Wyse ThinLinux combines the security, flexibility and market-leading usability of Ubuntu Linux with Dell’s optimizations in management and user experience. It is ideal for organizations that want to run server-based, web-based, or local applications without the deployment and security concerns of a non-standard Linux distribution.

NOTE: For details about the previous versions, if applicable, or to determine which version of the operating system you need to select for your thin client, see Version matrix.
The following section lists the platforms that are supported in each ThinLinux release, and the add-ons required for ThinLinux.

New and enhanced features

Webcam

The Wyse 5470 thin client has an integrated HD webcam. You can access the full functionality of the webcam during Citrix and VMware sessions.

Keyboard functions

The Wyse 5470 thin client has a laptop layout keyboard. The following short-cut key functions are supported:

- **Fn+F1** — Mutes Audio
- **Fn+F2** — Decreases volume
- **Fn+F3** — Increases volume
- **Fn+F10** — Adjusts keyboard backlight brightness and toggles backlight on/off
- **Fn+F11** — Decreases LCD brightness
- **Fn+F12** — Increases LCD brightness

Docking station

The Dell Docking station WD19 is compatible with the Wyse 5470 thin client. ThinLinux supports all the ports on the docking station and you can connect up to two external displays to the WD19 docking station.

Merlin imaging using docking station with MAPT

MAC Address Override or MAC Address Pass Through (MAPT) uses a system-unique MAC address that is entered in the system BIOS. The unique MAC address overrides the dock or dongle MAC address every time when you connect to the network. For more information about MAPT, see the What is MAC Address pass through? KB article at www.dell.com/support.

ThinLinux supports Merlin imaging through the docking station with MAPT enabled. By default, the MAPT feature is enabled in BIOS on the Wyse 5470 thin client. You must connect the thin client to the docking station and the network cable is connected to the network connector (RJ45) on the docking station. This feature is applicable only for imaging using Wyse Management Suite or using INI parameters.

Display capability

- Wyse 5470 thin client supports up to two external displays with 4K resolution.
- Wyse 5470 thin client supports one display with 4K resolution over the docking station.
- Wyse 5470 thin client supports up to two displays with non-4K resolution over the docking station.

Power management

The following are the power management features on the Wyse 5470 thin client:

- You can set functions such as screen brightness, keyboard brightness and blank screen using the Advanced Power Settings option.
- You can enable or disable Wi-Fi using the Power-saving mode.
- The battery icon on the task bar displays the battery status.
- The Automatic Suspend option is added to support the On Battery Power and Plugged In modes.
Suspend system

- You can use the Suspend System option to suspend the thin client after a specified idle time. This option enables your device to enter the S3 power state (low-power), and you can resume your work without rebooting the device.
- You can enable the suspend mode from either **Power button** or **Power module** in the **System Settings**. You can also use the INI parameter to enable the suspend mode feature.

General features

Below listed are the general features of the Wyse 5470 thin client:

- UEFI BIOS support
- Custom GUI
- VDI broker connections such as Citrix Receiver 13.x, Citrix RTME 2.x, VMware View 4.x and RDP 8.1.05
- Network and wireless modules
- Energy star certification
- Imaging solutions using Merlin Imaging
- 802.1x & SCEP using HTTP and HTTPS enhancement feature
- Configuration using INI parameters
- Multilanguage support in English, Spanish, French, German, Dutch, Portuguese, Simplified Japanese, Chinese and Korean
- Firefox and Chrome browser
- Browser settings and customization control
- Custom connection
- SSH connection
- VNC Viewer connection
- VNC Server
- Add-on packages such as .deb

Supported VDI brokers, browsers, and terminal emulation applications

The following are the major components in ThinLinux 2.2 MR1:

- Citrix Receiver Client 13.10
- Citrix RTME 2.8
- VMware View Client 5.0
- Wyse RDP 8.01.05
- Ericom Power Term 12.3.0
New and enhanced features

Citrix RTME 2.8

Added support for Citrix HDX RealTime Media Engine (RTME) version 2.8. The following are the new features in Citrix RTME version 2.8:

- Audio quality in the Windows session is enhanced.
- Supports Skype for Business calls when the Edge server is unreachable.

For more information about the Citrix RTME 2.8 features, see the HDX RealTime Media Engine for Microsoft Skype for Business article at docs.citrix.com.

VMware Horizon View Client 5.0

Added support for VMware Horizon View Client version 5.0. The following are the new features in VMware Horizon View Client version 5.0:

- Enhanced Horizon Client User Interface.
- Ability to start multiple desktops and applications within a single client session. This feature is applicable when you use the `--use Existing command-line option to start resources.
- Enhanced support for multiple-display configurations. The full-screen display dynamically updates when you change the local display configuration during a client session.
- Changes to the domain security. Depending on the server configuration, you might need to enter a domain in the username text box when you log in to the Horizon 7 version 7.8 server from Horizon Client.

For more information about the VMware Horizon View client 5.0 features, see the VMware Horizon Client 5.0 for Linux Release Notes at docs.vmware.com.

For information about the VMware 5.0 and VNC server UI changes, see the Dell Wyse ThinLinux 2.2 Administrator’s Guide at www.dell.com/support.

New and enhanced features

Domain join using Active Directory

ThinLinux 2.2 supports domain join and domain login using Active Directory credentials. Active Directory allows an administrator to enable or disable the user authentication to specific domains. You can either join the terminal to the domain, or use the INI parameter to authenticate the user from Active Directory without joining the terminal.

To join your thin client to a domain, enter the following details on the Active Directory page:

- Active Directory Domain Name
- Organizational Unit for Thin Client (OU)
- Administrator Name
- Administrator Password

After the thin client is added to the domain, disable the Autologon option, and restart the thin client. The domain name is displayed on the ThinLinux login screen. You must enter the domain username and password to log in to the ThinLinux desktop. An error message is displayed if the thin client fails to join the domain.

**NOTE:** On successful login, you can view the Domain Name and Domain IP in the System information dialog box. Add user should disable the Auto login and need restart the device then able to login domain user

INI parameters

<tbody>
<tr>

</tr>
<tr>
<td>Domainjoin.enable={true, false}</td>

</tr>
<tr>
<td>Domain.ou={string}</td>
<td>It specifies the organization unit within Active Directory to which an administrator can assign Group Policy settings.</td>
</tr>
</tbody>

Preserve User Settings

The Preserve User Settings feature enables you to retain the configured user settings when you upgrade from ThinLinux 2.2. However, before you upgrade from ThinLinux 2.2, the Preserve User Settings feature needs to be enabled.

When imaging is performed using the USB Imaging tool, use the Execute Preserve User Settings option available on the ThinLinux UI to retain the previous settings after upgrade. If you are using the INI parameters to perform an image upgrade, use the MerlinUpdate.Preserve_User_Setting parameter to retain the previous settings.

**NOTE:** Imaging using Wyse Management Suite is not supported by the current Wyse Management Suite release.

</tr>
<tr>
<td>MerlinUpdate.Password=&lt;string&gt;</td>
<td>The password is used to log in to the server. Default selection is base-64 encryption.</td>
</tr>
<tr>

Quick Start

Quick Start is software that provides an overview of different features and hardware specifications of the thin client. The Quick Start v2.0 wizard runs only for the first time when you start a new thin client, or the first time after performing a factory reset on the existing thin client.

A default icon is added on the ThinLinux desktop that enables you to launch the application. You can enable or disable the desktop icon for a specific user by using the **Hide Desktop Icons** option in **Other Settings**, or the INI parameter.

</tbody>
</table>

Suspend mode

ThinLinux 2.2 supports suspend mode, which enables the device to enter the S3 power state (low-power), and quickly resume your work without rebooting the device.

You can enable the suspend mode using either the GUI option available in **System Settings**, or from the **Power** button. You can also use the INI parameter to enable the suspend mode.

</tr>
</tbody>
</table>

**NOTE:** Suspend mode is supported only on Wyse 5070 thin client.

Bluetooth functionality

ThinLinux 2.2 supports Bluetooth version 5.0. Administrator can enable or disable the Bluetooth function using the GUI option in the **Peripherals** settings, or through INI parameters. Normal user (thinuser) cannot enable or disable the Bluetooth functionality.

**NOTE:** When a normal user (thinuser) attempts to enable or disable Bluetooth, the following warning message is displayed:

**Please contact Administrator.**

The following devices are supported by Bluetooth:

- Keyboard
• Mouse
• Headset

**NOTE:** Bluetooth printers are not supported.

### System Performance Improvement

In ThinLinux 2.2, the system performance during bootup is improved.

### Web browser updates

- Google Chrome is upgrade to the latest version 72.0.3626.81-1.
- Mozilla Firefox Extended Support Release (ESR) is upgraded to the latest version ESR-60.4.0.

### Multidisplay support on Wyse 5070 Extended thin client

ThinLinux 2.2 supports up to six displays.

**Salient features:**

- By default, the **Display Settings** UI is available in both user mode and admin mode. Any changes to display preferences that are made through this UI is saved for the user.
- You must select the layout for The **Display Settings** UI has an option to select the layout. The available layout options are **Horizontal** (1 x 6), **Vertical** (6 x 1), 2 Screens per column (2 x 3), and 3 Screens per column (3 x 2).
- A minimum of four monitors are required for **2 Screens per column**.
- A minimum of six monitors are required for **3 Screens per column**.
- VMware protocol supports only four monitors.
- Daisy chain configuration is not supported on ThinLinux 2.2.

**NOTE:** Rotation and Mirror screens options are not available for quad display.

**Port preferences on Wyse 5070 Extended thin client:**

- Optional port can be used as second RJ45, SFP, or VGA.
- If wireless is enabled, the optional port cannot be used as second RJ45 or SFP.
- If front headphone is used, the back headset is disabled.
- When monitor is connected on USB-C port, DP2 becomes inactive.
- When VGA monitor is connected on VGA optional port, DP3 becomes inactive.
- Power option is available on the first serial port.
- PCIe slot is available.

¹For three displays, Dell recommends that you configure first two 4K displays on the main board (DP1~DP3), and the third 4K display on AMD GPU card.

²Support only four monitors with 4K screen resolution @ 60 Hz and the remaining displays with 2K screen resolution.

**Monitor priority**—The following order defines the monitor priority set on ThinLinux 2.2 for Wyse 5070 Extended thin client:

- DP1 > DP2 > DP3 > mDP4 > mDP5 > DP6
- DP1 > USB-C > DP3 > mDP4 > mDP5 > DP6
- DP1 > DP2 > VGA > mDP4 > mDP5 > DP6
- DP1 > USB-C > VGA > mDP4 > mDP5 > DP6

For more information about configuring multiple displays on Wyse 5070 Extended thin client, see the *Dell Wyse ThinLinux 2.2 Administrator's Guide* at support.dell.com.

**NOTE:** INI parameters are not supported on a multi-display setup with more than three displays.

**Limitations**

**Multidisplay support on Wyse 5070 extended thin client**

When you set the 2K resolution for the primary display and open System Settings on the same display, the drop-down menu appears blank in all features except Display.

To overcome this limitation, do the following:

1. Drag the System Settings window to any nonprimary display.
2. Set the primary display to 4K resolution.

**Upgrading firmware**

**Upgrade ThinLinux 2.0 or 2.1 to 2.2 on Wyse 3040 thin client**

**About this task**

Use Wyse Management Suite version 1.3 to upgrade the ThinLinux build version 2.0.19 or 2.1 to 2.2.

To upgrade ThinLinux by using Wyse Management Suite for Wyse 3040 thin client:

**Steps**

2. Click Product Support, enter the Service Tag of your thin client, and then press Enter.
   
   **NOTE:** If you do not have Service Tag, manually browse for your thin client model.
3. Click Drivers and downloads.
4. From the **Operating system** drop-down list, select **ThinLinux**.

5. Scroll down the page, and do the following:
   - Download the `wda3040_3.0.10-01_amd64.deb`, `wda_3.2.13-01_amd64.tar`, and `merlin-nonpxe_3.7.7-00.05_amd64.deb` add-ons.
   - Download the latest ThinLinux version 2.2 image file (`2.2.0.00_3040_merlin_16GB.exe`).

6. On the thin client, go to **Settings > Management > Wyse Device Agent**.

7. Register the device to the Wyse Management Suite server.

8. Log in to the Wyse Management Suite console.

9. Create and deploy app policy for `wda3040_3.0.10-01_amd64.deb`, `wda_3.2.13-01_amd64.tar`, and `merlin-nonpxe_3.7.7-00.05_amd64.deb` add-ons.

10. Reboot the thin client.

11. Log in to the Wyse Management Suite server.

12. Copy the downloaded image (`2.2.0.00_3040_merlin_16GB.exe` file) to `<drive C>/wms/localrepo/repository/osimages/zipped/`.

13. Log in to the Wyse Management Suite console.

14. Go to **Apps & Data > OS Image repository > WES/ThinLinux** and verify that the ThinLinux image is available.

15. Go to **Apps & Data > OS Image policies (WES/ThinLinux)** and click **Add Policy**.

16. Update the required fields, and click **Save**.

17. Schedule the job.

18. Click **Update now** on the client to update the image.

New and enhanced features

- VMware Integrated Printing feature
  You can use the VMware Integrated Printing feature to print to a network printer or a locally attached printer from a remote desktop. This feature requires Horizon Agent 7.9.
  - Select specific monitors for published applications
    In a multiple-monitor configuration, you can select the monitors on which to display the published windows application.
  - Expanded support for serial port redirection
    Serial port redirection is supported for Windows 7 and Windows 10 virtual desktops that have Horizon Agent 7.9 installed with the serial port redirection option enabled. The PCoIP protocol is fully validated and supported for serial port redirection.
  - Support for HTML5 Multimedia Redirection
    Horizon Client for Linux supports the redirection of multimedia content to the client system from a Google Chrome or Microsoft Edge browser running on a remote desktop. This redirection reduces the load on the ESXi host and improves the audio and video experience.

For more information about the VMware Horizon View client 5.1 features, see the VMware Horizon Client 5.1 for Linux Release Notes at https://docs.vmware.com/.

- RSP add-on
  - File name—vmware-viewclient_5.0.0-12557422-00.02_amd64.zip
  - File size—26,730,405 bytes

## New and enhanced features

- Enhanced Horizon Client User Interface.
- Ability to start multiple desktops and applications within a single client session. This feature is applicable when you use the --use Existing command line option to start resources.
- Enhanced support for multiple-display configurations. The full-screen display dynamically updates when you change the local display configuration during a client session.
- Changes to the domain security. Depending on the server configuration, you might need to enter a domain in the username text box when you log in to the Horizon 7 version 7.8 server from Horizon Client

For more information about the VMware Horizon View client 5.0 features, see the VMware Horizon Client 5.0 for Linux Release Notes at docs.vmware.com.

Installing add-ons

Downloading the installation file

Steps
1. Go to www.dell.com/support.
2. In the Enter a Service Tag, Serial Number, Service Request... field, type the Service Tag or the model number of your device, and press Enter or click the search icon.
3. On the product support page, click Drivers & downloads.
4. Select the appropriate operating system.
5. From the list, locate the file entry and click the download icon.

Install add-on using Wyse Management Suite

Prerequisites

Ensure that you download either the DEB file or RSP file of the add-on based on your preference:

- If you download the DEB file, add the file to C:\WMS\LocalRepo\repository\thinClientApps repository on the Wyse Management Suite server.
- If you download the RSP file, add the compressed ZIP folder to C:\WMS\Local Repo\repository\rspPackages\zipped repository on the Wyse Management Suite server and wait for 2-3 minutes. The compress folder is extracted automatically, and the extracted files are copied to C:\WMS\LocalRepo\repository\rspPackages\valid.

On Wyse 3040 thin client, you must install Wyse Device Agent (WDA) 3.2.13-01 or later versions. To update WDA to 3.2.13-01 or later versions, the thin client must have the WDA version 3.0.10-01.

About this task

This section describes the steps to install the add-on using Wyse Management Suite version 1.2 or later:

Steps
1. Log in to Wyse Management Suite.
2. Click Portal Administration, and then click File Repository under Console Settings.
3. Select the Local Repository check box.
4. Click Sync Files.
   Wait for the synchronization process to complete. The synchronization process copies the package from the repository to Apps and Data.
5. Click Apps and Data.
   The Apps and Data page is displayed.
6. Verify the copied package in the applications list.
7. To create a group in the Wyse Management Suite server, click Groups & Configs.
   The Groups & Configs page is displayed.
8. Click the Plus sign (+) button and enter the required details to register your client in the same group.
9. Click Apps and Data.
   The Apps and Data page is displayed.
10. Click Thin Clients under App Policies.
11. Click Add Policy to add the policy to the required group.
12. Update the required fields, and then click Save.
   An Alert window is displayed.
13. Click Yes.
   The lock screen is displayed during the package installation process on all the thin clients. The package is deployed immediately.

## Install add-on using Wyse Device Manager

### Prerequisites
Copy the RSP file to the Wyse Device Manager server. The copied RSP file is included in the ZIP file.

### About this task
This section describes the steps to install the add-on by using Wyse Device Manager (WDM).

### Steps
1. Launch Wyse Device Manager and log in using valid credentials.
2. Click Applications in the Dell Wyse Device Manager dashboard page. The options Images, Other Packages, Agent Update, Device Configuration, and PCoIP Device Configuration are displayed.
3. Select Other Packages.
4. Click Create Package Plus (+). The application prompts to download the Package Register utility.
5. Click Allow. The Create Package window is displayed.
6. Download the ZIP file on your local repository.
7. Navigate to the folder, and run the Package Register utility file. The WDM Package Registration Utility window is displayed.
8. Enter WDM server address and user credentials in the respective fields.
9. Select RSP to register, and click Browse. The WDM Package Uploader window is displayed with the progress status bar.
10. Click Open. The list of selected packages is displayed.
11. Select the packages that you want to register, and click Upload. The status is displayed as Success.
12. Schedule the package to the target client.
13. Click Devices and select the Device ID check box.
14. Click Update, and select the preferred package.
15. Click Save. The add-ons installation is scheduled to the device and the add-on is installed to thin client.

## Install the add-on manually using ThinLinux

### About this task
This section describes the steps to install the add-on by using the ThinLinux UI.
