of the port channel, and the number of interfaces in the port channel.
- **description** (OPTIONAL) Enter the keyword `description` to display interface information with description.

</tr>
<tr>
<td>Output 0...</td>
<td>Displays the type and number of packets sent out the interface. This information is displayed over three lines.</td>
</tr>
<tr>
<td>Rate information...</td>
<td>Displays the traffic rate information into and out of the interface. Traffic rate is displayed in bits and packets per second.</td>
</tr>
<tr>
<td>Time since...</td>
<td>Displays the time since the last change in the configuration of this interface.</td>
</tr>
</tbody>
</table>

**Example (EtherScale)**

```
Dell#show interfaces port-channel
Port-channel 1 is down, line protocol is down
Hardware address is 00:1e:c9:f1:00:05, Current address is 00:1e:c9:f1:00:05
Interface index is 1107755009
Minimum number of links to bring Port-channel up is 1
Internet address is not set
```
Mode of IP Address Assignment : NONE
DHCP Client-ID :lag1001ec9f10005
MTU 12000 bytes, IP MTU 1500 bytes
LineSpeed auto
Members in this channel:
ARP type: ARPA, ARP Timeout 04:00:00
Last clearing of "show interface" counters 03:28:00
Queueing strategy: fifo
Input Statistics:
0 packets, 0 bytes
0 64-byte pkts, 0 over 64-byte pkts, 0 over 127-byte pkts
0 over 255-byte pkts, 0 over 511-byte pkts, 0 over 1023-byte pkts
0 Multicasts, 0 Broadcasts
0 runts, 0 giants, 0 throttles
0 CRC, 0 overrun, 0 discarded
Output Statistics:
0 packets, 0 bytes, 0 underruns
0 64-byte pkts, 0 over 64-byte pkts, 0 over 127-byte pkts
0 over 255-byte pkts, 0 over 511-byte pkts, 0 over 1023-byte pkts
0 Multicasts, 0 Broadcasts, 0 Unicasts
0 throttles, 0 discarded, 0 collisions

User Information

The following describes the `show interfaces port-channel brief` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>LAG</td>
<td>Lists the port channel number.</td>
</tr>
<tr>
<td>Mode</td>
<td>Lists the mode:</td>
</tr>
<tr>
<td></td>
<td>• L3 — for Layer 3</td>
</tr>
<tr>
<td></td>
<td>• L2 — for Layer 2</td>
</tr>
<tr>
<td>Status</td>
<td>Displays the status of the port channel.</td>
</tr>
<tr>
<td></td>
<td>• down — if the port channel is disabled (shutdown)</td>
</tr>
<tr>
<td></td>
<td>• up — if the port channel is enabled (no shutdown)</td>
</tr>
<tr>
<td>Uptime</td>
<td>Displays the age of the port channel in hours:minutes:seconds.</td>
</tr>
<tr>
<td>Ports</td>
<td>Lists the interfaces assigned to this port channel.</td>
</tr>
<tr>
<td>(untitled)</td>
<td>Displays the status of the physical interfaces (up or down).</td>
</tr>
<tr>
<td></td>
<td>• In Layer 2 port channels, an * (asterisk) indicates which interface is the primary port of the port channel. The primary port sends out interface PDU.</td>
</tr>
<tr>
<td></td>
<td>• In Layer 3 port channels, the primary port is not indicated.</td>
</tr>
</tbody>
</table>

Example

```
Dell#show int po bri
Codes: L - LACP Port-channel
        O - OpenFlow Controller Port-channel
        A - Auto Port-channel
        I - Internally Lagged
LAG Mode Status Uptime Ports
L  128 L3 down 00:00:00
Dell#
```

To indicate the LACP fallback, `Internally lagged` is added to the list. When the LAG auto-configures itself, the LAG status describes as ‘I’.
Related Commands

**show lACP** — displays the LACP matrix.

---

**show interfaces stack-unit**

Display information on all interfaces on a specific Aggregator stack member.

**Syntax**

```
show interfaces stack-unit unit-number
```

**Parameters**

- `unit-number` - Enter the stack member number (0 to 5).

**Command Modes**

- EXEC
- EXEC Privilege

**Supported Modes**

show interfaces status

Displays a summary of interface information or specify a stack unit and interface to display status information for that specific interface only.

**Syntax**

```
show interfaces [interface | stack-unit unit-number] status
```

**Parameters**

- `interface` (OPTIONAL) Enter one of the following keywords and slot/port or number information:
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` followed by the slot/port information.
- `linecard slot-number` (OPTIONAL) Enter the keyword `linecard` then the slot number.

**Defaults**
none

**Command Modes**
- EXEC
- EXEC Privilege

**Supported Modes**
All Modes

**Command History**

- **Version** 9.4(0.0) Supported on the FN I/O Aggregator.
- 8.3.17.0 Supported on the M I/O Aggregator.

**Example**

```
Dell#show interface status
Port Description Status Speed Duplex Vlan
Te 0/1 Down Auto Auto --
Te 0/2 Down Auto Auto --
Te 0/3 Down Auto Auto --
Te 0/4 Down Auto Auto --
Te 0/5 Down Auto Auto --
Te 0/6 Down Auto Auto --
Te 0/7 Down Auto Auto --
Te 0/8 Up 1 0000 Mbit Full --
Te 0/9 Down Auto Auto --

Te 0/12 Down Auto Auto --
Te 0/13 Down Auto Auto --
Te 0/14 Down Auto Auto --
Te 0/15 Down Auto Auto --
Te 0/16 Up 10000 Mbit Full --
```
show interfaces switchport

Display only virtual and physical interfaces in Layer 2 mode. This command displays the Layer 2 mode interfaces' IEEE 802.1Q tag status and VLAN membership.

Syntax

```
show interfaces switchport [interface | stack-unit unit-id ]
```

Parameters

- `interface` 
  (OPTIONAL) Enter one of the following keywords and slot/port or number information:
  
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` followed by the slot/port information.
  - Enter the keyword `backup` to view the backup interface for this interface.

- `stack-unit unit-id` 
  (OPTIONAL) Enter the keywords `stack-unit` followed by the stack member number. The range is from 0 to 5.

Command Modes

- EXEC
- EXEC Privilege

<td>An opening is detected on the cable. The location, in this Example is 93 meters. The open is accurate to plus or minus one meter.</td>
</tr>
<tr>
<td>Status: Impedance Mismatch</td>
<td>There is an impedance mismatch in the cables.</td>
</tr>
</tbody>
</table>

Example

Dell#show tdr tengigabitethernet 1/1
Time since last test: 00:00:02
Pair A, Length: OK Status: Terminated
Pair B, Length: 92 (+/- 1) meters, Status: Short
Pair C, Length: 93 (+/- 1) meters, Status: Open
Pair D, Length: 0 (+/- 1) meters, Status: Impedance Mismatch

Related Commands
dtr-cable-test — Runs the TDR test.
show vlan

Displays the current VLAN configurations on the switch.

Syntax

```
show vlan [brief | id vlan-id | name vlan-name]
```

Parameters

- **brief** (OPTIONAL) Enter the keyword `brief` to display the following information:
  - VLAN ID
  - VLAN name (left blank if none is configured.)
  - Spanning Tree Group ID
  - MAC address aging time
  - IP address

- **id vlan-id** (OPTIONAL) Enter the keyword `id` followed by a number from 1 to 4094. Only information on the VLAN specified is displayed.

- **name vlan-name** (OPTIONAL) Enter the keyword `name` followed by the name configured for the VLAN. Only information on the VLAN named is displayed.

Related Commands
interface vlan — Configures a VLAN.

shutdown
Disable an interface.

Syntax
shutdown
To activate an interface, use the no shutdown command.

Defaults
The interface is disabled.

Command Modes
INTERFACE

Supported Modes
All Modes

Command History

Version Description
9.4(0.0) Supported on the FN I/O Aggregator.
8.3.17.0 Supported on the M I/O Aggregator.

Usage Information
The shutdown command marks a physical interface as unavailable for traffic. To discover if an interface is disabled, use the show ip interface command. Disabled interfaces are listed as down.
Disabling a VLAN or a port channel causes different behavior. When a VLAN is disabled, the Layer 3 functions within that VLAN are disabled. Layer 2 traffic continues to flow. Entering the `shutdown` command on a port channel disables all traffic on the port channel and the individual interfaces within the port channel. To enable a port channel, you must enter `no shutdown` on the port channel interface and at least one interface within that port channel.

The `shutdown` and `description` commands are the only commands that you can configure on an interface that is a member of a port channel.

**Related Commands**

- `vlan tagged` — Test the condition of copper cables on 100/1000/10G Base-T modules.
- `interface vlan` — Creates a VLAN.
- `show ip interface` — Displays the interface routing status. Add the keyword `brief` to display a table of interfaces and their status.

### source (port monitoring for 40-Gigabit Ethernet)

Configure a port monitor source and destination. Starting with Dell Networking OS Release 9.3(0.0), you can also configure a 40-Gigabit Ethernet interface as the destination interface or port to which the monitored traffic is sent.

**Syntax**

```
source interface destination interface direction {rx | tx | both}
```

To disable a monitor source, use the `no source interface destination interface direction {rx | tx | both}` command.

**Parameters**

- `interface`
  - Enter the one of the following keywords and slot/port information:
    - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
    - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.

- `destination`
  - Enter the keyword `destination` to indicate the interface destination.

- `direction (rx | tx | both)`
  - Enter the keyword `direction` then one of the packet directional indicators.
    - `rx`: to monitor receiving packets only.
    - `tx`: to monitor transmitting packets only.
    - `both`: to monitor both transmitting and receiving packets.

**Defaults**

- `none`

**Command Modes**

- MONITOR SESSION (conf-mon-sess-session-ID)

**Supported Modes**

- All Modes

**Command History**

</tbody>
</table>
### speed (for 1000/10000 interfaces)

Set the speed for 1000/10000 Base-T Ethernet interfaces. Both sides of a link must be set to the same speed (1000/10000) or to auto or the link may not come up.

**Syntax**

```
speed {1000 | 10000 | auto}
```

To return to the default setting, use the no speed {1000 | 10000 | auto} command.

**Parameters**

- **1000** Enter the keyword 1000 to set the interface's speed to 1000 Mb/s.
- **10000** Enter the keyword 10000 to set the interface's speed to 10000 Mb/s. Auto-negotiation is enabled. For more information, refer to name.
- **auto** Enter the keyword auto to set the interface to auto-negotiate its speed. Auto-negotiation is enabled. For more information, refer to name.

**Defaults**

auto

**Command Modes**

INTERFACE

**Supported Modes**

All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

This command is found on the 1000/10000 Base-T Ethernet interfaces.

When you enable auto, the system performs and automatic discovery to determine the optics installed and configure the appropriate speed.

When you configure a speed for the 1000/10000 interface, confirm the negotiation auto command setting. Both sides of the link must should have auto-negotiation either enabled or disabled. For speed settings of 1000 or auto, the software sets the link to auto-negotiation and you cannot change that setting.

**Related Commands**

- `negotiation auto` — enables or disables auto-negotiation on an interface.
### stack-unit portmode

Split a single 40G port into 4x10G ports on the MXL switch.

**Syntax**

```
stack-unit stack-unit port number portmode quad
```

**Parameters**

- **stack-unit**
  Enter the stack member unit identifier of the stack member to reset. The range is 0 to 5.
  
  **NOTE:** The MXL switch commands accept Unit ID numbers from 0 to 5, though the MXL switch supports stacking up to three units only with the Dell Networking OS version 8.3.7.1.

- **number**
  Enter the port number of the 40G port to be split. Enter one of the following port numbers for the MXL switch: 48, 52, 56, or 60.

**Defaults**

Disabled.

**Command Modes**

- CONFIGURATION

**Supported Modes**

- Programmable-Mux (PMUX)

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

Splitting a 40G port into 4x10G port is supported on standalone and stacked units.

- You cannot use split ports as stack-link to stack an MXL Switch.
- The split ports MXL switch unit cannot be a part of any stacked system.
- The unit number with the split ports must be the default (stack-unit 0).
- This setup can be verified using `show system brief` command. If the unit ID is different than 0, it must be renumbered to 0 before ports are split by using the `stackunit id renumber 0` command in EXEC mode.

The quad port must be in a default configuration before it can be split into 4x10G ports. The 40G port is lost in the config when the port is split, so be sure that the port is also removed from other L2/L3 feature configurations.

The system must be reloaded after issuing the CLI for the change to take effect.

### tdr-cable-test

Test the condition of copper cables on 100/1000/10GBase-T modules.

**Syntax**

```
tdr-cable-test interface
```

**Parameters**

- **interface**
  Enter the keyword `TenGigabitEthernet` followed by the slot/port information for the 100/1000/10GBase-T Ethernet interface.

**Defaults**

none
**Command Modes**

**EXEC**

**Supported Modes**

All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

The interface must be enabled to run the test or an error message is generated:

```
Dell#tdr-cable-test tengigabitethernet 5/2
%Error: Interface is disabled TenGIG 5/2
```

**Related Commands**

`show tdr` — Displays the results of the TDR test.

---

**vlan tagged (CMC)**

Add a Layer 2 interface to a VLAN as a tagged interface.

**Syntax**

```
vlan tagged [vlan-id]
```

To remove a tagged interface from a VLAN, use the `no vlan tagged vlan-id` command.

**Parameters**

- **vlan-id**
  
Enter the VLAN ID. The range is from 1 to 4094.

**Defaults**

All interfaces in Layer 2 mode are untagged.

**Command Modes**

INTERFACE

**Supported Modes**

All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

If the interface belongs to several VLANs, you must remove it from all VLANs to change it to an untagged interface.

Tagged interfaces can belong to multiple VLANs, while untagged interfaces can only belong to one VLAN at a time.

When two or more ports configured for VLANs form a LAG, the resulting LAG is a tagged member of all the configured VLANs and an untagged member of the VLAN to which the port with the lowest port ID belongs.

For example, if port 0/1-32 is an untagged member of VLAN 2 and port 0/41 is an untagged member of VLAN 3, the resulting LAG consisting of the two ports is an untagged member of VLAN 2 and a tagged member of VLAN 3.

**Example**

```
Dell(conf-if-te-0/2)#vlan tagged ?
VLAN-RANGE Comma/Hyphen separated VLAN ID set
```
Dell(conf-if-te-0/2)#vlan tagged 2,3-4
Dell(conf-if-te-0/2)#show config
!
interface TenGigabitEthernet 0/2
 mtu 12000
 vlan tagged 2-4
!
port-channel-protocol LACP
port-channel 1 mode active
!
protocol lldp
 advertise management-tlv system-name
dcbx port-role auto-downstream
no shutdown
Dell(conf-if-te-0/2)#

Related Commands

interface vlan — Configures a VLAN.

vlan untagged — Specifies which interfaces in a VLAN are untagged.

## vlan untagged (CMC)

Add a Layer 2 interface to a VLAN as an untagged interface.

**Syntax**

```
vlan untagged [vlan-id]
```

To remove a untagged interface from a VLAN, use the `no vlan untagged [vlan-id]` command.

**Parameters**

- **vlan-id**
  
Enter the VLAN ID. The range is from 1 to 4094.

**Defaults**

All interfaces in Layer 2 mode are untagged.

**Command Modes**

- INTERFACE

**Supported Modes**

All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

Untagged interfaces can only belong to one VLAN.

In the default VLAN, you cannot use the `no untagged interface` command. To remove an untagged interface from all VLANs, including the default VLAN, enter INTERFACE mode and use the `no vlan tagged` command.

Tagged interfaces can belong to multiple VLANs, while untagged interfaces can only belong to one VLAN at a time.

When two or more ports configured for VLANs form a LAG, the resulting LAG is a tagged member of all the configured VLANs and an untagged member of the VLAN to which the port with the lowest port ID belongs.
For example, if port 0/33 is an untagged member of VLAN 2 and port 0/41 is an untagged member of VLAN 3, the resulting LAG consisting of the two ports is an untagged member of VLAN 2 and a tagged member of VLANs 2 and 3.

Example

Dell(conf-if-te-0/2)#vlan untagged ?
<1-4094> Untagged VLAN id
Dell(conf-if-te-0/2)#
Dell(conf-if-te-0/2)#vlan untagged 4094
Dell(conf-if-te-0/2)#show config
!
interface TenGigabitEthernet 0/2
mtu 12000
vlan untagged 4094
!
port-channel-protocol LACP
port-channel 1 mode active
!
protocol lldp
advertise management-tlv system-name
dcbx port-role auto-downstream
no shutdown
Dell(conf-if-te-0/2)#

Related Commands

interface vlan — Configures a VLAN.

vlan tagged — Specifies which interfaces in a VLAN are tagged.
IPv4 Routing

The aggregator supports both IPv4 and IPv6 routing and these are used only for the management purpose.
This chapter describes the IPv4 related commands. They are:

- clear tcp statistics
- debug ip dhcp
- debug ip icmp
- ip route
- management route
- show arp
- show ip management-route
- show ip multicast-cam stack-unit
- show ip interface
- show ip route
- show tcp statistics

### clear tcp statistics

Clear the TCP counters.

**Syntax**

```
clear tcp statistics
```

**Command Modes**

- EXEC Privilege

**Supported Modes**

- All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

### debug ip dhcp

Enable debug information for DHCP relay transactions and display the information on the console.

**Syntax**

```
debug ip dhcp
```

**Parameters**

- `debug ip dhcp` To disable debug, use the no debug ip dhcp command.

**Defaults**

Debug disabled
debug ip icmp

View information on the internal control message protocol (ICMP).

Syntax

ddebug ip icmp [interface] [count value]

To disable debugging, use the no debug ip icmp command.

Parameters

interface  (OPTIONAL) Enter the following keywords and slot/port or number information:

- For the management interface, enter the keyword ManagementEthernet then the slot/port information. The slot range is 0 and the port range is 0.
For a 10 Gigabit Ethernet interface, enter the keyword
TenGigabitEthernet then the slot/port information.

• For VLAN, enter the keyword vlan then by a number from 1 to 4094.

**count value**  
(OPTIONAL) Enter the keywords count then the count value. The ranges from 1 to 65534. The default is **Infinity**.

**Command Modes**  
EXEC Privilege

**Supported Modes**  
All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**  
To stop packets from flooding the user terminal when debugging is turned on, use the count option.

**Example**

ICMP: echo request rcvd from src 40.40.40.40
ICMP: src 40.40.40.40, dst 40.40.40.40, echo reply
ICMP: src 40.40.40.40, dst 40.40.40.40, echo reply
ICMP: echo request sent to dst 40.40.40.40
ICMP: src 40.40.40.40, dst 40.40.40.40, echo reply
ICMP: src 40.40.40.40, dst 40.40.40.40, echo reply
ICMP: echo request sent to dst 40.40.40.40:

---

**ip route**

Assign a static route to the switch.

**Syntax**

```
ip route destination mask {ip-address | interface [ip-address]}[distance]
[permanent][tag tag-value]
```

To delete a specific static route, use the `no ip route destination mask {address | interface [ip-address]}` command.

To delete all routes matching a certain route, use the `no ip route destination mask mask` command.

**Parameters**

- **destination**  
Enter the IP address in dotted decimal format of the destination device.

- **mask**  
Enter the mask in the slash prefix format (/x) of the destination device’s IP address.

- **ip-address**  
Enter the IP address in dotted decimal format of the forwarding router.

- **interface**  
Enter the following keywords and slot/port or number information:

  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet followed by the slot/port information.
  - For a VLAN, enter the keyword vlan followed by a number from 1 to 4094.
**distance**

(Optional) Enter a number as the distance metric assigned to the route. The range is from 1 to 255.

**permanent**

(Optional) Enter the keyword `permanent` to specify the route is not removed, even if the interface assigned to that route goes down. The route must be up initially to install it in the routing table.

If you disable the interface with an IP address associated with the keyword `permanent`, the route disappears from the routing table.

**tag tag-value**

(Optional) Enter the keyword `tag` followed by a number to assign to the route. The range is from 1 to 4294967295.

**Defaults**

Not configured.

**Command Modes**

CONFIGURATION

**Supported Modes**

All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

Using the following example of a static route: `ip route 33.33.33.0 /24 tengigabitethernet 0/0 172.31.5.43`

- The software installs a next hop that is not on the directly connected subnet but which recursively resolves to a next hop on the interface’s configured subnet. In the example, if gig 0/0 has an ip address on subnet 2.2.2.0 and if 172.31.5.43 recursively resolves to 2.2.2.0, Dell Networking OS installs the static route.
- When the interface goes down, Dell Networking OS withdraws the route.
- When the interface comes up, Dell Networking OS re-installs the route.
- When recursive resolution is “broken,” Dell Networking OS withdraws the route.
- When recursive resolution is satisfied, Dell Networking OS re-installs the route.

**Related Commands**

- `show ip route` — views the switch routing table.

---

**management route**

Configure a static route that points to the Management interface or a forwarding router.

**Syntax**

```
management route {ipv4-address}/mask[forwarding-router-address | managementethernet]
```

**Parameters**

- `ipv4-address`/`mask`
  - Enter an IPv4 address (A.B.C.D) followed by the prefix-length for the IP address of the management interface.

- `forwarding-router-address`
  - Enter an IPv4 address of a forwarding router.

- `managementethernet`
  - Enter the keyword `managementethernet` for the Management interface.

**Defaults**

Not configured.

**Command Modes**

CONFIGURATION
show arp

Displays the ARP table.

display arp [interface | ip ip-address [mask] | macaddress mac-address [mac-address mask]] [static | dynamic] [summary]

Parameters
- **interface**: (OPTIONAL) Enter the following keywords and slot/port or number information:
  - For the Management interface, enter the keyword managementethernet followed by the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet followed by the slot/port information.
  - For a VLAN, enter the keyword vlan followed by a number from 1 to 4094.
- **ip ip-address mask**: (OPTIONAL) Enter the keyword ip followed by an IP address in the dotted decimal format. Enter the optional IP address mask in the slash prefix format (/x).
- **static**: (OPTIONAL) Enter the keyword static to view entries entered manually.
- **retries**: (OPTIONAL) Enter the keyword retries to view the number of ARP retries before a 20-second back off.
- **dynamic**: (OPTIONAL) Enter the keyword dynamic to view dynamic entries.
- **summary**: (OPTIONAL) Enter the keyword summary to view a summary of ARP entries.
- **inspection**: (OPTIONAL) Enter the keyword inspection to view dynamic ARP Inspection details.

Command Modes
- EXEC Privilege

Dell#
show ip interface

View IP-related information on all interfaces.

Syntax

```
show ip interface [interface | brief] [configuration]
```

Parameters

- **interface** (OPTIONAL) Enter the following keywords and slot/port or number information:
  - For the Management interface, enter the keyword ManagementEthernet followed by zero (0).
  - For a Port Channel interface, enter the keywords port-channel followed by a number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet followed by the slot/port information.
  - For a VLAN, enter the keyword vlan followed by a number from 1 to 4094.

- **brief** (OPTIONAL) Enter the keyword brief to view a brief summary of the interfaces and whether an IP address is assigned.

- **configuration** (OPTIONAL) Enter the keyword configuration to display the physical interfaces with non-default configurations only.

Command Modes

- EXEC
- EXEC Privilege

Supported Modes

All Modes

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

Usage Information

The following describes the `show ip interface` command shown in the following example.

- **TenGigabitEthernet 0/0...**
  - Displays the interface’s type, slot/port and physical and line protocol

- **Internet address...**
  - States whether an IP address is assigned to the interface. If one is, that address is displayed.

- **IP MTU is...**
  - Displays IP MTU value.

- **Inbound access...**
  - Displays the name of the any configured incoming access list. If none is configured, the phrase “not set” is displayed.

- **Proxy ARP...**
  - States whether proxy ARP is enabled on the interface.

- **Split horizon...**
  - States whether split horizon for RIP is enabled on the interface.

- **Poison Reverse...**
  - States whether poison for RIP is enabled on the interface.

- **ICMP redirects...**
  - States if ICMP redirects are sent.

- **ICMP unreachable...**
  - States if ICMP unreachable messages are sent.
Example

Dell#show ip int te 0/0
TenGigabitEthernet 0/0 is down, line protocol is down
Internet address is not set
IP MTU is 1500 bytes
Inbound access list is not set
Proxy ARP is enabled
Split Horizon is enabled
Poison Reverse is disabled
ICMP redirects are not sent
ICMP unreachables are not sent
Dell#

Usage Information

The following describes the show ip interface brief command shown in the following example.

<table>
<thead>
<tr>
<th>Fields</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Interface</td>
<td>Displays type of interface and the associated slot and port number.</td>
</tr>
<tr>
<td>IP-Address</td>
<td>Displays the IP address for the interface, if configured.</td>
</tr>
<tr>
<td>Ok?</td>
<td>Indicates if the hardware is functioning properly.</td>
</tr>
<tr>
<td>Method</td>
<td>Displays “Manual” if the configuration is read from the saved configuration.</td>
</tr>
<tr>
<td>Status</td>
<td>States whether the interface is enabled (up) or disabled (administratively down).</td>
</tr>
<tr>
<td>Protocol</td>
<td>States whether IP is enabled (up) or disabled (down) on the interface.</td>
</tr>
</tbody>
</table>

Example (Brief)

Dell#show ip int brief

Interface          IP-Address  OK? Method Status Protocol
TenGigabitEthernet 0/1 unassigned NO None   up      down
TenGigabitEthernet 0/2 unassigned YES None   up      up
TenGigabitEthernet 0/3 unassigned YES None   up      up
TenGigabitEthernet 0/4 unassigned NO None   up     down
TenGigabitEthernet 0/5 unassigned NO None   up     down
TenGigabitEthernet 0/6 unassigned NO None   up     down
TenGigabitEthernet 0/7 unassigned NO None   up     down
TenGigabitEthernet 0/8 unassigned NO None   up     down
TenGigabitEthernet 0/9 unassigned NO None   up     down

show ip management-route

View the IP addresses assigned to the Management interface.

Syntax

show ip management-route [all | connected | summary | static]

Parameters

<table>
<thead>
<tr>
<th>Parameters</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>all</td>
<td>(OPTIONAL) Enter the keyword all to view all IP addresses assigned to all Management interfaces on the switch.</td>
</tr>
<tr>
<td>connected</td>
<td>(OPTIONAL) Enter the keyword connected to view only routes directly connected to the Management interface.</td>
</tr>
<tr>
<td>summary</td>
<td>(OPTIONAL) Enter the keyword summary to view a table listing the number of active and non-active routes and their sources.</td>
</tr>
<tr>
<td>static</td>
<td>(OPTIONAL) Enter the keyword static to view non-active routes also.</td>
</tr>
</tbody>
</table>

Command Modes

• EXEC
show ip multicast-cam stack-unit

Displays content-addressable memory (CAM) entries.

**Syntax**

```
show ip multicast-cam stack-unit 0-5 port-set pipe-number [ip-address mask [longer-prefixes] | detail | member-info | summary]
```

**Parameters**

- **0-5**
  - Enter the stack-unit ID, from 0 to 5.
- **pipe-number**
  - Enter the number of the Port-Pipe number. The range is from 0 to 0.
- **ip-address mask [longer-prefix]**
  - (OPTIONAL) Enter the IP address and mask of a route to CAM entries for that route only.
  - Enter the keyword longer-prefixes to view routes with a common prefix.
- **detail**
  - Enter the keyword detail to display the group index ID used by the ecmp routes into the CAM.
- **member-info**
  - Enter the keyword member-info to display the group index used by the ecmp, the number of egress ports (members) for the ecmp, and the port details of each member. The detail information under member-info will give the MAC address, VLAN ID and gateway of every member port of the ecmp.
- **summary**
  - (OPTIONAL) Enter the keyword summary to view a table listing route prefixes and the total number routes which can be entered into CAM.

**Command Modes**

- EXEC
- EXEC Privilege

**Supported Modes**

All Modes

**Command History**

- **9.4(0.0)**
  - Supported on the FN I/O Aggregator.
- **8.3.17.0**
  - Supported on the M I/O Aggregator.
Supported on the M I/O Aggregator.

Usage Information

The following describes the `show ip fib stack-unit` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Destination</td>
<td>Displays the destination route of the index.</td>
</tr>
<tr>
<td>CG</td>
<td>Displays 0.</td>
</tr>
<tr>
<td>V</td>
<td>Displays a 1 if the entry is valid and a 0 otherwise.</td>
</tr>
<tr>
<td>C</td>
<td>Displays the CPU bit. 1 indicates that a packet hitting this entry is forwarded to the control processor, depending on Egress port.</td>
</tr>
<tr>
<td>V Id</td>
<td>Displays the VLAN ID. If the entry is 0, the entry is not part of a VLAN.</td>
</tr>
<tr>
<td>Mac Addr</td>
<td>Displays the next-hop router’s MAC address.</td>
</tr>
<tr>
<td>Port</td>
<td>Displays the egress interface. Use the second half of the entry to determine the interface. For example, in the entry 17cl CP, the CP is the pertinent portion.</td>
</tr>
</tbody>
</table>

- CP = control processor
- Fo = 40 Gigabit Ethernet interface
- Te = 10 Gigabit Ethernet interface

Example

```
Dell#show ip multicast-cam stack-unit 0 port-set 0 10.10.10.10/32 longer-prefixes
Destination    EC    CG    V    C  VId   Mac-Addr        Port
----------------- -- -- - - ----- -----------------    --------------
10.10.10.10          0     0   1   1 0 00:00:00:00:00:00     3f01 CP
Dell#
```

show ip route

View information, including how they were learned, about the IP routes on the switch.

Syntax

```
show ip route [hostname | ip-address [mask] [longer-prefixes] | list prefix-list [process-id] | connected | static | summary]
```

Parameters

- **ip-address** (OPTIONAL) Specify a name of a device or the IP address of the device to view more detailed information about the route.
- **mask** (OPTIONAL) Specify the network mask of the route. Use this parameter with the IP address parameter.
- **longer-prefixes** (OPTIONAL) Enter the keywords longer-prefixes to view all routes with a common prefix.
- **list prefix-list** (OPTIONAL) Enter the keyword list and the name of a configured prefix list.
- **process-id** (OPTIONAL) Specify that only OSPF routes with a certain process ID must be displayed.
**connected**  (OPTIONAL) Enter the keyword `connected` to view only the directly connected routes.

**static**  (OPTIONAL) Enter the keyword `static` to view only routes configured by the `ip route` command.

**summary**  (OPTIONAL) Enter the keyword `summary`.

### Command Modes
- EXEC
- EXEC Privilege

### Supported Modes
All Modes

### Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

### Usage Information
The following describes the `show ip route all` command in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
</table>

`(undefined)` Identifies the type of route:
- C = connected
- S = static
- R = RIP
- B = BGP
- IN = internal BGP
- EX = external BGP
- LO = Locally Originated
- O = OSPF
- IA = OSPF inter area
- N1 = OSPF NSSA external type 1
- N2 = OSPF NSSA external type 2
- E1 = OSPF external type 1
- E2 = OSPF external type 2
- i = IS-IS
- L1 = IS-IS level-1
- L2 = IS-IS level-2
- IA = IS-IS inter-area
- * = candidate default
- > = non-active route
- + = summary routes

**Destination** Identifies the route’s destination IP address.

**Gateway** Identifies whether the route is directly connected and on which interface the route is configured.

**Dist/Metric** Identifies if the route has a specified distance or metric.
Field: Description

Last Change: Identifies when the route was last changed or configured.

Example (Summary)

```
Dell#show ip route summary
Route Source       Active Routes     Non-active Routes
connected              2                 0
static                 1                 0
Total                  3                 0
Total 3 active route(s) using 612 bytes
Dell#show ip route static ?
|                Pipe through a command
<cr>
Dell#show ip route static
```

show tcp statistics

View information on TCP traffic through the switch.

Syntax: show tcp statistics

Command Modes: EXEC Privilege

Supported Modes: All Modes

Command History:

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

Usage Information:

The following describes the `show tcp statistics` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Rcvd:</td>
<td>Displays the number and types of TCP packets received by the switch.</td>
</tr>
<tr>
<td></td>
<td>• Total = total packets received</td>
</tr>
<tr>
<td></td>
<td>• no port = number of packets received with no designated port</td>
</tr>
<tr>
<td>0 checksum error...</td>
<td>Displays the number of packets received with the following:</td>
</tr>
<tr>
<td></td>
<td>• checksum errors</td>
</tr>
<tr>
<td></td>
<td>• bad offset to data</td>
</tr>
<tr>
<td></td>
<td>• too short</td>
</tr>
<tr>
<td>329 packets...</td>
<td>Displays the number of packets and bytes received in sequence.</td>
</tr>
<tr>
<td>17 dup...</td>
<td>Displays the number of duplicate packets and bytes received.</td>
</tr>
<tr>
<td>0 partially...</td>
<td>Displays the number of partially duplicated packets and bytes received.</td>
</tr>
<tr>
<td>7 out-of-order...</td>
<td>Displays the number of packets and bytes received out of order.</td>
</tr>
</tbody>
</table>
### Field Description

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>0 packets with data after window</td>
<td>Displays the number of packets and bytes received that exceed the switch’s window size.</td>
</tr>
<tr>
<td>0 packets after close</td>
<td>Displays the number of packet received after the TCP connection was closed.</td>
</tr>
<tr>
<td>0 window probe packets...</td>
<td>Displays the number of window probe and update packets received.</td>
</tr>
<tr>
<td>41 dup ack...</td>
<td>Displays the number of duplicate acknowledgement packets and acknowledgement packets with data received.</td>
</tr>
<tr>
<td>10184 ack...</td>
<td>Displays the number of acknowledgement packets and bytes received.</td>
</tr>
<tr>
<td>Sent:</td>
<td>Displays the total number of TCP packets sent and the number of urgent packets sent.</td>
</tr>
<tr>
<td>25 control packets...</td>
<td>Displays the number of control packets sent and the number retransmitted.</td>
</tr>
<tr>
<td>11603 data packets...</td>
<td>Displays the number of data packets sent.</td>
</tr>
<tr>
<td>24 data packets retransmitted</td>
<td>Displays the number of data packets resent.</td>
</tr>
<tr>
<td>355 ack...</td>
<td>Displays the number of acknowledgement packets sent and the number of packet delayed.</td>
</tr>
<tr>
<td>0 window probe...</td>
<td>Displays the number of window probe and update packets sent.</td>
</tr>
<tr>
<td>7 Connections initiated...</td>
<td>Displays the number of TCP connections initiated, accepted, and established.</td>
</tr>
<tr>
<td>14 Connections closed...</td>
<td>Displays the number of TCP connections closed, dropped.</td>
</tr>
<tr>
<td>20 Total rxmt...</td>
<td>Displays the number of times the switch tried to re-send data and the number of connections dropped during the TCP retransmit timeout period.</td>
</tr>
<tr>
<td>0 Keepalive...</td>
<td>Lists the number of keepalive packets in timeout, the number keepalive probes and the number of TCP connections dropped during keepalive.</td>
</tr>
</tbody>
</table>

### Example

Dell#show tcp statistics

Rcvd: 9849 Total, 0 no port
0 checksum error, 0 bad offset, 0 too short
5735 packets (7919 bytes) in sequence
20 dup packets (2 bytes)
0 partially dup packets (0 bytes)
1 out-of-order packets (0 bytes)
0 packets ( 0 bytes) with data after window
0 packets after close
0 window probe packets, 0 window update packets
0 dup ack packets, 0 ack packets with unsend data
6671 ack packets (152813 bytes)
Sent: 6778 Total, 0 urgent packets
7 control packets
6674 data packets (152822 bytes)
12 data packets (1222 bytes) retransmitted
85 ack only packets (5677 delayed)
0 window probe packets, 0 window update packets
0 Connections initiated, 7 connections accepted, 7 connections established
8 Connections closed (including 4 dropped, 0 embryonic dropped)
12 Total rxmt timeout, 1 connections dropped in rxmt timeout
26 Keepalive timeout, 25 keepalive probe, 1 Connections dropped in keepalive
Dell#
iSCSI Optimization

Internet small computer system interface (iSCSI) optimization enables quality-of-service (QoS) treatment for iSCSI storage traffic on an Aggregator.

NOTE: When iSCSI storage devices are detected on the server-ports, storm-control is disabled on those ports. When the iSCSI devices are off the ports, storm-control is enabled again.

advertise dcbx-app-tlv

Configure DCBX to send iSCSI TLV advertisements.

Syntax  advertise dcbx-app-tlv iscsi

To disable DCBX iSCSI TLV advertisements, use the no advertise dcbx-app-tlv iscsi command.

Defaults   Disabled.

Command Modes   PROTOCOL LLDP

Supported Modes   Programmable-Mux (PMUX)

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

You can configure iSCSI TLVs to send either globally or on a specified interface. The interface configuration takes priority over global configuration.

iscsi aging time

Set the aging time for iSCSI sessions.

Syntax  iscsi aging time time

To remove the iSCSI session aging time, use the no iscsi aging time command.

Parameters

- **time**
  
Enter the aging time for the iSCSI session. The range is from 5 to 43,200 minutes.

Defaults   10 minutes

Command Modes   CONFIGURATION
Supported Modes
Programmable-Mux (PMUX)

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>

<tr>
<td>8.3(16.1)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**iscsi cos**

Set the QoS policy that is applied to the iSCSI flows.

**Syntax**

```
iscsi cos {enable | disable | dot1p vlan-priority-value [remark] | dscp dscp-value [remark]}
```

To disable the QoS policy, use the `no iscsi cos dscp` command.

**Parameters**

- **enable**
  - Enter the keyword `enable` to allow the application of preferential QoS treatment to iSCSI traffic so that the iSCSI packets are scheduled in the switch with a dot1p priority 4 regardless of the VLAN priority tag in the packet. The default is: the iSCSI packets are handled with dot1p priority 4 without remark.

- **disable**
  - Enter the keyword `disable` to disable the application of preferential QoS treatment to iSCSI frames.

- **dot1p vlan-priority-value**
  - Enter the dot1p value of the VLAN priority tag assigned to the incoming packets in an iSCSI session. The range is from 0 to 7. The default is the dot1p value in ingress iSCSI frames is not changed and is the same priority is used in iSCSI TLV advertisements if you did not enter the `iscsi priority-bits` command.

- **dscp dscp-value**
  - Enter the DSCP value assigned to the incoming packets in an iSCSI session. The valid range is from 0 to 63. The default is: the DSCP value in ingress packets is not changed.

- **remark**
  - Marks the incoming iSCSI packets with the configured dot1p or DSCP value when they egress to the switch. The default is: the dot1 and DSCP values in egress packets are not changed.

**Defaults**

The default dot1p VLAN priority value is 4 without the `remark` option.

**Command Modes**
CONFIGURATION

<td>8.3(16.1)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

234 iSCSI Optimization
**iscsi enable**

Globally enable iSCSI optimization.

**Syntax**

```
iscsi enable
```

To disable iSCSI optimization, use the `no iscsi enable` command.

**Parameters**

`enable`

Enter the keyword `enable` to enable the iSCSI optimization feature.

**Defaults**

Disabled.

**Command Modes**

CONFIGURATION

**Supported Modes**

Programmable-Mux (PMUX)

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>

<td>Introduced on the M I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

When you enable the iSCSI feature using the `iscsi enable` command, flow control settings are set to `rx on tx off` on all interfaces.

**iscsi priority-bits**

Configure the iSCSI priority advertised for the iSCSI protocol in application priority TLVs.

**Syntax**

```
iscsi priority-bits priority-bitmap
```

To remove the configured iSCSI priority, use the `no iscsi priority-bits` command.

**Parameters**

`priority-bitmap`

Enter the priority-bitmap range. The range is from 1 to FF.

**Defaults**

0x10

**Command Modes**

PROTOCOL LLDP

**Supported Modes**

Programmable-Mux (PMUX)

</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

This command is available at the global level only.
**iscsi profile-compellent**

Configure the auto-detection of Dell Compellent arrays on a port.

**Syntax**

```
iscsi profile-compellent
```

**Defaults**

Dell Compellent disk arrays are not detected.

**Command Modes**

INTERFACE

**Supported Modes**

Programmable-Mux (PMUX)

</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**iscsi target port**

Configure the iSCSI target ports and optionally, the IP addresses on which iSCSI communication is monitored.

**Syntax**

```
iscsi target port [ tcp-port-2...tcp-port-16 ] ip-address [ ip-address ]
```

To remove the configured iSCSI target ports or IP addresses, use the `no iscsi target port` command.

**Parameters**

- `tcp-port-2...tcp-port-16` Enter the tcp-port number of the iSCSI target ports. The `tcp-port-n` is the TCP port number or a list of TCP port numbers on which the iSCSI target listens to requests. Separate port numbers with a comma. The default is 860, 3260.

- `ip-address` (Optional) Enter the ip-address that the iSCSI monitors. The ip-address specifies the IP address of the iSCSI target.

**Defaults**

860, 3260

**Command Modes**

CONFIGURATION

**Supported Modes**

Programmable-Mux (PMUX)

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>

</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

You can configure up to 16 target TCP ports on the switch in one command or multiple commands.

When you use the `no iscsi target port` command and the TCP port you wish to delete is one bound to a specific IP address, the IP address value must be included in the command.
show iscsi
Display the currently configured iSCSI settings.

Syntax
show iscsi

```
Related Commands

- `show iscsi` — displays the currently configured iSCSI settings.
- `show iscsi sessions` — displays information on active iSCSI sessions on the switch that have been established since the last reload.
# Isolated Networks

This chapter describes the isolated networks commands in the Dell Networking OS.

## io-aggregator isolated-network vlan

Enable the isolated-network functionality for a particular VLAN or a set of VLANs.

**Syntax**

```
[no] io-aggregator isolated-network vlan vlan-range
```

**Parameters**

- `isolated-network`  Specify an isolated network to be configured
- `vlan vlan-range`  Enter the keyword vlan followed by the member VLANs using VLAN IDs (separated by commas), a range of VLAN IDs (separated by a hyphen), a single VLAN ID, or a combination. For example: VLAN IDs (comma-separated): 3, 4, 6. Range (hyphen-separated): 5-10. Combination: 3, 4, 5-10, 8.

**Defaults**

Not configured.

**Command Modes**

CONFIGURATION

**Usage Information**

To add more VLANs into an isolated network, you can enter this same command at any later point. The VLANs specified are appended to the existing set of VLANs. To remove a VLAN or a set of VLANs from an isolated network, use the no form of command.

**Supported Modes**

All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>

</tr>
</thead>
<tbody>
<tr>
<td>9.5(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.5(0.0)</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Example**

```
Dell(conf)#io-aggregator isolated-network vlan 5-10
```

## show io-aggregator isolated-networks

Display the VLANs that are configured to be part of an isolated network on an Aggregator.

**Syntax**

```
show io-aggregator isolated-networks
```

**Parameters**

- `isolated-networks`  Specify an isolated network to be configured
**vlan vlan-range**

Enter the keyword `vlan` followed by the member VLANs using VLAN IDs (separated by commas), a range of VLAN IDs (separated by a hyphen), a single VLAN ID, or a combination. For example: VLAN IDs (comma-separated): 3, 4, 6. Range (hyphen-separated): 5-10. Combination: 3, 4, 5-10, 8.

**Defaults**

None

**Command Modes**

EXEC Privilege

**Usage Information**

This command is used to show the isolated-network feature status and the VLANs configured for this feature. Show running-config will save this command under io-aggregator.

**Supported Modes**

All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>

</tr>
</tbody>
</table>

**Example**

```
Dell#show io-aggregator isolated-networks
Isolated Network Enabled VLANs : 5-10
```
Link Aggregation Control Protocol (LACP)

This chapter contains commands for Dell Networking’s implementation of the link aggregation control protocol (LACP) for the creation of dynamic link aggregation groups (LAGs — called port-channels in Dell Networking OS parlance).

**auto-lag enable**

Enable auto-lag on a server facing port.

Syntax:
```
auto-lag enable
```

To disable the auto-lag use the `no auto-lag enable` command.

When disabled, the server port associated in a LAG is removed and the LAG itself gets removed. Any LACPDUs received on the server port are discarded.

**clear lacp counters**

Clear Port Channel counters.

Syntax:
```
clear lacp port-channel-number counters
```

Parameters:
- `port-channel-number`: Enter a port-channel number.
  - The range is from 1 to 128.

Command Modes:
- EXEC
- EXEC Privilege

Supported Modes:
- All Modes
Command History

<table>

<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

Related Commands

- `show lacp` — displays the LACP configuration.

debug lacp

Debug LACP (events).

Syntax

```
debug lacp [events | pdu interface [in | out]]
```

To disable LACP debugging, use the `no debug lacp [events | pdu interface [in | out]]` command.

Parameters

- **events** (OPTIONAL) Enter the keyword `events` to debug the LACP event information.
- **pdu in | out** (OPTIONAL) Enter the keyword `pdu` to debug the LACP Protocol Data Unit information. Optionally, enter an `in` or `out` parameter to:
  - Receive enter `in`
  - Transmit enter `out`
- **interface in | out** Enter the following keywords and slot/port or number information:
  - For a Ten-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` followed by the slot/port information.

Defaults

none

Command Modes

- EXEC
- EXEC Privilege

Supported Modes

delay-restore abort-threshold

Increase the Boot Up timer to some value (>60 seconds).

Syntax

```
delay-restore abort-threshold <interval>
```

To remove use the `no delay-restore abort-threshold` command.
Defaults 60 seconds
Command Modes VLT DOMAIN
Command History This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.8(0.0)</td>
<td>Introduced on the S3048–ON and S4048–ON.</td>
</tr>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S4820T, S4810, S6000, S5000, Z9000, S6000–ON and Z9500.</td>
</tr>
</tbody>
</table>

Parameter Enter the value (in seconds) to specify the time interval for delay restore timer to abort. This timer is applicable only during reload/boot-up and not in other scenarios (example, ICL flap).

The range is from 1 to 1800 seconds.

Usage Information To abort VLT delay restore timer as the maximum threshold, the maximum time interval is applied to hold down ICL peer-up in the start-up configurations during the reload.

**io-aggregator auto-lag enable**

Enable auto-lag globally on the server facing ports

**Syntax**

```plaintext
io-aggregator auto-lag enable
```

To disable the auto-lag, use the `no io-aggregator auto-lag enable` command.

When disabled, all the server ports associated in a LAG are removed and the LAG itself gets removed. Any LACPDU's received on the server ports are discarded.

**Defaults**

Enabled

**Command Modes**

CONFIGURATION

**Supported Modes**

Standalone, Stacking, VLT

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.6(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.6(0.0)</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Related Commands**

- `show io-aggregator auto-lag status`—displays global information on the auto-lag status.

**lACP link-fallback member**

Enable the LACP link fallback member feature.

**Syntax**

`lACP link-fallback member-independent port-channel 128`

**Related Commands**

- `lacp port-channel`—Configures a port channel.
- `lacp system-priority`—Configures the system priority.
- `lacp system-system-id`—Configures the system identifier.
- `lacp system-transaction-id`—Configures the system transaction identifier.
To disable the LACP link fallback member, use the `no lacp link-fallback member-independent port-channel 128` command.

**Command Modes**
- INTERFACE

**Supported Modes**
- Standalone, Stacking

**Command History**
This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the M I/O Aggregator and FN I/O Aggregator.</td>
</tr>
</tbody>
</table>

### lACP long-timeout

Configure a long timeout period (30 seconds) for an LACP session.

**Syntax**

```
lacp long-timeout
```

To reset the timeout period to a short timeout (1 second), use the `no lacp long-timeout` command.

**Defaults**

1 second

**Command Modes**

- INTERFACE (conf-if-po-number)

**Supported Modes**

Programmable-Mux (PMUX)

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

This command applies to dynamic port-channel interfaces only. When applied on a static port-channel, this command has no effect.

### lACP port-priority

To influence which ports will be put in Standby mode when there is a hardware limitation that prevents all compatible ports from aggregating, configure the port priority.

**Syntax**

```
lacp port-priority priority-value
```

To return to the default setting, use the `no lacp port-priority priority-value` command.

**Parameters**

- **priority-value**
  - Enter the port-priority value. The higher the value number, the lower the priority.
  - The range is from 1 to 65535. The default is 32768.
port-channel mode

Configure the LACP port channel mode.

Syntax

```
port-channel number mode [active] [passive] [off]
```

Parameters

- `number`
  - Enter the keywords `number` then a number.
- `active`
  - Enter the keyword `active` to set the mode to the active state.
  - **NOTE:** LACP modes are defined in Usage Information.
- `passive`
  - Enter the keyword `passive` to set the mode to the passive state.
  - **NOTE:** LACP modes are defined in Usage Information.
- `off`
  - Enter the keyword `off` to set the mode to the off state.
  - **NOTE:** LACP modes are defined in Usage Information.

Defaults

- `off`

Command Modes

- INTERFACE

Supported Modes

- Programmable-Mux (PMUX)

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

LACP Modes

<table>
<thead>
<tr>
<th>Mode</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>active</td>
<td>An interface is in an active negotiating state in this mode. LACP runs on any link configured in the active state and also automatically initiates negotiation with other ports by initiating LACP packets.</td>
</tr>
<tr>
<td>passive</td>
<td>An interface is not in an active negotiating state in this mode. LACP runs on any link configured in the passive state. Ports in a passive state respond to negotiation</td>
</tr>
</tbody>
</table>
### Mode Function

- **requests from other ports that are in active states. Ports in a passive state respond to LACP packets**

- **off**  An interface cannot be part of a dynamic port channel in off mode. LACP does not run on a port configured in off mode.

### port-channel-protocol lacp

Enable LACP on any LAN port.

**Syntax**

```
port-channel-protocol lacp
```

To disable LACP on a LAN port, use the `no port-channel-protocol lacp` command.

**Command Modes**

- INTERFACE

**Supported Modes**

- Programmable-Mux (PMUX)

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Example**

```bash
Dell(conf)#interface TenGigabitethernet 3/15
Dell(conf-if-tengig-3/15)#no shutdown
Dell(conf-if-tengig-3/15)#port-channel-protocol lacp
Dell(conf-if-tengig-3/15-lacp)#port-channel 32 mode active
...```

```bash
Dell(conf)#interface TenGigabitethernet 3/16
Dell(conf-if-tengig-3/16)#no shutdown
Dell(conf-if-tengig-3/16)#port-channel-protocol lacp
Dell(conf-if-tengig-3/16-lacp)#port-channel 32 mode active
```

### show interfaces port-channel

Display information on configured Port Channel groups.

**Syntax**

```
show interfaces port-channel [channel-number] [brief| description]
```

**Parameters**

- **channel-number**  For a Port Channel interface, enter the keyword port-channel followed by a number. The range is from 1 to 128.

- **brief**  (OPTIONAL) Enter the keyword brief to display only the port channel number, the state of the port channel, and the number of interfaces in the port channel.

- **description**  (OPTIONAL) Enter the keyword description to display interface information with description.

**Command Modes**

- EXEC
**Supported Modes**

All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

The following describes the `show interfaces port-channel` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Port-Channel 1...</td>
<td>Displays the status of LAG. In the Example, the status of the LAG, LAG fate-sharing group (&quot;Failover-group&quot;) is listed.</td>
</tr>
<tr>
<td>Hardware is...</td>
<td>Displays the interface’s hardware information and its assigned MAC address.</td>
</tr>
<tr>
<td>Port-channel is part...</td>
<td>Indicates whether the LAG is part of a LAG fate-sharing group (&quot;Failover-group&quot;).</td>
</tr>
<tr>
<td>Internet address...</td>
<td>States whether an IP address is assigned to the interface. If an IP address is assigned, that address is displayed.</td>
</tr>
<tr>
<td>MTU 1554...</td>
<td>Displays link and IP MTU.</td>
</tr>
<tr>
<td>LineSpeed</td>
<td>Displays the interface’s line speed. For a port channel interface, it is the line speed of the interfaces in the port channel.</td>
</tr>
<tr>
<td>Members in this...</td>
<td>Displays the interfaces belonging to this port channel.</td>
</tr>
<tr>
<td>ARP type:...</td>
<td>Displays the ARP type and the ARP timeout value for the interface.</td>
</tr>
<tr>
<td>Last clearing...</td>
<td>Displays the time when the <code>show interfaces</code> counters were cleared.</td>
</tr>
<tr>
<td>Queueing strategy.</td>
<td>States the packet queueing strategy. FIFO means first in first out.</td>
</tr>
<tr>
<td>packets input...</td>
<td>Displays the number of packets and bytes into the interface.</td>
</tr>
<tr>
<td>Input 0 IP packets...</td>
<td>Displays the number of packets with IP headers, VLAN tagged headers, and MPLS headers. The number of packets may not add correctly because a VLAN tagged IP packet counts as both a VLAN packet and an IP packet.</td>
</tr>
<tr>
<td>0 64-byte...</td>
<td>Displays the size of packets and the number of those packets entering that interface. This information is displayed over two lines.</td>
</tr>
<tr>
<td>Received 0...</td>
<td>Displays the type and number of errors or other specific packets received. This information is displayed over three lines.</td>
</tr>
<tr>
<td>Output 0...</td>
<td>Displays the type and number of packets sent out the interface. This information is displayed over three lines.</td>
</tr>
<tr>
<td>Rate information...</td>
<td>Displays the traffic rate information into and out of the interface. Traffic rate is displayed in bits and packets per second.</td>
</tr>
<tr>
<td>Time since...</td>
<td>Displays the time since the last change in the configuration of this interface.</td>
</tr>
</tbody>
</table>

**Example (EtherScale)**

```
Dell#show interfaces port-channel
Port-channel 1 is down, line protocol is down
Hardware address is 00:1e:c9:f1:00:05, Current address is 00:1e:c9:f1:00:05
Interface index is 1107755009
Minimum number of links to bring Port-channel up is 1
Internet address is not set
```
Mode of IP Address Assignment: NONE
DHCP Client-ID: lag1001ec9f10005
MTU 12000 bytes, IP MTU 1500 bytes
LineSpeed auto
Members in this channel:
ARP type: ARPA, ARP Timeout 04:00:00
Last clearing of "show interface" counters 03:28:00
Queueing strategy: fifo
Input Statistics:
0 packets, 0 bytes
0 64-byte pkts, 0 over 64-byte pkts, 0 over 127-byte pkts
0 over 255-byte pkts, 0 over 511-byte pkts, 0 over 1023-byte pkts
0 Multicasts, 0 Broadcasts
0 runts, 0 giants, 0 throttles
0 CRC, 0 overrun, 0 discarded
Output Statistics:
0 packets, 0 bytes, 0 underruns
0 64-byte pkts, 0 over 64-byte pkts, 0 over 127-byte pkts
0 over 255-byte pkts, 0 over 511-byte pkts, 0 over 1023-byte pkts
0 Multicasts, 0 Broadcasts, 0 Unicasts
0 throttles, 0 discarded, 0 collisions

User Information

The following describes the show interfaces port-channel brief command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>LAG</td>
<td>Lists the port channel number.</td>
</tr>
<tr>
<td>Mode</td>
<td>Lists the mode:</td>
</tr>
<tr>
<td></td>
<td>• L3 — for Layer 3</td>
</tr>
<tr>
<td></td>
<td>• L2 — for Layer 2</td>
</tr>
<tr>
<td>Status</td>
<td>Displays the status of the port channel.</td>
</tr>
<tr>
<td>Uptime</td>
<td>Displays the age of the port channel in hours:minutes:seconds.</td>
</tr>
<tr>
<td>Ports</td>
<td>Lists the interfaces assigned to this port channel.</td>
</tr>
<tr>
<td>(untitled)</td>
<td>Displays the status of the physical interfaces (up or down).</td>
</tr>
<tr>
<td></td>
<td>• In Layer 2 port channels, an * (asterisk) indicates which interface is the primary port of the port channel. The primary port sends out interface PDU.</td>
</tr>
<tr>
<td></td>
<td>• In Layer 3 port channels, the primary port is not indicated.</td>
</tr>
</tbody>
</table>

Example

Dell#show int po bri
Codes: L - LACP Port-channel
        0 - OpenFlow Controller Port-channel
        A - Auto Port-channel
        I - Internally Lagged
LAG Mode Status Uptime Ports
L 128 L3 down 00:00:00
Dell#

To indicate the LACP fallback, Internally lagged is added to the list. When the LAG auto-configures itself, the LAG status describes as ‘I’.
show io-aggregator auto-lag status

Displays global information on the auto-lag status.

Syntax
show io-aggregator auto-lag status

Command Modes
- EXEC
- EXEC Privilege

Supported Modes
Standalone, Stacking, VLT

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.6(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.6(0.0)</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

Example

Dell-ct-mxl-1-b1(conf)#do show io-aggregator auto-lag status
Auto LAG creation on server port(s) is disabled

show lacp

Displays the LACP matrix.

Syntax
show lacp port-channel-number [sys-id | counters]

Parameters
- port-channel-number
  - Enter a port-channel number:
  - The range is from 1 to 128.
- sys-id
  - (OPTIONAL) Enter the keywords sys-id and the value that identifies a system.
- counters
  - (OPTIONAL) Enter the keyword counters to display the LACP counters.

Command Modes
- EXEC
- EXEC Privilege

Supported Modes
All Modes

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

Example (Port-Channel-Number)

Dell#show lacp 128
Port-channel 1 admin up, oper up, mode lacp
Actor  System ID:Priority 32768, Address 0001.e800.a12b
Partner System ID:Priority 32768, Address 0001.e801.45a5
  Actor Admin Key 1, Oper Key 1, Partner Oper Key 1
LACP LAG 1 is an aggregatable link

A-Active LACP, B-Passive LACP, C-Short Timeout, D-Long Timeout
E-Aggregatable Link, F-Individual Link, G-IN_SYNC, H-OUT_OF_SYNC
I-Collection enabled, J-Collection disabled, K-Distribution enabled, L-Distribution disabled,
M-Partner Defaulted, N-Partner Non-defaulted, O-Receiver is in expired state,
P-Receiver is not in expired state

Port Te 0/1 is enabled, LACP is enabled and mode is lacp
Actor Admin: State ACEHJLMP Key 1 Priority 128
   Oper: State ACEGIKMN Key 1 Priority 128
Partner Admin: State BDFHJLMP Key 0 Priority 0
   Oper: State BCEGIKNP Key 1 Priority 128

Example (Sys-id)
Dell#show lacp 1 sys-id
Actor System ID: Priority 32768, Address 0001.e800.a12b
Partner System ID: Priority 32768, Address 0001.e801.45a5

Example (Counter)
Dell#show lacp 1 counters
--------------------------------------------------
<table>
<thead>
<tr>
<th>LACP PDU</th>
<th>Marker PDU</th>
<th>Unknown</th>
<th>Illegal</th>

Related Commands

- clear lacp counters — Clears the LACP counters.
- show interfaces port-channel — Displays the information on configured Port Channel groups.

show link-bundle-distribution port-channel

Display the traffic-handling and utilization of the member interfaces of the port channel.

Syntax

    show link-bundle-distribution port-channel

Command Modes

- EXEC
- EXEC Privilege

Supported Modes

All Modes

Command History

Version     Description
            9.3.0.0  Introduced on the M I/O Aggregator

Usage Information

The following table describes the output fields of this show command:
<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Link-bundle trigger threshold</td>
<td>Threshold value that is the checkpoint, exceeding which the link bundle is marked as being overutilized and alarm is generated</td>
</tr>
<tr>
<td>LAG bundle number</td>
<td>Number of the LAG bundle</td>
</tr>
<tr>
<td>Utilization (In Percent)</td>
<td>Traffic usage in percentage of the packets processed by the port channel</td>
</tr>
<tr>
<td>Alarm State</td>
<td>Indicates whether an alarm is generated if overutilization of the port channel occurred. Possible values are Active and Inactive</td>
</tr>
<tr>
<td>Interface</td>
<td>Slot and port number, and the type of the member interface of the port channel</td>
</tr>
<tr>
<td>Line Protocol</td>
<td>Indicates whether the interface is administratively up or down</td>
</tr>
<tr>
<td>Utilization (In Percent)</td>
<td>Traffic usage in percentage of the packets processed by the particular member interface</td>
</tr>
</tbody>
</table>

**Example**

```
Dell#show link-bundle-distribution port-channel
Link-bundle trigger threshold - 60
LAG bundle - 1      Utilization[In Percent] - 0      Alarm State - Inactive
Interface                Line Protocol   Utilization[In Percent]
Te 0/5                   Up              0
Te 0/13                  Up              0
```

**show port-channel-flow**

Display an egress port in a given port-channel flow.

**Syntax**

```
show port-channel-flow port-channel number incoming-interface interface
{ src-mac address dest-mac address {vlan vlanid | ether-type }}
{ src-ip address dest-ip address }{ src-port number dest-port number }
```

**Parameters**

- **port-channel number**
  
  Enter the keywords `port-channel` then the number of the port channel to display flow information. The range is from 1 to 128.

- **incoming-interface interface**
  
  Enter the keywords `incoming-interface` then the interface type and slot/port number information:

  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.

- **src-mac address**
  
  Enter the keywords `src-mac` then the MAC source address in the `nn:nn:nn:nn:nn:nn` format.

- **dest-mac address**
  
  Enter the keywords `dest-mac` then the MAC destination address in the `nn:nn:nn:nn:nn:nn` format.

- **vlan vlan-id**
  
  Enter the keyword `vlan` then the VLAN ID. The range is from 1 to 4094.
ether-type
Enter the keywords `ether-type` then the ether-value in the XX:XX format.

src-ip address
Enter the keywords `src-ip` then the IP source address in IP address format.

dest-ip address
Enter the keywords `dest-ip` then the IP destination address in IP address format.

src-port number
Enter the keywords `src-port` then the source port number. The range is from 1 to 65536. The default is `None`.

dest-port number
Enter the keywords `dest-port` then the destination port number. The range is from 1 to 65536. The default is `None`.

<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

Usage Information

Because this command calculates based on a Layer 2 hash algorithm, use this command to display flows for switched Layer 2 packets, not for routed packets (use the `show ip flow` command to display routed packets).

The `show port-channel-flow` command returns the egress port identification in a given port-channel if a valid flow is entered. A mismatched flow error occurs if MAC-based hashing is configured for a Layer 2 interface and you are trying to display a Layer 3 flow.

The output displays three entries:

- Egress port for unfragmented packets.
- In the event of fragmented packets, the egress port of the first fragment.
- In the event of fragmented packets, the egress port of the subsequent fragments.

**NOTE:** In the `show port-channel-flow` command output, the egress port for an unknown unicast, multicast, or broadcast traffic is not displayed.
Layer 2

This chapter describes commands to configure Layer 2 features.

This chapter contains the following sections:

- MAC Addressing Commands
- Virtual LAN (VLAN) Commands

MAC Addressing Commands

The following commands are related to configuring, managing, and viewing MAC addresses:

- `clear mac-address-table dynamic`
- `mac-address-table aging-time`
- `mac-address-table static`
- `mac-address-table station-move refresh-arp`
- `show cam mac stack-unit`
- `show mac-address-table`

Virtual LAN (VLAN) Commands

The following commands configure and monitor virtual local area networks (VLANs). VLANs are a virtual interface and use many of the same commands as physical interfaces.

You can configure an IP address and Layer 3 protocols on a VLAN called Inter-VLAN routing. FTP, TFTP, ACLs and SNMP are not supported on a VLAN.

`clear mac-address-table dynamic`

Clear the MAC address table of all MAC addresses learned dynamically.

**Syntax**

```
clear mac-address-table dynamic {address mac-address | all | interface interface | vlan vlan-id}
```

**Parameters**

- `address mac-address`
  
  Enter the keyword `address` followed by a MAC address in `nn:nn:nn:nn:nn:nn` format.

- `all`
  
  Enter the keyword `all` to delete all MAC address entries in the MAC address table.

- `interface interface`
  
  Enter the following keywords and slot/port or number information:
For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet followed by the slot/port information.

```
vlan vlan-id
```
Enter the keyword `vlan` followed by a VLAN ID number from 1 to 4094.

**Command Modes**
- EXEC Privilege

**Supported Modes**
- All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

### description

Add a description about the selected VLAN.

**Syntax**

```
description description
```

To remove the description from the VLAN, use the `no description` command.

**Parameters**

- `description` Enter a text string description to identify the VLAN (80 characters maximum).

**Defaults**

none

**Command Modes**
- INTERFACE VLAN

**Supported Modes**
- All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Related Commands**

- `show vlan` – displays the VLAN configuration.

### mac-address-table aging-time

Specify an aging time for MAC addresses to remove from the MAC address table.

**Syntax**

```
mac-address-table aging-time seconds
```

To delete the configured aging time, use the `no mac-address-table aging-time seconds` command.

**Parameters**

- `seconds` Enter either zero (0) or a number as the number of seconds before MAC addresses are relearned. To disable aging of the MAC address table, enter 0. The range is from 10 to 1000000. The default is **1800 seconds**.
Defaults: 1800 seconds
Command Modes: CONFIGURATION
Supported Modes: Programmable-Mux (PMUX)

Command History:

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**mac-address-table static**

Associate specific MAC or hardware addresses to an interface and virtual local area networks (VLANs).

Syntax:
```
mac-address-table static mac-address output interface vlan vlan-id
```

To remove a MAC address, use the `no mac-address-table static mac-address output interface vlan vlan-id` command.

Parameters:
- **mac-address**: Enter the 48-bit hexadecimal address in nn:nn:nn:nn:nn:nn format.
- **output interface**: Enter the keyword `output` then one of the following interfaces for which traffic is forwarded:
  - For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
- **vlan vlan-id**: Enter the keyword `vlan` then a VLAN ID number from 1 to 4094.

Defaults: Not configured.
Command Modes: CONFIGURATION
Supported Modes: Programmable-Mux (PMUX)

Command History:

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>

<tr>
<td>8.3(16.1)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**mac-address-table station-move refresh-arp**

Ensure that address resolution protocol (ARP) refreshes the egress interface when a station move occurs due to a topology change.

Syntax:
```
[no] mac-address-table station-move refresh-arp
```
show cam mac stack-unit

Display the content addressable memory (CAM) size and the portions allocated for MAC addresses and for MAC ACLs.

Syntax
show cam mac stack-unit unit_number port-set port-pipe count [vlan vlan-id] [interface interface]

Parameters
stack-unit (REQUIRED) Enter the keyword stack-unit followed by a stack member number to select the stack unit for which to gather information. The range is 0 to 5.
unit_number
port-set port-pipe (REQUIRED) Enter the keywords port-set followed by a Port-Pipe number to select the Port-Pipe for which to gather information. The range is 0.
address mac-addr (OPTIONAL) Enter the keyword address followed by a MAC address in the nn:nn:nn:nn:nn:nn format to display information on that MAC address.
dynamic (OPTIONAL) Enter the keyword dynamic to display only those MAC addresses learned dynamically by the switch.
static (OPTIONAL) Enter the keyword static to display only those MAC addresses specifically configured on the switch.
interface interface (OPTIONAL) Enter the keyword interface followed by the interface type, slot and port information:
  For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet followed by the slot/port information.

Command Modes
  • EXEC
  • EXEC Privilege

Supported Modes
  All Modes
show mac-address-table

Display the MAC address table.

Syntax

show mac-address-table [dynamic | static] [address mac-address | interface interface | vlan vlan-id] [count [vlan vlan-id] [interface interface-type [slot [/port]]]

Parameters

dynamic (OPTIONAL) Enter the keyword dynamic to display only those MAC addresses the switch dynamically learns. Optionally, you can also add one of these combinations: address/mac-address, interface/interface, or vlan vlan-id.

static (OPTIONAL) Enter the keyword static to display only those MAC addresses specifically configured on the switch. Optionally, you can also add one of these combinations: address/mac-address, interface/interface, or vlan vlan-id.

address mac-address (OPTIONAL) Enter the keyword address then a MAC address in the nn:nn:nn:nn:nn:nn format to display information on that MAC address.

interface interface (OPTIONAL) Enter the keyword interface then the interface type, slot and port information:

  • For a Port Channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.
  • For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.

interface interface-type (OPTIONAL) Instead of entering the keyword interface then the interface type, slot and port information, as above, you can enter the interface type, then just a slot number.

vlan vlan-id (OPTIONAL) Enter the keyword vlan then the VLAN ID to display the MAC address assigned to the VLAN. The range is 1 to 4094.

count (OPTIONAL) Enter the keyword count, then optionally, by an interface or VLAN ID, to display total or interface-specific static addresses, dynamic addresses, and MAC addresses in use.

Command Modes

  • EXEC
  • EXEC Privilege

Supported Modes Programmable-Mux (PMUX)

**Example (Count)**

Dell#show mac-address-table count
MAC Entries for all vlans :
Dynamic Address Count :  5
Static Address (User-defined) Count :  0
Total MAC Addresses in Use:  5
Dell#
The link layer discovery protocol (LLDP) advertises connectivity and management from the local station to the adjacent stations on an IEEE 802 LAN. LLDP facilitates multi-vendor interoperability by using standard management tools to discover and make available a physical topology for network management. The Dell Networking OS implementation of LLDP is based on IEEE standard 801.1ab. This chapter describes the LLDP commands.

The starting point for using LLDP is invoking LLDP with the protocol lldp command in either CONFIGURATION or INTERFACE mode.

The information LLDP distributes is stored by its recipients in a standard management information base (MIB). You can access the information by a network management system through a management protocol such as simple network management protocol (SNMP).

For details about implementing LLDP/LLDP-MED, refer to the Link Layer Discovery Protocol chapter of the Dell PowerEdge FN I/O Aggregator Configuration Guide.

### advertise dot3-tlv
Advertise dot3 TLVs (Type, Length, Value).

**Syntax**
```
advertise dot3-tlv {max-frame-size}
```

To remove advertised dot3-tlv, use the no advertise dot3-tlv {max-frame-size} command.

**Parameters**
- `max-frame-size` Enter the keywords max-frame-size to advertise the dot3 maximum frame size.

**Defaults**
none

**Command Modes**
- CONFIGURATION (conf-lldp) and INTERFACE (conf-if-interface-lldp)

**Supported Modes**
Programmable-Mux (PMUX)

**Command History**

<table>

<tr>
<td>8.3(16.1)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>
advertise management-tlv

Advertise management TLVs (Type, Length, Value).

Syntax
advertise management-tlv {system-capabilities | system-description | system-name}

To remove advertised management TLVs, use the no advertise management-tlv {system-capabilities | system-description | system-name} command.

Parameters

- **system-capabilities**: Enter the keywords system-capabilities to advertise the system capabilities TLVs to the LLDP peer.
- **system-description**: Enter the keywords system-description to advertise the system description TLVs to the LLDP peer.
- **system-name**: Enter the keywords system-name to advertise the system name TLVs to the LLDP peer.

Defaults

none

Command Modes

CONFIGURATION (conf-lldp)

Supported Modes

Programmable-Mux (PMUX)

</tr>
</tbody>
</table>

Usage Information

The command options system-capabilities, system-description, and system-name can be invoked individually or together, in any sequence.

clear lldp counters

Clear LLDP transmitting and receiving counters for all physical interfaces or a specific physical interface.

Syntax

clear lldp counters interface

Parameters

- **interface**: Enter the following keywords and slot/port or number information:
  - For a 10-Gigabit Ethernet interface, enter the keyword tenGigabitEthernet followed by the slot/port information.

Defaults

none

Command Modes

EXEC Privilege

Supported Modes

All Modes
clear lldp neighbors

Clear LLDP neighbor information for all interfaces or a specific interface.

Syntax

```
clear lldp neighbors {interface}
```

Parameters

- **interface**
  - Enter the following keywords and slot/port or number information:
    - For a 10-Gigabit Ethernet interface, enter the keyword `tenGigabitEthernet` followed by the slot/port information.
    - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` followed by the slot/port information.

Defaults

none

Command Modes

- EXEC Privilege
- Programmable-Mux (PMUX)

Command History

- **9.2(0.0)**
  - Introduced on the M I/O Aggregator.
- **8.3.16.1**
  - Introduced on the MXL 10/40GbE Switch IO Module.

debug lldp interface

Enable LLDP debugging to display timer events, neighbor additions or deletions, and other information about incoming and outgoing packets.

Syntax

```
download llpdp interface {interface | all}{events | packet {brief | detail} {tx | rx | both}}
```

To disable debugging, use the `no download llpdp interface {interface | all}{events} {packet {brief | detail} {tx | rx | both}}` command.

Parameters

- **interface**
  - Enter the following keywords and slot/port or number information:
    - For a 10-Gigabit Ethernet interface, enter the keyword `tenGigabitEthernet` followed by the slot/port information.

- **all** (OPTIONAL) Enter the keyword `all` to display information on all interfaces.

- **events** (OPTIONAL) Enter the keyword `events` to display major events such as timer events.
packet (OPTIONAL) Enter the keyword packet to display information regarding packets coming in or going out.
brief (OPTIONAL) Enter the keyword brief to display brief packet information.
detail (OPTIONAL) Enter the keyword detail to display detailed packet information.
rx (OPTIONAL) Enter the keyword rx to display receive-only packet information.
both (OPTIONAL) Enter the keyword both to display both receive and transmit packet information.

Defaults
none

</tr>
</tbody>
</table>

Related Commands
debug lldp interface — debugs LLDP.

**hello**

Configure the rate at which the LLDP control packets are sent to its peer.

Syntax

hello seconds
To revert to the default, use the no hello seconds command.

**Parameters**

- **seconds**  
Enter the rate, in seconds, at which the control packets are sent to its peer. The rate is from 5 to 180 seconds. The default is **30 seconds**.

**Defaults**  
**30 seconds**

</tbody>
</table>

---

**multiplier**

Set the number of consecutive misses before LLDP declares the interface dead.

**Syntax**

```plaintext
multiplier integer
```

To return to the default, use the no multiplier integer command.

**Parameters**

- **integer**  
Enter the number of consecutive misses before the LLDP declares the interface dead. The range is from 2 to 10.

**Defaults**  
**4 x hello**

**Command Modes**  
CONFIGURATION (conf-lldp) and INTERFACE (conf-if-interface-lldp)

**Supported Modes**  
Programmable-Mux (PMUX)

**Command History**

</tr>
</tbody>
</table>

**protocol lldp (Interface)**

Enter the LLDP protocol in the INTERFACE mode.

**Syntax**

```
protocol lldp
```

To return to the global LLDP configuration mode, use the `no protocol lldp` command from Interface mode.

**Defaults**

Enabled

**Command Modes**

INTERFACE (conf-if-interface-lldp)

**Supported Modes**

All Modes

**Command History**

**Usage Information**

This command is available only in PMUX mode.

By default, protocol lldp is enabled. To disable, use the `no protocol lldp` command.

When you enter the LLDP protocol in the Interface context, it overrides global configurations. When you execute the `no protocol lldp` from INTERFACE mode, interfaces begin to inherit the configuration from global LLDP CONFIGURATION mode.

**show lldp neighbors**

Display LLDP neighbor information for all interfaces or a specified interface.

**Syntax**

```
show lldp neighbors [interface] [detail]
```

**Parameters**

- `interface` (OPTIONAL) Enter the following keywords and slot/port or number information:
  - For a 10-Gigabit Ethernet interface, enter the keyword `tenGigabitEthernet` then the slot/port information.
detail

(Optional) Enter the keyword detail to display all the TLV information, timers, and LLDP tx and rx counters.

Defaults

none

Command Modes

EXEC Privilege

Supported Modes

All Modes

Command History

Version Description

8.3.17.0 Supported on the M I/O Aggregator.

Usage Information

Omitting the keyword detail displays only the remote chassis ID, Port ID, and Dead Interval.

Example

Dell (conf-if-te-1/31)#do show lldp neighbors
Loc PortID Rem Host Name Rem Port Id Rem Chassis Id
-----------------------------------------------
Te 1/37 FTOS TenGigabitEthernet 0/37 00:01:e8:05:40:46
Te 1/38 FTOS TenGigabitEthernet 0/38 00:01:e8:05:40:46
Te 1/39 FTOS TenGigabitEthernet 0/39 00:01:e8:05:40:46
Te 1/40 FTOS TenGigabitEthernet 0/40 00:01:e8:05:40:46
Dell (conf-if-te-1/31)#

show lldp neighbors

Displays the LLDP statistical information.

Syntax

show lldp neighbors

Defaults

none

Command Modes

EXEC Privilege

Supported Modes

All Modes

Command History

Version Description

9.4(0.0) Supported on the FN I/O Aggregator.

8.3.17.0 Supported on the M I/O Aggregator.

Example

Dell#show lldp neighbors
------- LLDP GLOBAL STATISTICS ON CHASSIS -------
Total number of neighbors: 4
Last table change time: 00:01:17, In ticks: 3859
Total number of Table Inserts: 7
Total number of Table Deletes: 3
Total number of Table Drops: 0
Total number of Table Age Outs: 0
Dell#
Port Monitoring

The port monitoring feature allows you to monitor network traffic by forwarding a copy of each incoming or outgoing packet from one port to another port.

Important Points to Remember

- Port monitoring is supported on physical ports only. Port-channel interfaces and virtual local area networks (VLANs), are not supported.
- The monitoring (destination, “MG”) and monitored (source, “MD”) ports must be on the same switch.
- The monitored (source) interface must be a server-facing interface in the format slot/port, where valid slot numbers are 0-1 and server-facing port numbers are from 1 to 32. The monitoring interface must be an uplink port in the chassis.
- Dell Networking OS permits a limited set of commands for monitoring ports. To display these commands, use the ? command.
- Only one MG and one MD may be in a single port-pipe.
- A monitoring port may not be a member of a VLAN.
- There may only be one destination port in a monitoring session.
- A source port (MD) can only be monitored by one destination port (MG). If you try to assign a monitored port to more than one monitoring port, the following error is displayed as shown in example.

Example

Dell(conf)#mon ses 1
Dell(conf-mon-sess-1)#source tengig 0/0 destination tengig 0/60 direction both
Dell(conf-mon-sess-1)#do show mon ses
SessionID Source      Destination  Direction  Mode  Type
--------- ------      -----------  ---------  ----  ----
          TenGig 0/0  TenGig 0/60  both            interface
Port-based
Dell(conf-mon-sess-1)#mon ses 2
Dell(conf-mon-sess-2)#source tengig 0/0 destination tengig 0/61 direction both
% Error: MD port is already being monitored.

NOTE: There is no limit to the number of monitoring sessions per system, provided that there are only four destination ports per port-pipe. If each monitoring session has a unique destination port, the maximum number of session is four per port-pipe.

description

Enter a description of this monitoring session.

Syntax

description {description}

To remove the description, use the no description {description} command.
### Parameters

<table>
<thead>
<tr>
<th>Description</th>
<th>Enter a description regarding this session (80 characters maximum).</th>
</tr>
</thead>
</table>

### Defaults

| none |

### Command Modes

| MONITOR SESSION (conf-mon-sess-session-ID) |

</tbody>
</table>

### Related Commands

| monitor session — enables a monitoring session. |

## monitor session

Create a session for monitoring traffic with port monitoring.

### Syntax

```
monitor session session-ID
```

To delete a session, use the `no monitor session session-ID` command.

To delete all monitor sessions, use the `no monitor session all` command.

### Parameters

<table>
<thead>
<tr>
<th>session-ID</th>
<th>Enter a session identification number. The range is from 0 to 65535.</th>
</tr>
</thead>
</table>

### Defaults

| none |

### Command Modes

</table>

**Example**

```
Dell(conf-mon-sess-1)#show config
!
monitor session 1
   source TenGigabitEthernet 0/1 destination Port-channel 1 direction rx
```

**show monitor session**

Display the monitor information of a particular session or all sessions.

**Syntax**

```
show monitor session {session-ID}
```

To display monitoring information for all sessions, use the `show monitor session` command.

**Parameters**

`session-ID` (OPTIONAL) Enter a session identification number. The range is from 0 to 65535.

**Defaults**

none

**Command Modes**

- EXEC
- EXEC Privilege

**Supported Modes**

All Modes

**Command History**

```

**Related Commands**

`monitor session` — creates a session for monitoring.
show running-config monitor session

Displays the running configuration of all monitor sessions or a specific session.

**Syntax**

```
show running-config monitor session {session-ID}
```

To display the running configuration for all monitor sessions, use the `show running-config monitor session` command.

**Parameters**

- `session-ID`
  
  (OPTIONAL) Enter a session identification number. The range is from 0 to 65535.

**Defaults**

none

**Command Modes**

- EXEC
- EXEC Privilege

**Supported Modes**

All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>8.3.17.0</td>

</tbody>
</table>

**Usage Information**

The monitoring command is saved in the running configuration at the Monitor Session mode level and can be restored after a chassis reload.

**Example**

```
Dell# show running-config monitor session
!
monitor session 1
source TenGigabitEthernet 0/1 destination TenGigabitEthernet 0/2 direction rx
```

**Related Commands**

- `monitor session` — creates a session for monitoring.
- `show monitor session` — displays a monitor session.

---

**source (port monitoring)**

Configure a port monitor source.

**Syntax**

```
source interface destination interface direction {rx | tx | both}
```

To disable a monitor source, use the `no source interface destination interface direction {rx | tx | both}` command.

**Parameters**

- `interface`
  
  Enter the one of the following keywords and slot/port information:
  
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.

- `destination`
  
  Enter the keyword `destination` to indicate the interface destination.
direction (rx | tx | both)
Enter the keyword direction followed by one of the packet directional indicators.

- rx: to monitor receiving packets only.
- tx: to monitor transmitting packets only.
- both: to monitor both transmitting and receiving packets.

Defaults none

Command Modes MONITOR SESSION (conf-mon-sess-session-ID)

Supported Modes All Modes

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

Example

Dell(conf-mon-sess-11)#source tengig 10/0 destination tengig 10/47 direction rx
Dell(conf-mon-sess-11)#

Usage Information

The monitored (source) interface must be a server-facing interface in the format slot/port, where valid slot numbers are 0-1 and server-facing port numbers are from 1 to 32.
Quality of Service (QoS)

The Dell Networking operating software commands for quality of service (QoS) include traffic conditioning and congestion control. QoS commands are not universally supported on all Dell Networking Products.

Per-Port QoS Commands

Per-port QoS (port-based QoS) allows you to define the QoS configuration on a per-physical-port basis.

Policy-Based QoS Commands

Policy-based traffic classification is handled with class maps. These maps classify unicast traffic into one of four classes. The system allows you to match multiple class maps and specify multiple match criteria. Policy-based QoS is not supported on logical interfaces, such as port-channels, VLANs, or Loopbacks.

bandwidth-percentage

Assign a percentage of weight to the class/queue.

Syntax

bandwidth-percentage percentage

To remove the bandwidth percentage, use the no bandwidth-percentage command.

Parameters

percentage

Enter the percentage assignment of weight to the class/queue. The range is from 1 to 100% (granularity 1%).

Defaults

none

</table>

Usage Information

The unit of bandwidth percentage is 1%. A bandwidth percentage of 0 is allowed and disables the scheduling of that class. If the sum of the bandwidth percentages given to all eight classes exceeds 100%, the bandwidth percentage automatically scales down to 100%.
description

Add a description to the selected policy map or QoS policy.

Syntax

```
description {description}
```

To remove the description, use the `no description {description}` command.

Parameters

- `description` Enter a description to identify the policies (80 characters maximum).

Defaults

none

Command Modes

- CONFIGURATION (policy-map-input and policy-map-output; conf-qos-policy-in and conf-qos-policy-out; wred)

Supported Modes

Programmable-Mux (PMUX)

Command History

<table>
<thead>
<tr>
<th>Version</th>

</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Related Commands

- `policy-map-output` — creates an output policy map.
- `qos-policy-output` — creates an output QoS-policy on the router.

dot1p-priority

Assign a value to the IEEE 802.1p bits on the traffic this interface receives.

Syntax

```
dot1p-priority priority-value
```

To delete the IEEE 802.1p configuration on the interface, use the `no dot1p-priority` command.

Parameters

- `priority-value` Enter a value from 0 to 7.

<table>
<thead>
<tr>
<th>dot1p</th>
<th>Queue Number</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>2</td>
</tr>
<tr>
<td>1</td>
<td>0</td>
</tr>
<tr>
<td>2</td>
<td>1</td>
</tr>
<tr>
<td>3</td>
<td>3</td>
</tr>
<tr>
<td>4</td>
<td>4</td>
</tr>
<tr>
<td>5</td>
<td>5</td>
</tr>
</tbody>
</table>
### dot1p-priority

The `dot1p-priority` command changes the priority of incoming traffic on the interface. The system places traffic marked with a priority in the correct queue and processes that traffic according to its queue.

When you set the priority for a port channel, the physical interfaces assigned to the port channel are configured with the same value. You cannot assign the `dot1p-priority` command to individual interfaces in a port channel.

#### policy-aggregate

Allow an aggregate method of configuring per-port QoS via policy maps. An aggregate QoS policy is part of the policy map (input/output) applied on an interface.

**Syntax**

```
policy-aggregate qos-policy-name
```

To remove a policy aggregate configuration, use the `no policy-aggregate qos-policy-name` command.

**Parameters**

- `qos-policy-name` Enter the name of the policy map in character format (32 characters maximum).

**Defaults**

- none

**Command Modes**

- CONFIGURATION (policy-map-input and policy-map-output)
- Programmable-Mux (PMUX)

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>
Usage Information
Aggregate input/output QoS policy applies to all the port ingoing/outgoing traffic. Aggregate input/output QoS policy can coexist with per queue input/output QoS policies.

1. If only aggregate input QoS policy exists, input traffic conditioning configurations (rate-police) apply. Any marking configurations in aggregate input QoS policy are ignored.
2. If aggregate input QoS policy and per class input QoS policy coexist, aggregate input QoS policy preempts per class input QoS policy on input traffic conditioning (rate-police). In other words, if rate police configuration exists in the aggregate QoS policy, the rate police configurations in per class QoS are ignored. Marking configurations in per class input QoS policy still apply to each queue.

Related Commands

policy-map-output — creates an output policy map.

policy-map-output

Create an output policy map.

Syntax

policy-map-output policy-map-name

To remove a policy map, use the no policy-map-output policy-map-name command.

Parameters

policy-map-name Enter the name for the policy map in character format (32 characters maximum).

Defaults

none

Command Modes

CONFIGURATION

Supported Modes

Programmable-Mux (PMUX)

Command History

Version Description
9.4(0.0) Supported on the FN I/O Aggregator.
9.2(0.0) Introduced on the M I/O Aggregator.
8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

To assign traffic to different flows using QoS policy, use the Output Policy map. This command enables Policy-Map-Output Configuration mode (conf-policy-map-out).

Related Commands

service-queue — assigns a class map and QoS policy to different queues.

policy-aggregate — allows an aggregate method of configuring per-port QoS using policy maps.

service-policy output — applies an output policy map to the selected interface.

qos-policy-output

Create a QoS output policy.

Syntax

qos-policy-output qos-policy-name
To remove an existing output QoS policy, use the `no qos-policy-output qos-policy-name` command.

**Parameters**

`qos-policy-name` Enter your output QoS policy name in character format (32 characters maximum).

**Defaults**

none

**Command Modes**

CONFIGURATION

**Supported Modes**

Programmable-Mux (PMUX)

**Command History**

<table>
<thead>

</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

To specify the name of the output QoS policy, use this command. After the output policy is specified, rate-limit, bandwidth-percentage, and WRED can be defined. This command enables Qos-Policy-Output Configuration mode — (conf-qos-policy-out).

**Related Commands**

- `bandwidth-percentage` — assigns weight to the class/queue percentage.

---

**rate-shape**

Shape the traffic output on the selected interface.

**Syntax**

```
rate shape [kbps] rate [burst-KB]
```

**Parameters**

- `kbps` Enter the keyword `kbps` to specify the rate limit in Kilobits per second (Kbps). Make the following value a multiple of 64. The range is from 0 to 40000000. The default granularity is Megabits per second (Mbps).
- `rate` Enter the outgoing rate in multiples of 10 Mbps. The range is from 10 to 10000.
- `burst-KB` (OPTIONAL) Enter the burst size in KB. The range is from 0 to 10000. The default is 50.

**Defaults**

Granularity for rate is Mbps unless you use the `kbps` option.

**Command Modes**

QOS-POLICY-OUT

Dell EMC Networking R-Series Switches User Guide
Usage Information: When you apply rate-shape in QoS policy both on the Queue Level and in Aggregate mode, the queue-based shaping occurs first then aggregate rate shaping.

**service-class bandwidth-percentage**

Specify a minimum bandwidth for queues.

**Syntax**

```
service-class bandwidth-percentage queue0 number queue1 number queue2 number queue3 number
```

**Parameters**

- `number` Enter the bandwidth-weight, as a percentage. The range is from 1 to 100.

**Defaults**

```
none
```

**Command Modes**

```
CONFIGURATION
```

**Supported Modes**

```
Programmable-Mux (PMUX)
```

**Command History**

- **Version**
  - 9.4(0.0) Supported on the FN I/O Aggregator.
  - 9.2(0.0) Introduced on the M I/O Aggregator.
  - 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

Guarantee a minimum bandwidth to different queues globally using the `service-class bandwidth-percentage` command from CONFIGURATION mode. The command is applied in the same way as the `bandwidth-percentage` command in an output QoS policy. The `bandwidth-percentage` command in QOS-POLICY-OUT mode supersedes the `service-class bandwidth-percentage` command.

When you enable ETS, the egress QoS features in the output QoS policy-map (such as `service-class bandwidth-percentage` and `bandwidth-percentage`), the default bandwidth allocation ratio for egress queues are superseded by ETS configurations. This is to provide compatibility with DCBX. Therefore, Dell Networking OS recommends disabling ETS when you wish to apply these features exclusively. After you disable ETS on an interface, the configured parameters are applied.

**service-class dot1p-mapping**

Configure a service-class criterion based on a dot1p value.

**Syntax**

```
service-class dot1p-mapping {dot1p0 value | dot1p1 value | dot1p2 queue | dot1p3 value | dot1p4 value| dot1p5 value | dot1p6 value | dot1p7 value}
```

**Parameters**

- `value` Enter a dot1p list number and value. The list number range is from 0 to 7. The range is from 0 to 3.

**Defaults**

```
For each dot1p Priority, the default CoS queue value is:

- dot1p CoS Queue
```

<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

Usage Information

To apply dot1p-queue-mapping, use the service-class dynamic dot1p command.

**service-class dynamic dot1p**

Honor all 802.1p markings on incoming switched traffic on an interface (from INTERFACE mode) or on all interfaces (from CONFIGURATION mode). A CONFIGURATION mode entry supersedes an INTERFACE mode entry.

**Syntax**

```
service-class dynamic dot1p
```

To return to the default setting, use the `no service-class dynamic dot1p` command.

**Defaults**

All dot1p traffic is mapped to Queue 0 unless you enable the `service-class dynamic dot1p` command. The default mapping is as follows:

<table>
<thead>
<tr>
<th>dot1p</th>
<th>Queue ID</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>0</td>
</tr>
<tr>
<td>1</td>
<td>0</td>

<td>Introduced on the M I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

To honor all incoming 802.1p markings on incoming switched traffic on the interface, enter this command. By default, this facility is not enabled (that is, the 802.1p markings on incoming traffic are not honored).

You can apply this command on both physical interfaces and port channels. When you set the service-class dynamic for a port channel, the physical interfaces assigned to the port channel are automatically configured; you cannot assign the service-class dynamic command to individual interfaces in a port channel.

- All dot1p traffic is mapped to Queue 0 unless you enable the service-class dynamic dot1p command on an interface or globally.
- Layer 2 or Layer 3 service policies supersede dot1p service classes.

service-policy output

Apply an output policy map to the selected interface.

Syntax

service-policy output policy-map-name

To remove the output policy map from the interface, use the no service-policy output policy-map-name command.

Parameters

policy-map-name Enter the name for the policy map in character format (16 characters maximum). You can identify an existing policy map or name one that does not yet exist.

Defaults

none

Command Modes

INTERFACE

Supported Modes

Programmable-Mux (PMUX)

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>

<td>Introduced on the M I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

A single policy-map can be attached to one or more interfaces to specify the service-policy for those interfaces. A policy map attached to an interface can be modified.
service-queue

Assign a class map and QoS policy to different queues.

Syntax

```
service-queue queue-id [class-map class-map-name] [qos-policy qos-policy-name]
```

To remove the queue assignment, use the `no service-queue queue-id [class-map class-map-name] [qos-policy qos-policy-name]` command.

Parameters

- `queue-id`: Enter the value used to identify a queue. The range is from 0 to 3 (four queues per interface; four queues are reserved for control traffic).
- `class-map class-map-name` (OPTIONAL): Enter the keyword `class-map` then the class map name assigned to the queue in character format (32 character maximum).
  
  **NOTE:** This option is available under `policy-map-input` only.

- `qos-policy qos-policy-name` (OPTIONAL): Enter the keywords `qos-policy` then the QoS policy name assigned to the queue in text format (32 characters maximum). This specifies the input QoS policy assigned to the queue under `policy-map-input` and output QoS policy under `policy-map-output` context.

Defaults

```
none
```

9.2(0.0) Introduced on the M I/O Aggregator.
8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.
```

Usage Information

This command assigns a class map or QoS policy to different queues.

Related Commands

```
service-policy output — applies an output policy map to the selected interface.
```

show qos dcb-map

Display the DCB parameters configured in a specified DCB map.

Syntax

```
show qos dcb-map map-name
```

Parameters

- `map-name`: Displays the PFC and ETS parameters configured in the specified map.
show qos dcb-map

View DCB map information.

Syntax
show qos dcb-map

Defaults
none

Command Modes
- EXEC

show qos dot1p-queue-mapping

View dot1p to queue mapping.

Syntax
show qos dot1p-queue-mapping

Defaults
none

Command Modes
- EXEC
show qos qos-policy-output

View the output QoS policy details.

Syntax
show qos qos-policy-output [qos-policy-name]

Parameters
qos-policy-name Enter the QoS policy name.

Defaults
none

Command Modes
- EXEC
- EXEC Privilege

Dell#
Security

This chapter describes various types of security commands in the Dell Networking OS, in the following sections:
The commands are listed in the following sections:

- AAA Accounting Commands
- Authentication and Password Commands
- RADIUS Commands
- TACACS+ Commands
- SSH Server and SCP Commands

NOTE: Starting with the Dell Networking OS version 7.2.1.0, LEAP with MSCHAP v2 supplicant is implemented.

AAA Accounting Commands

AAA Accounting enables tracking of services that users are accessing and the amount of network resources being consumed by those services. When you enable AAA Accounting, the network server reports user activity to the TACACS+ security server in the form of accounting records. Each accounting record is comprised of accounting AV pairs and is stored on the access control server. As with authentication and authorization, you must configure AAA Accounting by defining a named list of accounting methods, and then applying that list to various interfaces.

**aaa accounting**

Enable AAA Accounting and create a record for monitoring the accounting function.

**Syntax**

```
aaa accounting {system | exec | commands level} {name | default}{start-stop | wait-start | stop-only} {tacacs+}
```

To disable AAA Accounting, use the `no aaa accounting {system | exec | command level} {name | default}{start-stop | wait-start | stop-only} {tacacs+} command.`

**Parameters**

- **system**: Enter the keyword `system` to send accounting information of any other AAA configuration.
- **exec**: Enter the keyword `exec` to send accounting information when a user has logged in to EXEC mode.
- **commands level**: Enter the keyword `command` then a privilege level for accounting of commands executed at that privilege level.
- **name | default**: Enter one of the following:
  - For `name`, enter a user-defined name of a list of accounting methods.
  - For `default`, the default accounting methods used.
**aaa accounting start-stop**

Enter the keywords `start-stop` to send a “start accounting” notice at the beginning of the requested event and a “stop accounting” notice at the end of the event.

**aaa accounting wait-start**

Enter the keywords `wait-start` to ensure that the TACACS+ security server acknowledges the start notice before granting the user’s process request.

**aaa accounting stop-only**

Enter the keywords `stop-only` to instruct the TACACS+ security server to send a “stop record accounting” notice at the end of the requested user process.

**aaa accounting tacacs+**

Enter the keyword `tacacs+` to use TACACS+ data for accounting. Dell Networking OS currently only supports TACACS+ accounting.

**Defaults**

none

**Command Modes**

CONFIGURATION

**Supported Modes**

All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
</table>
| 9.4(0.0) | Supported on the FN I/O Aggregator and M I/O Aggregator.

**Usage Information**

In the example above, TACACS+ accounting is used to track all usage of EXEC command and commands on privilege level 15.

Privilege level 15 is the default. If you want to track usage at privilege level 1 for example, use the `aaa accounting command 1` command.

**Example**

Dell(conf)# aaa accounting exec default start-stop tacacs+
Dell(conf)# aaa accounting command 15 default start-stop tacacs+
Dell(config)#

**Related Commands**

- `enable password` — changes the password for the `enable` command.

---

**aaa accounting suppress**

Prevent the generation of accounting records of users with the user name value of NULL.

**Syntax**

`aaa accounting suppress null-username`

To permit accounting records to users with user name value of NULL, use the `no aaa accounting suppress null-username` command.

**Defaults**

Accounting records are recorded for all users.

**Command Modes**

CONFIGURATION

**Supported Modes**

All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
</table>
| 9.4(0.0) | Supported on the FN I/O Aggregator and M I/O Aggregator.

**Usage Information**

Dell Networking OS issues accounting records for all users on the system, including users whose username string, due to protocol translation, is NULL. For example, a user who comes on line with the `aaa
authentication login method-list none command is applied. To prevent the accounting records from being generated for sessions that do not have user names associated to them, use the aaa accounting suppress command.

aaa authorization commands

Set parameters that restrict (or permit) a user’s access to EXEC and CONFIGURATION level commands.

Syntax

```
aaa authorization commands {level | role role-name} {name|default} {local | tacacs+ | none}
```

Undo a configuration with the no aaa authorization commands {level | role role-name} {name|default} {local | tacacs+ | none} command.

Parameters

- `commands level` Enter the keyword commands then the command privilege level for command level authorization.
- `role role-name` Enter the keyword role then the role name.
- `name` Define a name for the list of authorization methods.
- `default` Define the default list of authorization methods.
- `local` Use the authorization parameters on the system to perform authorization.
- `tacacs+` Use the TACACS+ protocol to perform authorization.
- `none` Enter the keyword none to apply no authorization.

Defaults

none

CONFIGURATION

Supported Modes

All Modes

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.6(0.0)</td>
<td>Supported on the M I/O Aggregator</td>
</tr>
</tbody>
</table>

aaa authorization config-commands

Set parameters that restrict (or permit) a user’s access to EXEC level commands.

Syntax

```
aaa authorization config-commands
```

Disable authorization checking for CONFIGURATION level commands using the no aaa authorization config-commands command.

Defaults

Enabled when you configure aaa authorization commands command.

Command Modes

CONFIGURATION

Supported Modes

All Modes
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following table lists the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.6.(0.0)</td>
<td>Supported on the FN I/O Aggregator and M I/O Aggregator.</td>
</tr>
</tbody>
</table>

Usage Information
By default, the `aaa authorization commands` command configures the system to check both EXEC level and CONFIGURATION level commands. Use the command `no aaa authorization commands` to enable only EXEC-level command checking.

### aaa authorization exec

Set parameters that restrict (or permit) a user’s access to EXEC-level commands.

**Syntax**

```
aaa authorization exec {name | default} {local || tacacs+ || if-authenticated || none}
```

To disable authorization checking for EXEC level commands, use the `no aaa authorization exec` command.

**Parameters**

- **name**
  - Define a name for the list of authorization methods.
- **default**
  - Define the default list of authorization methods.
- **local**
  - Use the authorization parameters on the system to perform authorization.
- **tacacs+**
  - Use the TACACS+ protocol to perform authorization.
- **none**
  - Enter the keyword `none` to apply no authorization.

**Defaults**

`none`

**Command Modes**

- `CONFIGURATION`

**Supported Modes**

- All Modes

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

</tr>
</thead>
<tbody>
<tr>
<td>9.6.(0.0)</td>
<td>Supported on the FN I/O Aggregator and M I/O Aggregator.</td>
</tr>
</tbody>
</table>

### accounting

Apply an accounting method list to terminal lines.

**Syntax**

```
accounting {exec | commands level} method-list
```

**Parameters**

- **exec**
  - Enter the keyword `exec` to apply an EXEC level accounting method list.
- **commands level**
  - Enter the keywords `commands level` to apply an EXEC and CONFIGURATION level accounting method list.
method-list

Enter a method list that you defined using the aaa accounting exec or aaa accounting commands.

Defaults
none

Command Modes
LINE

Version | Description
--- | ---
9.4(0.0) | Supported on the FN I/O Aggregator and M I/O Aggregator.

Related Commands

- **aaa accounting** — enables AAA Accounting and creates a record for monitoring the accounting function.

---

show accounting

Display the active accounting sessions for each online user.

**Syntax**

`show accounting`

**Defaults**

none

**Command Modes**

EXEC

**Supported Modes**

All Modes

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following table lists the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

This command steps through all active sessions and then displays the accounting records for the active account functions.

**Example**

```
Dell#show accounting
Active accounted actions on tty2, User admin Priv 1 Role <none>
  Task ID 2, EXEC Accounting record, 00:02:03 Elapsed, service=shell
Active accounted actions on tty3, User ad Priv 15 Role <none>
  Task ID 7, EXEC Accounting record, 00:01:22 Elapsed, service=shell
Active accounted actions on tty4, User ad Priv 15 Role <none>
  Task ID 11, EXEC Accounting record, 00:00:35 Elapsed, service=shell
Active accounted actions on tty5, User ad Priv1 Role sysadmin
  Task ID 16, EXEC Accounting record, 00:00:04 Elapsed, service=shell
Dell#
```

**Related Commands**

- **aaa accounting** — enables AAA Accounting and creates a record for monitoring the accounting function.
Authentication and Password Commands

This section contains the commands that control the management access to the system.

aaa authentication enable

Configure AAA Authentication method lists for user access to EXEC privilege mode (the “Enable” access).

Syntax

```
aaa authentication enable {default | method-list-name} method [... method2]
```

To return to the default setting, use the

```
no aaa authentication enable {default | method-list-name} method [... method2]
```

command.

Parameters

- **default**: Enter the keyword `default` then the authentication methods to use as the default sequence of methods for the Enable login. The default is `default enable`.
- **method-list-name**: Enter a text string (up to 16 characters long) to name the list of enabled authentication methods activated at login.
- **method**: Enter one of the following methods:
  - `enable`: Use the password the `enable password` command defines in CONFIGURATION mode.
  - `line`: Use the password the `password` command defines in LINE mode.
  - `none`: No authentication.
  - `radius`: Use the RADIUS servers configured with the `radius-server host` command.
  - `tacacs+`: Use the TACACS+ server(s) configured with the `tacacs-server host` command.

... **method2**

(OPTIONAL) In the event of a “no response” from the first method, Dell Networking Operating System (OS) applies the next configured method.

Defaults

Use the enable password.

Command Modes

CONFIGURATION

Supported Modes

All Modes

Command History

Version | Description
--- | ---
9.4(0.0) | Supported on the FN I/O Aggregator.
9.3(0.0) | Supported on the M I/O Aggregator.

Usage Information

By default, the `enable password` is used. If you configure `aaa authentication enable default`, Dell Networking Operating System (OS) uses the methods defined for `enable access` instead.

Methods configured with the `aaa authentication enable` command are evaluated in the order they are configured. If authentication fails using the primary method, Dell Networking Operating System (OS) employs the second method (or third method, if necessary) automatically. For example, if the TACACS+ server is reachable, but the server key is invalid, Dell Networking OS proceeds to the next authentication method. The TACACS+ is incorrect, but the user is still authenticated by the secondary method.
Related Commands

- `enable password` — changes the password for the `enable` command.
- `login authentication` — enables AAA login authentication on the terminal lines.
- `radius-server host` — specifies a RADIUS server host.
- `tacacs-server host` — specifies a TACACS+ server host.

### aaa authentication login

Configure AAA Authentication method lists for user access to EXEC mode (Enable log-in).

**Syntax**

```plaintext
aaa authentication login {method-list-name | default} method [... method4]
```

To return to the default setting, use the `no aaa authentication login {method-list-name | default}` command.

**Parameters**

- `method-list-name` Enter a text string (up to 16 characters long) as the name of a user-configured method list that can be applied to different lines.
- `default` Enter the keyword `default` to specify that the method list specified is the default method for all terminal lines.
- `method` Enter one of the following methods:
  - `enable`: use the password the `enable password` command defines in CONFIGURATION mode.
  - `line`: use the password the `password` command defines in LINE mode.
  - `none`: no authentication.
  - `radius`: use the RADIUS servers configured with the `radius-server host` command.
  - `tacacs+`: use the TACACS+ servers configured with the `tacacs-server host` command.
- `... method4` (OPTIONAL) Enter up to four additional methods. In the event of a “no response” from the first method, Dell Networking Operating System (OS) applies the next configured method (up to four configured methods).

**Defaults**

Not configured (that is, no authentication is performed).

**Command Modes**

- CONFIGURATION

**Supported Modes**

- All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.3(0.0)</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

By default, the locally configured username password is used. If you configure `aaa authentication login default`, Dell Networking Operating System (OS) uses the methods this command defines for login instead.
Methods configured with the `aaa authentication login` command are evaluated in the order they are configured. If users encounter an error with the first method listed, Dell Networking Operating System (OS) applies the next method configured. If users fail the first method listed, no other methods are applied. The only exception is the local method. If the user’s name is not listed in the local database, the next method is applied. If the correct user name/password combination is not entered, the user is not allowed access to the switch.

**NOTE:** If authentication fails using the primary method, Dell Networking Operating System (OS) employs the second method (or third method, if necessary) automatically. For example, if the TACACS+ server is reachable, but the server key is invalid, Dell Networking Operating System (OS) proceeds to the next authentication method. The TACACS+ is incorrect, but the user is still authenticated by the secondary method.

After configuring the `aaa authentication login` command, configure the `login authentication` command to enable the authentication scheme on terminal lines.

Connections to the SSH server work with the following login mechanisms: local, radius, and tacacs.

**Related Commands**

- `login authentication` — enables AAA login authentication on the terminal lines.
- `radius-server host` — specifies a RADIUS server host.
- `tacacs-server host` — specifies a TACACS+ server host.

**banner exec**

Configure a message that is displayed when your enter EXEC mode.

**Syntax**

`banner exec c line c`

To delete a banner, use the `no banner exec` command.

**Parameters**

- `c`  
  Enter the keywords `banner exec`, then enter a character delineator, represented here by the letter `c`. Press **ENTER**.

- `line`  
  Enter a text string for your banner message ending the message with your delineator. In the following example, the delineator is a percent character (%); the banner message is “testing, testing”.

**Defaults**

No banner is displayed.

**Command Modes**

- `CONFIGURATION`

</tr>
<tr>
<td>9.3(0.0)</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

After entering the banner login command, type one or more spaces and a delineator character. Enter the banner text then the second delineator character. When the user is connected to the router, if a message of the day banner is configured, it displays first. If no message of the day banner is configured, the login banner and prompt appear. After the user has logged in, the EXEC banner (if configured) displays.
**Example**

Dell(conf)#banner exec ?
LINE c banner-text c, where 'c' is a delimiting character
Dell(conf)#banner exec %
Enter TEXT message. End with the character '%'.
This is the banner
Dell(conf)#end
Dell#exit

- **exec-banner** — enables the display of a text string when you enter EXEC mode.
- **line** — enables and configures the console and virtual terminal lines to the system.

---

**banner login**

Set a banner to display when logging on to the system.

**Syntax**

banner login {keyboard-interactive | no keyboard-interactive} [c line c]

**Parameters**

- `keyboard-interactive`: Enter the keyword `keyboard-interactive` to require a carriage return (CR) to get the message banner prompt.
- `c`: Enter a delineator character to specify the limits of the text banner. The delineator is a percent character (%).
- `line`: Enter a text string for your text banner message ending the message with your delineator. The delineator is a percent character (%). Range: maximum of 50 lines, up to 255 characters per line.

**Defaults**

No banner is configured and the CR is required when creating a banner.

</tbody>
</table>
Usage Information

Optionally, use the `banner exec` command to create a text string that is displayed when you access EXEC mode. This command toggles that display.

Related Commands

`banner exec` — configures a banner to display when entering EXEC mode.

`line` — enables and configures console and virtual terminal lines to the system.

**ip radius source-interface**

Specify an interface's IP address as the source IP address for RADIUS connections.

**Syntax**

```
ip radius source-interface interface
```

To delete a source interface, use the `no ip radius source-interface` command.

**Parameters**

`interface` Enter the following keywords and slot/port or number information:

- For a 100/1000 Ethernet interface, enter the keyword `GigabitEthernet` then the slot/port information.
- For a Gigabit Ethernet interface, enter the keyword `GigabitEthernet` then the slot/port information.
- For Loopback interfaces, enter the keyword `loopback` then a number from zero (0) to 16838.
- For the Null interface, enter the keywords `null 0`.
- For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
- For a ten-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
- For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

Usage Information
If you configure the aaa authentication login default command, the login authentication default command automatically is applied to all terminal lines.

Related Commands
aaa authentication login — selects the login authentication methods.
RADIUS Commands

The following RADIUS commands are supported by Dell Networking Operating System (OS).

radius-server deadtime

Configure a time interval during which non-responsive RADIUS servers to authentication requests are skipped.

Syntax

```
radius-server deadtime seconds
```

To disable this function or return to the default value, use the `no radius-server deadtime` command.

Parameters

- **seconds**: Enter a number of seconds during which non-responsive RADIUS servers are skipped. The range is from 0 to 2147483647 seconds. The default is 0 seconds.

Defaults

0 seconds

radius-server host

Configure a RADIUS server host.

Syntax

```
radius-server host {hostname | ipv4-address | ipv6-address} [auth-port port-number] [retransmit retries] [timeout seconds] [key [encryption-type] key]
```

Parameters

- **hostname**: Enter the name of the RADIUS server host.
- **ipv4-address | ipv6-address**: Enter the IPv4 address (A.B.C.D) or IPv6 address (X::X::X::X) of the RADIUS server host.
- **auth-port port-number** (OPTIONAL): Enter the keywords auth-port then a number as the port number. The range is from zero (0) to 65535. The default port-number is 1812.
- **retransmit retries** (OPTIONAL): Enter the keyword retransmit then a number as the number of attempts. This parameter overwrites the radius-server retransmit command. The range is from zero (0) to 100. The default is 3 attempts.
- **timeout seconds** (OPTIONAL): Enter the keyword timeout then the seconds the time interval the switch waits for a reply from the RADIUS server. This parameter overwrites the radius-server timeout command. The range is from 0 to 1000. The default is 5 seconds.
- **key [encryption-type] key** (OPTIONAL): Enter the keyword key then an optional encryption-type and a string up to 42 characters long as the authentication key. The RADIUS host server uses this authentication key and the RADIUS daemon operating on this switch.
For the encryption-type, enter either zero (0) or 7 as the encryption type for the key entered. The options are:

- 0 is the default and means the password is not encrypted and stored as clear text.
- 7 means that the password is encrypted and hidden.

Configure this parameter last because leading spaces are ignored.

**Defaults**
Not configured.

**Command Modes**
CONFIGURATION

<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.3(0.0)</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**
To configure any number of RADIUS server hosts for each server host that is configured, use this command. Dell Networking Operating System (OS) searches for the RADIUS hosts in the order they are configured in the software.

The global default values for the timeout, retransmit, and key optional parameters are applied, unless those values are specified in the radius-server host or other commands. To return to the global default values, if you configure the timeout, retransmit, or key values, include those keywords when using the no radius-server host command syntax.

**Related Commands**
- `login authentication` — sets the database to be checked when a user logs in.
- `radius-server retransmit` — sets the number of times the RADIUS server attempts to send information.
- `radius-server timeout` — sets the time interval before the RADIUS server times out.

**radius-server key**
Configure a key for all RADIUS communications between the switch and the RADIUS host server.

**Syntax**
```
radius-server key [encryption-type] key
```
To delete a password, use the no radius-server key command.

**Parameters**
- `encryption-type`  
  (OPTIONAL) Enter either zero (0) or 7 as the encryption type for the key entered. The options are:
  - 0 is the default and means the key is not encrypted and stored as clear text.
  - 7 means that the key is encrypted and hidden.

- `key`  
Enter a string that is the key to be exchanged between the switch and RADIUS servers. It can be up to 42 characters long.

**Defaults**
Not configured.
Command Modes

<td>9.3(0.0)</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

Usage Information

The key configured on the switch must match the key configured on the RADIUS server daemon.

If you configure the key parameter in the radius-server host command, the key configured with the radius-server key command is the default key for all RADIUS communications.

Related Commands

radius-server host — configures a RADIUS host.

radius-server retransmit

Configure the number of times the switch attempts to connect with the configured RADIUS host server before declaring the RADIUS host server unreachable.

Syntax

radius-server retransmit retries

To configure zero retransmit attempts, use the no radius-server retransmit command.

To return to the default setting, use the radius-server retransmit 3 command.

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>retries</td>
<td>Enter a number of attempts that Dell Networking Operating System (OS) tries to locate a RADIUS server. The range is from zero (0) to 100. The default is 3 retries.</td>
</tr>
</tbody>
</table>

Defaults

3 retries

### Suppressing AAA Accounting for Null Username Sessions

When you activate AAA accounting, the Dell Networking OS software issues accounting records for all users on the system, including users whose username string, because of protocol translation, is NULL. An example of this is a user who comes in on a line where the AAA authentication `login method-list none` command is applied. To prevent accounting records from being generated for sessions that do not have usernames associated with them, use the following command:

- Prevent accounting records from being generated for users whose username string is NULL.
  
  `CONFIGURATION mode`

```
aaa accounting suppress null-username
```

### TACACS+ Commands

Dell Networking OS supports TACACS+ as an alternate method for login authentication.

---

**Suppressing AAA Accounting for Null Username Sessions**

When you activate AAA accounting, the Dell Networking OS software issues accounting records for all users on the system, including users whose username string, because of protocol translation, is NULL. An example of this is a user who comes in on a line where the AAA authentication `login method-list none` command is applied. To prevent accounting records from being generated for sessions that do not have usernames associated with them, use the following command:

- Prevent accounting records from being generated for users whose username string is NULL.
  
  `CONFIGURATION mode`

```
aaa accounting suppress null-username
```

### TACACS+ Commands

Dell Networking OS supports TACACS+ as an alternate method for login authentication.
TACACS+ Accounting

Enable AAA Accounting and create a record for monitoring the accounting function.

Syntax

```
aaa accounting {system | exec | commands level} {name | default}{start-stop | wait-start | stop-only} {tacacs+}
```

To disable AAA Accounting, use the

```
no aaa accounting {system | exec | command level} {name | default}{start-stop | wait-start | stop-only} {tacacs+}
```

Parameters

- **system**: Enter the keyword system to send accounting information of any other AAA configuration.
- **exec**: Enter the keyword exec to send accounting information when a user has logged in to EXEC mode.
- **commands level**: Enter the keyword command then a privilege level for accounting of commands executed at that privilege level.
- **name | default**: Enter one of the following:
  - For name, enter a user-defined name of a list of accounting methods.
  - For default, the default accounting methods used.
- **start-stop**: Enter the keywords start-stop to send a “start accounting” notice at the beginning of the requested event and a “stop accounting” notice at the end of the event.
- **wait-start**: Enter the keywords wait-start to ensure that the TACACS+ security server acknowledges the start notice before granting the user’s process request.
- **stop-only**: Enter the keywords stop-only to instruct the TACACS+ security server to send a “stop record accounting” notice at the end of the requested user process.
- **tacacs+**: Enter the keyword tacacs+ to use TACACS+ data for accounting.

Dell Networking OS currently only supports TACACS+ accounting.

Defaults

None

Command Modes

CONFIGURATION

Usage Information

In the example above, TACACS+ accounting is used to track all usage of EXEC command and commands on privilege level 15. Privilege level 15 is the default. If you want to track usage at privilege level 1 for example, use the `aaa accounting command 1` command.

Dell(config)#

Related Commands
- **enable password** changes the password for the enable command.
- **login authentication** enables AAA login authentication on the terminal lines.
- **password** creates a password.
- **tacacs-server host** specifies a TACACS+ server host.

### tacacs-server host

Specify a TACACS+ host.

**Syntax**
```
tacacs-server host {hostname | ipv4-address | ipv6-address} [port number] [timeout seconds] [key key]
```

**Parameters**
- **hostname**
  
Enter the name of the TACACS+ server host.
- **ipv4-address | ipv6-address**
  
Enter the IPv4 address (A.B.C.D) or IPv6 address (X::X::X) of the TACACS+ server host.
- **port number**
  
  (OPTIONAL) Enter the keyword port then a number as the port to be used by the TACACS+ server. The range is from zero (0) to 65535. The default is 49.
- **timeout seconds**
  
  (OPTIONAL) Enter the keyword timeout then the number of seconds the switch waits for a reply from the TACACS+ server. The range is from 0 to 1000. The default is 10 seconds.
- **key key**
  
  (OPTIONAL) Enter the keyword key then a string up to 42 characters long as the authentication key. This authentication key must match the key specified in the `tacacs-server key` command for the TACACS+ daemon.

**Defaults**
Not configured.

<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.3(0.0)</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

To list multiple TACACS+ servers to be used by the `aaa authentication login` command, configure this command multiple times.

If you are not configuring the switch as a TACACS+ server, you do not need to configure the `port`, `timeout` and `key` optional parameters. If you do not configure a key, the key assigned in the `tacacs-server key` command is used.

**Related Commands**
- **aaa authentication login** — specifies the login authentication method.
**tacacs-server key** — configures a TACACS+ key for the TACACS server.

**tacacs-server key**

Configure a key for communication between a TACACS+ server and a client.

**Syntax**
```
tacacs-server key [encryption-type] key
```
To delete a key, use the **no tacacs-server key key** command.

**Parameters**
- **encryption-type** (OPTIONAL) Enter either zero (0) or 7 as the encryption type for the key entered. The options are:
  - 0 is the default and means the key is not encrypted and stored as clear text.
  - 7 means that the key is encrypted and hidden.

- **key** Enter a text string, up to 42 characters long, as the clear text password. Leading spaces are ignored.

**Defaults**
Not configured.

**Command Modes**
CONFIGURATION

**Supported Modes**
All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.3(0.0)</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**
The key configured with this command must match the key configured on the TACACS+ daemon.

**timeout login response**

Specify how long the software waits for the login input (for example, the user name and password) before timing out.

**Syntax**
```
timeout login response seconds
```
To return to the default values, use the **no timeout login response** command.

**Parameters**
- **seconds** Enter a number of seconds the software waits before logging you out. The range is:
  - VTY: the range is from 1 to 30 seconds, the default is 30 seconds.
  - Console: the range is from 1 to 300 seconds, the default is 0 seconds (no timeout).
  - AUX: the range is from 1 to 300 seconds, the default is 0 seconds (no timeout).

**Defaults**
See the defaults settings shown in **Parameters**.

**Command Modes**
LINE

**Supported Modes**
All Modes
The software measures the period of inactivity defined in this command as the period between consecutive keystrokes. For example, if your password is “password” you can enter “p” and wait 29 seconds to enter the next letter.

### SSH Server and SCP Commands

The Dell Networking OS supports secure shell (SSH) protocol versions 1.5 and 2.0. SSH is a protocol for secure remote login over an insecure network. SSH sessions are encrypted and use authentication.

**enable password**

Change the password for the enable command.

**Syntax**

```
enable password [level level] [encryption-type] password
```

To delete a password, use the `no enable password [encryption-type] password [level level]` command.

**Parameters**

- **level level** (OPTIONAL) Enter the keyword level followed by a number as the level of access. The range is from 1 to 15.
- **encryption-type** (OPTIONAL) Enter the number 7 or 0 as the encryption type.

Enter a 7 followed by a text string as the hidden password. The text string must be a password that was already encrypted by a Dell Networking router.

Use this parameter only with a password that you copied from the show running-config file of another Dell Networking router.

- **password** Enter a text string, up to 32 characters long, as the clear text password.

**Defaults**

No password is configured. `level = 15`.

**Command Modes**

- CONFIGURATION

**Supported Modes**

- All Modes

**Command History**

- Version 9.4(0.0) Supported on the FN I/O Aggregator.
- Version 9.3(0.0) Supported on the M I/O Aggregator.

**Usage Information**

Use this command to define a password for a level.

Passwords must meet the following criteria:

- Start with a letter, not a number.
Passwords can have a regular expression as the password. To create a password with a regular expression in it, use CNTL + v prior to entering regular expression. For example, to create the password abcd\[e, you type “abcd CNTL v ]e”. When the password is created, you do not use the CNTL + v key combination and enter “abcd\[e”.

**NOTE:** The question mark (?) and the tilde (~) are not supported characters.

Related Commands

**show running-config** — views the current configuration.

**enable restricted**

Allows Dell Networking technical support to access restricted commands.

**Syntax**

```plaintext
enable restricted [encryption-type] password
```

To disallow access to restricted commands, use the `no enable restricted` command.

**Parameters**

- **encryption-type** (OPTIONAL) Enter the number 7 as the encryption type.
  
  Enter 7 followed a text string as the hidden password. The text string must be a password that was already encrypted by a Dell Networking router.
  
  Use this parameter only with a password that you copied from the `show running-config` file of another Dell Networking router.

- **password**
  
  Enter a text string, up to 32 characters long, as the clear text password.

**Command Modes**

Not configured.

**Supported Modes**

All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>

<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

Only Dell Networking Technical Support staff use this command.

**service password-encryption**

Encrypt all passwords configured in Dell Networking OS.

**Syntax**

```plaintext
service password-encryption
```

To store new passwords as clear text, use the `no service password-encryption` command.

**Defaults**

Enabled.

**Command Modes**

CONFIGURATION

**Supported Modes**

All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
</tbody>
</table>
CAUTION: Encrypting passwords with this command does not provide a high level of security. When the passwords are encrypted, you cannot return them to plain text unless you re-configure them. To remove an encrypted password, use the no password password command.

To keep unauthorized people from viewing passwords in the switch configuration file, use the service password-encryption command. This command encrypts the clear-text passwords created for user name passwords, authentication key passwords, the privileged command password, and console and virtual terminal line access passwords.

To view passwords, use the show running-config command.

**show ip ssh**
Display information about established SSH sessions.

**Syntax**
```
show ip ssh
```

**Command Modes**
- EXEC
- EXEC Privilege

**Supported Modes**
All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>

<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Example**
```
Dell#show ip ssh
SSH server                 : disabled.
SSH server version         : v1 and v2.
Password Authentication    : enabled.
Hostbased Authentication   : disabled.
RSA Authentication         : disabled.
Dell#
```

**Related Commands**
- `show ip ssh client-pub-keys` — displays the client-public keys.

**show ip ssh client-pub-keys**
Displays the client public keys used in host-based authentication

**Syntax**
```
show ip ssh client-pub-keys
```

**Defaults**
none

**Command Modes**
EXEC

**Supported Modes**
All Modes
show ip ssh rsa-authentication

Displays the authorized-keys for the RSA authentication.

**Syntax**

```
show ip ssh rsa-authentication {my-authorized-keys}
```

**Parameters**

- **my-authorized-keys**

  Display the RSA authorized keys.

**Defaults**

none

**Command Modes**

EXEC

**Supported Modes**

All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

This command displays the contents of the flash://ADMIN_DIR/ssh/authorized-keys.username file.

**Example**

```
Dell#show ip ssh rsa-authentication my-authorized-keys
ssh-rsa
AAAAB3NzaC1yc2EAAAABIwAAAEAgAyB17l4gFp4r2DRHIvMc1VZd0SGqxRV1y1X1JOMe06Nd0WuYzrQMM

Dell#
```

**show users**

Allows you to view information on all users logged in to the switch.

**Syntax**

```
show users [all]
```

**Parameters**

- **all**

  (OPTIONAL) Enter the keyword **all** to view all terminal lines in the switch.

**Command Modes**

EXEC Privilege
Usage Information
The following describes the show user command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>(untitled)</td>
<td>Indicates with an asterisk (*) which terminal line you are using.</td>
</tr>
<tr>
<td>Line</td>
<td>Displays the terminal lines currently in use.</td>
</tr>
<tr>
<td>User</td>
<td>Displays the user name of all users logged in.</td>
</tr>
<tr>
<td>Host(s)</td>
<td>Displays the terminal line status.</td>
</tr>
<tr>
<td>Location</td>
<td>Displays the IP address of the user.</td>
</tr>
</tbody>
</table>

Example
Dell# show users
Authorization Mode: role or privilege
Line                      User       Role        Priv Host(s) Location
* 0  console 0                unassigned  1  idle  10.16.127.35
  2  vty 0                     admin     unassigned  1  idle  10.16.127.145
  3  vty 1                     ad        unassigned  15  idle  10.16.127.141
  4  vty 2                     ad1       sysadmin    1  idle  10.16.127.141
  5  vty 3                     ad1       sysadmin    1  idle  10.16.127.141
  6  vty 4                     admin     unassigned  1  idle  10.16.127.141
  7  vty 5                     ad        unassigned  15  idle  10.16.127.141
Dell#

Related Commands
ssh — enables a user.

**ssh**

Open an SSH connection specifying the host name, username, port number and version of the SSH client.
Dell Networking OS supports both inbound and outbound SSH sessions using IPv4 addressing. Inbound SSH supports accessing the system through the management interface as well as through a physical Layer 3 interface.

Syntax
```
ssh {hostname | ipv4 address} [-l username | -p port-number | -v {1|2}]
```

Parameters
- `hostname` (OPTIONAL) Enter the IP address or the host name of the remote device.
- `ipv4 address` (OPTIONAL) Enter the IP address in dotted decimal format A.B.C.D.
- `-l username` (OPTIONAL) Enter the keyword -l followed by the user name used in this SSH session. The default is the user name of the user associated with the terminal.
- `-p port-number` (OPTIONAL) Enter the keyword -p followed by the port number. The range is from 1 to 65536. The default is 22.
- `-v {1 | 2}` (OPTIONAL) Enter the keyword -v then the SSH version 1 or 2. The default is the version from the protocol negotiation.
username

Establish an authentication system based on user names.

Syntax

username name access-list-name [nopassword | {password | secret} [encryption-type] password] [privilege level]

If you do not want a specific user to enter a password, use the nopassword option.

To delete authentication for a user, use the no username name command.

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>Enter a text string for the name of the user up to 63 characters.</td>
</tr>
<tr>
<td>access-list-name</td>
<td>Enter the name of a configured access control list (either an IP access control list or MAC access control list).</td>
</tr>
<tr>
<td>nopassword</td>
<td>Enter the keyword nopassword to specify that the user should not enter a password.</td>
</tr>
<tr>
<td>password</td>
<td>Enter the keyword password followed by the encryption-type or the password.</td>
</tr>
<tr>
<td>secret</td>
<td>Enter the keyword secret followed by the encryption-type or the password.</td>
</tr>
<tr>
<td>encryption-type</td>
<td>Enter an encryption type for the password that you enter.</td>
</tr>
<tr>
<td></td>
<td>• 0 directs Dell Networking OS to store the password as clear text. It is the default encryption type when using the password option.</td>
</tr>
<tr>
<td></td>
<td>• 7 to indicate that a password encrypted using a DES hashing algorithm follows. This encryption type is available with the password option only.</td>
</tr>
<tr>
<td></td>
<td>• 5 to indicate that a password encrypted using an MD5 hashing algorithm follow. This encryption type is available with the secret option only, and is the default encryption type for this option.</td>
</tr>
<tr>
<td>password</td>
<td>Enter a string up to 32 characters long.</td>
</tr>
<tr>
<td>privilege level</td>
<td>Enter the keyword privilege then a number from zero (0) to 15.</td>
</tr>
<tr>
<td>secret</td>
<td>Enter the keyword secret then the encryption type.</td>
</tr>
</tbody>
</table>

Example

Dell#ssh 10.16.151.48 -l anvltest

Trying 10.16.151.48...
01:18:16: %STKUNIT0-M:CP %SEC-5-SSH USAGE: Initiated SSH Client v2 (FIPS Disabled) to anvltest@10.16.151.48 by default from console
anvltest@10.16.151.48's password:
Last login: Thu Jan  5 00:17:47 2012 from login-maa-101
[anvltest@dt-maa-linux-1 ~]# exit
logout
Dell#
The default encryption type for the password option is 0. The default encryption type for the secret option is 0.

**Usage Information**

To view the defined user names, use the `show running-config user` command.

**Related Commands**

- `service password-encryption` — specifies a password for users on terminal lines.
- `show running-config` — views the current configuration.
Stacking Commands

Stacking is supported on an Aggregator only on the 40GbE ports on the base module. Stacking is limited to two Aggregators in the same chassis in a single stack. Up to three stacks are supported in an M1000e chassis.

Stacking provides a single point of management and NIC teaming for high availability and higher throughput. To configure an Aggregator stack, you must use the CLI.

The stacking commands are always available and operational, whether or not an Aggregator has a stacking module inserted. You can use the commands to pre-configure an Aggregator, so that the configuration settings are invoked when the Aggregator is attached to other Aggregator blades.

For more information about using the Aggregator stacking feature, refer to the Stacking Aggregators chapter in the Dell Networking OS Configuration Guide for the M I/O Aggregator.

You can use the following commands to manage a stack of Aggregator I/O modules:

- `power-cycle stack-unit`  
- `reset stack-unit`  
- `show system stack-ports`  
- `show system stack-unit iom-mode`  
- `show system stack-unit stack-group`  
- `stack-unit iom-mode`  

---

### power-cycle stack-unit

To hard reset any stack unit including master unit.

**Syntax**

```
power-cycle stack-unit unit-number
```

**Parameter**

- **Unit number**
  
  The unit number ranges from 0 to 5.

**Defaults**

None

**Command Modes**

EXEC Privilege

**Supported Modes**

All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.6.(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

This command is supported on the M I/O, FN410S, and FN410T Aggregators.
This command is used to reset the stack-unit. The master unit can also be power cycled using this command.

**reset stack-unit**

Reset any designated stack member except the management unit (master unit).

**Syntax**

```
reset stack-unit 0–5 hard
```

**Parameters**

- **0–5**: Enter the stack member unit identifier of the stack member to reset.
- **hard**: Reset the stack unit if the unit is in a problem state.

**Defaults**

none

**Command Modes**

EXEC Privilege

**Supported Modes**

All Modes

<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

This command is supported on the M I/O, FN410S, and FN410T Aggregators.

Resetting the management unit is not allowed and an error message displays if you try to do so. Resetting is a soft reboot, including flushing the forwarding tables.

You can run this command directly on the stack standby unit (Standby Master) to reset the standby. You cannot reset any other unit from the standby unit.

**Example**

```
Dell#show system brief

312   Stacking Commands
show system stack-ports

Display information about the stacking ports on all switches in the M I/O Aggregator switch stack.

Syntax

show system stack-ports [status | topology]

Parameters

status  
(OPTIONAL) Enter the keyword status to display the command output without the Connection field.

topology  
(OPTIONAL) Enter the keyword topology to limit the table to just the Interface and Connection fields.

Defaults

none

Command Modes

- EXEC
- EXEC Privilege

Supported Modes

All Modes

Command History

Version  
Description
8.3.17.0  
Supported on the M I/O Aggregator.

Usage Information

The following describes the show interfaces command shown in the following example.

Field        Description
Topology     Lists the topology of stack ports connected: Ring, Daisy chain, or Standalone.
Interface    The unit/port ID of the connected stack port on this unit.
Link Speed   Link Speed of the stack port (10 or 40) in Gb/s.
Admin Status The only currently listed status is Up.
Connection   The stack port ID to which this unit’s stack port is connected.

Example

Dell# show system stack-ports
Topology: Ring

Interface  Connection  Link Speed  Admin  Link  Trunk
           (Gb/s)        Status  Status Group
0/33       40           up       down
0/37       1/37         40       up       up
1/33       40           up       down
1/37       0/37         40       up       up
Dell#

Example (Status)

Dell# show system stack-ports status
Topology: Daisy chain

Interface  Link Speed  Admin  Link  Trunk

### (Gb/s) | Status | Status | Group
---|---|---|---
0/33 | 40 | up | down
0/37 | 40 | up | up
1/33 | 40 | up | down
1/37 | 40 | up | up

**Example (Topology)**

Dell# show system stack-ports topology
Topology: Daisy chain

<table>
<thead>
<tr>
<th>Interface</th>
<th>Connection</th>
<th>Trunk</th>
<th>Group</th>
</tr>
</thead>
<tbody>
<tr>
<td>0/33</td>
<td>0/37</td>

<td>1/33</td>
<td></td>
<td></td>
</tr>
<tr>
<td>1/33</td>
<td>1/37</td>
<td>0/37</td>
<td></td>
</tr>
</tbody>
</table>

**Related Commands**
- `power-cycle stack-unit` — resets the designated stack member.
- `show diag` — displays the data plane or management plane input and output statistics of the designated component of the designated stack member.
- `show system` — displays the current status of all stack members or a specific member.

### show system stack-unit fanout

Displays the current 40GbE ports configured in fanout mode.

**Syntax**

```
show system stack-unit <unit-number> fanout[configured]
```

**Parameters**

`unit-number <0-5>`

Enter the number of the member stack unit. The range is from 0 to 5.

**Defaults**

none

45 45  
Dell#
show system stack-unit iom-mode

Displays the current iom-mode (stack/standalone) and the mode configured after next reboot.

Syntax

`show system stack-unit unit-number iom-mode`

Parameters

- `unit number <0–5>`: Enter the number of the member stack unit. The range is from 0 to 5.

Command Modes

EXEC Privilege

Supported Modes

</tr>
</tbody>
</table>

Usage Information

This command is supported on the M I/O, FN410S, and FN410T Aggregators.

Example

```
Dell#show system stack-unit all iom-mode ?
|                  Pipe through a command <cr>
Dell#show system stack-unit all iom-mode
Unit    Boot-Mode             Next-Boot
------------------------------------------------
0           stack                 stack
1           stack                 stack
2           stack                 stack
3           stack                 stack
4       Not Present
5       Not Present
Dell#
```

show system stack-unit iom-uplink-speed

Display the uplink speed of the LAG bundles configured on the Flex IO modules installed on the Aggregator.

Syntax

`show system stack-unit unit-number iom-uplink-speed`

Parameters

- `unit number <0-5>`: Enter the number of the member stack unit. The range is from 0 to 5.

Command Modes

EXEC Privilege

Supported Modes

All Modes

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.3(0.0)</td>
<td>Introduced on the M I/O Aggregator</td>
</tr>
</tbody>
</table>

Usage Information

The value under the Boot-speed field in the output of the show command indicates the uplink speed that is currently effective on the LAG bundles, whereas the value under the Next-Boot field indicates the uplink speed that is applicable for the LAG bundle after the next reboot of the switch.

Example

```
Dell# show system stack-unit 0 iom-uplink-speed
Unit    Boot-speed              Next-Boot
```
show system stack-unit stack-group

Displays the stack-groups present/configured for a M I/O Aggregator stack unit.

Syntax
show system stack-unit unit-number stack-group [configured]

Parameters
unit number <0–5> Enter the number of the member stack unit. The range is from 0 to 5.

Defaults
none

Command Modes
EXEC Privilege

Dell#show system stack-unit 0 stack-group
Stack group Ports
------------------------------------
0 0/33
1 0/37
2 0/41
3 0/45
Dell#

Related Commands
reload — reboots the system.

show system — displays the current status of all stack members or a specific member.

stack-unit iom-mode

Toggle the Aggregator operating mode between programmable multiplex, standalone, stack, and VLT modes.

Syntax
stack-unit <unit-number> iom-mode [programmable-mux | stack | standalone | vlt]

Parameters
unit number <0-5> Enter the number of the member stack unit. The range is from 0 to 5.
programmable-mux Enable programmable multiplex mode.
stack Enable stack mode.
standalone Enable stand-alone mode.
**vlt**

Enable virtual link trunking mode.

**Defaults**
standalone

**Command Modes**

<tbody>
<tr>
<td>9.6.(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**
This command is supported on the M I/O, FN410S, and FN410T Aggregators.

**Example**

```
Dell(conf)#stack-unit 0 iom-mode stack
% You are about to stack your IOA module, please reload the IOA and then plug in the stacking cable for the changes to take effect.
Dell(conf)#
Dell#
```

**Related Commands**

- `reload` — Reboots the operating system.
- `show system` — displays the current status of all stack members or a specific member.

### stack-unit iom-mode uplink-speed

Specify the uplink speed of the member interfaces in a LAG bundle for the Aggregator that operates in standalone, stacking, or VLT mode to be 40 GbE. By default, the uplink speed of the LAG bundle is set as 10 GbE.

**Syntax**

```
stack-unit unit-number iom-mode {stack | standalone | vlt} uplink-speed 40G
```

To restore the default uplink speed of the LAG bundle, which is 10 GbE, use the `stack-unit unit-number iom-mode {stack | standalone | vlt} command.

**Parameters**

- `unit number <0-5>`: Enter the number of the member stack unit. The range is from 0 to 5.
- `iom-mode`: Denotes the operating mode of the I/O Aggregator.
- `stack`: Specify that the uplink speed of the member interfaces in a LAG bundle applies for the Aggregator in stacking mode.
- `standalone`: Specify that the uplink speed of the member interfaces in a LAG bundle applies for the Aggregator in standalone mode.
- `vlt`: Specify that the uplink speed of the member interfaces in a LAG bundle applies for the Aggregator in VLT mode.
- `uplink-speed 40G`: Set the uplink speed of the member or child interfaces of the LAG bundle to function at 40 Gigabit Ethernet per second.

**Command Modes**
CONFIGURATION

**Supported Modes**
All Modes
This functionality to set the uplink speed is available from the CMC interface when the I/O Aggregator functions as a simple MUX or a VLT node with all of the uplink interfaces configured to be member links in the same LAG bundle. You cannot configure the uplink speed to be set as 40 GbE by default if the Aggregator functions in programmable MUX mode with multiple uplink LAG interfaces or in stacking mode because CMC is not involved with configuration of parameters when the Aggregator operates in either of these modes with uplink interfaces being part of different LAG bundles.

When you configure the native mode to be 40 GbE, the CMC sends a notification to the IOA to set the default internal working of all of the ports to be 40 GbE after the reload of the switch is performed. After you configure the native mode that denotes the uplink speed of the module ports to be 40 GbE, you must enter the reboot command (not pressing the Reset button, which causes the factory default settings to be applied when the device comes up online) from the CMC to cause the configuration of the uplink speed to be effective.

### stack-unit priority

Configure the ability of a switch to become the management unit of a stack.

**Syntax**

```
stack-unit stack-number priority 1-14
```

**Parameters**

- `stack-number` Enter the stack member unit identifier.
- `1-14` This preference parameter allows you to specify the management priority of one backup switch over another, with 0 the lowest priority and 14 the highest. The switch with the highest priority value is chosen to become the management unit if the active management unit fails or on the next reload.

**Defaults**

0

**Command Modes**

CONFIGURATION

<td>9.6(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.3(0.0)</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

This command is supported on the M I/O, FN410S, and FN410T Aggregators.

**Related Commands**

- `reload` – reboots Dell Networking Operating System (OS).
- `show system` – displays the status of all stack members or a specific member.
**stack-unit renumber**

Change the stack member ID of any stack member or a stand-alone unit.

**Syntax**

```
stack-unit 0-5 renumber 0-5
```

**Parameters**

- **0-5**
  - The first instance of this value is the stack member unit identifier, from 0 to 5, of the switch that you want add to the stack. The range is from 0 to 5. The second instance of this value is the desired new unit identifier number.

**Defaults**
none

**Command Modes**

EXEC Privilege

**Supported Modes**
All Modes

**Command History**

- **Version**
  - **9.6.(0.0)**
    - Supported on the FN I/O Aggregator.
  
  - **9.3(0.0)**
    - Supported on the M I/O Aggregator.

**Usage Information**

- This command is supported on the FN410S and the FN410T Aggregators.

- You can renumber any switch, including the management unit or a stand-alone unit.

- You cannot renumber a unit to a number of an active member in the stack.

- When executing this command on the master, the stack reloads. When the members are renumbered, only that specific unit is reset and comes up with the new unit number.

**Example**

```
Dell#stack-unit 5 renumber 4
Renumbering will reset the unit.
Warning: Interface configuration for current unit will be lost!
Proceed to renumber [confirm yes/no]:
```

**Related Commands**

- `reload` — reboots Dell Networking Operating System (OS).
- `reset stack-unit` — resets the designated stack member.
- `show system` — displays the current status of all stack members or a specific member.
Storm Control

The Dell Networking operating software storm control feature allows you to limit or suppress traffic during a traffic storm.

Important Points to Remember

- Interface commands can only be applied on physical interfaces (virtual local area networks [VLANs] and link aggregation group [LAG] interfaces are not supported).
- An INTERFACE-level command only supports storm control configuration on ingress.
- An INTERFACE-level command overrides any CONFIGURATION-level ingress command for that physical interface, if both are configured.
- You can apply the CONFIGURATION-level storm control commands at ingress or egress and are supported on all physical interfaces.
- When storm control is applied on an interface, the percentage of storm control applied is calculated based on the advertised rate of the line card. It is not based on the speed setting for the line card.
- Do not apply per-VLAN quality of service (QoS) on an interface that has storm control enabled (either on an interface or globally).
- When you enable broadcast storm control on an interface or globally on ingress, and DSCP marking for a DSCP value 1 is configured for the data traffic, the traffic goes to queue 1 instead of queue 0.
- Similarly, if you enable unicast storm control on an interface or globally on ingress, and DSCP marking for a DSCP value 2 is configured for the data traffic, the traffic goes to queue 2 instead of queue 0.

**NOTE:** Bi-directional traffic (unknown unicast and broadcast) along with egress storm control causes the configured traffic rates split between the involved ports. The percentage of traffic that each port receives after the split is not predictable. These ports can be in the same/different port pipes or the same/different line cards.

**NOTE:** The policy discard drop counters are common across storm-control drops, ACL drops and QoS drops. Therefore, if your configuration includes ACL and QoS, those drops are also computed and displayed in the policy discard drops counter field along with storm-control drops. The packets dropped by the storm control feature can be monitored by viewing the value of the Policy Discard Drops field of the output of the show hardware stack-unit 0 drops command.

io-aggregator broadcast storm-control

Rate limit the traffic storm to 1 Gbps.

**Syntax**

io-aggregator broadcast storm-control

To disable storm control, use the `no io-aggregator broadcast storm-control` command.

**Defaults**

Enabled

**Command Modes**

- CONFIGURATION
**Supported Modes**  
Standalone-Mux (SMUX)

**Command History**

<table>

</tr>
</tbody>
</table>

**Example**

```
Dell#show io-aggregator broadcast storm-control status
Storm-Control Enabled
Broadcast Traffic limited to 1000 Mbps
Dell#
```

### show storm-control unknown-unicast

Display the storm control unknown-unicast configuration.

**Syntax**

```plaintext
show storm-control unknown-unicast [interface]
```

**Parameters**

- `interface`  
  Enter one of the following interfaces to display the interface specific storm control configuration:
  - For a 1-Gigabit Ethernet interface, enter the keyword `GigabitEthernet` then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.

**Defaults**  
none

**Command Modes**

- EXEC
storm-control broadcast (Interface)

Configure the percentage of broadcast traffic allowed on an interface.

Syntax

```
storm-control broadcast [packets_per_second in]
```

To disable broadcast storm control on the interface, use the `no storm-control broadcast [packets_per_second in]` command.

Parameters

- `packets_per_second`  
Enter the packets per second of broadcast traffic allowed into the network. The range is from 0 to 33554368.

Command Modes

- INTERFACE (conf-if-interface-slot/port)

Supported Modes

- Programmable-Mux (PMUX)

Command History

</tbody>
</table>

storm-control multicast (Interface)

Configure the percentage of multicast traffic allowed on the interface.

Syntax

```
storm-control multicast packets_per_second in
```

To disable multicast storm control on the interface, use the `no storm-control multicast packets_per_second in` command.

Parameters

- `packets_per_second`  
Enter the packets per second of broadcast traffic allowed into the network. The range is from 0 to 33554368.

Command Modes

- INTERFACE (conf-if-interface-slot/port)

Supported Modes

- Programmable-Mux (PMUX)

</tr>
</tbody>
</table>

### storm-control unknown-unicast (Interface)

Configure percentage of unknown-unicast traffic allowed on the interface.

**Syntax**

```
storm-control unknown-unicast [packets_per_second in]
```

To disable unknown-unicast storm control on the interface, use the `no storm-control unknown-unicast [packets_per_second in]` command.

**Parameters**

- **packets_per_second**
  - Enter the packets per second of broadcast traffic allowed into the network. The range is from 0 to 33554431.

**Command Modes**

- INTERFACE (conf-if-interface-slot/port)

**Supported Modes**

- Programmable-Mux (PMUX)

</tbody>
</table>
System Time

The commands in this chapter configure time values on the system, either using the Dell Networking OS, the hardware, or using the network time protocol (NTP). With NTP, the switch can act only as a client to an NTP clock host.

For more information, refer to the Network Time Protocol section of the Management chapter in the Dell PowerEdge M I/O Aggregator Configuration Guide.

The NTP commands are:

- calendar set
- ntp server
- show calendar
- show clock
- clock read-calendar
- clock set
- clock summer-time date
- clock summer-time recurring
- clock timezone
- clock update-calendar

calendar set

Set the time and date for the switch hardware clock.

**Syntax**

```
calendar set time month day year
```

**Parameters**

- **time**: Enter the time in hours:minutes:seconds. For the hour variable, use the 24-hour format; for example, 17:15:00 is 5:15 pm.
- **month**: Enter the name of one of the 12 months in English. You can enter the name of a day to change the order of the display to time day month year.
- **day**: Enter the number of the day. The range is from 1 to 31. You can enter the name of a month to change the order of the display to time day month year.
- **year**: Enter a four-digit number as the year. The range is from 1993 to 2035.

**Command Modes**

EXEC Privilege

**Supported Modes**

All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>
Usage Information

You can change the order of the month and day parameters to enter the time and date as time day month year.

In the switch, the hardware clock is separate from the software and is called the calendar. This hardware clock runs continuously. After the hardware clock (the calendar) is set, the operating system automatically updates the software clock after system bootup. You cannot delete the hardware clock (calendar).

To manually update the software with the hardware clock, use the `clock read-calendar` command.

Example

Dell#calendar set 08:55:00 june 18 2006
Dell#

Related Commands

- `clock read-calendar` — sets the software clock based on the hardware clock.
- `clock set` — sets the software clock.
- `clock update-calendar` — sets the hardware clock based on the software clock.
- `show clock` — displays the clock settings.

**clock read-calendar**

Set the software clock on the switch from the information set in hardware clock (calendar).

**Syntax**

```
clock read-calendar
```

**Defaults**

Not configured.

**Command Modes**

EXEC Privilege

**Supported Modes**

All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

In the switch, the hardware clock is separate from the software and is called the calendar. This hardware clock runs continuously. After the hardware clock (the calendar) is set, the operating system automatically updates the software clock after system bootup.

You cannot delete this command (there is not a no version of this command).

**clock set**

Set the software clock in the switch.

**Syntax**

```
clock set time month day year
```
Parameters

**time**
- Enter the time in hours:minutes:seconds. For the hour variable, use the 24-hour format; example, 17:15:00 is 5:15 pm.

**month**
- Enter the name of one of the 12 months, in English. You can enter the number of a day and change the order of the display to *time day month year*.

**day**
- Enter the number of the day. The range is from 1 to 31. You can enter the name of a month to change the order of the display to *time month day year*.

**year**
- Enter a four-digit number as the year. The range is from 1993 to 2035.

Defaults
- Not configured.

Command Modes
- EXEC Privilege

Supported Modes
- All Modes

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

Usage Information

You can change the order of the *month* and *day* parameters to enter the time and date as *time day month year*. You cannot delete the software clock.

The software clock runs only when the software is up. The clock restarts, based on the hardware clock, when the switch reboots.

Dell Networking recommends using an outside time source, such as NTP, to ensure accurate time on the switch.

Example

```
Dell#clock set 12:11:00 21 may 2012
Dell#
```

**clock summer-time date**

Set a date (and time zone) on which to convert the switch to daylight saving time on a one-time basis.

**Syntax**

```
clock summer-time time-zone date start-month start-day start-year start-time end-month end-day end-year end-time [offset]
```

To delete a daylight saving time zone configuration, use the `no clock summer-time` command.

**Parameters**

**time-zone**
- Enter the three-letter name for the time zone. This name is displayed in the show clock output.

**start-month**
- Enter the name of one of the 12 months in English. You can enter the name of a day to change the order of the display to *time day month year*.

**start-day**
- Enter the number of the day. The range is from 1 to 31. You can enter the name of a month to change the order of the display to *time month day year*.

**start-year**
- Enter a four-digit number as the year. The range is from 1993 to 2035.
**clock summer-time recurring**

Set the software clock to convert to daylight saving time on a specific day each year.

**Syntax**

```
clock summer-time time-zone recurring [start-week start-day start-month start-time end-week end-day end-month end-time [offset]]
```

To delete a daylight saving time zone configuration, use the `no clock summer-time` command.

**Parameters**

- **time-zone**
  
  Enter the three-letter name for the time zone. This name is displayed in the `show clock` output. You can enter up to eight characters.

- **start-week**
  
  (OPTIONAL) Enter one of the following as the week that daylight saving begins and then enter values for start-day through end-time:

  - `week-number`: Enter a number from 1 to 4 as the number of the week in the month to start daylight saving time.
  - `first`: Enter this keyword to start daylight saving time in the first week of the month.
  - `last`: Enter this keyword to start daylight saving time in the last week of the month.
**start-day**
Enter the name of the day that you want daylight saving time to begin. Use English three letter abbreviations; for example, Sun, Sat, Mon, and so on. The range is from Sun to Sat.

**start-month**
Enter the name of one of the 12 months in English.

**start-time**
Enter the time in hours:minutes. For the hour variable, use the 24-hour format; example, 17:15 is 5:15 pm.

**end-week**
Enter the one of the following as the week that daylight saving ends:

- **week-number**: enter a number from 1 to 4 as the number of the week to end daylight saving time.
- **first**: enter the keyword first to end daylight saving time in the first week of the month.
- **last**: enter the keyword last to end daylight saving time in the last week of the month.

**end-day**
Enter the weekday name that you want daylight saving time to end. Enter the weekdays using the three letter abbreviations; for example Sun, Sat, Mon, and so on. The range is from Sun to Sat.

**end-month**
Enter the name of one of the 12 months in English.

**end-time**
Enter the time in hours:minutes:seconds. For the hour variable, use the 24-hour format; example, 17:15:00 is 5:15 pm.

**offset**
(Optional) Enter the number of minutes to add during the summer-time period. The range is from 1 to 1440. The default is 60 minutes.

**Defaults**
Not configured.

**Command Modes**
CONFIGURATION

</tr>
</tbody>
</table>

**Related Commands**
- **clock summer-time date** — sets a date (and time zone) on which to convert the switch to daylight saving time on a one-time basis.
- **show clock** — displays the current clock settings.

---

**clock timezone**

Configure a timezone for the switch.

**Syntax**
clock timezone timezone-name offset

To delete a timezone configuration, use the no clock timezone command.

**Parameters**
- **timezone-name**
Enter the name of the timezone. You cannot use spaces.
offset

Enter one of the following:

- a number from 1 to 23 as the number of hours in addition to universal time coordinated (UTC) for the timezone.
- a minus sign (-) then a number from 1 to 23 as the number of hours.

Defaults
Not configured.

</tr>
</tbody>
</table>

Usage Information

Coordinated universal time (UTC) is the time standard based on the International Atomic Time standard, commonly known as Greenwich Mean time. When determining system time, include the differentiator between UTC and your local timezone. For example, San Jose, CA is the Pacific Timezone with a UTC offset of -8.

**clock update-calendar**

Set the switch hardware clock based on the software clock.

**Syntax**

clock update-calendar

**Defaults**
Not configured.

**Command Modes**
EXEC Privilege

**Supported Modes**
All Modes

**Command History**

<table>

<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

Use this command only if you are sure that the hardware clock is inaccurate and the software clock is correct. You cannot delete this command (there is not a no form of this command).

**Related Commands**

calendar set — sets the hardware clock.

**ntp server**

Configure an NTP time-serving host.

**Syntax**

ntp server {hostname | ipv4-address} [key keyid] [prefer] [version number]

**Parameters**

- **ipv4-address**
  Enter an IPv4 address (A.B.C.D).
hostname

Enter the hostname of the server.

key keyid

(OPTIONAL) Enter the keyword key and a number as the NTP peer key. The range is from 1 to 4294967295.

prefer

(OPTIONAL) Enter the keyword prefer to indicate that this peer has priority over other servers.

version number

(OPTIONAL) Enter the keyword version and a number to correspond to the NTP version used on the server. The range is from 1 to 3.

Defaults

Not configured.

Command Modes

CONFIGURATION

Supported Modes

All Modes

Command History

Version | Description
---------|-----------------------------
9.2(0.0) | Supported on the M I/O Aggregator.

Usage Information

You can configure multiple time-serving hosts (up to 250). From these time-serving hosts, the operating system chooses one NTP host with which to synchronize.

Because many polls to NTP hosts can impact network performance, Dell Networking recommends limiting the number of hosts configured.

---

**show calendar**

Display the current date and time based on the switch hardware clock.

**Syntax**

```
show calendar
```

**Command Modes**

- EXEC
- EXEC Privilege

Dell#
```

**Example (Detail)**

```
Dell#show clock detail
12:30:26.892 pacific Tue May 22 2012
Time source is RTC hardware
Summer time starts 00:00:00 UTC Wed Mar 14 2012
Summer time ends 00:00:00 pacific Wed Nov 7 2012
Dell#
```

**Related Commands**

- `clock summer-time recurring` — sets the software clock to convert to daylight saving time on a specific day each year.

- `ntp server` — configures an NTP time-serving host.
### Uplink Failure Detection (UFD)

Uplink failure detection (UFD) provides detection of the loss of upstream connectivity and, if you use this with network interface controller (NIC) teaming, automatic recovery from a failed link.

**NOTE:** In Standalone, VLT, and Stacking modes, the UFD group number is 1 by default and cannot be changed.

---

### clear ufd-disable

Re-enable one or more downstream interfaces on the switch/router that are in a UFD-Disabled Error state so that an interface can send and receive traffic.

**Syntax**

```
clear ufd-disable {interface interface | uplink-state-group group-id}
```

**Parameters**

- **interface interface**
  - Specify one or more downstream interfaces. For `interface`, enter one of the following interface types:
    - 10 Gigabit Ethernet: `tengigabitethernet {slot/port | slot/port-range}
    - Port channel: `port-channel {1-512 | port-channel-range}
  - Where `port-range` and `port-channel-range` specify a range of ports separated by a dash (-) and/or individual ports/port channels in any order; for example: `tengigabitethernet 1/1-2,5,9,11-12 port-channel 1-3,5`. A comma is required to separate each port and port-range entry.

- **uplink-state-group group-id**
  - Re-enables all UFD-disabled downstream interfaces in the group. The valid group-id values are from 1 to 16.

**Defaults**

A downstream interface in a UFD-disabled uplink-state group is also disabled and is in a UFD-Disabled Error state.

**Command Modes**

CONFIGURATION

**Supported Modes**

Programmable-Mux (PMUX)

**Command History**

<table>
<thead>
<tr>

**Related Commands**

- `downstream` — assigns a port or port-channel to the uplink-state group as a downstream interface.
- `uplink-state-group` — creates an uplink-state group and enables the tracking of upstream links.
**debug uplink-state-group**

Enable debug messages for events related to a specified uplink-state group or all groups.

**Syntax**

`debug uplink-state-group [group-id]

To turn off debugging event messages, enter the `no debug uplink-state-group [group-id]` command.

**Parameters**

- **group-id**
  Enables debugging on the specified uplink-state group. The valid group-id values are from 1 to 16.

**Defaults**

none

</tbody>
</table>

**Related Commands**

- `clear ufd-disable` — re-enables downstream interfaces that are in a UFD-Disabled Error state.

---

**defer-timer**

Configure a timer that prevents unwanted flapping of downstream ports when the uplink port channel goes down and comes up.

**Syntax**

`defer-timer seconds`

**Defaults**

10 (Standalone mode)

**Parameters**

- **seconds**
  Specify the time (in seconds) to wait for the upstream port channel (LAG 128) to come back up before server ports are brought down. The range is from 1 to 120.

**Command Modes**

UPLINK-STATE-GROUP

**Supported Modes**

Standalone, Stacking, VLT

**Command History**

**Example**

Dell(conf-uplink-state-group-16)# description test
Dell(conf-uplink-state-group-16)#

**Related Commands**

uplink-state-group — creates an uplink-state group and enables the tracking of upstream links.

---

**downstream**

Assign a port or port-channel to the uplink-state group as a downstream interface.

**Syntax**

downstream interface

To delete an uplink-state group, enter the no downstream interface command.

**Parameters**

interface

Enter one of the following interface types:

- Fast Ethernet: fastethernet {slot/port | slot/port-range}
- 1 Gigabit Ethernet: gigabitethernet {slot/port | slot/port-range}
- 10 Gigabit Ethernet: tengigabitethernet {slot/port | slot/port-range}
- Port channel: port-channel {1-512 | port-channel-range}

Where port-range and port-channel-range specify a range of ports separated by a dash (-) and/or individual ports/port channels in any order; for example: gigabitethernet 1/1-2,5,9,11-12 port-channel 1-3,5. A comma is required to separate each port and port-range entry.

**Defaults**

none

**Command Modes**

UPLINK-STATE-GROUP

**Supported Modes**

Programmable-Mux (PMUX)
Command History
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

Usage Information
You can assign physical port or port-channel interfaces to an uplink-state group.

You can assign an interface to only one uplink-state group. Configure each interface assigned to an uplink-state group as either an upstream or downstream interface, but not both.

You can assign individual member ports of a port channel to the group. An uplink-state group can contain either the member ports of a port channel or the port channel itself, but not both.

Related Commands
- `upstream` — assigns a port or port-channel to the uplink-state group as an upstream interface.

**downstream auto-recover**
Enable auto-recovery so that UFD-disabled downstream ports in an uplink-state group automatically come up when a disabled upstream port in the group comes back up.

Syntax
downstream auto-recover

To disable auto-recovery on downstream links, use the no downstream auto-recover command.

Defaults
The auto-recovery of UFD-disabled downstream ports is enabled.

Command Modes
UPLINK-STATE-GROUP

Supported Modes
Programmable-Mux (PMUX)

Command History

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

Related Commands
- `downstream` — assigns a port or port-channel to the uplink-state group as a downstream interface.
- `uplink-state-group` — creates an uplink-state group and enables the tracking of upstream links.
downstream disable links

Configure the number of downstream links in the uplink-state group that are disabled if one upstream link in an uplink-state group goes down.

Syntax

downstream disable links {number | all}

To revert to the default setting, use the no downstream disable links command.

Parameters

| number | Enter the number of downstream links to be brought down by UFD. The range is from 1 to 1024. |
| all | Brings down all downstream links in the group. |

Defaults

No downstream links are disabled when an upstream link in an uplink-state group goes down.

Command Modes

UPLINK-STATE-GROUP

Supported Modes

Programmable-Mux (PMUX)

Command History

<table>
<thead>
<tr>

<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

Usage Information

A user-configurable number of downstream interfaces in an uplink-state group are put into a link-down state with an UFD-Disabled error message when one upstream interface in an uplink-state group goes down.

If all upstream interfaces in an uplink-state group go down, all downstream interfaces in the same uplink-state group are put into a link-down state.

Related Commands

- downstream — assigns a port or port-channel to the uplink-state group as a downstream interface.
- uplink-state-group — creates an uplink-state group and enables the tracking of upstream links.

enable

Re-enable upstream-link tracking for an uplink-state group after it has been disabled.

Syntax

enable

To disable upstream-link tracking without deleting the uplink-state group, use the no enable command.

group-id

Enables debugging on the specified uplink-state group. Valid group-id values are 1 to 16.

Defaults

Upstream-link tracking is automatically enabled in an uplink-state group.

Command Modes

UPLINK-STATE-GROUP

Supported Modes

</table>

Example

```
Dell#show running-config uplink-state-group
!
no enable
uplink state track 1
downstream TengigabitEthernet 0/2,4,6,11
upstream TengigabitEthernet 0/8, 12
upstream PortChannel 1
!
uplink state track 2
downstream TengigabitEthernet 0/1,3,5
upstream TengigabitEthernet 0/9,10
```

Related Commands
- **show uplink-state-group** — displays the status information on a specified uplink-state group or all groups.
- **uplink-state-group** — creates an uplink-state group and enables the tracking of upstream links.

show uplink-state-group

Display status information on a specified uplink-state group or all groups.

Syntax
show uplink-state-group [group-id] [detail]

Parameters
- **group-id**: Displays status information on a specified uplink-state group or all groups. The valid group-id values are from 1 to 16.
**detail**

Displays additional status information on the upstream and downstream interfaces in each group.

**Defaults**

none

**Command Modes**

- EXEC
- EXEC Privilege

```
**uplink-state-group**

Create an uplink-state group and enable the tracking of upstream links on a switch/router.

**Syntax**

```
uplink-state-group group-id
```

To delete an uplink-state group, enter the `no uplink-state-group group-id` command.

**Parameters**

- **group-id**
  
Enter the ID number of an uplink-state group. The range is from 1 to 16.

**Defaults**

none

**Command Modes**

CONFIGURATION

**Supported Modes**

Programmable-Mux (PMUX)

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

After you enter the command, to assign upstream and downstream interfaces to the group, enter Uplink-state-Group Configuration mode.

An uplink-state group is considered to be operationally up if at least one upstream interface in the group is in the Link-Up state.

An uplink-state group is considered to be operationally down if no upstream interfaces in the group are in the Link-Up state. No uplink-state tracking is performed when a group is disabled or in an operationally down state.

To disable upstream-link tracking without deleting the uplink-state group, use the `no enable` command in uplink-state-group configuration mode.

**Example**

```
Dell(conf)#uplink-state-group 16
Dell(conf)#
02:23:17: %RPM0-P:CP %IFMGR-5-ASTATE_UP: Changed uplink state group Admin state to up: Group 16
```

**Related Commands**

- `show running-config uplink-state-group` — displays the current configuration of one or more uplink-state groups.
- `show uplink-state-group` — displays the status information on a specified uplink-state group or all groups.

**upstream**

Assign a port or port-channel to the uplink-state group as an upstream interface.

**Syntax**

```
upstream interface
```

To delete an uplink-state group, use the `no upstream interface` command.
Parameters

interface

Enter one of the following interface types:

- Fast Ethernet: fastethernet {slot/port | slot/port-range}
- 1 Gigabit Ethernet: gigabitethernet {slot/port | slot/port-range}
- 10 Gigabit Ethernet: tengigabitethernet {slot/port | slot/port-range}
- 40 Gigabit Ethernet: fortyGigE {slot/port | slot/port-range}
- Port channel: port-channel {1-512 | port-channel-range}

Where port-range and port-channel-range specify a range of ports separated by a dash (-) and/or individual ports/port channels in any order; for example: gigabitethernet 1/1-2,5,9,11-12 port-channel 1-3,5. A comma is required to separate each port and port-range entry.

Defaults

none

Command Modes

UPLINK-STATE-GROUP

Supported Modes

Programmable-Mux (PMUX)

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

Usage Information

You can assign physical port or port-channel interfaces to an uplink-state group.

You can assign an interface to only one uplink-state group. Configure each interface assigned to an uplink-state group as either an upstream or downstream interface, but not both.

You can assign individual member ports of a port channel to the group. An uplink-state group can contain either the member ports of a port channel or the port channel itself, but not both.

Example

Dell(conf-uplink-state-group-16)# upstream gigabitethernet 1/10-15
Dell(conf-uplink-state-group-16)#

Related Commands

- downstream — assigns a port or port-channel to the uplink-state group as a downstream interface.
Virtual Link Trunking (VLT)

VLT allows physical links between two chassis to appear as a single virtual link to the network core. VLT eliminates the requirement for Spanning Tree protocols by allowing link aggregation group (LAG) terminations on two separate distribution or core switches, and by supporting a loop-free topology. VLT provides Layer 2 multipathing, creating redundancy through increased bandwidth and enabling multiple parallel paths between nodes and load-balancing traffic where alternative paths exist.

NOTE: When you launch the VLT link, the VLT peer-ship is not established if any of the following is TRUE:

- The VLT System-MAC configured on both the VLT peers do not match.
- The VLT Unit-Id configured on both the VLT peers are identical.
- The VLT System-MAC or Unit-Id is configured only on one of the VLT peers.
- The VLT domain ID is not the same on both peers.

If the VLT peer-ship is already established, changing the System-MAC or Unit-Id does not cause VLT peer-ship to go down.

Also, if the VLT peer-ship is already established and the VLT Unit-Id or System-MAC are configured on both peers, then changing the CLI configurations on the VLT Unit-Id or System-MAC is rejected if any of the following become TRUE:

- After making the CLI configuration change, the VLT Unit-Id becomes identical on both peers.
- After making the CLI configuration change, the VLT System-MAC do not match on both peers.

When the VLT peer-ship is already established, you can remove the VLT Unit-Id or System-MAC configuration from either or both peers. However, removing configuration settings can cause the VLT ports to go down if you configure the Unit-Id or System-MAC on only one of the VLT peers.

back-up destination

Configure the IPv4 or IPv6 address of the management interface on the remote VLT peer to be used as the endpoint of the VLT backup link for sending out-of-band hello messages.

Syntax

back-up destination {ipv4-address | ipv6 ipv6-address} [interval seconds]

Parameters

ipv4–address Enter the IPv4 address of the backup destination.

ipv6 Enter the keyword ipv6 then an IPv6 address in the X:XX::X format.

interval seconds Enter the keyword interval to specify the time interval to send hello messages. The range is from 1 to 5 seconds. The default is 1 second.

Defaults 1 second

Command Modes VLT DOMAIN

Supported Modes Programmable-Mux (PMUX)
clear vlt statistics

Clear the statistics on VLT operations.

**Syntax**

```
clear vlt statistics [arp | domain | igmp-snoop | mac | multicast | NDP]
```

**Parameters**

- **domain**
  - Clear the VLT statistics for the domain.
- **multicast**
  - Clear the VLT statistics for multicast.
- **mac**
  - Clear the VLT statistics for the MAC address.
- **arp**
  - Clear the VLT statistics for ARP.
- **igmp-snoop**
  - Clear the VLT statistics for IGMP snooping.
- **ndp**
  - Clear the VLT statistics for NDP.

**Command Modes**

EXEC

**Supported Modes**

Programmable-Mux (PMUX)

<tr>
<td>9.2(0.0)</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Example**

```
VLT ARP Statistics
----------------
ARP Tunnel Pkts sent:0
ARP Tunnel Pkts Rcvd:0
ARP-sync Pkts Sent:0
ARP-sync Pkts Rcvd:0
ARP Reg Request sent:19
ARP Reg Request rcvd:10
```

lacp ungroup member-independent

Prevent possible loop during the bootup of a VLT peer switch or a device that accesses the VLT domain.

**Syntax**

```
lacp ungroup member-independent {vlt | port-channel}
```

**Parameters**

- **port-channel**
  - Force all LACP port-channel members to become switchports.
- **vlt**
  - Force all VLT LACP members to become switchports.

**Defaults**

Not configured.
Command Modes

CONFIGURATION

Supported Modes

Programmable-Mux (PMUX)

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>

<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

Usage Information

LACP on the VLT ports (on a VLT switch or access device), which are members of the virtual link trunk, is not brought up until the VLT domain is recognized on the access device.

To ungroup the VLT and port-channel configurations, use the **no lACP ungroup member independent** command on a VLT port channel, depending on whether the port channel is VLT or non-VLT.

Example

Dell(conf)#lACP ungroup member-independent?
port-channel LACP port-channel members become switchports
vlt All VLT LACP members become switchports

**peer-link port-channel**

Configure the specified port channel as the chassis interconnect trunk between VLT peers in the domain.

Syntax

```
peer-link port-channel port-channel-number {peer-down-vlan vlan id}
```

Parameters

- **port-channel-number**
  - Enter the port-channel number that acts as the interconnect trunk.
- **peer-down-vlan vlan id**
  - Enter the keyword **peer-down-vlan** then a VLAN ID to configure the VLAN that the VLT peer link uses when the VLT peer is down.

Defaults

Not configured.

Command Modes

VLT DOMAIN

Supported Modes

Programmable-Mux (PMUX)

Command History

<table>
<thead>
<tr>

stack-unit iom-mode

Set the Aggregator operating mode to VLT mode.

Syntax

```
stack-unit <unit-number> iom-mode vlt
```

Parameters

- **unit number**: Enter the number of the member stack unit. The range is from 0 to 5. The default is 0.
- **vlt**: Enable virtual link trunking mode.

Command Modes

- **CONFIGURATION**

Supported Modes

- All Modes

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

Usage Information

This command resets the operating mode to VLT. You must reboot the Aggregator after using this command.

system-mac

Reconfigure the default MAC address for the domain.

Syntax

```
system-mac mac-address
```

Parameters

- **mac-address**: Enter the system MAC address for the VLT domain.

Defaults

Not configured.

Command Modes

- VLT DOMAIN

Supported Modes

- Programmable-Mux (PMUX)

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

Usage Information

When you create a VLT domain on a switch, Dell Networking OS automatically creates a VLT-system MAC address used for internal system operations.

To reconfigure the default MAC address for the domain by entering a new MAC address in the format nnn:nn:nn:nn:nn:nn, use the `system-mac` command.
You must also reconfigure the same MAC address on the VLT peer switch.

**unit-id**

Explicitly configure the default unit ID of a VLT peer switch.

**Syntax**

unit-id [0 | 1]

**Parameters**

0 | 1  
Configure the default unit ID of a VLT peer switch. Enter 0 for the first peer or enter 1 for the second peer.

**Defaults**

Automatically assigned based on the MAC address of each VLT peer. The peer with the lower MAC address is assigned unit 0; the peer with the higher MAC address is assigned unit 1.

**Command Modes**

VLT DOMAIN

**Supported Modes**

Programmable-Mux (PMUX)

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

When you create a VLT domain on a switch, Dell Networking OS automatically assigns a unique unit ID (0 or 1) to each peer switch. The unit IDs are used for internal system operations. Use the `unit-id` command to explicitly configure the unit ID of a VLT peer. Configure a different unit ID (0 or 1) on each peer switch.

To minimize the time required for the VLT system to determine the unit ID assigned to each peer switch when one peer reboots, use this command.

**vlt domain**

Enable VLT on a switch, configure a VLT domain, and enter VLT-domain configuration mode.

**Syntax**

vlt domain domain-id

**Parameters**

domain-id  
Enter the Domain ID number. Configure the same domain ID on the peer switch. The range of domain IDs is from 1 to 1000.

**Command Modes**

CONFIGURATION

**Supported Modes**

Programmable-Mux (PMUX)

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>
Usage Information

The VLT domain ID must be the same between the two VLT devices. If the domain ID is not the same, a syslog message is generated and VLT does not launch.

vlt-peer-lag port-channel

Associate the port channel to the corresponding port channel in the VLT peer for the VLT connection to an attached device.

Syntax

vlt-peer-lag port-channel id-number

Parameters

id-number

Enter the respective vlt port-channel number of the peer device.

Defaults

Not configured.

Command Modes

INTERFACE PORT-CHANNEL

Supported Modes

Programmable-Mux (PMUX)

Command History

</tbody>
</table>
Debugging and Diagnostics

This chapter contains the following sections:

- Offline Diagnostic Commands
- Hardware Commands

Offline Diagnostic Commands

The offline diagnostics test suite is useful for isolating faults and debugging hardware. While tests are running, the Dell Networking OS results are saved as a text file (TestReport-SU-X.txt) in the flash directory. The `show file` command is available only on Master and Standby.

Important Points to Remember

- Offline diagnostics can only be run when the unit is offline.
- Offline diagnostics cannot be run in Stacking mode.
- You can only run offline diagnostics on a unit to which you are connected via the console. In other words, you cannot run diagnostics on a unit to which you are connected via a stacking link.
- Diagnostic results are stored in a file (TestReport-SU-X.txt) in the flash directory. To review the results, use the `show file` command, which prints the results to the screen.
- Diagnostics only test connectivity, not the entire data path.

The offline diagnostics commands are:

- `diag stack-unit`
- `offline stack-unit`
- `show diag`

Hardware Commands

These commands display information from a hardware sub-component or ASIC.

The hardware commands are:

- `clear hardware stack-unit`
- `show diag`
- `show hardware stack-unit`
- `show hardware system-flow`
**clear hardware stack-unit**

Clear statistics from selected hardware components.

**Syntax**

```
clear hardware stack-unit 0-5 {counters | unit 0-1 counters | cpu data-plane statistics | cpu party-bus statistics | stack-port 0-52}
```

**Parameters**

- **stack-unit 0–5**
  - Enter the keywords `stack-unit` then `0` to `5` to select a particular stack member and then enter one of the following command options to clear a specific collection of data.

- **counters**
  - Enter the keyword `counters` to clear the counters on the selected stack member.

- **unit 0–0 counters**
  - Enter the keyword `unit` along with a port-pipe number, from `0` to `1`, then the keyword `counters` to clear the counters on the selected port-pipe.

- **cpu data-plane statistics**
  - Enter the keywords `cpu data-plane statistics` to clear the data plane statistics.

- **cpu party-bus statistics**
  - Enter the keywords `cpu party-bus statistics` to clear the management statistics.

- **stack-port 33–56**
  - Enter the keywords `stack-port` then the port number of the stacking port to clear the statistics of the particular stacking port. The range is from `33` to `56`.

**Defaults**

```
none
```

**Command Modes**

EXEC Privilege

**Supported Modes**

All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Related Commands**

- `show diag` — displays the data plane or management plane input and output statistics of the designated component of the designated stack member.

---

**diag stack-unit**

Run offline diagnostics on a stack unit.

**Syntax**

```
diag stack-unit number {alllevels | level0 | level1 | level2 [verbose non-reboot] | terminate | interactive test <id>}
```

**Parameters**

- **number**
  - Enter the stack-unit number. The range is from `0` to `5`.

- **alllevels**
  - Enter the keyword `alllevels` to run the complete set of offline diagnostic tests.

- **level0**
  - Enter the keyword `level0` to run Level 0 diagnostics. Level 0 diagnostics check for the presence of various components and perform essential path verifications. In addition, they verify the identification registers of the components on the board.
level1 Enter the keyword level1 to run Level 1 diagnostics. Level 1 diagnostics is a smaller set of diagnostic tests with support for automatic partitioning. They perform status/self test for all the components on the board and test their registers for appropriate values. In addition, they perform extensive tests on memory devices (for example, SDRAM, flash, NVRAM, EEPROM, and CPLD) wherever possible. There are no tests on 10G links. At this level, stack ports are shut down automatically.

level2 Enter the keyword level2 to run Level 2 diagnostics. Level 2 diagnostics are a full set of diagnostic tests with no support for automatic partitioning. Level 2 diagnostics are used primarily for on-board loopback tests and more extensive component diagnostics. Various components on the board are put into Loopback mode and test packets are transmitted through those components. These diagnostics also perform snake tests using VLAN configurations. To test 10G links, physically remove the unit from the stack.

verbose Enter the keyword verbose to run the diagnostic in Verbose mode. Verbose mode gives more information in the output than Standard mode.

no-reboot Enter the keyword no-reboot to avoid automatic rebooting of the chassis after completion of diagnostic execution. Generally, this option is never used because if you run the diagnostic once again without rebooting the chassis, it may cause an issue with the diagnostic results.

terminate Enter the keyword terminate to stop the execution of the level diag that is already started using the diag stack-unit command. Once this CLI is issued, syslog indicating the termination of the diag test is displayed. The diag results for the executed tests are stored in the flash directory (TestReport-SU-X.txt).

interactive Enter the keyword interactive to run some individual diag tests such as POWERLEDTEST, STATUSLEDTEST and so on. The help option under the interactive command displays the list of tests that can be run.

Defaults none

### hardware watchdog

Set the watchdog timer to trigger a reboot and restart the system.

Syntax hardware watchdog

Defaults Enabled

Command Modes CONFIGURATION
**offline stack-unit**

Place a stack unit in the offline state.

**Syntax**

```
offline stack-unit number
```

**Parameters**

- `number` Enter the stack-unit number. The range is from 0 to 5.

**Defaults**

none

**Command Modes**

EXEC Privilege

</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

While executing the `offline stack-unit` CLI, the following warning message is displayed:

```
Dell#offline stack-unit 0
Warning - offline of unit will bring down all the protocols and the unit will be operationally down, except for running Diagnostics. Please make sure that stacking/fanout not configured for Diagnostics execution. Also reboot/online command is necessary for normal operation after the offline command is issued.
Proceed with Offline [confirm yes/no]: no
Dell#
```

Make sure that stacking is not configured for Diagnostics execution. Also, reboot/online command is necessary for normal operation after the offline command is issued.
show diag

View diagnostics information.

Syntax

show diag {information | stack-unit number [detail | periodic | summary] | testcase}

Parameters

- **information**: Enter the keyword *information* to view current diagnostics information in the system.
- **stack-unit unit-id**: Enter the keyword *stack-unit* followed by the *unit-id* to display information on a specific stack member. The range is from 0 to 5.
- **detail** *(OPTIONAL)*: Enter the keyword *detail* to view detailed diagnostics information.
- **summary** *(OPTIONAL)*: Enter the keyword *summary* to view a summary of the diagnostics information. By default, the summary is displayed.
- **testcase**: Enter the keyword *testcase* to view the list of all the diag tests available.

Defaults

**show hardware stack-unit**

Display the data plane or management plane input and output statistics of the designated component of the designated stack member.

**Syntax**

```plaintext
show hardware stack-unit 0-5 {buffer [ unit 0 ] total buffer | buffer unit 0 interface all queue [(0-14) | all] buffer-info} {phy-firmware-version}
```

**Parameters**

- **stack-unit 0–5 (command-option)**
  Enter the keywords `stack-unit` then 0 to 5 to select a particular stack member and then enter one of the following command options to display a collection of data based on the option entered.

- **buffer**
  Enter the keyword `buffer`. To display buffer statistics for a all interface, enter the keyword `interface` followed by the keyword `all`. To display the forwarding plane statistics containing the packet buffer usage per port per stack unit, enter the keyword `unit` then 0 for port-pipe 0, then `port` and the port number (42-53), and then `buffer-info`.

- **fpga**
  Enter the keyword `fpga`, to display fpga details.

- **fru**
  Enter the keyword `fru`, to display fru details.

- **phy-firmware-version**
  Each member of the stack is updated automatically with the latest firmware while booting as well as during OIR. To dump the physical firmware version for stack units, enter the keywords `phy-firmware-version`.

- **cpu data-plane statistics**
  Enter the keywords `cpu data-plane statistics`, optionally followed by the keywords `stack port` and its number from 0 to 52 to display the data plane statistics, which shows the High Gig (Higig) port raw input/output counter statistics to which the stacking module is connected.

- **cpu party-bus statistics**
  Enter the keywords `cpu party-bus statistics`, to display the Management plane input/output counter statistics of the Private Management interface.

- **cpu private-mgmt statistics**
  Enter the keywords `cpu private-mgmt statistics`, to display the Management plane input/output counter statistics of the Private Management interface.

- **drops interface interface**
  Enter the keyword `drops` to display internal drops on the selected stack member.

- **stack-port 33–56**
  Enter the keywords `stack-port` and a stacking port number to select a stacking port for which to display statistics. Identify the stack port number as you would to identify a 10G port that was in the same place in one of the rear modules.
NOTE: You can identify stack port numbers by physical inspection of the rear modules. The numbering is the same as for the 10G ports. You can also inspect the output of the show system stack-ports command.

```
unit 0–0 (counters | details | port-stats [detail] | register)
```

Enter the keyword `unit` then 0 for port-pipe 0, and then enter one of the following keywords to troubleshoot errors on the selected port-pipe and to give status on why a port is not coming up to register level: `counters`, `details`, `port-stats [detail]`, or `register`.

**Defaults**

```
none
```

**Command Modes**

```

Related Commands

- show interfaces stack-unit — displays information on all interfaces on a specific stack member.
- show processes cpu — displays CPU usage information based on running processes.
- show system stack-ports — displays information about the stacking ports on all switches in the stack.
- show system — displays the current status of all stack members or a specific member.

**show hardware counters interface**

Display the counter information for a specific interface.

**Syntax**

```
show hardware counters interface interface
```

**Parameters**

- **counters**: Enter the keywords `counters` to display counter value for the specified stack-member the port-pipe.
- **interface**: Enter any of the following keywords and slot/port or number information:
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.

**Defaults**

none
## Command Modes

- EXEC
- EXEC Privilege

## Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.8(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

## Example

Dell#show hardware counters interfac tengigabitethernet 5/1
unit: 0 port: 2 (interface Te 5/1)

<output truncated for brevity>
show hardware buffer interface

Display buffer statistics for a specific interface.

Syntax

```
show hardware buffer interface interface (priority-group { id | all } | queue { id | all }) buffer-info
```

Parameters

- **interface interface**: Enter any of the following keywords and slot/port or number information:
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.

- **priority-group**: Identifier of the priority group in the range of 0 to 7.

- **queue**: Enter the keyword `queue` followed by `id` for specific queue or keyword `all`.

- **buffer-info**: To display total buffer information for the interface, enter the keywords `buffer-info`.

Command Modes

- EXEC
- EXEC Privilege

Command History

Version Description

9.8(0.0) Introduced on the M I/O Aggregator and FN I/O Aggregator.

Example displaying total-buffer information for the interface

```
Dell# show hardware buffer interface tengigabitethernet 1/1 buffer-info
-----  Buffer Stats for Interface Te 1/1 -----
Maximum Shared Limit for the Interface: 38336
Default Packet Buffer allocate for the Interface: 120
Used Packet Buffer for the Interface: 0
```

Example displaying priority-group range

```
Dell#show hardware buffer interface tengigabitethernet 1/1 priority-group 0 buffer-info
----- Buffer stats for unit: 0 port: 1 (interface Te 1/1) -----
PG# PRIORITIES ALLOTED (CELLS) COUNTER (CELLS)
MIN SHARED MODE HDRM MIN SHARED HDRM
0 - 61440 0 STATIC 174 0 0 0
```

Example displaying queue range

```
Dell#show hardware buffer interface tengigabitethernet 1/1 queue all buffer-info
----- Buffer Stats for Interface Te 1/1 Queue 0 -----
Maximum Shared Limit: 29514
Default Packet Buffer allocate for the Queue: 8
Used Packet Buffer: 0
----- Buffer Stats for Interface Te 1/1 Queue 1 -----
Maximum Shared Limit: 29514
Default Packet Buffer allocate for the Queue: 8
Used Packet Buffer: 0
----- Buffer Stats for Interface Te 1/1 Queue 2 -----
```
show hardware system-flow

Display Layer 2 ACL or GoS data for the selected stack member and stack member port-pipe.

Syntax

show hardware system-flow layer2 stack-unit 0–5 port-set 0–0 [counters]

Parameters

- acl | qos
  For the selected stack member and stack member port-pipe, display which system flow entry the packet hits and what queue the packet takes as it dumps the raw system flow tables.

- stack-unit 0–5
  Enter the keywords stack-unit then 0 to 5 to select a stack member ID.

- port-set 0–0
  Enter the keywords port-set with a port-pipe number—0.

- [counters]
  (OPTIONAL) Enter the keyword counters to display hit counters for the selected ACL or GoS option.

Defaults

none
Example

Dell\#show hardware system-flow layer2 stack-unit 0 port-set 0 counters

Dell\#
show hardware buffer-stats-snapshot

Displays buffer statistics tracking resource information for a specific interface.

Syntax

Dell#show hardware stack-unit <id> buffer-stats-snapshot unit <id> resource...
Parameters

**buffer-info**

- **buffer-info** Displays total buffer information for a group, where x can be one of the following:
  - **All** - Displays ingress and egress device, port, and queue snapshots
  - **Interface all queue (all)** - egress queue-level snapshot for both unicast and multicast packets
  - **Interface all queue ucast (id | all)** - egress queue-level snapshot for unicast packets only
  - **Interface all queue mcast (id | all)** - egress queue-level snapshot for multicast packets only
  - **Interface all prio-group (id | all)** - ingress priority-group level snapshot

**buffer-stats-snapshot unit number**

- **Display the historical snapshot of buffer statistical values unit** Enter the keyword unit along with a port-pipe number. The range is from 0 to 0.

**Command Modes**

- **EXEC**
- **EXEC Privilege**

**Command History**

<table>

<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.8(0.0)</td>
<td>Introduced on the M I/O Aggregator and the FN I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

- `<Interface><slot/port>-Queue ucast/mcast` — Displays the total unicast/multicast buffer usage on per-port per-queue basis. For CPU port, counters for queues 0 to 11 displays and there is no differentiation between unicast and multicast queues.

**Example displaying egress queue-level snapshot for both unicast and multicast packets for the specific interface**

**show hardware stack-unit buffer-stats-snapshot (Total Buffer Information)**

View the buffer statistics tracking resource information depending on the type of buffer information, such as device-level details, port-level counters, queue-based snapshots, or priority group-level snapshot in the egress and ingress direction of traffic.

**Syntax**

```
show hardware stack-unit {id} buffer-stats-snapshot unit {id} resource interface all {priority-group { id | all } | queue { ucast{id | all} | mcast{id | all} | all}
```

**Parameters**

- `stack-unit stack-unit-number` Unique ID of the stack unit to select a particular stack member and then enter one of the following command options to display a collection of data based on the option entered. The range is from 0 to 11.
- `buffer-stats-snapshot unit number` Display the historical snapshot of buffer statistical values unit Enter the keyword unit along with a port-pipe number. The range is from 0 to 0.
- `buffer-info` buffer-info Displays total buffer information for a group, where x can be one of the following:
  - All - Displays ingress and egress device, port, and queue snapshots
- Interface all queue (all) - egress queue-level snapshot for both unicast and multicast packets
- Interface all queue ucast [id | all] - egress queue-level snapshot for unicast packets only
- Interface all queue mcast [id | all] - egress queue-level snapshot for multicast packets only
- Interface all prio-group [id | all] - ingress priority-group level snapshot

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.8(0.0)</td>
<td>Introduced on the MI/O Aggregator, and FN I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

The following information is displayed based on the buffer-info type, such as device-level details, queue-based snapshots, or priority group-level snapshot in the egress and ingress direction of traffic:

- Device-ingress – Displays total buffer accounting usage for the unit.
- Device-egress – Displays total buffer usage for the unit, total multicast buffer usage for the unit and also on per-service-pool basis. Counters will be displayed for the 2 service-pools – one for normal traffic and other for DCB traffic.

When the buffer-stats-snapshot is disabled, the following informational message is displayed when you run the show command: %Info: Buffer-stats-snapshot feature is disabled.

**Example**

```
Dell#show hardware stack-unit 1 buffer-stats-snapshot unit 3 resource interface all queue mcast 3
Unit 1 unit: 3 port: 1 (interface Fo 1/144)
---------------------------------------
Q# TYPE     Q#     TOTAL BUFFERED CELLS
---------------------------------------
MCAST       3      0

Unit 1 unit: 3 port: 5 (interface Fo 1/148)
---------------------------------------
Q# TYPE     Q#     TOTAL BUFFERED CELLS
---------------------------------------
MCAST       3      0

Unit 1 unit: 3 port: 9 (interface Fo 1/152)
---------------------------------------
Q# TYPE     Q#     TOTAL BUFFERED CELLS
---------------------------------------
MCAST       3      0

Unit 1 unit: 3 port: 13 (interface Fo 1/156)
---------------------------------------
Q# TYPE     Q#     TOTAL BUFFERED CELLS
---------------------------------------
MCAST       3      0

Unit 1 unit: 3 port: 17 (interface Fo 1/160)
---------------------------------------
Q# TYPE     Q#     TOTAL BUFFERED CELLS
---------------------------------------
MCAST       3      0
```
show hardware drops

Displays internal drops on the specified interface or for a range of interface.

Syntax

```
show hardware drops interface interface
```

Parameters

- **interface**
  - Enter any of the following keywords and slot/port or slot/port-range or number information:
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.

- **drops**
  - Enter the keyword drops to display internal drops.

Command Modes

- EXEC
- EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

Internet Control Message Protocol (ICMP) Message Types

This chapter lists and describes the possible ICMP message type resulting from a ping. The first three columns list the possible symbol or type/code. For example, you would receive an ! or 03 as an echo reply from your ping.
