SupportAssist Enterprise Version 1.2
User's Guide
Notes, cautions, and warnings

NOTE: A NOTE indicates important information that helps you make better use of your product.

CAUTION: A CAUTION indicates either potential damage to hardware or loss of data and tells you how to avoid the problem.

WARNING: A WARNING indicates a potential for property damage, personal injury, or death.
# Overview
- What is new in this release
- Overview of supported device types
- How SupportAssist Enterprise works
- SupportAssist Enterprise capabilities available with Dell service contracts
- System information collected by SupportAssist Enterprise

# Getting started with SupportAssist Enterprise
- Setting up SupportAssist Enterprise for the local system
- Setting up SupportAssist Enterprise for remote devices
- Evaluating SupportAssist Enterprise
  - Evaluating the monitoring capability
  - Evaluating the system information collection capability
- Downloading the SupportAssist Enterprise installation package
- Installing, Upgrading, or Migrating to SupportAssist Enterprise
- Minimum requirements for installing and using SupportAssist Enterprise
  - Hardware requirements
  - Software requirements
  - Network requirements
- Installing SupportAssist Enterprise
  - Operating system considerations for installing SupportAssist Enterprise
- Installing SupportAssist Enterprise by using the SupportAssist Enterprise installer package
- Installing SupportAssist Enterprise by using the OpenManage Essentials installation package
- Upgrading SupportAssist Enterprise
  - Upgrading SupportAssist Enterprise by using the SupportAssist Enterprise installation package
  - Upgrading SupportAssist Enterprise by using the OpenManage Essentials installer package
- Migrating to SupportAssist Enterprise
  - Migrating to SupportAssist Enterprise by using the SupportAssist Enterprise installer package
  - Migrating to SupportAssist Enterprise by using the OpenManage Essentials installer package
- Using SupportAssist Enterprise without registration
- Registering SupportAssist Enterprise
- Setting up an SELinux enabled system to receive alerts
- Opening the SupportAssist Enterprise user interface
- Logging in to SupportAssist Enterprise
- Logging out of SupportAssist Enterprise

# Adding devices
- Methods of adding devices
- Device types and applicable devices
- Adding a single device
- Adding a server or hypervisor
- Adding an iDRAC

SupportAssist Enterprise is an application that automates technical support for your Dell server, storage, and networking devices. SupportAssist Enterprise monitors your devices and proactively detects hardware issues that may occur. When a hardware issue is detected, SupportAssist Enterprise automatically opens a support case with Technical Support and sends you an email notification. SupportAssist Enterprise automatically collects the system state information required for troubleshooting the issue and sends it securely to Dell. The collected system information helps Technical Support to provide you an enhanced, personalized, and efficient support experience. SupportAssist Enterprise capability also includes a proactive response from Technical Support to help you resolve the issue.

Additionally, SupportAssist Enterprise can monitor hardware issues that may occur on devices that you are managing by using OpenManage Essentials, Microsoft System Center Operations Manager (SCOM), or OpenManage Enterprise – Tech Release.

This document provides information about installing and setting up SupportAssist Enterprise to:

- Monitor devices for hardware issues
- Automatically create a support case when an issue is detected
- Collect and send system information from your devices periodically and as needed

**NOTE:** In this document, the term *local system* refers to the server where SupportAssist Enterprise is installed; *remote device* refers to any other device in your environment.

**Topics:**

- What is new in this release
- Overview of supported device types
- How SupportAssist Enterprise works
- SupportAssist Enterprise capabilities available with Dell service contracts
- System information collected by SupportAssist Enterprise

**Related links**

- System information collected by SupportAssist Enterprise

**What is new in this release**

- Create discovery rules to discover and add devices based on IP address ranges
- Assign devices to Remote Collectors by using hostname expressions
- Extension of support for setting up Remote Collectors on Linux operating systems
- Enter dispatch preferences and shipping information to expedite the dispatch of a replacement hardware component
- Discover a device and its other associated device types through deep discovery
- Set up an adapter to inventory devices that are managed by OpenManage Enterprise – Tech Release
- Automatic case creation for the Storage MD Series arrays
- Association view that displays a device and its associated device types as a group
- Access the TechDirect portal from SupportAssist Enterprise
- Extension of support for adding servers that are discovered out-of-band in Microsoft System Center Operations Manager through the Dell WS-Man out-of-band management pack
- Extension of support for collections from controllers that are configured in pass through mode
Overview of supported device types

SupportAssist Enterprise is compatible with Dell server, storage, and networking devices. The following is an overview of the device types that are compatible with SupportAssist Enterprise.

- **Servers**
  - 9th and later generations of PowerEdge servers
  - PowerEdge C Series servers
  - Datacenter Scalable Solutions
  - Storage NX devices
  - Storage DL devices
  - OEM-ready servers

- **Storage**
  - Storage PS Series arrays (previously EqualLogic)
  - Storage MD Series arrays (previously PowerVault)
  - Storage SC Series arrays (previously Compellent)
  - Fluid File System (FluidFS) Network attached storage (NAS) devices
  - OEM-ready storage devices

- **Networking**
  - PowerConnect switches
  - Force10 switches
  - Networking switches
  - Networking X-Series switches
  - Networking Wireless Controllers Mobility Series

- **Chassis**
  - PowerEdge FX2/FX2s
  - PowerEdge VRTX
  - PowerEdge M1000e

- **Software**
  - HIT Kit / VSM for VMware
SAN HQ
– vCenter
– SCVMM

- Solution
  – XC Series of Web-scale Hyper-converged appliances

**NOTE:** You can also add non-Dell branded servers in SupportAssist Enterprise. For such servers, only collection of host information is supported.

**Related links**
- Identifying the generation of a Dell PowerEdge server

## How SupportAssist Enterprise works

When SupportAssist Enterprise is setup and the devices to be monitored are configured correctly, SupportAssist Enterprise receives an alert whenever a hardware event occurs on any monitored device. The received alerts are filtered by using various policies to determine if the alerts qualify for creating a new support case or for updating an existing support case. All qualifying alerts are sent securely to the SupportAssist server hosted by Dell, for creating a new support case or for updating an existing support case. After the support case is created or updated, SupportAssist Enterprise collects system information from the device that generated the alert and sends the information securely to Dell. The system information is used by Technical Support to troubleshoot the issue and provide an appropriate solution.

You can also use SupportAssist Enterprise to only collect and send system information from your devices to Dell. By default, SupportAssist Enterprise automatically collects and sends system information from your devices at periodic intervals and on case creation. If required, you can also manually start the collection and upload of system information to Dell.

**NOTE:** To experience the automatic case creation and system information collection capabilities of SupportAssist Enterprise, you must complete the registration. Without registration, you can only use SupportAssist Enterprise to manually start the collection and upload of system information from your devices to Dell. For more information about the restrictions that apply when using SupportAssist Enterprise without registration, see Using SupportAssist Enterprise without registration.

**NOTE:** SupportAssist Enterprise does not create a support case for every alert received from a monitored device. A support case is created only for a device that has an active service contract, and if the alert type and number of alerts received from the device match with the predefined criteria for support case creation.

**NOTE:** SupportAssist Enterprise sends you automatic email notifications about support cases, device status, network connectivity status, and so on. For information about the various email notifications, see Types of email notifications.

## SupportAssist Enterprise capabilities available with Dell service contracts

The following table provides a comparison of the SupportAssist Enterprise capabilities available with the ProSupport, ProSupport Plus, ProSupport Flex for Data Center, or ProSupport One for Data Center service contracts.

**NOTE:** Completing the registration is a prerequisite to receive the full benefits of SupportAssist Enterprise for your Dell devices. For information on registering SupportAssist Enterprise, see Registering SupportAssist Enterprise.

</tr>
</tbody>
</table>

**NOTE:** SupportAssist Enterprise also detects hardware issues in devices with a Dell Basic Hardware service contract. However, a support case is not created automatically for devices with a Basic Hardware service contract.

* Predictive detection of hardware failures is applicable only for the batteries, hard drives, backplanes, and expanders of 12th and later generation of PowerEdge servers that have PowerEdge RAID Controller (PERC) Series 5 to 9. Predictive detection of hardware failures is available only when the automated periodic collection and upload of system information is enabled in SupportAssist Enterprise.
System information collected by SupportAssist Enterprise

SupportAssist Enterprise continually monitors the configuration information and usage information of managed Dell hardware and software. While Dell does not anticipate accessing or collecting personal information, such as your personal files, web-browsing history, or cookies in connection with this program, any personal system information inadvertently collected or viewed will be treated in accordance with the Dell Privacy Policy available for review at Dell.com/privacy.

The information encrypted in the collected system information log that is sent to Dell contains the following categories of data:

- **Hardware and software inventory** — Installed devices, processors, memory, network devices, usage, and Service Tag
- **Software configuration for servers** — Operating system and installed applications
- **Configuration information** — Interfaces, VLAN, Data Center Bridging (DCB), spanning tree, and stacking
- **Identity information** — System name, domain name, and IP address
- **Event data** — Windows event logs, core dump, and debug logs

You can also access and view the system information collected by SupportAssist Enterprise. For information on viewing the collected system information, see Viewing the collected system information.

By default, SupportAssist Enterprise collects system information from all devices, irrespective of the service contract of the devices, and sends the system information securely to Dell. System information is collected from one device at a time based on the predefined collection start day and time specified in the Preferences page.

**NOTE:** If the security policy of your company restricts sending some of the collected system information outside of your company network, you can configure SupportAssist Enterprise to exclude the collection of certain system information from your devices. For information on excluding the collection of certain system information, see Enabling or disabling the collection of identity information and Enabling or disabling the collection of software information and the system log.
Getting started with SupportAssist Enterprise

SupportAssist Enterprise automates technical support from Dell for your Dell devices. Depending on your requirement, you can install and set up SupportAssist Enterprise to automate technical support for one or more of your devices.

Topics:

• Setting up SupportAssist Enterprise for the local system
• Setting up SupportAssist Enterprise for remote devices
• Evaluating SupportAssist Enterprise
• Downloading the SupportAssist Enterprise installation package
• Installing, Upgrading, or Migrating to SupportAssist Enterprise
• Minimum requirements for installing and using SupportAssist Enterprise
• Installing SupportAssist Enterprise
• Upgrading SupportAssist Enterprise
• Migrating to SupportAssist Enterprise
• Using SupportAssist Enterprise without registration
• Registering SupportAssist Enterprise
• Setting up an SELinux enabled system to receive alerts
• Opening the SupportAssist Enterprise user interface
• Logging in to SupportAssist Enterprise
• Logging out of SupportAssist Enterprise

Setting up SupportAssist Enterprise for the local system

Installing SupportAssist Enterprise enables you to start the collection and upload of system information from the local system (server where SupportAssist Enterprise is installed). To allow SupportAssist Enterprise to monitor the local system for hardware issues, you must complete the registration and perform additional tasks.

To set up SupportAssist Enterprise for the local system:

1. Download the SupportAssist Enterprise installation package. See Downloading the SupportAssist Enterprise installation package.
2. Review the requirements for installing SupportAssist Enterprise. See Minimum requirements for installing and using SupportAssist Enterprise.
4. (Optional) Complete the registration of SupportAssist Enterprise. See Registering SupportAssist Enterprise.

⚠️ CAUTION: Completing the registration is a prerequisite to receive the full benefits of SupportAssist Enterprise. Without registration, you can only use SupportAssist Enterprise to manually start the collection of system information from your devices. Until registration is completed, SupportAssist Enterprise can neither monitor your devices for hardware issues nor automatically collect system information.

5. Perform the following if you want SupportAssist Enterprise to monitor the local system for hardware issues:
   a. Install or upgrade OpenManage Server Administrator (OMSA) on the local system. See Installing or upgrading OMSA by using SupportAssist Enterprise.
   b. Configure the SNMP settings of the local system. See Configuring SNMP settings by using SupportAssist Enterprise.
Enable SupportAssist Enterprise to monitor hardware issues that may occur on the local system. See Enabling or disabling monitoring of a device.

(Optional) Update the contact information to include a secondary SupportAssist Enterprise contact and a parts dispatch address. See Viewing and updating the contact information.

Setting up SupportAssist Enterprise for remote devices

Adding remote device in SupportAssist Enterprise prepares SupportAssist Enterprise to monitor hardware issues and collect system information from those devices.

To set up SupportAssist Enterprise for remote devices:

1. Ensure that you have completed the steps listed in Setting up SupportAssist Enterprise for the local system.
2. (Optional) If you want to manage a set of devices as a group, create one or more device groups based on your preference. See Device grouping.
3. Add remote devices in SupportAssist Enterprise. See Adding devices.
4. (Optional) Set up an adapter to inventory and add devices from OpenManage Essentials or Microsoft System Center Operations Manager (SCOM). See Adapters.
5. (Optional) If you have more than 4,000 devices, set up Remote Collectors. See Remote Collectors.
6. (Optional) If your company utilizes an SMTP server (email server), configure the SMTP server settings in SupportAssist Enterprise. See Configuring the SMTP server settings.
7. (Optional) If you want to manage SupportAssist Enterprise alerts in TechDirect, set up TechDirect. See Managing SupportAssist Enterprise alerts in TechDirect.

Evaluating SupportAssist Enterprise

SupportAssist Enterprise has several configuration settings that you can enable or disable to evaluate the monitoring and system information collection capabilities.

Evaluating the monitoring capability

You can disable SupportAssist Enterprise from monitoring some specific devices or all devices.

When you disable monitoring of a specific device, SupportAssist Enterprise does not process alerts that are received from that device. Therefore, even if a hardware issue may occur on the device, SupportAssist Enterprise does not open a support case automatically. For instructions to disable monitoring of a specific device, see Enabling or disabling monitoring of a device.

You can also temporarily disable monitoring of a specific device by placing the device in maintenance mode. Placing a device in maintenance mode ensures that SupportAssist Enterprise does not process alerts received from the device during a planned maintenance activity. For instructions to place a device in maintenance mode, see Enabling or disabling device-level maintenance mode.

If necessary, you can disable SupportAssist Enterprise from monitoring all your devices by placing all your devices in maintenance mode. For instructions to place all your devices in maintenance mode, see Enabling or disabling global-level maintenance mode.

Evaluating the system information collection capability

By default, SupportAssist Enterprise automatically collects system information from all devices at periodic intervals, and also when a support case is created. The collected system information is then sent securely to Dell. For information on the system information collected by SupportAssist Enterprise from devices, see System information collected by SupportAssist Enterprise.
You can also view the system information that is collected by SupportAssist Enterprise. For information on viewing the collected data, see Viewing the collected system information.

If the security policy of your company restricts sending some of the collected system information outside of your company network, you can use the following configuration options available in SupportAssist Enterprise:

- You can disable the collection of identity information from all devices. See Enabling or disabling the collection of identity information.
- You can disable the collection of software information and the system log from certain devices. See Enabling or disabling the collection of software information and the system log.
- You can disable the periodic collection of system information from all devices. See Enabling or disabling the periodic collection of system information from all devices.
- You can disable the automatic collection of system information when a support case is created. See Enabling or disabling the automatic collection of system information.
- You can also prevent the upload of collections. See Disabling the automatic upload of collections.

**NOTE:** In most cases, part or all of the system information collected by SupportAssist Enterprise is required by Technical Support to properly diagnose issues and provide an appropriate resolution. To receive the full benefits of SupportAssist Enterprise, you must enable all the system information collection options.

## Downloading the SupportAssist Enterprise installation package

**Prerequisite**

The system must have internet connectivity.

**About this task**

Installation of SupportAssist Enterprise is supported on a virtual machine or a PowerEdge server running either a Windows or Linux operating system. You can download the appropriate installation package depending on the operating system running on the server where you want to install SupportAssist Enterprise.

**Steps**

1. Visit Dell.com/SupportAssist.
   
   The Dell SupportAssist portal is displayed.

2. In the **Available Versions** section, click the **Learn More** link that is displayed under **SupportAssist for Enterprise Systems**.
   
   The **SupportAssist for enterprise systems** page is displayed.

3. In the **Downloads** section, under **SupportAssist Enterprise**, do one of the following based on the installation package that you want to download:
   - For the Windows installation package, click the **SupportAssist Enterprise Windows management server** link.
   - For the Linux installation package, click the **SupportAssist Enterprise Linux management server** link.

   The **Drivers Details** page is displayed in a new web browser window.

4. In the **Available formats** section, click the **Download File** link that is displayed under **File Format: Application**.

   Download of the SupportAssist Enterprise installation package is initiated.

## Installing, Upgrading, or Migrating to SupportAssist Enterprise

Installing SupportAssist Enterprise enables you to receive the automated support capabilities for your Dell server, storage, and networking devices.

- If you are installing SupportAssist Enterprise for the first time, perform one of the following:
  - Install SupportAssist Enterprise by using the SupportAssist Enterprise installation package. For more information, see Installing SupportAssist Enterprise by using the SupportAssist Enterprise installation package.
Install SupportAssist Enterprise by using the OpenManage Essentials installation package. For more information, see *Installing SupportAssist Enterprise by using the OpenManage Essentials installation package*.

The following table provides information about the supported upgrade or migration paths.

**Table 2. Upgrading and migrating to SupportAssist Enterprise**

<table>
<thead>

</tbody>
</table>

**Minimum requirements for installing and using SupportAssist Enterprise**

The following sections describe the minimum hardware, software, and networking requirements for installing and using SupportAssist Enterprise.

**Hardware requirements**

The hardware requirements for installing and using SupportAssist Enterprise vary depending on:

- The number of devices you want to monitor
- The SupportAssist Enterprise functionality you want to use — collection of system information only or both monitoring and collection of system information

You can install SupportAssist Enterprise on a virtual machine or on a 9th or later generation PowerEdge server.

The following table provides a summary of the minimum hardware requirements on the server where you want to install SupportAssist Enterprise.

**Table 3. Hardware requirements for installing and using SupportAssist Enterprise**

### Software requirements

You can install SupportAssist Enterprise on a supported Windows or Linux operating system. After installing SupportAssist Enterprise, you can view the SupportAssist Enterprise user interface by using a web browser. The following section provides information about the operating system requirements for installing and using SupportAssist Enterprise.

### Operating system requirements

The following sections provide the list of Windows and Linux operating systems that support the installation of SupportAssist Enterprise.

### Windows operating systems

- **NOTE**: SupportAssist Enterprise can only be installed on 64-bit operating systems.

  - Microsoft Windows Server 2008 R2 SP1 Standard, Enterprise, and Datacenter
• Windows Server 2012 R2 Standard and Datacenter
• Windows Server 2012 Standard, Essentials, and Datacenter
• Windows Server 2016 Standard, Essentials, and Datacenter
• Windows 2008 Small Business Server
• Windows 2011 Small Business Server
• Windows Server Core 2012
• Windows Server Core 2012 R2
• Windows Server Core 2016

NOTE: SupportAssist Enterprise can also be installed on a Microsoft Windows domain controller.

Linux operating systems

• Red Hat Enterprise Linux 7.x
• Red Hat Enterprise Linux 6.x
• Red Hat Enterprise Linux 5.x
• CentOS 7.x
• CentOS 6.x
• Novell SUSE Linux Enterprise Server 12 SP1
• Novell SUSE Linux Enterprise Server 12 SP2
• Novell SUSE Linux Enterprise Server 12 SP3
• SUSE Linux Enterprise Server 12
• SUSE Linux Enterprise Server 11 SP4
• SUSE Linux Enterprise Server 10 SP4
• Oracle Linux 7.x
• Oracle Linux 6.x
• Debian 7.x
• Debian 8.x
• Debian 9.x
• Ubuntu 14.x
• Ubuntu 16.04.x

NOTE: Installation of SupportAssist Enterprise is not supported on Red Hat Enterprise Linux 6.6.

Web browser requirements

To view the SupportAssist Enterprise user interface, one of the following web browsers is required:

• Internet Explorer 10 or later
• Mozilla Firefox 31 or later
• Google Chrome 59 or later
• Microsoft Edge 38 or later

NOTE: Transport Layer Security (TLS) version 1.1 or later must be enabled on the web browser.

NOTE: To open SupportAssist Enterprise by using Internet Explorer:

• In the Security tab, enable Active Scripting.
• In the Advanced tab, enable Play animations in web pages.
Network requirements

The following are the network requirements on the local system (the server where SupportAssist Enterprise is installed) and remote devices.

- Internet connection — standard 1 GbE network or faster.
- The local system must be able to communicate with the SupportAssist server hosted by Dell over HTTPS protocol.
- The local system must be able to connect to the following destinations:
  - https://is.us.dell.com/FUS/api/2.0/uploadfile — the file upload server where the collected system information is uploaded.
  - https://is.us.dell.com/FUSCHUNK/api/1.0/file/uploadChunk — the file upload server where the collection files greater than 10 MB in size are uploaded.
  - https://downloads.dell.com/ — for downloading Dell OpenManage Server Administrator (OMSA) and receiving new SupportAssist Enterprise release information, policy files, and product support files.

The following table lists the network bandwidth requirements for monitoring and collecting system information from devices.

<table>
<thead>
<tr>
<th>Requirement</th>
<th>LAN bandwidth*</th>
<th>WAN bandwidth**</th>
</tr>
</thead>
<tbody>
<tr>
<td>For collection of system information from a single device</td>
<td>10 Mbps</td>
<td>5 Mbps</td>
</tr>
<tr>
<td>For monitoring and collection of system information from up to 20 devices</td>
<td>0.5 Gbps</td>
<td>10 Mbps</td>
</tr>
<tr>
<td>For monitoring and collection of system information from up to 100 devices</td>
<td>0.5 Gbps</td>
<td>10 Mbps</td>
</tr>
<tr>
<td>For monitoring and collection of system information from up to 300 devices</td>
<td>0.5 Gbps</td>
<td>10 Mbps</td>
</tr>
<tr>
<td>For monitoring and collection of system information from up to 1000 devices</td>
<td>1 Gbps</td>
<td>20 Mbps</td>
</tr>
<tr>
<td>For monitoring and collection of system information from up to 4000 devices</td>
<td>1 Gbps</td>
<td>20 Mbps</td>
</tr>
</tbody>
</table>

* Network bandwidth required for monitoring and collecting system information from devices within a single site.

** Network bandwidth required for monitoring and collecting system information from devices that are distributed across multiple sites.

The following table lists the ports that must be open on the local system.
### Table 6. Network port requirements on the local system

<table>
<thead>
<tr>
<th>Port</th>
<th>Direction</th>
<th>Usage</th>
</tr>
</thead>
<tbody>
<tr>
<td>22</td>
<td>Out</td>
<td>For adding the local system running a Linux operating system and for collecting system information</td>
</tr>
<tr>
<td>25</td>

### Installing SupportAssist Enterprise

You can install SupportAssist Enterprise by using either the SupportAssist Enterprise installer package or the OpenManage Essentials installer package. The following sections provide the instructions to install SupportAssist Enterprise on Windows or Linux operating systems.

#### Operating system considerations for installing SupportAssist Enterprise

The features available in SupportAssist Enterprise vary based on the operating system where SupportAssist Enterprise is installed. The complete features of SupportAssist Enterprise are available only when SupportAssist Enterprise is installed on a Windows operating system.

The following table provides a comparison of the available features when SupportAssist Enterprise is installed on a Windows or Linux operating system.

#### Table 8. Features available based on the operating system where SupportAssist Enterprise is installed

**NOTE:** For more information about setting up adapters and Remote Collectors, see Using Extensions.

**Installing SupportAssist Enterprise by using the SupportAssist Enterprise installer package**

**Installing SupportAssist Enterprise on Windows**

**Prerequisites**
- Download the SupportAssist Enterprise installation package for Windows operating systems. See Downloading the SupportAssist Enterprise installation package.
- Log in to the system with Administrator privileges.
- The system must meet the requirements for installing SupportAssist Enterprise. See Minimum requirements for installing and using SupportAssist Enterprise.

**Steps**
1. Right-click the SupportAssist Enterprise installer package and then click **Run as administrator**.

   **NOTE:** Microsoft User Access Control (UAC) requires that the installation is performed with elevated privileges that are obtained only through the Run as administrator option. If you are logged in to the system as an administrator, double-click the installer package to install SupportAssist Enterprise. However, ensure that you acknowledge the Open File - Security Warning dialog box to proceed.

   The Preparing to Install page is displayed briefly, and then the Welcome to SupportAssist Enterprise Installer page is displayed.

2. Click **Next**.

   The License Agreement page is displayed.

   **NOTE:** Installing and using SupportAssist Enterprise requires that you allow Dell to save certain Personally Identifiable Information (PII) such as your contact information, device credentials, and so on. SupportAssist Enterprise installation cannot proceed unless you agree to allow Dell to save your PII.

3. Read about the information that SupportAssist Enterprise collects from monitored devices, and select I Agree.

4. Read the Dell End User License Agreement, select I Agree, and then click Next.

   The Destination Folder page is displayed.

5. The default installation folder for SupportAssist Enterprise is &lt;Drive where SupportAssist Enterprise is installed&gt;\Program Files\Dell \SupportAssist. If you want to want to install SupportAssist Enterprise on any other location, click Browse and select a folder.

6. Click Install.

   If the default SupportAssist Enterprise ports (9099 and 2424) are already in use, the Port Settings page is displayed. Else, the Installing SupportAssist Enterprise page is displayed briefly, and then the Installation Completed page is displayed.
NOTE: In Windows Server 2016, the User Account Control dialog box may be displayed more than once while the installation is in progress.

7 If the Port Settings page is displayed, perform one of the following:
   - Ensure that no other application is configured to use ports 9099 and 2424.
   - Enter custom port numbers.

NOTE: Ensure that you enter a valid port number which is not in use and within the range 1025 to 65535.

8 Click Finish to exit the SupportAssist Enterprise installer.

The SupportAssist Enterprise login page opens in a web browser window.

![Login page](image)

Figure 1. Login page

NOTE: If the initialization of the Dell SupportAssist Service takes longer than expected, an error message is displayed. If this issue occurs, close the web browser and try accessing SupportAssist Enterprise later. For instructions to access SupportAssist Enterprise, see Opening the SupportAssist Enterprise user interface.

NOTE: If the system is a member of a domain, you must enter the login user name in the [Domain\Username] format. For example, MyDomain\MyUsername. You can also use a period [ . ] to indicate the local domain. For example, .\Administrator.

9 Enter the Microsoft Windows operating system user name and password, and then click Login.

The SupportAssist Enterprise Registration Wizard is displayed.

Next step
(Optional) Follow the instructions in the SupportAssist Enterprise Registration Wizard to complete the registration of SupportAssist Enterprise.

CAUTION: Completing the registration is a prerequisite to receive the full benefits of SupportAssist Enterprise. Without registration, you can only use SupportAssist Enterprise to manually start the collection of system information from your devices. Until registration is completed, SupportAssist Enterprise can neither monitor your devices for hardware issues nor automatically collect system information.

Installing SupportAssist Enterprise on Windows Server Core

Prerequisites
- You must be logged in to a system that has PowerShell ISE version 5.1 or later.
- You must be logged in to the system with Administrator Privileges.
- You must have the SupportAssist Enterprise installation package for Windows.

About this task
You can install SupportAssist Enterprise by remotely accessing the system running Windows Server Core.
Steps
1. Open the PowerShell ISE window.
2. Type `get-service winrm` and press Enter.
3. Type `Enable-PSRemoting -force` and press Enter.
4. Type `set-item wsman:\localhost\Client\TrustedHosts -value "<Windows Server Core operating system IP address>" -Force` and press Enter.
   Example: `set-item wsman:\localhost\Client\TrustedHosts -value "10.49.18.20" -Force`
5. Type `$TargetSession = New-PSSession -ComputerName "<Windows Server Core operating system IP address>" -Credential ~\<Username>` and press Enter.
   Example: `$TargetSession = New-PSSession -ComputerName "10.49.18.20" -Credential ~\Administrator`
6. Type `Enter-PSSession -ComputerName <HostName/IP address of the Windows Server Core device> -Credential ~\<Username of Windows Server Core machine>` and press Enter.
   Example: `Enter-PSSession -ComputerName "10.49.18.20" -Credential ~\Administrator`
7. Type the password and press Enter.
8. Create a folder.
9. Type `Exit` and press Enter to end the remote connection.
10. To copy the installer file to Windows Server Core, type `Copy-Item -ToSession $TargetSession -Path "<Location where the SupportAssist Enterprise installer is available>" -Destination "<Destination Path>" -Recurse` and press Enter.
   Example: `Copy-Item -ToSession $TargetSession -Path "C:\Installer\SupportAssistEnterprise_1.2.0.exe" -Destination "C:\Users\Administrator\Documents\SupportAssistEnterprise_1.2.0.exe" -Recurse`
11. To enable remote login, type `set-itemProperty -Path 'HKLM:\System\CurrentControlSet\Control\Terminal Server\WinStations\RDP-Tcp' -name "UserAuthentication" -Value 1` and press Enter.
12. Open a remote desktop connection to the system running Windows Server Core and run the SupportAssist Enterprise installer.exe file.

Installing SupportAssist Enterprise on Linux

Prerequisites

- Download the SupportAssist Enterprise installation package for Linux operating systems. See Downloading the SupportAssist Enterprise installation package.
- Log in to the system with root privileges.
- Net-SNMP must be installed on the system. For information on installing Net-SNMP, see Installing Net-SNMP (Linux only).

**NOTE**: If you choose to install Net-SNMP after installing SupportAssist Enterprise, ensure that you run the script file, `snmptrapdServiceConfiguration.sh`, after installing Net-SNMP. The script file will be available at `/opt/dell/supportassist/scripts` after the installation of SupportAssist Enterprise is completed.

- The system must meet the requirements for installing SupportAssist Enterprise. See Minimum requirements for installing and using SupportAssist Enterprise.
- If you are using a Linux terminal emulator such as PuTTY to remotely install SupportAssist Enterprise, ensure that you are using PuTTY version 0.63 or later.
- On Debian operating systems, ensure that `en_US.utf8` locale package is installed.
  - If locales are not installed, use the `apt-get install locales` command to install the locales.
  - If any other locale is installed, you can install the `en_US.utf8` locale by using the `dpkg-reconfigure locales` command.

Steps
1. Open the terminal window on the system running the Linux operating system.
2. Browse to the folder where the SupportAssist Enterprise installation package is available.
3. Perform one of the following:
   - Type `chmod 744 supportassistenterprise_1.2.0.bin` and press Enter.
   - Type `chmod +x supportassistenterprise_1.2.0.bin` and press Enter.
4. Type `./supportassistenterprise_1.2.0.bin` and press Enter.
   The **Welcome to the SupportAssist Enterprise Installer** message is displayed.
To continue, type \texttt{c}.

The \textbf{SupportAssist Enterprise License Agreement} is displayed.

Read the license agreement and type \texttt{y} to start the installation.

If the default SupportAssist Enterprise ports (9099 and 2424) are already in use, you are prompted to ensure that the ports are not in use or to enter custom port numbers. Else, the \textbf{SupportAssist Enterprise} login page opens in a web browser window.

![Login page](image)

**Figure 2. Login page**

\textbf{NOTE}: If the initialization of the Dell SupportAssist Service takes longer than expected, an error message is displayed. If this issue occurs, close the web browser and try accessing SupportAssist Enterprise later. For instructions to access SupportAssist Enterprise, see \textit{Opening the SupportAssist Enterprise user interface}.

\textbf{NOTE}: If you are using a Linux terminal emulator such as PuTTY to remotely install SupportAssist Enterprise, the SupportAssist Enterprise login page is not displayed. In such a scenario, you must access the SupportAssist Enterprise login page by using one of the following methods:

- Log in to a remote system and access the following web address by using a web browser:
  \texttt{https://<IP address or host name of the server where SupportAssist Enterprise is installed>:5700/SupportAssist}
  
  You can access SupportAssist Enterprise from a remote system only if port 5700 is open on the network.

- Log in to the local system and access the following web address by using a web browser:
  \texttt{http://localhost:9099/SupportAssist}
  
  If you entered a custom port number, you must replace 9099 with the custom port number in the web address.

\textbf{NOTE}: On certain Linux operating systems, the SupportAssist Enterprise services may not start automatically after the installation is complete. To resolve the issue, edit the \texttt{/etc/hosts} file to include the localhost entries. For example, \texttt{127.0.0.1 localhost}.

If you are prompted that the default SupportAssist Enterprise ports are in use, perform one of the following and then press \texttt{y}.

- Ensure that no other application is configured to use ports 9099 and 2424.
- Enter custom port numbers.

\textbf{NOTE}: Ensure that you enter a valid port number which is not in use and within the range 1025 to 65535.

Type the user name and password of a user with root privileges on the system where SupportAssist Enterprise is installed, and then click \texttt{Login}.

The \textbf{SupportAssist Enterprise Registration Wizard} is displayed.

\textbf{Next step}

(Optional) Follow the instructions in the \textbf{SupportAssist Enterprise Registration Wizard} to complete the registration of SupportAssist Enterprise.
Installing SupportAssist Enterprise on Linux in silent mode

Prerequisites
- Download the SupportAssist Enterprise installation package for Linux operating systems.
- Log in to the system with root privileges.
- Net-SNMP must be installed on the system. For information on installing Net-SNMP, see Installing Net-SNMP (Linux only).

**NOTE:** If you choose to install Net-SNMP after installing SupportAssist Enterprise, ensure that you run the script file, `snmptrapdServiceConfiguration.sh`, after installing Net-SNMP. The script file will be available at `/opt/dell/supportassist/scripts` after the installation of SupportAssist Enterprise is completed.

- The system must meet the requirements for installing SupportAssist Enterprise. See Minimum requirements for installing and using SupportAssist Enterprise.
- On Debian operating systems, ensure that `en_US.utf8` locale package is installed.
  - If locales are not installed, use the `apt-get install locales` command to install the locales.
  - If any other locale is installed, you can install the `en_US.utf8` locale by using the `dpkg-reconfigure locales` command.

Steps
1. Open the terminal window on the system running the Linux operating system.
2. Browse to the folder where the SupportAssist Enterprise installation package is available.
3. Perform one of the following:
   - Type `chmod 744 supportassistenterprise_1.2.0.bin` and press Enter.
   - Type `chmod +x supportassistenterprise_1.2.0.bin` and press Enter.
4. Type `/supportassistenterprise_1.2.0.bin silent` and press Enter.

Next step
(Optional) Follow the instructions in the SupportAssist Enterprise Registration Wizard to complete the registration of SupportAssist Enterprise.

Installing SupportAssist Enterprise by using the OpenManage Essentials installation package

Prerequisites
- The system must have internet connectivity.
- You must have Administrator rights on the system.
- Port 443 must be open on the firewall to access:
  - https://apidp.dell.com
  - https://api.dell.com/
  - https://is.us.dell.com/FUS/api/2.0/uploadfile
  - https://is.us.dell.com/FUSCHUNK/api/1.0/file/uploadChunk
  - https://downloads.dell.com/
NOTE: If the installation of SupportAssist Enterprise is unsuccessful, perform one of the following:

- Retry the installation. To retry the installation, right-click the SupportAssistSetup.exe file available at <System drive>\Program Files \Dell\SysMgt\Essentials\SupportAssistSetup on the OpenManage Essentials custom installation folder, and select Run as administrator.
- Download the SupportAssist Enterprise installation package and install it on the server running OpenManage Essentials on any other server.

Steps
1. Extract the OpenManage Essentials installation package to a folder on the system.
2. In the folder where you extracted the installation package, double-click the Autorun.exe file. The Dell EMC OpenManage Install window is displayed.
3. If OpenManage Essentials version 2.3 or later is not installed on the system, make sure that Dell EMC OpenManage Essentials is selected.
4. Select Dell EMC SupportAssist Enterprise, and then click Install. If you selected Dell EMC OpenManage Essentials and Dell EMC SupportAssist Enterprise, installation of OpenManage Essentials is completed and then SupportAssist Enterprise is installed. The system prerequisites for installing SupportAssist Enterprise are verified. If the system prerequisites are met, the Welcome to Dell EMC SupportAssist Enterprise Installer window is displayed.
5. Click Next.
6. Read the terms in the communication requirements and click I Agree.
7. Read the software license agreement, click I Agree, and then click Next. The Installing SupportAssist Enterprise window is displayed briefly, and then the Installation Completed window is displayed.
8. Click Finish.

Next step
(Optional) Follow the instructions in the SupportAssist Enterprise Registration Wizard to complete the registration of SupportAssist Enterprise.

CAUTION: Completing the registration is a prerequisite to receive the full benefits of SupportAssist Enterprise. Without registration, you can only use SupportAssist Enterprise to manually start the collection of system information from your devices. Until registration is completed, SupportAssist Enterprise can neither monitor your devices for hardware issues nor automatically collect system information.

Upgrading SupportAssist Enterprise

If you are using SupportAssist Enterprise version 1.0 or 1.1, you can upgrade to SupportAssist Enterprise version 1.2 by using one of the following installation packages:

- SupportAssist Enterprise version 1.2 installation package available at Dell.com/SupportAssistGroup.
- OpenManage Essentials installation package available at DellTechCenter.com/OME.

NOTE: Before you upgrade SupportAssist Enterprise, ensure that SupportAssist Enterprise is not open in any web browser window.
Upgrading SupportAssist Enterprise by using the SupportAssist Enterprise installation package

1. On the Dell OpenManage Essentials management server, right-click the SupportAssist Enterprise installer package, and select Run as administrator.

   **NOTE:** UAC requires that the installation is performed with elevated privileges that are obtained only through the Run as administrator option. If you are logged on to the OpenManage Essentials server as an administrator, double-click the installer package to install SupportAssist Enterprise. However, ensure that you click Run on the Open File - Security Warning dialog box to proceed.

   The Dell SupportAssist Enterprise - InstallShield Wizard window is displayed.

2. At the This setup will perform an upgrade of 'Dell SupportAssist Enterprise'. Do you want to continue? prompt, click Yes. The Preparing to Install window is briefly displayed, and then the Resuming the Install Wizard for SupportAssist Enterprise window is displayed.

3. Click Upgrade.

   If the default SupportAssist Enterprise ports (9099 and 2424) are already in use, the Port Settings page is displayed. Else, the Install Wizard Completed window is displayed.

4. If the Port Settings page is displayed, perform one of the following:
   - Ensure that no other application is configured to use ports 9099 and 2424.
   - Enter custom port numbers.

   **NOTE:** Ensure that you enter a valid port number which is not in use and within the range 1025 to 65535.

5. Click Finish.

   If you had created device groups and device group credentials prior to the upgrade, the following changes occur:

   - Device group credentials are saved as Credential Accounts and Credential Profiles. However, if individual and device group credentials were configured for devices within the device group, only the individual device credentials are applied for those devices after the upgrade. If necessary, you can select those devices and apply the created credential profiles.
   - Credential Accounts are not created for the existing individual device credentials. If devices within the device group were configured with individual credentials, the individual credentials are saved and applied on the devices.

   **NOTE:** After upgrading from an unregistered version of SupportAssist, collections that you manually initiate are not automatically uploaded. To ensure that these collections are automatically uploaded, enable the automatic collection upload settings in the Preferences page.

   **NOTE:** If a newer version of the adapter or Remote Collector is available, the adapter or Remote Collector is also upgraded during the upgrade of SupportAssist Enterprise.

Upgrading SupportAssist Enterprise by using the OpenManage Essentials installer package

1. Double-click the OpenManage Essentials executable file.

   The Dell OpenManage Install window is displayed.

2. Ensure that SupportAssist Enterprise is selected and then click Install.

   The Welcome to Dell SupportAssist Enterprise Installer window is displayed.

3. Click Next.

   The Installing SupportAssist Enterprise window is displayed briefly, and then the Installation Completed window is displayed.

4. Click Finish.
If you had created device groups and device group credentials prior to the upgrade, the following changes occur:

- Device group credentials are saved as Credential Accounts and Credential Profiles. However, if individual and device group credentials were configured for devices within the device group, only the individual device credentials are applied for those devices after the upgrade. If necessary, you can select those devices and apply the created credential profiles.
- Credential Accounts are not created for the existing individual device credentials. If devices within the device group were configured with individual credentials, the individual credentials are saved and applied on the devices.

**NOTE:** If you have upgraded OpenManage Essentials, you must run discovery and inventory of all existing discovery ranges in OpenManage Essentials.

**NOTE:** After upgrading from an unregistered version of SupportAssist, collections that you manually initiate are not automatically uploaded. To ensure that these collections are automatically uploaded, enable the automatic collection upload settings in the Preferences page.

**NOTE:** If a newer version of the adapter or Remote Collector is available, the adapter or Remote Collector is also upgraded during the upgrade of SupportAssist Enterprise.

## Migrating to SupportAssist Enterprise

If you are already using SupportAssist for OpenManage Essentials or SupportAssist for Microsoft System Center Operations Manager, you can migrate to SupportAssist Enterprise. When you migrate to SupportAssist Enterprise, the devices, cases, device credentials, user groups, and settings are migrated.

### Migrating to SupportAssist Enterprise by using the SupportAssist Enterprise installer package

**Prerequisite**

Download the SupportAssist Enterprise installation package for Windows operating systems. See [Downloading the SupportAssist Enterprise installation package](#).

**About this task**

If you have SupportAssist for Dell OpenManage Essentials version 2.2 or SupportAssist for Microsoft System Center Operations Manager version 1.1 installed, you can migrate to SupportAssist Enterprise.

**NOTE:** Migration to SupportAssist Enterprise version 1.2 from SupportAssist for OpenManage Essentials is supported only if OpenManage Essentials version 2.3 or later is installed on the system.

**Steps**

1. Right-click the SupportAssist Enterprise installer package and click **Run as administrator**.

   **NOTE:** Microsoft User Access Control (UAC) requires that the installation is performed with elevated privileges that are obtained only through the Run as administrator option. If you are logged in to the system as an administrator, double-click the installer package to install SupportAssist Enterprise. However, ensure that you acknowledge the Open File - Security Warning dialog box to proceed.

   The **Dell SupportAssist Enterprise - InstallShield Wizard** window is displayed.

2. At the **This setup will perform an upgrade of 'Dell SupportAssist'. Do you want to continue?** prompt, click **Yes**.

   The **Preparing to Install** page is displayed briefly, and then the **Welcome to the SupportAssist Enterprise Installer** page is displayed.

3. Click **Upgrade**.

   The **Installing SupportAssist Enterprise** page is displayed, and then the **Installation Completed** page is displayed.

4. Click **Finish**.

   The **SupportAssist Enterprise** login page opens in a web browser window.

5. Type the Microsoft Windows operating system user name and password, and then click **Login**.
The SupportAssist Enterprise Devices page is displayed.

If you had created device groups and device group credentials prior to migration, the following changes occur:

- Device group credentials are saved as Credential Accounts and Credential Profiles. However, if individual and device group credentials were configured for devices within the device group, only the individual device credentials are applied for those devices after the upgrade. If necessary, you can select those devices and apply the created credential profiles.
- Credential Accounts are not created for the existing individual device credentials. If devices within the device group were configured with individual credentials, the individual credentials are saved and applied on the devices.

NOTE: For instructions to access SupportAssist Enterprise after the migration is complete, see Opening the SupportAssist Enterprise user interface.

Next steps

For Storage PS Series devices only: After migration from SupportAssist for OpenManage Essentials to SupportAssist Enterprise, members of an Storage PS Series group that are discovered in OpenManage Essentials are replaced in SupportAssist Enterprise by only the Storage PS Series group. The Storage PS Series group is placed in the Staging group with an Unable to add device status because the credentials of the Storage PS Series group are not available. To add the Storage PS Series group in SupportAssist Enterprise, ensure that you edit the credentials or apply a Credential Profile to the Storage PS Series group after migration.

For migration from SupportAssist for Microsoft System Center Operations Manager to SupportAssist Enterprise only: The servers that were discovered in SupportAssist for Microsoft System Center Operations Manager are placed in the Staging group with an Unable to add device status because the credentials of the servers are not available. To add the servers in SupportAssist Enterprise, ensure that you edit the credentials or apply a Credential Profile to the servers after migration.

NOTE: If the server running SupportAssist Enterprise connects to the internet through a proxy server, devices that were added with the iDRAC IP address are placed in the Staging group. To move the devices to the Default group, add the IP address of the iDRACs in the Proxy Exclusion List on the SupportAssist Enterprise Proxy Settings page and then revalidate each device.

After migration from an unregistered version of SupportAssist, collections that you manually initiate are not automatically uploaded. To ensure that these collections are automatically uploaded, enable the automatic collection upload settings in the Preferences page.

Migrating to SupportAssist Enterprise by using the OpenManage Essentials installer package

About this task

If you have SupportAssist for OpenManage Essentials version 2.2 installed, you can migrate to SupportAssist Enterprise version 1.2 by using the OpenManage Essentials installer package.

NOTE: Migration to SupportAssist Enterprise version 1.2 from SupportAssist for OpenManage Essentials is supported only if OpenManage Essentials version 2.3 or later is installed on the system.

Steps

1. Double-click the OpenManage Essentials executable file.
   The Dell OpenManage Install window is displayed.
2. Ensure that SupportAssist Enterprise is selected and then click Install.
   The Welcome to Dell SupportAssist Enterprise Installer window is displayed.
3. Click Next.
   The Installing SupportAssist Enterprise window is displayed briefly, and then the Installation Completed window is displayed.
4. Click Finish.
   If you had created device groups and device group credentials prior to migration, the following changes occur:
   - Device group credentials are saved as Credential Accounts and Credential Profiles. However, if individual and device group credentials were configured for devices within the device group, only the individual device credentials are applied for those devices after the upgrade. If necessary, you can select those devices and apply the created credential profiles.
Credential Accounts are not created for the existing individual device credentials. If devices within the device group were configured with individual credentials, the individual credentials are saved and applied on the devices.

For devices that are not members of a device group, if both default and individual credentials were configured for the devices, only the individual credentials are saved and applied on those devices.

Using SupportAssist Enterprise without registration

Registration of SupportAssist Enterprise is a prerequisite to receive the full benefits of SupportAssist Enterprise and to use all the available features. You can also use SupportAssist Enterprise without registration. However, only certain capabilities or features of SupportAssist Enterprise are available without registration. The following table provides a summary of the availability of capabilities or features without registration.

Table 9. Availability of capabilities or features without registration

<table>
<thead>
<tr>
<th>Capabilities or features that are available</th>
<th>Capabilities or features that are not available</th>
</tr>
</thead>
<tbody>
<tr>
<td>Add devices</td>
<td>Monitor devices for hardware issues</td>
</tr>
<tr>
<td>Manually start the collection and upload of system information to Dell from a single device or multiple devices</td>
<td>Automatic case creation on issue detection</td>
</tr>
<tr>
<td></td>
<td>Automated periodic collection of system information</td>
</tr>
<tr>
<td></td>
<td>View support cases that are open for your devices</td>
</tr>
<tr>
<td></td>
<td>Update contact and parts dispatch information</td>
</tr>
<tr>
<td></td>
<td>Set up adapter</td>
</tr>
<tr>
<td></td>
<td>Set up Remote Collector</td>
</tr>
</tbody>
</table>

NOTE: Registration of SupportAssist Enterprise is optional. However, Dell recommends that you complete the registration to receive the full benefits of the automated support capabilities of SupportAssist Enterprise.

Registering SupportAssist Enterprise

Prerequisites

- If the server where you have installed SupportAssist Enterprise connects to the internet through a proxy server, ensure that you have the details of the proxy server.
- Ensure that you have the details of the contact you want to assign as your company’s primary contact for SupportAssist Enterprise.

About this task

CAUTION: Completing the registration is a prerequisite to receive the full benefits of SupportAssist Enterprise. Without registration, you can only use SupportAssist Enterprise to manually start the collection of system information from your devices. Until registration is completed, SupportAssist Enterprise can neither monitor your devices for hardware issues nor automatically collect system information.

The SupportAssist Enterprise Registration Wizard guides you through configuring the proxy server settings (if applicable) and completing the registration. The registration wizard is displayed when you log in to SupportAssist Enterprise for the first-time. If you do not complete the registration or skip the registration, whenever you log in to SupportAssist Enterprise, the SupportAssist Enterprise is not registered banner is displayed at the top of the page. You can click the Register now link to open the registration wizard and complete the registration.

NOTE: You can also click Register in the About page or on the add devices wizard to open the SupportAssist Enterprise Registration Wizard.

NOTE: In Internet Explorer, if the Internet Explorer Enhanced Security Configuration feature is enabled, the SupportAssist Enterprise Registration Wizard is not displayed.

Steps

1. On the Welcome page, click Next.

SupportAssist Enterprise verifies connectivity to the Internet.
If SupportAssist Enterprise is able to connect to the Internet, the Registration page is displayed.

If SupportAssist Enterprise is unable to connect to the Internet, a message prompts you to confirm if the system connects to the Internet through a proxy server. If you click Yes, the Proxy Settings page is displayed.

If the system connects to the Internet directly, but the Internet connectivity issue persists, contact your network administrator for assistance.

2 If the Proxy Settings page is displayed:
   a In the Address field, type the IP address or host name of the proxy server.
   b In the Port field, type the port number of the proxy server.
   c If a user name and password is required to connect to the proxy server, select Requires authentication, and type the user name and password in the appropriate fields.
   d Click Next.

SupportAssist Enterprise verifies connectivity to the Internet through the proxy server. If the connection is successful, the Registration page is displayed. Else, an error message is displayed. If the proxy server connectivity issue persists, contact your network administrator for assistance.

3 On the Registration page, provide the following information:
   a In the Company Information section, type the company name select your country or territory.
   b In the Contact Information section, type your first name, last name, phone number, alternate phone number, and email address in the appropriate fields.
   c To provide the shipping information and dispatch preferences, select Dispatch details, and enter the following information:
      1 In the Parts Dispatch section, select one of the following:
         a Parts Dispatch Only — If you want only the replacement hardware component to be dispatched to your address.
         b Parts Dispatch with Onsite Service — If you want an on-site technician to replace the dispatched hardware component.
      2 Select Copy contact information, if you want to copy the contact details from the Contact Information section.
      3 Select the preferred contact hours during which Dell can contact you, if necessary.
      4 Select the time zone and type your shipping address in the appropriate fields.
      5 Type any specific dispatch related information in the Dispatch Notes section.

   NOTE: If a device is moved to a different location, ensure that the dispatch preferences and shipping information are updated.
NOTE: Ensure that you use an English keyboard layout to type data in the Phone Number, Alternate Phone Number, and Email Address fields. If a native keyboard layout or non-English language is used to type data in these fields, an error message is displayed.

NOTE: After registering SupportAssist Enterprise, you can update the primary contact information and also provide a secondary contact information. If the primary contact is unavailable, Dell will contact your company through the secondary contact. If both the primary and secondary contacts are configured with valid email addresses, both receive SupportAssist Enterprise emails. For information on updating the contact information, see Viewing and updating the contact information.

4 Click Next.
SupportAssist Enterprise connects to Dell and completes the registration. If the registration is successful, the Summary page is displayed. Else, an error message is displayed. If the registration issue persists, contact your network administrator for assistance.

5 Click Finish.
The SupportAssist Enterprise Devices page is displayed. The local system may display the following status in the Devices page:
• OMSA not installed — Dell OpenManage Server Administrator (OMSA) is not installed on the local system.
• SNMP not configured — SNMP settings of the local system is not configured.

CAUTION: Without the installation of OMSA and the configuration of SNMP settings, SupportAssist Enterprise will not be able to monitor hardware issues that may occur on the local system.

Next steps
- To allow SupportAssist Enterprise to automatically create a support case when a hardware issue occurs on the local system:
  a Install or upgrade Dell OpenManage Server Administrator (OMSA) on the local system. See Installing or upgrading OMSA by using SupportAssist Enterprise.
  b Configure the SNMP settings of the local system. See Configuring SNMP settings by using SupportAssist Enterprise.
  c Enable SupportAssist Enterprise to monitor hardware issues that may occur on the local system. See Enabling or disabling monitoring of a device.
- If you have installed SupportAssist Enterprise on a server running a Linux operating system that has Security Enhanced Linux (SELinux) enabled, set up the server to receive alerts from remote devices. For more information, see Setting up an SELinux enabled system to receive alerts.
- Add devices in SupportAssist Enterprise. For more information, see Adding devices.
- (Optional) If your company utilizes an SMTP server (email server), configure the SMTP server settings in SupportAssist Enterprise. This enables SupportAssist Enterprise to utilize the SMTP server to send you device status and connectivity status email notifications. For more information, see Configuring the SMTP server settings.
- (Optional) Update the contact details of the primary and secondary SupportAssist Enterprise contacts and provide a parts dispatch address. See Viewing and updating the contact information.
- (Optional) If you want to manage a set of devices as a group, create one or more device groups based on your preference. See Device grouping.
- If you have entered dispatch notes, follow the instructions in Adding dispatch notes to default group, to ensure that the dispatch notes are applied to devices that are present in the default group.

- Updating dispatch details

Setting up an SELinux enabled system to receive alerts

About this task
Security-Enhanced Linux (SELinux) is a security module that authorizes or prevents operations in Linux operating systems. When SELinux is enabled on the system running SupportAssist Enterprise, alerts (SNMP traps) from remote devices are not received by SupportAssist Enterprise. Without receiving alerts, SupportAssist Enterprise will not be able to identify hardware issues that may occur on remote devices. Therefore, you must perform the following steps on the system running SupportAssist Enterprise to allow SupportAssist Enterprise to receive alerts from remote devices.
NOTE: SELinux is enabled by default in Red Hat Enterprise Linux 6 and 7, CentOS 6 and 7, and Oracle Enterprise Linux 6 and 7.

Steps
1. Open the terminal window and create a policy file named `supportassistpolicy.te`.
2. Open the policy file (`supportassistpolicy.te`) and type the following:

   ```
   module supportassistpolicy 1.0;
   require {
     type websm_port_t;
     type snmpd_t;
     type root_t;
     class tcp_socket name_connect;
     class dir { write add_name };
     class file { write getattr open create };
   }
   
   #============= snmpd_t ==============
   allow snmpd_t wevsbm_port_t:tcp_socket name_connect;
   allow snmpd_t root_t:dir write;
   allow snmpd_t root_t:dir add_name;
   allow snmpd_t root_t:file { write create open getattr };
   
   Save the policy file.
3. Browse to the folder where you saved the policy file.
4. Type `checkmodule -M -m -o supportassistpolicy.mod supportassistpolicy.te` and press Enter.
5. Type `semodule_package -o supportassistpolicy.pp -m supportassistpolicy.mod` and press Enter.
6. Type `semodule -i supportassistpolicy.pp` and press Enter.

Opening the SupportAssist Enterprise user interface

You can open the SupportAssist Enterprise user interface by using one of the following methods:
- If you are logged in to the server where SupportAssist Enterprise is installed:
  - Double-click the Dell SupportAssist Enterprise desktop icon.
  - Open a web browser and type the address in the following format:
    
    http://localhost:9099/SupportAssist

    NOTE: If you entered a custom port number during the installation of SupportAssist Enterprise, you must replace 9099 with the custom port number in the web address.

- To access SupportAssist Enterprise from a remote system, open a web browser and type the address in the following format:

    https://<IP address or host name of the server where SupportAssist Enterprise is installed>:5700/SupportAssist

    For example, https://10.25.35.1:5700/SupportAssist

    NOTE: When typing the address, ensure that you type SupportAssist with the S and A in uppercase.

    - If you are using Internet Explorer, the following message may be displayed: There is a problem with this website’s security certificate. To open SupportAssist Enterprise, click Continue to this website (not recommended).
    - If you are using Mozilla Firefox, the following message may be displayed: This Connection is Untrusted. To open SupportAssist Enterprise, click I Understand the Risks, and then click Add Exception. In the Add Security Exception window, click Confirm Security Exception.

    The SupportAssist Enterprise login page is displayed in the web browser.
NOTE: The recommended screen resolution for optimally viewing the SupportAssist Enterprise user interface is 1280 x 1024 or higher.

Logging in to SupportAssist Enterprise

1. In the SupportAssist Enterprise login page, type the user name and password in the appropriate fields.
   
   NOTE: You must provide the user name and password of a user account that is a member of the SupportAssistAdmins or SupportAssistUsers user group. If SupportAssist Enterprise is installed on a Linux operating system, you can also provide the user name and password of a user account that is a member of the root or users user group. For information on the SupportAssist Enterprise user groups, see SupportAssist Enterprise user groups.
   
   NOTE: If the server where SupportAssist Enterprise is installed is a member of a Windows domain, you must provide the user name in the [Domain\Username] format. For example, MyDomain\MyUsername. You can also use a period [ . ] to indicate the local domain. For example, .\Administrator.

2. Click Login.
   The SupportAssist Enterprise Devices page is displayed.

   NOTE: By default, after 14 minutes of inactivity, a Session Timeout message is displayed. If you want to continue the session, click Renew. If no response is received within a minute, you will be logged out automatically.

Logging out of SupportAssist Enterprise

1. Click the user name link that is displayed at the top-right of the SupportAssist Enterprise header area.

2. In the menu that is displayed, click Logout.
   The SupportAssist Enterprise login page is displayed.
Adding devices

Adding devices prepares SupportAssist Enterprise to automate support from Dell Technical Support for your Dell devices. To use SupportAssist Enterprise to either monitor hardware issues or collect system information from your devices, you must add your devices in SupportAssist Enterprise.

After the installation of SupportAssist Enterprise, the local system (server where SupportAssist Enterprise is installed) is automatically added in SupportAssist Enterprise. To receive the benefits of SupportAssist Enterprise for your other Dell devices, you must add each device in SupportAssist Enterprise.

**NOTE:** For the complete list of devices types and device models that you can add in SupportAssist Enterprise, see the SupportAssist Enterprise Version 1.2 Support Matrix at Dell.com/ServiceabilityTools.

**NOTE:** By default, a SupportAssist component is available on 14th generation of PowerEdge servers. You can register the SupportAssist component on the server to receive the automated support capabilities of SupportAssist. When an iDRAC is added in SupportAssist Enterprise, the SupportAssist component is automatically disabled, but the automatic support capabilities are available through SupportAssist Enterprise.

**NOTE:** Only IPv4 addresses are supported for adding devices and collecting system information.

### Methods of adding devices

You can add devices in SupportAssist Enterprise by using one of the following methods:

- **Add a single device** — Add each device individually by entering details of the device
- **Import multiple devices** — Add several devices by using a .csv file that contains details of the devices
- **Create a device discovery rule** — Add devices based on a specific IP address ranges. For more information on discovery rules, see Managing device discovery rules.
- **Set up an adapter** — Inventory and add devices that are managed by OpenManage Essentials, Microsoft System Operations Manager, or OpenManage Enterprise - Tech Release. For more information on setting up an adapter, see Adapters.

### Device types and applicable devices

While adding a single device or importing multiple devices in SupportAssist Enterprise, you must select an appropriate device type. The following table lists the devices that you can add by selecting a specific device type.
NOTE: SupportAssist Enterprise may not be compatible with all device models of a supported device type. For the complete list of supported device types and device models, see the SupportAssist Enterprise Version 1.2 Support Matrix at Dell.com/ServiceabilityTools.

**Adding a single device**

You can add a device individually based on the device type. The available device types that you can add are as follows:

- Chassis
- Fluid File System (FluidFS)
- iDRAC
- Networking
- Peer Storage (PS) / EqualLogic
- PowerVault
- Server / Hypervisor
- Software
- Solution
- Storage Center (SC) / Compellent

**Adding a server or hypervisor**

**Prerequisites**

- You must be logged in to SupportAssist Enterprise with elevated or administrative privileges. See *Granting elevated or administrative privileges to users*.
- The device must be reachable from the server where SupportAssist Enterprise is installed.
- If the device is running a Microsoft Windows operating system, Windows Management Instrumentation (WMI) service must be running on the device.
- If the device is running a Linux operating system:
  - Secure Shell (SSH) service must be running on the device.
  - SSH password authentication must be enabled (enabled by default).
  - Unzip package must be installed on the server where SupportAssist Enterprise is installed.
- If the device is running VMware ESXi, ESX, Oracle Virtual Machine, Ctxix XenServer, or Microsoft Hyper-V:
  - SSH service must be running on the device.
  - Ports 22 and 443 must be open on the device.
  - For collecting system information from ESX and ESXi only, ensure that SFCBD and CIMOM are enabled.
- Port 1311 must be open on the device for OMSA communication.
- If the device connects to the internet through a proxy server, the following ports must be open on the proxy server firewall: 161, 22 (for adding devices running Linux), 135 (for adding devices running Windows), and 1311.
- Review the requirements for installing OMSA on the device. For more information, see the “Installation Requirements” section in the Dell OpenManage Server Administrator Installation Guide at [Dell.com/OpenManageManuals](Dell.com/OpenManageManuals).

**About this task**

SupportAssist Enterprise can monitor hardware issues and collect system information from Dell servers. You can perform the following steps to add a server running Windows or Linux, or a hypervisor. While adding the device, you can allow SupportAssist Enterprise to automatically perform the following tasks that are required for monitoring hardware issues that may occur on the device:

- Install or upgrade OMSA — OMSA is required to generate alerts for hardware events that occur on the device and also to collect system information from the device.
- Configure SNMP — Configuration of SNMP settings is required to forward alerts from the device to SupportAssist Enterprise.
Steps

1. Point to Devices and click View Devices. The Devices page is displayed.
2. Click Add Devices. The Add Single Device or Import Multiple Devices wizard is displayed.
4. From the Device Type list, select Server / Hypervisor.

![Add single device or import multiple devices](image)

**Figure 4. Add single device window**

5. Type the host name or IP address of the device in the appropriate field.

   **NOTE:** Dell recommends that you enter the host name of the device. If the host name is not available, you can enter the IP address of the device.

6. To discover and add other supported device types that may be associated with the server, select Perform deep discovery. See Deep discovery.

7. If desired, type a name for the device in the appropriate field. The name that you enter is used to represent the device in SupportAssist Enterprise. If you do not enter a name, the IP address or host name that you have entered is used to represent the device.

8. Perform one of the following:

   - If you selected the Perform deep discovery option, select the credential profile that you want to assign to the device and its associated device types. To create a new credential profile, select Create New Profile and click Create. To enter the profile details, follow steps 3 to 7 in Creating Credential Profile.
   - If you did not select the Perform deep discovery option, select an Account Credentials that you want to assign to the device. To create a new account credentials, select Create New Account and click Create. To enter the account details, follow steps 3 to 6 in Adding Account Credentials.

9. If you want SupportAssist Enterprise to monitor hardware issues that may occur on the device, select the Enable Monitoring, Configure SNMP Settings, and Install / Upgrade OMSA options.

   **NOTE:** If the registration is completed, by default, the Enable Monitoring, Configure SNMP Settings, and Install / Upgrade OMSA options are selected. If the registration is not completed, when you select the Enable Monitoring option, you are requested to complete the registration. To continue, you can either clear the Enable Monitoring option or click Register to open the registration wizard.
For SupportAssist Enterprise to monitor hardware issues that may occur on the device, the following dependencies must be met:

- The SNMP settings of the device must be configured to forward SNMP traps (alerts) to the server where SupportAssist Enterprise is installed.
- The recommended version of Dell OpenManage Server Administrator (OMSA) must be installed on the device.

To help you meet these dependencies, SupportAssist Enterprise can configure SNMP trap (alert) forwarding and also install or upgrade OMSA automatically on the device. To allow SupportAssist Enterprise to automatically:

- Configure the device to forward alerts, ensure that the **Configure SNMP Settings** option is selected.
- Install or upgrade OMSA on the device, ensure that the **Install / Upgrade OMSA** option is selected.

Tasks to configure alert forwarding and to install OMSA are initiated after the device is added successfully to the device inventory.

**NOTE:** If you prefer to perform both tasks (configure alert forwarding and install or upgrade OMSA) manually, clear the **Configure SNMP Settings** and **Install / Upgrade OMSA** options.

10. Click **Next**.

The **Discovering Device** page is displayed until SupportAssist Enterprise identifies the device.

If the device is discovered successfully, the **Assign Device Group (Optional)** page is displayed. Otherwise, an appropriate error message is displayed.

11. If desired, from the **Assign Other Group** list, select a device group to which you want to assign the device.

If you do not select a device group, the device is assigned to the **Default** device group. For information on the **Default** device group, see **Predefined device groups**.

12. Click **Finish**.

The device is added to the device inventory and the **Summary** page is displayed.

13. Click **OK** to close the **Add Single Device** wizard.

**CAUTION:** If the SNMP settings of the device is not configured and OMSA is not installed on the device, SupportAssist Enterprise cannot monitor hardware issues that may occur on the device.

**NOTE:** Installation of OMSA is not supported on devices running CentOS, Oracle Virtual Machine, and Oracle Enterprise Linux. When you add these devices with the Device Type as Server / Hypervisor, SupportAssist Enterprise can only collect and upload system information. To allow SupportAssist Enterprise to monitor these devices for hardware issues, add these devices by selecting the Device Type as iDRAC. For more information on adding an iDRAC, see **Adding an iDRAC**.

The device is added to the device inventory with an appropriate status:

- When SupportAssist Enterprise is configuring the SNMP settings, the device displays a **Configuring SNMP** status.
- When SupportAssist Enterprise is installing or upgrading OMSA, the device displays an **Installing OMSA** status.

After the installation of OMSA and configuration of SNMP settings are completed, the device status changes to **OK**. If an issue occurs during the configuration of SNMP or OMSA installation, the device displays an appropriate status in the **Devices** page.

**NOTE:** If the device displays an **error** status, click the error link to see a description of the issue and the possible resolution steps. To retry the OMSA installation or SNMP configuration, you can use the **Tasks** list available on the device overview pane.

**Next steps**

(Optional) You can also add the server in SupportAssist Enterprise by using the iDRAC details. In this scenario, SupportAssist Enterprise automatically correlates the alerts and collection of system information from both the operating system and the iDRAC. For instructions to add an iDRAC, see **Adding an iDRAC**. For more information on how SupportAssist Enterprise correlates device information, see **Device correlation**.

If a message is displayed stating that the device is added to the **Staging** group:
1. Ensure that all prerequisites for adding the device are met.
2. Revalidate the device. See Revalidating a device.

Add Single Device
Deep discovery

Adding an iDRAC

Prerequisites
- You must be logged in to SupportAssist Enterprise with elevated or administrative privileges. See Granting elevated or administrative privileges to users.
- The device must be a 12th or later generation Dell PowerEdge server (iDRAC7 or later). For information on identifying the generation of a PowerEdge server, see Identifying the generation of a PowerEdge server.
- The device must be reachable from the server where SupportAssist Enterprise is installed.
- If the device connects to the internet through a proxy server, ports 161 and 443 must be open on the proxy server firewall.
- To add an iDRAC7 or iDRAC8, Enterprise or Express license must be installed on the iDRAC. To add an iDRAC9, Basic, Enterprise, or Express license must be installed on the iDRAC. For information on purchasing and installing an Enterprise or Express license, see the "Managing Licenses" section in the iDRAC User’s Guide at Dell.com/idracmanuals.

About this task
SupportAssist Enterprise can monitor hardware issues and collect system information from Dell servers. You can perform the following steps to add Dell's 12th or later generation of PowerEdge servers. While adding the device, you can allow SupportAssist Enterprise to automatically configure the SNMP settings of the device. Configuration of SNMP settings is required to forward alerts from the device to SupportAssist Enterprise.

**NOTE:** By default, a SupportAssist component is available on 14th generation of PowerEdge servers. You can register the SupportAssist component on the server to receive the automated support capabilities of SupportAssist. When an iDRAC is added in SupportAssist Enterprise, the SupportAssist component is automatically disabled, but the automatic support capabilities are available through SupportAssist Enterprise.

Steps
1. Point to Devices and click View Devices.
   The Devices page is displayed.
2. Click Add Devices.
   The Add Single Device or Import Multiple Devices wizard is displayed.
4. From the Device Type list, select iDRAC.
5. Type the host name or IP address of the device in the appropriate field.
   **NOTE:** Dell recommends that you enter the host name of the device. If the host name is not available, you can enter the IP address of the device.
6. If desired, type a name for the device in the appropriate field.
   The name that you enter is used to represent the device in SupportAssist Enterprise. If you do not enter a name, the IP address or host name that you have entered is used to represent the device.
7. From the Account Credentials list, select an account credentials that you want to assign to the device. To create a new account credentials, select Create New Account and click Create. To enter the account details, follow steps 3 to 6 in Adding Account Credentials.
8. If you want SupportAssist Enterprise to monitor hardware issues that may occur on the device, select the Enable Monitoring and Configure SNMP Settings options.
For SupportAssist Enterprise to monitor hardware issues that may occur on the device, the device must be configured to forward SNMP traps (alerts) to the server where SupportAssist Enterprise is installed. To help you meet this requirement, SupportAssist Enterprise can configure SNMP trap (alert) forwarding automatically. To allow SupportAssist Enterprise to automatically configure the device to forward alerts, ensure that the Configure SNMP Settings option is selected. A task to configure alert forwarding is initiated after the device is added successfully to the device inventory.

NOTE: If you prefer to configure alert forwarding manually, clear the Configure SNMP Settings option.

9 Click Next.

The Discovering Device page is displayed until SupportAssist Enterprise identifies the device.

If the device is discovered successfully, the Assign Device Group (Optional) page is displayed. Otherwise, an appropriate error message is displayed.

10 If desired, from the Assign Other Group list, select a device group to which you want to assign the device.

If you do not select a device group, the device is assigned to the Default device group. For information on the Default device group, see Predefined device groups.

11 Click Finish.

NOTE: If you have selected the Configure SNMP Settings option, device addition may take some time.

The device is added to the device inventory and the Summary page is displayed.

12 Click OK to close the Add Single Device wizard.

CAUTION: If the SNMP settings of the device is not configured to forward alerts to the server where SupportAssist Enterprise is installed, SupportAssistEnterprise cannot monitor hardware issues that may occur on the device.

The device is added to the device inventory with an appropriate status. When SupportAssist Enterprise is configuring the SNMP settings, the device displays a Configuring SNMP status. After the configuration of SNMP settings are completed, the device status changes to OK. If an issue occurs during the configuration of SNMP, the device displays an appropriate status in the Devices page.

NOTE: If the device displays an error status, click the error link to view the description of the issue and the possible resolution steps. To retry the SNMP configuration, you can use the Tasks list available on the device overview pane.

Next steps
(Optional) You can also add the server in SupportAssist Enterprise by using the operating system details. In this scenario, SupportAssist Enterprise automatically correlates the alerts and collection of system information from both the operating system and the IDRAC. For instructions to add the server, see Adding a server or hypervisor. For more information on how SupportAssist Enterprise correlates device information, see Device correlation.

If a message is displayed stating that the device is added to the Staging group:

1 Ensure that all prerequisites for adding the device are met.
2 Revalidate the device. See Revalidating a device.

Add Single Device
Deep discovery
Adding a chassis

**Prerequisites**
- You must be logged in to SupportAssist Enterprise with elevated or administrative privileges. See [Granting elevated or administrative privileges to users](#).
- The device must be reachable from the server where SupportAssist Enterprise is installed.
- Port 22 and 161 must be open on the device.
- Secure Shell (SSH) service must be running on the device.

**About this task**
SupportAssist Enterprise can monitor hardware issues and collect system information from Dell chassis. The chassis that you can add in SupportAssist Enterprise are:
- Dell PowerEdge FX2/FX2s
- Dell PowerEdge VRTX
- Dell PowerEdge M1000e

**Steps**
1. Point to **Devices** and click **View Devices**.
   - The **Devices** page is displayed.
2. Click **Add Devices**.
   - The **Add Single Device or Import Multiple Devices** wizard is displayed.
3. Select **Single Device**.
4. From the **Device Type** list, select **Chassis**.
5. Type the host name or IP address of the device in the appropriate field.

   **NOTE:** Dell recommends that you enter the host name of the device. If the host name is not available, you can enter the IP address of the device.
6. To discover and add other supported device types that may be associated with the chassis, select **Perform deep discovery**. See [Deep discovery](#).
7. If desired, type a name for the device in the appropriate field.
   - The name that you enter is used to represent the device in SupportAssist Enterprise. If you do not enter a name, the IP address or host name that you have entered is used to represent the device.
8. Perform one of the following:
   - If you selected the **Perform deep discovery** option, select the credential profile that you want to assign to the device and its associated device types. To create a new credential profile, select **Create New Profile** and click **Create**. To enter the profile details, follow steps 3 to 7 in [Creating Credential Profile](#).
   - If you did not select the **Perform deep discovery** option, select an Account Credentials that you want to assign to the device. To create a new account credentials, select **Create New Account** and click **Create**. To enter the account details, follow steps 3 to 6 in [Adding Account Credentials](#).
9. If you want SupportAssist Enterprise to monitor hardware issues that may occur on the device, select the **Enable Monitoring** option.

   **NOTE:** If the registration is completed, by default, the Enable Monitoring option is selected. If the registration is not completed, when you select the Enable Monitoring option, you are requested to complete the registration. To continue, you can either clear the Enable Monitoring option or click **Register** to open the registration wizard.

   **NOTE:** SupportAssist Enterprise can monitor hardware issues that may occur on the device only if the device is configured to forward SNMP traps (alerts) to the server where SupportAssist Enterprise is installed. For instructions to configure alert forwarding on a chassis, see [Manually configuring the alert destination of a chassis by using the web interface](#).
10. Click **Next**.
    - The **Discovering Device** page is displayed until SupportAssist Enterprise identifies the device.
If the device is discovered successfully, the Assign Device Group (Optional) page is displayed. Otherwise, an appropriate error message is displayed.

11 If desired, from the Assign Other Group list, select a device group to which you want to assign the device.
   If you do not select a device group, the device is assigned to the Default device group. For information on the Default device group, see Predefined device groups.

12 Click Finish.
   The device is added to the device inventory and the Summary page is displayed.

13 Click OK to close the Add Single Device wizard.

Next steps

⚠️ CAUTION: If the device is not configured to forward alerts, SupportAssist Enterprise cannot detect hardware issues that may occur on the device.

For monitoring hardware issues that may occur on the device only — Ensure that the device is configured to forward SNMP traps (alerts) to the server where SupportAssist Enterprise is installed. For instructions to configure alert forwarding, see Manually configuring the alert destination of a chassis by using the web interface.

If a message is displayed stating that the device is added to the Staging group:

1 Ensure that all prerequisites for adding the device are met.
2 Revalidate the device. See Revalidating a device.

Adding a Networking device

Prerequisites

- You must be logged in to SupportAssist Enterprise with elevated or administrative privileges. See Granting elevated or administrative privileges to users.
- The device must be reachable from the server where SupportAssist Enterprise is installed.
- Port 22 and 161 must be open on the device.
- Secure Shell (SSH) and SNMP services must be running on the device.

About this task
SupportAssist Enterprise can monitor hardware issues and collect system information from Dell Networking devices. The networking devices that you can add in SupportAssist Enterprise are:

- Dell PowerConnect
- Dell Force10
- Dell Networking
- Dell X-Series switches
- Dell Wireless Controllers Mobility Series

Steps

1 Point to Devices and click View Devices.
   The Devices page is displayed.
2 Click Add Devices.
   The Add Single Device or Import Multiple Devices wizard is displayed.
3 Select Single Device.
4 From the Device Type list, select Networking.
Type the host name or IP address of the device in the appropriate field.

**NOTE:** Dell recommends that you enter the host name of the device. If the host name is not available, you can enter the IP address of the device.

To discover and add other supported device types that may be associated with the networking device, select **Perform deep discovery**. See **Deep discovery**.

If desired, type a name for the device in the appropriate field. The name that you enter is used to represent the device in SupportAssist Enterprise. If you do not enter a name, the IP address or host name that you have entered is used to represent the device.

Perform one of the following:

- If you selected the **Perform deep discovery** option, select the credential profile that you want to assign to the device and its associated device types. To create a new credential profile, select **Create New Profile** and click **Create**. To enter the profile details, follow steps 3 to 7 in **Creating Credential Profile**.

- If you did not select the **Perform deep discovery** option, select an Account Credentials that you want to assign to the device. To create a new account credentials, select **Create New Account** and click **Create**. To enter the account details, follow steps 3 to 6 in **Adding Account Credentials**.

If desired, type a name for the device in the appropriate field. The name that you enter is used to represent the device in SupportAssist Enterprise. If you do not enter a name, the IP address or host name that you have entered is used to represent the device.

Perform one of the following:

- If you selected the **Perform deep discovery** option, select the credential profile that you want to assign to the device and its associated device types. To create a new credential profile, select **Create New Profile** and click **Create**. To enter the profile details, follow steps 3 to 7 in **Creating Credential Profile**.

- If you did not select the **Perform deep discovery** option, select an Account Credentials that you want to assign to the device. To create a new account credentials, select **Create New Account** and click **Create**. To enter the account details, follow steps 3 to 6 in **Adding Account Credentials**.

If you want SupportAssist Enterprise to monitor the health status of the device, select the **Enable Monitoring** option.

**NOTE:** If the registration is completed, by default, the Enable Monitoring option is selected. If the registration is not completed, when you select the Enable Monitoring option, you are requested to complete the registration. To continue, you can either clear the Enable Monitoring option or click Register to open the registration wizard.

**NOTE:** SupportAssist Enterprise can monitor the health status of the device only if the SNMP settings of the device is configured to forward SNMP traps (alerts) to the server where SupportAssist Enterprise is installed. For instructions to configure alert forwarding, see **Manually configuring the alert destination of a networking device**.

Click **Next**.

The **Discovering Device** page is displayed until SupportAssist Enterprise identifies the device.

If the device is discovered successfully, the **Assign Device Group (Optional)** page is displayed. Otherwise, an appropriate error message is displayed.

If desired, from the **Assign Other Group** list, select a device group to which you want to assign the device.

If you do not select a device group, the device is assigned to the **Default** device group. For information on the **Default** device group, see **Predefined device groups**.

Click **Finish**.

The device is added to the device inventory and the **Summary** page is displayed.

Click **OK** to close the **Add Single Device** wizard.

**Next steps**

**CAUTION:** If the device is not configured to forward alerts, SupportAssist Enterprise cannot detect hardware issues that may occur on the device.

For monitoring hardware issues that may occur on the device only — Ensure that the device is configured to forward SNMP traps (alerts) to the server where SupportAssist Enterprise is installed. For instructions to configure alert forwarding, see **Manually configuring the alert destination of a networking device**.

Adding a PowerVault MD Series storage array

Prerequisites

- You must be logged in to SupportAssist Enterprise with elevated or administrative privileges. See Granting elevated or administrative privileges to users.
- The device must be reachable from the server where SupportAssist Enterprise is installed.
- Port 2463 must be open on the device.

About this task

SupportAssist Enterprise can only collect system information from the Storage MD Series arrays. By adding a Storage MD Series device, you will be able to collect system information on demand and after deployment.

Steps

1. Point to Devices and click View Devices.
   The Devices page is displayed.
2. Click Add Devices.
   The Add Single Device or Import Multiple Devices wizard is displayed.
4. From the Device Type list, select PowerVault.
5. Type the host name or IP address of the device in the appropriate field.

   **NOTE:** Dell recommends that you enter the host name of the device. If the host name is not available, you can enter the IP address of the device.

6. To discover and add other supported device types that may be associated with the device, select Perform deep discovery.
7. If desired, type a name for the device in the appropriate field.
   The name that you enter is used to represent the device in SupportAssist Enterprise. If you do not enter a name, the IP address or host name that you have entered is used to represent the device.
8. Perform one of the following:
   - If you selected the Perform deep discovery option, select the credential profile that you want to assign to the device and its associated device types. To create a new credential profile, select Create New Profile and click Create. To enter the profile details, follow steps 3 to 7 in Creating Credential Profile.
   - If you did not select the Perform deep discovery option, select an Account Credentials that you want to assign to the device. To create a new account credentials, select Create New Account and click Create. To enter the account details, follow steps 3 to 6 in Adding Account Credentials.
9. Click Next.
   The Discovering Device page is displayed until SupportAssist Enterprise identifies the device.
   If the device is discovered successfully, the Assign Device Group (Optional) page is displayed. Otherwise, an appropriate error message is displayed.
10. If desired, from the Assign Other Group list, select a device group to which you want to assign the device.
    If you do not select a device group, the device is assigned to the Default device group. For information on the Default device group, see Predefined device groups.
11. Click Finish.
    The device is added to the device inventory and the Summary page is displayed.
12. Click OK to close the Add Single Device wizard.

Next step

If a message is displayed stating that the device is added to the Staging group:

1. Ensure that all prerequisites for adding the device are met.
2. Revalidate the device. See Revalidating a device.
Adding an EqualLogic PS Series storage solution

Prerequisites

- You must be logged in to SupportAssist Enterprise with elevated or administrative privileges. See Granting elevated or administrative privileges to users.
- The device must be reachable from the server where SupportAssist Enterprise is installed.
- Ports 21, 22, and 161 must be open on the device.
- Secure Shell (SSH) and SNMP service must be running on the device.

About this task
SupportAssist Enterprise can only collect system information from the Storage PS Series (previously EqualLogic) arrays. By adding a Storage PS Series device, you will be able to collect system information on demand and after deployment.

Steps

1. Point to Devices and click View Devices.
   The Devices page is displayed.
2. Click Add Devices.
   The Add Single Device or Import Multiple Devices wizard is displayed.
4. From the Device Type list, select Peer Storage (PS) / EqualLogic.
5. Type the host name or IP address of the Storage PS Series group in the appropriate field.
   **NOTE:** Dell recommends that you enter the host name of the device. If the host name is not available, you can enter the IP address of the device.
6. To discover and add other supported device types that may be associated with the Storage PS Series device, select Perform deep discovery. See Deep discovery.
7. If desired, type a name for the device in the appropriate field.
   The name that you enter is used to represent the device in SupportAssist Enterprise. If you do not enter a name, the IP address or host name that you have entered is used to represent the device.
8. Perform one of the following:
   - If you selected the Perform deep discovery option, select the credential profile that you want to assign to the device and its associated device types. To create a new credential profile, select Create New Profile and click Create. To enter the profile details, follow steps 3 to 7 in Creating Credential Profile.
   - If you did not select the Perform deep discovery option, select an Account Credentials that you want to assign to the device. To create a new account credentials, select Create New Account and click Create. To enter the account details, follow steps 3 to 6 in Adding Account Credentials.
9. Click Next.
   The Discovering Device page is displayed until SupportAssist Enterprise identifies the device.
   If the device is discovered successfully, the Assign Device Group (Optional) page is displayed. Otherwise, an appropriate error message is displayed.
10. If desired, from the Assign Other Group list, select a device group to which you want to assign the device.
    If you do not select a device group, the device is assigned to the Default device group. For information on the Default device group, see Predefined device groups.
11. Click Finish.
    The device is added to the device inventory and the Summary page is displayed.
12. Click OK to close the Add Single Device wizard.
Next step
If a message is displayed stating that the device is added to the Staging group:

1. Ensure that all prerequisites for adding the device are met.
2. Revalidate the device. See Revalidating a device.

Adding a Compellent SC Series storage solution

Prerequisites

- You must be logged in to SupportAssist Enterprise with elevated or administrative privileges. See Granting elevated or administrative privileges to users.
- The device must be reachable from the server where SupportAssist Enterprise is installed.
- Port 443 must be open on the device.
- REST service must be running on the device.
- For collecting system information, SupportAssist must be enabled in the Dell Compellent Enterprise Manager application.

About this task
SupportAssist Enterprise can only collect system information from the Storage SC Series solutions. By adding a Storage SC Series device, you will be able to collect system information on demand and after deployment.

Steps

1. Point to Devices and click View Devices. The Devices page is displayed.
2. Click Add Devices. The Add Single Device or Import Multiple Devices wizard is displayed.
3. From the Device Type list, select Storage Center (SC) / Compellent.
4. Type the host name or IP address of the device in the appropriate field.
   
   ✔️ NOTE: Dell recommends that you enter the host name of the device. If the host name is not available, you can enter the IP address of the device.
5. If desired, type a name for the device in the appropriate field. The name that you enter is used to represent the device in SupportAssist Enterprise. If you do not enter a name, the IP address or host name that you have entered is used to represent the device.
6. From the Account Credentials list, select an account credentials that you want to assign to the device. To create a new account credentials, select Create New Account and click Create. To enter the account details, follow steps 3 to 6 in Adding Account Credentials.
7. Click Next. The Discovering Device page is displayed until SupportAssist Enterprise identifies the device.
   If the device is discovered successfully, the Assign Device Group (Optional) page is displayed. Otherwise, an appropriate error message is displayed.
8. If desired, from the Assign Other Group list, select a device group to which you want to assign the device.
   If you do not select a device group, the device is assigned to the Default device group. For information on the Default device group, see Predefined device groups.
9. Click Finish. The device is added to the device inventory and the Summary page is displayed.
10. Click OK to close the Add Single Device wizard.
Next step

If a message is displayed stating that the device is added to the Staging group:

1. Ensure that all prerequisites for adding the device are met.
2. Revalidate the device. See Revalidating a device.

Adding a Fluid File System NAS device

Prerequisites

- You must be logged in to SupportAssist Enterprise with elevated or administrative privileges. See Granting elevated or administrative privileges to users.
- The device must be reachable from the server where SupportAssist Enterprise is installed.
- Ports 22 and 44421 must be open on the device.
- Secure Shell (SSH) service must be running on the device.

About this task

SupportAssist Enterprise can only collect system information from a Dell Fluid File System (FluidFS) network attached storage (NAS) device. By adding a FluidFS NAS device, you will be able to collect system information on demand and after deployment. The FluidFS NAS devices that you can add are:

- Storage SC Series
- Storage PS Series
- Storage MD Series

Steps

1. Point to Devices and click View Devices. The Devices page is displayed.
2. Click Add Devices. The Add Single Device or Import Multiple Devices wizard is displayed.
4. From the Device Type list, select Fluid File System (FluidFS).
5. Type the host name or IP address of the device in the appropriate field.

   **NOTE:** Dell recommends that you enter the host name of the device. If the host name is not available, you can enter the IP address of the device.

6. If desired, type a name for the device in the appropriate field. The name that you enter is used to represent the device in SupportAssist Enterprise. If you do not enter a name, the IP address or host name that you have entered is used to represent the device.
7. From the Account Credentials list, select an account credentials that you want to assign to the device. To create a new account credentials, select Create New Account and click Create. To enter the account details, follow steps 3 to 6 in Adding Account Credentials.
8. Click Next. The Discovering Device page is displayed until SupportAssist Enterprise identifies the device. If the device is discovered successfully, the Assign Device Group (Optional) page is displayed. Otherwise, an appropriate error message is displayed.
9. If desired, from the Assign Other Group list, select a device group to which you want to assign the device. If you do not select a device group, the device is assigned to the Default device group. For information on the Default device group, see Predefined device groups.
10 Click **Finish**.
   The device is added to the device inventory and the **Summary** page is displayed.

11 Click **OK** to close the **Add Single Device** wizard.

**Next step**

If a message is displayed stating that the device is added to the **Staging** group:

1 Ensure that all prerequisites for adding the device are met.
2 Revalidate the device. See **Revalidating a device**.

**Related links**

- **Add Single Device**
- **Deep discovery**

## Adding a software

### Prerequisites

- You must be logged in to SupportAssist Enterprise with elevated or administrative privileges. See **Granting elevated or administrative privileges to users**.
- The device must be reachable from the server where SupportAssist Enterprise is installed.

### About this task

SupportAssist Enterprise can only collect system information from the management and monitoring software such as VMware vCenter, Microsoft System Center Virtual Machine Manager (SCVMM), Dell EqualLogic SAN Headquarters (SAN HQ), and Host Integration Toolkit for VMware (HIT Kit / VSM).

### Steps

1. Point to **Devices** and click **View Devices**.
   The **Devices** page is displayed.
2. Click **Add Devices**.
   The **Add Single Device or Import Multiple Devices** wizard is displayed.
3. From the **Device Type** list, select **Software**.
4. From the **Select Software type** list, select the software type.
5. Type the host name or IP address of the device in the appropriate field.

   **NOTE:** Dell recommends that you enter the host name of the device. If the host name is not available, you can enter the IP address of the device.

6. If desired, type a name for the device in the appropriate field.
   The name that you enter is used to represent the device in SupportAssist Enterprise. If you do not enter a name, the IP address or host name that you have entered is used to represent the device.
7. From the **Account Credentials** list, select an account credentials that you want to assign to the device. To create a new account credentials, select **Create New Account** and click **Create**. To enter the account details, follow steps 3 to 6 in **Adding Account Credentials**.
8. If desired, from the **Assign Other Group** list, select a device group to which you want to assign the device.
   If you do not select a device group, the device is assigned to the **Default** device group. For information on the **Default** device group, see **Predefined device groups**.
9. Click **Finish**.
   The device is added to the device inventory and the **Summary** page is displayed.
10 Click **OK** to close the **Add Single Device** wizard.

**Next step**

If a message is displayed stating that the device is added to the **Staging** group:
Ensure that all prerequisites for adding the device are met.

Revalidate the device. See Revalidating a device.

Add Single Device
Deep discovery

Adding a solution

Prerequisites
- You must be logged in to SupportAssist Enterprise with elevated or administrative privileges. See Granting elevated or administrative privileges to users.
- The device must be reachable from the server where SupportAssist Enterprise is installed.
- Port 443 must be open on the device.
- For web-scale solution, firmware version 4.x or later must be installed on the device for the collection of system information.

About this task
SupportAssist Enterprise can monitor hardware issues and collect system information from a Web-Scale Hyper-converged appliance.

Steps
1. Point to Devices and click View Devices.
   The Devices page is displayed.
2. Click Add Devices.
   The Add Single Device or Import Multiple Devices wizard is displayed.
4. From the Device Type list, select Web-Scale.
5. From the Select solution type list, select the solution.
6. Type the host name or IP address of the device in the appropriate field.
   NOTE: Dell recommends that you enter the host name of the device. If the host name is not available, you can enter the IP address of the device.
7. To discover and add other supported device types that may be associated with the solution, select Perform deep discovery. See Deep discovery.
8. If desired, type a name for the device in the appropriate field.
   The name that you enter is used to represent the device in SupportAssist Enterprise. If you do not enter a name, the IP address or host name that you have entered is used to represent the device.
9. Perform one of the following:
   - If you selected the Perform deep discovery option, select the credential profile that you want to assign to the device and its associated device types. To create a new credential profile, select Create New Profile and click Create. To enter the profile details, follow steps 3 to 7 in Creating Credential Profile.
   - If you did not select the Perform deep discovery option, select an Account Credentials that you want to assign to the device. To create a new account credentials, select Create New Account and click Create. To enter the account details, follow steps 3 to 6 in Adding Account Credentials.
10. If desired, from the Assign Other Group list, select a device group to which you want to assign the device.
    If you do not select a device group, the device is assigned to the Default device group. For information on the Default device group, see Predefined device groups.
11. Click Finish.
    The device is added to the device inventory and the Summary page is displayed.
12. Click OK to close the Add Single Device wizard.

Next step
If a message is displayed stating that the device is added to the Staging group:
1. Ensure that all prerequisites for adding the device are met.
2. Revalidate the device. See Revalidating a device.

**Related links**
- Add Single Device

**Adding a device by duplication**

**Prerequisites**
- You must be logged in to SupportAssist Enterprise with elevated or administrative privileges. See Granting elevated or administrative privileges to users.
- The device must be reachable from the server where SupportAssist Enterprise is installed.
- The required network ports must be open on the device. For the network port requirements on the remote device, see Network requirements.

**About this task**
You can use the Duplicate feature to quickly add a device that is of the same type as a device that you have already added. For example, if you have already added a remote server, you select that server and click Duplicate to start adding another remote server.

**Steps**
1. Point to Devices and click View Devices.
   - The Devices page is displayed.
2. Select a device which is of the same type as the device that you want to add.
Figure 5. Duplicate option

The device overview pane is displayed.

3 Click Duplicate.
   The Duplicate Device wizard is displayed.

4 Type the host name or IP address of the device in the appropriate field.
   
   **NOTE**: Dell recommends that you enter the host name of the device. If the host name is not available, you can enter the IP address of the device.

5 If you want to discover a device and its associated device types, select Perform deep discovery.

6 If desired, type a name for the device in the appropriate field.
   The name that you enter is used to represent the device in SupportAssist Enterprise. If you do not enter a name, the IP address or host name that you have entered is used to represent the device.

7 Perform one of the following:
   - If you selected the **Perform deep discovery** option, select the credential profile that you want to assign to the device and its associated device types. To create a new credential profile, select **Create New Profile** and click Create. To enter the profile details, follow steps 3 to 7 in Creating Credential Profile.
   - If you did not select the **Perform deep discovery** option, select an Account Credentials that you want to assign to the device. To create a new account credentials, select **Create New Account** and click Create. To enter the account details, follow steps 3 to 6 in Adding Account Credentials.

8 Click Next.
The **Discovering Device** page is displayed until SupportAssist identifies the device. If the device is discovered successfully, the **Device Options** page is displayed. Otherwise, an appropriate error message is displayed.

9. If desired, from the **Assign Other Group** list, select a device group to which you want to assign the device. If you do not select a device group, the device is assigned to the **Default** device group. For information on the **Default** device group, see **Predefined device groups**.

10. Click **Finish**. The device is added to the device inventory and the **Summary** page is displayed.

11. Click OK to close the **Duplicate Device** wizard.

**Next step**
If a message is displayed stating that the device is added to the **Staging** group:

1. Ensure that all prerequisites for adding the device are met.
2. Revalidate the device. See **Revalidating a device**.

### Importing multiple devices

**Prerequisite**
You must be logged in to SupportAssist Enterprise with elevated or administrative privileges. See **SupportAssist Enterprise user groups** and **Granting elevated or administrative privileges to users**.

**About this task**
You can import multiple devices by using a .csv file that contains details of the devices in a specified format.

1. **NOTE**: The maximum number of devices that you can import by using a csv file is 5,000.

2. **NOTE**: The Import Multiple Devices option does not support the import of software.

3. **NOTE**: Deep discovery is not supported when importing multiple devices by using a .csv file.

**Steps**

1. Point to **Devices** and click **View Devices**. The **Devices** page is displayed.

2. Click **Add Devices**. The **Add Single Device or Import Multiple Devices** wizard is displayed.

3. Select **Multiple Devices**.
4 Click Download template and save the .csv file.
5 Open the .csv template and update the details of the devices.
   An example of a .csv file with the device details is as follows:
   
   Device Type,Device SubType,IP/Hostname,Display Name,Username,Password,Enable Password,Community String,Auto SNMP Config(Yes/No),Auto Push OMSA (Yes/No)
   Server/Hypervisor,LINUX,192.168.1.1,ServerA.com,root,Password$,Enabled,public,No,
   Server/Hypervisor,ESX,192.168.1.1,ServerA.com,root,Password$,Enabled,public,No,
   Server/Hypervisor,ESXi,192.168.1.1,ServerA.com,root,Password$,Enabled,public,No,
   Server/Hypervisor,WINDOWS,192.168.1.1,ServerA.com,administrator,Password$,Enabled,,No,
   Storage Center (SC) / Compellent,,192.168.1.3,ServerC,,,Enabled,private,No,
   PowerVault,,192.168.1.4,ServerD,root,Password$,Enabled,private,No,
   Chassis,,192.168.1.5,ServerE,root,Password$,Enabled,private,No,
   PeerStorage(PS) / Equallogic,,192.168.1.6,ServerF,root,Password$,Enabled,private,No,
   Fluid File System (Fluid FS),192.168.1.7,ServerG,root,Password$,Enabled,private,No,
   Networking,,192.168.1.8,ServerH,root,Password$,Enabled,private,No,
   iDRAC,,192.168.1.9,ServerI,root,Password$,Enabled,private,No,

   **NOTE:** If the device type is Server / Hypervisor, you must enter one of the following in the Device SubType column:
   - Windows
   - Linux
   - ESX
   - ESXi

   **NOTE:** If you are using a .csv file that you have downloaded from SupportAssist Enterprise version 1.1, then you must add the Device SubType column in the template.

6 Click Browse.
   The Choose file to Upload window is displayed.
7 Navigate to the folder that contains the .csv file, select the .csv file, and then click Open.
8 If you want SupportAssist Enterprise to monitor the health status of the devices, ensure that the Enable Monitoring option is selected.
9 Click Next.
Figure 7. Importing devices window

The **Importing Devices** window is displayed.

If you click **Cancel** while the device import operation is in progress:

- The import operation is stopped after your confirmation.
- Devices that were already imported are retained in the **Default** or **Staging** group.
- The import operation continues for devices for which discovery has already started.
- Devices for which the initial identification is incomplete are discarded.

While importing devices that are members of one or more domains by using a .csv file, if SupportAssist Enterprise detects that the credentials of two of those devices of a certain domain are incorrect, the import operation is paused for other devices in that domain. The import operation is paused to prevent automatic lockout of the domain account due to repetitive authentication failures. For devices of other domains included in the .csv file, the import process continues normally. If the import process is paused for devices of a certain domain, you can perform one of the following:

- Click **Cancel** to stop the import operation. You can try importing the .csv file again after verifying and updating the device credentials.
- Click **Resume** to continue importing other devices that are members of that domain.

⚠️ **CAUTION:** Resuming the import operation may result in lockout of the domain account, if other devices in the .csv file use the same credentials.

Click **Close**.
The **Device Import** pane is displayed. The result of the device import operation is as follows:

- Devices that were imported successfully are added to the device inventory.
- Devices that were identified, but did not meet certain prerequisites, are added to the **Staging** group. For more information on the **Staging** group, see **Predefined device groups**.
- Devices that were not identified are notified as failed devices.

**Next step**

- For devices that were added successfully to the device inventory:
  - Verify if the device displays an error status. If an error status is displayed, click the error status to view a detailed description of the error and a possible resolution.
  - You may also have to perform additional tasks that may be required to enable SupportAssist Enterprise to monitor those devices. To allow SupportAssist Enterprise to monitor the device, enable monitoring and ensure that the SNMP settings of the device is configured. For instructions to enable monitoring, see **Enabling or disabling monitoring of a device**. For instructions to configure the SNMP settings of a device, see **Configuring SNMP settings by using SupportAssist Enterprise** and **Manually configuring SNMP settings**.
- For devices that were added to the **Staging** group:
  - If the device is an iDRAC, ensure that the iDRAC Enterprise license is installed. For information on purchasing and installing the iDRAC Enterprise license, see the **iDRAC User's Guide** at [Dell.com/idracmanuals](http://Dell.com/idracmanuals).
  - If the device is a Storage SC Series array, ensure that SupportAssist is enabled in the Dell Compellent Enterprise Manager application. For information on enabling the SupportAssist in Enterprise Manager, see the **Dell Enterprise Manager Administrator's Guide** at [Dell.com/storagemanuals](http://Dell.com/storagemanuals).
  - Ensure that all prerequisites for adding the device are met. For information on the prerequisites for adding a device, see the "Prerequisites" section in the instructions for adding each device type. See **Adding a single device**.
  - Revalidate each device. See **Revalidating a device**.
- For devices notified as failed devices:
  a. Export the device details to view the issue description and possible resolution. See **Exporting details of devices that were not imported**.
  b. Update the device details in the .csv file and try importing the devices again.
## Exporting details of devices that were not imported

### About this task
You can export the details of the devices that were not imported as a .csv file. The exported file contains the device details, description of the issue, and the possible resolution.

### Steps
1. Point to **Devices** and click **View Devices**. The **Devices** page is displayed.
2. In the **Device Import** pane, click **Save failed device list**. The **Save As** window is displayed.
3. Navigate to the location where you want to save the file and click **Save**.

### Next step
Open the exported .csv file. The **Status** column displays the error code, description of the issue, and the possible resolution.

## Revalidating a device

### Prerequisites
- The device that you want to revalidate must be in the **Staging** group.
- If the device is a Storage SC Series array, ensure that SupportAssist is enabled in the Dell Compellent Enterprise Manager application. For information on enabling the SupportAssist in Enterprise Manager, see the *Dell Enterprise Manager Administrator’s Guide* at [Dell.com/storagemanuals](http://Dell.com/storagemanuals).
- Ensure that all prerequisites for adding the device are met. For information on the prerequisites for adding a device, see the "Prerequisites" section in the instructions for adding each device type. See *Adding a single device*.

### About this task
Revalidating a device enables you to verify if a device present in the **Staging** group meets the requirements for enabling SupportAssist Enterprise capabilities.

### Steps
1. Point to **Devices** and click **View Devices**. The **Devices** page is displayed.
2. In the **Refine By** pane, select **Staging**. The devices in the **Staging** group are displayed.
3. Select the device that you want to revalidate.
4 Click **Revalidate**.

SupportAssist Enterprise identifies the device and verifies if all the requirements for enabling SupportAssist Enterprise capabilities are met. If the revalidation is successful, the **Assign Device Group (Optional)** page is displayed.

5 If desired, from the **Assign Other Group** list, select a device group to which you want to assign the device.

6 Click **Finish**.

The device is added to the device inventory and the **Summary** page is displayed.

7 Click **OK**.
Managing device discovery rules

A device discovery rule enables you to discover and add devices that are present within one or more IP address ranges. Creating a device discovery rule helps you add multiple devices, and reduces the effort involved in adding each device individually.

Topics:
- Creating device discovery rule
- Viewing the device discovery rule overview pane
- Editing device discovery rule
- Deleting device discovery rule
- Running the discovery rule

Creating device discovery rule

**Prerequisite**
You must be logged in to SupportAssist Enterprise with elevated or administrative privileges. See Granting elevated or administrative privileges to users.

**About this task**
By creating a discovery rule, you can discover and add devices based on IP address ranges. While you create the discovery rule, you can select a Credential Profile that must be applied to the devices. After creating the device discovery rule, you can run the rule immediately or based on a schedule to discover devices.

**Steps**
1. Point to Devices and click Manage Rules for Device Discovery.
   The Manage Discovery Rules page is displayed.
2. Click Create Discovery Rule.
   The Create Discovery Rule window is displayed.
3. Type a name for the discovery rule in the appropriate field.
4. From the Credential profile list, select a Credential Profile that contains the Account Credentials for the device types that are present within the IP address ranges. To create a new credential profile, select Create New Profile and click Create. To enter the profile details, follow steps 3 to 7 in Creating Credential Profile.
5. Type the IP address or IP address range of the devices that you want to discover. To add another IP address range, click Add another range, and then type the IP address range of the devices.

**NOTE:** You can add up to five different IP address ranges in the following format:
- 10.34.**.**
- 10.34.1-10.*
- 10.34.1-10.1-10
- 10.34.1-10.1-10
- 10.34.1.1/24

**NOTE:** Ensure that the IP address ranges that you have entered do not overlap with each other.

**NOTE:** For an IP address entered in Classless-Inter Domain Routing (CIDR) notation, for example 10.34.1.1/24, the subnet mask entry is not considered.
6 Type the Subnet Mask of the specified IP address range in the appropriate field.

7 Select an option based on your preference:
   - Run now — Discover the devices immediately.
   - Run once — Discover the devices at a specific date and time.
   - Recur — Schedule the discovery of devices at periodic intervals.

8 Click Next.
   The Discovering Devices window is displayed. Based on the device types included in the Credential Profile, the device types are selected automatically.

9 If desired, clear the device types that you do not want to discover.

10 In the Configuration Settings section, clear the following options based on your preference:
   - Perform deep discovery — Discover a device and its associated device types. See Deep discovery.
   - Enable Monitoring — Enables SupportAssist Enterprise to detect hardware issues that may occur on the discovered devices.
   - Configure SNMP to receive alerts from this device — Automatically configure the SNMP settings of the discovered device to forward alerts (SNMP traps) to SupportAssist Enterprise.
   - Install latest version of OMSA — Enables SupportAssist Enterprise to install the latest version of OMSA or iDRAC Service Module (iSM) on the discovered servers. OMSA or iSM is required for collecting system information and to generate alerts from servers.

11 Click Add Rule.
   The discovery rule is added and listed on the Manage Discovery Rules page. If you selected Run now, discovery of devices is initiated.

Viewing the device discovery rule overview pane

About this task
The Manage Discovery Rules page enables you to view the Discovery Rule Details, Discovery Rule Current Iteration Status, Recent Activity, and Current v/s Previous Discovery Rule Status panes. For more information about the attributes displayed in these panes, see Discovery Rule Details, Discovery Rule Current Iteration Status, Recent Activity, and Current v/s Previous Discovery Rule Status.

Steps
1 Point to Devices and click Manage Rules for Device Discovery.
   The Manage Discovery Rules page is displayed.

2 Select a discovery rule.
   The Discovery Rule Details, Discovery Rule Current Iteration Status, Recent Activity, and Current v/s Previous Discovery Rule Status panes are displayed.

Editing device discovery rule

Prerequisite
You must be logged in to SupportAssist Enterprise with elevated or administrative privileges. See Granting elevated or administrative privileges to users.

About this task
You can edit the discovery rule based on your requirement.
Steps
1. Point to Devices and click Manage Rules for Device Discovery.
   The Manage Discovery Rules page is displayed.
2. Select the discovery rule that you want to edit and click Edit.
   The Edit Device Discovery Rule window is displayed.
3. Update the name, IP address ranges, credential profile, and schedule as required and click Next.
   The Discovering Devices window is displayed.
4. Select or clear the devices types and the configuration settings.
5. Click Edit Rule.
   The discovery rule is updated.

Deleting device discovery rule

Prerequisite
You must be logged in to SupportAssist Enterprise with elevated or administrative privileges. See Granting elevated or administrative privileges to users.

About this task
You can delete the discovery rule based on your preference.

Steps
1. Point to Devices and click Manage Rules for Device Discovery.
   The Manage Discovery Rules page is displayed.
2. Select the discovery rule that you want to delete and click Delete.
   The Delete Device Discovery Rule window is displayed.
3. Click Yes.

- Manage Device Discovery Rule

Running the discovery rule

Prerequisite
You must be logged in to SupportAssist Enterprise with elevated or administrative privileges. See Granting elevated or administrative privileges to users.

About this task
After creating a discovery rule, you can run the rule at any time.

Steps
1. Point to Devices and click Manage Rules for Device Discovery.
   The Manage Discovery Rules page is displayed.
2. Select the discovery rule that you want to run and click Run now.
   The devices associated with the discovery rule are discovered immediately.

   **NOTE:** Devices that were discovered by the discovery rule, but are later unreachable are moved to the Inactive status. If a device is in an Inactive status even after the discovery rule is run for three consecutive times, the device is deleted automatically from SupportAssist Enterprise.

Viewing cases and devices

The SupportAssist Enterprise user interface displays the devices that you have added and the support cases that are open for those devices. From the Devices page, you can perform various device-specific operations such as view collections, enable or disable monitoring, and so on. From the Cases page, you can manage cases that were opened by SupportAssist Enterprise.

**NOTE:** SupportAssist Enterprise does not create a support case for every alert that is received from a monitored device. A support case is created only if the alert type and number of alerts that are received from the device match with the criteria defined by Dell for support case creation.

Topics:
- Viewing all support cases
- Viewing support cases for a specific device
- Case management options
- Viewing the device inventory
- Viewing the device overview pane
- Sorting the displayed data

**Viewing all support cases**

**NOTE:** The list of open cases is displayed only if you have completed the registration of SupportAssist.

To view the support cases that are present for your monitored devices, point to Cases and click View Cases. A Fetching Cases progress indicator is displayed at the top of the Cases page when SupportAssist Enterprise is checking if cases are present for the devices that you have added.

![Figure 10. Cases page](image)
NOTE: By default, the case list is grouped by the device name or device IP address. The last refreshed date and time that is displayed in the group header indicates when the case information was last retrieved from Dell.

Support case information is automatically available, for supported devices that have valid Service Tags when SupportAssist Enterprise connects to the Dell support case and service contract databases over the internet. Support case information is refreshed only in the following situations:

- When you open the **Cases** page.
- When you click the **Refresh** link on the **Cases** page.
- When the **Cases** page is open and you refresh the web browser window.

After SupportAssist Enterprise has completed its open support cases update, the **Cases** page displays the current support cases. For information on the fields and details displayed on the **Cases** page, see Case page.

Viewing support cases for a specific device

**Prerequisite**
You must be logged in to SupportAssist Enterprise with elevated or administrative privileges. See SupportAssist Enterprise user groups and Granting elevated or administrative privileges to users.

**About this task**
You can view the open support cases for a specific monitored device by using the **Check for cases** option.

**Steps**
1. Point to **Devices** and click **View Devices**.
   The **Devices** page is displayed.
2. Select the device for which you want to check for support cases.
   The device overview pane is displayed.

   **NOTE:** The device overview pane is displayed only if a single device is selected in the **Devices** page.
3. From the **Tasks** list, select **Check for cases**.
If support cases are present for the device, you are navigated to the **Cases** page. Support cases that are present for the device are displayed at the top of the **Cases** page.

If no support cases are present for the device, an appropriate message is displayed.

**NOTE:** When you check for support cases, the latest support cases information is retrieved from Dell for the selected device. If support case information cannot be retrieved because of an issue, an appropriate message is displayed.

### Case management options

The **Cases** page provides options that you can use to manage the support cases that were opened automatically by SupportAssist Enterprise. You can request Technical Support to perform the following activities by using the available case management options:

- Suspend activities related to a support case
- Resume activities related to a support case
- Close a support case

**NOTE:** The case management options are applicable only for support cases that were opened automatically by SupportAssist Enterprise.
Requesting to suspend case activities for 24 hours

Prerequisite
You must be logged in to SupportAssist Enterprise with elevated or administrative privileges. See SupportAssist Enterprise user groups and Granting elevated or administrative privileges to users.

About this task
You can request Technical Support to stop activities related to a support case for 24 hours, if necessary. For example, you may want Technical Support to suspend activities for a support case in the following scenarios:

- If you want to resolve the issue without any assistance from Technical Support
- If you do not want to receive any notifications related to the support case from Dell during a planned maintenance activity

NOTE: You can request Technical Support to stop activities related to a support case only if the support case was opened by SupportAssist.

Steps
1. Point to Cases and click View Cases.
   The Cases page is displayed.
2. In the Refine by pane, from the Source Type list, select SupportAssist.
   The list of all cases that were opened by SupportAssist are displayed.
3. Select the support case that you want to suspend.
   NOTE: The Case Options list is enabled only if the support case that you have selected was opened by SupportAssist.
   NOTE: The Suspend Activity 24 hours option is disabled if you have already requested to suspend notifications for the selected support case.
4. From the Case Options list, select Suspend Activity 24 hours.
   The Suspend case activities for 24 hours window is displayed.
5. (Optional) Type your reason for requesting to suspend activities for the support case.
6. Click OK.
   The Updating Case message is displayed. After the case is updated successfully, the Case Status message is displayed.
7. Click OK.
   The support case displays a Suspended status.
   NOTE: If SupportAssist Enterprise is unable to process your request, an appropriate error message is displayed. In such a scenario, you can run the case creation test to verify connectivity to Dell, and then retry the operation.

Testing the case creation capability
Requesting to resume support activities

Prerequisite
You must be logged in to SupportAssist Enterprise with elevated or administrative privileges. See SupportAssist Enterprise user groups and Granting elevated or administrative privileges to users.

About this task
You can request Technical Support to resume activities for a support case, if you had previously requested to suspend activities for the support case.

Steps
1. Point to Cases and click View Cases.
   The Cases page is displayed.
2. In the Refine by pane, from the Source Type list, select SupportAssist.
   The list of all cases that were opened by SupportAssist are displayed.
3. Select the support case for which you want to Technical Support to resume case activities.
   
   | NOTE: | The Case Options list is enabled only if the support case that you have selected was opened by SupportAssist. |
   | NOTE: | The Resume Activity option is enabled only if you had previously requested to suspend notifications for the selected support case. |
4. From the Case Options list, select Resume Activity.
   The Resume Activity window is displayed.
5. (Optional) Type your reason for requesting to resume activities for the support case.
6. Click OK.
   The Updating Case message is displayed. After the case is updated successfully, the Case Status message is displayed.
7. Click OK.
   The support case displays the appropriate status.
   
   | NOTE: | If SupportAssist Enterprise is unable to process your request, an appropriate error message is displayed. In such a scenario, you can run the case creation test to verify connectivity to Dell, and then retry the operation. |

Related links
Testing the case creation capability

Requesting to close a support case

Prerequisite
You must be logged in to SupportAssist Enterprise with elevated or administrative privileges. See SupportAssist Enterprise user groups and Granting elevated or administrative privileges to users.

About this task
If you have resolved a problem with a device, you can request Technical Support to close the corresponding support case.

Steps
1. Point to Cases and click View Cases.
   The Cases page is displayed.
2. In the Refine by pane, from the Source Type list, select SupportAssist.
   The list of all cases that were opened by SupportAssist are displayed.
   
   | NOTE: | You can request Technical Support to close a support case only if the support case was opened by SupportAssist. |
   | NOTE: | You can request Technical Support to close a support case that is in any status, except the Closed and Closure Requested status. |
Select the support case that you want to close.

1. **NOTE**: The Case Options list is enabled only if the support case that you have selected was opened by SupportAssist.

4. From the **Case Options** list, select **Request to Close**. The **Request to close the case** window is displayed.

5. (Optional) Type your reason for requesting to close the support case.

6. Click **OK**. The **Updating Case** message is displayed. After the case is updated successfully, the **Case Status** message is displayed.

7. Click **OK**. The support case displays a **Closure requested** status.

1. **NOTE**: After you request to close a support case, Technical Support may contact you to get more details before closing the support case.

1. **NOTE**: If SupportAssist Enterprise is unable to process your request, an appropriate error message is displayed. In such a scenario, you can run the case creation test to verify connectivity to Dell, and then retry the operation.

**Related links**
- Testing the case creation capability

**Viewing the device inventory**

To view the device inventory, point to **Devices** and click **View Devices**.

![Device Inventory page](image)

**Figure 13. Device Inventory page**

1. **NOTE**: The Devices page is refreshed automatically every 3 minutes.

For information on the fields and details displayed on the **Devices** page, see **Device inventory**.

**Viewing the device overview pane**

**About this task**

You can view details of a device such as the IP address, device type, model number, Service Tag, collection status, collection history, and so on in the device overview pane. From the device overview pane, you can also perform the following tasks:

- Clear the System Event Log of a server
• Check for support cases of a specific device
• Perform deep discovery
• Enable or disable maintenance mode for a device
• Install or upgrade OMSA on a server
• Configure the SNMP settings of a device
• Enable or disable monitoring of a device
• Revalidate a device that is present in the Staging group.
• Access the configuration viewer that allows you to view the system information collected from a device
• Add a device by duplication

**Steps**

1. Point to **Devices** and click **View Devices**.
   The **Devices** page is displayed.
2. Select a device.

   *NOTE:* The device overview pane is displayed if only one device is selected in the Devices page.

   *NOTE:* If a SupportAssist Enterprise-initiated task is already running on a device, you may not be able to select that device.

   The device overview pane is displayed.
Sorting the displayed data

To sort the data displayed on the Devices, Cases or Collections page, click a column header. The displayed data is sorted and an arrow that indicates the sorting type (ascending or descending) is displayed next to the column title. To reset the sorting, click the column header again.
The extensions that are available in SupportAssist Enterprise enable you to extend the SupportAssist Enterprise capability to many devices. You can use the extensions to inventory and add devices that are managed by a systems management console such as Dell OpenManage Essentials or Microsoft System Center Operations Manager (SCOM). The extensions also enable you to optimize the performance of SupportAssist Enterprise by distributing the workload of collecting and uploading system information to remote systems.

Topics:

- Types of extensions
- Support for setting up adapter or Remote Collector
- Getting started with adding devices managed by systems management consoles
- Adapters
- Remote Collectors

**Types of extensions**

Two types of extensions are available in SupportAssist Enterprise:

- **Adapter** — An application that acts as an interface between SupportAssist Enterprise and a systems management console. The adapter enables SupportAssist Enterprise to inventory and retrieve alerts from supported devices that are managed by a systems management console, instead of adding each device individually. After inventorying and adding the devices, SupportAssist Enterprise can monitor the devices for hardware issues and also collect and upload system information to Dell. Two types of adapters available in SupportAssist Enterprise:
  - OpenManage Essentials adapter — For inventorying devices managed by OpenManage Essentials
  - System Center Operations Manager adapter — For inventorying devices managed by System Center Operations Manager
  - OpenManage Enterprise adapter — For inventorying devices managed by OpenManage Enterprise – Tech Release

- **Remote Collector** — A remote instance of SupportAssist Enterprise that collects and uploads system information from devices that are present within a specific IP address range. The Remote Collector enables SupportAssist Enterprise to distribute the workload of collecting and uploading system information to a remote system. Typically, collection and upload of system information from all your devices is performed by the server where SupportAssist Enterprise is installed. When you set up a Remote Collector on a remote system, collection and upload of system information from devices within the specified IP address ranges is performed by the remote system. To ensure optimal performance of SupportAssist Enterprise, Dell recommends that you set up a separate Remote Collector for every 3,500 devices.

**Support for setting up adapter or Remote Collector**

The capability to set up an adapter or Remote Collector is available only when SupportAssist Enterprise is installed on a Windows operating system. The following tables provide a summary of the capability to set up an adapter or Remote Collector depending on the operating system.

**Table 11. Support for setting up an adapter**

<table>
<thead>
<tr>

Getting started with adding devices managed by systems management consoles

To inventory and add devices that are managed by a systems management console such as OpenManage Essentials, Microsoft System Center Operations Manager, or OpenManage Enterprise - Tech Release:

1. Add Account Credentials in SupportAssist Enterprise for the devices that you want to add from the systems management console. See Adding Account Credentials.
2. Create one or more Credential Profiles depending on the type of devices that you want to add. See Creating Credential Profile.
3. Set up the adapter in SupportAssist Enterprise. See Setting up OpenManage Essentials adapter, Setting up Microsoft System Center Operations Manager adapter, or Setting up OpenManage Enterprise adapter.
4. If you are adding more than 4,000 devices, set up a Remote Collector. See Setting up Remote Collector.

Adapters

The adapter is an application that acts as an interface between SupportAssist Enterprise and a systems management console. Setting up an adapter enables SupportAssist Enterprise to inventory devices and retrieve alerts from devices that are managed by the systems management console. You can set up one or more of the following adapters depending on the systems management console that you are using:

- OpenManage Essentials adapter — To inventory devices that are managed by OpenManage Essentials
- System Center Operations Manager adapter — To inventory Dell EMC devices that are managed by Microsoft System Center Operations Manager by using the Dell Server Management Pack Suite
- OpenManage Enterprise – Tech Release adapter — To inventory devices that are managed by OpenManage Enterprise – Tech Release

NOTE: Servers running Debian and Ubuntu operating systems can only be added directly in SupportAssist Enterprise, and not through the adapters.

Related links

- Extensions
- Set Up OpenManage Enterprise adapter
- Setting up OpenManage Enterprise adapter

Setting up OpenManage Essentials adapter

Prerequisites

- You must be logged in to SupportAssist Enterprise with elevated or administrative privileges. See Granting elevated or administrative privileges to users.
The system where you want to set up the adapter must be running OpenManage Essentials version 2.3 or later.

- You must have administrator privileges on the system running OpenManage Essentials.
- You must have created Account Credentials and a Credential Profile that contains the credentials of the devices that will be inventoried by the adapter. See Creating Account Credentials and Creating Credential Profile.
- The server running SupportAssist Enterprise must have internet connectivity.
- You must have read-write access to the system drive of the target device.

About this task
Setting up the OME adapter enables you to inventory and add devices that are managed by OpenManage Essentials. During the set up, SupportAssist Enterprise installs the adapter on the system running OpenManage Essentials, and then inventories the devices.

**NOTE:** If you have installed SupportAssist Enterprise and OpenManage Essentials on the same server, you must also set up the adapter on the same server to add devices that are managed by OpenManage Essentials.

**NOTE:** If you have upgraded from SupportAssist for OpenManage Essentials to SupportAssist Enterprise, the OpenManage Essentials adapter is automatically set up and your devices are inventoried and added in SupportAssist Enterprise.

**NOTE:** The OpenManage Essentials adapter only inventories devices that are supported by SupportAssist Enterprise. For the list of supported devices, see the SupportAssist Enterprise version 1.2 Support Matrix at Dell.com/ServiceabilityTools.

Steps
1. Point to Extensions and click Manage Adapters.
   The Adapters page is displayed.

2. Click Set Up Adapter.
   The Set Up Adapter window is displayed.

![Figure 15. Set Up Adapter window](image)

3. From the Adapter type list, select OpenManage Essentials.

4. Perform the following:
   a. Type the hostname or IP address of the server where OpenManage Essentials is installed.
   b. If desired, type a name for the adapter in the appropriate field.
      The name you enter is used to represent the adapter in SupportAssist Enterprise. If you do not enter a name, the host name or IP address that you have entered is used to represent the adapter.
   c. Type the user name and password in the appropriate fields.

**NOTE:** If you change the credentials of the system running OpenManage Essentials because of the security policy requirements of your company or for other reasons, ensure that you also update the adapter credentials in SupportAssist Enterprise. Dell recommends that you create a service account with credentials that do not expire, and enter the service account credentials in SupportAssist Enterprise.
From the **Update device inventory** list, select the desired frequency for inventorying devices through the adapter.

From the **Credential profile** list, select a Credential Profile that contains the Account Credentials for the device types that will be inventoried by the adapter.

Click **OK**.

The **Adapter Details** overview pane is displayed and devices that are managed by OpenManage Essentials are inventoried in SupportAssist Enterprise.

### Note
- If the adapter is not added successfully, you may have to delete the adapter and set it up again.
- While assigning a Credential Profile, SupportAssist Enterprise performs additional classification tasks in the background for each device. Therefore, assigning Credential Profiles may be prolonged depending on the device types, number of devices, and your network bandwidth. For more information on the approximate time taken to assign Credential Profiles, see **Approximate time taken to assign Credential Profiles**.

**Next steps**

If the Credential Profile that you selected contains the correct credentials for the inventoried devices, the devices are added to the **Default** group. Devices for which the credentials are either not correct or not available are moved to the **Staging** group.

- **Note**: By default, monitoring is enabled for devices that are added successfully through the adapter.
- **Note**: The automated support capabilities of SupportAssist Enterprise are not available for devices that are placed in the **Staging** group.

To add devices that are placed in the **Staging** group:

1. In the **Refine by** pane, expand **Groups** and select **Staging**. You can also select the adapter under **Devices Added** in the **Refine by** pane to view devices that are inventoried by an adapter. If necessary, use the **Search by** option to filter the displayed list of devices.
2. Perform one of the following:
   - Select the devices and assign a Credential Profile that contains the credentials of the selected devices.
   - Select a device and click **Edit** to assign a Credential Account.
3. Repeat step 2 until you have assigned the correct Credential Profile or Account Credentials to all devices.

- **Note**: For Storage PS Series devices, only the Storage PS Series management group is added through the adapter. The Storage PS Series members are not added through the adapter.

**Related links**

- Adapters
- Set Up OpenManage Essentials Adapter

**Setting up the Microsoft System Center Operations Manager adapter**

**Prerequisites**

- You must be logged in to SupportAssist Enterprise with elevated or administrative privileges. See **Granting elevated or administrative privileges to users**.
The system or virtual machine where you want to set up the adapter must be running one of the following:

- Microsoft System Center Operations Manager 2012 R2
- Microsoft System Center Operations Manager 2012 SP1
- Microsoft System Center Operations Manager 2016

Dell Server Management Pack Suite Version 6.3 or 7.0 for Microsoft System Center Operations Manager and System Center Essentials must be installed on the system. For information on the required management packs, see Management packs required by Operations Manager.

You must have administrator privileges on the system or virtual machine running System Center Operations Manager.

The server running SupportAssist Enterprise must have internet connectivity.

You must have created Account Credentials and a Credential Profile that contains the credentials of the devices that will be inventoried by the adapter. See Creating Account Credentials and Creating Credential Profile.

You must have read-write access to the system drive of the target device.

### About this task

Setting up the System Center Operations Manager (SCOM) adapter enables you to inventory and add devices that are managed by System Center Operations Manager. During the set up, SupportAssist Enterprise installs the adapter on the system running Operations Manager, and then inventories the devices.

#### NOTE:
If you have upgraded from SupportAssist for Microsoft System Center Operations Manager to SupportAssist Enterprise, the System Center Operations Manager adapter is automatically set up and your devices are inventoried in SupportAssist Enterprise.

#### NOTE:
The System Center Operations Manager adapter only inventories Dell PowerEdge servers, iDRAC, and OEM devices that are supported by SupportAssist Enterprise. For the list of supported PowerEdge servers, see the SupportAssist Enterprise version 1.2 Support Matrix at Dell.com/ServiceabilityTools.

### Steps

1. Point to Extensions and click Manage Adapters. The Adapters page is displayed.

2. Click Set Up Adapter. The Set Up Adapter window is displayed.

3. From the Adapter type list, select System Center Operations Manager.

4. If desired, type a name for the adapter in the appropriate field.

---

**Figure 17. Set Up Adapter window**
The name you enter is used to represent the adapter in SupportAssist Enterprise. If you do not enter a name, the host name or IP address that you have entered is used to represent the adapter.

5 If you are setting up the adapter on the management group:
   a. Type the hostname or IP address of the management group.
   b. Type the user name and password in the appropriate fields.

6 If you are setting up the adapter on a Remote Console (RC), select **Establish a remote connection with the management group**, and perform the following:
   a. Type the hostname or IP address of the management group.
   b. Type the user name and password in the appropriate fields.
   c. Type the hostname or IP address of the Remote Console.
   d. Type the user name and password in the appropriate fields.

**NOTE:** If you change the credentials of the system running the Management Group or Remote Console because of the security policy requirements of your company or for other reasons, ensure that you also update the adapter credentials in SupportAssist Enterprise. Dell recommends that you create a service account with credentials that do not expire, and enter the service account credentials in SupportAssist Enterprise.

7 From the **Credential profile** list, select a Credential Profile that contains the credentials of the devices that will be inventoried by the adapter.

8 From the **Update device inventory** list, select the desired frequency for inventorying devices through the adapter.

9 Click **OK**. The **Adapter Details** overview pane is displayed and devices that are managed by System Center Operations Manager are inventoried in SupportAssist Enterprise.

**NOTE:** If the adapter is not added successfully, you may have to delete the adapter and set it up again.

**NOTE:** While assigning a Credential Profile, SupportAssist Enterprise performs additional classification tasks in the background for each device. Therefore, assigning Credential Profiles may be prolonged depending on the device types, number of devices, and your network bandwidth. For more information on the approximate time taken to assign Credential Profiles, see **Approximate time taken to assign Credential Profiles**.

**Next steps**

If the Credential Profile that you selected contains the correct credentials for the inventoried devices, the devices are added to the **Default** group. Devices for which the credentials are either not correct or not available are moved to the **Staging** group.

**NOTE:** By default, monitoring is enabled for devices that are added successfully through the adapter.

**NOTE:** The automated support capabilities of SupportAssist Enterprise are not available for devices that are placed in the **Staging** group.

To add devices that are placed in the **Staging** group:

1. In the **Refine by** pane, expand **Groups** and select **Staging**. You can also select the adapter under **Devices Added** in the **Refine by** pane to view devices that are inventoried by an adapter. If necessary, use the **Search by** option to filter the displayed list of devices.
2. Perform one of the following:
   a. Select the devices and assign a Credential Profile that contains the credentials of the selected devices.
   b. Select a device and click **Edit** to assign a Credential Account.
3. Repeat step 2 until you have assigned the correct Credential Profile or Account Credentials to all devices.

Setting up OpenManage Enterprise adapter

**Prerequisites**

- You must be logged in to SupportAssist Enterprise with elevated or administrative privileges. See Granting elevated or administrative privileges to users.
- You must have administrator privileges on the system running OpenManage Enterprise – Tech Release.
- You must have created Account Credentials and a Credential Profile that contains the credentials of the devices that will be inventoried by the adapter. See Creating Account Credentials and Creating Credential Profile.

**About this task**

Setting up the OpenManage Enterprise adapter enables you to inventory devices that are managed by OpenManage Enterprise – Tech Release. During the set up, SupportAssist Enterprise installs the adapter on the system running SupportAssist Enterprise and then inventories the devices.

You can only inventory and add the following devices through the OpenManage Enterprise adapter:

- iDRAC of 12th to 14th generation of PowerEdge servers
• Servers running Linux, ESXi, and HyperV
• Chassis
• Storage SC Series devices (previously Compellent)
• Networking devices (previously Force10)

**Steps**
1. Point to **Extensions** and click **Manage Adapters**.
   The **Adapters** page is displayed.
2. Click **Set Up Adapter**.
   The **Set Up Adapter** window is displayed.
3. From the **Adapter type** list, select **OpenManage Enterprise**.
4. Perform the following:
   a. Type the hostname or IP address of the server where OpenManage Enterprise is installed.
   b. If desired, type a name for the adapter in the appropriate field.
      The name you enter is used to represent the adapter in SupportAssist Enterprise. If you do not enter a name, the host name or IP address that you have entered is used to represent the adapter.
   c. Type the user name and password in the appropriate fields.
5. From the **Credential profile** list, select a Credential Profile that contains the Account Credentials for the device types that will be inventoried by the adapter.
6. From the **Update device inventory** list, select the desired frequency for inventorying devices through the adapter.
7. Click **OK**.
   The **Adapter Details** overview pane is displayed and devices that are managed by OpenManage Enterprise – Tech Release are inventoried in SupportAssist Enterprise.

**Next steps**
If the Credential Profile that you selected contains the correct credentials for the inventoried devices, the devices are added to the **Default** group. Devices for which the credentials are either not correct or not available are moved to the **Staging** group.

**NOTE:** By default, monitoring is enabled for devices that are added successfully through the adapter.

**NOTE:** The automated support capabilities of SupportAssist Enterprise are not available for devices that are placed in the **Staging** group.

**NOTE:** For Storage PS Series devices, only the Storage PS Series management group is added through the adapter. The Storage PS Series members are not added through the adapter.

To add devices that are placed in the **Staging** group:
1. In the **Refine by** pane, expand **Groups** and select **Staging**. You can also select the adapter under **Devices Added** in the **Refine by** pane to view devices that are inventoried by an adapter. If necessary, use the **Search by** option to filter the displayed list of devices.
2. Perform one of the following:
   a. Select the devices and assign a Credential Profile that contains the credentials of the selected devices.
   b. Select a device and click **Edit** to assign a Credential Account.
3. Repeat step 2 until you have assigned the correct Credential Profile or Account Credentials to all devices.

**NOTE:** When the OpenManage Enterprise services are suspended and resumed, the OpenManage Enterprise adapter will only retrieve alerts that have occurred in the last 12 hours for devices that are added in SupportAssist Enterprise through the OpenManage Enterprise adapter.

**NOTE:** After synchronization of the OpenManage Enterprise adapter, some of the iDRACs may not be displayed in SupportAssist Enterprise. This may occur if the iDRAC version cannot be retrieved from OpenManage Enterprise.

**Related links**
Adapters
Set Up OpenManage Enterprise adapter
Viewing adapter overview pane

**Prerequisite**
You must be logged in to SupportAssist Enterprise with elevated or administrative privileges. See Granting elevated or administrative privileges to users.

**About this task**
You can view details of an adapter such as the adapter type, operating system type, managed devices, staging devices, version, and the last inventory date and time in the adapter overview pane.

**Steps**
1. Point to **Extensions** and click **Manage Adapters**.
   The **Adapters** page is displayed.
2. Select an adapter.
   The adapter overview pane is displayed.

**Related links**
- Adapters
- Adapter overview pane

Viewing devices inventoried by the adapter

**Prerequisite**
You must be logged in to SupportAssist Enterprise with elevated or administrative privileges. See Granting elevated or administrative privileges to users.

**Steps**
1. Point to **Devices** and click **View Devices**.
   The **Devices** page is displayed.
2. In the **Refine By** pane, under **Devices Added**, click + to expand the adapter list, and then select the adapter.
   The devices that are inventoried by the adapter are displayed.

**Related links**
- Adapters

Synchronizing adapter

**Prerequisite**
You must be logged in to SupportAssist Enterprise with elevated or administrative privileges. See Granting elevated or administrative privileges to users.

**About this task**
By default, the adapter inventories devices from the systems management console at regular intervals, based on your selection. Depending on your requirement, you can also manually initiate the inventory of devices at any time.

**Steps**
1. Point to **Extensions** and click **Manage Adapters**.
   The **Adapters** page is displayed.
2. Select an adapter.
   The adapter overview pane is displayed.
3. Click **Sync now**.
Editing adapter

Prerequisite
You must be logged in to SupportAssist Enterprise with elevated or administrative privileges. See Granting elevated or administrative privileges to users.

About this task
You can edit the details of the adapter to update any of the following:

- Credentials of the server where the adapter is set up
- Inventory frequency
- Credential Profile
- Name

Steps
1. Point to Extensions and click Manage Adapters.
   The Adapters page is displayed.
2. Select the adapter that you want to edit and click Edit.
   The Edit Adapter window is displayed.
3. Edit the name, user name, and password as required.
4. Change the update inventory frequency and Credential Profile as required.
5. Click Update.
   The details of the adapter are updated.

Deleting adapter

Prerequisite
You must be logged in to SupportAssist Enterprise with elevated or administrative privileges. See Granting elevated or administrative privileges to users.

About this task
You can delete an adapter from SupportAssist Enterprise based on your preference.

Deleting an adapter results in the following:

- Removes the adapter from SupportAssist Enterprise user interface
- Removes the devices associated with the adapter
- Uninstalls the adapter application from the server where it was set up

**NOTE:** Uninstallation of the OpenManage Enterprise adapter occurs only if all the OpenManage Enterprise adapters are deleted in SupportAssist Enterprise.

Steps
1. Point to Extensions and click Manage Adapters.
   The Adapters page is displayed.
2. Select the adapter you want to delete and click Delete.
   The Delete Adapter window is displayed.
Approximate time required to assign Credential Profile

Assigning a Credential Profile may be prolonged depending upon the device types, number of devices, and your network bandwidth. The following table provides the approximate time required to assign a Credential Profile depending upon the number of devices.

</tbody>
</table>

Remote Collectors

The Remote Collector is a remote instance of SupportAssist Enterprise that collects and uploads system information from devices within a specified IP address range. The Remote Collector enables SupportAssist Enterprise to distribute the workload associated with collecting and uploading system information to a remote server. You can set up the Remote Collector on any remote server. Depending on the total number of devices, you can set up multiple Remote Collectors.

System information collected by a Remote Collector is saved on the remote server and directly uploaded to Dell from the remote server.

1. **NOTE:** A single Remote Collector can collect and upload system information to Dell from up to 4,000 devices.

2. **NOTE:** The Remote Collector (remote instance of SupportAssist Enterprise) can only collect and upload system information from devices. You cannot add devices to a Remote Collector.

Minimum requirements for setting up a Remote Collector

The following sections describe the minimum hardware and networking requirements for setting up a Remote Collector in SupportAssist Enterprise.

Hardware requirements

The following table provides a summary of the minimum hardware requirements on the server where the Remote Collector is set up.
Table 15. Hardware requirements

<table>

Network requirements

The following are the network requirements of the server where the Remote Collector is set up.

- Internet connection — standard 1 GbE network or faster.
- The server where the Remote Collector is set up must be able to communicate with the SupportAssist server hosted by Dell over HTTPS protocol.
- The Remote Collector must be able to connect to the following destinations:
  - [https://is.us.dell.com/FUS/api/2.0/uploadfile](https://is.us.dell.com/FUS/api/2.0/uploadfile) — the file upload server where the collected system information is uploaded.
  - [https://is.us.dell.com/FUSCHUNK/api/1.0/file/uploadChunk](https://is.us.dell.com/FUSCHUNK/api/1.0/file/uploadChunk) — the file upload server where the collection files greater than 10 MB in size are uploaded.

The following table lists the network bandwidth requirements for collecting system information from devices.

**Setting up Remote Collector**

**Prerequisites**

- You must be logged in to SupportAssist Enterprise with elevated or administrative privileges. See [Granting elevated or administrative privileges to users](#).
- The server where you want to set up the Remote Collector must be reachable from the server where SupportAssist Enterprise is installed.
- Port 5700 must be open on both the server running SupportAssist Enterprise and the server where you want to set up the Remote Collector.
- The remote system must have internet connectivity for uploading the collected system information to Dell.
- The remote system must meet the minimum requirements for setting up the Remote Collector. See [Minimum requirements for setting up a Remote Collector](#).
- The server running SupportAssist Enterprise must have internet connectivity.
- You must have read-write access to the system drive of the target device.

**About this task**

Setting up a Remote Collector enables SupportAssist Enterprise to distribute the workload associated with collecting and uploading system information to a remote server. During the set up, SupportAssist Enterprise installs the Remote Collector on the remote server.

**Steps**

1. Point to Extensions and click Manage Remote Collectors. The Remote Collectors page is displayed.
2. Click Set Up Remote Collector. The Set Up Remote Collector window is displayed.
Figure 18. Set Up Remote Collector window

3 Type the hostname or IP address of the server where you want to set up the Remote Collector.

4 If desired, type a name for the Remote Collector in the appropriate field.

5 Type the user name and password in the appropriate fields.

6 To assign devices to the Remote Collector by using hostname expressions:
   a Select **Hostname**.
   b Type the hostname expression or hostname expressions of the devices that you want to assign to the Remote Collector.

   **NOTE:** The hostname expression can only include *, ?, or alphanumeric characters.
   c To add multiple hostname expressions, click **Add another expression**, and then type the hostname expressions of the devices.

7 To assign devices to the Remote Collector by using IP address ranges:
   a Select **IP address / range**.
   b Type the IP address or IP address ranges of the devices that you want to associate with the Remote Collector.
   c To add multiple IP address ranges, click **Add IP address range**, and then type the IP address range of the devices.

   You can add up to five different IP address ranges by using one of the following formats:
   - 193.109.112.99
   - 193.109.112.*
   - 193.104.20-40.*
   - 192.168.*
   - 192.168.2-51.3-91
   - 193.109.112.45-99

   **NOTE:** Ensure that the IP address ranges you have entered do not overlap with each other.

8 If the remote server connects to the internet through a proxy server, select the **The remote system connects to the internet through a proxy server** option and then do the following:
a Type the host name or IP address, and port number of the proxy server in the appropriate fields.
b If a user name and password are required to connect to the proxy server, select **Proxy requires authentication** and then type the user name and password in the appropriate fields.
c In the **Proxy Exclusion List** box, type the IP address ranges or host name expressions of devices to which the Remote Collector must communicate directly and not through the proxy server. IP address of devices that communicate through https protocol must be included in the proxy exclusion list. Examples of devices that communicate through https protocol include iDRAC, Storage SC Series arrays, VMware ESX and ESXi, and XC Series of Web-scale Hyper-converged appliances.

**NOTE:** You can enter one or more IP address ranges as semi-colon separated values. For example, `10.49.*.* ; 10.49.18.* ; *.*.100.10`.

You can enter a list of IP address ranges in the following formats:

- `10.49.*.*`
- `10.49.18.*`
- `*.*.100.10`
- `*.*.*.10`
- `*.*.*.10`
- `10.*.*.*`

The following IP address range formats are not supported:

- `10.*.*.49`
- `10.*.49.*`
- `10.49.*.10`

**NOTE:** If you have assigned devices to the Remote Collector by using IP address ranges, ensure that you only enter IP address ranges in the Proxy Exclusion List. If you have assigned devices to the Remote Collector by using hostname expressions, ensure that you only enter hostname expressions in the Proxy Exclusion List.

9 Click OK.

The **Set Up Remote Collector** overview pane is displayed and the Remote Collector (remote instance of SupportAssist Enterprise) is installed and set up on the remote server.

**NOTE:** If the Remote Collector is not added successfully, you may have to delete the Remote Collector and set it up again.

### Viewing collections for devices associated with a Remote Collector

**About this task**

Collections that are performed by Remote Collectors can only be viewed by manually accessing the collection file.

**Steps**

1 Log in to the server where the Remote Collector is set up.

2 Perform one of the following:

   - If you have set up the Remote Collector on a server running Windows — Browse to `<Drive where SupportAssist Enterprise is installed>\Program Files\Dell\SupportAssist\Reports` folder.
   - If you have set up the Remote Collector on a server running Linux — Browse to `\opt\Dell\supportassist\reports` folder.

3 Extract the appropriate collection .zip file and then double click the `index.html` file.
NOTE: For collections from devices that are running a non-English operating system, the Configuration Viewer may not display certain attributes as expected.

The Configuration Viewer opens in a web browser window.

Remote Collectors

Viewing the Remote Collector overview pane

Prerequisite
You must be logged in to SupportAssist Enterprise with elevated or administrative privileges. See Granting elevated or administrative privileges to users.

About this task
You can view details of a Remote Collector such as the name of the Remote Collector, IP address, connectivity status, collection range, and the details of the connected devices in the Remote Collector overview pane.

Steps
1. Point to Extensions and click Manage Remote Collectors. The Remote Collectors page is displayed.
2. Select a Remote Collector. The Remote Collector overview pane is displayed.

Figure 19. Remote Collector overview pane

Remote Collectors
Remote Collector overview pane

Viewing devices associated with a Remote Collector

Prerequisite
You must be logged in to SupportAssist Enterprise with elevated or administrative privileges. See Granting elevated or administrative privileges to users.

Steps
1. Point to Extensions and click Manage Remote Collectors. The Remote Collectors page is displayed.
2. Select a Remote Collector. The Remote Collector overview pane is displayed.
Figure 20. Remote Collector overview pane

3 Click **View all devices**.

Devices that are associated with the Remote Collector are displayed on the **Devices** page.

Remote Collectors

Editing Remote Collector

**Prerequisite**
You must be logged in to SupportAssist Enterprise with elevated or administrative privileges. See [Granting elevated or administrative privileges to users](#).

**About this task**
You can edit the name, IP address range, user name, and password of a Remote Collector based on your preference.

**Steps**

1 Point to **Extensions** and click **Manage Remote Collectors**.

   The **Remote Collectors** page is displayed.

2 Select the Remote Collector that you want to update and click **Edit**.

   The **Edit Remote Collector** window is displayed.

3 Edit the name, IP address range, user name, password, proxy details, and the proxy exclusion list as required.

4 Click **Update**.

   If SupportAssist Enterprise is unable to connect to the remote system using the entered credentials:

   • The existing credentials are retained
   • The Remote Collector and the Upload Connectivity on the Remote Collectors page retain the status that was displayed prior to editing the credentials

   If the remote system is unable to connect to the proxy server using the entered proxy server credentials:

   • The entered proxy server credentials are saved in SupportAssist Enterprise, but the existing proxy server credentials are retained in the Remote Collector.
   • The Remote Collector displays a proxy validation failed status, but the Upload connectivity retains the status that was displayed prior to editing the proxy server credentials.

Remote Collectors
Deleting Remote Collector

Prerequisite
You must be logged in to SupportAssist Enterprise with elevated or administrative privileges. See Granting elevated or administrative privileges to users.

About this task
You can delete a Remote Collector from SupportAssist Enterprise based on your preference.

⚠️ CAUTION: Deleting the Remote Collector will also delete all collections that are saved on the remote system.

Steps
1. Point to Extensions and click Manage Remote Collectors.
   The Remote Collectors page is displayed.
2. Select the Remote Collector you want to delete and click Delete.
   The Remove Remote Collector window is displayed.
3. Click Remove Remote Collector.
   The Remote Collector is removed from SupportAssist Enterprise and the Remote Collector application is uninstalled from the remote system. If the IP address range or hostname expression of devices that were assigned to the Remote Collector overlap with that of another Remote Collector, the applicable devices are assigned to the other Remote Collector. Otherwise, the devices are assigned to server running SupportAssist Enterprise.

Remote Collectors
Device grouping

SupportAssist Enterprise has two predefined device groups—Default and Staging—that help you in managing the devices that you add. Depending on your requirement, you can also create custom device groups to manage certain devices as a group. For example, you can create device groups that may include devices based on the following:

- Device type (server, storage, or networking)
- The individual who manages the devices (Administrator group)
- Organization or business unit (Marketing, Operations, Finance, and so on)
- Physical location of the devices (shipping address)
- Alerting or notification (individuals who must be notified if an issue is detected on certain devices)

After you create a device group, you can:

- Add or remove devices from the device group.
- Assign a Credential Profile for each device type included in the device group.
- Configure the contact information and parts dispatch information for the device group.
- Edit the device group details or delete the device group.

**NOTE:** Grouping of devices is optional. Device grouping does not have an impact on the monitoring and automatic case creation capabilities of SupportAssist Enterprise.

**NOTE:** You can create and manage device groups only if you are logged in to SupportAssist Enterprise with elevated or administrative privileges. For information on the SupportAssist Enterprise user groups, see SupportAssist Enterprise user groups and Granting elevated or administrative privileges to users.

**NOTE:** The credentials, contact information, and parts dispatch information configured for a device group override the default credentials, contact information, and parts dispatch information configured through the Settings pages. For example, if you have created a device group and configured the primary contact for the device group, all SupportAssist Enterprise notifications for issues with any device included in the device group are sent to the primary contact assigned to that device group.

Topics:

- Predefined device groups
- Viewing device groups
- Creating a device group
- Managing devices in a device group
- Managing the credentials of a device group
- Viewing and updating the contact information of a device group
- Editing device group details
- Deleting a device group
Predefined device groups

The predefined device groups available in SupportAssist Enterprise are as follows:

- **Default group** — Contains devices that you have assigned to the Default group. By default, all devices that are discovered successfully are assigned to this group, unless you assign the device to any other group.
- **Staging group** — Contains devices that were only discovered partially while you tried to add them because certain requirements were not met. Devices in this group will be automatically moved to the Default group when you revalidate them after the requirement is met. SupportAssist Enterprise capabilities are not available for devices that are present in this group. Typically, a device is added to the staging group in the following scenarios:
  - For servers, the iDRAC does not have the required license installed
  - For Compellent devices, SupportAssist is not enabled in the Dell Compellent Enterprise Manager application
  - Certain prerequisites for adding the device are not met

Viewing device groups

You can view the devices groups that you have created in the Device Groups page.

To view the device groups, point to Devices and click Manage Device Groups.

The Device Groups page is displayed.

Creating a device group

You can create a device group based on your requirement. For example, you can create device groups based on the device types.

**Prerequisite**

You must be logged in to SupportAssist Enterprise with elevated or administrative privileges. See SupportAssist Enterprise user groups and Granting elevated or administrative privileges to users.

**Steps**

1. Point to Devices and click Manage Device Groups.
The **Device Groups** page is displayed.

2. Click **Create Device Group**.
   The **Create Group** window is displayed.

3. Type a unique name and description for the device group and click **Save**.
   The device group that you created is displayed in the **Device Groups** page.

### Managing devices in a device group

After creating a device group, you can select the devices you want to add or remove from the device group.

#### Prerequisites

- Ensure that you have already created a device group. See **Creating a device group**.
- You must be logged in to SupportAssist Enterprise with elevated or administrative privileges. See **SupportAssist Enterprise user groups** and **Granting elevated or administrative privileges to users**.

#### About this task

You can use the **Manage Devices** action available in the **Device Groups** page to add or remove devices from the device group.

1. **NOTE**: A device can be included in only one device group.

#### Steps

1. Point to **Devices** and click **Manage Device Groups**.
   The **Device Groups** page is displayed.

2. Select a device group.

3. In the **Select group actions** list, select **Manage Devices**.
   The **Manage Devices** window is displayed.

4. To add devices to the device group, select the devices in the **Ungrouped** pane, and click **>**.
   The selected devices are moved to the **Devices in current group** pane.

5. To remove devices from the device group, select the devices in the **Devices in current group** pane, and click **<**.

---

Figure 22. Manage Devices window

---

**Figure 22. Manage Devices window**
The selected devices are moved to the **Ungrouped** pane.

6. Click **Save**.

**NOTE**: Including or excluding one listing of a correlated device from a device group results in the automatic inclusion or exclusion of the other associated listing. For more information about device correlation, see **Device correlation**.

### Managing the credentials of a device group

If device types within the device group have the same credentials, you can configure common credentials for each device type within the device group.

**Prerequisites**

- You must be logged in to SupportAssist Enterprise with elevated or administrative privileges. See [SupportAssist Enterprise user groups](#) and [Granting elevated or administrative privileges to users](#).
- You must have created a Credential Profile. See [Creating Credential Profile](#).

**About this task**

You can use the **Assign Credential Profile** option to apply common credentials for the different device types within a device group.

**Steps**

1. Point to **Devices** and click **View Devices**. The **Devices** page is displayed.
2. From the **Refine by** pane, expand **Groups** and select a device group.
3. Select the devices for which you want to apply a Credential Profile.
4. From the **Assign Credential Profile** list, select a Credential Profile.
   
   Credentials are assigned to the device group based on the credentials that are available in the selected Credential Profile.

### Viewing and updating the contact information of a device group

You can view or update the contact information, preferred contact method and time, and the parts dispatch information of a device group.

**Prerequisite**

You must be logged in to SupportAssist Enterprise with elevated or administrative privileges. See [SupportAssist Enterprise user groups](#) and [Granting elevated or administrative privileges to users](#).

**About this task**

Updating the contact information for a device group allows SupportAssist Enterprise to send notifications to the device group contact.

**NOTE**: The device group contact information overrides the default contact information configured through the **Settings > Contact Information** page. If an issue is detected on devices included in a group, SupportAssist Enterprise sends notifications to the device group contact (not the default contact).

**Steps**

1. Point to **Devices** and click **Manage Device Groups**. The **Device Groups** page is displayed.
2. Select a device group.
3. From the **Select group actions** list, select **Manage Contacts**. The **Manage Contacts** window is displayed.
4. If you want to use the contact information provided in the **Settings > Contact Information** page, select **Use Default**.
5. Select the type of contact:
   - **Primary**
   - **Secondary**
6. Type the first name, last name, phone number, alternate phone number (optional), and email address in the appropriate fields.
7. Select the preferred contact method, preferred contact hours, and time zone.
To enter the shipping information and parts dispatch details, follow steps 2 to 6 in **Updating dispatch details**.

**NOTE:** If the Technical Support agent determines that a part must be replaced in your system to resolve a support case, the replacement part is dispatched with your consent to the provided address.

**NOTE:** The device group parts dispatch information overrides the default parts dispatch information that you configured through the Settings > Contact Information page. If resolving a problem requires replacing a part, the replacement part is shipped with your consent to the device group parts dispatch address (not the default parts dispatch address).

Click **Save**.

## Editing device group details

### Prerequisite
You must be logged in to SupportAssist Enterprise with elevated or administrative privileges. See [SupportAssist Enterprise user groups](#) and [Granting elevated or administrative privileges to users](#).

### About this task
You can edit the name and description of a device group based on your preference.

### Steps
1. Point to **Devices** and click **Manage Device Groups**.
   The **Device Groups** page is displayed.
2. Select a device group.
3. From the **Select group actions** list, select **Edit / Delete Device Group**.
   The **Edit / Delete Group** window is displayed.
4. Edit the name and description based on your preference and click **Update**.

## Deleting a device group

### Prerequisite
You must be logged in to SupportAssist Enterprise with elevated or administrative privileges. See [SupportAssist Enterprise user groups](#) and [Granting elevated or administrative privileges to users](#).

### About this task
You can delete device groups based on your preference.

**NOTE:** Deleting a device group only removes the device group, device group credentials, and contact information. It does not delete any devices from the **Devices** page.

### Steps
1. Point to **Devices** and click **Manage Device Groups**.
   The **Device Groups** page is displayed.
2. Select a device group.
3. From the **Select group actions** list, select **Edit / Delete Device Group**.
   The **Edit / Delete Group** window is displayed.
4. Click **Delete**.
Managing device credentials

SupportAssist Enterprise requires the device credentials to add devices and to collect system information.

You can enter or assign credentials to a device by using one of the following methods:

• While adding a single device or importing multiple devices
• By using the Edit option
• By assigning an Account Credentials or a Credential Profile

Topics:

• Account Credentials
• Credential Profiles

Account Credentials

An Account Credential consists of the credentials of a specific device type. The Account Credentials is used by SupportAssist Enterprise connect to a device and to collect system information. Depending on the number of device types in your environment, you may have to create one or more Account Credentials.

Adding Account Credentials

Prerequisite
You must be logged in to SupportAssist Enterprise with elevated or administrative privileges. See Granting elevated or administrative privileges to users.

About this task
Account Credentials are required to add a device or to create a Credential Profile that you can apply to devices. Depending on your requirement, you can create an Account Credentials for each device type in your environment.

Steps

1. Point to Devices > Manage Credentials and click Account Credentials.

The Manage Account Credentials page is displayed.
Figure 23. Manage Account Credentials page

2 Click **Add Credentials**. The **Add Account Credentials** window is displayed.

3 In the **Name** field, type a unique name for the Account Credentials.

4 From the **Device Type** list, select the type of device.

5 Type the credentials of the selected device type:

**NOTE:** The credentials that you enter must have Administrator rights.

- For **Server / Hypervisor** devices, from the **Operating System type** list, select the operating system, and then type the user name and password of the device in the appropriate fields.

  The user name and password you enter must have:
  
  - Local administrator or domain administrator rights and WMI access on the device (if the device is running a Windows operating system)
  - Root or sudo user rights (if the device is running a Linux operating system). If you provide the user name and password of a sudo user, ensure that the sudo user is configured for SupportAssist Enterprise. For information on configuring the sudo user, see [Configuring sudo access for SupportAssist Enterprise (Linux)](link).
If the device is a member of a Windows domain, you must provide the user name in the [Domain\Username] format. For example, MyDomain\MyUsername. You can also use a period [.] to indicate the local domain. For example, .\Administrator.

Example of a Linux user name: root

- For **Chassis**, **Fluid File System (FluidFS)**, **iDRAC**, and **Storage Center (SC) / Compellent** devices, type the user name and password of the device in the appropriate fields.
- For **Software**, from the **Software type** list, select the software type, and then type the user name and password in the appropriate fields.
- For **Solution** devices, enter the SSH and REST credentials in the appropriate fields.
- For **Networking** devices, type the user name, password, community string, and enable password of the device in the appropriate fields.

**NOTE:** Community string is required for the following network devices:
- PowerConnect family 28xx and X series
- Cisco
- Wireless controller

**NOTE:** Enable password is required only when the networking device is configured with an enable password.

- For **PeerStorage(PS) / EqualLogic** devices, type the user name, password, and community string of the device in the appropriate fields.

**NOTE:** Credentials are not required for Storage MD Series devices.

6 Click **Save**.

The Account Credentials is listed on the **Manage Accounts Credentials** page.

---

**Reassigning Account Credentials**

**Prerequisite**
You must be logged in to SupportAssist Enterprise with elevated or administrative privileges. See [Granting elevated or administrative privileges to users](#).

**Steps**

1. Point to **Devices** and click **View Devices**.
   - The **Devices** page is displayed.
2. Select a device and click **Edit**.
   - The **Edit Account** window is displayed.
3. From the **Account Credentials** list, select an account credential.

   **NOTE:** Only Account Credentials that you have already created for the selected device type are present in the Account Credentials list.

4. Click **Save** (if the device is in the Default group) or **Revalidate** (if the device is in the Staging group).

**Related links**
- Account Credentials
- Manage Account Credentials
- Add Account Credentials
**Editing Account Credentials**

**Prerequisite**
You must be logged in to SupportAssist Enterprise with elevated or administrative privileges. See [Granting elevated or administrative privileges to users](#).

**About this task**
You can edit the Account Credentials based on your requirement. For example, you must edit the Account Credentials whenever there is a change in the credentials of the associated device type.

**Steps**

1. Point to **Devices > Manage Credentials** and click **Account Credentials**. The **Manage Account Credentials** page is displayed.

   ![Figure 25. Manage Account Credentials page](image)

2. Select the Account Credentials that you want to edit and click **Edit**. The **Edit Account Credentials** window is displayed.

3. Update the credentials as required.

4. Click **Update**. The Account Credentials is updated. Devices to which the Account Credentials is assigned are re-validated.

- Account Credentials
- Manage Account Credentials
- Edit Account Credentials

---

**Deleting Account Credentials**

**Prerequisites**

- You must be logged in to SupportAssist Enterprise with elevated or administrative privileges. See [Granting elevated or administrative privileges to users](#).
- The Account Credentials that you want to delete must not be assigned to any device.

**About this task**
You can delete the Account Credentials based on your preference.

**Steps**

1. Point to **Devices > Manage Credentials** and click **Account Credentials**. The **Manage Account Credentials** page is displayed.
Figure 26. Manage Account Credentials page

2. Select the Account Credentials that you want to delete and click **Delete**. The **Delete Account Credentials** window is displayed.

3. Click **Yes**.

**Related links**
- Account Credentials
- Manage Account Credentials

## Credential Profiles

A Credential Profile is a collection of Account Credentials of various device types. Credential Profiles enable you to assign a set of credentials to your devices, instead of entering the credentials for each device manually.

**Related links**
- Manage Credential Profiles
- Creating Credential Profile
- Assigning Credential Profile
- Editing Credential Profile
- Deleting Credential Profile

## Creating Credential Profile

**Prerequisite**
You must be logged in to SupportAssist Enterprise with elevated or administrative privileges. See **Granting elevated or administrative privileges to users**.

**About this task**
Creating a Credential Profile enables you to assign credentials to your devices.

**Steps**
1. Point to **Devices > Manage Credentials** and click **Credential Profiles**. The **Manage Credential Profiles** page is displayed.
2. Click **Create Profile**.
   The **Create Credential Profile** window is displayed.

3. In the **Name** box, type a unique name for the Credential Profile.
4. Select the device type you want to include in the profile.
   For **Server / Hypervisor**, **Software**, and **Solution**, click + to expand the list of device types.
   
   **NOTE:** The Account Credentials list displays **Not available** if you have not created an Account Credentials for the device type. To create a new Account Credentials, click Add Account Credentials. For more information on creating Account Credentials, see Adding Account Credentials.
5. Repeat step 4 and 5 for each device type that you want to include in the Credential Profile.
7 Click **Save**.

The Credential Profile is listed on the **Manage Credential Profiles** page.

**Related links**
- Credential Profiles
- Manage Credential Profiles
- Add Credential Profile

## Assigning Credential Profile

**Prerequisite**
You must be logged in to SupportAssist Enterprise with elevated or administrative privileges. See **Granting elevated or administrative privileges to users**.

**Steps**
1. Point to **Devices** and click **View Devices**.
   
   The **Devices** page is displayed.
2. Select one or more devices and from the **Assign Credential Profile** list, select a Credential Profile.
   
   The Credential Profile is assigned to the selected devices. Devices to which the Credential Profile is assigned are re-validated.

**Related links**
- Credential Profiles
- Manage Credential Profiles

## Viewing devices associated with a Credential Profile

1. Point to **Devices > Manage Credentials** and click **Credential Profiles**.
   
   The **Manage Credential Profiles** page is displayed.
2. Select a credential profile.
   
   Devices that are associated with the Credential Profile are displayed on the Credential Profile overview pane.

## Editing Credential Profile

**Prerequisite**
You must be logged in to SupportAssist Enterprise with elevated or administrative privileges. See **Granting elevated or administrative privileges to users**.

**About this task**
You can update the credentials of a profile based on your requirement. For example, you may edit the Credential Profile to add a new Account Credentials or change the Account Credentials for a device type.

**Steps**
1. Point to **Devices > Manage Credentials** and click **Credential Profiles**.
   
   The **Manage Credential Profiles** page is displayed.
2. Select the Credential Profile that you want to edit and click **Edit**. The **Edit Credential Profile** window is displayed.
3. Select the device type for which you want to edit Account Credentials. The **Account Credentials** list is enabled for selection.
4. From the **Account Credentials** list, select the Account Credentials that you want to assign to the device type.
5. Click **Update**. The Credential Profile is updated. Devices to which the Credential Profile is assigned are re-validated.

### Deleting Credential Profile

**Prerequisites**
- You must be logged in to SupportAssist Enterprise with elevated or administrative privileges. See [Granting elevated or administrative privileges to users](#).
- The Credential Profile that you want to delete must not be assigned to any device.

**About this task**
You can delete a Credential Profile based on your preference.

**Steps**
1. Point to **Devices > Manage Credentials** and click **Credential Profiles**. The **Manage Credential Profiles** page is displayed.
2. Select the Credential Profile that you want to delete and click **Delete**. The **Delete Credential Profile** window is displayed.
3. Click **Yes**.

Maintaining SupportAssist Enterprise capability

The changes that occur in your company’s IT setup over a period of time may require configuration or updates in SupportAssist Enterprise. To maintain SupportAssist Enterprise capability over a period of time for all your devices, you may be required to:

- Enable monitoring of devices. See Enabling or disabling monitoring of a device.
- Edit the credentials (user name and password) of a device, if the device credentials were changed because of your company’s security policy or for other reasons. See Editing Account Credentials.
- Install or upgrade dependent components such as Dell OpenManage Server Administrator (OMSA). See Installing or upgrading OMSA by using SupportAssist Enterprise.
- Configure the SNMP settings of a device. See Configuring SNMP settings by using SupportAssist Enterprise.
- Update the primary and secondary contact information, if there is a change in the contact details. See Viewing and updating the contact information.
- Update the parts dispatch preferences and shipping information to enable the dispatch of a replacement hardware component. Updating dispatch details.
- Update the proxy server settings in SupportAssist Enterprise, if applicable. See Configuring proxy server settings.
- Update the SMTP server (email server) settings in SupportAssist Enterprise, if applicable. See Configuring the SMTP server settings.
- Perform the connectivity test to ensure that SupportAssist Enterprise is able to connect to all dependent network resources. See Connectivity test.
- Perform the case creation test to verify the automatic case creation capability of SupportAssist Enterprise. See Testing the case creation capability.
- Clear the System Event Log of a server. See Clearing the System Event Log (SEL).
- Upgrade or update SupportAssist Enterprise. See Automatic update.

You may also want to delete a device, if you do not want SupportAssist Enterprise to monitor a device or for other reasons. See Deleting a device.

Topics:
- Enabling or disabling monitoring of a device
- Performing deep discovery
- Installing or upgrading OMSA by using SupportAssist Enterprise
- Configuring SNMP settings by using SupportAssist Enterprise

- Testing the case creation capability
- Clearing the System Event Log
- Automatic update
- Deleting a device

Enabling or disabling monitoring of a device

Prerequisite
Ensure that you have completed the registration of SupportAssist Enterprise. See Registering SupportAssist Enterprise.
About this task
For devices that SupportAssist Enterprise can monitor, you can enable monitoring while adding the device. Depending on your requirement, you can also enable or disable monitoring of a device at any time from the Devices page. For SupportAssist Enterprise to automatically create a support case when a hardware issue occurs on a device, monitoring must be enabled for that device.

Steps
1. Point to Devices and click View Devices.
   The Devices page is displayed.
2. Select the device for which you want to enable or disable monitoring.
   The device overview pane is displayed at the right side of the Devices page.
3. In Monitoring, select Enable or Disable depending on your requirement.

![Devices page](image)

**Figure 31. Enable or disable monitoring option**

**NOTE:** If the registration of SupportAssist Enterprise is not completed, the Enable monitoring option is disabled.

**NOTE:** To allow SupportAssist Enterprise to monitor a device, in addition to enabling monitoring, the SNMP settings of the device must also be configured. For instructions to configure the SNMP settings of a device, see Configuring SNMP settings by using SupportAssist Enterprise and Manually configuring SNMP settings.
Performing deep discovery

**Prerequisite**
A Credential Profile must be assigned to the device.

**About this task**
Deep discovery enables you to discover a device and its associated device types. See Deep discovery.

**Steps**
1. Point to Devices and click View Devices.
   The Devices page is displayed.
2. Select the device for which you want to perform deep discovery.
   The device overview pane is displayed at the right side of the Devices page.
3. From the Tasks list, select Perform deep discovery.
   The Perform deep discovery window is displayed.
   
   ![NOTE: If deep discovery is not applicable for a device, the Perform deep discovery option is disabled.]
4. Select a Credential Profile and click Next.
   The device is revalidated and the associated devices are discovered.

**Related links**
Deep discovery

### Installing or upgrading OMSA by using SupportAssist Enterprise

**Prerequisites**

- You must be logged in to SupportAssist Enterprise with elevated or administrative privileges. See SupportAssist Enterprise user groups and Granting elevated or administrative privileges to users.
- You must have read-write access to the system drive of the target device.

**About this task**

For monitoring hardware issues that may occur on a server, the Dell OpenManage Server Administrator (OMSA) agent must be installed and running on the server. If OMSA is either not installed or requires an upgrade on a device, the Status column on the Devices page displays an appropriate message. You can use the Install / Upgrade OMSA option to automatically download and install the recommended version of OMSA on a device.

![NOTE: The SupportAssist Enterprise recommended version of OMSA may vary depending on the generation of the PowerEdge server and the operating system running on the server. For information on the recommended versions of OMSA, see the SupportAssist Enterprise Version 1.2 Support Matrix at Dell.com/ServiceabilityTools.

![NOTE: Installation or upgrade of OMSA by using SupportAssist Enterprise is not supported on servers running the following operating systems or hypervisors:

- Oracle Enterprise Linux
- CentOS
- Citrix XenServer
- VMware ESX or ESXi
- Oracle Virtual Machine
- Debian 7.x
- Debian 8.x
- Ubuntu 14.x
- Ubuntu 16.x
Steps

1. Point to Devices and click View Devices. The Devices page is displayed.
2. Select the server where you want to install or upgrade OMSA. The device overview pane is displayed at the right side of the Devices page.
3. From the Tasks list, select Install / Upgrade OMSA.

**NOTE:** If SupportAssist Enterprise does not support the installation or upgrade of OMSA on the server that you have selected, the Install / Upgrade OMSA option is disabled.

Figure 32. Install / Upgrade OMSA option

The Status column on the Devices page displays the status of the OMSA installation or upgrade.

Support for automatically installing or upgrading OMSA
Configuring SNMP settings by using SupportAssist Enterprise

Prerequisites

- You must be logged in to SupportAssist Enterprise with elevated or administrative privileges. See SupportAssist Enterprise user groups and Granting elevated or administrative privileges to users.
- You must have read-write access to the system drive of the target device.

About this task

Configuring SNMP settings sets the alert destination of a device, and ensures that alerts from the device are forwarded to the server where SupportAssist Enterprise is installed. If the SNMP settings of a device are not configured, the status column on the Devices page displays an appropriate message. You can use the Configure SNMP option to automatically configure the SNMP settings of a device.

**NOTE:** Configuring SNMP by using SupportAssist Enterprise is not supported on devices running the following operating system or hypervisors:

- Oracle Enterprise Linux
- VMware ESXi
- Oracle Virtual Machine

Steps

1. Point to Devices and click View Devices.
   The Devices page is displayed.
2. Select the device where you want to configure the SNMP settings.
   **NOTE:** If SupportAssist Enterprise does not support the configuration of SNMP on the device that you have selected, the Configure SNMP option is disabled.
   The device overview pane is displayed at the right side of the Devices page.
3. From the Tasks list, select Configure SNMP.
Figure 33. Configure SNMP option

The **Status** column on the **Devices** page displays the status of the SNMP configuration.

**Related links**
- Support for automatically configuring SNMP settings

**Viewing and updating the contact information**

You can update the primary contact details and also provide secondary contact information. If the primary contact is unavailable, Dell will contact your company through the secondary contact. If both the primary and secondary contacts are configured with valid email addresses, both receive SupportAssist Enterprise emails.

**Prerequisite**
You must be logged in to SupportAssist Enterprise with elevated or administrative privileges. See SupportAssist Enterprise user groups and Granting elevated or administrative privileges to users.

**Steps**
1. Point to **Settings** and click **Contact Information**.
   
The **Contact Information** page is displayed.
2. Select the type of contact:
   - **Primary**
In the contact details section:

a Type or edit the first name, last name, phone number, alternate phone number, and email address.
b Select the preferred contact method.
c Select the preferred contact hours.
d Select the time zone.

Click Apply.

Related links
Updating dispatch details

### Updating dispatch details

**Prerequisite**
You must be logged in to SupportAssist Enterprise with elevated or administrative privileges. See Granting elevated or administrative privileges to users.

**About this task**
Entering your dispatch preferences and shipping information enables Dell to dispatch of a replacement hardware component to you. You can enter your dispatch preferences and shipping information during registration or at a later time.

**NOTE:** Parts dispatch is supported only for systems that have an active ProSupport, ProSupport Plus, ProSupport One, or ProSupport Flex service entitlement.

**Steps**

1 Point to Settings and click Contact Information. The Contact Information page is displayed.

2 In the Parts Dispatch section, select one of the following:

   - **Parts dispatch only** — If you want only the replacement hardware component to be dispatched to your address.
   - **Parts dispatch and onsite service** — If you want an on-site technician to replace the dispatched hardware component.

3 Select Copy contact information, if you want to copy the contact details from the Contact Information section.

4 Select the preferred contact hours during which Dell can contact you, if necessary.

5 Select the time zone and type your shipping address in the appropriate fields.

6 Type any specific dispatch related information in the Dispatch notes section.

**NOTE:** If a device is moved to a different location, ensure that the dispatch preferences and shipping information are updated.

7 For Brazil only: Type the CNPJ and IE numbers.

8 Click Apply.

**Next step**

If you have entered dispatch notes, follow the instructions in Adding dispatch notes to default group, to ensure that the dispatch notes are applied to devices that are present in the default group.

**Related links**
Registering SupportAssist Enterprise
Viewing and updating the contact information
Registration
Contact Information
Adding dispatch notes to default group

About this task
By default, except the dispatch notes, all other dispatch preferences that you provide in the Preferences > Contact Information page or the Registration wizard are applied to all devices that are present in the Default group. To ensure that the dispatch notes are also applied to all devices that are present in the Default group, you must perform the following steps.

Steps
1. Point to Devices and click Manage Device Groups. The Device Groups page is displayed.
2. Select the Default device group.
3. From the Select group actions list, select Manage Contacts. The Manage Contacts window is displayed.
4. To use the contact information provided in the Settings > Contact Information page, select Use Default.
5. Click Save.

Configuring proxy server settings
If the server where SupportAssist Enterprise is installed connects to the Internet through a proxy server, you must ensure that the proxy settings are configured in SupportAssist Enterprise. You must also ensure that the proxy server settings are updated in SupportAssist Enterprise, whenever the settings of the proxy server are changed.

Prerequisite
You must be logged in to SupportAssist Enterprise with elevated or administrative privileges. See SupportAssist Enterprise user groups and Granting elevated or administrative privileges to users.

Steps
1. Point to Settings and click Proxy Settings. The Proxy Settings page is displayed.
2. Select Use proxy server.
3. Type the host name or IP address, and port number of the proxy server in the appropriate fields.
4. If a user name and password are required to connect to the proxy server, select Requires authentication and then type the user name and password in the appropriate fields.
5. In the Proxy exclusion list box, type the IP address ranges or host name expressions of devices to which SupportAssist Enterprise must communicate directly and not through the proxy server. IP address of devices that communicate through https protocol must be included in the proxy exclusion list. Examples of devices that communicate through https protocol include iDRAC, Storage SC Series arrays, VMware ESX and ESXi, and XC Series of Web-scale Hyper-converged appliances.

NOTE: You can enter one or more IP address ranges as semi-colon separated values. For example, 10.49.18.* ; 10.49.18.* ; **.

You can enter the IP address ranges in the following formats:
- 10.49.*.*
- 10.49.18.*
- **.100.10
- **.*.10
- .*10.12.100
- 10.*.*
The following IP address range formats are not supported:

- 10.*.*.49
- 10.*.49.*
- 10.49.*.10

6 Click Apply.

SupportAssist Enterprise verifies the connection to the proxy server by using the provided proxy server details, and displays a message indicating the connectivity status.

1. **NOTE:** The proxy settings are saved only if SupportAssist Enterprise is able to connect to the proxy server by using the provided details.

2. **NOTE:** If the proxy server is configured to allow anonymous authentication, the credentials you provide for the proxy server are saved, but the credentials are not validated.

**Related links**
- Proxy Settings

**Connectivity test**

The **Network Connectivity Test** page enables you to verify and test connectivity status to resources that affect the functionality of SupportAssist Enterprise. You can use the connectivity tests to verify if SupportAssist Enterprise is able to connect successfully to the following resources:

- Internet (including the proxy server, if the server where SupportAssist Enterprise is installed connects to the internet through a proxy server)
- The SMTP server (email server) utilized by your company
- Dell FTP server
- File upload server hosted by Dell
- SupportAssist server hosted by Dell

![Network Connectivity Test](image)

**Figure 34. Network Connectivity Test page**

1. **NOTE:** The network connectivity test does not verify the following:

   - Ports used by SupportAssist Enterprise
   - Internet connectivity of the server where the Remote Collector is set up

By default, SupportAssist Enterprise automatically tests connectivity to the dependent resources every day at 11 p.m. (time as on the server where SupportAssist Enterprise is installed), and displays the result in the **Status** column. If there is an issue with connectivity to a dependent resource, a status email is sent to your primary and secondary SupportAssist Enterprise contacts.
You can also test SupportAssist Enterprise connectivity to the dependent resources at any time. The result of the test is displayed in the
Status column.

**Viewing the connectivity status**

In the SupportAssist Enterprise header area, point to the user name link, and then click Network Connectivity Test.

The Status column displays the connectivity status to the dependent resources. If an Error status is displayed, click the Error link to view a description of the problem and the possible resolution steps.

**Performing the connectivity test**

1. In the SupportAssist Enterprise header area, point to the user name link, and then click Network Connectivity Test.
2. Select the tests that you want to perform.
3. Click Test Connectivity.

The Status column displays the result of the connectivity test. If an Error status is displayed, click the Error link to view a description of the problem and the possible resolution steps.

**Testing the case creation capability**

**About this task**

You can use the Case Creation test to ensure that support case creation is working prior to an actual alert that would automatically create a support case.

**Steps**

1. In the SupportAssist Enterprise header area, point to the user name link, and then click SupportAssist Enterprise Test.
2. Select the check box for the Case Creation test.
3. Click Run Tests.

The Status column displays the result of the test. If the test is successful, the Ready to Create Cases status is displayed.

Network Connectivity Test

SupportAssist Enterprise test
Clearing the System Event Log

Prerequisite
You must be logged in to SupportAssist Enterprise with elevated or administrative privileges. See SupportAssist Enterprise user groups and Granting elevated or administrative privileges to users.

About this task
The System Event Log (SEL) or hardware log, also known as the Embedded System Management (ESM) log, reports potential hardware problems in Dell PowerEdge servers. You can use the Clear System Event Log option available in SupportAssist Enterprise to clear the SEL in the following scenarios:

- An error message is displayed on a server even after the problem is resolved.
- An SEL full error message is displayed.

⚠️ CAUTION: Clearing the SEL removes the event history of the server.

Steps
1. Point to Devices and click View Devices.
   The Devices page is displayed.
2. Select the server where you want to clear the System Event Log.

⚠️ NOTE: If OMSA is not installed on a device that you have added in SupportAssist Enterprise with the Device Type as Server, the Clear System Event Log option is disabled.
From the Tasks list, select **Clear System Event Log**.

While the SEL is cleared from a device, the device displays a **Clearing System Event Log** status in SupportAssist Enterprise.

After the SEL is cleared successfully, the device displays a **System Event Log cleared** status.

**Automatic update**

The types of SupportAssist Enterprise updates that are available is as follows:

- **SupportAssist Enterprise application** update — Upgrades the SupportAssist Enterprise application with additional capability, protocol support, usability enhancements, and patches to fix existing issues.
- **Policy files** update — Defines SupportAssist Enterprise alert handling and case creation. By installing this update, SupportAssist Enterprise will have optimized case management as per the latest Dell definitions.
- **Product support files** update — Defines the Dell devices and operating systems that are compatible with SupportAssist Enterprise. By installing this update, SupportAssist Enterprise will be able to connect to, and collect system information from more device models.
- **Adapter upgrade** — Enables support for more and newer versions of the OpenManage Essentials, System Center Operations Manager, or OpenManage Enterprise adapter. By upgrading the adapter, SupportAssist Enterprise can add and inventory more device types and device models from the systems management console.
The adapter will be updated only if the update option is available.

By default, automatic update is enabled for the SupportAssist Enterprise application, policy files, product support files, and the adapter. This ensures that SupportAssist Enterprise is automatically updated whenever an update is available. You can choose to enable or disable the automatic update of a specific component based on your preference. For instructions to enable or disable automatic updates, see Enabling or disabling automatic updates.

Dell recommends that you enable automatic update to ensure that SupportAssist Enterprise is up-to-date with the latest features and enhancements.

The SupportAssist Enterprise application checks if any updates are available, every Monday at 11 a.m. (date and time as on the server where SupportAssist Enterprise is installed):

- If updates are available and automatic updates are enabled, the updates are downloaded and automatically installed in the background.
- If updates are available, but automatic update is disabled, the update available banner is displayed at the top of the page. You can click Update now to allow SupportAssist Enterprise to download and install the latest updates.

After the updates are downloaded and installed, an update successful message is displayed. To view and use the latest updates and enhancements, you must refresh the SupportAssist Enterprise user interface.

Information about the SupportAssist Enterprise update is logged in the log file available at the following location based on the operating system where SupportAssist Enterprise is installed:

- On Windows — \<Drive where SupportAssist Enterprise is installed>\Program Files\Dell\SupportAssist\logs
- On Linux — /opt/dell/supportassist/logs

Enabling or disabling automatic updates

Enabling automatic updates ensures that SupportAssist Enterprise is automatically updated whenever updates are available.

Prerequisite
You must be logged in to SupportAssist Enterprise with elevated or administrative privileges. See SupportAssist Enterprise user groups and Granting elevated or administrative privileges to users.

Steps
1. Point to Settings and click Preferences.
   The Preferences page is displayed.
2. In Automatically update the following features in SupportAssist Enterprise, select or clear the options that you want to enable or disable.
3. Click Apply.

Deleting a device

Prerequisite
You must be logged in to SupportAssist Enterprise with elevated or administrative privileges. See SupportAssist Enterprise user groups and Granting elevated or administrative privileges to users.

About this task
You can delete one or more devices from SupportAssist Enterprise, if you do not want to monitor a device or for other reasons.

NOTE: Deleting a device only removes the device from the SupportAssist Enterprise user interface; it does not affect the functionality of the device.

NOTE: Devices that are inventoried and added in SupportAssist Enterprise through an adapter cannot be deleted. Those devices are deleted automatically from SupportAssist Enterprise when either the adapter is deleted or the devices are removed from the systems management console.
Steps

1. Point to **Devices** and click **View Devices**. The **Devices** page is displayed.
2. Select the devices that you want to delete.
3. Click **Delete**. The **Confirm Device Deletion** window is displayed.

4. Click **Yes**. The devices are deleted from the **Devices** page.

**NOTE:** When a device is deleted, the system information collected from the device is not deleted until the purge collections task deletes the collected system information. The purge collection task only deletes system information collections that are 30 days or older and collections that are older than the last 5 collections over the last 30 days.
Configuring email notifications

By default, SupportAssist Enterprise is configured to send an email notification when a support case is created automatically. SupportAssist Enterprise can also send email notifications about maintenance mode, device status, and network connectivity status. Depending on your preference, you can configure the following email notification settings:

- Disable the case creation email notification and/or select the preferred language for email notifications. See Configuring email notification settings.
- Configure SupportAssist Enterprise to send email notifications through the SMTP server (email server) utilized by your company. See Configuring SMTP server settings.

**NOTE:** For information about the different types of SupportAssist Enterprise email notifications, see Types of email notifications.

Topics:
- Configuring email notification settings
- Configuring SMTP server settings
- Types of email notifications

### Configuring email notification settings

**Prerequisite**
You must be logged in to SupportAssist Enterprise with elevated or administrative privileges. See SupportAssist Enterprise user groups and Granting elevated or administrative privileges to users.

**About this task**
You can enable or disable automatic email notifications from SupportAssist Enterprise and also select the preferred language for email notifications.

**Steps**
1. Point to **Settings** and click **Preferences**. The **Preferences** page is displayed.
2. To receive email notifications when a new support case is opened, in **Email Settings**, select **Receive email notification when a new support case is opened**.

   **NOTE:** Disabling support case email notifications also disables the automatic email notifications that are sent if an issue occurs while:
   - Creating a support case
   - Collecting the system information from a device
   - Sending the system information from a device to Dell
3. To set the language in which you want to receive email notifications, from the **Preferred Email Language** list, select a language.

   **NOTE:** The Preferred Email Language is enabled only when the Receive email notification when a new support case is opened option is selected.
4. Click **Apply**.

**Related links**
- Preferences
Configuring SMTP server settings

**Prerequisite**
You must be logged in to SupportAssist Enterprise with elevated or administrative privileges. See SupportAssist Enterprise user groups and Granting elevated or administrative privileges to users.

**About this task**

**NOTE:** Configuring the SMTP server settings is optional.

If your company utilizes an SMTP server (email server), Dell recommends that you configure the SMTP server settings in SupportAssist Enterprise. Configuring the SMTP server settings enables SupportAssist Enterprise to send maintenance mode, device status, and network connectivity status email notifications through the SMTP server.

**Steps**

1. Point to **Settings** and click **SMTP Settings**.
   
   The **SMTP Settings** page is displayed.
2. Select **Use SMTP server**.
3. Type the host name or IP address, and the port number of the SMTP server in the appropriate fields.
4. If the SMTP server requires authentication for sending emails, select **Requires authentication**.
5. Type the user name and password in the corresponding fields.
6. To send email notifications securely, select **Use SSL**.
7. Click **Apply**.

| Final message regarding unresolved issue with the adapter or Remote Collector | If the issue is not resolved within 6 hours, after the issue was detected.                                                                                                                                                                 | SupportAssist Enterprise application |

**NOTE:** Email notifications can be received only if the Receive email notification when a new support case is opened option is selected. See Configuring email notification settings.
Configuring collection settings

By default, when registration is complete, SupportAssist Enterprise automatically collects system information from all devices at periodic intervals. SupportAssist Enterprise also collects system information automatically from a device when a support case is created for an issue with the device. Depending on your preference, you can configure the following collection settings:

- Disable the automatic collection of system information from devices when a support case is created or updated. See Enabling or disabling the automatic collection of system information on case creation.
- Disable the periodic collection of system information from all devices. See Enabling or disabling the periodic collection of system information from all devices.
- Disable the collection of identity information from all devices. See Enabling or disabling the collection of identity information.
- Disable the collection of software information and the system log from all devices. See Enabling or disabling the collection of software information and the system log.
- Enable or disable the automatic upload of collections. See Disabling the automatic upload of collections.

Topics:

- Prerequisites for collecting system information
- Enabling or disabling the automatic collection of system information on case creation
- Enabling or disabling the periodic collection of system information from all devices
- Enabling or disabling the collection of identity information
- Enabling or disabling the collection of software information and the system log
- Enabling or disabling the automatic upload of collections

Prerequisites for collecting system information

The following are the SupportAssist Enterprise prerequisites for collecting system information:

- The local system (server where SupportAssist Enterprise is installed) must have sufficient hard drive space to save the collected system information. For information on the hard-drive space requirements, see Hardware requirements.
- For collecting system information from a remote device, the remote devices must be reachable from the local system. If the remote device is associated with a Remote Collector, the remote device must be reachable from the server where the Remote Collector is set up.
- The local system and remote devices (devices you have added in SupportAssist Enterprise) must meet the network port requirements. For information on the network port requirements, see Network requirements.
- If you have added a server in SupportAssist Enterprise by using the operating system IP address or host name (agent-based monitoring):
  - The server must preferably have Dell OpenManage Server Administrator (OMSA) installed.
  - If the server is running a Windows operating system:
    - The device credentials you have entered in SupportAssist Enterprise must have administrative privileges.
    - The device credentials must have privileges required for Windows Management Instrumentation (WMI) communication. For information on ensuring WMI communication, see the “Securing a Remote WMI Connection” technical documentation at msdn.microsoft.com.
  - If the server is running a Linux operating system:
    - The device credentials you have entered in SupportAssist Enterprise must have administrative privileges.
    - If you have entered the credentials of a sudo user, the sudo user must be configured for SupportAssist Enterprise. For information on configuring the sudo user, see Configuring sudo access for SupportAssist Enterprise (Linux).
- No resource (network share, drive, or ISO image) must be mounted on the /tmp folder.
- If OMSA is installed on the device, the latest version of OpenSSL must also be installed on the device. For more information on OpenSSL, see the resolution for OpenSSL CCS injection vulnerability (CVE-2014-0224) available in the support website of the operating system.

**NOTE:** If the server you have added for agent-based monitoring does not have OMSA installed, periodic collections from the device will not include storage and system details.

- If you have added a server in SupportAssist Enterprise by using the iDRAC IP address (agentless monitoring), the iDRAC credentials that you entered must have administrator privileges.
- The local system must have internet connectivity for uploading the collected system information to Dell.
- For collecting system information from ESX and ESXi only, ensure that SFCBD and CIMOM are enabled.

## Enabling or disabling the automatic collection of system information on case creation

**Prerequisite**
You must be logged in to SupportAssist Enterprise with elevated or administrative privileges. See SupportAssist Enterprise user groups and Granting elevated or administrative privileges to users.

**About this task**
By default, when a support case is created, SupportAssist Enterprise automatically collects system information from the device with the issue and sends the information securely to Dell. If required, you can enable or disable the automatic collection of system information on case creation based on your preference.

**NOTE:** To receive the full benefits of the support, reporting, and maintenance offering of the ProSupport Plus, ProSupport Flex for Data Center, or ProSupport One for Data Center service contract for a device, automatic collection of system information must be enabled.

**Steps**
1. Point to Settings and click Preferences.
   
   The Preferences page is displayed.

2. In Automatically collect system state information, depending on your requirement, select or clear the When a new support case is created option.

   **NOTE:** By default, the When a new support case is created option is selected.

3. Click Apply.

**Related links**
Preferences

## Enabling or disabling the periodic collection of system information from all devices

**Prerequisite**
You must be logged in to SupportAssist Enterprise with elevated or administrative privileges. See SupportAssist Enterprise user groups and Granting elevated or administrative privileges to users.

**About this task**
By default, SupportAssist Enterprise starts collecting system information from all monitored devices at periodic intervals and sends it securely to Dell. The collection start time is a randomly determined day of every month at 11 PM. If required, you can enable or disable the periodic collection of system information from all monitored devices based on your preference.

**NOTE:** To receive the ProSupport Plus recommendation report by email, periodic collection of system information must be enabled.

**Steps**
1. Point to Settings and click Preferences.
The **Preferences** page is displayed.

2. In **Automatically collect system state information**, select or clear the **Starting from day N of every month at 11 PM** option.

3. Click **Apply**.

**Related links**
- Preferences

### Enabling or disabling the collection of identity information

**Prerequisite**
You must be logged in to SupportAssist Enterprise with elevated or administrative privileges. See [SupportAssist Enterprise user groups](#) and [Granting elevated or administrative privileges to users](#).

**About this task**
The system information that is collected by SupportAssist Enterprise includes identity information (PII) such as the complete configuration snapshot of systems, hosts, and network devices that can contain host identification and network configuration data. In most cases, part or all of this data is required to properly diagnose issues. If the security policy of your company restricts sending identity data outside of the company network, you can configure SupportAssist Enterprise to filter such data from being collected and sent to Dell.

The following identity information can be filtered when collecting the system information from a device:

- Host name
- IP address
- Subnet mask
- Default gateway
- MAC address
- DHCP server
- DNS server
- Processes
- Environment variables
- Registry
- Logs
- iSCSI data
- Fibre Channel data — host World Wide Name (WWN) and port WWN

**NOTE:** When the **Include identification information in collections** option is cleared, some of the data about your company network (including the system log) is not transmitted to Dell. This may impede Technical Support from resolving issues that may occur on your devices.

**NOTE:** If your devices have an active ProSupport Plus, ProSupport Flex for Data Center, or ProSupport One for Data Center service contract, when the Include identification information in data sent to Dell option is disabled, you will not receive some reporting information about your devices.

**Steps**

1. Point to **Settings** and click **Preferences**.
   The **Preferences** page is displayed.

2. In **Identification Information Settings**, depending on your requirement, select or clear the **Include identification details in the information that is sent to Dell** option.

   **NOTE:** By default, the include identification details in the information that is sent to Dell option is selected.

   **NOTE:** If you clear the **Include identification details in the information that is sent to Dell** option, the settings for collection of logs, diagnostic data, and support data are disabled automatically. Therefore, collections that are sent to Dell from your devices do not include certain categories of data.
NOTE: If you have disabled the collection of identity information from devices, the identity information such as host name, IP address, and so on are replaced by tokenized values in the collected system information. The tokenized values are represented as TOKEN\text{n}—for example, TOKEN0, TOKEN1, or TOKEN2.

3 Click Apply.

Enabling or disabling the collection of software information and the system log

Prerequisite
You must be logged in to SupportAssist Enterprise with elevated or administrative privileges. See SupportAssist Enterprise user groups and Granting elevated or administrative privileges to users.

About this task
By default, the system information that is collected and sent to Dell by SupportAssist Enterprise includes software information and system logs. If required, you can configure SupportAssist Enterprise to exclude the collection of software information and system logs from all devices.

Steps
1 Point to Settings and click Preferences. The Preferences page is displayed.
2 In Collection Data Settings, select or clear the available options for each device type.

NOTE: By default, all Collection Data Settings options are selected.

NOTE: For information on the logs that are collected by SupportAssist Enterprise, see the SupportAssist Enterprise Version 1.2 Reportable Items document at Dell.com/ServiceabilityTools.

3 Click Apply.

Enabling or disabling the automatic upload of collections

Prerequisite
You must be logged in to SupportAssist Enterprise with elevated or administrative privileges. See SupportAssist Enterprise user groups and Granting elevated or administrative privileges to users.

About this task
By default, the system state information is collected from your devices by SupportAssist Enterprise and sent to Dell. If required, you can disable the automatic upload of collections.

NOTE: Auto upload setting is not applicable for multiple device collections.

Steps
1 Point to Settings and click Preferences. The Preferences page is displayed.
2 In Automatically upload, depending on your requirement, select or clear System state information collected from devices to Dell option.
3 Click Apply.
SupportAssist Enterprise collects system information from each device that you have added and sends the information securely to Dell. Typically, the system information is collected as follows:

- Periodically — At regular intervals, depending on the predefined collection start date specified in the Preferences page.
- On case creation — When a support case is created for an issue that has been identified by SupportAssist Enterprise.
- Manual (on demand) — If requested by Technical Support, you can initiate the collection of system information from one or more devices at any time.

**NOTE:** By default, SupportAssist Enterprise collects system information periodically and on case creation only after the registration is completed. For more information on registration, see Registering SupportAssist Enterprise.

You can also use SupportAssist Enterprise to collect and send system information from multiple devices to Dell. For more information on collecting system information from multiple devices, see Starting the collection of system information from multiple devices.

The collected system information is saved on the server that hosts the application that runs the collection task. Collections tasks that are run by SupportAssist Enterprise are saved on the server where SupportAssist Enterprise is installed. Collection tasks that are run by a Remote Collector are saved on the server where the Remote Collector is set up. You can access collections that are run by SupportAssist Enterprise from the Devices or Collections page. The system information available in a collection is displayed in the Configuration Viewer that is available in SupportAssist Enterprise.

**NOTE:** Collections that are performed by a Remote Collector cannot be viewed from SupportAssist Enterprise. For information on viewing such collections, see Viewing collections for devices associated with a Remote Collector.

**NOTE:** You can only view the last 5 system information collections through the Configuration Viewer. System information collections that are 30 days or older and collections that are older than the last 5 collections within the last 30 days are automatically purged. The purge collections task runs automatically every day at 10 p.m. (time as on the server where SupportAssist Enterprise is installed).

**NOTE:** The Configuration Viewer does not support viewing the system information collected from storage devices with Fluid File System (FluidFS).

**NOTE:** For collections from devices that are running a non-English operating system, the Configuration Viewer may not display certain attributes as expected.

**NOTE:** Collections tab will only display system information collected during the last 7 days. To view collections that are older than 7 days, use the date filter to display the list of collections.

Viewing a collection from the Devices page

**About this task**
The device overview pane lists the collections that have been performed on a specific device. You can select any collection that you want to view from the collections list.

**Steps**
1. Point to **Devices** and click **View Devices**.
   The **Devices** page is displayed.
2. Select the device for which you want to view collections.
   The device overview pane is displayed at the right side of the **Devices** page.
   The **Collections** field displays **No Collections** in the following scenarios:
   - No collections have been performed from the device
   - The device is associated with a Remote Collector
3. From the **Collections** list, select a collection date and time.

![Device Overview Pane](image)

**Figure 38. Selecting a collection**

If the device is a server, the **Configuration Viewer** is displayed in a new web browser window. For all other device types and multiple device collections, you are prompted to save the collection as a .zip file. To view the downloaded collection, extract the .zip file and click the **index.html** file.
Viewing a collection from the Collections page

About this task

The Collections page lists all the collections that have been performed successfully. You can select any collection that you want to view from the collections list. You can also identify whether the collection is either a single or multiple device collection based on the collection name.

- Collections from a single device are named in the following format: device name (collection type). If the device name is not available, the collection name contains the IP address or hostname of the device.
- Multiple device collections are named in the following format: SA_yyyy_mm_ddThh_ss_collection name

Steps

1. Point to Collections and click View Collections.
   The Collections page is displayed.
2. Select a collection that you want to view.

![Figure 39. View Collection option](image)

The collection overview pane is displayed.

**NOTE:** The View Collection or Download Collection option is disabled if the collection was performed by a Remote Collector.

3. Click View (for server collections) or Download (for all other device types and multiple device collections).
   If the collection is from a server, the Configuration Viewer is displayed in a new web browser window. For collections from all other device types and multiple device collections, download and save the collection as a .zip file. To view the downloaded collection, extract the .zip file and click the index.html file.

Refining collections based on a date range

Prerequisite

You must be logged in to SupportAssist Enterprise with elevated or administrative privileges. See Granting elevated or administrative privileges to users.

Steps

1. Point to Collections and click View Collections.
   The Collections page is displayed.
2. From the Date Range filter, select the start and end dates, and then click Apply.
   Collections in the selected date range are displayed.
Configuration Viewer

The **Configuration Viewer** enables you to view the system information collected by SupportAssist Enterprise from your devices. The title bar of the **Configuration Viewer** displays the date of the collection and the Service Tag of the device. The collected system information is displayed in the **Configuration Viewer** under various categories and sub categories. In addition, the **Configuration Viewer** displays a **Summary** category. You can select the **Summary** category to view the following:

- The system information collection settings in SupportAssist Enterprise at the time of the collection
- Summary of errors that were detected in the collected system information
- Brief information about the device

The layout of the **Configuration Viewer** is as follows:

**User interface**

**Left pane**

Displays the various categories and sub categories of system information in an expanded tree format. A category may display a warning or critical icon to indicate the health status roll-up of its subcategories. When you can click a category, the category is expanded, enabling you to view its sub categories. You can click **Expand All** or **Collapse All** to quickly expand or collapse all categories.

**Divider**

Is displayed between the left and right panes. You can click and drag the divider to the left or right to increase or decrease the viewable area of the right pane. You can also hide the left pane if necessary. To hide the left pane, click the < icon that is displayed at the top of the divider. To view the left pane again, click the > icon that is displayed at the top of the divider.

**Right pane**

Displays the system information available for the category or subcategory that is selected in the left pane. This pane includes a navigation trail, which you can click to navigate backward on the current trail.

Figure 40. Configuration Viewer

- **NOTE**: If you have disabled the collection of identity information from devices, the identity information such as host name, IP address, and so on are replaced by tokenized values in the collected system information. The tokenized values are represented as **TOKENn**—for example, TOKEN0, TOKEN1, or TOKEN2.

- **NOTE**: For a list of items that may be reported in collections from a server, see **Items reported in periodic collections from servers**.
NOTE: The Configuration Viewer does not support viewing the system information collected from storage devices with Fluid File System (FluidFS).

Data views

By default, the data for a selected category or sub category is displayed in a grid format. For some categories, a grid may present several columns or rows of data. When the data is presented either in more than 4 columns or less than 50 rows, the Grid View and List View toggle options are displayed at the top-right of the data display area. The Grid View and List View toggle options enable you to view the data efficiently by transposing the displayed data as follows:

- Grid View (default) — When the data is displayed in List View, selecting this option transposes the displayed data from rows to columns
- List View — When the data is displayed in Grid View, selecting this option transposes the displayed data from columns to rows

NOTE: If multiple grids are displayed for a selected category, the Grid View and List View selections are applied only on those grids that present data in either more than 4 columns or less than 50 rows.

To toggle the views, click at the appropriate side of the slider.

Log types

You can use the configuration viewer to access two types of logs from the system information that is collected by SupportAssist Enterprise:

<table>
<thead>
<tr>
<th>Log types</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Structured logs</td>
<td>Contain application logs, Embedded Server Management (ESM) logs, smart logs, and event logs. When you click the Structured Logs category, the configuration viewer displays the list of available structured logs. You can click any of the listed structured logs to view the details of the log in a new web browser window.</td>
</tr>
<tr>
<td>Unstructured logs</td>
<td>Contain a snapshot of the system files such as the Remote Access Controller (RAC) logs, Windows event logs, and other logs. When you click the Unstructured Logs category, the configuration viewer displays the list of available unstructured logs.</td>
</tr>
</tbody>
</table>

NOTE: Unstructured logs cannot be viewed within the configuration viewer. You can only save the unstructured logs and view the log details using an appropriate application.

Items reported in periodic collections from servers

The items reported in the system information collected from servers vary depending on the following:

- Device Type used to add the device in SupportAssist Enterprise
- Type of collection (manual, periodic, or support case)

The following table provides a summary of the items reported in the collected system information for a periodic collection from servers.

NOTE: The system information in a collection that is performed for a support case creation and a manually-initiated collection is more detailed in comparison with the system information collected in a periodic collection. For the complete list of items that are collected by SupportAssist Enterprise, see the SupportAssist Enterprise Version 1.2 Reportable Items document at Dell.com/ServiceabilityTools.

NOTE: The system information from periodic collections enables Dell to provide you an insight into your company’s as-maintained environment configuration with proactive firmware recommendations and other reports.

**NOTE:** In a collection from an iDRAC, Controller TTY Log is available only if iDRAC firmware version 2.00.00.00 or later installed on the server.
Downloading and viewing a multiple device collection

About this task
You can also view the system information available in the multiple device collections that you have performed. To view a multiple device collection, you must download the multiple device collection and open the collection by using a web browser.

Steps
1. Point to Collections and click View Collections. The Collections page is displayed.
2. Select a multiple device collection that you want to view.

![Figure 41. Download Collection option](image)

The collection overview pane is displayed.

3. Click Download Collection.
   You are prompted to open or save the collection file.
4. Save the collection file.
5. Extract the multiple device collection .zip file.
6. Open the folder where you extracted the collection file.
7. Double-click the index.html file.
   The multiple device configuration viewer opens in a new web browser window. You can view the system information collected from each device by accessing the device type menu.

Multiple device configuration viewer

The multiple device configuration viewer displays information in a tabbed format. The Contacts tab is the default tab of the multiple device configuration viewer. The Contacts tab displays the case details, customer information, and collection details.

Depending on the device types from which the collection was performed, the multiple device configuration viewer may display the following tabs:

- Server — If the collection includes the system information from a server
- **Storage** — If the collection includes the system information from a storage device
- **Networking** — If the collection includes the system information from a network device
- **Chassis** — If the collection includes the system information from a chassis

To access the system information collected from a specific device, point to the device type tab and click the device from the menu that is displayed. The system information collected from a device is displayed as categories and subcategories. Click a category to expand or collapse the category. The system information available in a category can be viewed when the category is expanded. You can click **Expand All** or **Collapse All** to quickly expand or collapse all categories.

![Figure 42. Multiple device configuration viewer](image)

---

**NOTE:** The Configuration Viewer does not support viewing the system information collected from storage devices with Fluid File System (FluidFS).
Using SupportAssist Enterprise to collect and send system information

SupportAssist Enterprise automates the collection of system information from your Dell devices both periodically and on case creation. If required, you can also manually start the collection and upload of system information to Dell at any time. You can choose to start the collection of system information from a single device or multiple devices.

**NOTE:** For information on the devices from which SupportAssist Enterprise can collect and send system information to Dell, see the SupportAssist Enterprise Version 1.2 Support Matrix at Dell.com/ServiceabilityTools.

Topics:
- Setting up SupportAssist Enterprise for collecting and sending system information
- Starting the collection of system information from a single device
- Starting the collection of system information from multiple devices
- Uploading a collection
- Uploading a collection from a disconnected site

Setting up SupportAssist Enterprise for collecting and sending system information

**About this task**
Installing SupportAssist Enterprise enables you to use SupportAssist Enterprise to collect and send system information to Dell from the local system. To use SupportAssist Enterprise to collect and send system information to Dell from remote devices, you must add each remote device in SupportAssist Enterprise.

**NOTE:** The following steps are only required if you have not installed SupportAssist Enterprise. If you have already installed SupportAssist Enterprise, follow the instructions in Starting the collection of system information from a single device to manually start the collection and upload of system information to Dell.

**Steps**
1. Install SupportAssist Enterprise. See Installing SupportAssist Enterprise.
2. (Optional) Register SupportAssist Enterprise. See Registering SupportAssist Enterprise.
   SupportAssist Enterprise is now ready to collect system information from the local system.
3. Add each remote device in SupportAssist Enterprise. See Adding devices.

**NOTE:** System information collected from servers running OMSA contains additional troubleshooting information that may not be available in the data collected from servers that are not running OMSA. Therefore, Dell recommends that you install OMSA on the servers that you have added in SupportAssist Enterprise.

SupportAssist Enterprise is now ready to collect system information from remote devices.
Starting the collection of system information from a single device

**Prerequisites**

- Ensure that you have completed setting up SupportAssist Enterprise. See Setting up SupportAssist Enterprise for collecting and sending system information.
- You must be logged in to SupportAssist Enterprise with elevated or administrative privileges. See SupportAssist Enterprise user groups and Granting elevated or administrative privileges to users.

**About this task**

When a support case is opened or updated for a device, SupportAssist Enterprise automatically collects system information from that device, and uploads the information to Dell. If necessary, you can also manually start the collection of system information from a device. For example, if an error occurs during the automatic collection and upload of system information, you must resolve the underlying issue, and then manually start the collection and upload of system information. You may also be required to manually start the collection and upload of system information, if requested by Technical Support.

**Steps**

1. Point to **Devices** and click **View Devices**.
   
   The **Devices** page is displayed.

2. Select the local system or a remote device from which you want to collect system information.
   
   The **Start Collection** link is enabled.
Figure 43. Starting a collection from a single device

3. Click **Start collection**.
The Name/IP Address column on the Devices page displays a progress bar and a message that indicate the status of the collection and upload of system information to Dell.

1. **NOTE:** If you want to cancel the collection of system information, click the icon that is displayed next to the progress bar.
2. **NOTE:** Until the collection is complete, the check box that is used to select the device is disabled. Therefore, you cannot initiate any other tasks on the device until the collection is complete.
3. **NOTE:** If the registration is not complete, the collection is not automatically sent to Dell. However, you can go to the Collections page, and then manually initiate the upload.

### Starting the collection of system information from multiple devices

**Prerequisite**
You must be logged in to SupportAssist Enterprise with elevated or administrative privileges. See SupportAssist Enterprise user groups and Granting elevated or administrative privileges to users.

**About this task**
You can use SupportAssist Enterprise to create and upload a collection bundle that contains the collected system information from multiple devices.

1. **NOTE:** System information is collected only from devices that are not present in the Staging group.

**Steps**
1. Point to Devices and click View Devices.
   - The Devices page is displayed.
2. Select the devices from which you want to collect system information.
   - The Start Collection link is disabled when you select more than one device.
3. From the Collection Purpose list, select a reason for the collection.
   - The Start Collection link is enabled.
4. Click Start Collection.
Figure 45. Starting a multiple device collection

The **Multiple Device Collection** window is displayed.

5. (Optional) Type a name for the collection bundle, support case number, and the name or email address of the Technical Support contact.

6. If you want SupportAssist Enterprise to upload the collection bundle to Dell, ensure that the **Upload Collection** option is selected.

   **NOTE:** If you clear the Upload Collection option, the collection bundle is saved, but not uploaded to Dell. You can upload the collection bundle at a later time through the **Collections** page.

7. Click **OK**.

    ![Multiple Device Collection](image)

Figure 46. Multiple Device Collection pane

The collection progress status is displayed in the **Multiple Device Collection** pane on the **Devices** page. If the collection is completed successfully, the **Collections** page displays the details of the collection. You can also download the multiple device collection from the **Collections** page. For information on viewing a multiple device collection, see [Downloading and viewing a multiple device collection](#).

   **NOTE:** To cancel the multiple device collection, click **Cancel** on the Multiple Device Collection pane.

   **NOTE:** Until the multiple device collection is complete, the check box that is used to select the devices is disabled. Therefore, you cannot initiate any other tasks on the devices until the multiple device collection is complete.

   **NOTE:** If the registration is not complete, the collection is not automatically sent to Dell. However, you can go to the **Collections** page, and then manually initiate the upload.

   **NOTE:** When you are collecting system information from multiple devices, if the devices you have selected are associated with multiple Remote Collectors, then each Remote Collector generates a separate collection bundle.
Uploading a collection

**Prerequisite**
You must be logged in to SupportAssist Enterprise with elevated or administrative privileges. See SupportAssist Enterprise user groups and Granting elevated or administrative privileges to users.

**About this task**
You can use the Upload option available in the Collections page to upload collections to Dell. You may choose to upload a collection in the following scenarios:

- Collection of system information was successful, but upload of the collection was unsuccessful.
- While starting a multiple device collection, you had chosen not to upload the multiple device collection to Dell. Such collections display a Never Uploaded status in the Collections page.
- You want to upload a collection to Dell once again.

**NOTE:** Manual upload is not supported for collections that were performed by a Remote Collector.

**Steps**

1. Point to Collections and click View Collections. The Collections page is displayed.
2. Select one or more collections that you want to upload and click Upload.

**NOTE:** The total file size of the all collections that you have selected must be lesser than 5 GB.

---

**Figure 47. Upload collection option**

The Upload Status column displays the status of the upload.

---

**Uploading a collection from a disconnected site**

**About this task**
When internet connectivity is available, SupportAssist Enterprise automatically collects and sends system information from your devices to Dell. If the server where SupportAssist Enterprise is installed or the server where the Remote Collector is set up does not have internet connectivity, you can choose to manually upload collections to Dell.

**Steps**

1. Perform a collection from the device. See Starting the collection of system information from a single device.
2. If the collection was performed by SupportAssist Enterprise:
• For storage, networking, or multiple device collections only — On the **Collections** page, select the collection, and in the collection overview pane, click **Download File**.

• For other device collections, depending on the operating system, you can access the collection .zip file at the following location:
  – Windows — <Drive where SupportAssist Enterprise is installed>:\Program Files\Dell\SupportAssist\reports
  – Linux — /opt/dell/supportassist/scripts/reports

• If the collection was performed by a Remote Collector, log in to the server where the Remote Collector is installed. Depending on the operating system, you can access the collection .zip file at the following location:
  – Windows — <System drive of the remote system>:\Program Files\Dell\SupportAssist\reports
  – Linux — /opt/dell/supportassist/scripts/reports

3 Copy and paste the collection .zip file to another system that has internet connectivity.

4 Visit https://techdirect.dell.com/fileUpload/
   The **Dell EMC Technical Support File Upload** page is displayed.

5 Type the Service Tag of the device.

6 Type your company name, contact name, Service Request #, email address, Dell contact email, and address in the appropriate fields.

   **NOTE:** If you do not have a Service Request number, contact Technical Support to open a service request.

7 Click **Choose File** and browse to select the collection .zip file.

8 Click **Submit**.
Understanding maintenance mode

The maintenance mode functionality suspends the alert processing and automatic case creation capability of SupportAssist Enterprise, thereby preventing the creation of unnecessary support cases during an alert storm or a planned maintenance activity. If an alert storm is received from a monitored device, SupportAssist Enterprise automatically places the device in maintenance mode. You can also manually enable the maintenance mode functionality before a planned maintenance activity to temporarily suspend the automatic case creation capability. The following sections provide more information about the maintenance mode functionality.

Global-level maintenance mode

Global-level maintenance mode places all monitored devices in maintenance mode, suspending alert processing and automatic case creation for all devices. While in global-level maintenance mode, SupportAssist Enterprise displays a yellow Maintenance Mode banner at the top of the page. You can enable global-level maintenance mode to prevent the creation of unnecessary support cases during downtime or a routine maintenance activity. For instructions to enable global-level maintenance mode, see Enabling or disabling global-level maintenance mode.

Device-level maintenance mode

Device-level maintenance mode suspends alert processing and automatic case creation for a specific device. For all other monitored devices, SupportAssist Enterprise continues to process alerts and create support cases, if the alerts qualify for case creation. Device-level maintenance mode is implemented as follows:

- **Automated device-level maintenance mode** — By default, if SupportAssist Enterprise receives 10 or more valid hardware alerts within 60 minutes from a specific device, SupportAssist Enterprise automatically places that device in maintenance mode. The device remains in maintenance mode for 30 minutes, allowing you to resolve the issue without creating additional support cases for the device. An email notification is also sent to the primary and secondary contacts, and the device displays the maintenance mode icon on the Devices page. After 30 minutes, the device is automatically removed from maintenance mode, enabling SupportAssist Enterprise to resume normal alert processing for the device. If required, you can retain the device in maintenance mode until you resolve the issue, by manually enabling maintenance mode. You can also remove a device from automated maintenance mode before the 30-minute period. For instructions to enable or disable the device-level maintenance mode, see Enabling or disabling device-level maintenance mode.

- **Manual device-level maintenance mode** — If you have a planned maintenance activity for a device, and do not want SupportAssist Enterprise to automatically create support cases, you can place that device in maintenance mode. While in maintenance mode, the device displays the maintenance mode icon on the Devices page. After the maintenance activity is completed, you can remove the device from maintenance mode, enabling SupportAssist Enterprise to resume processing alerts from the device normally. For instructions to enable device-level maintenance mode, see Enabling or disabling device-level maintenance mode.

The global-level and device-level maintenance mode functionalities work independent of each other. For example:

- If a device is placed in manual maintenance mode, the device continues to remain in manual maintenance mode even if global-level maintenance mode is enabled and then disabled.
- If a device is placed in automated maintenance mode, the device continues to remain in automated maintenance mode for 30 minutes even if the global-level maintenance mode is enabled and then disabled.

Topics:

- Enabling or disabling global-level maintenance mode
- Enabling or disabling device-level maintenance mode
Enabling or disabling global-level maintenance mode

Enabling global-level maintenance mode suspends the automatic case creation capability for all devices.

**Prerequisite**
You must be logged in to SupportAssist Enterprise with elevated or administrative privileges. See SupportAssist Enterprise user groups and Granting elevated or administrative privileges to users.

**Steps**
1. Point to Settings and click Preferences. The Preferences page is displayed.
2. In Maintenance Mode, depending on your requirement, select or clear the Temporarily suspend case generation activity (for example, for purposes of downtime, external troubleshooting, etc.) option.
3. Click Apply. The Saving Preferences Data window is displayed. If you enabled maintenance mode, a Maintenance Mode banner is displayed at the top of the SupportAssist Enterprise user interface. After global-level maintenance mode is enabled, SupportAssist Enterprise remains in that state unless you clear the option as in step 2.

Preferences

Enabling or disabling device-level maintenance mode

If you have a planned maintenance activity for a specific device and do not want SupportAssist Enterprise to process alerts from that device, you can place that device in maintenance mode. After the maintenance activity is completed, you can remove the device from maintenance mode, enabling SupportAssist Enterprise to process alerts from the device normally.

**Prerequisite**
You must be logged in to SupportAssist Enterprise with elevated or administrative privileges. See SupportAssist Enterprise user groups and Granting elevated or administrative privileges to users.

**Steps**
1. Click Devices. The Devices page is displayed.
2. Select a device on the Devices page. The device overview pane is displayed at the right side of the Devices page.
3. From the Tasks list, under Maintenance Mode, select Enable or Disable depending on your requirement.
If maintenance mode is enabled for a specific device, the maintenance mode icon is displayed with the name of the device on the Devices page. If you disable maintenance mode for a device, the maintenance mode icon is removed from the device name.
SupportAssist Enterprise user groups

SupportAssist Enterprise maintains security and privileges through the following user groups that are created during the installation of SupportAssist Enterprise:

- **SupportAssistAdmins** — Users who are members of this group have elevated or administrative privileges required for performing both basic and advanced functions in SupportAssist Enterprise.
- **SupportAssistUsers** — Users who are members of this group have normal privileges required for performing only basic functions in SupportAssist Enterprise.

After the installation of SupportAssist Enterprise, by default, the operating system user groups specified in the following table are automatically added to the SupportAssist Enterprise user groups.

<table>
<thead>
<tr>
<th>Operating system where SupportAssist Enterprise is installed</th>
<th>SupportAssistAdmins</th>
<th>SupportAssistUsers</th>
</tr>
</thead>
<tbody>
<tr>
<td>Microsoft Windows</td>
<td>Local Administrators</td>
<td>Users</td>
</tr>
<tr>
<td>Windows domain controller</td>
<td>Domain Admins</td>
<td>Domain Users</td>
</tr>
<tr>
<td>Linux</td>
<td>root user</td>
<td>—</td>
</tr>
</tbody>
</table>

If you have Administrator privileges (Windows) or root privileges (Linux) on the system, you can add user accounts to the appropriate SupportAssist Enterprise user groups based on your requirement. Users who are members of the operating system user groups on the system where SupportAssist Enterprise is installed have the following privileges in SupportAssist Enterprise:

- If SupportAssist Enterprise is installed on Windows:
  - Users who are members of the **Administrators** user group have elevated or administrative privileges in SupportAssist Enterprise.
  - Users who are members of the **Users** user group have normal privileges in SupportAssist Enterprise.
- If SupportAssist Enterprise is installed on Linux:
  - Users who are members of the **root** group have elevated or administrative privileges in SupportAssist Enterprise.
  - Users who are members of the **users** group have normal privileges in SupportAssist Enterprise.

Topics:

- SupportAssist Enterprise functions and user privileges
- Granting elevated or administrative privileges to users
- Adding users to the SupportAssist Enterprise user groups - Windows
- Adding users to the SupportAssist Enterprise user groups - Linux

SupportAssist Enterprise functions and user privileges

The following table provides a list of functions that can be performed by the SupportAssist Enterprise users depending on their privileges.

### Granting elevated or administrative privileges to users

You can grant elevated or administrative privileges to users by adding them to specific user groups on the system where SupportAssist Enterprise is installed. The user groups to which a user must be added to grant elevated or administrative privileges vary depending on the operating system where SupportAssist Enterprise is installed.

- If SupportAssist Enterprise is installed on Windows, you can grant elevated or administrative privileges through one of the following methods:
  - Add the user to the **SupportAssistAdmins** user group. See [Adding users to the SupportAssist Enterprise user groups (Windows)](#).
  - Add the user to the Windows **Administrators** user group.
- If SupportAssist Enterprise is installed on Linux, you can grant elevated or administrative privileges through one of the following methods:
  - Add the user to the **SupportAssistAdmins** user group. See [Adding users to the SupportAssist Enterprise user groups (Linux)](#).
  - Add the user to the Linux **root** group.

### Adding users to the SupportAssist Enterprise user groups - Windows

**Prerequisite**
Ensure that you are logged in to the server where SupportAssist Enterprise is installed with administrator privileges.

**Steps**
1. Open the command prompt window.
2. To add an existing user account to a SupportAssist Enterprise user group, use the following syntax: `net localgroup SupportAssist_Enterprise_user_group_name user_name`

   For example:
   - To add an existing user account (for example, User1) to the **SupportAssistAdmins** user group, type `net localgroup SupportAssistAdmins User1` and press Enter.
   - To add an existing user account (for example, User2) to the **SupportAssistUsers** user group, type `net localgroup SupportAssistUsers User2` and press Enter.

### Adding users to the SupportAssist Enterprise user groups - Linux

**Prerequisite**
Ensure that you are logged in to the server where SupportAssist Enterprise is installed with root privileges.
**Steps**

1. Open the terminal window.

2. To create a new user account and add the user account to a SupportAssist Enterprise user group, use the following syntax:

   ```bash
   useradd -G SupportAssist_Enterprise_user_group_name User_name
   ```

   For example:
   
   - To create a new user account (for example, User1) and add it to the **SupportAssistAdmins** user group, type `useradd -G Supportassistadmins User1` and press Enter.
   - To create a new user account (for example, User2) and add it to the **SupportAssistUsers** user group, type `useradd -G Supportassistusers User2` and press Enter.

3. To add an existing user account to a SupportAssist Enterprise user group, use the following syntax:

   ```bash
   usermod -G SupportAssist_Enterprise_user_group_name User_name
   ```

   For example:

   - To add an existing user account (for example, User1) to the **SupportAssistAdmins** user group, type `usermod -G SupportAssistAdmins User1` and press Enter.
   - To add an existing user account (for example, User2) to the **SupportAssistUsers** user group, type `usermod -G SupportAssistUsers User2` and press Enter.
Manually configuring SNMP settings

Configuring the SNMP settings (alert destination) of a device ensures that SupportAssist Enterprise receives alerts from the device. SupportAssist Enterprise can automatically configure the SNMP settings of Dell servers. For Dell chassis and networking devices, you must manually configure the SNMP settings.

Topics:
- Manually configuring the alert destination of a server
- Manually configuring the alert destination of iDRAC by using the web interface
- Manually configuring the alert destination of a chassis by using the web interface
- Manually configuring the alert destination of a networking device

Manually configuring the alert destination of a server

By default, when you add a server you can allow SupportAssist Enterprise to automatically configure the alert destination of the server. If the automatic SNMP configuration is unsuccessful, you can configure the SNMP settings of a device by using the following methods:

- Running a script file — The SupportAssist Enterprise installation folder includes two script files (one for Microsoft Windows and another for Linux) that you can use to configure the alert destination of a server.
- Manually configure the SNMP settings — You can configure settings by accessing the SNMP trap service.

**NOTE:** You can retry the automatic configuration of the alert destination at any time using the Configure SNMP option available in SupportAssist Enterprise. For information on using the Configure SNMP option, see Configuring SNMP settings by using SupportAssist Enterprise.

Related links
- Manually configuring the alert destination of a server by using the script file on server running Windows
- Manually configuring the alert destination of a server running Windows
- Manually configuring the alert destination of a server by using the script file on a server running Linux
- Manually configuring the alert destination of a server running Linux

Manually configuring the alert destination of a server by using the script file on server running Windows

**Prerequisites**
- Microsoft Windows PowerShell version 1.0 or later must be installed on the device.

**NOTE:** The script file is supported only on Windows PowerShell. It is not supported on Windows PowerShell (x86), Windows PowerShell ISE, or Windows PowerShell ISE (x86).

- Ensure that you have administrator rights on the device to run the PowerShell script file.
- Ensure that you have write permissions on the C:\ drive of the device.
- If the device is running Windows 2003, ensure that the SNMP service is installed. On all other supported operating systems, the script file installs the SNMP service if it is not installed already.

The script file is supported only on devices running the following operating systems:
Steps
1. On the server where SupportAssist Enterprise is installed, browse to the \Program Files\Dell\SupportAssist\scripts folder.
2. Copy the script file (WindowsSNMPConfig.ps1) located in the folder and paste the file at a desired location (for example, C:\temp) on the device.
3. Perform one of the following, depending on the operating system running on the device:
   - In Windows Server 2012, on the Start screen, right-click the Windows PowerShell tile, and in the app bar, click Run as administrator.
   - In Windows Server 2003, 2008, or Windows Small Business Server 2011, click Start, type PowerShell, right-click Windows PowerShell, and then click Run as administrator.
4. Set the PowerShell execution policy as appropriate on the device. For example, type the following command: Set-ExecutionPolicy RemoteSigned or Set-ExecutionPolicy AllSigned.
5. Run the script file on the device using the following syntax: <script file path> -hosts <IP address of server where SupportAssist Enterprise is installed>. For example, .\WindowsSNMPConfig.ps1 -hosts 10.55.101.20.
6. If Verisign is not included as a trusted publisher on the device, you are prompted to confirm if you want to run the software from an untrusted publisher. Press <R> to run the script.

Manually configuring the alert destination of a server running Windows

Perform the following steps to manually configure the alert destination of a server running Microsoft Windows:

1. Open a command prompt, type services.msc, and press Enter.
   The Services window is displayed.
2. Browse the list of services, and ensure that the status of the SNMP Service is displayed as Started.
3. Right-click SNMP Service and select Properties.
   The SNMP Service Properties window is displayed.
4. Click the Traps tab, and perform the following:
   a. In the Community name box, type the community name, and click Add to list.
   b. In Trap destinations, click Add.
      The SNMP Service Configuration window is displayed.
   c. In the Host name, IP or IPX address field, type the host name or IP address of the server where SupportAssist Enterprise is installed, and click Add.
5. Click Apply.
6. In the Services window, right-click SNMP Service and click Restart.
Manually configuring the alert destination of a server by using the script file on a server running Linux

Prerequisites

- Net-SNMP must be installed on the system. For information on installing Net-SNMP, see Installing Net-SNMP (Linux only).
- Ensure that you have root privileges on the device.

The script file is supported only on devices running the following operating systems:

- Red Hat Enterprise Linux 5.5 (32-bit and 64-bit)
- Red Hat Enterprise Linux 5.7 (32-bit and 64-bit)
- Red Hat Enterprise Linux 5.8 (32-bit and 64-bit)
- Red Hat Enterprise Linux 5.9 (32-bit and 64-bit)
- Red Hat Enterprise Linux 5.10 (32-bit and 64-bit)
- Red Hat Enterprise Linux 5.11 (32-bit and 64-bit)
- Red Hat Enterprise Linux 6.1 (64-bit)
- Red Hat Enterprise Linux 6.2 (64-bit)
- Red Hat Enterprise Linux 6.3 (64-bit)
- Red Hat Enterprise Linux 6.4 (64-bit)
- Red Hat Enterprise Linux 6.5 (64-bit)
- Red Hat Enterprise Linux 6.7 (64-bit)
- Red Hat Enterprise Linux 6.8 (64-bit)
- Red Hat Enterprise Linux 7.0 (64-bit)
- Red Hat Enterprise Linux 7.1 (64-bit)
- Red Hat Enterprise Linux 7.2 (64-bit)
- SUSE Linux Enterprise Server 10 SP3 (32-bit and 64-bit)
- SUSE Linux Enterprise Server 10 SP4 (32-bit and 64-bit)
- SUSE Linux Enterprise Server 11 (64-bit)
- SUSE Linux Enterprise Server 11 SP1 (32-bit and 64-bit)
- SUSE Linux Enterprise Server 11 SP2 (64-bit)
- SUSE Linux Enterprise Server 11 SP3 (64-bit)
- SUSE Linux Enterprise Server 11 SP4 (64-bit)
- SUSE Linux Enterprise Server 12 (64-bit)
- SUSE Linux Enterprise Server 12 SP1 (64-bit)
- CentOS 7.0
- CentOS 6.0
- Oracle Linux 7.1
- Oracle Linux 6.7

Steps

1. On the server where SupportAssist Enterprise is installed, browse to the `<Drive where SupportAssist Enterprise is installed>\Program Files\Dell\SupportAssist\scripts` folder.
2. Copy the script file (LinuxSNMPConfig.sh) located in the folder and paste the file at a desired location (for example, `\root`) on the device.
3. Open the terminal window and log in as a user with root privileges.
Run the script file on the device using the following syntax: `sh LinuxSNMPConfig.sh -d <IP address of the server where SupportAssist Enterprise is installed>`. For example, `sh LinuxSNMPConfig.sh -d 10.10.10.10`.

### Related links
- Manually configuring the alert destination of a server

## Manually configuring the alert destination of a server running Linux

Perform the following steps to manually configure the alert destination of a server running Linux:

1. Run the command `rpm -qa | grep snmp`, and ensure that the `net-snmp` package is installed.
2. Run `cd /etc/snmp` to navigate to the snmp directory.
3. Open `snmpd.conf` in the VI editor (`vi snmpd.conf`).
4. Search `snmpd.conf` for `# group context sec.model sec.level prefix read write notif` and ensure that the values for fields `read`, `write`, and `notif` are set to `all`.
5. At the end of the `snmpd.conf` file, just before `Further Information`, add an entry in the following format: `Trapsink <IP address of the server where SupportAssist Enterprise is installed> <community string>` For example, `trapsink 10.94.174.190 public`.
6. Restart the SNMP services (`service snmpd restart`).

### Related links
- Manually configuring the alert destination of a server

## Manually configuring the alert destination of iDRAC by using the web interface

Perform the following steps to manually configure the alert destination of an iDRAC:

1. Log in to the iDRAC web interface.
2. Go to `Overview > Server > Alerts`.
3. In the `Alerts` section, make sure that the `Enabled` option is selected.
4. In the `Alerts Filter` section, make sure that the following options are selected:
   - System Health
   - Storage
   - Configuration
   - Audit
   - Updates
   - Warning
   - Critical
5. In the `Alerts and Remote System Log Configuration` section, make sure that all fields in the `SNMP Trap` column are selected.
6. Click `SNMP and Email Settings`.
7. In the `IP Destination List` section, select the `State` option to enable the alert destination field. You can specify up to eight destination addresses. For more information about the options, see the `iDRAC Online Help`.
8. In the `Destination Address` field, type the IP address of the server where SupportAssist Enterprise is installed.
9. Type the iDRAC SNMP community string (public) and the SNMP alert port number (for example, 162) in the appropriate fields. For more information about the options, see `iDRAC Online Help`.

Manually configuring SNMP settings
NOTE: The community string value indicates the community string to be used in a Simple Network Management Protocol (SNMP) alert trap sent from iDRAC. Ensure that the destination community string is the same as the iDRAC community string. The default community string is Public.

10 Click Apply.
   The alert destination is configured.

11 In the SNMP Trap Format section, make sure that either SNMP v1 or SNMP v2 is selected, and click Apply.

iDRAC is now configured to forward alerts to the server where SupportAssist Enterprise is installed.

NOTE: For information on configuring the alert destination of an iDRAC using other methods, see the “Configuring IP Alert Destinations” section in the iDRAC User’s Guide at Dell.com/idracmanuals.

Manually configuring the alert destination of a chassis by using the web interface

Prerequisite
You must be logged in to the CMC web interface with administrator privileges.

Steps
1 In the system tree, go to Chassis Overview, and then click Alerts > Chassis Events.
   The Chassis Events page is displayed.
2 Under Chassis Event Filters Configuration section, select Enable Chassis Event Alerts option to enable alert generation.
3 Under the Chassis Event List section, select the Enable Alert option on the column header to generate alerts for all events.
4 In the system tree, go to Chassis Overview, and then click Alerts > Trap Settings.
   The Chassis Event Alert Destinations page is displayed.
5 Perform the following:
   • In the Destination field, enter the IP address of the server where SupportAssist Enterprise is installed.
   • In the Community String field, enter a valid community string to which the server where SupportAssist Enterprise is installed belongs.

   NOTE: CMC uses a default SNMP community string as public. To ensure higher security, it is recommended to change the default community string and set a value which is not blank.
   • Under Enabled, select the check box corresponding to the IP address of the server where SupportAssist Enterprise is installed.
6 Click Apply to save the settings.
7 To test whether the destination IP address is receiving the SNMP traps, click Send in the Test SNMP Trap column.
   The IP alert destinations are configured.

Manually configuring the alert destination of a networking device

About this task

NOTE: The steps to configure the alert destination of networking devices may vary based on the networking device type and model. For information on configuring the alert of a specific networking device model, see the networking device documentation.

Steps
1 Log in to the networking device by using a terminal emulator such as PuTTY.
   The terminal window is displayed.
2 Type configure and press Enter.
3 Type snmp-server host <IP address of the server where SupportAssist Enterprise is installed> traps version 1.
4 To verify if the alert destination is configured successfully, type show running-config snmp and press Enter.
The list of alert destinations that are configured on the device is displayed.
Managing SupportAssist Enterprise alerts in TechDirect

Dell EMC TechDirect is a centralized support portal that enables administrators in your organization to manage alerts that are created by SupportAssist Enterprise. By default, SupportAssist Enterprise automatically forwards alerts that qualify for support case creation or parts dispatch to Dell EMC. TechDirect enables Administrators to set rules that allow them to review and determine if the alerts need to be forwarded to Dell EMC for case creation or parts dispatch.

Topics:
• Setting up TechDirect to receive SupportAssist Enterprise alerts
• Configuring alert rules in TechDirect
• Viewing SupportAssist Enterprise alerts in TechDirect
• SupportAssist alerts
• SupportAssist alert actions

Setting up TechDirect to receive SupportAssist Enterprise alerts

Prerequisite
The server where SupportAssist Enterprise is installed must have internet connectivity.

About this task
Setting up TechDirect to receive alerts from SupportAssist Enterprise enables you to view and manage alerts.

Steps
   The TechDirect home page is displayed.
2. Click Register and enter the following information on the Registration page:
   a. In the Contact Information section, type the first name, last name, email address, and company name, and select the country.
   b. In the Account Information section, select the preferred language and time zone.
   c. In the TechDirect Terms of Use section, read about the Dell TechDirect portal access and site terms of use, and then select Yes, I agree to the TechDirect Terms of Use.
   d. In the Security Check section, type the displayed text.
3. Click Submit.
   The Registration Complete page is displayed.
4. Click Sign In and type your TechDirect user name and password.
   The TechDirect Dashboard is displayed.
5. From the Services menu, click SupportAssist.
   The SupportAssist page is displayed.
6. Read about the SupportAssist terms of use and select I have read and understood these terms and conditions, and I am authorized to accept these terms.
7. If you have multiple accounts, select an account from the Select Account list.
8. In the Manage Devices gadget, click Manage.
The Manage Devices page is displayed.
9 Click Manage Sites and Devices.
The Manage Sites and Devices window is displayed.
10 Click Create a new site.
The Create a new site window is displayed.
11 Enter a site name in the appropriate field and click Next.
The Add Devices to Site window is displayed.
12 Select Connect to an existing SupportAssist Enterprise installation.
13 Enter the registration ID, Service Tag of a device, and phone number in the appropriate fields.

NOTE: You can find the registration ID on the About page in SupportAssist Enterprise.
14 Click Finish and then click Close.
Your site is created, but the device addition capability is enabled only after 24 hours. A notification is sent to your Message Center after the device addition capability is enabled.

Configuring alert rules in TechDirect

About this task
Administrators in your organization can configure rules to determine how alerts created by SupportAssist are handled by the TechDirect portal. For example, you can choose to automatically forward all alerts to technical support or have the alerts placed in your SupportAssist alert queue for your support team to review and determine if the alert should be forwarded to Dell.

Steps
1 Go to TechDirect.com.
The TechDirect home page is displayed.
2 Click Sign In and type your TechDirect user name and password.
The TechDirect Dashboard is displayed.
3 From the Services menu, click SupportAssist.
The SupportAssist page is displayed.
4 In the Configure Rules gadget, click Configure.
The Configure SupportAssist Alert Rules page is displayed.
5 In the Inactivity notification alert period field, type the desired duration.
6 For the Automated technical support case requests? option, select one of the following:
   • Select Yes to directly forward all technical support alerts to Dell.
   • Select No to send all technical support alerts to your company’s SupportAssist Enterprise alerts queue for review by your support team to determine if the alert should be forwarded to Dell.
7 For the Auto-forward all Dispatch alerts to Dell? option, select one of the following:
   • Select Yes to directly forward all parts dispatch alerts to Dell.
   • Select No to send all parts dispatch alerts to your company’s SupportAssist Enterprise alerts queue for review by your support team to determine if the alert should be forwarded to Dell.

The Group Management section is displayed if you have chosen to forward all parts dispatch alerts to Dell.
8 Click Add Group Rule.
The group rules are used to identify the address where dispatched parts should be sent. Whenever a SupportAssist Enterprise alert is forwarded to Dell EMC for parts dispatch, the address in the alert is compared with the addresses defined in the group rules. If there is a match, the address information associated with that group rule is used to identify the address where the dispatched parts should be sent.
9 On the Add Group Rule page, select one of the following options:
   • By Country — Select this option if you want to route all auto-dispatches from a country to a specific address.
• **By State/Province** — Select this option if you want to route all auto-dispatches from a state or province to a specific address.
• **By City** — Select this option if you want to route all auto-dispatches from a city to a specific address.
• **By ZIP/Postal Code** — Select this option if you want to route all auto-dispatches with a ZIP/Postal Code to a specific address.

10. Enter the required details based on the option that you have selected in Step 8 and click **Save Rule**.

11. Click **Save Alert Rules**.

---

## Viewing SupportAssist Enterprise alerts in TechDirect

### About this task

You can view SupportAssist Enterprise alerts in TechDirect after you set up TechDirect to receive alerts.

### Steps

1. Go to [TechDirect.com](https://TechDirect.com).
   - The TechDirect home page is displayed.
2. Click **Sign In** and type your TechDirect user name and password.
   - The TechDirect Dashboard is displayed.
3. From the **Services** menu, click **SupportAssist**.
   - The **SupportAssist** page is displayed.
4. In the **Manage SupportAssist Alerts** tile, click **Manage**.
   - The **SupportAssist Alerts** page is displayed.

## SupportAssist alerts

You can view details about the alerts generated by SupportAssist Enterprise through the TechDirect portal. The following table describes the details displayed on the **SupportAssist Alerts** page.

### Table 23. Alert details

<table>

This chapter provides additional information that you may require while using SupportAssist Enterprise.

Topics:
- Monitoring servers for hardware issues
- Support for automatically installing or upgrading OMSA
- Support for automatically configuring SNMP settings
- Deep discovery
- Device correlation
- Association view
- Detection of hardware issues in attached storage devices
- Support for Dell OEM servers
- Installing Net-SNMP on a server running Linux
- Configuring sudo access for SupportAssist Enterprise on a server running Linux
- Ensuring successful communication between the SupportAssist Enterprise application and the SupportAssist server
- Accessing the SupportAssist Enterprise application logs
- Event storm handling
- Accessing the context-sensitive help
- Viewing SupportAssist Enterprise product information
- Uninstalling SupportAssist Enterprise
- Identifying the generation of a Dell PowerEdge server

Monitoring servers for hardware issues

SupportAssist Enterprise can monitor Dell servers through the following methods:

- **Agent-based monitoring** — This method is used to monitor devices that are added with the **Device Type** as **Server / Hypervisor**. In this method, an agent acts as an interface between the device and SupportAssist Enterprise. The agent generates an alert (SNMP trap) whenever a hardware event occurs on the device. For monitoring a device using the agent-based method, SupportAssist Enterprise depends on the Dell OpenManage Server Administrator (OMSA) agent. The OMSA agent is an application that monitors the health of various components of the device where it is installed. Whenever a hardware event occurs on the device, the OMSA agent generates an alert. SupportAssist Enterprise processes the alert to determine if the alert qualifies for creating a support case. For instructions to add a device for agent-based monitoring, see Adding a server or hypervisor.

  **NOTE:** Without OMSA, SupportAssist Enterprise will not be able to monitor a device through the agent-based monitoring method.

  **NOTE:** Installation of OMSA may not be supported on certain operating systems. SupportAssist Enterprise may be able to monitor devices running such operating systems only through the agentless monitoring method. For information on the operating system requirements for agent-based monitoring, see the **SupportAssist Enterprise Version 1.2 Support Matrix** at Dell.com/ServiceabilityTools.

- **Agentless monitoring** — This method is used to monitor devices that are added with the **Device Type** as **iDRAC**. In this method, the Integrated Dell Remote Access Controller (iDRAC) available on the device acts as an interface between the device and SupportAssist Enterprise. Whenever a hardware event occurs on the device, the iDRAC generates an alert. SupportAssist Enterprise processes the alert to determine if the alert qualifies for creating a support case. For instructions to add a device for agentless monitoring, see Adding an iDRAC.
NOTE: Agentless monitoring is supported only for Dell's 12th and later generation of PowerEdge servers (iDRAC 7 and later).

NOTE: The iDRAC can be configured to send alerts through SNMP and IPMI. However, SupportAssist Enterprise can only receive alerts sent through SNMP. To ensure that SupportAssist Enterprise receives alerts sent from an iDRAC, you must ensure that all SNMP Trap options are selected in the Alerts and Remote System Log Configuration section of the iDRAC web console.

Benefits of agent-based monitoring

Even though Dell's 12th and later generations of PowerEdge servers can be monitored through the agentless (iDRAC) method, agent-based (OMSA) method has the following benefits:

- Alert generation capabilities of OMSA and iDRAC are not the same. In Dell's 13th or later generation of PowerEdge servers, the alert generation capabilities of OMSA and iDRAC are almost similar. However, alerts from chipset and software RAID are available only through OMSA.
- For devices with a ProSupport Plus, ProSupport Flex for Data Center, or ProSupport One for Data Center service contract Dell's recommendations for operating system and software component versions are available only if the device is monitored through OMSA.
- OMSA is the only option available for monitoring 9th to 11th generation of PowerEdge servers.

Support for automatically installing or upgrading OMSA

To monitor a device through the agent-based method, SupportAssist Enterprise requires the Dell OpenManage Server Administrator (OMSA) agent to be installed and running on the device. The OMSA agent is an application that monitors the health of various components of the device where it is installed. When OMSA is installed and running on a device, the OMSA agent generates an alert whenever a hardware event occurs on the device. SupportAssist Enterprise receives the alert from the device and processes the alert to identify if the alert indicates a hardware issue. For more information on OMSA, visit Delltechcenter.com/OMSA.

NOTE: The SupportAssist Enterprise recommended version of OMSA may vary depending on the generation of the PowerEdge server and the operating system running on the server. For information on the recommended versions of OMSA, see the SupportAssist Enterprise Version 1.2 Support Matrix at Dell.com/ServiceabilityTools.

SupportAssist Enterprise has the capability to automatically download and install the recommended version of OMSA on a device. By default, when a server is added for agent-based monitoring, SupportAssist Enterprise verifies if the recommended version of OMSA is installed on the device.

- If OMSA is not installed on the device, SupportAssist Enterprise prompts for your confirmation to download and install the recommended version of OMSA on the device. On confirmation, SupportAssist Enterprise downloads and installs OMSA in the background. The OMSA installation status is displayed in the Status column on the Devices page. If you choose not to install OMSA, the status of the device is displayed as OMSA not installed. To install OMSA at a later time, you can use the Tasks > Install / Upgrade OMSA option on the device overview pane.
- If OMSA is already installed on the device, SupportAssist Enterprise verifies if the version of OMSA matches with the recommended OMSA version for SupportAssist Enterprise. If the existing version of OMSA is not the recommended version, but supports direct upgrade to the recommended version of OMSA, SupportAssist Enterprise prompts for your confirmation to download and upgrade OMSA on the device. The OMSA upgrade status is displayed in the Status column on the Devices page. If you choose not to upgrade OMSA, the status of the device is displayed as New version of OMSA available. To upgrade OMSA at a later time, use the Tasks > Install / Upgrade OMSA option on the device overview pane.

NOTE: Direct upgrade to OMSA version \( n \) is supported only from the two previous versions \( (n-2) \) of OMSA. If direct upgrade is not supported, you must manually download and upgrade OMSA on the device. For example, if OMSA version 7.0 is already installed on the device, but the recommended version of OMSA is 7.4, you must manually upgrade from OMSA version 7.0 to 7.2. After upgrading to OMSA version 7.2, you can upgrade to OMSA version 7.4 using the More Tasks > Install/Upgrade OMSA option on the device overview pane or you can manually download and upgrade to OMSA version 7.4.
NOTE: When you allow or use SupportAssist Enterprise to install or upgrade OMSA, the downloaded packages of OMSA are retained in the SupportAssist Enterprise installation folder. If a compatible version of OMSA was already downloaded during an earlier operation, SupportAssist Enterprise does not download OMSA again. In this scenario, SupportAssist Enterprise only installs or upgrades OMSA on the device using the already downloaded version of OMSA.

NOTE: The time taken to download OMSA is dependent on the internet download speed and network bandwidth.

If the recommended version of OMSA is installed and running on the device, the status of the device is displayed as OK.

NOTE: Automatic installation of OMSA through SupportAssist Enterprise is not supported on devices running Citrix XenServer, VMware ESXi, or ESX. To allow SupportAssist Enterprise to detect hardware issues on these devices, you must manually download and install OMSA.

Related links
Installing or upgrading OMSA by using SupportAssist Enterprise

Support for automatically configuring SNMP settings

To enable SupportAssist Enterprise to monitor a device, the device must be configured to forward alerts (SNMP traps) to the server where SupportAssist Enterprise is installed. Configuring the SNMP settings sets the alert destination of a device, and ensures that alerts from the device are forwarded to the server where SupportAssist Enterprise is installed. SupportAssist Enterprise has the capability to automatically configure the SNMP settings of a device, such that the device forwards alerts to the server where SupportAssist Enterprise is installed. You can allow SupportAssist Enterprise to configure the SNMP settings of the device while adding the device or at a later time. The status of the SNMP configuration is displayed in the Status column on the Devices page. While SupportAssist Enterprise configures the SNMP settings of a device, the device displays a Configuring SNMP status. You can also use the Tasks > Configure SNMP option on the device overview pane to automatically configure the SNMP settings of a device at any time.

NOTE: When you allow or use SupportAssist Enterprise to automatically configure the SNMP settings of a device, the alert destination of the device is set to the IP address of the server where SupportAssist Enterprise is installed.

Configuring SNMP settings by using SupportAssist Enterprise

Deep discovery

The deep discovery feature enables you to discover and add other devices that are associated with a primary device. To perform deep discovery, you must assign a credential profile to the discovery task. You can choose to perform deep discovery while discovering the primary device or after the primary device is discovered.

NOTE: Deep discovery may result in an increase in the duration of the overall discovery process.

The following table lists the primary device and its associated devices that are discovered by deep discovery.

Table 25. Primary device and its associated devices discovered by deep discovery

<table>
<thead>
<tr>
<th>Primary Device</th>
<th>Associated devices discovered by deep discovery</th>
</tr>
</thead>
<tbody>
<tr>
<td>Server running Windows</td>

<td>JBODs</td>
</tr>
<tr>
<td>Networking - management switch</td>
<td>Member switches</td>
</tr>
<tr>
<td>Web-scale converged appliances</td>
<td>Controller VM, Node (iDRAC / ESX)</td>
</tr>
</tbody>
</table>

* On deep discovery of chassis, discovery of the iDRAC (modular servers) is supported only for iDRAC7 or later.

**NOTE:** On deep discovery of a chassis, networking devices associated with the chassis are also discovered. However, you can collect system information only from networking devices that are supported by SupportAssist Enterprise. For the list of supported networking devices, see the [SupportAssist Enterprise Version 1.2 Support Matrix](https://Dell.com/ServiceabilityTools) at Dell.com/ServiceabilityTools.

- Adding a Fluid File System NAS device
- Adding a software
- Adding a solution
- Performing deep discovery
- Association view

**Device correlation**

You can add (discover) a server in SupportAssist Enterprise by using both the host operating system IP address and iDRAC IP address of the device. In such a scenario, the Devices page displays two separate listings for the same device. SupportAssist Enterprise receives alerts from the device through both the operating system and the iDRAC. However, for operational purposes, SupportAssist Enterprise correlates the operating system IP address and iDRAC IP address of the device and considers the device as a single device. The following are the expected behaviors when a device is correlated:

- Alerts originating from the operating system and the iDRAC are correlated and a support case is created for the Service Tag of the device.
- When system information is collected, the Devices page display the same status for both the listings.
- For a manually-initiated collection of system information — System information is gathered through the selected device listing in the Devices page. For example, if the operating system listing is selected, system information is gathered through the operating system. However, if SupportAssist Enterprise is unable to connect to the device by using the operating system IP address, system information is gathered through the iDRAC.
- For periodic collections and on case creation — System information is typically gathered through the operating system. However, if SupportAssist Enterprise is unable to connect to the device by using the operating system IP address, system information is gathered through the iDRAC.

**Association view**

The Devices page supports two types of views for displaying the list of devices:

- Default view — Displays all available devices as a list
- Association view — Displays all available devices as groups based on their association. This view enables you to view a primary device and its associated devices as a group.

The following table lists how the devices are grouped in the association view.

Table 26. Device grouping in association view

<table>
<thead>
<tr>
<th>Primary Device</th>
<th>Associated devices</th>
</tr>
</thead>
<tbody>
<tr>
<td>Server</td>
<td>• iDRAC&lt;br&gt;• vCenter&lt;br&gt;• SCVMM&lt;br&gt;• SAN-HQ</td>
</tr>
<tr>
<td>Chassis</td>
<td>• iDRAC*&lt;br&gt;• Networking switches</td>
</tr>
<tr>
<td>Storage PS Series group</td>
<td>• Storage PS Series members&lt;br&gt;• Storage PS Series FluidFS</td>
</tr>
<tr>

<td>JBODs</td>
</tr>
<tr>
<td>Networking - management switch</td>
<td>Member switches</td>
</tr>
<tr>
<td>Web-scale converged appliances</td>
<td>• Controller VM&lt;br&gt;• iDRAC</td>
</tr>
</tbody>
</table>

* Only iDRAC7 or later is displayed under the Chassis node.

**NOTE:** Starting the collection of system information is not supported for the following devices that may be displayed in the Association view:

- JBODs
- Storage PS Series members
- Stacked switches
- Devices that are listed in SupportAssist Enterprise with an IP address as 0.0.0.0

**Related links**

Deep discovery

**Detection of hardware issues in attached storage devices**

In addition to monitoring PowerEdge servers, SupportAssist Enterprise can also process alerts received from Dell EMC Storage MD Series arrays that may be attached to a server. Alert generation from an attached storage device occurs through the Dell OpenManage Storage Services (OMSS) application installed on the server. When you allow SupportAssist Enterprise to automatically install OMSA on the server, by default, OMSS is also installed. If you manually download and install OMSA on the server, ensure that you also install OMSS. Otherwise, SupportAssist Enterprise will not be able to detect hardware issues that may occur on the attached storage device. When a hardware issue is detected on an attached storage device, SupportAssist Enterprise automatically creates a support case for the associated server.

**Support for Dell OEM servers**

Dell OEM-ready devices (either re-branded or de-branded Dell hardware), when added, are classified under the re-branded name and not the original Dell hardware name. All of the functionality available for Dell standard devices, such as alerts handling, automatic case creation
(when the support level has been validated at the time of the support incident as ProSupport Plus, ProSupport Flex for Data Center, or ProSupport One for Data Center) and ProSupport Plus reports are available for OEM-ready devices. On ProSupport Plus reports, OEM-ready devices are listed with the re-branded name.

Automatic case creation is supported through Dell Enterprise Technical Support and not available for other support case service request management systems.

As with any system that is modified for custom solutions, Dell recommends that you verify all SupportAssist Enterprise features to ensure proper operation with those modifications.

## Installing Net-SNMP on a server running Linux

**Prerequisite**
Ensure that you are logged in to the device with a user account that has root privileges.

**About this task**
SupportAssist Enterprise receives alerts that are forwarded from remote devices through an SNMP agent. Net-SNMP consists of a suite of SNMP tools, including an SNMP agent. On devices running Linux operating systems, Net-SNMP must be installed to allow SupportAssist Enterprise to receive alerts.

**Steps**
1. Open the terminal window on the device running the Linux operating system.
2. Type the following commands based on the operating system:
   - Red Hat Enterprise Linux, CentOS, and VMware ESX: `yum install net-snmp`
   - Oracle Linux: `rpm -ivh net-snmp-x.x-xx.x.x.xxx.x86_64.rpm`, where x.x-xx.x.x.xxx.x represents the version number included in the rpm file name.
   - SUSE Linux Enterprise Server:
     2. `zypper refresh`
     3. `zypper install net-snmp`

## Configuring sudo access for SupportAssist Enterprise on a server running Linux

In Linux operating systems, users with sudo access may be granted administrative privileges to run certain commands. If you have added a remote device in SupportAssist Enterprise using the credentials of a sudo user, you must perform the following steps to allow SupportAssist Enterprise to monitor and collect system information from the device.

**Prerequisite**
Ensure that you are logged in to the remote device as a user with root privileges.

**Steps**
1. Open the terminal window.
2. Set the home directory path for the user — Type `useradd user_name -d /home` and press Enter.
3. Open the `/etc/sudoers` file.
4. Insert an exclamation mark `!` on the requiretty line. For example, `!requiretty`
5. Add one of the following based on your preference:
   - `%root ALL=(ALL) NOPASSWD: ALL` — To grant permission to all users in the root group.
   - `user_name ALL=(ALL) NOPASSWD: ALL` — To grant permission to only a specific user.
6. Save the `/etc/sudoers` file.
Ensuring successful communication between the SupportAssist Enterprise application and the SupportAssist server

The server where SupportAssist Enterprise is installed must be able to communicate with the SupportAssist server hosted by Dell to:

- Automatically create a support case if there is a problem with a device in your environment.
- Upload the collected system information to Dell.

To ensure that the SupportAssist Enterprise application is able to successfully communicate with the SupportAssist server:

- The server where the SupportAssist Enterprise application is installed must be able to connect to the following destinations:
  
  
  - https://is.us.dell.com/FUS/api/2.0/uploadfile — the file upload server where the collected system information is uploaded.
  
  - https://is.us.dell.com/FUSCHUNK/api/1.0/file/uploadChunk — the file upload server where the collection files greater than 10 MB in size are uploaded.
  
  - https://downloads.dell.com/ — for downloading Dell OpenManage Server Administrator (OMSA) and also for getting new SupportAssist Enterprise release information, policy files, and product support files. On the server where SupportAssist Enterprise is installed, verify if you can access the following location using the web browser: https://downloads.dell.com/
  
  - On the server where SupportAssist Enterprise is installed, verify if port 443 is open for is.us.dell.com, downloads.dell.com, apidp.dell.com, and api.dell.com. You can use a telnet client to test the connection. For example, use the following command:

  downloads.dell.com 443

- On the server where SupportAssist Enterprise is installed, verify if the network settings are correct.
- If the server where SupportAssist Enterprise is installed connects the Internet through a proxy server, configure the proxy settings in SupportAssist Enterprise. See Configuring proxy server settings.

If the communication problem persists, contact your network administrator for further assistance.

Accessing the SupportAssist Enterprise application logs

SupportAssist Enterprise saves system events and log messages in the following locations:

- On Windows:
  
  - Windows Event Log
  
  - The installation logs folder (C:\Program Files\Dell\SupportAssist\logs)

- On Linux:
  
  - var logs
  
  - The installation logs folder (/opt/dell/supportassist/logs)

A new log file is created daily at 11:59 p.m. based on the time zone configured on the system, and the log is stored in the logs folder. The log file contains log information for the current day. At the end of each day, the log file is renamed as application.log.<date format in yyyymmddd>. If the log file is older than two days, the log file is zipped automatically. This enables you to identify the exact log file stored for a given date when alerts occur. For example, log files similar to the following can be seen:

- application.log
- application.log.20171101
- application.log.20171102.zip
The log files are purged from storage after 30 days.

The log file contains log messages that correspond to the following values (or higher) in the log4j.xml file: FATAL, ERROR, WARN, INFO, and DEBUG, with special values of OFF and ALL. The log4j.xml file is available at <Drive where SupportAssist Enterprise is installed>: \Program Files\Dell\SupportAssist\config (on Windows) and /opt/dell/supportassist/config (on Linux). A value of ERROR in the log4j.xml file results in log messages of FATAL, and ERROR, since FATAL is a higher level than ERROR.

**Event storm handling**

SupportAssist Enterprise intelligently handles event storm conditions, allowing up to nine separate alerts from a device within a 60-minute timespan. However, if 10 or more separate alerts are received from a device, SupportAssist Enterprise automatically places the device in maintenance mode. Maintenance mode prevents any further processing of alerts from the device, enabling you to make infrastructure changes without creating unnecessary support cases. After 30 minutes in maintenance mode, SupportAssist Enterprise automatically removes the device from maintenance mode and resumes normal alert processing for the device. For more information about maintenance mode, see Understanding maintenance mode.

**Accessing the context-sensitive help**

Context-sensitive help provides information about features and tasks that are applicable to the current view on the user interface. Once you invoke the context-sensitive help, you can navigate or search through the entire SupportAssist Enterprise help system.

To access context-sensitive help, click the icon that appears in the user interface. Context-sensitive help is displayed in a new browser window.

**Viewing SupportAssist Enterprise product information**

Click About in the SupportAssist Enterprise header area or on the log in page. The About page is displayed, where you can view the following:

- SupportAssist Enterprise version
- Registration ID
- Policy file version
- Device configuration file version
- Update history

**Uninstalling SupportAssist Enterprise**

You can uninstall SupportAssist Enterprise based on your preference. During the uninstallation, you can choose to provide a reason for the uninstallation and also provide feedback to Dell. Your feedback will remain confidential and will allow Dell to make product improvements. The following sections provide information about uninstalling SupportAssist Enterprise on Windows and Linux operating systems.

**NOTE:** During the uninstallation of SupportAssist Enterprise, all adapters and Remote Collectors that you have set up are also uninstalled, provided the systems hosting the adapters and Remote Collectors are reachable.

**Uninstalling SupportAssist Enterprise - Windows**

**Prerequisite**

Log in to the server where SupportAssist Enterprise is installed with administrator privileges.

**Steps**

1. Perform one of the following based on the operating system:
   - On Windows Server 2012 or 2016, point to the bottom-left corner of the screen, and then click the Start icon. On the Start screen, click the Control Panel tile. On the Control Panel, click Uninstall a program.
Uninstalling SupportAssist Enterprise - Linux

**Prerequisite**
Ensure that you are logged in to the server where SupportAssist Enterprise is installed with root privileges.

**Steps**
1. Open the terminal window.
2. Browse to the `/opt/dell/supportassist/bin` folder.
3. Type `./uninstall` and press Enter.
4. To continue the uninstallation, type `c`.

**NOTE:** If you have set up an adapter or a Remote Collector, you are prompted to delete the adapter or Remote Collector before you uninstall SupportAssist Enterprise.

5. When prompted for your feedback, perform one of the following:
   - To skip the feedback and start the uninstallation, type `n`.
   - To provide feedback, type `y`.
6. If you selected to provide feedback, press a number that matches your reason for uninstalling SupportAssist Enterprise.

The `Dell SupportAssist Enterprise uninstallation is complete` message is displayed.

Uninstalling SupportAssist Enterprise in silent mode - Linux

**Prerequisite**
Ensure that you are logged in to the server where SupportAssist Enterprise is installed with root privileges.

**Steps**
1. Open the terminal window on the system where SupportAssist Enterprise is installed.
2. Browse to the `/opt/dell/supportassist/bin` folder.
Identifying the generation of a Dell PowerEdge server

You can quickly identify the generation of a PowerEdge server by observing the representation of the server model. The following table provides information about the various generations of PowerEdge servers and their model representation.

### Table 27. PowerEdge server examples

<table>
<thead>
<tr>
<th>PowerEdge server generation</th>
<th>Representation of the server model</th>
<th>Examples of server models</th>
</tr>
</thead>
<tbody>
<tr>

Installing SupportAssist Enterprise

If you experience any issues while installing SupportAssist Enterprise:

- Ensure that the server is running a 64-bit operating system.
- Ensure that the server where you are installing SupportAssist Enterprise does not have any other SupportAssist application installed already.
- On Windows operating systems, ensure that you right-click the installer package and select Run as administrator to start the installation.
- On Linux operating systems, ensure that the permission of the installer file is updated.
- Ensure that you agree to allow Dell to save your Personally Identifiable Information (PII) on the License Agreement page of the installation wizard.
- Ensure that the server where you are installing SupportAssist Enterprise has internet connectivity. If the server connects to the internet through a proxy server, enter the proxy server details in the installation wizard.

SupportAssist Enterprise registration

If you experience any issues with the registration of SupportAssist Enterprise:

- Verify if the server where SupportAssist Enterprise is installed can connect to the internet.
- If the server where SupportAssist Enterprise is installed connects to the internet through a proxy server, enter the proxy server details in the SupportAssist Enterprise Settings > Proxy Settings page.
- Verify if the network settings of the server where SupportAssist Enterprise is installed are correct.
- Ensure that the registration details, such as first name, last name, email address, and phone number you have provided are valid.
- Ensure that you use an English keyboard layout to type data in the Phone Number, Alternate Phone Number, and Email Address fields.
- Verify if port 443 is open on the firewall to access https://apidp.dell.com and https://api.dell.com.
- Perform the Network Connectivity Test and ensure that connectivity to the SupportAssist server is successful. For instructions to perform the connectivity test, see Performing the connectivity test. If the test is successful, close the web browser, open the SupportAssist Enterprise user interface again, and retry the registration.
- Retry the registration after some time.

Opening the SupportAssist Enterprise user interface

If a Problem starting the SupportAssist Service error is displayed when you open the SupportAssist Enterprise user interface:

- Ensure that you are logged in to the server with a user account that has the required privileges to start system services.
- Try to restart the Dell SupportAssist Service. For instructions to restart the SupportAssist Service, see SupportAssist service.
- Check the log file, application.log, available at <Drive where SupportAssist Enterprise is installed>\Program Files\Dell\SupportAssist\Logs (on Windows) or /opt/dell/supportassist/logs (on Linux) to identify the component that failed to load.

Logging in to SupportAssist Enterprise

If you experience any issues while logging in to SupportAssist Enterprise:

- Verify if the user account you are using to log in is a member of the SupportAssistAdmins or SupportAssistUsers user groups:
  - Open a command prompt as an administrator and type the following commands: net localgroup SupportAssistAdmins and net localgroup SupportAssistUsers. If the user account is not listed in the SupportAssistAdmins or SupportAssistUsers group, add the user account to one of the SupportAssist Enterprise user groups.
If you want to add users to the SupportAssist Enterprise users groups, open a command prompt as an administrator, and type the following commands:

- net localgroup SupportAssistAdmins <User1> /add — To add User1 to the SupportAssistAdmins user group.
- net localgroup SupportAssistUsers <User2> /add — To add User2 to the SupportAssistUsers user group.

If you manually deleted the SupportAssistAdmins or SupportAssistUsers user groups, create the SupportAssist Enterprise user groups, and then add users to the groups:

- To create the SupportAssist Enterprise user groups, open a command prompt as an administrator, and type the following commands:
  - net localgroup SupportAssistAdmins /add — To create the SupportAssistAdmins user group.
  - net localgroup SupportAssistUsers /add — To create the SupportAssistUsers user group.

- To add users to the SupportAssist Enterprise users groups, open a command prompt as an administrator, and type the following commands:
  - net localgroup SupportAssistAdmins <User1> /add — To add User1 to the SupportAssistAdmins user group.
  - net localgroup SupportAssistUsers <User2> /add — To add User2 to the SupportAssistUsers user group.

Verify if the Dell SupportAssist Service is running. For instructions to verify the status of the SupportAssist Service, see SupportAssist service.

Unable to add device

If a device displays an *Unable to add device* status:

- If the device is an iDRAC, ensure that the iDRAC has an Enterprise or Express license installed. For information on purchasing and installing an Enterprise or Express license, see “Managing Licenses” section in the iDRAC User’s Guide at Dell.com/idracmanuals.
- If the device is a Storage SC Series array, ensure that SupportAssist is enabled in Enterprise Manager. For information on enabling SupportAssist in Enterprise Manager, see the Dell Enterprise Manager Administrator’s Guide at Dell.com/storagemanuals.
- If the device was inventoried through an adapter, ensure that the credentials of the device are correct. To resolve credential errors, you can edit the device credentials, update the credential account, or assign another Credential Profile.
- Revalidate the device. See Revalidating a device.

If an error message is displayed stating that SupportAssist Enterprise is unable to add the device:

- Ensure that the device model is supported. For a complete list of supported device models, see the Dell SupportAssist Enterprise Version 1.2 Support Matrix at Dell.com/ServiceabilityTools.
- Ensure that the prerequisites for adding the device are met. For information on the prerequisites for adding a device, see Adding devices.
- Verify if the device is reachable from the server where SupportAssist Enterprise is installed.
- Verify if the device credentials (user name and password) you provided are correct.
- If the error message states that the device could not be added within the predefined time limit, retry adding the device.
- If the device encryption level is greater than 128 bits, perform one of the following:
  - Reduce the encryption level to 128 bits.
  - On the server running SupportAssist Enterprise, the Java Cryptography Extension (JCE) Unlimited Strength Jurisdiction Policy Files must be installed in the Java Development Kit (JDK) or Java Runtime Environment (JRE). For more information on the JCE Unlimited file, visit Oracle.com.

Servers

- If you are adding a server by providing the operating system details (agent-based monitoring) and the device is running a Windows operating system:
- Verify if the credentials you provided have administrator rights on the device.
- Verify if the Windows Management Instrumentation (WMI) service is running on the device.
- If the issue persists, review the instructions in “Securing a Remote WMI Connection” technical documentation at msdn.microsoft.com.

- If you are adding a server by providing the operating system details (agent-based monitoring) and the device is running a Linux operating system:
  - Verify if the credentials you provided have root, super user, or sudo user rights on the device. If you provide the user name and password of a sudo user, ensure that the sudo user is configured for SupportAssist Enterprise. See Configuring sudo access for SupportAssist Enterprise (Linux).
  - Verify if the Secure Shell (SSH) service is running on the device.
  - Verify if SSH password authentication is enabled (enabled by default).

- If you are adding a server by providing the iDRAC details (agentless monitoring), ensure that the iDRAC has an Enterprise or Express license installed. For information on purchasing and installing an Enterprise or Express license, see the "Managing Licenses" section in the iDRAC User's Guide at Dell.com/idracmanuals.

- If the error message states that SupportAssist Enterprise is unable to add the device because the SSL encryption level of the device is set to 256 bit or higher:
  a. Download the Zulu Cryptographic Extension Kit available at the Azul Systems website.
  b. Extract the downloaded file.
  c. Copy the local_policy.jar and US_export_policy.jar files and paste them at the following location on the system where SupportAssist Enterprise is installed:
     - On Windows: `<Drive where SupportAssist Enterprise is installed>\Program Files\Dell\SupportAssist\jre\lib\security`
     - On Linux: `/opt/dell/supportassist/jre/lib/security`
  d. Restart the SupportAssist service and retry the operation.

### Storage

If the device is an Storage PS Series array:

- Ensure that Secure Shell (SSH) and SNMP service are running on the device.
- Ensure that you provide the management group IP address of the device in the add device wizard.

If the device is a Storage SC Series storage array:

- Ensure that the REST service is running on the device.
- Ensure that SupportAssist is enabled in Enterprise Manager. For information on enabling SupportAssist in Enterprise Manager, see the Dell Enterprise Manager Administrator's Guide at Dell.com/storagemanuals.

If the device is a FluidFS NAS device, ensure that SSH service is running on the device.

### Networking

- Ensure that Secure Shell (SSH) and SNMP service are running on the device.
- If the enable password is configured on the device, ensure that you provide the enable password in the add device wizard.

### Chassis

Ensure that Secure Shell (SSH) service is running on the device.
Software

- For troubleshooting HITKIT collection:
  - Ensure that Secure Shell (SSH) service is running on the system.
  - Ensure that you have root credentials for the SSH connection. SupportAssist Enterprise uses the SSH protocol to connect to the system.
- For troubleshooting SAN HQ device:
  - Check the server installation details of Dell SAN Headquarters device from the registry entry: HKLM\SOFTWARE\PerformanceMonitor.
  - Ensure that the value of the install type attribute is "Full" and logdir attribute has a value.

Solution

- Ensure that you are logged in to SupportAssist Enterprise with elevated or administrative privileges. See Granting elevated or administrative privileges to users.
- Ensure that the device is reachable from the server where SupportAssist Enterprise is installed.
- Ensure that port 443 is open on the device.
- Ensure that firmware version 4.x or later is installed on the device for the collection of system information.
- Verify if the assigned Account Credentials (user name and password) you provided are correct.

Unable to add adapter

If the Adapters page displays an Unable to add adapter status:

- Verify if the server where you want to add the adapter is reachable from the server where SupportAssist Enterprise is installed.
- Ensure that the system where you want to set up the adapter has more than 500 MB of free disk space required for installation of the adapter.
- Verify if port 135 is open on the system where you want to set up the adapter.
- For setting up an OpenManage Essentials (OME) adapter, the system where you want to set up the adapter must be running OpenManage Essentials version 2.3 or later.
- For setting up the Microsoft System Center Operations Manager (SCOM) adapter, Dell Server Management Pack Suite Version 7.x For Microsoft System Center Operations Manager and System Center Essentials must be installed on the system.
- Ensure that Microsoft .NET Framework 4 is installed on the system where you are trying to set up the adapter.
- Ensure that the adapter is not already installed on the server where you are trying to set up the adapter.

Unable to add Remote Collector

If the Remote Collectors page displays an Unable to add Remote Collector status:

- Verify if the server where you want to add the Remote Collector is reachable from the server where SupportAssist Enterprise is installed.
- Ensure that the system where you want to set up the Remote Collector has more than 500 MB of free disk space required for installation of the Remote Collector.
- Verify if port 135 is open on the system where you want to set up the Remote Collector.
- Ensure that SupportAssist Enterprise is not previously installed on the server where you want to add the Remote Collector.
- Ensure that the Remote Collector is not already installed on the server where you are trying to set up the Remote Collector.
Disconnected

A **Disconnected** status may be displayed on header area if the server running SupportAssist Enterprise is unable to connect to an adapter or Remote Collector that you have set up. When this issue occurs, a **Disconnected** status is also displayed on the Adapters or Remote Collectors page depending on the connectivity status of SupportAssist Enterprise with an adapter or Remote Collector. If the **Disconnected** status is displayed:

- Ensure that server where you have set up the adapter or Remote Collector is reachable from the server where SupportAssist Enterprise is installed.
- For Remote Collectors, ensure that the Dell EMC SupportAssist Enterprise service is running on the server where you have set up the Remote Collector.
- For adapters, ensure that the Dell EMC SupportAssist Enterprise OME Adapter or Dell EMC SupportAssist Enterprise SCOM Adapter service is running on the server where you have set up the adapter.
- Ensure that port 5700 is open on the server where SupportAssist Enterprise is installed.
- For OpenManage Essentials adapter, if you have added the adapter by using your service account, try deleting the REST_Error.xml file available at `<System drive>:\ProgramData`, and then manually synchronize the adapter.

Importing multiple devices

If you have problems importing multiple devices by using a .csv file:

- Ensure that the .csv file is valid. If necessary, download the .csv template and use it for importing devices.
- Ensure that the .csv file is not corrupted.
- Ensure that you have not edited the header in the .csv file.
- If some devices are not imported, download the list of failed devices as a .csv file. Then, open the file to see the reason why the devices were not imported.
- Ensure that you have followed the instructions in Importing multiple devices.
- If devices are added to the Staging group:
  a. Ensure that all prerequisites for adding the device are met. For information on the prerequisites for adding a device, see the "Prerequisites" section in the instructions for adding each device type. See Adding a single device.
  b. Revalidate each device. See Revalidating a device.

OMSA not installed

If a device displays an **OMSA not installed** status:

- Install OMSA on the device by using the install / Upgrade OMSA option. See Installing or upgrading OMSA by using SupportAssist Enterprise.
- If the installation of OMSA cannot be completed successfully even after repeated attempts, log in to the device and manually download and install the recommended version of OMSA on the device. For information on the recommended version of OMSA, see the SupportAssist Enterprise Version 1.2 Support Matrix at Dell.com/ServiceabilityTools.

SNMP not configured

If a device displays an **SNMP not configured** status:

- Configure the SNMP settings on the device by using the Configure SNMP option. See Configuring SNMP settings by using SupportAssist Enterprise.
- If the SNMP configuration cannot be completed successfully even after repeated attempts, log in to the device and manually configure SNMP settings. For instructions to manually configure the SNMP settings:
– For a server or hypervisor that you have added in SupportAssist Enterprise by using the operating system IP address: Manually configuring the alert destination of a server.
– For a server that you added in SupportAssist Enterprise by using the iDRAC IP address: Manually configuring the alert destination of an iDRAC by using the web interface.

New version of OMSA available

If a device displays a ✗ New version of OMSA available status:

• Install OMSA on the device by using the Install / Upgrade OMSA option. See Installing or upgrading OMSA by using SupportAssist Enterprise.
• If the installation of OMSA cannot be completed successfully even after repeated attempts, log in to the device and manually download and install the recommended version of OMSA on the device. For information on the recommended version of OMSA, see the SupportAssist Enterprise Version 1.2 Support Matrix at Dell.com/ServiceabilityTools.

Unable to configure SNMP

If a device displays an ♂ Unable to configure SNMP status:

• Ensure that the network settings are correct.
• Ensure that the SNMP port (162) is open.
• Ensure that the firewall settings are correct.
• Configure the SNMP settings of the device by using the Configure SNMP option. See Configuring SNMP settings by using SupportAssist Enterprise.

If the SNMP configuration is still unsuccessful, you can manually configure the SNMP. For instructions to manually configure the SNMP settings:

• For a server or hypervisor that you have added in SupportAssist Enterprise by using the operating system IP address: Manually configuring the alert destination of a server.
• For a server that you added in SupportAssist Enterprise by using the iDRAC IP address: Manually configuring the alert destination of an iDRAC by using the web interface.

Unable to verify SNMP configuration

If the device displays an ♂ Unable to verify SNMP configuration status:

• Ensure that the DNS is configured correctly.
• Ensure that the SNMP port (162) is open.
• Ensure that the firewall settings are correct.
• Configure the SNMP settings of the device by using the Configure SNMP option. See Configuring SNMP settings by using SupportAssist Enterprise.
• If the server is running a Linux operating system, restart the snmpdtrapd service.

Unable to install OMSA

If a device displays an ♂ Unable to install OMSA status:

• Verify if the device is reachable from the server where SupportAssist Enterprise is installed.
• Verify if the device credentials (user name and password) you provided are correct.
• If the device is running a Windows operating system:
  – Verify if the credentials you provided have administrator rights on the device.
  – Restart the Windows Management Instrumentation (WMI) service on both the server where SupportAssist Enterprise is installed and the remote device.
  – Delete any files available in the `<System drive>\Windows\temp` folder on the server where SupportAssist Enterprise is installed.
• If the device is running a Linux operating system:
  – Verify if the Secure Shell (SSH) service is running on the device.
  – Verify if SSH password authentication is enabled (enabled by default).
  – Verify if the credentials you provided have root, super user, or sudo user rights on the device. If you provide the user name and password of a sudo user, ensure that the sudo user is configured for SupportAssist Enterprise. See Configuring sudo access for SupportAssist Enterprise (Linux).
  – Ensure that the device has all the required OMSA dependencies installed. For more information about OMSA dependencies, see the “Remote Enablement Requirements” section in the Dell OpenManage Server Administrator Installation Guide at DellTechCenter.com/OMSA.
• Retry the installation of OMSA. See Installing or upgrading OMSA by using SupportAssist Enterprise.
• If the installation of OMSA cannot be completed successfully even after repeated attempts, log in to the device and manually download and install the recommended version of OMSA on the device. For information on the recommended version of OMSA, see the SupportAssist Enterprise Version 1.2 Support Matrix at Dell.com/ServiceabilityTools.

**NOTE:** Upgrade from a 32-bit version of OMSA to a 64-bit version of OMSA is not supported. In this scenario, you must uninstall the existing version of OMSA, and install OMSA by using SupportAssist Enterprise. For instructions to install OMSA by using SupportAssist Enterprise, see Installing or upgrading OMSA by using SupportAssist Enterprise.

### Unable to verify OMSA version

If an error message is displayed stating that SupportAssist Enterprise is unable to verify the OMSA version installed on the device:

• Click the error status link in the Status column on the Devices page to view the possible resolution steps.
• Perform the connectivity test and ensure that connectivity to the Dell FTP server is successful. See Performing the connectivity test.
• Ensure that the OMSA services are running on the device.
• Retry the installation of OMSA. See Installing or upgrading OMSA by using SupportAssist Enterprise.
• If the installation of OMSA cannot be completed successfully even after repeated attempts, log in to the device and manually download and install the recommended version of OMSA on the device. For information on the recommended version of OMSA, see the SupportAssist Enterprise Version 1.2 Support Matrix at Dell.com/ServiceabilityTools.

### OMSA not supported

If a device displays the **OMSA not supported** status:

• Log in to the device and uninstall the existing version of OMSA.
• Install OMSA on the device by using the Install / Upgrade OMSA option. See Installing or upgrading OMSA by using SupportAssist Enterprise.

### Unable to reach device

If a device displays an **Unable to reach device** status:

• Click the error status link in the Status column on the Devices page to view the possible resolution steps.
• Verify if the device is turned on and connected to the network.
• Verify if the required network ports are open on the device.
• If you added the device in SupportAssist Enterprise by providing the device IP address, verify if the IP address of the device has changed. The IP address may change each time the device is restarted, if the device is configured to obtain a dynamic IP address.
• If the IP address of the device has changed:
  – Delete the device from SupportAssist Enterprise. See Deleting a device.
  – Add the device again. See Adding devices.

[NOTE]: To avoid deleting and adding a device each time the IP address of the device changes, Dell recommends that you provide the host name of the device (instead of the IP address) while adding the device.

Unable to gather system information

If a device displays an Unable to gather system information status:

• Click the error status link in the Status column to view the possible resolution steps.
• Verify if the device is reachable from the server where SupportAssist Enterprise is installed.
• Verify if the device credentials (user name and password) you provided are correct.
• If the password of the device is lengthy (10 or more characters), try assigning a shorter password (about 5 to 7 characters), that does not include spaces and quotes, and then update the password in SupportAssist Enterprise.

Servers

• If you are adding a device by providing the operating system details (agent-based monitoring) and the device is running a Windows operating system:
  – Verify if the credentials you provided have administrator rights on the device.
  – Verify if the Windows Management Instrumentation (WMI) service is running on the device.
  – If the issue persists, review the instructions in “Securing a Remote WMI Connection” technical documentation at msdn.microsoft.com.
• If you are adding a device by providing the operating system details (agent-based monitoring) and the device is running a Linux operating system:
  – Verify if the credentials you provided have root, super user, or sudo user rights on the device. If you provide the user name and password of a sudo user, ensure that the sudo user is configured for SupportAssist Enterprise. See Configuring sudo access for SupportAssist Enterprise.
  – Verify if the Secure Shell (SSH) service is running on the device.
  – Verify if SSH password authentication is enabled (enabled by default).
  – Ensure that OpenSSL is updated. For more information, see the resolution for OpenSSL CCS injection vulnerability (CVE-2014-0224) available in the support website of the operating system.
• If you are adding a device by providing the iDRAC details (agentless monitoring), ensure that the iDRAC has an Enterprise or Express license installed. For information on purchasing and installing an Enterprise or Express license, see the "Managing Licenses" section in the iDRAC User’s Guide at Dell.com/idracmanuals.
• If the error message states that SupportAssist Enterprise is unable to gather system information from the device because the SSL encryption level of the device is set to 256 bit or higher:
  a Download the Zulu Cryptographic Extension Kit available at the Azul Systems website.
  b Extract the downloaded file.
  c Copy the local_policy.jar and US_export_policy.jar files and paste them at the following location on the system where SupportAssist Enterprise is installed:
    – On Windows: <Drive where SupportAssist Enterprise is installed>\Program Files\Dell\SupportAssist\jre\lib\security
    – On Linux: /opt/dell/supportassist/jre/lib/security
  d Restart the SupportAssist service and retry the operation.

After resolving the underlying issue, manually initiate the collection and upload of system information. See Starting the collection of system information from a single device.
**Hypervisors**

For devices running VMware ESX and ESXi:

- Ensure that SFCBD and CIMOM are enabled on your device.
  - To enable SFCBD, use the following command: `sudo /etc/init.d/sfcbd-watchdog start`.
  - To enable WBEM, use the following command: `esxcli system wbem set --enable true`.

Depending on your scenario, you may have to run the following commands.

- To check the status of the agent: `sudo /etc/init.d/sfcbd-watchdog status`.
- To reset WBEM, perform the following:
  - Disable WBEM on your device: `esxcli system wbem set --enable false`.
  - Enable WBEM on your device: `esxcli system wbem set --enable true`.
- To disable SFCBD, use the following command: `sudo /etc/init.d/sfcbd-watchdog stop`.

**Storage**

If the device is an Storage PS Series array:

- Ensure that Secure Shell (SSH) and SNMP service are running on the device.
- Ensure that you provide the management group IP address of the device in the add device wizard.

If the device is a Storage SC Series array:

- Ensure that the REST service is running on the device.
- Ensure that SupportAssist is enabled in Enterprise Manager. For information on enabling SupportAssist in Enterprise Manager, see the *Dell Enterprise Manager Administrator's Guide* at Dell.com/storagemanuals.

If the device is a FluidFS NAS device, ensure that SSH service is running on the device.

**Networking**

- Ensure that Secure Shell (SSH) and SNMP service are running on the device.
- If the enable password is configured on the device, ensure that you provide the enable password in SupportAssist Enterprise.

**Chassis**

Ensure that Secure Shell (SSH) service is running on the device.

**Software**

- For troubleshooting HITKIT collection:
  - Ensure that Secure Shell (SSH) service is running on the system.
  - Ensure that you have root credentials for the SSH connection. SupportAssist Enterprise uses the SSH protocol to connect to the system.
- For troubleshooting SAN HQ device:
Check the server installation details of Dell SAN Headquarters device from the registry entry: HKLM\SOFTWARES\\PerformanceMonitor.

Ensure that the value of the install type attribute is "Full" and logdir attribute has a value.

Solution

- Ensure that the device is reachable from the server where SupportAssist Enterprise is installed.
- Ensure that port 443 is open on the device.
- Ensure that firmware version 4.x or later is installed on the device for the collection of system information.

Insufficient storage space to gather system information

If a device displays an Insufficient storage space to gather system information status, ensure that the server where SupportAssist Enterprise is installed has sufficient free space on the C:\drive.

Unable to export collection

If a device displays an Unable to export collection status:

- Click the error status link in the Status column to view the possible resolution steps.
- Manually initiate the collection and upload of system information. See Starting the collection of system information from a single device.

If the problem persists, contact Technical Support for assistance.

Unable to send system information

If a device displays an Unable to send system information status:

- Click the error status link in the Status column to view the possible resolution steps.
- Verify if the server where SupportAssist Enterprise is installed is able to connect to the internet.
- If the server where SupportAssist Enterprise is installed connects to the internet through a proxy server, ensure that the proxy settings are configured in SupportAssist Enterprise. See Configuring proxy server settings.
- Perform the network connectivity test and ensure that connectivity to the Dell upload server is successful. See Performing the connectivity test.
- If the device is associated to a Remote Collector, then verify if the system where Remote Collector is setup has internet connectivity.
- Ensure that the collection file does not contain any potential threats such as viruses or malware.

After resolving the underlying issue, manually initiate the collection and upload of system information. See Starting the collection of system information from a single device.

Authentication failed

If a device displays an Authentication failed status:

- Click the error status link in the Status column to view the possible resolution steps.
- Verify if the device credentials (user name and password) you provided are correct.
Server

- If you added the device by providing the operating system details (agent-based monitoring) and the device is running a Windows operating system:
  - Verify if the credentials you provided have administrator rights on the device.
  - Verify if the WMI service is running on the device.
  - If the issue persists, review the instructions in “Securing a Remote WMI Connection” technical documentation at msdn.microsoft.com.

- If you added the device by providing the operating system details (agent-based monitoring) and the device is running a Linux operating system:
  - Verify if the credentials you provided have root, super user, or sudo user rights on the device. If you provide the user name and password of a sudo user, ensure that the sudo user is configured for SupportAssist Enterprise. See Configuring sudo access for SupportAssist Enterprise (Linux).
  - Verify if the SSH service is running on the device.
  - Verify if SSH password authentication is enabled (enabled by default).

Storage

If the device is an Storage PS Series array:

- Ensure that Secure Shell (SSH) and SNMP service are running on the device.
- Ensure that you provide the management group IP address of the device in the add device wizard.

If the device is a Storage SC Series array:

- Ensure that the REST service is running on the device.
- Ensure that SupportAssist is enabled in Enterprise Manager. For information on enabling SupportAssist in Enterprise Manager, see the Dell Enterprise Manager Administrator's Guide at Dell.com/storagemanuals.

If the device is a FluidFS NAS device, ensure that SSH service is running on the device.

Networking

- Ensure that Secure Shell (SSH) and SNMP service are running on the device.
- If the enable password is configured on the device, ensure that you provide the enable password in the add device wizard.

Chassis

Ensure that Secure Shell (SSH) service is running on the device.

Software

- For troubleshooting HITKIT collection:
  - Ensure that Secure Shell (SSH) service is running on the system.
  - Ensure that you have root credentials for the SSH connection. SupportAssist Enterprise uses the SSH protocol to connect to the system.
- For troubleshooting SAN HQ device:
– Check the server installation details of Dell SAN Headquarters device from the registry entry: HKLM\SOFTWARE\PerformanceMonitor.
– Ensure that the value of the install type attribute is "Full" and logdir attribute has a value.

Solution

• Ensure that the device is reachable from the server where SupportAssist Enterprise is installed.
• Ensure that port 443 is open on the device.
• Ensure that firmware version 4.x or later is installed on the device for the collection of system information.
• Verify if the assigned Account Credentials (user name and password) you provided are correct.

Clearing System Event Log failed

If the device displays a Clearing System Event Log failed status, ensure that the following requirements are met and then retry clearing the System Event Log:

• The device is reachable from the server where SupportAssist Enterprise is installed.
• If the device is a member of a domain, the host name of the device is added in the DNS server.
• The credentials you have provided for the device in SupportAssist Enterprise are correct.
• The credentials you have provided for the device in SupportAssist Enterprise have administrative privileges.
• If you have added the device in SupportAssist Enterprise with the operating system IP address, ensure that the following requirements are met depending on the operating system running on the device:
  – For Windows, the WMI service is running on the device and the firewall allows WMI communication.
  – For Linux, the SSH service is running on the device and the firewall allows SSH communication.
• If you have added the device in SupportAssist Enterprise with the iDRAC IP address, the WS-MAN service is running on the device.

If the problem persists, try clearing the System Event Log by using one of the following methods:

• Clearing the System Event Log by using iDRAC
• Clearing the System Event Log by using OMSA

Clearing the System Event Log by using iDRAC

Prerequisite
Ensure that you are logged in to the iDRAC web console with administrative privileges.

About this task
You can perform the following steps to clear the System Event Log by using the iDRAC web console.

1. In the iDRAC web console, click Overview > Server > Logs Page.
2. Click Clear Log.

Clearing the System Event Log by using OMSA

Prerequisite
Ensure that you are logged in to OMSA with administrative privileges.
About this task
If OMSA is installed on the device, you can perform the following steps to clear the System Event Log.

NOTE: If you want to clear the System Event Log using the CLI, log in to the device and run the following command from a command prompt (Windows) or terminal (Linux): omconfig system esmlog action=clear

NOTE: If the device is running VMware ESX, log in to OMSA from another remote device using the Server Administrator Managed System Login option, and then perform the following steps.

Steps
1. In OMSA, perform one of the following, depending on the type of server:
   - If the device is a modular server, click Modular Enclosure > Server Module.
   - If the device is not a modular server, click System > Main System Chassis.
2. Click the Logs tab.
3. Click Clear Log.

Maintenance mode
If a device displays the Maintenance Mode status:

- Ensure that the issue with the device is resolved.
- If more time is required to resolve the issue, you may place the device in manual maintenance mode. See Enabling or disabling device-level maintenance mode.
- If required, you may place SupportAssist Enterprise in maintenance mode. See Enabling or disabling global-level maintenance mode.

Auto update
If the auto update of SupportAssist Enterprise, product support files, or policy files is unsuccessful:

1. Perform the network connectivity test and ensure that connectivity to the Dell FTP server is successful. See Performing the connectivity test.
2. Click the Update Available banner and try installing the update again.

Unable to edit device credentials
If an error message is displayed stating that SupportAssist Enterprise is Unable to edit the credentials of a device:

- Verify if the device is reachable from the server where SupportAssist Enterprise is installed.
- Verify if the device credentials (user name and password) you provided are correct.

Servers

- If you are editing the credentials of a device running a Windows operating system:
  - Verify if the credentials you provided have administrator rights on the device.
  - Verify if the Windows Management Instrumentation (WMI) service is running on the device.
  - If the issue persists, review the instructions in “Securing a Remote WMI Connection” technical documentation at msdn.microsoft.com.
- If you are editing the credentials of a device running a Linux operating system:
  - Verify if the credentials you provided have root, super user, or sudo user rights on the device. If you provide the user name and password of a sudo user, ensure that the sudo user is configured for SupportAssist Enterprise. See Configuring sudo access for SupportAssist Enterprise (Linux).
– Verify if the Secure Shell (SSH) service is running on the device.
– Verify if SSH password authentication is enabled (enabled by default).

• If the error message states that SupportAssist Enterprise is unable to edit the credentials of the device because the SSL encryption level of the device is set to 256 bit or higher:
  a. Download the Zulu Cryptographic Extension Kit available at the Azul Systems website.
  b. Extract the downloaded file.
  c. Copy the `local_policy.jar` and `US_export_policy.jar` files and paste them at the following location on the system where SupportAssist Enterprise is installed:
     - On Windows: `<Drive where SupportAssist Enterprise is installed>:\Program Files\Dell\SupportAssist\jre\lib\security`
     - On Linux: `/opt/dell/supportassist/jre/lib/security`
  d. Restart the SupportAssist service and retry the operation.

**Storage**

If the device is an Storage PS Series array:

• Ensure that Secure Shell (SSH) and SNMP service are running on the device.
• Ensure that you provide the management group IP address of the device in the add device wizard.

If the device is a Storage SC Series array:

• Ensure that the REST service is running on the device.
• Ensure that SupportAssist is enabled in Enterprise Manager. For information on enabling SupportAssist in Enterprise Manager, see the *Dell Enterprise Manager Administrator’s Guide* at [Dell.com/storagemanuals](Dell.com/storagemanuals).

If the device is a FluidFS NAS device, ensure that SSH service is running on the device.

**Networking**

• Ensure that Secure Shell (SSH) and SNMP service are running on the device.
• If the enable password is configured on the device, ensure that you provide the enable password in the add device wizard.

**Chassis**

Ensure that Secure Shell (SSH) service is running on the device.

**Software**

• For troubleshooting HITKIT collection:
  – Ensure that Secure Shell (SSH) service is running on the system.
  – Ensure that you have root credentials for the SSH connection. SupportAssist Enterprise uses the SSH protocol to connect to the system.
• For troubleshooting SAN HQ device:
  – Check the server installation details of Dell SAN Headquarters device from the registry entry: `HKLM\SOFTWARE\PerformanceMonitor`.
  – Ensure that the value of the install type attribute is "Full" and logdir attribute has a value.
Solution

- Ensure that the device is reachable from the server where SupportAssist Enterprise is installed.
- Verify if the assigned Account Credentials (user name and password) you provided are correct.

Automatic case creation

If an issue occurs on a device, but a support case is not created automatically:

**NOTE:** SupportAssist Enterprise does not create a support case for every alert received from a monitored device. A support case is created only if the alert type and number of alerts received from a device match with the criteria defined by Dell for support case creation.

- Ensure that the device is a server, storage, networking switch, or chassis.
- Ensure that monitoring is enabled for the device in SupportAssist Enterprise. See Enabling or disabling monitoring of a device.
- Ensure that the device is configured to forward alerts to the server where SupportAssist Enterprise is installed.
- Perform the network connectivity test and ensure that the connectivity to the SupportAssist server is successful. See Performing the connectivity test.
- Perform the case creation test and ensure that the Ready to Create Cases status is displayed. See Testing the case creation capability.
- Check the application.log file available at `<Drive where SupportAssist Enterprise is installed>\Program Files\Dell\SupportAssist\Logs` (on Windows) or `/opt/dell/supportassist/logs` (on Linux) to identify if the alert was received successfully by SupportAssist Enterprise.
- If the device was inventoried through an OpenManage Essentials adapter, ensure that the device is configured to forward alerts to the server where OpenManage Essentials is installed.

Scheduled tasks

If the time or time zone of the system on which SupportAssist Enterprise is installed is changed, all built-in and user-defined schedule tasks do not work as expected. Examples of scheduled tasks include the following:

- Periodic collection of system information from monitored devices
- Upload of device inventory information to Dell
- Connectivity test email notifications
- Upload of application logs
- Upload of alerts table
- Upload of adapter and Remote Collector details
- Revalidation of the adapter
- Synchronization of the adapter

To resolve this issue, restart the Dell SupportAssist Service.

SupportAssist Enterprise services

SupportAssist Enterprise has two services that run in the background: Dell EMC SupportAssist Enterprise and Dell EMC SupportAssist Enterprise DB. If the SupportAssist Enterprise application does not respond appropriately, ensure the following:

1. On the server where SupportAssist Enterprise is installed, verify if the SupportAssist Enterprise services are running. For information on verifying the status of the SupportAssist Enterprise services, see Verifying the status of SupportAssist Enterprise services (Windows) or Verifying the status of SupportAssist Enterprise services (Linux).
2. If the services cannot or do not start, open the most recent SupportAssist Enterprise application log file (application.log), and then search for text with a timestamp of when you tried to start the services. The log file may contain a message indicating any user interface startup errors and a possible problem diagnosis.
NOTE: You can access the SupportAssist Enterprise application log file (application.log) at the following location depending on the operating system:

- On Windows — `<Drive where SupportAssist Enterprise is installed>\Program Files\Dell\SupportAssist\logs`
- On Linux — `/opt/dell/supportassist/logs`

3 To verify if the SupportAssist Enterprise application can connect to the SupportAssist Enterprise server hosted by Dell, perform the connectivity test. See Performing the connectivity test.

   - If the server is responding, a success message is displayed in the user interface. If not, the server may be unreachable. If this is the scenario, check the `application.log` file to find details. If there are no discernible details in the log file, and the server is not reachable, contact Technical Support for assistance.

   - If communication is successful, but no data updates occur, the SupportAssist Enterprise application may be identifying itself with an ID that is unknown to the server. If this is the scenario, check the `application.log` file to find details. The log file may contain a message stating that the SupportAssist Enterprise application was not recognized. If the SupportAssist Enterprise application is not recognized by the SupportAssist server, uninstall and reinstall the SupportAssist Enterprise application.

### Verifying the status of SupportAssist Enterprise services on Windows

To verify the status of the SupportAssist Enterprise services on Windows operating systems:

1. On the server where SupportAssist Enterprise is installed, click **Start** > **Run**. The **Run** dialog box is displayed.
2. Type `services.msc`, and then click **OK**. The **Services** Microsoft Management Console (MMC) is displayed.
3. Verify if the **Dell EMC SupportAssist Enterprise** and **Dell EMC SupportAssist Enterprise DB** services display the status as **Running**.
4. If the services are not running, right-click each service and select **Start**.

   **NOTE:** If you stop one or both of the SupportAssist Enterprise services, ensure that you restart both the services.

   **NOTE:** To verify if the adapter service is running, check for the status of the **Dell EMC SupportAssist Enterprise OME Adapter** or **Dell EMC SupportAssist Enterprise SCOM Adapter** service on the server where you have set up the adapter.

   **NOTE:** To verify if the Remote Collector service is running, check for the status of the **Dell EMC SupportAssist Enterprise** and **Dell EMC SupportAssist Enterprise DB** service on the server where you have set up the Remote Collector.

### Verifying the status of SupportAssist Enterprise services on Linux

To verify the status of the SupportAssist Enterprise services on Linux operating systems:

1. Open the terminal window on the system where SupportAssist Enterprise is installed.
2. Type `service Dell EMC SupportAssist Enterprise status` and press Enter. The status of the Dell EMC SupportAssist Enterprise service is displayed.
3. Type `service Dell EMC SupportAssist Enterprise DB status` and press Enter. The status of the Dell EMC SupportAssist Enterprise DB service is displayed.
4. If the services are not running, type `service <service name> start` and press Enter.

   **NOTE:** If you stop one or both of the SupportAssist Enterprise services, ensure that you restart both the services.
Verifying the status of SupportAssist Enterprise services on Ubuntu and Debian

To verify the status of the SupportAssist Enterprise services on Ubuntu and Debian operating systems:

1. Open the terminal window on the system where SupportAssist Enterprise is installed.
2. Type `systemctl status supportassist.service` and press Enter.
   The status of the Dell EMC SupportAssist Enterprise service is displayed.
3. Type `systemctl status supportassistdatabase.service` and press Enter.
   The status of the Dell EMC SupportAssist Enterprise DB service is displayed.

**NOTE:** If your system is running the Systemd service, the Dell EMC SupportAssist Enterprise service and the Dell EMC SupportAssist Enterprise DB service may not display the correct status.

4. If the services are not running, type `systemctl start <service name>.service` and press Enter.
5. To stop the services, type `systemctl stop <service name>.service` and press Enter.
6. To restart the services, type `systemctl restart <service name>.service` and press Enter.

**NOTE:** If you stop one or both of the SupportAssist Enterprise services, ensure that you restart both the services.

Tool tips

If tool tips are not displayed in Mozilla Firefox:

1. Open Mozilla Firefox, and type `about:config` in the address bar.
2. If a warning is displayed, click Accept.
3. Verify if the `browser.chrome.toolbar_tips` value is set to True.
4. If the `browser.chrome.toolbar_tips` value is False, double-click the value to set it to True.

Other services

To add a device and perform other operations on the device, SupportAssist Enterprise requires the following services to be installed and running on the device:

- WMI service (on devices running a Windows operating system)
- SSH service (on devices running a Linux operating system)

If the services are either not installed or not running, an error message is displayed in SupportAssist Enterprise. The following sections provide information about verifying the status of the service and restarting the service (if required).

WMI service

To verify the status of the WMI service and to start the service (if required):

1. Click Start > Run. The Run dialog box is displayed.
2. Type `services.msc`, and then click OK. The Services Microsoft Management Console (MMC) is displayed.
3. In the list of services, verify the status of the Windows Management Instrumentation service. If the service is running, the status is displayed as Running.
4. If the service does not display a Running status, right-click Windows Management Instrumentation and click Start.
**SSH service**

You can use the following commands to verify the status of the SSH service and to start the service (if required):

- `service sshd status` — Displays the status of the SSH service.
- `service sshd start` — Starts the SSH service.

**Security**

If the **Edit Credentials** or **Start Collection** links remain disabled even after selecting a device in the **Devices** page, ensure that you are logged in to SupportAssist Enterprise with elevated or administrative privileges. See **SupportAssist Enterprise user groups** and **Granting elevated or administrative privileges to users**.
SupportAssist Enterprise user interface

The SupportAssist Enterprise user interface contains the following tabs:

- **Cases** — Displays the support cases that are present for the devices that you have added in SupportAssist Enterprise.
- **Devices** — Displays the devices that you have added in SupportAssist Enterprise and their status. You can point to the Devices tab and click the available options to access following pages:
  - **Manage Device Groups** — Enables you to create and manage devices groups.
  - **Manage Rules for Device Discovery** — Enables you to create device discovery rules.
  - **Manage Credentials** — Enables you to provide the credentials for the device types.
    - **Account Credentials** — Enables you to connect to your remote devices and collect system information.
    - **Credential Profiles** — Enables you to apply a set of credentials to a device or group of devices, instead of entering the credentials for each device manually.
- **Collections** — Displays the list of collections that have been performed successfully.
- **Extensions** — Enable you to set up adapters and Remote Collectors.
- **Settings** — Enables you to configure the options available in SupportAssist Enterprise. You can point to the Settings tab and click the available options to access following pages:
  - **Proxy Settings** — Enables you to configure the proxy server settings in SupportAssist Enterprise.
  - **Preferences** — Enables you to configure your preferences for tasks, collections, email notification, reports, and maintenance mode.
  - **Contact Information** — Enables you to update the details of your primary and secondary contacts.
  - **SMTP Settings** — Enables you to configure the details of the SMTP server utilized by your company.
- **Disconnected** — Displayed when SupportAssist Enterprise is unable to connect to an adapter or Remote Collector.

At the top-right of the SupportAssist Enterprise header area, you can access links that allow you to navigate to resources or perform certain tasks. The following table describes the use of the available links.

<table>
<thead>
<tr>
<th>Link</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>SupportAssist Enterprise Community</td>
<td>Opens the SupportAssist Enterprise community website in a new browser window.</td>
</tr>
<tr>
<td>About</td>
<td>Provides information about the SupportAssist Enterprise version, registration ID, policy file version, device configuration version, and the update history.</td>
</tr>
<tr>
<td><strong>User name</strong></td>
<td>The user name of the currently logged in user. Point to the <strong>user name</strong> link to view a drop-down list that contains the following links:</td>
</tr>
<tr>
<td></td>
<td>- <strong>Network Connectivity Test</strong> — Opens the <strong>Network Connectivity Test</strong> page.</td>
</tr>
<tr>
<td></td>
<td>- <strong>SupportAssist Enterprise Test</strong> — Opens the <strong>SupportAssist Enterprise Test</strong> page.</td>
</tr>
<tr>
<td></td>
<td>- <strong>Logout</strong> — Allows you to log out of SupportAssist Enterprise.</td>
</tr>
</tbody>
</table>

**NOTE:** The Network Connectivity Test and SupportAssist Enterprise Test links are enabled only if you are logged in to SupportAssist Enterprise with administrative or elevated privileges.
In some scenarios, a yellow banner may be displayed at the top of the SupportAssist Enterprise user interface. The following table describes the banners that may be displayed.

**Table 29. Banners in the SupportAssist Enterprise header area**

<table>
<thead>
<tr>

- Registering SupportAssist Enterprise

Welcome

The Welcome page enables you to start the registration of SupportAssist Enterprise. Click Next to start the registration of SupportAssist Enterprise.

Proxy Settings

The Proxy Settings page allows you to configure the proxy server settings.

**NOTE:** The Proxy Settings page is displayed only if you confirm that the system connects to the Internet through a proxy server.

The following table provides information about the fields displayed in the Proxy Settings page.

<table>
<thead>
<tr>
<th>Table 30. Proxy Settings</th>

</tr>
</tbody>
</table>
### Registration

The Registration page enables you to provide your contact information and register SupportAssist Enterprise. The fields displayed in the Registration page are described in the following table.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Username</strong></td>
<td>The user name required to connect to the proxy server.</td>
</tr>
<tr>
<td><strong>Password</strong></td>
<td>The password required to connect to the proxy server.</td>
</tr>
</tbody>
</table>

#### Company Information
- **Company Name**: The name of the company.
- **Country/Territory**: The location of the company.

#### Primary Contact Information
- **First Name**: The first name of the primary contact.
- **Last Name**: The last name of the primary contact.
- **Phone Number**: The phone number of the primary contact.
- **Alternate Phone Number**: The alternate phone number of the primary contact.
- **Email Address**: The email address of the primary contact. SupportAssist Enterprise email notifications are sent to this email address.

#### Dispatch Details
- **Parts Dispatch Only**: Select this option if you want only the replacement hardware component to be dispatched to your address.
- **Parts Dispatch with Onsite Service**: Select this option if you want an on-site technician to replace the dispatched hardware component.
- **Copy Contact Information**: Select this option if you want to copy the contact details from the Contact Information section.
- **Preferred Contact Hours**: The preferred hours when Technical Support can contact your primary or secondary contact in case of any issues with the monitored devices.
- **Country / Territory**: Select the country.
- **Address**: The address where a replacement component must be dispatched.

- Logging in to SupportAssist Enterprise

**Cases page**

The **Cases** page displays the support cases that are present for your devices that you have added in SupportAssist Enterprise. For devices with a ProSupport, ProSupport Plus, ProSupport Flex for Data Center, or ProSupport One for Data Center service contract, the **Cases** page displays the case status irrespective of the case creation method. By default, the displayed support cases are grouped under their respective device name or device IP address. The last refreshed date and time that is displayed in the group header indicates when the case information was last retrieved from Dell.

The following options available at the top of the cases page are:

- **Search by** — To search by a specific category of displayed data. The available options are:
  - Service Tag
  - Name / IP Address
  - Number
  - Title
  - Status
- **Search term** — To enter the search keyword.
Case Options — Enables you to manage support cases that were opened by SupportAssist Enterprise based on your requirement. The following are the available options:

- **Suspend Activity 24 hours** — To request Technical Support to suspend activities related to a support case for 24 hours. After 24 hours, Technical Support automatically resumes activities related to the support case.
- **Resume Activity** — To request Technical Support to resume activities related to a support case.

**NOTE:** The Resume Activity option is enabled only if you had previously requested to suspend activities related to a support case.

- **Request to Close** — To request Technical Support to close a support case.

**NOTE:** Only support cases that were opened by SupportAssist Enterprise can be managed by using the Case Options list.

- **Refresh** — To refresh the case list view.
- **Fetching Cases** — A progress indicator that is displayed when SupportAssist Enterprise is verifying if cases are present for your devices.
- **TechDirect** — Opens the Dell EMC TechDirect home page in a new web browser window.

The following table describes the support case information for your Dell devices that are monitored by SupportAssist Enterprise, as displayed in the Cases page.

### Table 33. Cases page

<td>• <strong>ProSupport Plus</strong> — The device is covered under a Dell ProSupport Plus service contract.</td>
</tr>
<tr>
<td></td>
<td>• <strong>ProSupport Flex for Data Center</strong> — The device is covered under a ProSupport Flex for Data Center service contract.</td>
</tr>
<tr>
<td></td>
<td>• <strong>ProSupport One for Data Center Or ProSupport Flex for Data Center</strong> — The device is covered under a ProSupport One for Data Center Or ProSupport Flex for Data Center service contract.</td>
</tr>
<tr>
<td>Service Tag</td>
<td>A unique, alphanumeric identifier that allows Dell to individually recognize each Dell device.</td>
</tr>
</tbody>
</table>

**NOTE:** When you check for support cases of a specific device, the support cases of that device are displayed at the top of the Cases page with a blue border for the appropriate rows. See Checking for support cases.

You can choose to refine the displayed devices based on the device type, case status, service contract type, case source, or other criteria. The following are the available options for refining the displayed data:

- **Device Type**
  - Server
  - Storage
  - Networking
  - Chassis
  - Software
  - Solution
- **Case Status**
  - Open
  - Submitted
  - In Progress
  - Suspended
  - Requested for Closure
Devices page

The Devices page displays the devices that you have added and status of the SupportAssist Enterprise functionality for each device. In the default view, the Devices page displays all the devices that you have added.

At the top of the Devices page, the navigation trail is displayed.

The following options available at the top of the device list enables you to perform certain tasks:

- **Search by** — To search by a specific category of displayed data. The available options are:
  - Service Tag
  - Model
  - Name / IP Address
  - Operating System
- **Search term** — To enter the search keyword.
- **Add Device** — To add a single device or to import multiple devices.
- **Start Collection** — To initiate a single device or multiple device collections.
- **Edit** — To update the name and account credentials of the device.
- **Delete** — To delete a device from SupportAssist Enterprise.
- **Collection Purpose** — To select a reason for performing a multiple device collection.
- **Assign Credential Profile** — To assign credentials for devices.
- **Refresh** — To refresh the device inventory view.
- **View by** — Enables you to view the devices in a (list) view or (association) view.

The following table describes the automatically generated inventory information for your supported Dell devices, as displayed in the Devices page.
Table 34. Devices page

</tbody>
</table>

**NOTE:** The error status may be displayed as a link that you can click to view a description of the issue and the possible resolution steps.

You can choose to refine the displayed devices based on the device type, device group, or other criteria. The following are the available options for refining the displayed data:

- **Device Type**
  - Server
  - Storage
  - Networking
  - Chassis
  - Software
  - Solution
- **Groups**
  - Default — Displays all devices.
  - Staging — Displays devices in the staging group.
  - Inactive — Displays devices that are not reachable.
- **Adapter**
- **Remote Collector**
The Devices page also displays the following panes based on your actions:

- Device overview pane — When only a single device is selected. See Device overview pane.
- Device Import pane — When you import multiple devices by using a .csv file. See Device Import pane.
- Multiple Device Collection pane — When a multiple device collections is in progress. See Multiple Device Collection pane.

Import Multiple Devices

The Import Multiple Devices page enables you to add multiple devices by using a .csv file.

The following are the items that are displayed on the Import Multiple Devices page:

- Browse — To select a .csv file that contains details of the devices that you want to import.
- Download the .csv template — To download a .csv template that you can use to import multiple devices.
- Enable monitoring — To allow SupportAssist Enterprise to monitor the devices for hardware issues. Additional configuration or installation may be required to allow SupportAssist Enterprise to monitor hardware issue that may occur on the devices.

Importing multiple devices

Importing Devices

The Importing Devices page displays the status and result of the device import.

The Importing Devices page displays the following:

- Progress bar that indicates the status of the device import
- Result of the device import
- Total number of devices that are processed

The result of the device import is displayed in both text and graphical format. The result of the device import is classified as follows:

- Devices added to the inventory — Number of devices that were discovered successfully and added to the device inventory.
- Dependency devices are added to the staging group — Number of devices that were discovered, but did not meet certain prerequisites. To add a device in the staging group to the device inventory, revalidate the device after the prerequisites are met.

**NOTE:** SupportAssist Enterprise capabilities are not available for devices that are in the Staging group.

- Failed devices — Number of devices could not be discovered.
- Save failed devices list — To export details of the devices that were not discovered. The exported .csv file will contain the reason and resolution for the import issue.

**NOTE:** The Save failed devices list option is displayed only if devices could not be discovered.

While importing devices that are members of one or more domains by using a .csv file, if SupportAssist Enterprise detects that the credentials of two of those devices of a certain domain are incorrect, the import operation is paused for other devices in that domain. The import operation is paused to prevent automatic lockout of the domain account due to repetitive authentication failures. For devices of other domains included in the .csv file, the import process continues normally. If the import process is paused for devices of a certain domain, the Resume option is displayed. You can click Resume to continue the import process for the other devices in that domain.

You can also use the following options that are available on the Importing Devices page:

- Close — To close the Importing Devices page. You can view progress status in the Devices pane.
- Cancel — To cancel the device import process.

Device Import pane

The Device Import pane displays the status and result of the device import. This pane is displayed in the Devices page when you import multiple devices by using a .csv file.

The Device Import pane displays the following:

- Date and time when the device import was started
- Progress bar that indicates the status of the device import
- Result of the device import
- Total number of devices that are processed

The result of the device import is displayed in both text and graphical format. The result of the device import is classified as follows:

- Devices added to the inventory — Number of devices that were discovered successfully and added to the device inventory.
- Dependency devices are added to the staging group — Number of devices that were discovered, but did not meet certain prerequisites. To add a device in the staging group to the device inventory, revalidate the device after the prerequisites are met.
NOTE: SupportAssist Enterprise capabilities are not available for devices that are in the Staging group.

- **Failed devices** — Number of devices could not be discovered.
- **Save failed devices list** — To export details of the devices that were not discovered. The exported .csv file will contain the reason and resolution for the import issue.

NOTE: The Save failed devices list option is displayed only if devices could not be discovered.

While the device import is in progress, you can click **Cancel** to stop the device import process.

While importing devices that are members of one or more domains by using a .csv file, if SupportAssist Enterprise detects that the credentials of two of those devices of a certain domain are incorrect, the import operation is paused for other devices in that domain. The import operation is paused to prevent automatic lockout of the domain account due to repetitive authentication failures. For devices of other domains included in the .csv file, the import process continues normally. If the import process is paused for devices of a certain domain, the **Resume** option is displayed. You can click **Resume** to continue the import process for the other devices in that domain.

By default, the **Device Import** pane is displayed in an expanded format. You can collapse or expand the display of the **Device Import** pane by using the following options:

- **Hide Details** — Collapses the **Device Import** pane. In the collapsed view, only the progress status of the device import is displayed.
- **Show Details** — Expands the **Device Import** pane.

After the devices are imported, you can click **x** to close the **Device Import** pane.

### Device overview pane

The device overview pane displays the details of a device and allows you to perform certain operations on that device. This pane is displayed when you select only a single device in the **Devices** page.

<td>The email address or name of the Technical Support contact.</td>
</tr>
<tr>
<td>Project ID (Optional)</td>
<td>The project identification information.</td>
</tr>
<tr>
<td>Upload collection</td>
<td>- Select this option to upload the collection to Dell after the collection is completed.</td>
</tr>
</tbody>
</table>
Multiple Device Collection pane

The Multiple Device Collection pane displays the status of the collection from multiple devices. This Multiple Device Collection pane is displayed in the Devices page while the collection of system information from multiple devices is in progress.

The Multiple Device Collection pane displays the following:

- Progress bar that indicates the collection status
- Collections status message
- Number of completed collections and the total number of collections
- Name assigned to the collection

The Cancel button enables you to cancel the collection at any time.

**NOTE:** After the collection of system information is completed, the Multiple Device Collection pane closes automatically, and the collection details are displayed in the Collections page.

Device Groups page

The Device Groups page allows you to create and manage devices groups.

The Create Device Group option available at the top of the Device Groups page enables you to create a new device group.

At the top of the Device Groups page, the navigation trail is displayed.

The Select group actions list enables you to select an action that you want to perform on the group. The following are the available actions:

- Manage Devices — To add or remove devices from a device group.
- Manage Contacts — To provide the contact information and parts dispatch information for each device type included in a device group.
- Edit/Delete Group — To edit the group details or delete a device group.

The following table describes the information displayed in the Device Groups page.

**Account Credentials**
The Account Credentials that you have created for the specific device type.
Collections page

The Collections page displays the collections that have been performed successfully. From the Collections page, you can view the collected system information, download multi-device collections, and also upload collections to Dell.

At the top of the Collections page, the navigation trail is displayed.

The following options available at the top of the collections page are:

- **Date Range** — To search the collections by a specific date range.
- **Search by** — To search by a specific category of displayed data. The available options are:
  - Service Tag
  - Name / IP Address
- **Search term** — To enter the search keyword.
- **Upload** — To upload a collection to Dell.

The following table describes the information displayed in the Collections page.

<table>
<thead>
<tr>
<th>Column name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Check box</td>
<td>Use to select a collection for viewing the collection overview pane and to upload a collection.</td>
</tr>
<tr>
<td>Name</td>
<td>The name of the device and collection type. For single device collections, the name of the device is followed by the type of collection. For example, manual, periodic, and so on.</td>
</tr>
<tr>
<td>Collection Date</td>
<td>The date when the collection was started.</td>
</tr>
<tr>
<td>Collection Purpose</td>
<td>The reason selected while performing a multiple device collection.</td>
</tr>
<tr>
<td>Case Number</td>
<td>The numeric support case identifier.</td>
</tr>
<tr>
<td>Upload Status</td>
<td>The upload status of the collection.</td>
</tr>
</tbody>
</table>

You can choose to refine the displayed collections based on the collection type, device type, or adapter. The following are the available options for refining the displayed data:

- **Collection Type**
  - Manual Collection
  - Periodic Collection
  - Case Collection
  - Multi Collection
- **Collection Purpose**
  - Technical Support
  - Deployment
  - System Maintenance
  - Consulting
Collection overview pane

The collection overview pane displays the details of a collection and enables you to view or download the collected system information. This pane is displayed when you select a collection that is listed in the Collections page.

The following table describes the information displayed in the collection overview pane.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Name</td>
<td>The name assigned of the collection.</td>
</tr>
<tr>
<td>Upload status</td>
<td>The status of the collection upload.</td>
</tr>
<tr>
<td>Date</td>
<td>The date and time when the collection was started.</td>
</tr>
<tr>
<td>IP Address / Host name</td>
<td>The IP address of host name of the device.</td>
</tr>
<tr>
<td>Service Tag</td>
<td>A unique, alphanumeric identifier that allows Dell to individually recognize each Dell device.</td>
</tr>
<tr>
<td>Collection status</td>
<td>The status of the collection from the device.</td>
</tr>
<tr>
<td>View Collection (for server collections only)</td>
<td>Click to open a collection from a server in the Configuration Viewer.</td>
</tr>
<tr>
<td>Download Collection (for collections from all other device types and multiple device collections)</td>
<td>Click to download the collection as a .zip file.</td>
</tr>
</tbody>
</table>

**NOTE:** The View Collection or Download Collection option is disabled if the collection was performed by a Remote Collector.

Extensions

The extensions available in SupportAssist Enterprise enables you to extend the SupportAssist Enterprise capability to many devices. You can use the extensions to inventory and add devices that are managed by a systems management console such as Dell OpenManage Essentials or Microsoft System Center Operations Manager.

Two types of extensions are available in SupportAssist Enterprise:

- Adapter — An application that acts as an interface between SupportAssist Enterprise and a systems management console.
- Remote Collector — A remote instance of SupportAssist Enterprise that collects and uploads system information from devices within a specific IP address range.
Adapters

The adapter is an application that acts as an interface between SupportAssist Enterprise and systems management consoles. The following table provides information about the options displayed in the Adapters tab.

### Table 58. Adapters

Settings

The Settings tab enables you to configure the options available in SupportAssist Enterprise. You can point to the Settings tab and click the available options to access the following pages:

- **Proxy Settings** — To configure the settings of the proxy server available in your environment. This setting is required only if the server where SupportAssist Enterprise is installed connects to the internet through a proxy server.
- **Preferences** — To configure your preferences for the following: automatic update, collection of system information, email notification, recommendation report, and maintenance mode.
- **Contact Information** — To view and update your company's primary and secondary SupportAssist Enterprise contacts.
- **SMTP Settings** — To configure the details of the SMTP server utilized by your company. This setting is applicable only if your company utilizes an SMTP server. If your company does not utilize an SMTP server, you may not receive certain email notifications from SupportAssist Enterprise.

If the problem persists, contact Technical Support for assistance. |
| 3000_39    | An unexpected error occurred during the installation of Dell OpenManage Server Administrator (OMSA) on device_name. |  
- Verify if the device is reachable.  
- Verify if the configured device credentials have Administrator rights.  
- Select the device in the Devices page, and in the device overview pane, select Install / Upgrade OMSA from the Tasks list.  
- Manually install the recommended version of OMSA. To identify the recommended version of OMSA, see the SupportAssist Enterprise version 1.2 Support Matrix at Dell.com/ServiceabilityTools.  
If the problem persists, contact Technical Support for assistance. |
<p>| 3000_40    | The time allowed for OMSA installation has expired. | Log on to the device and verify if OMSA is installed. If OMSA is not installed, select the device, and in the device overview pane, select Install / Upgrade OMSA from the Tasks list. If the problem persists, contact Technical Support for assistance. |
| 3000_41    | This device has generated an unusual number of alerts exceeding the set threshold limit. SupportAssist Enterprise has temporarily placed it under maintenance. | Ensure that the health of this device is restored for optimal SupportAssist Enterprise operations. |</p>

Topics:
- Accessing documents from the Dell EMC support site
- Contacting Dell

Accessing documents from the Dell EMC support site
You can access the required documents using the following links:
- For Dell EMC Enterprise Systems Management documents — Dell.com/SoftwareSecurityManuals
- For Dell EMC OpenManage documents — Dell.com/OpenManageManuals
- For Dell EMC Remote Enterprise Systems Management documents — Dell.com/esmmanuals
- For iDRAC and Dell EMC Lifecycle Controller documents — Dell.com/idracmanuals
- For Dell EMC OpenManage Connections Enterprise Systems Management documents — Dell.com/OMConnectionsEnterpriseSystemsManagement
- For Dell EMC Serviceability Tools documents — Dell.com/ServiceabilityTools
  a. Go to Dell.com/Support/Home.
  b. Click Choose from all products.
  c. From All products section, click Software & Security, and then click the required link from the following:
    - Enterprise Systems Management
    - Remote Enterprise Systems Management
    - Serviceability Tools
    - Dell Client Command Suite
    - Connections Client Systems Management
  d. To view a document, click the required product version.
  e. Using search engines:
    - Type the name and version of the document in the search box.
Contacting Dell

Prerequisite

NOTE: If you do not have an active Internet connection, you can find contact information on your purchase invoice, packing slip, bill, or Dell product catalog.

About this task

Dell provides several online and telephone-based support and service options. Availability varies by country and product, and some services may not be available in your area. To contact Dell for sales, technical support, or customer service issues:

Steps

1. Go to Dell.com/support.
2. Select your support category.
3. Verify your country or region in the Choose a Country/Region drop-down list at the bottom of the page.
4. Select the appropriate service or support link based on your need.
