| VSWP-86, VSWP-87, VSWP-97, VSWP-231 | You cannot access NSX Manager console if vSphere Web Client Plugin and NSX are registered in the same vCenter virtual appliance. **Workaround:**  
  • Deploy NSX Plugin first, and then register Dell Storage vSphere Web Client Plugin  
  • Unregister vSphere Web Client Plugin, and then restart vCenter to access the NSX Manager console. |
| VSWP-112          | Runtime Fault summary error may occur when creating a datastore, mapping an existing volume, recovering VM data from a Snapshot, or enabling Live volume high consistency for a datastore. **Workaround:** Reinitiate the respective operations. |
| VSWP-169          | When creating a Snapshot schedule for a datastore, if the time is set to 12:00 AM or 12:00 PM, it will appear as 12:00 PM or 12:00 AM respectively. **Workaround:** Set the scheduled time for something other than 12:00, such as 12:01 AM or 12:01 PM. If the schedule must run at 12:00, use Dell Storage Manager to set the Snapshot schedule. |
| VSWP-199          | After renaming an NFS datastore it can no longer be managed in the vSphere Client. **Workaround:** Restore it to the original name of the datastore. |
| VSWP-217          | Compression and QoS options can be selected in the vSphere Client even though the profile selections are disabled in Dell Storage Manager. |
| VSWP-231          | When the host on which a NAS datastore is created is moved from one vSphere Client to a different vSphere Client, the NAS datastore may no longer appear in the Remove Datastore dialog box or in the Monitor> Dell Storage view. **Workaround:** Use Unmount Datastore to remove NAS datastores from VSWP. |
