Working on your computer

Safety instructions

Use the following safety guidelines to protect your computer from potential damage and to ensure your personal safety. Unless otherwise noted, each procedure included in this document assumes that you have read the safety information that shipped with your computer.

**NOTE:** Before working inside your computer, read the safety information that is shipped with your computer. For more safety best practices, see the Regulatory Compliance home page at www.dell.com/regulatory_compliance.

**NOTE:** Disconnect your computer from all power sources before opening the computer cover or panels. After you finish working inside the computer, replace all covers, panels, and screws before connecting your computer to an electrical outlet.

**CAUTION:** To avoid damaging the computer, ensure that the work surface is flat, dry and clean.

**CAUTION:** To avoid damaging the components and cards, handle them by their edges, and avoid touching the pins and the contacts.

**CAUTION:** You should only perform troubleshooting and repairs as authorized or directed by the Dell technical assistance team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. See the safety instructions that is shipped with the product or at www.dell.com/regulatory_compliance.

**CAUTION:** Before touching anything inside your computer, ground yourself by touching an unpainted metal surface, such as the metal at the back of the computer. While you work, periodically touch an unpainted metal surface to dissipate static electricity which could harm internal components.

**CAUTION:** When you disconnect a cable, pull it by its connector or its pull tab, not the cable itself. Some cables have connectors with locking tabs or thumb-screws that you must disengage before disconnecting the cable. When disconnecting cables, keep them evenly-aligned to avoid bending the connector pins. When connecting cables, ensure that the ports and the connectors are correctly oriented and aligned.

**CAUTION:** Press and eject any installed card from the media-card reader.

**NOTE:** The color of your computer and certain components may appear differently than shown in this document.

Before working inside your computer

About this task

**NOTE:** The images in this document may differ from your computer depending on the configuration you ordered.

**Steps**

1. Save and close all open files and exit all open applications.
2. Shut down your computer. Click **Start** > **Power** > **Shut down**.
   
   **NOTE:** If you are using a different operating system, see the documentation of your operating system for shut-down instructions.

3. Disconnect your computer and all attached devices from their electrical outlets.
4. Disconnect all attached network devices and peripherals, such as keyboard, mouse, and monitor from your computer.
CAUTION: To disconnect a network cable, first unplug the cable from your computer and then unplug the cable from the network device.

5. Remove any media card and optical disc from your computer, if applicable.

Safety precautions

The safety precautions chapter details the primary steps to be taken before performing any disassembly instructions.

Observe the following safety precautions before you perform any installation or break/fix procedures involving disassembly or reassembly:

- Turn off the system and all attached peripherals.
- Disconnect the system and all attached peripherals from AC power.
- Disconnect all network cables, telephone, and telecommunications lines from the system.
- Use an ESD field service kit when working inside any desktop to avoid electrostatic discharge (ESD) damage.
- After removing any system component, carefully place the removed component on an anti-static mat.
- Wear shoes with non-conductive rubber soles to reduce the chance of getting electrocuted.

Standby power

Dell products with standby power must be unplugged before you open the case. Systems that incorporate standby power are essentially powered while turned off. The internal power enables the system to be remotely turned on (wake on LAN) and suspended into a sleep mode and has other advanced power management features.

Unplugging, pressing and holding the power button for 15 seconds should discharge residual power in the system board.

Bonding

Bonding is a method for connecting two or more grounding conductors to the same electrical potential. This is done through the use of a field service electrostatic discharge (ESD) kit. When connecting a bonding wire, ensure that it is connected to bare metal and never to a painted or non-metal surface. The wrist strap should be secure and in full contact with your skin, and ensure that you remove all jewelry such as watches, bracelets, or rings prior to bonding yourself and the equipment.

Electrostatic discharge—ESD protection

ESD is a major concern when you handle electronic components, especially sensitive components such as expansion cards, processors, memory DIMMs, and system boards. Very slight charges can damage circuits in ways that may not be obvious, such as intermittent problems or a shortened product life span. As the industry pushes for lower power requirements and increased density, ESD protection is an increasing concern.

Due to the increased density of semiconductors used in recent Dell products, the sensitivity to static damage is now higher than in previous Dell products. For this reason, some previously approved methods of handling parts are no longer applicable.

Two recognized types of ESD damage are catastrophic and intermittent failures.

- **Catastrophic** – Catastrophic failures represent approximately 20 percent of ESD-related failures. The damage causes an immediate and complete loss of device functionality. An example of catastrophic failure is a memory DIMM that has received a static shock and immediately generates a “No POST/No Video” symptom with a beep code emitted for missing or nonfunctional memory.
- **Intermittent** – Intermittent failures represent approximately 80 percent of ESD-related failures. The high rate of intermittent failures means that most of the time when damage occurs, it is not immediately recognizable. The DIMM receives a static shock, but the tracing is merely weakened and does not immediately produce outward symptoms related to the damage. The weakened trace may take weeks or months to melt, and in the meantime may cause degradation of memory integrity, intermittent memory errors, etc.

The more difficult type of damage to recognize and troubleshoot is the intermittent (also called latent or “walking wounded”) failure.

Perform the following steps to prevent ESD damage:

- Use a wired ESD wrist strap that is properly grounded. The use of wireless anti-static straps is no longer allowed; they do not provide adequate protection. Touching the chassis before handling parts does not ensure adequate ESD protection on parts with increased sensitivity to ESD damage.
- Handle all static-sensitive components in a static-safe area. If possible, use anti-static floor pads and workbench pads.
- When unpacking a static-sensitive component from its shipping carton, do not remove the component from the anti-static packing material until you are ready to install the component. Before unwrapping the anti-static packaging, ensure that you discharge static electricity from your body.
- Before transporting a static-sensitive component, place it in an anti-static container or packaging.
ESD field service kit

The unmonitored Field Service kit is the most commonly used service kit. Each Field Service kit includes three main components: anti-static mat, wrist strap, and bonding wire.

Components of an ESD field service kit

The components of an ESD field service kit are:

- **Anti-Static Mat** – The anti-static mat is dissipative and parts can be placed on it during service procedures. When using an anti-static mat, your wrist strap should be snug and the bonding wire should be connected to the mat and to any bare metal on the system being worked on. Once deployed properly, service parts can be removed from the ESD bag and placed directly on the mat. ESD-sensitive items are safe in your hand, on the ESD mat, in the system, or inside a bag.

- **Wrist Strap and Bonding Wire** – The wrist strap and bonding wire can be either directly connected between your wrist and bare metal on the hardware if the ESD mat is not required, or connected to the anti-static mat to protect hardware that is temporarily placed on the mat. The physical connection of the wrist strap and bonding wire between your skin, the ESD mat, and the hardware is known as bonding. Use only Field Service kits with a wrist strap, mat, and bonding wire. Never use wireless wrist straps. Always be aware that the internal wires of a wrist strap are prone to damage from normal wear and tear, and must be checked regularly with a wrist strap tester in order to avoid accidental ESD hardware damage. It is recommended to test the wrist strap and bonding wire at least once per week.

- **ESD Wrist Strap Tester** – The wires inside of an ESD strap are prone to damage over time. When using an unmonitored kit, it is a best practice to regularly test the strap prior to each service call, and at a minimum, test once per week. A wrist strap tester is the best method for doing this test. If you do not have your own wrist strap tester, check with your regional office to find out if they have one. To perform the test, plug the wrist-strap's bonding-wire into the tester while it is strapped to your wrist and push the button to test. A green LED is lit if the test is successful; a red LED is lit and an alarm sounds if the test fails.

- **Insulator Elements** – It is critical to keep ESD sensitive devices, such as plastic heat sink casings, away from internal parts that are insulators and often highly charged.

- **Working Environment** – Before deploying the ESD Field Service kit, assess the situation at the customer location. For example, deploying the kit for a server environment is different than for a desktop or portable environment. Servers are typically installed in a rack within a data center; desktops or portables are typically placed on office desks or cubicles. Always look for a large open flat work area that is free of clutter and large enough to deploy the ESD kit with additional space to accommodate the type of system that is being repaired. The workspace should also be free of insulators that can cause an ESD event. On the work area, insulators such as Styrofoam and other plastics should always be moved at least 12 inches or 30 centimeters away from sensitive parts before physically handling any hardware components.

- **ESD Packaging** – All ESD-sensitive devices must be shipped and received in static-safe packaging. Metal, static-shielded bags are preferred. However, you should always return the damaged part using the same ESD bag and packaging that the new part arrived in. The ESD bag should be folded over and taped shut and all the same foam packing material should be used in the original box that the new part arrived in. ESD-sensitive devices should be removed from packaging only at an ESD-protected work surface, and parts should never be placed on top of the ESD bag because only the inside of the bag is shielded. Always place parts in your hand, on the ESD mat, in the system, or inside an anti-static bag.

- **Transporting Sensitive Components** – When transporting ESD sensitive components such as replacement parts or parts to be returned to Dell, it is critical to place these parts in anti-static bags for safe transport.

ESD protection summary

It is recommended that all field service technicians use the traditional wired ESD grounding wrist strap and protective anti-static mat at all times when servicing Dell products. In addition, it is critical that technicians keep sensitive parts separate from all insulator parts while performing service and that they use anti-static bags for transporting sensitive components.

After working inside your computer

About this task

⚠️ **CAUTION:** Leaving stray or loose screws inside your computer may severely damage your computer.

Steps

1. Replace all screws and ensure that no stray screws remain inside your computer.
2. Connect any external devices, peripherals, or cables you removed before working on your computer.
3. Replace any media cards, discs, or any other parts that you removed before working on your computer.
4. Connect your computer and all attached devices to their electrical outlets.
5. Turn on your computer.
Recommended tools

The procedures in this document require the following tools:

- Phillips #0 screwdriver
- Phillips #1 screwdriver
- Plastic scribe—Recommended for field technician

Screw List

The following table shows the screw list and the images for different components.

Table 1. Screw list

Side cover

Removing the side cover

Prerequisites

1. Follow the procedure in before working inside your computer.

**NOTE:** Ensure that you remove the security cable from the security-cable slot (if applicable).
About this task

The following images indicate the location of the side cover and provides a visual representation of the removal procedure.

Steps

1. Slide down on the release latch until you hear a click.
2. Slide the side cover towards the back of the system.
3. Lift the side cover from the system.
Installing the side cover

Prerequisites

About this task

The following image indicates the location of the side panels and provides a visual representation of the installation procedure.
Steps

1. Place the side cover on your computer.
2. Slide the side cover towards the front of the system till you hear the release latch click.

Next steps

1. Follow the procedure in after working inside your computer.

Intrusion switch

Removing the intrusion switch

Prerequisites

1. Follow the procedure in Before working inside your computer.
2. Remove the Side cover

About this task

The following images indicate the location of the intrusion switch and provide a visual representation of the removal procedure.

Steps

1. Disconnect the intrusion switch cable from the connector on the system board.
2. Slide the intrusion switch from the system.

Installing the intrusion switch

Prerequisites
About this task
The following image indicates the location of the intrusion switch and provides a visual representation of the installation procedure.

Steps
1. Slide the intrusion switch into the slot on the chassis.
2. Connect the intrusion switch cable to the connector on the system board.

Next steps
1. Install the Side cover
2. Follow the procedure in After working inside your computer.

Front bezel
Removing the front bezel

Prerequisites
1. Follow the procedure in before working inside your computer.
2. Remove the side cover.

About this task
The following images indicate the location of the front bezel and provide a visual representation of the removal procedure.
Steps
1. Pry the retention tabs to release the front bezel from the system.
2. Remove the front bezel from the system.

Installing the front bezel

Prerequisites

About this task
The following image indicates the location of the front bezel and provides a visual representation of the installation procedure.
Steps
1. Align the bezel and insert the retention tabs on the bezel into the slots on the system.
2. Press the bezel until the retention tabs click into place.

Next steps
1. Install the side cover.
2. Follow the procedure in after working inside your computer.

Hard-drive assembly

Removing the 2.5 in. hard-disk drive assembly

Prerequisites
1. Follow the procedure in before working inside your computer.
2. Remove the side cover.
3. Remove the front bezel.

About this task
The following images indicate the location of the 2.5 in. hard-disk drive assembly and provide a visual representation of the removal procedure.
Steps
1. Disconnect the hard-disk drive data cable and power cable from the connectors on the hard-disk drive.
2. Push the release tab and slightly lift the hard-disk drive assembly.
3. Release the hard-disk drive assembly from the notch and slide the hard-disk drive assembly out.

NOTE: Note the orientation of the hard-disk drive so that you can replace it correctly.

Removing the hard-disk drive bracket

Prerequisites
1. Follow the procedure in before working inside your computer.
2. Remove the side cover.
3. Remove the front bezel.
4. Remove the 2.5 in. hard-disk drive assembly.

About this task
The following images indicate the location of the hard-disk drive bracket and provide a visual representation of the removal procedure.
Steps
1. Pull one side of the hard-disk drive bracket to disengage the pins on the bracket from the slots on the drive and lift the hard-disk drive.
2. Hard-disk drive bracket for the 2.5 in. hard-disk drive.
3. 2.5 in. hard-disk drive.

Installing the hard-disk drive bracket

Prerequisites

About this task
The following image indicates the location of the hard-disk drive bracket and provides a visual representation of the installation procedure.
Steps
1. 2.5 in. hard-disk drive.
2. Hard-disk drive bracket for the 2.5 in. hard-disk drive.
3. Align and insert the pins on the drive bracket with the slots on the hard-disk drive.
4. 2.5 in. hard-disk drive assembly.

Next steps
1. Install the 2.5 in. hard-disk drive assembly.
2. Install the front bezel.
3. Install the side cover.
4. Follow the procedure in after working inside your computer.

Installing the 2.5 in. hard-disk drive assembly

Prerequisites

About this task
The following image indicates the location of the 2.5 in. hard-disk drive and provides a visual representation of the installation procedure.
Steps
1. Insert the hard-disk drive assembly into the slot on the system and slide the hard-disk drive assembly down.
2. Press down the hard-disk drive assembly, until it clicks into place.
3. Connect the power cable and hard-disk drive cable to the connectors on the hard-disk drive.

Next steps
1. Install the front bezel.
2. Install the side cover.
3. Follow the procedure in after working inside your computer.

Hard-drive and optical-drive module

Removing the hard-disk drive and optical-disk drive module

Prerequisites
1. Follow the procedure in Before working inside your computer.
2. Remove the Side cover
3. Remove the Front bezel
About this task

The following images indicate the location of the hard-disk drive and optical-disk drive module and provide a visual representation of the removal procedure.
Disassembly and reassembly
Steps
1. Remove the hard-disk drive power cable and the SATA cable through the recess in the release latch.
2. Unroute the optical-disk drive cable and the hard-disk drive cable from the retention clip on the hard-disk drive and optical-disk drive module.
3. Slide the release latch to unlock the hard-disk drive and optical-disk drive module.
4. Holding the release latch lift the hard-disk drive and optical-disk drive module.
5. Lift the hard-disk drive and optical-disk drive module and slide it out of the slot.
6. Flip the hard-disk drive and optical-disk drive module to disconnect the optical-disk drive data and power cables.

Installing the hard-disk drive and optical-disk drive module

Prerequisites

About this task
The following image indicates the location of the hard-disk drive and optical-disk drive module and provides a visual representation of the installation procedure.
Steps

1. Connect the optical-drive data and power cable to the connectors on the optical-drive and flip the hard-disk drive and optical-disk drive module.
2. Insert the tabs on the hard-disk drive and optical-disk drive module into the slot on the system at an angle.
3. Lower the hard-disk drive and optical-disk drive module into the slot.
4. Slide the release latch to lock the hard-disk drive and optical-disk drive module.
5. Reroute the hard-disk drive power cable and SATA cable through the retention clips on the hard-disk drive and optical-disk drive module.
6. Reroute the hard-disk drive power cable and the SATA cable through the recess on the release tab.

Next steps

1. Install the Front bezel
2. Install the Side cover
3. Follow the procedure in After working inside your computer.
**Optical drive**

**Removing the slim optical-drive**

**Prerequisites**
1. Follow the procedure in *Before working inside your computer*.
2. Remove the *Side cover*.
3. Remove the *Front bezel*.

**About this task**
The following images indicate the location of the slim optical-drive and provide a visual representation of the removal procedure.

![Diagram 1](image1)

![Diagram 2](image2)

![Diagram 3](image3)

![Diagram 4](image4)

**Steps**
1. Press the release tab on the optical-drive/ hard-drive module.
2. Slide the optical-drive out of the optical-drive/ hard-drive module.
3. Optical-drive unit.
Installing the slim optical-drive

Prerequisites

About this task

The following image indicates the location of the slim optical-drive and provides a visual representation of the installation procedure.

Steps

1. Optical drive/ hard drive module.
2. Optical drive unit.
3. Insert the optical drive into the optical drive/ hard drive module.
4. Press the Optical drive unit until it clicks in place.

Next steps

1. Install the Side cover
2. Install the Front bezel
3. Follow the procedure in After working inside your computer.
Solid-state drive

Removing the M.2 2230 PCIe solid-state drive

Prerequisites
1. Follow the procedure in before working inside your computer.
2. Remove the side cover.
3. Remove the front bezel.
4. Remove the 2.5 in. hard drive assembly.

About this task
The following images indicate the location of the solid-state drive and provide a visual representation of the removal procedure.

Steps
1. Remove the screw (M2x3) that secures the solid-state drive to the system board.
2. Slide and lift the solid-state drive off the system board.

Installing the M.2 2230 PCIe solid-state drive

Prerequisites

About this task
The following image indicates the location of the solid-state drive and provides a visual representation of the installation procedure.
Steps
1. Align the notch on the solid-state drive with the tab on the solid-state drive connector.
2. Insert the solid-state drive at a 45-degree angle into the connector on the system board.
3. Replace the screw (M2x3) that secures the M.2 2230 PCIe solid-state drive to the system board.

Next steps
1. Install the 2.5 in. hard drive assembly.
2. Install the front bezel.
3. Install the side cover.
4. Follow the procedure in after working inside your computer.

Removing the M.2 2280 PCIe solid-state drive

Prerequisites
1. Follow the procedure in before working inside your computer.
2. Remove the side cover.
3. Remove the front bezel.
4. Remove the 2.5 in. hard drive assembly.

About this task
The following images indicate the location of the solid-state drive and provide a visual representation of the removal procedure.
Steps
1. Remove the screw (M2x3) that secures the solid-state drive to the system board.
2. Slide and lift the solid-state drive off the system board.

Installing the M.2 2280 PCIe solid-state drive

Prerequisites

About this task
The following image indicates the location of the solid-state drive and provides a visual representation of the installation procedure.
Steps
1. Align the notch on the solid-state drive with the tab on the solid-state drive connector.
2. Insert the solid-state drive at a 45-degree angle into the connector on the system board.
3. Replace the screw (M2x3) that secures the M.2 2280 PCIe solid-state drive to the system board.

Next steps
1. Install the 2.5 in. hard drive assembly.
2. Install the front bezel.
3. Install the side cover.
4. Follow the procedure in after working inside your computer.

WLAN card

Removing the WLAN card

Prerequisites
1. Follow the procedure in before working inside your computer.
2. Remove the side cover.
3. Remove the front bezel.
4. Remove the 2.5 in. hard drive assembly.

About this task
The following images indicate the location of the wireless card and provide a visual representation of the removal procedure.
Steps
1. Remove the (M2x3) screw that secures the WLAN bracket and WLAN card to the system board.
2. Slide and lift the WLAN card bracket away from the WLAN card.
3. Disconnect the antenna cables from the WLAN card.
4. Slide and remove the WLAN card from the connector on the system board.

Installing the WLAN card

Prerequisites

About this task

The following image indicates the location of the wireless card and provides a visual representation of the installation procedure.
Steps

1. Connect the antenna cables to the WLAN card.
   The following table provides the antenna-cable color scheme for the WLAN card of your computer.

   **Table 2. Antenna-cable color scheme**

<table>
<thead>
<tr>
<th>Connectors on the wireless card</th>
<th>Antenna-cable color</th>
</tr>
</thead>
<tbody>
<tr>
<td>Main (white triangle)</td>
<td>White</td>
</tr>
<tr>
<td>Auxiliary (black triangle)</td>
<td>Black</td>
</tr>
</tbody>
</table>

2. Place the WLAN card bracket to secure the antenna cables.
3. Align the notch on the WLAN card with the tab on the WLAN-card slot and insert it into the connector on the system board.
4. Replace the (M2x3) screw to secure the WLAN card bracket and WLAN card to the system board.

Next steps

1. Install the 2.5 in. hard drive assembly.
2. Install the front bezel.
3. Install the side cover.
4. Follow the procedure in after working inside your computer.
SD card reader - optional

Removing the SD card reader

Prerequisites
1. Follow the procedure in Before working inside your computer.
2. Remove the Side cover

About this task
The following images indicate the location of the graphics card and provide a visual representation of the removal procedure.

Steps
1. Unroute the power supply cables from the retention clip on the SD card reader.
2. Remove the two screws (M6x32) and lift the SD card reader from the chassis.

Installing the SD card reader

Prerequisites

About this task
The following image indicates the location of the SD card reader and provides a visual representation of the installation procedure.
Steps

1. Align the SD card reader with the screw holes on the system board and replace the two screws (M6X32).
2. Route the power supply cables through the retention clip on the SD card reader.

Next steps

1. Install the Side cover
2. Follow the procedure in After working inside your computer.

Expansion card

Removing the expansion card

Prerequisites

1. Follow the procedure in Before working inside your computer.
2. Remove the Side cover

About this task

The following images indicate the location of the expansion card and provide a visual representation of the removal procedure.
Steps
1. Pull the metal tab to open the expansion card latch.
2. Pull the release tab at the base of the expansion card.
3. Lift the expansion card away from the connector on the system board.

Installing the expansion card

Prerequisites

About this task
The following image indicates the location of the expansion card and provides a visual representation of the installation procedure.
Steps
1. Align the notch on the expansion card with the connector on the system board.
2. Place the card in the connector and press down firmly. Ensure that the card is firmly seated.
3. Close the expansion card latch and press it until it clicks into place.

Next steps
1. Install the Side cover
2. Follow the procedure in After working inside your computer.

Memory modules

Removing the memory modules

Prerequisites
1. Follow the procedure in before working inside your computer.
2. Remove the side cover.
3. Remove the front bezel.
4. Remove the 2.5 in. hard drive assembly.

**CAUTION:** To prevent damage to the memory module, hold the memory module by the edges. Do not touch the components on the memory module.

**About this task**
The following images indicate the location of the memory modules and provide a visual representation of the removal procedure.

### Steps
1. Pull the securing clips from the memory module until the memory module pops up.
2. Remove the memory module from the memory-module slot.

### Installing the memory modules

**Prerequisites**

**About this task**
The following image indicates the location of the memory modules and provides a visual representation of the installation procedure.
Steps
1. Align the notch on the memory module with the tab on the memory-module slot.
2. Slide the memory module firmly into the slot at an angle and press the memory module down until it clicks into place.
   - **NOTE:** If you do not hear the click, remove the memory module and reinstall it.

Next steps
1. Install the 2.5 in. hard drive assembly.
2. Install the front bezel.
3. Install the side cover.
4. Follow the procedure in after working inside your computer.

Heat sink

Removing the heat-sink

Prerequisites
1. Follow the procedure in before working inside your computer.
2. Remove the side cover.
3. Remove the front bezel.

About this task
The following images indicate the location of the heat-sink and provide a visual representation of the removal procedure.
Steps
1. Disconnect the fan cable from the connector on the system board.
2. Loosen the four captive screws that secure the heat sink to the system.
   
   **NOTE:** Loosen the screws in a sequential order (1, 2, 3, 4) as mentioned on the system board.
3. Lift the heat-sink from the system board.

Installing the heat-sink

Prerequisites

About this task
The following image indicates the location of the VR heat sink and provides a visual representation of the installation procedure.
Steps
1. Place the heat sink on the processor.
2. Tighten the four captive screws that secure the heat-sink to the system board, as per the callout on the system board.
   
   _NOTE:_ Tighten the screws in a sequential order (1,2,3,4) as mentioned on the system board.
3. Connect the heat sink fan cable to the system board.

Next steps
1. Install the front bezel.
2. Install the side cover.
3. Follow the procedure in after working inside your computer.

Coin-cell battery

Removing the coin-cell battery

Prerequisites
1. Follow the procedure in before working inside your computer.
2. Remove the side cover.
3. Remove the front bezel.

About this task
The following images indicate the location of the coin-cell battery and provide a visual representation of the removal procedure.
Steps
1. Using a plastic scribe, gently pry the coin-cell battery out of the battery socket.
2. Remove the coin-cell battery out of the system.

Installing the coin-cell battery

Prerequisites

About this task
The following image indicates the location of the coin-cell battery and provides a visual representation of the installation procedure.
Steps
1. Insert the coin cell battery with the "+" sign facing up and slide it into the battery socket at an angle.
2. Press the battery into the connector until it clicks into place.

Next steps
1. Install the front bezel.
2. Install the side cover.
3. Follow the procedure in after working inside your computer.

Processor

Removing the processor

Prerequisites
1. Follow the procedure in before working inside your computer.
2. Remove the side cover.
3. Remove the front bezel.
4. Remove the heat-sink.

About this task

NOTE: The processor might still be hot after the computer is shut down. Allow the processor to cool down before removing it.

The following images indicate the location of the processor and provide a visual representation of the removal procedure.
Steps
1. Press down and push the release lever away from the processor to release it from the securing tab.
2. Lift the lever upward to lift the processor cover.

⚠️ **CAUTION:** When removing the processor, do not touch any of the pins inside the socket or allow any objects to fall on the pins in the socket.

3. Gently lift the processor from the processor socket.

### Installing the processor

#### Prerequisites

#### About this task

The following image indicates the location of the processor and provides a visual representation of the installation procedure.
Steps
1. Align the pin-1 corner of the processor with the pin 1 corner of the processor socket, and then place the processor in the processor socket.

   **NOTE:** The pin-1 corner of the processor has a triangle that aligns with the triangle on the pin-1 corner on the processor socket. When the processor is properly seated, all four corners are aligned at the same height. If one or more corners of the processor are higher than the others, the processor is not seated properly.

2. When the processor is fully seated in the socket, close the processor cover.
3. Press down and push the release lever under the securing tab to lock it.

Next steps
1. Install the heat-sink.
2. Install the front bezel.
3. Install the side cover.
4. Follow the procedure in after working inside your computer.
Power switch

Removing the power switch

Prerequisites
1. Follow the procedure in before working inside your computer.
2. Remove the side cover.
3. Remove the front bezel.
4. Remove the Hard drive and optical drive module

About this task
The following images indicate the location of the heat-sink and provide a visual representation of the removal procedure.

Steps
1. Disconnect the power switch cable from the system board.
2. Press the power switch retention tabs and pull the power switch out from the system.

Installing the power switch

Prerequisites

About this task
The following image indicates the location of the VR heat sink and provides a visual representation of the installation procedure.

Steps
1. Slide the power switch module into the slot on the chassis until it clicks into place.
2. Connect the power switch cable to the connector on the system board.

Next steps
1. Install the Hard drive and optical drive module
2. Install the front bezel.
3. Install the side cover.
4. Follow the procedure in after working inside your computer.

Power-supply unit

Removing the power-supply unit

Prerequisites
1. Follow the procedure in Before working inside your computer.
2. Remove the Side cover
3. Remove the Front bezel
4. Remove the Hard drive and optical drive module

About this task
The following images indicate the location of the power-supply unit and provide a visual representation of the removal procedure.
Steps
1. Remove the SATA cables from the retention clip on the support bracket.
2. Remove the two screws (M6x32) and slide the support bracket out from the slot.
3. Remove the power-supply cable from the retention clip on the chassis.
4. Remove the three screws (M6x32) that secure the power-supply unit to the back of the chassis.
5. Press the power-supply unit release latch and slide the unit into the chassis.
6. Remove the power-supply unit out of the chassis.

Installing the power-supply unit

Prerequisites

About this task
The following image indicates the location of the power-supply unit and provides a visual representation of the installation procedure.
Disassembly and reassembly
Steps
1. Align and place the power-supply unit into the slot on the chassis.
2. Slide the power-supply unit into the slot until it clicks in place.
3. Replace the three screws (M6x32) to secure the power-supply unit to the chassis.
4. Insert the power-supply cables through retention clips and connect it to the connectors on the system board.
5. Place the support bracket into the slot and secure it with the two screws (M6x32).
6. Insert the SATA cables through the retention clip on the support bracket.

Next steps
1. Install the Hard drive and optical drive module
2. Install the Front bezel
3. Install the Side cover
4. Follow the procedure in After working inside your computer.

System fan

Removing the system fan

Prerequisites
1. Follow the procedure in before working inside your computer.
2. Remove the side cover.
3. Remove the front bezel.
4. Remove the Hard drive and optical drive module

About this task
The following images indicate the location of the heat-sink and provide a visual representation of the removal procedure.

Steps
1. Disconnect the fan cable from the connector on the system board.
2. Slide the fan grommets towards the slot on the back of the fan chassis.
3. Lift the system fan from the system.

Installing the system fan

Prerequisites

About this task
The following image indicates the location of the VR heat sink and provides a visual representation of the installation procedure.

Steps
1. Align and place the system fan in the system chassis.
2. Pass the grommets through the chassis and slide outward along the groove to secure it in place.
3. Connect the system fan cable to the system board.

Next steps
1. Install the Hard drive and optical drive module
2. Install the front bezel.
3. Install the Side cover.
4. Follow the procedure in after working inside your computer.
System board

Removing the system board

Prerequisites
1. Follow the procedure in before working inside your computer.
2. Remove the side cover.
3. Remove the front bezel.
4. Remove the hard drive assembly.
5. Remove the solid-state drive.
6. Remove the WLAN card.
7. Remove the heat-sink.
8. Remove the memory modules.
9. Remove the processor.

About this task
The following images indicate the location of the system board and provide a visual representation of the removal procedure.
Steps
1. Remove the screw (6-32) that secures the I/O panel to the system chassis.
2. Lift the I/O panel away from the system chassis.
3. Disconnect the intrusion switch cable from the connector on the system board.
4. Disconnect the system board power supply cables.
5. Disconnect the power button switch cable from the connector on the system board.
6. Disconnect the system fan cable to the connector on the system board.
7. Disconnect the processor power supply cable from the connector on the system board.
8. Disconnect the SATA cables from the connector on the system board.
9. Disconnect the SATA power cable from the connector on the system board.
10. Remove the four Screws (6-32) and the single standoff screw (M2X4) that secure the system board.
11. Lift the system board at an angle and slide it out of the system chassis.

Installing the system board

Prerequisites

About this task
The following image indicates the location of the system board and provides a visual representation of the installation procedure.
Steps

1. Align and lower the system board into the system until the connectors at the back of the system board align with the slots on the chassis, and the screw holes on the system board align with the standoffs on the system.
2. Replace the four screws (6-32) and the single standoff screw (M2x4) screw to secure the system board to the chassis.
3. Align and lower the I/O panel into the slot on the system chassis.
4. Replace the screws (6-32) to secure the I/O panel to the system chassis.
5. Reconnect the intrusion switch cable to the connector on the system board.
6. Reconnect the system board power supply cables to the connector on the system board.
7. Reconnect the power button switch cable to the connector on the system board.
8. Reconnect the system fan cable to the connector on the system board.
9. Reconnect the processor power supply cable to the connector on the system board.
10. Reconnect the SATA cables to the connectors on the system board.
11. Reconnect the SATA power cable to the connector on the system board.
12. Reconnect the internal speaker cables to the connector on the system board.

Next steps

1. Install the processor.
2. Install the memory modules.
3. Install the heat-sink.
4. Install the WLAN card.
5. Install the solid-state drive.
6. Install the hard drive assembly.
7. Install the front bezel.
8. Install the side cover.
9. Follow the procedure in after working inside your computer.
System setup enables you to manage your desktop hardware and specify BIOS level options. From the System setup, you can:

- Change the NVRAM settings after you add or remove hardware
- View the system hardware configuration
- Enable or disable integrated devices
- Set performance and power management thresholds
- Manage your computer security

Topics:

- Accessing System Setup
- Navigation Keys
- General screen options
- System Configuration screen options
- Security screen options
- Video screen options
- Secure Boot screen options
- Intel Software Guard Extensions screen options
- Performance screen options
- Power Management screen options
- POST Behavior screen options
- Virtualization support screen options
- Wireless screen options
- Advanced configuration options
- Maintenance screen options
- System Log screen options
- SupportAssist System Resolution
- Updating the BIOS in Windows
- Updating your system BIOS using a USB flash drive
- System and setup password

Accessing System Setup

Steps

1. Turn on (or restart) your computer.
2. After the white Dell logo appears, press F2 immediately.

The System Setup page is displayed.

NOTE: If you wait too long and the operating system logo appears, wait until you see the desktop. Then, shut down or restart your computer and try again.

NOTE: After the Dell logo appears, you can also press F12 and then select BIOS setup.

Navigation Keys

The following table displays the system setup navigation keys.

NOTE: For most of the system setup options, changes that you make are recorded but do not take effect until you re-start the system.
Table 3. Navigation Keys

<table>
<thead>
<tr>
<th>Keys</th>
<th>Navigation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Up arrow</td>
<td>Moves to the previous field.</td>
</tr>
<tr>
<td>Down arrow</td>
<td>Moves to the next field.</td>
</tr>
<tr>
<td>&lt;Enter&gt;</td>
<td>Allows you to select a value in the selected field (if applicable) or follow the link in the field.</td>
</tr>
<tr>
<td>Spacebar</td>
<td>Expands or collapses a drop-down list, if applicable.</td>
</tr>
<tr>
<td>&lt;Tab&gt;</td>
<td>Moves to the next focus area.</td>
</tr>
<tr>
<td>&lt;Esc&gt;</td>
<td>Moves to the previous page till you view the main screen. Pressing &lt;Esc&gt; in the main screen displays a message that prompts you to save any unsaved changes and restarts the system.</td>

## Security screen options

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
</table>
| **Admin Password** | Allows you to set, change, or delete the administrator (admin) password.  
|                | **NOTE:** You must set the admin password before you set the system or hard drive password.  
|                | Deleting the admin password automatically deletes the system password and the hard drive password.  
|                | **NOTE:** Successful password changes take effect immediately.  
|                | Default setting: Not set                                                                          |
| **System Password** | Allows you to set, change, or delete the system password.  
|                | **NOTE:** Successful password changes take effect immediately.  
|                | Default setting: Not set                                                                          |
| **Internal HDD-0 Password** | Allows you to set, change, or delete the password on the system's internal hard-disk drive.  
|                | **NOTE:** Successful password changes take effect immediately.  
|                | Default Setting: Not set                                                                          |
| **Internal HDD-1 Password** | Allows you to set, change, or delete the password on the system's internal hard-disk drive.  
|                | **NOTE:** Successful password changes take effect immediately.  
|                | Default Setting: Not set                                                                          |
| **Internal HDD-3 Password** | Allows you to set, change, or delete the password on the system's internal hard-disk drive.  
|                | **NOTE:** Successful password changes take effect immediately.  
|                | Default Setting: Not set                                                                          |
| **Password Change** | Allows you to enable the disable permission to the System and Hard Drive passwords when the admin password is set.  
|                | Default setting: Allow Non-Admin Password Changes is selected.                                    |
| **UEFI Capsule Firmware Update** | This option controls whether the system allows the BIOS updates through UEFI capsule update packages. This option is enabled by default. |
| **TPM 2.0 Security** | Allows you to enable the Trusted Platform Module (TPM) during POST. The options are:  
|                | - TPM On (enabled by default)  
|                | - Clear  
|                | - PPI Bypass for Enabled Commands  
|                | - PPI Bypass for Disabled Commands  
|                | - PPI Bypass for Clear Command  
|                | - Attestation Enable (enabled by default)  
|                | - Key Storage Enable (enabled by default)  
|                | - SHA-256 (enabled by default)  
|                | - Disabled  
|                | - Enabled (enabled by default)                                                                    |
| **PTT Security** | Allows you to enable the Platform Trust Technology feature (PTT). The option is:  
|                | - PTT On (not enabled)                                                                            |
| **Absolute(R)** | Allows you to activate or disable the optional Computrace software. The options are:  
|                | - Deactivate  
|                | - Disable  
|                | - Permanently Disabled                                                                           |
**Option** | **Description**
--- | ---
NOTE: The Activate and Disable options will permanently activate or disable the feature and no further changes are allowed
Default setting: Deactivate

**Master Password Lockout**
The option Enable Master Password Lockout is not selected by default.

**SMM Security Mitigation**
Allows you to enable or disable the additional UEFI SMM Security Mitigation protections.
Default Setting: SMM Security Mitigation is not selected.

---

### Video screen options

**Option** | **Description**
--- | ---
Multi-Display
This option enables or disables Multi-Display. It should be enabled for Windows 7 or later. This feature is not applicable to other operating systems.
- Enable Multi-Display: This option is enabled by default.

Primary Display
This option determines which video controller becomes the primary display when multiple controllers are available in the system
- Auto: This option is enabled by default.
- Intel HD Graphics
- NVIDIA HD Graphics

---

### Secure Boot screen options

**Option** | **Description**
--- | ---
Secure Boot Enable
This option enables or disables the Secure Boot feature.
Default setting: Not selected

Secure Boot Mode
- Deployed Mode (default)
- Audit Mode

Expert Key Management
Allows you to manipulate the security key databases only if the system is in Custom Mode. The Enable Custom Mode option is disabled by default. The options are:
- PK (default)
- KEK
- db
- dbx

If you enable the Custom Mode, the relevant options for PK, KEK, db, and dbx appear. The options are:
- Save to File—Saves the key to a user-selected file.
- Replace from File—Replaces the current key with a key from a user-selected file.
- Append from File—Adds a key to the current database from a user-selected file
- Delete—Deletes the selected key
- Reset All Keys—Resets to default setting
- Delete All Keys—Deletes all the keys

NOTE: If you disable the Custom Mode, all the changes made are erased and the keys restore to default settings.
## Intel Software Guard Extensions screen options

Updating the BIOS in Windows

Prerequisites
It is recommended to update your BIOS (System Setup) when you replace the system board or if an update is available.

About this task

NOTE: If BitLocker is enabled, it must be suspended prior to updating the system BIOS, and then re enabled after the BIOS update is completed.

Steps
1. Restart the computer.
2. Go to Dell.com/support.
   • Enter the Service Tag or Express Service Code and click Submit.
   • Click Detect Product and follow the instructions on screen.
3. If you are unable to detect or find the Service Tag, click Choose from all products.
4. Choose the Products category from the list.
   **NOTE:** Choose the appropriate category to reach the product page.
5. Select your computer model and the Product Support page of your computer appears.
6. Click Get drivers and click Drivers and Downloads.
   The Drivers and Downloads section opens.
7. Click Find it myself.
8. Click BIOS to view the BIOS versions.
9. Identify the latest BIOS file and click Download.
10. Select your preferred download method in the Please select your download method below window, click Download File.
    The File Download window appears.
11. Click Save to save the file on your computer.
12. Click Run to install the updated BIOS settings on your computer.
    Follow the instructions on the screen.

Updating your system BIOS using a USB flash drive

About this task
If the system cannot load into Windows, but there is still a need to update the BIOS, download the BIOS file using another system and save it to a bootable USB Flash Drive.

**NOTE:** You will need to use a bootable USB flash drive. Please refer to the following article for further details How to Create a Bootable USB Flash Drive using Dell Diagnostic Deployment Package (DDDP)
Steps
1. Download the BIOS update .EXE file to another system.
2. Copy the file e.g. O9010A12.EXE onto the bootable USB flash drive.
3. Insert the USB flash drive into the system that requires the BIOS update.
4. Restart the system and press F12 when the Dell splash logo appears to display the One Time Boot Menu.
5. Using arrow keys, select USB Storage Device and click Enter.
6. The system will boot to a Diag C:\> prompt.
7. Run the file by typing the full filename, for example, O9010A12.exe and press Enter.
8. The BIOS Update Utility will load. Follow the instructions on screen.

System and setup password

Table 4. System and setup password

<table>
<thead>
<tr>
<th>Password type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>System password</td>
<td>Password that you must enter to log on to your system.</td>
</tr>
<tr>
<td>Setup password</td>
<td>Password that you must enter to access and make changes to the BIOS settings of your computer.</td>
</tr>
</tbody>
</table>

You can create a system password and a setup password to secure your computer.

⚠️ **CAUTION:** The password features provide a basic level of security for the data on your computer.

⚠️ **CAUTION:** Anyone can access the data stored on your computer if it is not locked and left unattended.

⚠️ **NOTE:** System and setup password feature is disabled.

Assigning a system setup password

**Prerequisites**
You can assign a new System or Admin Password only when the status is in Not Set.
About this task
To enter the system setup, press F2 immediately after a power-on or reboot.

Steps
1. In the System BIOS or System Setup screen, select Security and press Enter. The Security screen is displayed.
2. Select System/Admin Password and create a password in the Enter the new password field. Use the following guidelines to assign the system password:
   - A password can have up to 32 characters.
   - The password can contain the numbers 0 through 9.
   - Only lower case letters are valid, upper case letters are not allowed.
   - Only the following special characters are allowed: space, ("), (+), (,), (-), (.), (/), (;), ([), (]), (`).
3. Type the system password that you entered earlier in the Confirm new password field and click OK.
4. Press Esc and a message prompts you to save the changes.
5. Press Y to save the changes.
   The computer reboots.

Deleting or changing an existing system setup password

Prerequisites
Ensure that the Password Status is Unlocked (in the System Setup) before attempting to delete or change the existing System and Setup password. You cannot delete or change an existing System or Setup password, if the Password Status is Locked.

About this task
To enter the System Setup, press F2 immediately after a power-on or reboot.

Steps
1. In the System BIOS or System Setup screen, select System Security and press Enter. The System Security screen is displayed.
2. In the System Security screen, verify that Password Status is Unlocked.
3. Select System Password, alter or delete the existing system password and press Enter or Tab.
4. Select Setup Password, alter or delete the existing setup password and press Enter or Tab.

   **NOTE:** If you change the System and/or Setup password, re enter the new password when prompted. If you delete the System and Setup password, confirm the deletion when prompted.
5. Press Esc and a message prompts you to save the changes.
6. Press Y to save the changes and exit from System Setup.
   The computer restarts.
System diagnostic lights

Power-supply diagnostics light
Indicates the power-supply state.

Hard-drive activity light
Turns on when the computer reads from or writes to the hard drive.

WiFi power cycle

About this task
If your computer is unable to access the internet due to WiFi connectivity issues a WiFi power cycle procedure may be performed. The following procedure provides the instructions on how to conduct a WiFi power cycle:

NOTE: Some ISPs (Internet Service Providers) provide a modem/router combo device.

Steps
1. Turn off your computer.
2. Turn off the modem.
3. Turn off the wireless router.
4. Wait for 30 seconds.
5. Turn on the wireless router.
6. Turn on the modem.
7. Turn on your computer.
Topics:

- Contacting Dell

Contacting Dell

Prerequisites

**NOTE:** If you do not have an active Internet connection, you can find contact information on your purchase invoice, packing slip, bill, or Dell product catalog.

About this task

Dell provides several online and telephone-based support and service options. Availability varies by country and product, and some services may not be available in your area. To contact Dell for sales, technical support, or customer service issues:

Steps

1. Go to [Dell.com/support](http://Dell.com/support).
2. Select your support category.
3. Verify your country or region in the **Choose a Country/Region** drop-down list at the bottom of the page.
4. Select the appropriate service or support link based on your need.
